- A. Contractor must provide documentation required for commissioning work in accordance with Section 01 33 00 SUBMITTAL PROCEDURES. At minimum, documentation must include, but not be limited to:
1. Submittal of shop drawings, product data, samples, etc., relevant to BECx and as requested by the BECA. Such submittals must be in compliance with Section 01 78 39 CONTRACT RECORD DOCUMENTS.
 2. As-Built Record Drawings and Operation and Maintenance Information relevant to BECx and as required by the BECA. Such submittals must be in compliance with Section 01 78 39 CONTRACT RECORD DOCUMENTS.
 3. All demonstration and orientation submittals relevant to BECx and as requested by the BECA. Such submittals must be in compliance with Section 01 79 00 DEMONSTRATION AND OWNER'S PREACCEPTANCE ORIENTATION.
 4. Performance data, any performance test procedures, and installation and checkout materials.
- B. The Contractor must provide all submittals to the Design Consultant, as per Section 01 33 00 SUBMITTAL PROCEDURES. The Design Consultant will transmit all building enclosure related submittals to the BECA for concurrent review.

PART II – PRODUCTS (Not Used)

PART III – EXECUTION

3.1 SYSTEMS TO BE COMMISSIONED

- A. Building Enclosure systems to be commissioned may include, but are not limited to, Roof waterproofing, including garden roof systems, all penetrations, and transitions; skylights and other sloped glazing; exterior walls, including the air barrier system, water management systems, and thermal insulation; punched windows, window walls, curtain walls, storefronts, glazed entries, doors, and louvers; sealants, expansion joints, and control joints; flashings, including all transitions and end-dams; terrace, balcony, and deck waterproofing; below-grade waterproofing, including drainage, waterproofing and damp proofing; below slab floor barriers; interface and transition conditions between exterior enclosure components and systems; smoke controls and fire separation and stopping; and any other special building enclosure systems, equipment, and controls. Refer to the Contract Documents for clarity.

3.2 RESPONSIBILITIES OF COMMISSIONING TEAM MEMBERS DURING CONSTRUCTION PHASE

- A. Responsibilities of the Design Consultant include without limitation the following:
1. Review BECA comments on construction documents and shop drawings.
 2. Assist in dispute resolution regarding building enclosure items.
 3. Review BECA reports.
 4. Incorporate BECA Submittal Review Comments into response on submittals.
- B. Responsibilities of the BECA include the following without limitation:

1. Review and comment on Mock-up construction and testing plan as provided by Contractor.
 2. Development of BECx Plan.
 3. Review of building enclosure shop drawings and submittals, including “approved equal” requests, through the Commissioner in accordance with Section 01 33 00 SUBMITTAL PROCEDURES.
 4. Attend combined pre-construction and BECx kick-off meeting.
 5. Develop construction checklists for the building enclosure for the Contractor’s use.
 6. Observe the construction of a building enclosure Mock-up.
 7. Witness the testing of a building enclosure Mock-up.
 8. Project meetings / conference calls / coordination.
 9. Field monitor installation of exterior enclosure components.
 10. Update field report log.
 11. Update BECx Plan.
 12. Advise on Requests for Information.
 13. Assist with the preparation of LEED paperwork.
 14. Prepare systems manual, with required inputs and documentation from the Contractor in accordance with Section 01 78 39 CONTRACT RECORD DOCUMENTS.
 15. Complete Maintenance Plan, with required inputs and documentation from the Contractor in accordance with Section 01 78 39 CONTRACT RECORD DOCUMENTS.
 16. Prepare training manual, with required inputs and documentation from the Contractor in accordance with Section 01 78 39 CONTRACT RECORD DOCUMENTS.
 17. Prepare final BECx record and enclosure commissioning close-out documents.
 18. Develop on-going BECx Plan.
- C. Responsibilities of the Contractor and Building Enclosure Subcontractors include without limitation the following:
1. Review BECx Plan and FPT specification.
 2. Attend commissioning kick-off meeting and other Building Enclosure Commissioning Team meetings.
 3. Incorporate commissioning activities into the construction schedule.
 4. Periodically update Commissioning activities in the construction schedule.
 5. Notify Commissioner and BECA of work completion.
 6. Verify building enclosure materials and assemblies are ready for functional testing.
 7. Retain the services of an approved independent BETA; submit qualifications of independent BETA to Commissioner for approval; coordinate all activities and deliverables of this BETA; ensure all BETA deliverables are provided to the Building Enclosure Commissioning Team.
 8. Attend all required material and systems testing.
 9. Execute all periodic maintenance or repairs required on started systems from initial Mock-up of equipment to Final Acceptance by Commissioner to prevent material warranties from being voided.
 10. Submit maintenance logs of all interim maintenance or repair tasks performed by Contractor.

11. Ensure installation work is complete, is in compliance with Contract Documents, and is ready for Functional Performance Testing. FPT test results will be documented by BECA.
 12. Ensure resolution of non-compliance and deficiencies in construction or test results. Obtain written documentation of completion from the appropriate subcontractors.
 13. Provide letters of compatibility for adjacent building enclosure materials and assemblies.
 14. Facilitate all repairs and retesting of failed condition at no additional cost to the City of New York.
 15. Provide all warranty information to BECA.
- D. Responsibilities of the BETA include without limitation the following:
1. Attend Commissioning kick-off meeting and other Building Enclosure Commissioning Team meetings.
 2. Provide on-site technician and equipment to complete Mock-up and field Functional Performance Testing.
 3. Prepare and submit reports to the Commissioner at the conclusion of all testing.
 4. Perform retesting and prepare corresponding reports.

3.3 BUILDING ENCLOSURE COMMISSIONING TEAM (BECx) MEETINGS

- A. BECx meetings will be held periodically, as determined by the Commissioner and recommended by BECA.
- B. Discussions held in BECx meetings must include, but not be limited to: system/materials, mock-up/field, progress, scheduling, testing, documentation, deficiencies, and problem resolution.
- C. The Contractor must attend BECx meetings, and must ensure the attendance of required subcontractors, as requested.

3.4 REPORTING

- A. BECA will provide status reports to the Commissioner. The Commissioner will provide such status reports to the Contactor, CxA, Design Consultant, and other entities as needed.
- B. BECA will submit non-compliance and deficiency reports to Commissioner. The Commissioner will provide such reports to the Contractor, CxA, Design Consultant, and other entities as needed.
- C. BECA will provide a final summary report to Commissioner and CxA.

3.5 MOCK-UP AND FINAL CONSTRUCTION

- A. Prior to Functional Performance Testing or concealment of functional performance layers within the building enclosure, the Contractor must verify that all assemblies are complete, including deficiency long items, and all Contract requirements are met.

3.6 FUNCTIONAL PERFORMANCE TESTING

- A. Objectives and Scope
 1. The objective of Functional Performance Testing is to demonstrate that the building enclosure is performing according to documented design intent and Contract Documents. Functional Performance Testing ensures and documents that the building enclosure systems are fully operational. Additionally, during Functional Performance Testing, areas of deficient performance are identified and corrected, improving building enclosure system performance.
- B. Development of Test Procedures

1. The purpose of a specific test is to verify and document compliance of the installed enclosure systems with the OPR. Building Enclosure Functional Performance Test Protocols are provided in other sections of the Project Specifications for specific requirements regarding BECx.

C. Coordination and Scheduling

1. Contractor must provide sufficient notice to BECA, through the Commissioner, regarding completion schedule for materials and systems. Testing to be performed in conjunction with site visits. Contractor must schedule Functional Performance Tests with Commissioning Team. BECA must witness and document functional testing of equipment and systems. BETA, as retained by the Contractor, must execute tests under direction of BECA.
2. Successful completion of Mock-up functional performance testing must occur prior to full production installation of building enclosure materials and systems.

3.7 DOCUMENTATION, NON-CONFORMANCE, AND APPROVAL OF TESTS

A. Documentation

1. BECA must witness and document results of FPT.

B. Non-Conformance

1. BECA must record results of functional testing. Deficiency or non-conformance issues must be noted and reported to the Commissioner. The Commissioner must provide such non-conformance reports to the CxA, Design Consultant, Contractor, and other entities, as needed.
2. Corrections of minor deficiencies identified may be made during tests at the discretion of the Commissioner and as recommended by the BECA. In such cases, deficiency and resolution must be documented.
3. Every effort must be made to expedite testing and minimize unnecessary delays, while not compromising integrity of tests.
4. Deficiencies are handled in the following manner:
 - a) BECA documents deficiencies and notes Contractor's response and intentions. A finding of deficiency will not end the testing process.
 - b) BECA submits deficiency report to the Commissioner. The Commissioner will provide such deficiency report to the CxA, Contractor, Design Consultant, and other entities as required.
 - c) Contractor corrects deficiency and certifies that material or assembly is ready to be retested.
 - d) Contractor informs Commissioner of retesting schedule for coordination with the BECA.
 - e) Contractor reschedules test with the Commissioner and BETA at no additional cost to the City of New York.
 - f) If a test must be witnessed more than twice by the BECA due to repeated failure to perform as per the design documents, the Contractor must be responsible for the BECA's fee for witnessing repeated tests beyond the second incidence. Such fee will be negotiated between the BECA and the Commissioner.

C. Testing

1. Costs for all testing and retesting required for the Project will be the responsibility of the Contractor. The Contractor is to provide access to the test specimens to the Commissioning Team, through the Commissioner.

3.8 COMMISSIONING DOCUMENTATION

A. Final Report Details

1. Final BECx Report must include an executive summary, list of participants and roles, brief building description, overview of Commissioning and testing scope, and general description of testing and verification methods. Report must contain evaluation regarding:
 - a) Conformance to Specifications and design intent.
 - b) Material/system installation.
 - c) Functional performance.
2. All outstanding non-compliance items must be specifically listed.
3. Recommendations for improvement to system or operations, future actions, etc. must also be listed.

ADDENDUM No. # 1

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85023B0022 – SANDBOMB

NYPD Bomb Squad Building

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for January 26, 2023, at 2:30 pm is rescheduled to February 16, 2023 at 2:30 pm.**
Contract #1 – General Construction Work
2. **Bidders Questions and Responses to Questions:**
See Attachment A.
3. **Revisions to Documents:**
See Attachment B.
4. **Revisions to PASSPort forms:**
See Attachment C.

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFX tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

Executive Director, Specifications

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidder's Question	DDC Response
1.	The Site logistic plan DM100.00 see attached provided as part of Appendix indicate "Existing building to be Demoeed" in Frank Range area which will be the location of DDC/CM trailers please advise if this bldg. is to be demolished under this contract or by others?	Building F Frank is to be demolished under this contract.
2.	One of storage building prefab vendors is saying they are providing it direct to DDC. However, the contract drawings shows it as part of the scope. Please advise.	The Storage Building 8 is to be provided by the Contractor under this contract, not directly to DDC.
3.	Specification section 096723 "Resinous Flooring," lists Stonhard Stonclad GS with stonproof ME 7 & Stonkote GS4. The schedule only lists Stonhard Stonclad 3/16" thick. Please clarify. We will be pricing Dex-O-Tex as an approved equal system.	The contractor is to provide the basis-of-design product, Stonhard Stonclad GS with stonproof ME 7 & Stonkote GS4, or an approved equal as noted in Specification Section 096723, Article 2.1.
4.	Please provide the Planholder list in the Addenda as per pre-bid conference information.	The Planholder list is included with this Addendum.
5.	Architectural Drawing A880 is calling for windows W1 through W9 to be "Composite" and Specification section 085113 "Aluminum Windows" mentions "composite windows." However, the specified window is aluminum, all the details on the drawings are aluminum, and there is no description of these composite windows anywhere in the specifications. Please provide clarification into the "composite windows."	All windows are of aluminum construction. The word "composite" refers to the finish on the frame, not the frame material itself.
6.	Please confirm that a standard bid bond form is acceptable for the security of bid. No specific form was located.	Confirmed. The Bid Bond form for this project can be found in the PASSPort Questionnaire, Paper Bid Submissions – to be Submitted to the Agency, Bid Security Requirements.
7.	Please provide pre-bid meeting information if any.	The Pre-Bid Sign in sheet is included with this Addendum.

8.	We would like to bid as a manufacturer of the metal building enclosure. How would we obtain a list of first tier subcontractors that will be contracted to furnish and install the building enclosure?	This information can be found in the Planholder List, included with this Addendum.
9.	Will there be a bidders list posted for this procurement?	Yes. Refer to the Planholder List, included with this Addendum.
10.	Contract Drawing A103 "ROOF PLAN" calls for Finish Key "F – 3.0" which denotes for cast-in-place concrete floor exposed concrete with clear, non-yellowing, matte sealer. Please confirm if this is correct since all roof slab detail calls for decking and roofing finishes only, no concrete placements shown on roof level.	The roof plan is correct. The roof slab is to receive the clear, non-yellowing sealer as called for.
11.	Please confirm if all exposed structural steel (interior and exterior) shall either get painted or spray fireproofed.	The structural steel does not require fireproofing. All exposed steel is to be painted. Drawing G004 shows the fire rating of building elements based on the 2008 NYC Building Code. Structural frames are shown as having 0-hour rating.
12.	Is there a requirement that we use specific unions for this project? For example, in regard to the electrical work, do we have to use the Local 3 Union? We have a great relationship with a subcontractor that belongs to Local 339. Would it be acceptable to use them on this project?	This contract is subject to a Project Labor Agreement (PLA). Please refer to the PLA, and the PLA Frequently Asked Questions, both found in Volume 2.
13.	Does a Joint Venture (JV) have to be officially formed to submit this bid? If the JV does not have to be formed, is a letter of intent required or is it just the identification of the JV partner data entered in PASSPort?	The Joint Venture (JV) does not have to be formed in order to submit the bid. The bid may be submitted by one of the JV members on behalf of the JV. The PASSPort Questionnaire contains a "Joint Venture" section, which contains requirements for a Letter of Willingness from each JV member. If the bid is being submitted on behalf of a JV, regardless whether JV is already formed or its formation will depend on whether or not the JV is awarded the contract, the Letter of Willingness is required from each proposed JV member as part of the bid.

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidder's Question	DDC Response
1.	What is the size of the existing oil tank? (Is it the same fuel oil tank shown on drawing M-100.00).	The removal of the oil tank shown on drawing M100 is deleted from the contract and will be removed by DDC Tank Unit. See revised drawing M100.
2.	What type of product is in the existing holding tank?	The existing tank shown on drawing DM102 is an existing septic holding tank of approximately 600 gallons. It is to be removed under this contract.
3.	Specification 096723 "Resinous Flooring" calls out for Dex-O-tex ME Floor and Stonhard Stonclad GS, but the finish schedule only calls out for Stonhard Stonclad. Please confirm we can use Dex-o-tex ME Floor as per the specifications.	Contract may submit for approval Dex-O-Tex flooring, as listed in 096723 "Resinous Flooring," Article 2.1.
4.	Is the resinous flooring to go on the walls of House trap pit 58" deep as per plan A-101?	No.
5.	Please confirm no resinous flooring work on storage building #8, we did not find any.	No, no resinous flooring in Building 8.
6.	Please confirm no resinous flooring work on stair.	No.
7.	Please see our take off documents and confirm scope of work.	Scope of work must be determined by careful examination of the Contract Drawings and Specifications.
8.	What is the difference between F1.0 and F2.0? Is it just that one is smooth and one is textured finish? Please confirm which system is the basis of design for pricing.	See finish schedule as both are Basis of Design. F1.0 is a Smooth Epoxy resin finish and F2.0 is a Textured Epoxy resin finish.
9.	Section 28 14 00 - Access Control System Hardware - The security system specifications list all of the standard field devices and power supplies. However, there's no notes regarding the manufacturer of the Reader Controllers and Software Package. We're pretty sure NYPD uses "LENEN On guard" for their Access Control System reader controllers and software package, but we need in writing which model number of reader controllers and licensing information for the software package and	The project does not use an access control system. There are no card readers in the project, doors are electronically locked and released by the intercom system.

	card readers (Enterprise System linked to NYPD SOC or Stand-Alone)	
10.	Integrated Systems can provide turnkey installation including our CWA Union Cabling Subcontractor. Please advise if CWA Labor is permitted or should I be contacting the Local-3 Electrical Contractors and send them my “parts and smarts” security system proposals and be part of their Low Voltage Package with Security Systems, Fire Alarm, Telecom, and Audio Visual?	Contractor must use the PLA Unions.
11.	Integrated Systems field technicians will be responsible for the System Commissioning, Programming, and Final Testing after the initial security system rough-in scope of work is completed and all cabling and equipment is installed and terminated. Please advise if we should include Prevailing Wage/PW Labor Rates or will our standard Non-Union Labor Rates during Normal Business Hours are permitted?	Contractor must follow the PLA rates.
12.	What is the tax status for NYPD Bomb Squad - Capital Improvement or Tax Exempt?	This project is Tax Exempt.
13.	Genetec needs to know which type of Archiver/NVR Server for NYPD Bomb Squad - All-In-One - Server/workstation appliance without RAID5?	The video surveillance system is for live view only, no recording of video required as indicated in specification section 28 23 00(1.5)(B). Genetec workstation to be provided by the Contractor and not configured for recording.
14.	Genetec needs to know which type of Archiver/NVR Server for NYPD Bomb Squad - Separate server and workstation, with the server configured w/RAID5 for archiving drives.	The video surveillance system is for live view only, no recording of video required as indicated in specification section 28 23 00(1.5)(B).
15.	There’s a W2.0 at East elevation between col. 3 & 4 on A101M. there’s no W2.0 in windows schedule. Is that W2.1?	Window W2.0 is relabeled W2.1. Refer to updated Drawing A101M, included with this Addendum.
16.	Are there any specs for the aluminum doors #2.00 & #2.10	Door 2.00 is a flush aluminum door (similar to a flush hollow metal door), with vision panel as shown on the elevation. Door is to be provided by storefront manufacturer. Door 2.01 is hollow metal, not aluminum. Doors 2.00 and 2.10 are shown on drawing A860, Door Schedule and Types. Both are Type E, Door (Both types are shown on Door Types.) Refer to updated Drawing A860, included with this Addendum.
17.	What type of glass to infilled in doors type E & J?	1/4" tempered glass. Refer to updated Drawing A860, included with this Addendum.

18.	Spec 088100-10 calls for fire rated glazing. Where is it applied to?	There is no fire-rated glazing in the project. Refer to updated Specification Section 088100, included with this Addendum.
19.	Will the glass at lightwell to be laminated as per A880 or not laminated as per spec 088100-8?	The exterior pane (facing the stair) of the double-paned glazing is laminated glass as per section 088100. Refer to updated Drawing A880, included with this Addendum.
20.	Will Fireproofing be required for this project? If so where are the details and where is it on the drawings	No fireproofing is required.
21.	Drawing A602 detail 10 Lateral files are N.I.C. However, A941 has details for the lateral files. Are they part of this contract?	The lateral files shown on both drawings are not part of this contract. These files are incorporated into a millwork countertop and vertical uprights, which are in the contract.
22.	What the target U-Value - if it's .60 - neither the specified product nor the triple glazing is necessary.	Triple glazing shall be provided as detailed, regardless of U value.
23.	Will they accept modified operable sizes that we can build in the 2250i-XP - OR - will they accept a different Wausau series to accommodate the operable sizes as drawn - we can do it in our 3250i-XLT series.	This question to be resolved during the shop drawing and product literature submittal process. Refer to specification section 08 44 13 Glazed Aluminum Curtain Walls.
24.	What is the extent of Architectural Concrete as specified in Section 033300?	All visible concrete, inside and out, is to be Architectural Concrete as described and specified in section 033300.
25.	Structure on DM-101 is listed as, "Remove one story bldg. & foundations, arched MTL structure & plastic cover". Is this structure to be removed and disposed of or is it to be dismantled and stored for future reuse?	The structure is to be demolished and all remnants disposed of.
26.	On DM-102, note reads "Remove exg underground holding tank & associated piping (+-600 gal)". What was this holding tank used for (Septic, oil stormwater)?	This is a septic holding tank. Refer to Drawing DM-102, which describes the type of tank, its capacity and its contents.
27.	Please provide as-built drawings for Building F Frank area in order to quantify the demolition scope.	As-Built Drawings are unavailable and will not be included as part of this Contract.
28.	Section 3 on Drawing FO300 calls for 6" Gravel on the underside of the cast in place concrete slab and elevator pit. However, 'typical detail elevator pit' on Drawing S050 shows a 3" mud slab instead. Please clarify which is correct.	There is no mud slab under the elevator pit. Note has been removed. Refer to updated Drawing S050, included with this Addendum.

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to Bid Drawings:

Drawing DM102: Removed note about removal of existing oil tank.
Drawing A002: Removed diagram of existing oil tank.
Drawing A101M: Changed tag on east window from “W2.0” to “W2.1”.
Drawing A860: Added note about type of glazing for door types E and J.
Added note to “Notes” column in Door Schedule for door No.2.00.
Drawing A880: Added note re: laminated glass for windows W10, W12, W14 and W15.
Drawing M100: Removed note regarding removal of tanks. Added note that tanks will be removed by others.
Drawing S050: Removed extra note

Revisions to Volume 3:

08 81 00 Glass Glazing: Removed text describing fire-rated glass.

Revisions to Appendix:

Bomb Squad Logistics Plan Phase 1: Added notes for temporary fencing.

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

DDC Response to Bidder's Questions in Addendum 2 are hereby revised as follows:

No.	Bidders Questions	DDC Revised Responses
11.	Integrated Systems field technicians will be responsible for the System Commissioning, Programming, and Final Testing after the initial security system rough-in scope of work is completed and all cabling and equipment is installed and terminated. Please advise if we should include Prevailing Wage/PW Labor Rates or will our standard Non-Union Labor Rates during Normal Business Hours are permitted?	Contractor must follow the PLA or applicable Prevailing Wage rate for this trade.

February 14, 2023

ADDENDUM No. # 4

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85023B0022 – SANDBOMB

NYPD Bomb Squad Building

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for February 16, 2023, at 2:30 pm is rescheduled to March 16, 2023 at 2:30 pm.**
Contract #1 – General Construction Work
2. **Bidders Questions and Responses to Questions:**
See Attachment A (Not Used).
3. **Revisions to Documents:**
See Attachment B (Not Used).
4. **Revisions to PASSPort forms:**
See Attachment C.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Drawing DM100, Site Logistics Plan indicates that we are to relocate the existing flag poles. How many are there, can you provide the specification on the poles, (i.e. manufacturer, height, etc.), and where is the new location(s)? New foundations will need to be installed with the correct sleeve to match the pole.	There are no flagpole relocations shown on DM100. There are no flagpole relocations in this project.
2	We noticed that the scaled dimensions on Demolition Drawings DM101 and DM102 do not match and the Existing Bomb Squad Bldg Perimeter and Areas lead to different results when comparing them. Please clarify these discrepancies preferably by providing the As-Built Drawings.	Demolition Site Plan on Drawing DM101 is scaled 1/16" = 1'-0", as shown on the drawing title. Drawing DM102 is scaled at 1/8" = 1'-0", as shown on the drawing title.
3	Drawing E010 calls for 2-3 1/2" PVC conduits with 4-500mcm & 1-1/0 GRD.2" spare. Please advise where the remote annunciator and battery charging circuit go.	The battery charging outlet and block heater outlet were added due to the remote location and size of the generator. Outlets will be powered from base building panel. Remote annunciator for temporary generator is not required. Refer to updated Drawing E010, included with this Addendum, for clarification.
4	Please provide a specification for generator.	Generator is N.I.C. and not permanent. NYPD can utilize mobile generator from any manufacturer, provided it meets required capacity of 475 Amps, 208V, 3-Phase.
5	Please advise the location of the Generator Tap Box specification 263214.	Refer to drawing E010 for Generator tap box (docking station) location. Refer to updated Section 263214 included with this Addendum, for clarification.
6	Please confirm lightning protection is not required	Lightning Protection is not required.
7	Please provide specifications and details of the new 500kva transformer and secondary 120/208v shown on E301.	Transformer is shown on drawings ES002, ES100, E301 and described in Specification Section 261200.
8	Please advise if the 500 KVA transformer is Oil Filled or Dry Transformer.	It could be either.
9	Drawing E102 shows Hot water Heater on DP #5, whereas Drawing E401 calls for DP #8. Please confirm which is correct.	DP-8 is correct circuit number. Please note that switch for the EWH-1 in panel DP will be changed to 100/70A and feeder will be changed to 4#4, #6G, 1#8G in 1-1/4" conduit. Refer to updated Drawing E102, included with this Addendum.

10	Drawing E103 calls for 2- ACC-1 disconnect DP #8 & DP #9, whereas Drawing E401 DP #8 is Hot Water Heater and DP # 9 is Panel UP-CR. Please confirm which is correct.	Panel DP will be provided with two switches for ACC-1, each rated for 60/50A. ACC-1 will be provided with two feeders, each 3#6, #8G in 3/4" conduit. Circuits allocated for ACC-1 will be No. 5 and No. 10. Two 60A spare switches will be added to panel DP. Refer to updated Drawing E103, included with this Addendum.
11	Drawings E203 shows 3-N1, whereas Drawing A104 shows 5-N1. Please confirm which is correct.	Drawing A104 (Building 8 Reflective Ceiling Plan) shows (5) N0-1 fixtures. A104 is correct. Refer to updated Drawing E203, included with this Addendum.
12	Drawing E004 includes Fixture J1 exterior 13" floor recessed fixture. Where is this located? Please advise.	Fixture J1 is a drive-over recessed uplight. (2) fixtures have been added to drawing E201. Refer to updated Drawing E201 for this information.
13	Drawing A202 calls for 11- BTN Lights. Please provide the manufacturer and model number.	"BTN" does not refer to a fixture type. It is an abbreviation for the word "between."
14	Specification section 26 05 33-6 paragraph 4 calls for surface metal raceway, whereas paragraph 3 calls for EMT. Please confirm which is correct.	Both are correct. EMT is for concealed wiring. Rigid Galvanized Steel is for all exposed conduits. See notes on Drawings E101, E102, E201, and E202 for clarification.
15	For the vehicle exhaust duct, there is a note that it should be a minimum 14GA, but there is another one that states it should be 24GA. Please confirm which is correct.	14 GA. Refer to updated Specification section 233516, Article 2.16A, included with this Addendum, for this clarification.
16	Please advise the specified BMS vendor for this project.	The BMS vendor is not specified, but must adhere to all requirements noted within the Contract Documents, in particular, Specification section 230900.
17	On Drawing E301, there is a "K-link disconnect fused for 100A AT4160V" shown. Is there more information that can be provided on this disconnect? Or will this disconnect be provided by Con Edison and bidders do not need to include it?	No further information is available at this time. Bidders must bid on the fused disconnect.
18	Is there a fire alarm vendor currently on site in the adjacent buildings? If so, can you provide the contact information for that vendor?	There is no fire alarm vendor currently on site. Fire Alarm vendor must adhere to all requirements noted within the Contract Documents, in particular, section 284600.
19	Drawing ES101, near the light pole 'LP3' says "refer to duct bank Detail #7 on ES-200." That detail shows (4) 5" and (2) 4" conduits. Is this correct?	Detail 7/ES200 is correct.
20	Drawing ES200, Detail #4 shows both power and lighting in and out of the handhole. Are there separate circuits for the power and the lighting?	Yes.
21	Drawing ES002, Detail #1 shows feed to panel 'PB-8' as (1) 1 1/4". However, Drawing ES101 shows the feed as (1) 2" and (1) 2" spare. Please clarify.	Drawing ES101 is correct. Drawing ES002 does not show the feed to panel PB-8 as (1) 1 1/4". Drawing ES101 shows the correct feed sizes and types.

22	Drawing DM100 identifies a "security booth" at the construction entrance "to be coordinated by GC." Is the security booth and security guard both by the GC? If so, will the security guard only be required during construction operations, or around the clock?	This note has been removed. Refer to updated Drawing DM100, included with this Addendum.
23	HM doors & frames specification section 081113-4 identifies Type B frames not less than 14GA, but door schedule A860 identifies 12GA. frames? Please confirm we can use 14GA frames.	Gage of steel hollow metal frames is shown on Door Schedule, drawing A860. Refer to updated Specification Section 081113, included with this Addendum.
24	Details 1, 2, 3, 4 & 5 / A711 identify W12 on the walls, F4.0 on the floor and C5.0 ceilings. Please clarify as these are not on the finish key / plan.	Floors to be F9.0. Ceiling to be C9.0. Floor and ceiling tags have been updated. Refer to updated Drawing A711, included with this Addendum.
25	Please verify that the legend on Drawing L101 is showing the pattern backwards for the trench drain protection. Pattern is the opposite direction and different detail called out vs legend. These are also shown in the pattern of the legend, but assume this is a mistake, since outside lod & not trench drain	Direction of pattern at the actual trench to be protected is correct. Direction of pattern on legend is revised. Refer to updated Drawing L101, included with this Addendum.
26	Foundation Waterproofing specification 071300 calls for Preprufe 300R foundation waterproofing under slabs and horizontal surfaces and Preprufe 160R on vertical foundation surfaces, per Article 2.1A. However, the foundation drawings do not call for waterproofing, except at the elevator pit on Drawing S050. The Architectural Drawings only call out for vapor barrier as shown on Detail 9/A501. Please confirm if the foundation requires just vapor barrier, or waterproofing per section 071300.	Wherever "vapor barrier" is shown on the drawings, it shall be Preprufe 300R (or approved equal as listed in 071300, Article 2.1) below-grade waterproofing. Refer to updated Drawings A500 and A501, included with this Addendum.
27	Drawing C102 identifies a prop. 6" perforated HDPE in front of and behind building #8 storage. What is the top arrow pointing to? There is a trench drain nearby, but no line that matches the other dashed line that the lower one points to. Also, what are the inverts at the ends of the 2 sections that tie in the middle to the MH? And are the ends capped?	The top arrow (pointing to the east side of Building 8) has been revised. There is only a perforated HDPE pipe on the west side of Building 8. Pipes are not capped. Refer to updated Drawing C102, included with this Addendum.
28	Specification section 071300, Article 2.1 calls for Preprufe 300R from GCP or equal to be used below the slab on grade. However, Specification section 072616 calls for a 15 mil vapor barrier to be used below the slab on grade. Please advise which product is to be used.	The building is to receive Foundation Waterproofing, not Below-Grade Vapor Retarders. Specification section 072616 is not applicable to this project and deemed deleted from the Contract Documents. Refer to updated Volume 3, included with this Addendum, for clarification.
29	Details showing the below grade condition (per Drawing A500) show the below slab waterproofing or vapor barrier extending below the pile caps/ grade beams, and extending vertically up the outside face of pile cap/grade beam. If two different products are to be used, please clarify where one terminates and one begins.	See response to Question #28 above. The building is to received Foundation Waterproofing (per section 071300), not Below-Grade Vapor Retarders. Specification section 072616 is not applicable to this project and deemed deleted from the Contract Documents. Refer to updated Volume 3, included with this Addendum, for clarification.

30	Re: Addendum 2 Phase I Site Logistics Plan: please indicate if the building demolition and grading is in this contract's scope of work Site logistics and Drawing DM100 are contradicting.	Yes, Building Demolition and Grading is under this Contract. Refer to updated DM100, included with this Addendum.

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to Volume 3:

Table of Contents: Section 072616 is removed.
07 26 16 Below-Grade Vapor Retarder is removed.
08 11 13 Hollow Metal Doors and Frames is revised.
23 35 16 Engine Exhaust Systems is revised.
26 32 14 Generator Tap Box is revised.

Revisions to the Drawings:

<u>Drawing No.</u>	<u>Description of Change</u>
C102	Removed arrow pointing to east side of Building 8.
L101	Changed the direction of the hatch for trench drain protection on the Legend
DM100	Removed notes near “Rodman’s Neck Training Facility Entry”.
A500	Changed callout from “Vapor Barrier” to “Foundation Waterproofing”.
A501	Changed callout from “Vapor Barrier” to “Foundation Waterproofing”.
A711	Changed Floor Type to F9.0. Changed Ceiling Type to C9.0
E010	Added power outlets at Generator docking station
E102	Added disconnect switch for EWH-1
E103	Added disconnect switches for ACC-1 DP-5 and ACC-1 DP-10
E201	Added (2) fixtures Type J1. Note: contractor to provide circuit for this fixture. Switching shall be as per exterior lighting.
E203	Added (2) fixture types N1
E301	Showed additional power outlets at generator docking station on power diagram
E401	Updated DP schedule

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	Drawing ES002, Detail #1 shows feed to the Bomb Squad Building property line box as 4 sets (4#600, 4" conduit) and (2) 4" spare conduits. Detail #2 refers to ES200 detail #7. Detail #7 on ES200 shows (4) 5" and (2) 4" spares. Can you please clarify which conduit sizes are needed?	Detail 7/ES-200 shows the typical concrete encasement for a duct bank, with required reinforcing, concrete coverage, etc. Detail 1/ES002 shows (6) 4" conduits and (2) 4" conduit spares. Number of conduits on Detail 1/ES002 is correct. The duct bank shall be sized for the number of conduits shown on detail 1/ES002.
2	Are two layers of impact board/ abuse-resistant GWB required for partition type 3? Typically, it is one layer of impact board/ abuse-resistant GWB, followed by standard GWB. Please advise.	Yes, 2 layers of impact board are required, as per partition type.
3	Re: Phase 1 Site Logistics Plan DM100 Addendum # 2: Notes were added for temporary fencing on Jersey barriers in Northeast Parking lot. Is this to be installed & maintained under this contract, or by the contractor that will be building the two new buildings?	Yes fence to be provided and maintained under this contract, as per Addendum #2.
4	Re: Phase 1 Site Logistics Plan DM100 Addendum # 2: The two new buildings by others is shown in the temporary fenced in area. What is the schedule for this work in relation to the Bomb Squad contract work? Will both sites be in construction at the same time?	The buildings in the fenced-in area will be relocated before work begins on this contract.
5	Re: Phase 1 Site Logistics Plan DM100 Addendum # 2: The existing Bomb Squad Building #1 has been hatched and noted as 'Building to be Demoeed by others.' Please clarify who are 'by others?' Is the intent that Building #1 is demoeed under this contract after phase 1 work is completed?	All work associated with the Demo of "BSC Building #1 Bomb Squad Building" is under this Contract. Refer to updated Phase 1 Site Logistics Plan, included with this Addendum.
6	There is a note for the existing building to be demoeed at the Frank Range. This is outside of the contract area of work on the Site Logistics Plan DM100. Please clarify if this work will be completed under another contract?	Building F (Frank) to be demoeed as shown on drawing DM101. Demolition of Frank is part of this contract.
7	Please confirm that the permanent electrical generator is provided by others (not the GC). No specification is given.	Correct. No permanent generator is to be provided under this contract.
8	Re: Drawing ES001: The P1 (pole light "fixture") specification is invalid and / or missing information. Please provide specifications, including mounting options, features, lumens, etc.	Lighting pole detail is provided on drawing ES-200. Pole footing is shown on drawing ES201.

9	Drawing A101 identifies floor finish F 1.0 in the elevator pit. Are we to install the epoxy on the floor and walls inside of the elevator pit?	Yes.
10	Drawing DM100 identifies BSC BLDG #6 to be removed, but at the walk thru it was identified to be relocated. Please clarify.	Building 6 is to be demolished as per note on the Drawing DM100.
11	Re: Drawing DM100: Could you provide the weights for the (12) MTL containers to be relocated?	No, this information is not available at this time.
12	Drawing DM101 identifies the BSB building #7 relocated by others (NIC)? Is that correct? Is this not the existing trailer next to the BSC Bldg #8?	Building 7 is to be relocated before the start of construction by others. The relocation of this building is N.I.C.
13	Re: Addendum 1, Question #10: Please confirm that the roof of the new structure is a metal deck with insulation and finish roofing materials, and there is no exposed concrete to apply this clear sealer.	Yes, response to this question per Addendum 1 is correct.
14	Re: Drawings A301, A302 and A981: A recessed graphic with the NYPD Bomb Squad is identified. The text is identified, but is there more info on the "graphic" to be used (such as material)?	The sign is to be cast, recessed 2" into the cast-in-place concrete as shown on 2/A981. The only material is concrete.
15	Please confirm the roof top PV panels are by others (NIC).	No, they are provided by the contractor under this contract. PVs are described in Drawing E103 and in Specification section 263100 Photovoltaic Collectors.
16	Decorative metal specification section 057000 identifies "metal clad stair sidewalls," but this is not identified on the drawings. The interior stair calls for 8GA. steel plates painted. Please clarify.	"Metal clad stair sidewalls" as described in Section 057000 is a general description of the stair walls. The detail on the drawing governs the actual design and materials.
17	Specification section 142400 -19 identifies that the elevator cab is to receive 1/8" thick aluminum diamond plate flooring. Is there a basis of design or manufacturer?	No, there is no basis-of-design. 1/8" thick diamond-plate aluminum is a generic product.
18	Drawing A741 identifies painted steel corner guards at CMU walls. Are we to assume 16GA steel?	Detail 4/A741 calls out SS (stainless steel), not painted, for the corner guards.
19	On Drawing A840, there is a wall type W11.0 but we cannot find the location on the drawings. Please advise.	Wall finish type W.11 is shown on Elevation 1 and 3/A600 on metal panels.
20	In an effort to streamline the Bid Submission, we have been uploading the necessary documents and answering the necessary questions in the PASSPort portal in advance of the February 16 deadline. Twice today, however, we have been prompted via email to reaffirm that we will be bidding on this project and after both times we reaffirmed, all of the progress we had previously made was lost, and we had to reupload and re-answer everything we had already done. Is there a way for us to prevent this from happening again?	Please contact MOCS for assistance: https://mocssupport.atlassian.net/servicedesk/customer/portal/8

21	Drawing C100 shows curbs on both sides of the 3' gravel walkway from the concrete apron at the main building up to the storage shed area. However, Drawing A002 only shows it on the outside edge along the asphalt (not the grasses side) Which is correct?	Drawing A002 is correct. There is no curb on the lawn side of the walkway.
22	Drawing A002 shows 2 notes that refer to Civil Drawings, but nothing about either of these notes are on the Civil Drawings. The Site Utilities do not show this either (nor end of electrical). Please advise.	Notes on A002 are general, not specific.
23	Are there any sidewalk bridge or shed requirements?	Sidewalk Bridges and sheds are only required if needed to comply with NYC Building Code.
24	Per Addendum #1, the roof slab is to receive the clear, non-yellowing sealer. Please provide extents of slab on metal deck for the roof level. None are shown on drawings.	See response to Question #13 above. Yes, the roof slab is to receive the clear, non-yellowing sealer. Extent of slab is shown of roof plan.
25	Re: Addendum 2 Phase I Site Logistics Plan: is temporary fencing part of this contract, or by others?	Yes, temporary fencing is under this Contract.
26	On Drawing ES101, pull box at LP-3 indicates to refer to Detail #7 on ES200 for ductbank details. Can you clarify if all conduit runs from pull box to pull-box to be in a concrete ductbank? This is not indicated on the one-line or any other pull-box.	Detail 7/ES200 shows a typical detail for concrete encasement of buried conduits. The number of conduits in each location is shown on the plan and 1-line diagrams. There may be 3, 4, 6 or other numbers of conduits in a given location. The detail shows the required concrete coverage of conduits, reinforcing, etc. The contractor must adapt the detail to each location and size the overall concrete encasement for the required number of conduits.
27	Drawing ES002, Detail 1 shows a new 500KVA 4160V/120/208V step down transformer. Please advise if Con Edison is providing both the enclosure and the transformer.	The Contractor provides and installs the enclosure and the transformer.
28	Please provide a detailed specification for K-Link Medium Voltage Fusible Disconnect for 100A at 4160V, shown on Drawing ES002.	Specification not available. This is a generic item.
29	On Drawing ES-101, pull box at LP-3 indicates to refer to detail #7 on ES200 for ductbank details. Can you clarify if all conduit runs from pull box to pull-box to be in a concrete ductbank? This is not indicated on the one-line or any other pull-box.	All conduit runs from pull box to pull box shall be encased in concrete as per detail 7 on ES200. The size of the encasement is based on the number of feeds in the bank.
30	Detail 4/A510 needs to be modified. The sill base needs to be built up level or above the exterior sloped concrete.	The detail shown is correct. The manufacturer is creating a custom window frame/sill with the extended sill as shown on the detail.
31	Doors 2.00 & 2.10 are listed as door Type "E". This looks to be a HM door type, not an Aluminum door type. Please confirm this is the correct door type.	Doors 2.00 and 2.10 are aluminum, as shown on the door schedule.
32	In Addendum #2, the light court glass was changed to be laminated glass. In the revised specification section, "08 81 00 Glass Glazing", Article 2.2.E.2.a, it does not indicate this change. Please clarify the type(s) of glass to be used in the windows (W10 - W15).	Specification Section 088100 describes several different glass types. The drawings indicate which window, or storefront or other glazed opening gets which type of glass. The glass assembly and glass type are shown on the window schedule in the column "Glazing."

March 28, 2023

ADDENDUM No. # 7

FOR FURNISHING ALL LABOR AND MATERIAL NECESSARY AND REQUIRED FOR:

85023B0022 – SANDBOMB

NYPD Bomb Squad Building

This addendum is issued for the purpose of amending the requirements of the Bid and Contract Documents and is hereby made a part of said Bid and Contract Documents to the same extent as though it were originally included therein.

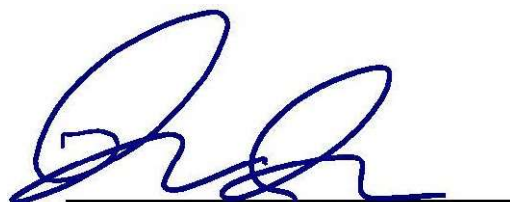

The bidder is advised that the items listed below apply to the project:

1. **The Bid Opening for the contract described below scheduled for March 28, 2023, at 2:30 pm is rescheduled to March 30, 2023 at 2:30 pm.**
Contract #1 – General Construction Work
2. **Bidders Questions and Responses to Questions:**
See Attachment A
3. **Revisions to Documents:**
See Attachment B
4. **Revisions to PASSPort forms:**
See Attachment C

Transferring Data Between Rounds of an RFX: A new document titled “Transferring Data Between Rounds of an RFX” has been added to the Documents section of the View RFX tab. Please refer to this document when an addendum has been issued. Note: Whenever an addendum is issued, the RFX item grid will be cleared. You can import the work you have already done by following the steps on this document.

DDC strongly advises vendors to finalize and submit bids 48 hours prior to due date and time. The City is not responsible for technical issues (e.g. internet connection, power outages, technology malfunction, computer errors, etc.) related to bid submissions.

If additional information is required, please contact the Department of Design and Construction, Contract Section at (718) 391-1041 or by email at CSB_projectinquiries@ddc.nyc.gov.

Executive Director, Specifications

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT A - BIDDERS QUESTIONS AND DDC RESPONSES

No.	Bidders Questions	DDC Responses
1	An Allowance for Expanded Work is shown in the allowance forms in the PASSPort Item Grid as \$884,299.19. However, Addendum 5 says this item does not apply. Should we be including this cost in our bid?	Yes, Expanded Work Allowance applies as noted in the PASSPort Item Grid. See updated Addendum to General Conditions, included with this Addendum.

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT B – REVISIONS TO THE DOCUMENTS

Revisions to Volume 3:

Addendum to the General Conditions, p.3: 012200 Expanded Work Allowance is marked as 'Applies.'

DDC PROJECT #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

ATTACHMENT C – REVISIONS TO PASSPORT FORMS

This Addendum initiates Round 6 of the procurement.

Please note that numbering of addenda is independent of rounds.

Bid Opening Changes:

The Bid Opening scheduled for March 28, 2023 at 2:30pm is rescheduled for March 30, 2023 at 2:30pm.

Questionnaire Changes:

None

Item Grid Changes:

None

THE CITY OF NEW YORK DEPARTMENT OF DESIGN AND CONSTRUCTION DIVISION OF PUBLIC BUILDINGS

ADDENDUM TO THE GENERAL CONDITIONS FOR SINGLE CONTRACT PROJECTS

The General Conditions are hereby amended in accordance with the terms and conditions set forth in this Addendum.

I. PROJECT DESCRIPTION

FMS #: SANDBOMB

PROJECT NAME: NYPD Bomb Squad Building

PROJECT DESCRIPTION: This Project consists of the development of a new building for the NYPD Bomb Squad within the Rodman’s Neck complex in the Bronx, NY.

PROJECT LOCATION: 100A Rodman’s Neck Path
BOROUGH: Bronx
CITY OF NEW YORK
ZIP CODE: 10464
COMMUNITY BOARD #: 10

LANDMARK STATUS:

DESIGNATED LANDMARK STRUCTURE OR SITE: NO
If this is a Designated Landmark Structure or Site, Section 01 3591, Historic Treatment Procedures applies to this project.
LANDMARK QUALITY STRUCTURE: NO
If this is a Landmark Quality Structure, Section 01 3591, Historic Treatment Procedures applies to this project.

II. LEED GREEN BUILDING REQUIREMENTS

NOT USED

III. COMMISSIONING REQUIREMENTS

This project includes MEP and Building Enclosure Commissioning Requirements.

The General Commissioning Requirements for MEP Systems are found in Section 01 9113 of the DDC Standard General Conditions.

The General Commissioning Requirements for Building Enclosure are found in Section 01 9115 of the DDC Standard General Conditions.

Other specific Commissioning Requirements can be found in the Project Specification Sections.

IV. PROJECT MANAGEMENT

DDC shall publicly bid and enter into all contracts for the Project. DDC shall manage the Project using its own personnel.

DDC shall publicly bid and enter into all contracts for the Project. A Construction Management firm (the "CM") hired by DDC shall manage the Project. The Contractor is advised that the CM shall serve as the representative of the Commissioner at the site and shall, subject to review by the Commissioner, be responsible for the inspection, management, coordination and administration of the required construction work, as delineated in the article of the Standard Construction Contract entitled "The Resident Engineer".

V. CONTRACTS FOR THE PROJECT

The Project consists of a single contract, the Contract for General Construction Work. The Contractor for General Construction Work is responsible for the performance of all required work for the Project as set forth in the Contract Documents (General Conditions, Drawings and Specifications), including all responsibilities and obligations assigned to separate Contractors for the following subdivisions of the work: Plumbing Work, HVAC Work, and Electrical Work. All responsibilities and obligations in the Contract Documents assigned to separate Contractors for such subdivisions of the work are the responsibility of the Contractor for General Construction Work.

VI. SCHEDULES

The Contractor is advised that Schedules A through E are attached to, and incorporated as part of, this Addendum to the General Conditions. These schedules contain important information that is specific to this Project. The Contractor is advised to carefully review these schedules.

VII. APPLICABILITY OF SECTIONS/SUB-SECTIONS AND AMENDED SUB-SECTIONS

The Contractor is advised that various Sections/Sub-Sections in the General Conditions may not apply to this Project or may apply as amended. Such Sections/Sub-Sections advise the Contractor to "Refer to the Addendum for the applicability of this Section/Sub-Section." Such Sections/Sub-Sections are set forth below. A check mark indicates whether the Section/Sub-Section (1) applies to the Project, (2) does not apply to the Project, or (3) applies to the Project as amended. If no box is checked, the Section/Sub-Section, as set forth in the General Conditions, applies to the Project. Amended Sections/Sub-Sections, if any, are set forth following this list of Sections.

AMENDED SECTIONS/SUB-SECTIONS

The Contractor is advised that the amended Sub-Sections set forth below are included in the General Conditions and apply to the Project.

Section 01 50 00 Sub-section 3.8(B-3b) is amended as follows:

- 1) Overall Length: 60 feet
Overall Width: 10 feet
- 3) Provide four (4) complete computer workstations and two (2) tablets as specified in sub-section 3.8.D herein. Provide one (1) each complete computer workstation in each private office and one (1) complete computer workstation at the secretarial position as directed by the Resident Engineer.

Section 01 50 00 Sub-section 3.8(B-12) is amended as follows:

- a. Six (6) single pedestal desks, 42" x 32"; six (6) swivel chairs with arms and three (3) side chairs without arms to match desk. Six (6) full ball bearing two (2) drawer vertical legal filing cabinets with locks.
- c. Six (6) metal wastebaskets.

Section 01 50 00 Sub-section 3.8(B-13d) is deleted.

Section 01 50 00 Sub-section 3.8(D2) is deleted.

Section 01 50 00 Sub-section 3.8(D3a) is amended as follows:

Add the following:

10) Laptop Workstation:

Provide four (4) Personal Computers NYPD – Each Laptop Configuration.

- | | |
|------------------------|--|
| a) Make and Model: | Dell Inspiron 15 7000 2-in-1(Black Edition), or an approved equal. (Note: an approved equal requires written approval of the DDC Assistant Commissioner of ITS.) |
| b) Processor: | 11th Generation Intel Core i7-1165G7U Processor (12MB Cache, up to 4.7 GHz) |
| c) Graphics Card | Intel Iris Xe MAX graphics 4GB |

- m) Other Peripherals: Dell Wireless Mouse – WM326, Dell USB Slim DVD+RW Drive, Dell Portable SSD, USB-C 250GB
- n) Operating System Windows 10 Professional
- o) Software Requirement Microsoft Office 2019 Professional; Microsoft Project 2016 Professional, Adobe Acrobat Professional DC, Anti-Virus software package w/ 3 year updates subscription, AutoCAD 2019
- p) Warranty 3 Year Basic Limited Warranty and 3 Year NBD On-Site Service

VIII. SPECIAL EXPERIENCE REQUIREMENTS FOR THE PROJECT

Refer to the PASSPort Questionnaire for Special Experience Requirements.

IX. REVISIONS: SPECIFICATIONS AND CONTRACT DRAWINGS

The Specifications and the Contract Drawings for the Project are revised in accordance with the provisions set forth below.

- (1) Owner: Wherever the term "Owner" is used in the Specifications and/or the Contract Drawings, such term shall mean the City of New York.
- (2) Other Entities: In the event any entity other than the City of New York is referred to or named as the "Owner" in the Specifications and/or the Contract Drawings, the name of such other entity is deemed deleted and replaced with the "City of New York".
- (3) Architect / Engineer: Wherever the words "Architect", "Engineer", "Architect / Engineer" or "Architect and/or Engineer" are used in the Specifications and/or the Contract Drawings, such words are deemed deleted and replaced with the word "Commissioner".
- (4) Products / Manufacturers: Wherever the Specifications and/or the Contract Drawings require the Contractor to provide a particular product (i.e., material and/or equipment) from a designated manufacturer and/or vendor, the term "or approved equal" is deemed inserted, even if only one product and/or manufacturer is specified, except as otherwise provided below.
 - (a) Proprietary Items: If the Documents section in PASSPort contains a Notice which identifies a particular product from a designated manufacturer as a "Sole Source Product, the Contractor shall be required to provide such specified product. In such case, no substitution or "approved equal" will be permitted.
- (5) Special Experience Requirements: Special Experience Requirements for the Project, if any, are set forth in the PASSPort Questionnaire. Special Experience Requirements may apply to Contractors, subcontractors, installers, fabricators, applicators, erectors, specialists, manufacturers and/or suppliers. Refer to DDC General Conditions Section 014000 Article 1.7.C for applicable Special Experience qualification levels. If the Specifications and/or the Contract Drawings contain any Special Experience Requirement that is not set forth in the PASSPort Questionnaire, such Special Experience Requirement is deemed deleted, except as otherwise provided below.
 - (a) Any Special Experience Requirement that provides that the entity performing the work or supplying the material must have more than three (3) years of experience, is revised to provide that the entity performing the work or supplying the material must have three (3) years of experience as noted in DDC General Conditions Section 014000 Quality Requirements, Article 1.7.B, except as described in paragraph (b) below.
 - (b) Any Special Experience Requirement that pertains to the abatement of hazardous materials must not be subject to the deletion and/or revision set forth above. Such Special Experience Requirement will remain in full force and effect.
 - (c) Any Special Experience Requirement that provides that the individual workers performing the work must be licensed, authorized, certified, approved by or acceptable to the manufacturer, is deemed deleted and replaced with the requirement that such individual workers must be properly trained for the specified work.
- (6) Alternate Bids: If the agency is requesting the submission of Alternate Bids, a Notice regarding such Alternate Bids is set forth in the Documents section in PASSPort. In the event of any conflict or inconsistency between (1) the Notice regarding Alternate Bids set forth in the Documents section in PASSPort and (2) a provision in the Specifications and/or the Contract Drawings regarding Alternate Bids, the Notice set forth in the Documents section in shall prevail. If the agency is not requesting the submission of Alternate Bids, as indicated by the absence of a Notice in the Documents section in PASSPort, and the Specifications and/or the Contract Drawings contain any provision regarding Alternate Bids, such provision is deemed deleted.
- (7) Contractor Retained Engineer: If the Specifications and/or the Contract Drawings require the Contractor to retain an Engineer to provide engineering services for the Project, the following sentence is deemed inserted: "Such Engineer must be a Professional Engineer, licensed in the State of New York."
- (8) LEED Related Provisions: If the Specifications and/or the Contract Drawings require the Contractor to purchase FSC certified wood, rapidly renewable materials, or materials within 500 miles (LEED v3) or 100 miles (LEED v4), such provisions are deemed deleted and replaced with the requirement that if the Contractor has purchased

FSC certified wood, rapidly renewable materials, or materials within 500 miles (LEED v3) or 100 miles (LEED v4), the Contractor shall submit such forms or documentation as may be required by the City in order for the USGBC to certify that the Project qualifies for the related LEED credit(s).

- (9) Guarantees: Requirements for Guarantees and Maintenance are set forth in Schedule B, which is included in the Addendum to the General Conditions. In the event of any conflict or inconsistency between (1) a guarantee and/or maintenance requirement set forth in the Specifications and/or the Contract Drawings and (2) a guarantee and/or maintenance requirement set forth in Schedule B, the guarantee and/or maintenance requirement set forth in Schedule B shall prevail.
- (10) Warranties: Requirements for Warranties are set forth in Schedule B, which is included in the Addendum to the General Conditions.
- (a) The term “manufacturer’s warranty” as described in this article encompasses the following terms as indicated in the Specifications: “Manufacturer’s Warranty”, “Manufacturer’s Special Warranty”, “Special Warranty”, “Special Finish Warranty”, “Manufacturer’s Special Warranty for a (product, assembly).”
 - (b) In the event of any conflict or inconsistency between (1) a warranty requirement set forth in the Specifications and/or the Contract Drawings and (2) a warranty requirement set forth in Schedule B, the warranty requirement set forth in Schedule B shall prevail.
 - (c) In the event a warranty requirement set forth in the Specifications and/or the Contract Drawings is omitted from Schedule B, such omission from Schedule B shall have no effect and the Contractor’s obligation to provide the manufacturer’s warranty, as set forth in the Specifications and/or the Contract Drawings, shall remain in full force and effect.
 - (d) In the event a warranty requirement for a particular item of material or equipment is omitted from Schedule B, as well as from the Specifications or the Contract Drawings, and the manufacturer of such item actually provides a warranty, the Contractor shall be obligated to obtain and deliver to the Commissioner the highest level of warranty actually provided by that manufacturer.
- (11) Exculpatory Provisions: In the event the Specifications and/or the Contract Drawings contain any provision whereby the consultant and/or any of its officers, employees or agents, including subconsultants, is absolved of responsibility for any act or omission, such provision is deemed deleted.
- (12) Insurance: Provisions regarding insurance coverage the Contractor is required to provide are set forth in Article 22 of the City of New York Standard Construction Contract and Schedule A, which is included in the Addendum to the General Conditions. In the event the Specifications and/or the Contract Drawings contain any provision regarding insurance requirements, such provision is deemed deleted.
- (13) Indemnification: Provisions regarding indemnification are set forth in Articles 7, 12, 22 and 57 of the City of New York Standard Construction Contract. In the event the Specifications and/or the Contract Drawings contain any provision regarding indemnification, such provision is deemed deleted.
- (14) Dispute Resolution: Provisions regarding dispute resolution are set forth in Article 27 of the City of New York Standard Construction Contract. In the event the Specifications and/or the Contract Drawings contain any provision regarding dispute resolution, such provision is deemed deleted.
- (15) Payment to Other Entities: In the event the Specifications and/or the Contract Drawings contain any provision which requires the Contractor to make payments to an entity other than a subcontractor and/or supplier providing services and/or material for the project, such provision is deemed deleted.
- (16) General Conditions: In the event of any conflict or inconsistency between (1) the Specifications and/or the Contract Drawings and (2) the General Conditions, the General Conditions shall prevail.
- (17) Standard Construction Contract: In the event of any conflict or inconsistency between (1) the Specifications and/or the Contract Drawings and (2) the City of New York Standard Construction Contract, the City of New York Standard Construction Contract shall prevail.
- (18) Shall: Wherever the word “shall” is used in the Specifications and/or the Contract Drawings with respect to the Contractor’s or Subcontractor’s responsibilities or Project Requirements, the term is intended to convey a contractual mandate, such as the terms “must,” “will,” or “be obliged to” (and not “may”).

SCHEDULE A (FOR PUBLICLY BID PROJECTS)
PART I - Contract Requirements

Various Articles of the Contract refer to requirements which are set forth in Schedule A of the General Conditions. The Schedule set forth below specifies the following: (1) the referenced Articles of the Contract, and (2) the specific requirements applicable to the contract.

REFERENCE	ITEM	REQUIREMENTS	CONTRACT #1
Information For Bidders	Bid Security	The Contractor must obtain a bid security in the amount indicated to the right.	Required provided the TOTAL BID PRICE set forth on the Bid Form is \$1,000,000. or more. Certified Check: 2% of Bid Amount or Bond: 10% of Bid Amount
Information For Bidders	Performance and Payment Bonds		For Contracts in the amount of \$1,000,000.00 or more, Performance and Payment Bonds must each be in amount equal to 100% of the Contract Price.
Information For Bidders	Department of Design and Construction Safety Requirements	The Contractor must provide the safety personnel as indicated to the right	<input checked="" type="checkbox"/> Project Safety Representative <input type="checkbox"/> Dedicated, full-time Project Safety Representative
Article 14 Contract	Time of Substantial Completion	Consecutive Calendar Days	720
Article 15 Contract	Liquidated Damages	For each consecutive calendar day over completion time	\$600
Article 17 Contract	Sub-Contracts	Not to exceed Percent of Contract Price	60%
Article 21 Contract	Retainage	Percent of Voucher	If 100% bonds are required 5% If 100% bonds are not required, and Contract Price is \$1,000,000 or less 5% If 100% bonds are not required, and Contract Price is more than \$1,000,000 10%
Article 24 Contract	Deposit Guarantee	Percent of Contract Price	1%
Article 24 Contract	Period of Guarantee		See Schedule B of the Addendum to the General Conditions
Article 75 Contract	Compensation to be Paid to Contractor		Amount for which the Contract was Awarded: _____ Dollars (\$ _____)
Article 79 Contract	MWBE Program		See M/WBE Utilization Plan in the PASSPort Procurement M/WBE Considerations Section.

SCHEDULE A (FOR PUBLICLY BID PROJECTS)

Relating to Article 22 - Insurance

PART II. Types of Insurance, Minimum Limits and Special Conditions

Note: All certificate(s) of insurance submitted pursuant to Contract Article 22.3. 3 must be accompanied by a Certification by Broker consistent with Part III below and include the following information:

- For each insurance policy, the name and NAIC number of issuing company, number of policy, and effective dates;
- Policy limits consistent with the requirements listed below;
- Additional insureds or loss payees consistent with the requirements listed below; and
- The number assigned to the Contract by the City (in the “Description of Operations” field).

Insurance indicated by a blackened box (■) or by (X) in the to left will be required under this contract.

Types of Insurance (per Article 22 in its entirety, including listed paragraph)	Minimum Limits and Special Conditions
<p>■ Commercial General Liability Art. 22.1.1</p>	<p>This Contract requires Commercial General Liability Insurance (CGL) that is at least as broad as ISO Form CG 00 01 (see Section 22.1.1 of the New York City Standard Construction Contract).</p> <p>The minimum limits shall be <u>\$1,000,000.00</u> per occurrence and <u>\$2,000,000.00</u> per project aggregate applicable to this Contract unless the Work requires a permit from the Department of Buildings and greater limits of Commercial General Liability Insurances are required pursuant to 1 RCNY section 101-08.</p> <p>Additional Insureds:</p> <p>1. City of New York, including its officials and employees, with coverage at least as broad as ISO Forms CG 20 10 and CG 20 37, and</p> <p>2. All person(s) or organization(s), if any, that Article 22.1.1(b) of the Contract requires to be named as Additional Insured(s), with coverage at least as broad as ISO Form CG 20 26. The Additional Insured endorsement shall either specify the entity's name, if known, or the entity's title (e.g., Project Manager).</p>

<p>[OTHER] Art. 22.1.8</p> <p>■ Professional Liability</p> <p>In the event any section of the Specifications requires the Contractor to engage a Professional Engineer to provide design and/or engineering services, the Engineer engaged by the Contractor, as well as any sub consultant(s) performing professional services, shall provide Professional Liability Insurance.</p>	<p>\$1,000,000 per occurrence</p> <p>The Contractor's Professional Engineer shall maintain and submit evidence of Professional Liability Insurance in the minimum amount of \$1,000,000 per claim. The policy or policies shall include an endorsement to cover the liability assumed by the Contractor under this Agreement arising out of the negligent performance of professional services or caused by an error, omission or negligent act of the Contractor's Professional Engineer or anyone employed by the Contractor's Professional Engineer.</p> <p>Claims-made policies will be accepted for Professional Liability Insurance. All such policies shall have an extended reporting period option or automatic coverage of not less than two (2) years. If available as an option, the Contractor's Professional Engineer shall purchase extended reporting period coverage effective on cancellation or termination of such insurance unless a new policy is secured with a retroactive date, including at least the last policy year.</p>
<p>OTHER] Art. 22.1.8</p> <p><input type="checkbox"/> Umbrella/Excess Liability Insurance</p> <p>The Contractor shall provide Umbrella/Excess Liability Insurance in the minimum amounts shown to the right. The policy terms and condition should be at least as broad as the underlying policies. The underlying policies should comply with the insurance provision as outlined by the contract. Defense cost should be in addition to the limit of liability. The City of New York, including its officials and employees, should be included as additional insured as respects to the noted project.</p>	<p>\$10,000,000 per Occurrence and \$10,000,000 in Aggregate</p>

SCHEDULE A (FOR PUBLICLY BID PROJECTS)

Relating to Article 22 - Insurance

PART III. Certificates of Insurance

All certificates of insurance (except certificates of insurance solely evidencing Workers' Compensation Insurance, Employer's Liability Insurance, and/or Disability Benefits Insurance) must be accompanied by one of the following:

- (1) the Certification by Insurance Broker or Agent on the following page setting forth the required information and signatures;

-- OR --

- (2) copies of all policies as certified by an authorized representative of the issuing insurance carrier that are referenced in such certificate of insurance. If any policy is not available at the time of submission, certified binders may be submitted until such time as the policy is available, at which time a certified copy of the policy shall be submitted.

SCHEDULE A (FOR PUBLICLY BID PROJECTS)

Relating to Article 22 - Insurance

PART III. Certification by Insurance Broker or Agent

The undersigned insurance broker or agent represents to the City of New York that the attached Certificate of Insurance is accurate in all material respects.

[Name of broker or agent (typewritten)]

[Address of broker or agent (typewritten)]

[Email address of broker or agent (typewritten)]

[Phone number/Fax number of broker or agent (typewritten)]

[Signature of authorized official or broker or agent]

[Name and title of authorized official, broker or agent (typewritten)]

NOTARY PUBLIC FOR THE STATE OF _____

SCHEDULE A (FOR PUBLICLY BID PROJECTS)

Relating to Article 22 - Insurance

PART IV. Address of Commissioner

Wherever reference is made in Article 7 or Article 22 to documents to be sent to the **Commissioner** (e.g., notices, filings, or submissions), such documents must be sent via email to insurance@ddc.nyc.gov. Hard copies of such documents will no longer be required or accepted.

SCHEDULE B

Guarantees and Warranties

(Reference: Section 01 7839, Article 2.7 of the DDC Standard General Conditions)

GUARANTY FROM CONTRACTOR

(1) Contractor’s Guaranty Obligation: The Contractor shall promptly repair, replace, restore or rebuild, as the Commissioner may determine, any finished Work in which defects of materials or workmanship may appear or to which damage may occur because of such defects, during the one (1) year period subsequent to the date of Substantial Completion (or use and occupancy in accordance with the Contract), except for the areas of Work set forth below:

- Roofing, Waterproofing, and Joint Sealant Work. For these types of work, the guarantee period shall be (2) two years.
- Trees and/or Plant Material. For trees and/or plant material furnished and installed, the guarantee period shall be (2) two years. During the guarantee period, the Contractor shall provide all maintenance services set forth in the Specifications.

(2) Guaranty Period: The obligation of the Contractor, and its Surety under the Performance Bond, is limited to the period(s) of time specified above.

(3) Other Provisions Deemed Deleted: In the event the Specifications and/or the Contract Drawings contain any provisions regarding guaranty requirements, such provisions are deemed deleted and replaced with the guaranty requirements set forth in this Schedule B.

WARRANTY FROM MANUFACTURER

(1) Contractor’s Obligation to Provide Warranties: The items of material and/or equipment for which manufacturer warranties are required are listed below. For each item of material and/or equipment listed below, the Contractor shall obtain a written warranty from the manufacturer. Such warranty shall provide that the material or equipment is free from defects for the period set forth below and will be replaced or repaired within such specified period. The Contractor shall deliver all required warranties to the Commissioner.

(2) Required Warranties:

Specification Number	Material or Equipment	Warranty Period (years)
06 61 16	Solid Surfacing Fabrications	10
07 13 00	Foundation Waterproofing	2
07 27 00	Air Barriers	3
07 42 13	Metal Wall Panels: Exterior Panel Finish	10
07 42 13	Metal Wall Panels: Wall System	5
07 52 00	Modified Bituminous Membrane Roofing	20
07 92 00	Joint Sealants	10
08 36 13	Sectional Doors	5
08 44 13	Glazed Aluminum Curtain Walls	10
08 44 13	Glazed Aluminum Curtain Walls: finish	20
08 51 13	Aluminum Windows	10
08 62 00	Unit Skylights	10
08 62 00	Unit Skylights: finish	10
08 71 00	Door Hardware: Closers	10
08 71 00	Door Hardware: Exit Devices	3

Specification Number	Material or Equipment	Warranty Period (years)
08 71 00	Door Hardware: Locksets and Cylinders	3
08 71 00	Door Hardware: All other Hardware	2
08 80 00	Glass and Glazing: Coated Glass	5
08 80 00	Glass and Glazing: Insulating Glass	10
08 80 00	Glass and Glazing: Laminated Glass	5
09 67 24	Resinous Flooring	3
10 21 13	Toilet Compartments	15
12 24 13	Roller Window Shades	25
13 31 13	Framed Fabric Structures: Fabric	10
22 05 33	Heat Tracing for Plumbing Piping	10
22 11 23.13	Domestic Packaged Water Booster Pumps	1
22 33 00	Electric Domestic Water Heaters	5
23 35 16	Engine Exhaust Systems	3
23 72 00	Air-to-Air Energy Recovery Equip.	1
23 72 00	Air-to-Air Energy Recovery Equip.: Heat Exchanger	6
23 72 00	Air-to-Air Energy Recovery Equip.: Compressor	2
23 72 00	Air-to-Air Energy Recovery Equip.: Energy Wheel	5
23 81 29	Variable Refrigerant Flow HVAC Systems	1.5
23 81 29	Variable Refrigerant Flow HVAC Systems: Compressor	6
23 82 39	Unit Heaters	1
23 82 39	Unit Heaters: Heating Element	5
26 05 13	Medium Voltage Cable	40
26 05 19	Low Voltage Electrical Power Conductors	10
26 09 23	Lighting Control Devices	1
26 31 00	Photovoltaic Collectors: Modules	20
26 31 00	Photovoltaic Systems: Inverter, Transformer	5
26 31 00	Photovoltaic Collectors: Support System	20
26 31 01	Data Acquisition for Photovoltaic System	5
26 32 14	Generator Tap Box	1
26 50 00	Lighting	2
26 50 00	Lighting: Ballasts	3
27 10 00	Structured Cabling	25
28 42 00	Gas Detection and Alarm	1
28 42 00	Gas Detection and Alarm: CO Sensor	3
28 42 00	Gas Detection and Alarm: NO2 Sensor	1
28 46 00	Fire Detection and Alarm	1

(3) Application: The obligations under the warranty for the periods specified above shall apply only to the manufacturer of the material or equipment, and not to the Contractor or its Surety; provided, however, the Contractor retains responsibility for obtaining all required warranties from the manufacturers and delivering the same to the Commissioner.

(4) Other Provisions: The warranty requirements set forth in this Schedule B are also included in the Specifications.

- (a) In the event of any conflict between a warranty requirement set forth in the Specifications and a warranty requirement set forth in Schedule B, the warranty requirement set forth in Schedule B shall take precedence.
- (b) In the event a warranty requirement set forth in the Specifications is omitted from Schedule B, such omission from Schedule B shall have no effect and the Contractor's obligation to provide the manufacturer's warranty, as set forth in the Specifications, shall remain in full force and effect.

- (c) In the event a warranty requirement for a particular item of material or equipment is omitted from both Schedule B and the Specifications, and the manufacturer of such item actually provides a warranty, the Contractor shall be obligated to obtain and deliver to the Commissioner the highest level of warranty actually provided by that manufacturer.
- (d) In the event a warranty requirement is provided for a particular item of material or equipment, and such requirement specifies a warranty period that is longer than that which is actually provided by any of the specified manufacturers, the Contractor shall be obligated to obtain and deliver to the Commissioner the highest level of warranty actually provided by any of the specified manufacturers, unless otherwise directed in writing by the Commissioner.
- (e) Unless indicated otherwise Warranties are to take effect on the date of Substantial Completion.

SCHEDULE C

Contract Drawings

(Reference: Section 01 1000, Article 1.5 (A) of the DDC Standard General Conditions)

The Schedule set forth below lists all Contract Drawings for the Project.

<u>NUMBER</u>	<u>DRAWING TITLE</u>
1 . T000.00	TITLE, DWG SCHEDULE, KEY PLANS

SCHEDULE D

Electrical Motor Control Equipment

(Reference: 01 3506, Article 3.8 of the DDC Standard General Conditions)

Requirements for electrical motor equipment may be included in one or more sections of the Specifications for the Contract for the Project. Schedule D set forth below delineates specific information for electrical motor control equipment. In the event of any conflict between the Specifications and this Schedule D, Schedule D shall take precedence; provided, however, in the event of an omission from Schedule D (i.e., Schedule D omits either a reference to or information concerning electrical motor equipment which is set forth in the Specifications), such omission from Schedule D shall have no effect and the Contractor's obligation with respect to the electrical motor control equipment, as set forth in the Specifications, shall remain in full force and effect.

TABLE OF CONTENTS

CONTRACT #1 GENERAL CONSTRUCTION

DIVISION 1 - GENERAL CONDITIONS

01 91 17 Building Enclosure Functional Performance Test Protocol

DIVISION 2 - EXISTING CONDITIONS

02 41 16.13 Building Demolition
02 80 13 General Contractor Work Allowance for Incidental Asbestos Abatement

DIVISION 3 - CONCRETE

03 30 00 Cast-in-Place Concrete
03 33 00 Architectural Concrete

DIVISION 4 - MASONRY

04 20 00 Unit Masonry

DIVISION 5 – METALS

05 12 00 Structural Steel Framing
05 31 00 Steel Decking
05 40 00 Cold Formed Metal Framing
05 50 00 Metal Fabrications
05 70 00 Decorative Metal

DIVISION 6 - WOOD, PLASTICS AND COMPOSITES

06 20 00 Finish Carpentry
06 61 16 Solid Surfacing Fabrications

DIVISION 7 - THERMAL AND MOISTURE PROTECTION

07 13 00 Foundation Waterproofing
07 21 00 Thermal Insulation
07 27 00 Air Barriers
07 42 13 Metal Wall Panels
07 52 00 Modified Bituminous Membrane Roofing
07 62 00 Sheet Metal Flashing and Trim
07 71 00 Roof Specialties
07 81 00 Applied Fireproofing
07 84 13 Penetration Firestopping
07 92 00 Joint Sealants

DIVISION 8 - OPENINGS

08 11 13	Hollow Metal Doors and Frames
08 31 13	Access Doors and Frames
08 33 23	Overhead Coiling Doors
08 36 13	Sectional Doors
08 44 13	Glazed Aluminum Curtain Walls
08 51 13	Aluminum Windows
08 62 00	Unit Skylights
08 71 00	Door Hardware
08 81 00	Glass Glazing
08 95 43	Flood Vents

DIVISION 9 - FINISHES

09 29 00	Gypsum Board
09 30 13	Ceramic Tiling
09 67 23	Resinous Flooring
09 90 00	Painting and Coating

DIVISION 10 - SPECIALTIES

10 11 00	Visual Display Units
10 14 00	Signage
10 21 13	Toilet Compartments
10 28 00	Toilet, Bath and Laundry Accessories
10 44 13	Fire Protection Cabinets
10 51 13	Metal Lockers
10 56 13	Metal Storage Shelving

DIVISION 12 - FURNISHINGS

12 24 13	Roller Window Shades
----------	----------------------

DIVISION 13 - SPECIAL CONSTRUCTION

13 31 33	Framed Fabric Structures
----------	--------------------------

DIVISION 14 - CONVEYING EQUIPMENT

14 24 00	Hydraulic Elevators
----------	---------------------

DIVISION 21 - FIRE PROTECTION

21 05 00	Common Work Results for Fire Suppression
21 08 00	Commissioning of Fire Suppression
21 10 00	Water-Based Fire Suppression Systems
21 31 13	Electrical-Drive, Centrifugal Fire Pumps

DIVISION 22 – PLUMBING

22 05 00	Common Work Results for Plumbing
22 05 23	General Duty Valves for Plumbing Piping
22 05 29	Hangers And Supports for Plumbing Piping and Equipment
22 05 33	Heat Tracing for Plumbing Piping
22 05 53	Identification for Plumbing Piping and Equipment
22 07 00	Plumbing Insulation
22 08 00	Comissioning of Plumbing
22 11 13	Facility Water Distribution Piping
22 11 16	Domestic Water Piping
22 11 19	Domestic Water Piping Specialties
22 11 23.13	Domestic Water-Packaged Booster Pumps
22 13 16	Sanitary Waste and Vent Piping
22 13 19	Sanitary Waste Piping Specialties
22 14 13	Facility Storm Drainage Piping
22 14 23	Storm Drainage Piping Specialties
22 14 29	Sump Pumps
22 15 13	General Service Compressed Air Piping
22 15 19	General Service Packaged Air Compressors and Receivers
22 33 00	Electric Domestic Water Heaters
22 40 00	Plumbing Fixtures

DIVISION 23 - HEATING, VENTILATING AND AIR CONDITIONING

23 05 00	Common Work Results for HVAC
23 05 13	Common Motor Requirements for HVAC Equipment
23 05 29	Hangers And Support for HVAC Piping and Equipment
23 05 48	Vibration and Seismic Controls for HVAC
23 05 50	Noise Control
23 05 53	Indentification for HVAC Piping And Equipment
23 05 93	Testing, Adjusting, and Balancing for HVAC
23 07 00	HVAC Insulation
23 08 00	Commissioning of HVAC
23 09 00	Instrumentation and Control for HVAC
23 23 00	Refrigerant Piping
23 31 13	Metal Ducts
23 33 00	Air Duct Accessories
23 34 16	HVAC Fans
23 35 16	Engine Exhaust Systems
23 37 13	Diffusers, Registers and Grilles
23 72 00	Air-to-Air Energy Recovery Equipment
23 81 29	Variable Refrigerant Flow HVAC Systems
23 82 39	Unit Heaters

DIVISION 26 – ELECTRICAL

26 05 00	Common Work Results for Electrical
26 05 05	Selective Demolition for Electrical
26 05 10	Electrical Testing
26 05 13	Medium-Voltage Cables
26 05 19	Low-Voltage Electrical Power Conductors
26 05 26	Grounding and Bonding for Electrical Systems
26 05 29	Hangers And Supports for Electrical Systems
26 05 33	Raceways and Boxes for Electrical Systems
26 05 43	Underground Ducts and Raceways for Electrical Systems
26 05 53	Identification for Electrical Systems
26 05 85	Provision for Elevators
26 08 00	Commissioning of Electrical Systems
26 09 23	Lighting Control Devices
26 12 00	Medium Voltage Transformers
26 24 16	Panelboards
26 24 20	Feeders and Branch Circuitry
26 27 00	Electric Service
26 27 13	Electricity Metering
26 27 26	Wiring Devices
26 28 00	Low-Voltage Circuit Protective Devices
26 28 13	Fuses
26 28 16.13	Enclosed Circuit Breakers
26 28 16.16	Enclosed Switches
26 29 13	Enclosed Controllers
26 31 00	Photovoltaic Collectors
26 31 01	Data Acquisition for Photovoltaic System
26 32 14	Generator Tap Box
26 36 00	Transfer Switches
26 50 00	Lighting

DIVISION 27 - COMMUNICATIONS

27 10 00	Structured Cabling
----------	--------------------

DIVISION 28 - ELECTRONIC SAFETY AND SECURITY

28 00 00	Electronic Safety and Security
28 05 00	Common Work Results for Electronic Safety and Security
28 08 00	Commissioning of Electronic Safety and Security
28 14 00	Access Control System Hardware
28 20 00	Video Surveillance
28 21 00	Surveillance Cameras
28 42 00	Gas Detection and Alarm
28 46 00	Fire Detection and Alarm

DIVISION 31 – EARTHWORK

31 00 00	Earthwork
31 01 00	Site Work Standards
31 22 00	Grading
31 23 00	Excavation and Fill
31 23 33	Trenching and Backfilling
31 25 00	Erosion and Sedimentation Controls
31 41 16	Sheet Piling
31 64 00	Drilled Caissons

DIVISION 32 - EXTERIOR IMPROVEMENTS

32 11 23	Aggregate Base Courses
32 11 36	Concrete Base Courses
32 12 13.13	Tack Coats
32 12 19	Asphalt Paving Wearing Courses
32 15 40	Crushed Stone Surfacing
32 16 13	Curbs and Gutters
32 31 13	Chain Link Fences and Gates
32 92 00	Turf and Grasses
32 93 00	Plants

DIVISION 33 - UTILITIES

33 14 19	Valves and Hydrants for Water Utility Service
33 31 13	Site Sanitary Sewerage Gravity Piping
33 42 11	Stormwater Gravity Piping
33 42 31	Stormwater Area Drains and Inlets
33 42 41	Gratings and Frames for Stormwater Drainage Inlets

**CONTRACT # 1
GENERAL CONSTRUCTION WORK**

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 01 91 17

BUILDING ENCLOSURE FUNCTIONAL PERFORMANCE TEST PROTOCOL

PART I – GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the project
 1. The Contract Drawings
 2. The Specifications
 3. The General Conditions
 4. The Addendum
 5. The Contract [City of New York Standard Construction Contract]

1.2 SECTION INCLUDES

- A. This section includes functional performance testing requirements for the Building Enclosure systems. Refer to DDC's General Conditions 01 91 13 General Commissioning Requirements for MEP Systems and Section 01 91 15 General Commissioning Requirements for Building Enclosure.

1.3 RELATED WORK

- A. Division 03, 05, 07, 08 and 09 Specification Sections also apply to this section. Where conflicts arise regarding building enclosure testing, this Section shall supersede the other Sections.

1.4 TESTING AGENCY

- A. Building Enclosure Testing Agency should be an independent agency retained by the Contractor, fully accredited by the appropriate governing body for each of the materials, components, or systems to be tested or evaluated for compliance with the requirements of the contract documents as outlined below in sections 1.7 and 1.8, and as directed by the BECA. Accreditations to include American Architectural Manufacturers Association (AAMA), American National Standards Institute (ANSI), International Accreditation service, Inc. (IAS), Safety Glazing Certification Council (SGCC), and Window and Door Manufacturers Association (WDMA).
- B. Submit BETA qualifications for testing indicated for acceptance by the Commissioner.

1.5 COORDINATION

- A. Functional Performance Team members shall consist of:
 1. Commissioning Agent (CxA)
 2. Building Enclosure Commissioning Agent (BECA)
 3. Building Enclosure Testing Agent (BETA)
 4. Commissioner
 5. Contractor and all Building Enclosure Sub-Contractors

- B. Management: The Contractor shall hire the BETA. The Commissioner shall direct and coordinate the activities of the BETA, as guided by the BECA. All interactions between the BECA and the Contractor are to be coordinated by the Commissioner.
- C. Scheduling:
 - 1. The Contractor and BETA shall work with the BECA and Commissioner to establish a functional performance testing schedule.

1.6 REPORTING

- A. The Contractor shall provide reports from the BETA for all functional performance testing to the Commissioner and BECA.
- B. BECA shall submit non-compliance and deficiency reports to Commissioner, CxA, and Contractor, as needed.

1.7 PERFORMANCE REQUIREMENTS

- A. The performance criterion below applies to all mock-up and field testing of exterior enclosure components.
- B. Air and Water performance criteria summary table according to each component:

Component	Performance Criteria	
	Air	Water
Glazed Aluminum Curtain Wall Assembly	ASTM E 1186 (4.2.6) – No major air leaks. A major leak is defined as air and smoke are visible and easily detectable by hand within one inch of the leak location(s) <i>DIAGNOSTIC TESTING</i>	AAMA 501.2 – No leakage when tested under a calibrated water spray at 30 psi. <i>2 TESTS @ EACH FENESTRATION TYPE, LOCATION PER COMMISSIONER</i>
	ASTM E 783 – Maximum air leakage of 0.06 cfm/ft at an air pressure differential of 6.24 psf <i>2 TESTS @ EACH FENESTRATION TYPE, LOCATION PER COMMISSIONER</i>	
Aluminum Window Assemblies	ASTM E 1186 (4.2.6) – No major air leaks. A major leak is defined as air and smoke are visible and easily detectable by hand within one inch of the leak location(s) <i>DIAGNOSTIC TESTING</i>	AAMA 501.1/ ASTM E 1105 - No evidence of water penetration when tested under a pressure difference equivalent to the greater of 20% of the maximum positive pressure in zone 5 of the ASCE 07 wind load calculations or 20% of the positive wind tunnel recorded pressure but not less than 6.24 psf.
	ASTM E 783 – Maximum air leakage of 0.1 cfm/ft at an air pressure differential of 6.24 psf <i>2 TESTS @ EACH</i>	

	<i>FENESTRATION TYPE, LOCATION PER COMMISSIONER</i>	<i>2 TESTS @ EACH FENESTRATION TYPE, LOCATION PER COMMISSIONER</i>
Unit Skylights	ASTM E 783 – Maximum air leakage of 0.20 cfm/ft at an air pressure differential of 1.57 psf <i>2 TESTS @ EACH FENESTRATION TYPE, LOCATION PER COMMISSIONER</i>	AAMA 501.1/ ASTM E 1105 - No evidence of water penetration when tested under a pressure difference equivalent to the greater of 20% of the maximum positive pressure in zone 5 of the ASCE 07 wind load calculations or 20% of the positive wind tunnel recorded pressure but not less than 6.24 psf. <i>2 TESTS, LOCATION PER COMMISSIONER</i>
	ASTM E 1186 (4.2.6) – No major air leaks. A major leak is defined as air and smoke are visible and easily detectable by hand within one inch of the leak location(s) <i>DIAGNOSTIC TESTING</i>	AAMA 501.2 – No leakage when tested under a calibrated water spray at 30 psi. <i>2 TESTS, LOCATION PER COMMISSIONER</i>
Air Barrier Assemblies	ASTM E 1186 (4.2.7) – Pass/fail criteria shall be no bubbles observed in the leak detection liquid. <i>2 TESTS @ EACH ANCHOR TYPE, LOCATION PER COMMISSIONER</i>	AAMA 501.1/ ASTM E 1105 – Test inconjunction with adjacent fenestration. No uncontrolled water leakage when tested under a pressure as defined in fenestrations above. <i>TEST IN CONJUNCTION WITH FENESTRATION.</i>
	ASTM E 1186 (4.2.6) – No major air leaks. A major leak is defined as air and smoke are visible and easily detectable by hand within one inch of the leak location(s) <i>2 TESTS @ EACH ANCHOR TYPE, LOCATION PER COMMISSIONER</i>	
	ASTM E 783 – Test inconjunction with adjacent fenestration. Air leakage criteria to match fenestration criteria above. <i>TEST IN CONJUNCTION WITH ASTM E 1105</i>	

Roofing Systems	ASTM E 1186 (4.2.7) – Pass/fail criteria shall be no bubbles observed in the leak detection liquid. <i>2 TESTS @ EACH ANCHOR TYPE AND SEAMA, LOCATION PER COMMISSIONER</i>	ASTM D7877 - Electronic Leak Detection (ELD), or
		ASTM C1153 - No wet insulation observed. Verify suspicious areas with test cuts. <i>IR SCAN @ 100% OF THE SYSTEM</i>

- C. Water leakage is only acceptable if all of the following conditions are satisfied:
 - 1. Water is contained and drained to the exterior.
 - 2. There is no wetting of a surface that is visible to the building occupants.
 - 3. There would be no staining or other damage to the completed building or finishes.

- D. Where testing indicates that performance requirements are not met, the Contractor shall repair or replace the failed section and a re-test conducted. Any repairs should be conducted with inspection by the BECA. Re-testing shall be conducted by the BETA at no additional cost to the City.

- E. In addition to re-testing, failed tests shall typically result in testing of an additional specimen by the Contractor at the discretion of the Commissioner and at no additional cost to the City. Testing shall be concluded only when satisfactory results are achieved.

1.8 FIELD TEST REQUIREMENTS

- A. All functional performance tests shall be conducted to project performance requirements as set forth in the Construction Documents.

- B. The baseline testing defined below is included in the contract and shall be performed at no additional cost to the City.

- C. Where testing indicates that performance requirements are not met, the Contractor shall repair or replace the failed section and a re-test shall be conducted at no additional cost to the City. Any repairs shall be conducted with inspection by the BECA. Re-testing shall be conducted by the BETA at no additional cost to the City.

- D. In addition to re-testing, failed tests shall typically result in testing of an additional specimen by the Contractor at a location selected by the BECA at no additional cost to the City. Testing shall be concluded only when satisfactory results are achieved. Refer to DDC’s General Conditions Section 01 91 13 General Commissioning Requirements for MEP Systems and Section 01 91 15 General Commissioning Requirements for Building Enclosure.

- E. The following shall be performed during the construction phase at the discretion of the Commissioner and BECA:
1. Air Barrier Testing:
 - a. The performance criteria and test pressures for each test method shall be the same as the corresponding test outlined above. Large scale field testing includes the following baselin testing.
 - b. ASTM D4541: Adhesion testing of self-adhered and fluid applied air barriers.
 - 1) Allowable: All air barriers to achieve a minimum adhesion of 16 psi (sheathing) and/or 30 psi (concrete / masonry).
 - 2) Testing Extent: Perform periodic testing for each substrate, but no less than 2 (two) representative tests for each substrate per season to confirm results from mockup phase.
 2. Sealant Testing:
 - a. ASTM C1521, Pull testing of field installed weatherproofing sealants
 - 1) Allowable: Pass/Fail criteria shall be the adhesive failure of the joint.
 - 2) Testing extent: One (1) test for each joint type per 1000 lineal ft. installed
 - b. ASTM C1401-14, Guide for Structural Sealant Glazing; Method A Hand Pull Tab (Destructive).
 - 1) Allowable: Pass/Fail criteria shall be the adhesive failure of the joint.
 - 2) Testing extent: One (1) test for each joint type per 1000 lineal ft. installed.
 - c. ASTM C1193-16, Guide for Use of Joint Sealants: Field-Applied Sealant Joint Hand Pull Tab
 - 1) Allowable: Pass/Fail criteria shall be the adhesive failure of the joint.
 - 2) Testing extent: One (1) test for each joint type per 1000 lineal ft. installed.
- F. In the event of water leakage through the test sample either during pre-testing or final testing; additional isolation testing shall be conducted to best determine the location of the water infiltration as required.
- G. Failure of any tests listed above shall result in subsequent repair and retesting of the failed specimen and the Commissioner's option to test an addition specimen.

PART II – PRODUCTS (Not Used)

PART III – EXECUTION (Not Used)

END OF SECTION 01 91 17

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 02 41 16.13

BUILDING DEMOLITION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Demolition and removal of existing building.
2. Disconnecting and capping existing abandoned utility lines.
3. Removal of debris.
4. Filling below grade voids.
5. Protection of existing curbs and sidewalks.
6. Temporary covered passageways.
7. Rodent control.
8. Maintain (re-route, shore, etc.) all existing utilities and facilities to adjacent buildings which are to remain.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Prior to beginning work, prepare a careful study of the building to be demolished and map out a definite plan of procedure before demolition is begun, for review of the Commissioner.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. The Contractor must be responsible for the engineering of any and all required support of excavation (means and methods) and must retain the services of a Professional Engineer licensed in the State of New York to provide signed and sealed drawings for submission to the New York City Department of Buildings.

1.5 JOB CONDITIONS

- A. Buildings and other structures to be demolished will be vacated and discontinued in use prior to the start of the work.
- B. Condition of Structures
 - 1. The City of New York assumes no responsibility for the actual condition of structures to be demolished.
 - 2. Conditions existing at the time of inspection for bidding purposes will be maintained by the City of New York insofar as practicable.
- C. Partial Removal
 - 1. Items of salvageable value to the Contractor may be removed from the structure as the work progresses. Salvaged items must be transported from the site as they are removed.
 - 2. Storage or sale of removed items on the site will not be permitted.
- D. Explosives: The use of explosives will not be permitted.
- E. Protection
 - 1. Provide interior and exterior shoring, bracing, or supporting to prevent movement or settlement or collapse of structures to be demolished and adjacent facilities to remain. The Contractor must engage a Professional Engineer licensed in the State of New York to advise on bracing, shoring, underpinning, or other structural requirements. The Contractor must bear all responsibility for prevention of movement or other structural fault.
- F. Utilities
 - 1. Maintain any existing utilities required to remain; keep in service and protect against damage during demolition operations.
 - 2. Do not interrupt existing utilities serving occupied or used facilities, except when authorized in writing by Commissioner. Provide temporary services during interruptions to existing utilities, as acceptable to Commissioner.
 - 3. The Contractor must arrange to shut off utilities serving the structure. Disconnect and seal the abandoned utilities before starting demolition operations. Coordinate all work with Con Edison.

PART 2 PRODUCTS

Not Used

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 DEMOLITION

A. Pollution Controls

1. Use water sprinkling, temporary enclosures, and other suitable methods to limit the amount of dust and dirt rising and scattering in the air to the lowest practical level.
 - a. Do not use water when it may create hazardous or objectionable conditions such as ice, flooding, and pollution.
2. Clean adjacent structures and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to condition existing prior to the start of the work.
3. Provide drainage for temporary water use.

B. Building Demolition

1. Demolish building completely and remove from the site. Refer to drawings for scope of demolition.
2. Proceed with demolition in a systematic manner, from the top of the structure to the ground. Complete demolition work above each floor or tier before disturbing supporting members on lower levels.
3. Demolish concrete and masonry in small sections.
4. Remove structural framing members and lower to ground by means of hoists, derricks, or other suitable methods.
5. Break up and remove concrete slabs on grade at street level.
6. Locate demolition equipment throughout the structure and remove materials so as to not impose excessive loads to supporting walls, floors, or framing.

3.3 DISPOSAL OF DEMOLISHED MATERIALS

A. General

1. Remove from the site debris, rubbish, and other materials resulting from demolition operations that are not acceptable as fill material.
2. Burning of removed materials from demolished structures will not be permitted on the site.

- B. Removal: Transport materials removed from demolished structures and legally dispose of off site. Leave the site in an orderly condition to the approval of the Commissioner.

END OF SECTION 02 41 16.13

**SECTION 028013 – GENERAL CONTRACTOR WORK
NOVEMBER 2017 VERSION**

ALLOWANCE FOR INCIDENTAL ASBESTOS ABATEMENT

1.01 SCOPE FOR ASBESTOS ABATEMENT WORK

- A. The "General Conditions" apply to the work of this Section.
- B. The asbestos abatement contractor shall remove asbestos containing materials as needed to perform the other work of this Contract when discovered during the course of work. When required, the asbestos abatement contractor shall replace the ACM with non-asbestos containing materials. An allowance of **\$15,000.00** for the **General Contractor** is herein established for this incidental work when so ordered and authorized by the Commissioner.
- C. All work shall be done in accordance with the applicable provisions of the rules and regulations of the asbestos control program as promulgated by Title 15 Chapter I of RCNY and New York State Department of Labor Industrial Code Rule 56 cited as 12 NYCRR Part 56, whichever is more stringent as per latest amendments to these laws and as modified herein by these specifications.
- D. All disposal of asbestos contaminated material shall be per Local Law 70/85.
- E. The asbestos abatement contractor's attention is directed to the fact that certain methods of asbestos abatement are protected by patents. To date, patents have been issued with respect to "negative pressure enclosure" or "negative-air" or "reduced pressure" and "glove bag".
- F. The asbestos abatement contractor shall be solely responsible for and shall hold the Department of Design and Construction and the City harmless from any and all damages, losses and expenses resulting from any infringement by the asbestos abatement contractor of any patent, including but not limited to the patents described above, used by the asbestos abatement contractor during performance of this agreement.
- G. "Asbestos" shall mean any hydrated mineral silicate separable into commercially usable fibers, including but not limited to chrysotile (serpentine), amosite (cummingtonite-grunerite), crocidolite (riebeckite), tremolite, anthrophyllite and actinolite.
- H. Prior to starting, the asbestos abatement contractor must notify the Commissioner of the Department of Design and Construction if he/she anticipates any difficulty in performing the Work as required by these Specifications. The asbestos

abatement contractor is responsible to prepare and submit all filings, notifications, etc. required by all City, State and Federal regulatory agencies having jurisdiction.

The asbestos abatement contractor is responsible for submitting the Asbestos Project Notification Form (ACP-7 Form) to the Department of Environmental Protection, Asbestos Control Program, as per Title 15, Chapter I of RCNY and to the NYSDOL as per Industrial Code Rule 56.

The asbestos abatement contractor is responsible for preparing, and submitting Asbestos Variance Application (ACP-9). If a Variance is required, the asbestos abatement contractor is responsible to retain a NYSDOL Asbestos Project Designer, as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required variance.

The general contractor is responsible for preparing and submitting an Asbestos Abatement Permit and/or Work Place Safety Plans (WPSP) that may be required for the completion of the Contract or incidental work. If such plans are required, the general contractor is responsible for retaining a registered design professional as defined in Title 15, Chapter 1 of the RCNY to prepare and submit the required plans.

The asbestos abatement contractor is responsible for the submission of all required documents to the NYCDEP to acquire the appropriate Asbestos Project Conditional Closeout (ACP-20) and/or Asbestos Project Completion Forms (ACP-21) on a timely basis for the completion of the incidental work encountered under this contract.

The asbestos abatement contractor will be required to attend an on-site job meeting with the Construction Project Manager prior to the start of work to examine conditions and plan the sequence of operations, etc.

The asbestos abatement contractor shall have a NYSDOL/NYCDEP Asbestos Supervisor onsite to oversee the work and conduct a final visual inspection as required by both Title 15, Chapter 1 of the RCNY and NYSDOL Industrial Code Rule 56.

- I. All work shall be done during regular working hours unless the asbestos abatement contractor requests authorization to work in other than regular working hours and such authorization is granted by the Commissioner. (Regular work hours are those hours during which any given facility, in which work is to be done, is customarily open and functioning, normally between the hours of 8:00 A.M. and 4:00 P.M. Monday - Friday.) If such work schedule is authorized by the Commissioner, the work shall be done at no additional cost to the City.
- J. The Commissioner may order that work be done in other than regular working hours as herein by defined and this order may require the asbestos abatement

contractor to pay premium or overtime wages to complete the work. If the Commissioner orders work in other than regular working hours, the asbestos abatement contractor shall multiply the unit price for that portion of the work requiring premium wages by 1.50 when computing payment in accordance with Paragraph 1.09. All requests for premium payment must be supported by certified payroll sheets and field sheets approved by the Construction Project Manager.

1.02 QUALIFICATIONS OF ASBESTOS ABATEMENT CONTRACTOR

- A. Requirements: The asbestos abatement contractor must be approved through the Department's Request for Subcontractor Approval, administered by the Agency Chief Contracting Office (ACCO), Vendor Integrity Unit. The asbestos abatement contractor must demonstrate compliance with the special experience requirements set forth in subparagraphs (1) through (6) below. Such documentation shall include without limitation, all required licenses, certificates, and documentation.
1. The asbestos abatement contractor must, whether an individual, corporation, partnership, joint venture or other legal entity, demonstrate for the three year period prior to the work that it has been licensed by the New York State Department of Labor (NYSDOL), as an "Asbestos Abatement Contractor". The asbestos abatement contractor shall submit copies of the asbestos abatement contractors NYSDOL License for the past three years
 2. The asbestos abatement contractor must, for the three-year period prior to the work, have been in the business of providing asbestos abatement services as a routine part of its daily operations.
 3. The asbestos abatement contractor proposing to do asbestos abatement work must be thoroughly experienced in such work and must submit a list of five (5) asbestos abatement projects of similar size and complexity. The aggregate cost of these projects must be at least \$1,000,000 in each of the three years.
 4. For each project submitted to meet the experience requirements set forth above, the asbestos abatement contractor must submit the following information for the project; name and location of the project; name title and telephone number and email address of the owner or the owner's representative who is familiar with the asbestos abatement contractor's work; brief description of the scope of work completed as a prime or sub-asbestos abatement contractor; amount of contract or subcontract and the date of completion.
 5. The asbestos abatement contractor must demonstrate that it has the financial resources, certified supervisory personnel and equipment

necessary to carry out the work and to comply with the required performance schedule, taking into consideration other business commitments. The asbestos abatement contractor must submit such documentation as may be required by the Department of Design and Construction to demonstrate that it has the requisite capacity to perform the required services of this contract. The Department may also conduct an inspection of the asbestos abatement contractor's facility to verify if the contractor has equipment and staffing to perform the work.

6. The asbestos abatement contractor must submit a copy of their Corporate Health and Safety Plan for review and acceptance. A Job Hazard Analysis (JHA) for the specific work conducted must be included.
- B. Throughout the specifications, reference is made to codes and standards which establish qualities and types of workmanship and materials, and which establish methods for testing and reporting on the pertinent characteristics thereof. Provide materials or workmanship that meet or exceed the specifically named codes or standards where required by these specifications.
- C. Site Investigation: Asbestos abatement contractor shall inspect all the specifications and related drawings, and will investigate and confirm the site conditions affecting the work, including, but not limited to (1) through (5) below. The asbestos abatement contractor will attend a walkthrough site inspection with the department's Project Manager and the Third-Party Air Monitor prior to the work. Such walkthrough will be scheduled at the Department's convenience.
1. Physical considerations and conditions of both the material and structure. These considerations include any obstacles or obstructions encountered in accessing or removing the material.
 2. Handling, storage, transportation and disposal of the material.
 3. Availability of qualified and skilled labor.
 4. Availability of utilities.
 5. Exact quantities of all materials to be disturbed and/or removed

1.03 ASBESTOS ABATEMENT CONTRACTOR RESPONSIBILITIES

The asbestos abatement contractor will visit the subject location within one (1) working day of notification to ascertain actual work required. If the project is identified as being "urgent", then work shall commence no later than 48 hours from the time of notification. In this event, the asbestos abatement contractor shall immediately notify when applicable EPA NESHAPS Coordinator, NYSDOL Asbestos Control Bureau and NYCDEP

Asbestos Control Program of start of the work and file the necessary Asbestos Notifications and any applicable Variance Applications with the regulatory agencies cited above.

In the event that the project is not classified as "urgent" the asbestos abatement contractor shall notify the EPA NESHAPS Coordinator, NYSDOL and NYCDEP by submitting the requisite asbestos project notification forms, postmarked 10 days before activity begins if 260 linear feet or more and/or 160 square feet or more of asbestos containing material will be disturbed.

The following information must be included in the notification:

- A. Name and address of building City or operator;
- B. Project description:
 - 1. Size - square feet, number of linear feet, etc;
 - 2. Age - date of construction and renovations (if known);
 - 3. Use - i.e., office, school, industrial, etc.
 - 4. Scope - repair, demolition, cleaning, etc.
- C. Amount of asbestos involved in work and an explanation of techniques used to determine the amount;
- D. Building location/address, including Block and Lot numbers;
- E. Work schedule including the starting and completion dates;
- F. Abatement methods to be employed;
- G. Procedures for removal of asbestos-containing material;
- H. Name, title and authority of governmental representative sponsoring project.

1.04 WORK INCLUDED IN UNIT PRICE

The asbestos abatement contractor will be paid a basic unit price of **\$25.00** per square feet for the removal and disposal of asbestos containing material and replacement of the same with non-asbestos containing materials.

Unit price shall include all costs necessary to do the work of this Contract, including but not limited to: labor, materials, equipment, utilities, disposal, insurance, overhead and profit.

1.05 AIR MONITORING – ASBESTOS ABATEMENT CONTRACTOR

- A. “Air Sampling” shall mean the process of measuring the fiber content of a known volume of air collected during a specific period of time. The procedure utilized for asbestos follows the NIOSH Standard Analytical Method 7400 or the provisional transmission electron microscopy methods developed by the USEPA and/or National Institute of Standard and Technology which are utilized for lower detectability and specific fiber identification.
- B. Air monitoring of asbestos abatement contractor’s personnel will be performed in conformance with OSHA requirements, (All costs associated with this work are deemed included in the unit price.).
- C. Qualifications of Testing Laboratory:

The industrial hygiene laboratory shall be a current proficient participant in the American Industrial Hygiene Association (AIHA) PAT Program. The laboratory identification number shall be submitted and approved by the City. The laboratory shall be accredited by the AIHA and New York State Department of Health Environmental Laboratory Approval Program (ELAP).

Note: Work area air testing and analysis before, during and upon completion of work (clearance testing) will be performed by a Third Party Air Monitor under separate Contract with the City.

1.06 THIRD PARTY MONITORING AND LABORATORY

- A. The NYCDDC, at its own expense, will employ the services of an independent Third Party Air Monitoring Firm and Laboratory. The Third Party Air Monitor will perform air sampling activities and project monitoring at the Work Site.
- B. The Laboratory will perform analysis of air samples utilizing Phase Contrast Microscopy (PCM) and/or Transmission Electron Microscopy (TEM).
- C. The Third Party Air Monitoring Firm and the designated Project Monitor shall have access to all areas of the asbestos removal project at all times and shall continuously inspect and monitor the performance of the asbestos abatement contractor to verify that said performance complies with this Specification. The Third-Party Air Monitor shall be on site throughout the entire abatement operation.
- D. The NYCDDC will be responsible for costs incurred with the Third Party Air Monitoring Firm and laboratory work. Any subsequent additional testing required due to limits exceeded during initial testing shall be paid for by the asbestos abatement contractor.

1.07 PAYMENT REQUEST DOCUMENTATION

- B. The following information shall be included for each payment request:
1. Description of work performed.
 2. Linear footage and pipe sizes involved.
 3. Square footage for boiler & breaching insulation removed.
 4. Square footage of non pipe and boiler areas removed, patched, enclosed, sealed, or painted.
 5. Square footage of encapsulation, sealing, patching, and painting involved.
 6. Total cost associated with compliance with the assigned task.
 7. Architectural, Electrical, HVAC, Plumbing, etc. work incidental to the Asbestos Abatement Work.
 8. A certified copy (in form 4312-39) to the Comptroller or Financial Officer of the New York City to the effect that the financial statement is true.
 9. A signed copy (in form 6506q-6) of certificate of compliance with non-discriminatory provisions of the Contract.
 10. Attach a copy of valid workmen compensation insurance.
 11. Valid asbestos insurance per occurrence.
 12. General liability insurance when required.
- C. Each payment request shall include a grand total for all work completed that billing period, the landfill waste manifests and a copy of waste transporter permit. The Department of Design and Construction will inspect the work performed, review the cost and approve or disapprove requests for payment.
- D. EXPOSURE LOG: With this final payment, the asbestos abatement contractor shall submit a listing of the names and social security numbers of all employees actively engaged in the abatement work of this Contract. This list shall include a summary showing each part of the abatement work in which the employee was engaged and the dates thereof.

1.08 QUANTITY CALCULATIONS

In order to determine the square footage involved for the various pipe sizes of pipe insulation that might be encountered, the following table is to be used.

PIPE INSULATION SIZE O.D.	PIPE SIZE O.D.	SQUARE FOOTAGE PER LINEAR FOOT
2-1/2"	1/2"	0.65
2-3/4"	3/4"	0.72
3"	1"	0.79
3-1/4"	1-1/4"	0.85
3-1/2"	1-1/2"	0.92
4"	2"	1.05
4-1/2"	2-1/2"	1.18
5"	3"	1.31
6"	3-1/4"	1.57
7"	3-1/2"	1.83
8"	4"	2.09
9"	5"	2.36
10"	6"	2.62
12"	8"	3.14
14"	10"	3.67
16"	12"	4.19
18"	14"	4.71

1.09 METHOD OF PAYMENT

Payment shall be made in accordance with Items A through R below. Payment shall be calculated based on the actual quantity of the item performed by the asbestos abatement contractor, times the unit price specified below. Credits may apply to certain times, as specified below.

A. REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING PIPE INSULATION: Actual linear footage, multiplied by the square footage factor listed for the respective pipe size in Section 1.08, multiplied by the unit price in Section 1.04.

EXAMPLE: 100 lin.ft. of 1/2" pipe and 100 lin.ft. of 6" pipe, including elbows, tees. Flanges, etc.

$$100 \times 0.65 = 65 \text{ sq.ft.} \quad 65 \times \text{unit price} = \text{Payment}$$

$$100 \times 2.62 = 262 \text{ sq.ft.} \quad 262 \times \text{unit price} = \text{Payment}$$

B. REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER INSULATION: (all types including Silicate Block and including the removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.

EXAMPLE: Item B. removal and replacement of 1000 S.F. of boiler insulation (incl. Silicate block)

1000 S.F. X (1.5) X the Unit Price = Payment

- C. **REMOVAL, DISPOSAL AND REPLACEMENT OF TANK INSULATION:** (all types including removal/replacement of metal jacketing) Payment shall be made at 1.5 times the unit price per square foot.
- D. **REMOVAL, DISPOSAL AND REPLACEMENT OF BOILER UPTAKE, & BREACHING INSULATION:** (all types including stiffening angles and wire lath) Payment shall be made at 2.0 times the unit price per square foot.
- E. **REMOVAL, DISPOSAL AND REPLACEMENT OF DUCT INSULATION:** Payment shall be made at 1.0 times the unit price per square foot.
- F. **REMOVAL, DISPOSAL AND REPLACEMENT OF SOFT ASBESTOS CONTAINING MATERIAL:** (Including sprayed-on fire proofing and sound proofing) Payment shall be made at 1.0 times the unit price per square foot of surface area. Area of irregular surfaces must be calculated and confirmed with DDC representative.
- G. **ACOUSTIC PLASTER REPAIR AND/OR ENCAPSULATION:** Payment shall be made at 0.5 times the unit price per square foot.
- H. **PATCHING OR REPAIR** of items listed in A through F will be paid at 0.33 times the unit price per square foot.
- I. **REMOVAL, DISPOSAL AND REPLACEMENT OF WATERPROOFING ASBESTOS CONTAINING MATERIAL:** (including friable and non-friable waterproofing material from interior and exterior walls, floors, foundations, penetrations, louvers, vents and openings other than windows, doors and skylights) Payment shall be made at 0.5 times the unit price per square foot.
- J. **REMOVAL, DISPOSAL AND REPLACEMENT OF ASBESTOS CONTAINING ELECTRICAL WIRING INSULATION:** (including friable and non-friable wiring insulation) Payment shall be made at 0.33 times the unit price per square foot.
- K. **PAINTING:** Payment shall be made at 0.05 times the unit price per square foot.
- L. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING PLASTER:** from ceilings and walls, including any wire lath and disposal as asbestos containing waste. Payment shall be made at 0.80 times the unit price per square foot.
- M. **REMOVAL AND DISPOSAL OF ASBESTOS-CONTAINING FLOOR TILES, CEILING TILES, TRANSITE PANELS:** (including any adhesive, glue, mastic and/or underlayment) and disposal as asbestos containing waste. Payment shall be made at 0.40 times the unit price per square foot. If multiple

layers are discovered, each additional layer shall be paid at 0.20 times the unit price per square foot.

- N. **ADDITIONAL CLEAN UP/HOUSEKEEPING OF WORK AREA:** (excluding pre-cleaning of work area required by regulations) HEPA vacuuming and wet cleaning of asbestos contaminated surface. Payment shall be made at 0.20 times the unit price per square foot. When GLOVE BAG is employed to remove ACM, cost of HEPA vacuuming and wet cleaning of floor area up to 3 feet on each side of glove-bag shall be included in unit price and no extra payment will be made.
- O. **REMOVAL, DISPOSAL OF ASBESTOS-CONTAINING ROOFING MATERIAL:** including mastic, flashing and sealant compound and provide temporary asbestos-free roof covering consisting of one layer of rolled roofing paper sealed with asphaltic roofing compound. Payment shall be made at 0.8 times the unit price per square foot. Credit at a rate of 0.33 times the unit price will be taken for each square foot of temporary roof covering which the asbestos abatement contractor is directed not to install.
- P. **PICK-UP AND DISPOSAL OF GROSS DEBRIS:** (excluding any waste generated from abatement under Item A-R) at a rate of \$150 per cubic yard for asbestos contaminated waste and \$75 per cubic yard for non-asbestos contaminated waste. This cost includes all labor and material cost associated with work.
- Q. **REMOVAL OF ASBESTOS-CONTAINING BRICK, BLOCK, MORTAR, CEMENT OR CONCRETE:** along with all surfacing materials including wire lath and/or other supporting structures and disposal as ACM waste. Payment shall be made at a rate of \$25.00 per cubic foot of material removed.
- R. **REMOVAL AND DISPOSAL OF ASBESTOS CONTAINING WINDOW/DOOR CAULKING:** including friable and non-friable caulking, weather-stripping, glazing, sealants or other waterproofing materials applied to windows, doors, skylights, etc. Payment shall be made at the rate of \$400.00 per opening regardless of size or configuration. This cost includes labor, consumable materials, set-up/breakdown, removal and disposal, as required.

Note 1: CREDIT: For items listed in A through F, a credit at a rate of 0.33 times the unit price, times the respective multiplier (for each item) will be taken for each square foot of insulation which the asbestos abatement contractor is not directed to reapply.

Note 2: MINIMUM PAYMENT: The minimum payment per call at any individual job sites or various job sites during the same day will be eight hundred dollars (\$800.00).

Note 3: All payments shall be made as described in paragraph 1.09 herein.

Note 4: WORKING HIGHER THAN 12 FEET ABOVE FLOOR LEVEL OR WORK REQUIRING COMPLEX SCAFFOLDING OR CONSTRUCTION WORK

PLATFORMS: Provisions are made in this Contract to compensate the asbestos abatement contractor for work performed in locations that are difficult to access due to work at elevations that are significantly higher than the normal work level. The unit price for these items will be paid at 1.20 times the unit price described in Paragraphs 1.09, A through R for those portions of the work that are more than twelve (12) feet above the grade for that would be judged as the normal working level.

1.10 GUARANTEE

- A. Work performed in compliance with each task shall be guaranteed for a period of one year from the date the completed work is accepted by the Department of Design and Construction.
- B. The Commissioner of The Department of Design and Construction will notify the asbestos abatement contractor in writing regarding defects in work under the guarantee.

1.11 OCCUPANCY OF SITE NOT EXCLUSIVE

Attention is specifically drawn to the fact that contractors, performing the work of other Contracts, may be brought upon any of the work sites of this Contract. Therefore, the asbestos abatement contractor shall not have exclusive rights to any site of his work and shall fully cooperate and coordinate his work with the work of other contractors who may be brought upon any site of the work of this Contract. This paragraph applies to those areas outside the regulated Work Area as defined by Title 15, Chapter I of RCNY.

1.12 SUBMITTALS

- A. Pre-Construction Submittals:
 - 1. Attend a pre-construction meeting scheduled by the City of New York Department of Design and Construction. This meeting shall also be attended by a designated representative of the City of New York third party air monitoring firm, facility manager and the Construction Project Manager. At this meeting, the asbestos abatement contractor shall present three copies of the following items:
 - a. asbestos abatement contractor's scope of work, work plan and schedule.
 - b. Asbestos project notifications, approved variances and plans to Government Agencies.
 - c. Copies of Permits, clearance and licenses if required.
 - d. Schedules: the asbestos abatement contractor shall provide to the Construction Project Manager a copy of the following schedules for

approval. Once approved, schedules shall be maintained and updated as received. asbestos abatement contractor shall post a copy of all schedules at the site:

- (1) A construction schedule stating critical dates of the project including, but not limited to, mobilization, Work Area preparation, demolition, gross removal, fine cleaning, encapsulation, inspections, clearance monitoring, and phase of refinishing and final inspections. The schedule shall be updated biweekly, at a minimum.
 - (2) A schedule of staffing stating number of workers per shift per activity, name and number of supervisor(s) per shift, shifts per day, and total days to be worked.
 - (3) Submit all changes in schedule or staffing to the Construction Project Manager prior to implementation.
- e. Written description of emergency procedures to be followed in case of injury or fire. This section must include evacuation procedures, source of medical assistance (name and telephone number to nearest hospital) and procedures to be used for access by medical personnel (examples: first aid squad and physician). NOTE: Necessary Emergency Procedures Shall Take Priority Over All Other Requirements of These Specifications.
- f. Safety Data Sheets (SDS) for encapsulants, sealants, firestopping foam, cleaners/disinfectants, spray adhesive and any and all potentially hazardous materials that may be employed on the project. No work involving the aforementioned will be allowed to proceed until SDS are reviewed.
- g. Worker Training and Medical Surveillance: The asbestos abatement contractor shall submit a list of the persons who will be employed by him /her to perform the removal work. Present evidence that workers have received proper training required by the regulations and the medical examinations required by OSHA 29 CFR 1926.1101.
- h. Logs: Specimen copies of daily progress log, visitor's log, and disposal log.
- (1) The asbestos abatement contractor shall provide a permanently bound log book of minimum 8-1/2" x 11" size at the entrance to the Worker and Waste Decontamination enclosure system as hereinafter specified. Log book shall

contain on title page the project name, name, address and phone number of the asbestos abatement contractor; name, address and phone number of asbestos abatement contractor and City's third party air monitoring firm; emergency numbers including, but not limited to local Fire/Rescue Department. Log book shall contain a list of personnel approved for entry into the Work Area.

- (2) All entries into the log shall be made in non-washable, permanent ink and such pen shall be strung to or otherwise attached to the log to prevent removal from the log-in area. Under no circumstances shall pencil entries be permitted. Any significant events occurring during the abatement project shall be entered into the log. Upon completion of the job, the asbestos abatement contractor shall submit the logbook containing a day-to-day record of personnel log entries countersigned by the Construction Project Manager every day.

- i. Worker's Acknowledgments: Submit statements signed by each employee that the employee has received training in the proper handling of ACM, understands the health implications and risks involved; and understands the use and limitations of the respiratory equipment to be used.

B. During Construction Submittals:

1. Security and safety logs showing names of person entering workspace, date and time of entry and exit, record of any accident, emergency evacuation, and any other safety and/or health incident.
2. Progress logs showing the number of workers, supervisors, hours of work and tasks completed shall be submitted daily to the Construction Project Manager.
3. Floor plans indicating asbestos abatement contractor's current work progress shall be submitted for review by the Construction Project Manager.
4. All asbestos abatement contractors' air monitoring and inspection results.

C. Project Closeout Submittals:

Upon completion of the project and as a condition of acceptance, the asbestos abatement contractor shall present two copies of the following items, bound and indexed:

1. Lien Waivers from asbestos abatement contractor, sub-asbestos abatement contractors and Suppliers,
2. Daily OSHA air monitoring results,
3. All Waste Manifests (Asbestos and Construction Debris), seals and disposal logs,
4. Field Sign-In/Sign-Out Logs for every shift,
5. Copies of all Building Department Forms and Permits,
6. A Letter of Compliance stating that all the work on this project was performed in accordance with the Specifications and all applicable Federal, State and Local regulations,
7. All Warranties as stated in the Specifications,
 - a. Fully executed disposal certificates and transportation manifest.
8. Project Record: The asbestos abatement contractor shall maintain a project record for all small and large asbestos projects. During the project, the project record shall be kept on site at all times. Upon completion of the project, the project record shall be maintained by the building owner. The project record shall be submitted to DDC as part of the close out documents. The project record shall consist of:
 - a. Copies of licenses of all asbestos abatement contractors involved in the project;
 - b. Copies of NYCDEP and NYSDOL supervisor and handler certificates for all workers engaged in the project;
 - c. Copies of all project notifications and reports filed with NYCDEP, NYSDOL and USEPA for the project, with any amendments or variances;
 - d. Copies of all asbestos abatement permits, including associated approved plans and work place safety plan;
 - e. A copy of the air sampling log and all air sampling results;
 - f. A copy of the abatement asbestos abatement contractor's daily log book;

- g. Copies of all asbestos waste manifests;
- h. A copy of all Project Monitor's Reports (ACP-15).
- i. A copy of each ATR-1 Form completed for the asbestos project (if required).
- j. A copy of each Asbestos Project Conditional Closeout Report (ACP-20) if required.
- k. A copy of the Asbestos Project Completion Form (ACP-21).

1.13 PROTECTION OF FURNITURE AND EQUIPMENT

Cover all furniture and equipment that cannot be removed from Work Areas. Movable furniture and equipment will be removed from Work Areas by the asbestos abatement contractor prior to start of work. At the conclusion of the work (after final air testing), the asbestos abatement contractor will remove all plastic covering on walls, floors, furniture, equipment and reinstall furniture and equipment. He shall remove and store all sheaths, curtains and drapes, and reinstall same following final clean up.

1.14 UTILITIES

A. General:

All temporary facilities shall be subject to the approval of the Commissioner. Prior to starting work at any site, locations and/or sketches (if required) of temporary facilities must be submitted to the Construction Project Manager for the required approval.

B. Water:

The Department of Design and Construction will furnish all water needed for construction, at no cost to the asbestos abatement contractor in buildings under their jurisdiction. However, it is the responsibility of the asbestos abatement contractor to ensure that hot water is provided for showering in the decontamination unit. The asbestos abatement contractor shall furnish, install and maintain any needed equipment to meet these requirements at his own expense.

C. Electricity:

The Department of Design and Construction will furnish all electricity needed for construction, at no cost to the asbestos abatement contractor in a building, under their jurisdiction. The asbestos abatement contractor is responsible for routing the electric power to the abatement Work Area.

All temporary lighting and temporary electrical service for Work Area shall be in weatherproof enclosures and be ground fault protected.

- D. In leased spaces, arrangements for water supplies and electricity must be made with the landlord. However, all such arrangements must be made through and are subject to approval of the Department of Design and Construction. Utilities will be provided at no cost to the asbestos abatement contractor. However, it is the asbestos abatement contractor's (or the general contractor's) responsibility to furnish and install a suitable distribution system to the Work Area. This system will be provided at no cost to the City.

1.15 FEES

The asbestos abatement contractor shall be responsible for any and all fees or charges imposed by Local, State or Federal Law, Rule and Regulation applicable to the work specified herein, including fees or charges which may be imposed subsequent to the date of the Bid opening.

END OF SECTION

SECTION 03 30 00

CAST IN PLACE CONCRETE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Foundation systems including footings, piles, pile caps, walls, beams, piers, and similar concrete.
2. Slabs on grade.
3. Structural slabs on grade.
4. Cast-in-place slabs, beams, and walls.
5. Furnishing and installing all required anchors and inserts.
6. Placing in the forms all inserts, anchors, anchor bolts, bearing plates and the like furnished by other trades for casting into the concrete and cleaning of same after stripping of forms.
7. Protection of all inserts, anchors, hangers, sleeves and supports furnished and set by others for the attachment of other work to the concrete, or required to permit the passage of other work through the concrete.
8. Supply, fabricate and place all required reinforcing bars, mesh and other reinforcement for concrete where shown, called for, and/or required complete with proper supporting devices.
9. Erection and removal of all formwork required to properly complete the work.
10. Finishing of all concrete work as hereinafter specified.
11. Curing and protection of all concrete work.
12. Site concrete consisting of curbs, walks, pads, boxes and the like as shown on the drawings.
13. Floor sealers and dust-proofing of all areas exposed and/or covered with carpet.
14. Cutting, patching, grouting, restoring and pointing up as required.
15. Vapor barrier system below slabs on grade.
16. Under slab drainage course.
17. Dewatering.
18. Waterproofing.
19. Grouting of all beam bearing plates and column base plates.
20. Equipment pads as required.
21. All other work and materials as may be reasonably inferred and needed to make the work of this section complete.
22. Waste Management

B. Related Requirements:

1. DDC General Conditions “Construction Waste Management and Disposal”
2. Section 04 20 00 “Unit Masonry”
3. Section 05 12 00 “Structural Steel Framing”
4. Section 05 31 00 “Steel Decking”
5. Section 05 50 00 “Metal Fabrications”
6. Section 06 20 00 “Finish Carpentry”
7. Section 07 13 00 “Foundation Waterproofing”
8. Section 07 92 00 “Joint Sealants”

1.3 SUBMITTALS

A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

B. Product Data: Submit data for proprietary materials and items, including the following:

1. Reinforcement and forming accessories
2. Admixtures
3. Patching compounds
4. Waterstops
5. Joint systems
6. Curing compounds
7. Dry-shake finish materials
8. Others items as requested by the Commissioner.

C. Shop Drawings; Reinforcement: Submit original shop drawings for fabrication, bending, and placement of concrete reinforcement. Comply with ACI 315 "Details and Detailing of Concrete Reinforcement" showing bar schedules, stirrup spacing, diagrams of bent bars, arrangement of concrete reinforcement. Include special reinforcement required for openings through concrete structures. The shop drawings must be prepared by a Professional Engineer licensed in the State of New York and checked by the contractor prior to submission.

1. The shop drawings must show construction, contraction and isolation joint locations and the added reinforcement required at same.
2. Obtain and coordinate information for sleeves and openings in concrete, which are required for the work of other trades. Make coordinated drawings showing size and location of openings and sleeves and incorporate this information on the reinforcing drawings.
3. Only those splices indicated on the approved shop drawings will be permitted.
4. Provide elevations of all foundation walls and other structural elements to a minimum 1/4" scale.

D. Shop Drawings Formwork: Submit shop drawings for fabrication and erection of specific finished concrete surfaces. Show form construction including jointing, special form joint or reveals, location and pattern of form tie placement, and other items which affect exposed concrete visually. Commissioner’s review is for general architectural applications and features only. Design of formwork for structural stability and efficiency is Contractor’s responsibility,

prepared by or under the supervision of a qualified Professional Engineer licensed in the State of New York detailing fabrication, assembly, and support of formwork.

1. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.
- E. Construction Joint Layout: Indicate proposed construction joints required to construct the structure.
 1. Location of construction joints is subject to approval of the Commissioner.
- F. Contraction Joint Layout: Indicate proposed contraction joints required per applicable codes and drawings.
 1. Location of contraction joints is subject to approval of the Commissioner.
- G. Samples: Submit samples of materials as requested by Commissioner, including names, sources and descriptions.
- H. Laboratory Test Reports: Submit laboratory test reports for concrete materials, mix design test and microwave test.
- I. Material Certificates: Provide materials certificates in lieu of materials laboratory test reports when permitted by Commissioner and Manufacturer, certifying that each material item complies with, or exceeds, specified requirements must sign material certificates. Provide certification from admixture manufacturers that chloride content complies with specification requirements.
- J. Cold Weather and Hot Weather Concreting Procedures: Submit written descriptions of contractor's proposed cold weather and hot weather concreting procedures, when applicable.
- K. Certification that pozzolanic materials conforms to ASTM C 618-01 (noting class C or class F), ASTM C 989 or ASTM C1240.
- L. Certified recycled steel content. Provide cut sheets clearly indicating whether the rebar used meets the minimums for post-consumer OR post-industrial recycled contents. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and if the recycled content is post-consumer or post-industrial.
- M. Formwork: Specify whether reusable, permanent, salvaged or new wood forms are to be used.
- N. Recycled Aggregate: Provide laboratory reports indicating that aggregate conforms to ASTM C33 for structural concrete or ASTM D1241-00 for sub-base material. Provide cut sheets clearly indicating the source, total weight and volume of the recycled aggregate. If aggregate provided is a mix of virgin and recycled aggregates obtain a written affidavit from the manufacturer stating the recycled content percentage
- O. VOC content for curing compounds, sealants and release agents: Provide a cut sheet and a Material Safety Data Sheet (MSDS) for each curing compound, sealant, hardener and release agent used highlighting VOC contents. VOC content must be less than or equal to limits stated under "PRODUCTS".

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”
- B. Source Limitations: Obtain each type or class of cementitious material of the same brand from the same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer.
- C. Welding Qualifications: Qualify procedures and personnel according to AWS-98 D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."
- D. Codes and Standards: Comply with provisions of following codes, specifications, and standards, except where more stringent requirements are shown or specified:
 - 1. New York City Building Code, 2008
 - 2. ACI 117 “Standard Specifications for Tolerances for Concrete Construction and Materials and Commentary.”
 - 3. ACI 211.1 “Standard Practice for Selecting Proportions for Normal, Heavyweight and mass concrete.”
 - 4. ACI 211.2, “Standard Practice for Selecting Proportions for Structural Lightweight Concrete.”
 - 5. ACI 214R, “Evaluation of Strength Test Results of Concrete.”
 - 6. ACI 232.2R, “Use of Fly Ash in Concrete.”
 - 7. ACI 233R, “Guide to Use of Slag Cement in Concrete and Mortar.”
 - 8. ACI 234, “Guide for the Use of Silica Fume in Concrete.”
 - 9. ACI 301 “Specifications for Structural Concrete.”
 - 10. ACI 302.1R “Guide for Concrete Floor and Slab Construction.”
 - 11. ACI 304R, “Guide for Measuring, Mixing, Transporting and Placing Concrete.”
 - 12. ACI 305R “Hot Weather Concreting.”
 - 13. ACI 306.1-90 “Standard Specification for Cold Weather Concreting.”
 - 14. ACI 308.1 “Standard Specification for Curing Concrete.”
 - 15. ACI 309R, “Guide for Consolidation of Concrete.”
 - 16. ACI 311.4R, “Guide for Concrete Inspections.”
 - 17. ACI 315, “Details and Detailing of Concrete Reinforcement.”
 - 18. ACI 318 “Building Code Requirements for Structural Concrete and Commentary.”
 - 19. ACI 347 “Guide to Formwork of Concrete.”
 - 20. Concrete Reinforcing Steel Institute, (CRSI) “Manual of Standard Practice.”
 - 21. CRSI-WCRSI, “Placing Reinforcing Bars.”
 - 22. AWS D1.4, “Structural Welding Code Reinforcing Steel.”
 - 23. The ACI Field Reference Manual, SP-15 must be kept at the job site, and the practices set forth therein must be strictly adhered to.
 - 24. ASTM Standards as applicable in the building code of New York City and as noted in this specification.
- E. Form TR3: Technical Report Concrete Design Mix: The contractor shall be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design

mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.

- F. Materials and installed work may require testing and retesting at anytime during progress of work. Tests, including retesting of rejected materials for installed work, must be done at Contractor's expense.
- G. Preconstruction Meeting:
1. At least 35 days prior to the start of the concrete construction schedule, the Contractor must conduct a meeting to review the proposed mix designs and to discuss the required methods and procedures to achieve the required concrete construction. The Contractor must send a pre-concrete conference agenda to all attendees 20 days prior to the scheduled date of the conference.
 2. The Contractor must require responsible representatives of every party who is concerned with the concrete work to attend the conference, including but not limited to the following:
 - a. Contractor's superintendent
 - b. Laboratory responsible for the concrete design mix
 - c. Laboratory responsible for field quality control
 - d. Concrete subcontractor
 - e. Ready-mix concrete producer
 - f. Admixture manufacturer(s)
 - g. Concrete pumping equipment manufacturer.
 3. Minutes of the meeting must be recorded, typed and printed by the contractor and distributed to all parties concerned within 5 days of the meeting. One copy of the minutes must also be transmitted to the following for information purposes:
Commissioner.
 4. The minutes must include a statement by the concrete contractor indicating that the proposed mix design and placing can produce the concrete quality required by these specifications.
 5. A minimum of a 4 cubic yard trial mixture containing all required admixtures must be placed at the job site using the accepted methods of placing, finishing and curing. All applicable tests including slump, strength, air content, permeability, and air content will be performed. This must occur at least four weeks before actual concreting operations with particular admixture begins. The admixture manufacturer(s) and inspectors must be present. The same testing should be done in the laboratory at the same time for comparison. A test sample should be done for each condition that is to be placed.

1.5 PROJECT CONDITIONS

- A. The Contractor, before commencing work, must examine all adjoining work on which this work is in any way dependent for proper installation and workmanship according to the intent of this specification, and must report to the Commissioner any condition which prevents this contractor from performing first class work.

- B. Protection of Footings Against Freezing: Cover completed work at footing level with sufficient temporary or permanent cover as required to protect footings and adjacent subgrade against possibility of freezing; maintain cover for time period as necessary.
- C. Protect adjacent finish materials against spatter during concrete placement.
- D. Provide all barricades and safeguards at all pits, holes, shaft and stairway openings, etc., to prevent injury to workmen and others within and about the premises. Also provide all safeguards as required by the 2008 New York City Building Code, OSHA, or any other departments having jurisdiction. Take full responsibility for all safety precautions and methods.
- E. Procedure of Work: The contractor must stay constantly informed as to the progress of the work in the field, materials and men ready to start work immediately when conditions of preceding work are available or ready, wholly or in part, so as not to delay the progress of building work or to interfere with the progress of work of other trades, and in any event must, within 24 hours after notice from the City of New York, proceed with such work as directed to maintain the uninterrupted progress of the work.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Avoid damaging coatings on steel reinforcement.
- B. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 FORM MATERIALS

- A. Forms for Exposed Finish Concrete: Unless otherwise indicated, construct of plywood, metal, metal-framed plywood faced, or other acceptable panel-type materials, to provide continuous, straight, smooth, exposed surfaces. Furnish in largest practicable sizes to minimize number of joints and to conform to joint system shown on drawings. Provide form material with sufficient strength and thickness to withstand pressure of newly placed concrete without bow or deflection.
 - 1. Use plywood complying with U.S. Product Standard PS-1 “B-B (Concrete Form) Plywood”, Class I, Exterior Grade or better mill oiled and edge-sealed, with each piece bearing legible inspection trademark.
- B. Forms for Unexposed Finish Concrete: Plywood, lumber, metal, or other acceptable material. Preference will go to salvaged or re-used Dimensional Lumber. Provide lumber dressed on at least 2 edges and one side for tight fit.
- C. Sustainability Requirements For Wood Used For Formwork
 - 1. Salvaged or re-used Dimensional Lumber for Formwork: Provide documentation certifying products are from salvaged wood sources. Provide grading certificate for structural applications. For wood salvage wood resources see GreenSpec.

- D. Form Coatings: Provide VOC compliant commercial formulation form- coating compounds that will not bond with, stain nor adversely affect concrete surfaces, and will not impair subsequent treatments of concrete surfaces. Use biodegradable form release agent listed below or equivalent made from soy or rapeseed oil, or approved equal.
- | | |
|----------------------|-------------------------------------|
| 1. “Bio-Release EF” | Dayton Superior |
| 2. “Soy Form Away” | Cure & Seal by Natural Soy Products |
| 3. “Bio-Form” | Leahy-Wolf Company |
| 4. “Duogard II” | W. R. Meadows, Inc. |
| 5. “Atlas Bio-Guard” | Atlas Construction Supply, Inc. |
- E. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.
- F. Form Ties: Form ties and spreaders: prefabricated assemblies by Richmond; Superior, Dayton or approved equal. Wire ties must not be used. Ties for foundation work must be of snap design with removal cones and water seal washer.
1. Furnish units that will leave no corrodible metal closer than 1 inch to the plane of exposed concrete surface.
 2. Furnish ties that, when removed, will leave holes no larger than 1 inch in diameter in concrete surface.
 3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.2 REINFORCING MATERIALS

- A. Reinforcing Bars: ASTM A 615, Grade 60.
- B. Epoxy-Coated Reinforcing Bars and Wire Welded Fabric: ASTM A 775 (as noted on plan and/or in section).
- C. Steel Wire: ASTM A 82, plain, cold-drawn steel.
- D. Welded Wire Fabric: ASTM A 185, welded steel wire fabric, Galvanized.
- E. Welded Deformed Steel Wire Fabric: ASTM A 497, Galvanized.
- F. Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 , plain-steel bars, cut true to length with ends square and free of burrs.
- G. Epoxy-Coated Joint Dowel Bars: ASTM A 615/A 615M, Grade 60 , plain-steel bars, ASTM A 775/A 775M epoxy coated.
- H. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A 775/A 775M.
- I. Supports for Reinforcement: Bolsters, chairs, spacers and other devices for spacing, supporting and fastening reinforcing bars and welded wire fabric in place. Use wire bar type supports complying with CRSI specifications.

1. For epoxy coated reinforcement provide plastic protected chairs and plastic ties. All imperfections in the epoxy coating are to be corrected prior to placement of concrete.
 - a. Use recycled plastic rebar supports. Subject to compliance with requirements, provide one of the following, or approved equal:
 - 1) International Plastics Group
 - 2) Eclipse Plastic
 - 3) Inland Concrete Products
2. For exposed-to-view concrete surfaces, where legs of supports are in contact with forms, provide supports with legs which are plastic protected (CRSI, Class I) or stainless steel protected (CRSI, Class 2), at a spacing not to exceed 4'-0" on center in either direction.

2.3 CONCRETE MATERIALS

- A. Portland cement: ASTM C 150, Type I. Total percentage of Portland Cement is NOT to exceed 75% of the cementitious mix. Use one brand of cement throughout project, unless otherwise acceptable to Commissioner.
 - a. Fly Ash: Cast-in-place concrete must incorporate fly ash as a replacement for at least 25% (by weight) of the Portland cement. All design mixes must be reviewed and approved by the Commissioner. Fly Ash must not be used in conjunction with Ground Granulated Blast Furnace Slag.
 - b. Ground Granulated Blast Furnace Slag (GGBF): Cast-in-place concrete must incorporate GGBF as a replacement for at least 40% (by weight) of the Portland cement. All design mixes must be reviewed and approved by the Commissioner. GGBF must not be used in conjunction with Fly Ash.
 - c. Pozzolans and Slags: These must be completely accounted for in the design mix. Mix design must meet minimum design requirements set in the contract documents. Additional admixtures may be required to meet early strength requirements and alternative cementitious material goals. If a "blended cement" is used which already contains a certain percentage of Pozzolans or Slags this content may offset or entirely satisfy the minimum percentage required.
 - 1) Coal Fly Ash: ASTM C 618 (Class C or Class F): ASTM C 618 (Note: Class F fly Ash will require higher amounts or air entraining ad-mixtures than class C).
 - 2) Blast Furnace Slag: ASTM C989
 - 3) Silica Fume: ASTM C 1240
 - 4) Rice Hull (or "husk") Ash: ASTM C 618 Blended hydraulic cement, as defined by ASTM C 595 or ASTM C 1157
- B. Normal Weight Aggregates: ASTM C 33, and as herein specified. Provide aggregates from a single source for exposed concrete.
 1. Local aggregates not complying with ASTM C 33 but which have shown by special test or actual service to produce concrete of adequate strength and durability may be used when acceptable to Commissioner.

2. Normal weight Fine Aggregate: washed, inert, natural or manufactured or combination thereof, sand conforming ASTM C33 gradation.
3. Normal weight Coarse Aggregate: well graded crushed stone or washed gravel conforming to ASTM C33, sizes 57 for foundations and 67 for slabs and structure.
 - a. Recycled crushed concrete aggregate in concrete mixes is only to be used with approval of Commissioner. Recycled aggregate must be used only as a substitute for coarse aggregate and must also be washed and well-graded, conforming to ASTM C33.
 - b. For sub-base, slabs on grade and non-structural applications and Recycled Aggregate Materials are NOT required to meet the ASTM C 33 standard. In addition to concrete rubble, glass, porcelain, and tire chips can be used as filler material. Any inert material conforming to ASTM D1241 is acceptable for the applications described in this paragraph.
- C. Water: Free from oils, acids, alkali, organic matter and other deleterious material to conform to ASTM C94. ASTM C94 for gray water use in the production of ready mixed concrete per approval by the Commissioner.
- D. Air-Entraining Admixture: Any material proposed for use as an air-entraining admixture should be tested in conformance with ASTM C 260.
 1. Liquid air-entrainment: Use only agents derived from salts of wood resins. Select from products listed below or approved equal conforming to ASTM C-260.
 - a. "Airmix" Euclid Chemical
 - b. "Darex AEA" W. R. Grace
 - c. "MB-VR" Master Builders
- E. Water-Reducing Admixture: ASTM C 494.
 1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:
 - a. "Polyheed 997" Master Builders
 - b. "Euclid MR" Euclid Chemical
 - c. "WRDA 64" W. R. Grace.
- F. High-Range Water-Reducing Admixture (Superplasticizer): ASTM C 494, Type F or Type G and containing not more than 0.05 percent chloride ions.
 1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:
 - a. "Eucon 37, 1037 or Plastol 5000" Euclid Chemical Co.
 - b. "Rheobuild 1000" Master Builders
 - c. "Glenium 7500" Master Builders
 - d. "Daracem-100" W. R. Grace

- G. Water Reducing, Non-Corrosive Accelerating Admixture: The admixture must conform to ASTM C 494, Type C or E, and not contain more chloride ions than are present in municipal drinking water. The admixture manufacturer must have long-term non-corrosive test data from an independent testing laboratory (of at least a year's duration) using an acceptable accelerated corrosion test method such as that using electrical potential measures. Accelerating admixtures are not to be used as antifreeze agents. Accelerating admixtures are permitted only upon review by the Commissioner.
1. Products: Subject to compliance with requirements, provide the following, or approved equal:
 - a. "Accelguard 80" Euclid Chemical Co.
 - b. "Daraset" W. R. Grace
 - c. "Pozzutec 20" Master Builders.
- H. Water-Reducing, Retarding Admixture: ASTM C 494, Type D, and contain not more than 0.05 percent chloride ions.
1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:
 - a. "Eucon Retarder 75" Euclid Chemical Co.
 - b. "Pozzolith 100XR" Master Builders.
 - c. "Plastiment" Sika Chemical Co.
 - d. "Daratard" W.R. Grace.
- I. Microsilica Admixture must be dry densified or slurry formed. Microsilica must come from the same source throughout the project. If a single source cannot be maintained, laboratory testing of each new source must be required before acceptance by the Commissioner at no cost to the City of New York.
1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:
 - a. "Emsac F 100" Elkem Chemical, Inc.
 - b. "Eucon MSA" Euclid Chemical Co.
 - c. "Force 10,000" W. R. Grace
- J. Prohibited Admixtures: Calcium chloride, thiocyanates or admixtures containing more than 0.05 percent chloride ions are not permitted.
- K. Certification: Written conformance to the above-mentioned requirements and the chloride ion content of admixtures will be required from the admixture manufacturer prior to mix design review by the Commissioner.
- L. Macro-Fibers: Engineered macro-synthetic fibers.
1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:

- a. "Tuf-Strand SF" Euclid Chemical Co.
- b. "Fibermesh 650" Propex Concrete Systems
- c. "Forta-Ferro" Forta

M. Micro-Fibers: Engineered micro-synthetic fibers.

- 1. Products: Subject to compliance with requirements, provide the following, or approved equal:

- a. "Fiberstrand N": Euclid Chemical Co.
- b. "Fibermesh 150": Propex Concrete Systems
- c. "Ultra-Net" Forta

N. Natural Fiber Reinforced Concrete: Natural fiber reinforced concrete is permitted only upon review by Commissioner. Refer to ACI 544.1R, chapter 5

O. Corrosion Inhibitor: 30% calcium nitrite (where called for in the specifications or on the drawings). Subject to compliance with requirements, provide the following (or approved equal) at 3 gal/cy:

- 1. "Eucon CIA" Euclid Chemical
- 2. "DCI" W. R. Grace
- 3. "Rheocrete CNI" Master Builders.

P. Waterproofing admixture Xypex or approved equivalent must be added to foundation concrete.

Q. Contractor will be required to provide information demonstrating successful use in prior placement involving all admixtures.

2.4 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal;

- a. Greenstreak
- b. Williams Products, Inc.
- c. Cetco

- 2. Profile: Flat, dumbbell with center bulb
- 3. Dimensions: 4 inches by 3/16 inch thick

B. Flexible PVC Waterstops: CE CRD-C 572, with factory-installed metal eyelets, for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following, or approved equal:
 - a. BoMetals, Inc.
 - b. Greenstreak
 - c. Paul Murphy Plastics Company
 - d. Vinylex Corp.
 2. Profile: Flat, dumbbell with center bulb
 3. Dimensions: 4 inches by 3/16 inch thick (100 mm by 4.75 mm thick)mm thick
- C. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 3/4 by 1 inch (19 by 25 mm).
1. Products: Subject to compliance with requirements, provide one of the following or approved equal;
 - a. Carlisle Coatings & Waterproofing, Inc.; MiraSTOP
 - b. CETCO; Volclay Waterstop-RX
 - c. Concrete Sealants Inc.; Conseal CS-231
 - d. Greenstreak; Swellstop
 - e. Henry Company, Sealants Division; Hydro-Flex
 - f. JP Specialties, Inc.; Earth Shield Type 20

2.5 GROUT

- A. Non-Shrink, Non-Metallic Grout: The non-shrink grout must be a factory pre-mixed grout and must conform to ASTM C1107, "Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Non-Shrink)." In addition, the grout manufacturer must furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency must achieve 95% bearing under a 4' x 4' base plate.
1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:

a. "Euco-NS"	Euclid Chemical Co.
b. "Five Star Grout"	U.S. Grout Corp.
c. "Masterflow 713"	BASF
- B. High Flow Grout: Where high fluidity and/or increased placing time is required, use high flow grout. The factory pre-mixed grout must conform to ASTM C1107, "Standard Specification for Packages Dry, Hydraulic-Cement Grout (Non-shrink)." In addition, the grout manufacturer must furnish test data from an independent laboratory indicating that the grout when placed at a fluid consistency must achieve 95% bearing under a 18" x 36" base plate.
1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:

a. "Euco Hi-Flow Grout"	Euclid Chemical Co.
-------------------------	---------------------

- b. "Masterflow 928" BASF
- c. "Five Star Fluid Grout 100" Five Star

2.6 RELATED MATERIALS

- A. Granular Fill: Clean mixture of crushed stone or crushed or uncrushed gravel; ASTM D 1241, Size 57, with 100 percent passing a 1-1/2 inch sieve and 0 to 5 percent passing a No. 8 sieve.
- B. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 1241, Size 10, with 100 percent passing a 3/8 inch sieve, 10 to 30 percent passing a No. 100 sieve, and at least 5 percent passing No. 200 sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.
- C. Non-slip Aggregate Finish: Provide fused aluminum oxide grits, or crushed emery, as abrasive aggregate for non-slip finish with emery aggregate containing not less than 40% aluminum oxide and not less than 25% ferric oxide. Use material that is factory-graded, packaged, rustproof and non-glazing, and is unaffected by freezing, moisture, and cleaning materials.
- D. Absorptive Cover: Burlap cloth made from jute or kenaf, weighing approximately 9 oz. per sq. yd., complying with AASHTO M 182, Class 2.
- E. Moisture-Retaining Cover: One of the following, complying with ASTM C 171.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Waterproof paper
 - b. Polyethylene film
 - c. Polyethylene-coated burlap
- F. Curing Compounds: The compound must conform to ASTM C 309. Limit VOC content to 130 g/L. Use water-based curing compound. For surfaces receiving both a curing compound and additional flooring, verify that the curing compound and additional flooring are compatible.
 - 1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:

a. SealTight 1100	W.R. Meadows
b. Kurez W VOX	Euclid Chemical Co.
c. Luster Seal WB STD	Euclid Chemical Co.
d. VOCOMP-25	W.R. Meadows
- G. Curing & Sealing Compounds: Only specify for slabs that will remain exposed, i.e. will not receive additional flooring. The compound must conform to ASTM C1315. Limit VOC content to 130 g/L. Use water-based curing compound.
 - 1. Products: Subject to compliance with requirements, provide one of the following or approved equal:

a. Luster Seal WB STD	Euclid Chemical Co.
-----------------------	---------------------

- b. VOCOMP-25 W.R. Meadows
- c. Cure & Seal Dayton Superior

H. Sealers/Hardeners: For use on concrete surfaces that will remain exposed. Slabs that will receive additional flooring do not require sealing or hardening. Sealers and hardeners must conform to ASTM D1546, not yellow under ultra violet light after 500 hours of test in accordance with and have a maximum moisture loss of 0.039 grams per sq. cm. when applied at a coverage rate of 250 sq. ft. per gallon. Limit VOC content to 130 g/L. Use water- or vegetable-based product.

1. Products: Subject to compliance with requirements, provide one of the following or approved equal:

- a. Kure-N-Harden BASF
- b. Consolideck Prosoco
- c. Liqui-hard W.R. Meadows

I. For concrete floors subjected to heavy vehicular traffic use a Liquid Sealer/Densifier: The product must be a high performance, deeply penetrating concrete densifier conforming to ASTM C836; odorless, colorless, VOC - compliant, non-yellowing silicate based solution designed to harden, dustproof and protect and to resist black rubber tire marks on concrete surfaces. The compound must contain a minimum of 20% solids content of which 50% is silicate

J. Evaporation Retardant:

1. Products Subject to compliance with requirements, provide one of the following or approved equal:

- a. "Eucobar" Euclid Chemical Co.
- b. "Confilm" BASF
- c. "Evapre" W.R. Meadows

K. Certify that all curing compounds, sealers and hardeners are compatible with all adhesive products intended for attaching co-lateral floor material. In conformance with ASTM F 710, coordination with flooring manufacturer is required to ensure concrete coatings will not obstruct the bond between the concrete and the adhesive. Ensure coatings and adhesives are "benignly compatible" -- in other words, do not combine substances whose constituents are reactive. Reactivity releases VOCs and /or other toxic fumes.

L. Crack Sealer: Elastomeric liquid crack sealer resistant to water, gasoline, oil and salts.

1. Products: Subject to compliance with requirements, provide one of the following or approved equal:

- a. "Plasti-seal" Euclid Chemical Co.
- b. "Sikaflex" Sika
- c. "Deck-O-Seal One Step" W.R. Meadows

M. Underlayment Compound: Free flowing, self-leveling, pumpable cementitious base compound.

1. Products: Subject to compliance with requirements, provide the following, or approved equal:
 - a. "Flo-Top 90 or Super Flo-Top" Euclid Chemical Co.
 - b. "Ardex" Ardex Co.
 - c. "Underlayment 110" Master Builders

- N. Bonding Admixture: The compound must be a latex, non-rewettable type.
 1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:
 - a. "Flex-Con" Euclid Chemical Co.
 - b. "Daraweld C" W.R. Grace
 - c. "SBR Latex" Euclid Chemical Co.

- O. High Strength Polymer Mortar: For form and pouring or large horizontal restoration, provide the flowable on-part, high strength mortar.
 1. Products: subject to compliance with requirements, provide the following, or approved equal:
 - a. "Eucocrete" The Euclid Chemical Co.
 - b. "Euco Speed MP" (Cold Weather) The Euclid Chemical Co.
 - c. "Emaco R" Master Builders.

- P. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

- Q. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:
 1. Type IV for bonding hardened concrete to hardened concrete, and Type V for bonding freshly mixed concrete to hardened concrete.

- R. Reglets: Fabricate reglets of not less than 0.022 inch thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

- S. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.034 inch thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

- T. Vapor Barrier: Provide vapor barrier which conforms to ASTM E 1745, Class A or B. The membrane must have a water-vapor permeance rate no greater than 0.012 perms when tested in accordance with ASTM E 154, Section 7. The vapor barrier must be placed over prepared base material where indicated below slabs on grade. Vapor barrier must be no less than 10 mil thick in accordance with ACI 302.1R. Preferred vapor barriers will be manufactured from post-consumer recycled polymers.

1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:

- | | | |
|----|--|----------------------|
| a. | “Stego Wrap (15 mil) Vapor Barrier” | Stego Industries LLC |
| b. | “Griffolyn Vaporguard” | Reef Industries |
| c. | “Premoulded Membrane with Plastmatic Core” | W.R. Meadows. |

- U. Expansion Joint Filler: ASTM D 1751.

1. Products: Subject to compliance with requirements, provide one of the following, or approved equal:

- | | | |
|----|--|------------------|
| a. | “Homex 300” | Homasote Company |
| b. | “Standard Cork Expansion Joint Filler” | A.P.S. Cork |
| c. | “Fibre Expansion Joint” | W.R. Meadows |

- V. Water: Potable.

2.7 PROPORTIONING AND DESIGN OF MIXES

- A. Preparation of Design Mixes

1. All mix designs must be proportioned in accordance with Section 5.3, "Proportioning on the Basis of Field Experience and/or Trial Mixtures" of ACI 318 and prepared by a licensed testing laboratory approved by the City of New York, but paid for by the contractor. Submit mix designs on each class of concrete for review.
2. If previously used mixes are submitted, all materials must be from the same sources and with the same brand names as the previously utilized mix.
3. If trial batches are used, the mix design must be prepared by an independent testing laboratory and must achieve an average compressive strength 1200 psi higher than the specified strength. This over-design must be increased to 1400 psi when concrete strengths of 5000 or more are used.
4. The proposed mix designs must be accompanied by complete standard deviation analysis or trial mixture test data.

- B. Submit each proposed mix to the Commissioner for review at least 5 days prior to the pre-concrete conference. Do not begin concrete production until Commissioner has reviewed and approved mixes.

1. Submit Test reports for any pozzolans or slags indicating compliance with ASTM C 618 or ASTM C 989, respectively.
2. Provide cut sheets clearly indicating the percentages of pozzolans or slags used in the mix design as replacement for Portland cement. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the percentage.
3. Test reports for recycled aggregate indicating compliance with ASTM C 33. Provide cut sheets clearly indicating the percentage of aggregates used that are recycled. Or, if cut

- sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and source or sources of the material.
4. Provide cut sheets clearly indicating the percentage of sub-base and filler aggregate materials that are recycled. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and source or sources of the material.
- C. Design mixes to provide concrete with strength as indicated on drawings and schedules.
- D. Adjustment to Concrete Mixes: Mix design adjustments may be requested by Contractor when characteristics of materials, job conditions, weather, test results, or other circumstances warrant; at no additional cost to The City of New York and as accepted by Commissioner. Laboratory test data for revised mix design and strength results must be submitted to and accepted by Commissioner before using in work.
- E. Admixtures:
1. Use water-reducing admixture or high range water-reducing admixture (superplasticizer) in all concrete as required for placement and workability.
 2. Use non-corrosive, non-chloride accelerating admixture in concrete slabs placed at ambient temperatures below 50°F (10°C).
 3. Use high-range water-reducing admixture in pumped concrete, architectural concrete, parking structure slabs, fiber concrete, concrete required to be watertight, concrete with ultimate strength of 5,000 psi or more, and concrete with water/cement ratios below 0.50.
 4. Use air-entraining admixture in exterior exposed concrete, unless otherwise indicated. Add air-entraining admixture at manufacturer's prescribed rate to result in concrete at point of placement having total air content with a tolerance of plus-or-minus 1-1/2 percent within following limits:
 - a. Concrete structures and slabs exposed to freezing and thawing or deicer chemicals.
 - 1) 4.5 percent (moderate exposure); 5.5 percent (severe exposure) 1-1/2" max. aggregate 4.5 percent (moderate exposure); 6.0 percent (severe exposure) 1" max. aggregate.
 - 2) 5.0 percent (moderate exposure); 6.0 percent (severe exposure) 3/4" max. aggregate.
 - 3) 5.5 percent (moderate exposure); 7.0 percent (severe exposure) 1/2" max. aggregate.
 - b. Other Concrete: (not exposed to freezing, thawing, or hydraulic pressure): 2 percent to 4 percent air.
 - c. Interior concrete subjected to vehicular traffic: 3 percent maximum.
 5. Use admixtures for water-reducing and set-control in strict compliance with manufacturer's directions.
- F. Water-Cement Ratio: Provide concrete for following conditions with maximum water-cement (W/C) ratios as follows:

1. Concrete for precast slabs, precast beams, structural topping slab, caisson caps, caissons, poured in place slabs and grade beams, columns and walls, over water, on ground or exposed to weather: W/C 0.40.
2. Concrete on metal deck:
 - a. With specified minimum compressive strength not greater than 5,000 psi: 0.40.
 - b. With specified minimum compressive strength not greater than 7,000 psi: 0.35.
3. “Quick Dry” Concrete: 0.40.
4. Subjected to freezing and thawing; W/C 0.50.
5. Subjected to deicers/watertight: W/C 0.45.
6. Reinforced concrete subjected to brackish water, salt spray or deicers; W/C 0.40.

G. Slump Limits: Proportion and design mixes to result in concrete slump at point of placement as follows:

1. Ramp slabs and sloping surfaces: Not more than 3".
2. Reinforced foundation systems, including mud slabs below hydrostatic slabs: Not less than 1" and not more than 3".
3. Concrete containing HRWR admixture (superplasticizer): Not more than 9" unless otherwise approved by the Commissioner. The concrete must arrive at the job site at a slump of 2" to 3" (3" to 4" for concrete receiving a "shake-on" hardener or lightweight concrete), be verified, then the high-range water-reducing admixture added to increase the slump to the approved level.
4. Other Concrete: Not less than 1" or more than 4".

H. Chloride Ion Level: Chloride ion content of aggregate must be tested by the laboratory making the trial mixes. The total chloride ion content of the mix including all constituents must not exceed the limitations set forth in Table 4.4.1 of ACI 318 for concrete subjected to deicers or exposed to chloride in service (0.15% chloride ions by weight of cement).

2.8 CONCRETE MIXING

- A. Ready-Mix Concrete: Comply with requirements of ASTM C 94, and as herein specified.
- B. Provide batch ticket for each batch discharged and used in work, indicating project identification name and number, date, mix type, mix time, quantity, and amount of water introduced.
- C. During hot weather, or under conditions contributing to rapid setting of concrete, a shorter mixing time than specified in ASTM C 94 may be required. When air temperature is between 85°F (30°C) and 90°F (32°C), reduce maximum mixing and delivery time from 1-1/2 hours to 75 minutes, and when air temperature is above 90°F (32°C), reduce maximum mixing and delivery time to 60 minutes.
- D. No water may be added after mixing to concrete containing HRWR (Superplasticizer). If loss of slump occurs, the concrete treated with HRWR may be redosed as long as a "flash set" has not occurred. Redosage procedures must be discussed and approved by the Commissioner and the manufacturer.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Coordinate the installation of joint materials and vapor retarders with placement of forms and reinforcing steel.

3.3 INSPECTION

- A. Examine all work prepared by others to receive work of this section and report any defects affecting installation to the Contractor for correction. Commencement of work will be construed as complete acceptance of preparatory work by other trades.

3.4 CONCRETE

- A. Concrete must develop the minimum compressive strengths shown on drawings at 28 days when sampled and tested in accordance with ASTM C 31-06 and C 39-12a with the maximum slump in accordance with the approved mix design.
- B. Concrete must be in accordance with the requirements and specifications of "Building Code Requirements for Structural Concrete" as modified by the 2008 NYC Building Code.
- C. Fly Ash Concrete & Slag Concrete: Concrete mixes containing high volumes of fly ash or Slag have slower set times and may take up to 56 days to reach full strength. The Commissioner, agency responsible for concrete mix design, the Commissioner and the concrete subcontractor must coordinate to ensure that the form stripping schedule is consistent with the ability of the structure to support itself and all imposed construction loads.

3.5 FORMS

- A. Design formwork to maximize its reusability, reduce resources devoted to formwork construction and minimize waste generated. Where appropriate choose alternative formwork systems (refer to sections listed above in Part 2).
- B. Design, erect, support, brace and maintain formwork to support vertical and lateral, static, and dynamic loads that might be applied until such loads can be supported by concrete structure. Construct formwork so concrete members and structures are of correct size, shapes, alignment, elevation and position. Maintain formwork construction tolerances complying with ACI 347. Provide Class A tolerances for concrete exposed to view. Provide Class C tolerances for other concrete surfaces.
- C. Design formwork to be readily removable without impact, shocks or damage to cast-in-place concrete surfaces and adjacent materials.

- D. Construct forms to size shapes, lines and dimensions shown, and to obtain accurate alignment, location, grades, level and plumb work in finished structures. Provide for openings, offsets, sinkages, keyways, recesses, moldings, rustications, reglets, chamfers, blocking, screeds, bulkheads, anchorages and inserts, and other features required in work. Use selected materials to obtain required finishes. Solidly butt joints and provide back- up at joints to prevent leakage of cement paste.
- E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush plates or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces where slope is too steep to place concrete with bottom forms only. Kerf wood inserts for forming keyways, recesses, and the like, to prevent swelling and for easy removal.
- F. Provide temporary openings where interior area of formwork is inaccessible for cleanout, for inspection before concrete placement, and for placement of concrete. Securely brace temporary openings and set tightly to forms to prevent loss of concrete mortar. Locate temporary openings on forms at inconspicuous locations.
- G. Chamfer exposed corners and edges as indicated, using wood, metal, PVC or rubber chamfer strips fabricated to produce uniform smooth lines and tight edge joints.
- H. Provisions for Other Trades: Provide openings in concrete formwork to accommodate work of other trades. Determine size and location of openings, recesses and chases from trades providing such items. Accurately place and securely support items built into forms.
- I. Cleaning and Tightening: Thoroughly clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt or other debris just before concrete is placed. Retightening forms and bracing after concrete placement is required to eliminate mortar leaks and maintain proper alignment.

3.6 VAPOR BARRIER INSTALLATION

- A. Examine the condition of porous fill and remedy any unsatisfactory portions prior to installing vapor barriers.
- B. Sub-base material to be per above sections.
- C. Following leveling and tamping of sub-base for slabs on grade, place vapor barrier sheeting with longest dimension parallel with direction of pour.
- D. Lap joints 6" and seal with appropriate tape.
- E. After placement of moisture barrier, cover with granular material and compact to depth as shown on drawings.
- F. Avoid cutting or puncturing vapor barrier during reinforcement placement and concreting operations.

3.7 PLACING REINFORCEMENT

- A. Comply with Concrete Reinforcing Steel Institute's recommended practice for "Placing Reinforcing Bars", for details and methods of reinforcement placement and supports, and as herein specified.
- B. Clean reinforcement of loose rust and mill scale, earth, ice, and other materials, which reduce or destroy bond with concrete.
- C. Accurately position, support and secure reinforcement against displacement by formwork, construction, or concrete placement operations. Locate and support reinforcing by metal chairs, runners, bolsters, spacers, and hangers, as required.
- D. Place reinforcement to obtain at least minimum coverage's for concrete protection. Arrange, space and securely tie bars and bar supports to hold reinforcement in position during concrete placement operations. Set wire ties so ends are directed into concrete, not toward exposed concrete surfaces.
- E. Micro-Fibers: All concrete where indicated on the drawings must contain the specified micro-fibers. Length must be per the manufacturer's specification. The dosage rate must be 1.0 – 1.6 lbs per cubic yard per the manufacturer's specification. Submit proposed dosage rate to the Commissioner for review prior to concrete placement.
- F. Macro-Fibers: All concrete where indicated on the drawings must contain the specified macro-fibers. Length must be per the manufacturer's specification. The dosage rate must be 3.0 – 5.0 lbs per cubic yard per the manufacturer's specification. Submit proposed dosage rate to the Commissioner for review prior to concrete placement.
- G. Epoxy-coated reinforcing bars supported from formwork must rest on coated wire bar supports. Reinforcing bars used as support bars must be epoxy-coated. In walls having epoxy-coated reinforcing bars, spreader bars where specified by the Commissioner, must be epoxy-coated. Proprietary combination bar clips and spreaders used in walls with epoxy-coated reinforcing bars must be made of corrosion-resistant material.
- H. Epoxy-coated reinforcing bars must be fastened with nylon- , epoxy- , or plastic-coated tie wire, or other acceptable materials.
- I. Restoration of damaged epoxy-coating: When required, damaged epoxy-coating must be restored with patching material conforming to ASTM A775. Restoration must be done in accordance with the patching material manufacturer's recommendations.
- J. Unless permitted by the Commissioner, epoxy-coated reinforcing bars must not be cut in the field. When epoxy-coated reinforcing bars are cut in the field, the ends of the bars must be coated with the same material used for restoration of coating damage.

3.8 JOINTS

- A. Construction Joints: Locate and install construction joints as indicated, or if not indicated, locate so as not to impair strength and appearance of the structure, as acceptable to the Commissioner.
- B. Provide keyways at least 1-1/2" deep in construction joints in walls, slabs and between walls and footings; accepted bulkheads designed for this purpose may be used for slabs.

- C. Place construction joints perpendicular to main reinforcement. Continue reinforcement across construction joints, except as otherwise indicated.
- D. Waterstops: Provide waterstops in construction joints as indicated. Install waterstops to form continuous diaphragm in each joint. Make provisions to support and protect exposed waterstops during progress of work. Fabricate field joints in waterstops in accordance with manufacturer's printed instructions, using manufacturer's specified welding irons.
- E. Isolation Joints in Slabs-on-Ground: Construct isolation joints in slabs-on-ground at points of contact between slabs-on-ground and vertical surfaces, such as column pedestals and elsewhere as indicated.
 - 1. Joint filler and sealant materials are specified in the section for "Related Materials"
- F. Contraction (Control) Joints in Slabs-on-Ground: Maximum joint spacing must be 36 times the slab thickness unless otherwise noted on the drawings. The dry cut saw must be used immediately after final finishing and to a depth of 1-1/4". A conventional saw must be used as soon as possible without dislodging aggregate and to a depth of 1/4 slab thickness.
 - 1. Joint sealant material is specified in the section for "Related Materials".

3.9 INSTALLATION OF EMBEDDED ITEMS

- A. General: Set and build into work anchorage devices and other embedded items required for other work that is attached to, or supported by, cast-in-place concrete. Use setting drawings, diagrams, instructions and directions provided by suppliers of items to be attached thereto.
- B. Edge Forms and Screed Strips for Slabs: Set edge forms or bulkheads and intermediate screed strips for slabs to obtain required elevations and contours in finished slab surface. Provide and secure units sufficiently strong to support types of screed strips by use of strike-off templates or accepted compacting type screeds.
- C. Embedded Plates at Foundation Walls: Install plate at top of forms so that exterior face of steel plate is level and plumb. Use construction documents for locations, sizes and elevations.

3.10 PREPARATION OF FORM SURFACES

- A. Clean re-used forms of concrete matrix residue, restore and patch as required to return forms to acceptable surface condition.
- B. If form-release compound is required, coat contact surfaces of forms with a form-coating compound before reinforcement is placed.
- C. Thin form-coating compounds only with thinning agent of type, and amount, and under conditions of form-coating compound manufacturer's directions. Do not allow excess form-coating material to accumulate in forms or to come into contact with in-place concrete surfaces against which fresh concrete will be placed. Apply in compliance with manufacturer's instructions.

- D. Coat steel forms with a non-staining, rust-preventative form oil or otherwise protect against rusting. Rust-stained steel formwork is not acceptable.

3.11 CONCRETE PLACEMENT

- A. Ready-mix concrete must comply with the requirements of ASTM C 94 and ACI 304. All plant and transporting equipment must comply with the concrete plant standards and truck mixer and agitator standards of the National Ready Mix Concrete Association.
- B. Cold weather mixing procedures must be submitted to the Commissioner for approval.
- C. Notify the Commissioner and the City of New York’s Inspector at least 36 hours (1 1/2 regular working days) before each pour so that forms and reinforcing may be examined. Do not place concrete until inspection has been made or waived.
- D. Preplacement Inspection: Before placing concrete, inspect and complete formwork installation, reinforcing steel, and items to be embedded or cast-in. Notify other crafts to permit installation of their work; cooperate with other trades in setting such work. Moisten wood forms immediately before placing concrete where form coatings are not used.
 - 1. Apply temporary protective covering to lower 2' of finished walls adjacent to poured floor slabs and similar conditions, and guard against spattering during placement.
- E. General: Comply with ACI 304 “Recommended Practice for Measuring, Mixing, Transporting, and Placing Concrete,” and as herein specified.
 - 1. Deposit concrete continuously or in layers of such thickness that no concrete will be placed on concrete which has hardened sufficiently to cause the formation of seams or planes of weakness. If a section cannot be placed continuously, provide construction joints as herein specified. Deposit concrete as nearly as practicable to its final location to avoid segregation.
- F. Placing Concrete in Forms: Deposit concrete in forms in horizontal layers not deeper than 18" and in a manner to avoid inclined construction joints. Where placement consists of several layers, place each layer while preceding layer is still plastic to avoid cold joints. Use internal vibrators penetrating both the top and preceding layers.
- G. Consolidate placed concrete by mechanical vibrating equipment supplemented by hand-spading, rodding or tamping. Use equipment and procedures for consolidation of concrete in accordance with ACI recommended practices.
- H. Use and type of vibrators must conform to ACI 309 “Recommended Practice for Consolidation of Concrete.” Do not use vibrators to transport concrete inside forms. Insert and withdraw vibrators vertically at uniformly spaced locations not farther than visible effectiveness of machine. Place vibrators to rapidly penetrate placed layer and at least 6" into preceding layer. Do not insert vibrators into lower layers of concrete that have begun to set. At each insertion limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing segregation of mix.

- I. Placing Concrete Slabs: Deposit and consolidate concrete slabs in a continuous operation, within limits of construction joints, until the placing of a panel or section is completed.
- J. Consolidate concrete during placing operations so that concrete is thoroughly worked around reinforcement and other embedded items and into corners.
- K. Slabs: Bring slab surfaces to correct level with straightedge and strikeoff. Use highway straightedge, bull floats or darbies to smooth surface free of humps or hollows. Do not disturb slab surfaces prior to beginning finishing operations. See also "MONOLITHIC SLAB FINISHES" below.
- L. Maintain reinforcing in proper position during concrete placement operations.
- M. Cold Weather Placing: Protect concrete work from physical damage or reduced strength which could be caused by frost, freezing actions, or low temperatures, in compliance with ACI 306 and as herein specified.
 - 1. When air temperature has fallen to or is expected to fall below 40°F (4°C), uniformly heat water and aggregates before mixing to obtain a concrete mixture temperature of not less than 50°F (10°C), and not more than 80°F (27°C) at point of placement.
 - 2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
 - 3. Use only a non-corrosive, non-chloride accelerator. Calcium chloride, thiocyanates or admixtures containing more than 0.05% chloride ions are NOT permitted.
 - 4. Care must be taken to store water-based curing and sealing compounds where they will not freeze. In most cases, they cannot be reconstituted after thawing.
- N. Hot Weather Placing: When hot weather conditions exist that would seriously impair quality and strength of concrete, place concrete in compliance with ACI 305 and as herein specified.
 - 1. Cool ingredients before mixing to maintain concrete temperature at time of placement below 90°F (32°C). Mixing water may be chilled, or chopped ice may be used to control temperature provided water equivalent of ice is calculated to total amount of mixing water. Use of liquid nitrogen to cool concrete is Contractor's option.
 - 2. Cover reinforcing steel with water-soaked burlap if it becomes too hot, so that steel temperature will not exceed the ambient air temperature immediately before embedment in concrete.
 - 3. Fog spray forms, reinforcing steel and subgrade just before concrete is placed.

3.12 FINISH OF FORMED SURFACES

- A. Concrete mixes containing pozzolans or slags do not set at the same rate or with the same bleed water characteristic as plain Portland cement. Therefore attention must be directed to the proper procedures. Refer to ACI 232.2R and ACI 301.
- B. Rough Form Finish: For formed concrete surface not exposed-to- view in the finish work or by other construction, unless otherwise indicated. This is the concrete surface having texture imparted by form facing material used, with tie holes and defective areas restored and patched and fins and other projections exceeding 1/4" in height rubbed down or chipped off.

- C. Smooth Form Finish: For formed concrete surfaces exposed-to-view, or that are to be covered with a coating material applied directly to concrete, or a covering material applied directly to concrete, such as waterproofing, damp-proofing, painting or other similar system. This is as-cast concrete surface obtained with selected form facing material, arranged orderly and symmetrically with a minimum of seams. Correction and patch defective areas with fins or other projections completely removed and smoothed. Follow all requirements in ACI 301, Chapter 10 for smooth form finish. Surface preparation for surfaces receiving waterproofing must be approved by the waterproofing manufacturer prior to construction.

3.13 FLOOR FLATNESS/LEVELNESS TOLERANCES

- A. FF defines the maximum floor curvature allowed over 24 in. Computed on the basis of successive 12 in. (300 mm) elevation differentials, FF is commonly referred to as the "Flatness F-Number".
- B. FL defines the relative conformity of the floor surface to a horizontal plane as measured over a 10 ft. (3.05 m) distance commonly referred to as the "Levelness F-Number".
- C. All floors must be measured within 72 hours of being poured and in accordance with ASTM E 1155 "Standard Test Method for Determining Floor Flatness and Levelness Using the "F Number" System (Inch-Pound Units).
- D. All slabs must achieve the specified overall tolerance. The minimum local tolerance (1/2 bay or as designated by the Commissioner) must be 2/3 of the specified tolerances.
- E. All elevated slabs must achieve the specified FL tolerance before the removal of the forms.
- F. All slabs on metal deck must achieve the specified FF.

3.14 MONOLITHIC SLAB FINISHES

- A. Float Finish: Apply float finish to slabs at crawl spaces, unless otherwise noted. After screeding, consolidating, and leveling concrete slabs, do not work surface until ready for floating. Begin floating when surface water has disappeared or when concrete has stiffened sufficiently to permit operation of power-driven floats, or both. Consolidate surface with power-driven floats, or by hand-floating if area is small or inaccessible to power units. Cut down high spots and fill low spots. Uniformly slope surfaces to drains. Immediately after leveling, refloat surface to a uniform, smooth, granular texture. Surface must achieve an FF 20 - FL 17 tolerance.
- B. Trowel Finish: Apply trowel finish to monolithic slab surfaces to be exposed-to-view, and slab surfaces to be covered with resilient flooring, carpet, ceramic or quarry tile, paint, or other thin film finish coating system, unless otherwise noted. After floating, begin first trowel finish operation using a power-driven trowel. Begin final troweling when surface produces a ringing sound as trowel is moved over surface. Consolidate concrete surface by final hand-troweling operation, free of trowel marks, uniform in texture and appearance and with a surface leveled to an FF 25/ FL 20 tolerance (FL17 for elevated slabs). Grind smooth surface defects, which would telegraph through applied floor covering system.

- C. Trowel and Fine Broom Finish: Where ceramic or quarry tile is to be installed with thin-set mortar, and slab surfaces which are to be covered with membrane or elastic waterproofing, or sand-bed terrazzo, and as otherwise indicated, apply single trowel finish as specified, then immediately follow with slightly scarifying surface by fine brooming. Surface preparation for surfaces receiving waterproofing must be approved by the waterproofing manufacturer prior to construction
- D. Sealers, Hardeners and Liquid Densifiers: Apply a coat of the specified compound to all exposed interior concrete floors where indicated on the drawings. This surface must be continuously moist cured by a method satisfactory to the Commissioner. Apply and mechanically scrub compound into the floor in strict accordance with the manufacturer's printed instructions.

3.15 CONCRETE CURING AND PROTECTION

- A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures.
 - 1. Start initial curing as soon as free water has disappeared from concrete surface after placing and finishing. Weather permitting, keep continuously moist for not less than 7 days.
 - 2. Begin final curing procedures immediately following initial curing and before concrete has dried. Continue final curing for at least 7 days in accordance with ACI 301 procedures. Avoid rapid drying at end of final curing period.
 - 3. In order to avoid plastic or drying shrinkage cracks during warm, dry or windy weather, ACI 302 and ACI 308 must be followed using wind breaks and sun shades when recommended. Evaporation retardant must be as specified in Section 2.04.
 - 4. Care must be taken to store water based curing and sealing compounds where they will not freeze. In most cases, they cannot be reconstituted after thawing.
- B. Curing Methods: Perform curing of concrete by moisture curing, moisture-retaining cover curing, curing and sealing compound, and by combinations thereof, as herein specified.
 - 1. Provide moisture curing by following methods.
 - a. Keep concrete surface continuously wet by covering with water.
 - b. Continuous water-fog spray.
 - c. Covering concrete surface with specified absorptive cover, thoroughly saturating cover with water and keeping continuously wet. Place absorptive cover to provide coverage of concrete surfaces and edges, with 4" lap over adjacent absorptive covers.
 - 2. Provide moisture-retaining cover curing as follows:
 - a. Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width with sides and ends lapped at least 3" and sealed by waterproof tape or adhesive. Immediately correct any holes or tears during curing period using cover material and waterproof tape.

3. Provide curing and sealing compound to exposed interior slabs not receiving additional flooring. A clear curing and sealing compound must be used on exterior slabs, sidewalks and curbs not receiving a penetrating sealer.
 4. Use the specified curing compound on surfaces to be covered with finish or coating material applied directly to concrete, such as liquid densifier/sealer, waterproofing, dampproofing, membrane roofing, flooring, painting, and other coatings and finish materials. Apply compound in accordance with manufacturer's direction.
- C. Curing Formed Surfaces: Cure formed concrete surfaces, including undersides of beams, supported slabs and other similar surfaces by moist curing with forms in place for full curing period or until forms are removed. If forms are removed, continue curing by methods specified above, as applicable.
- D. Curing Unformed Surfaces: Cure unformed surfaces, such as slabs, floor topping, and other flat surfaces by application of the specified curing compound or a continuous moist curing method approved by the Commissioner.
- E. Certify that all curing compounds, sealers and hardeners are compatible with all adhesive products intended for attaching co-lateral floor material. In conformance with ASTM F710, coordination with flooring manufacturer is required to ensure concrete coatings will not obstruct the bond between the concrete and the adhesive. In addition, ensure coatings and adhesives are "benignly compatible" -- in other words, do not combine substances whose constituents are reactive.
- F. Sealer and Dustproofers: Apply a second coat of the specified curing and sealing compound to exposed interior slabs not subjected to vehicular traffic, noted on the drawings. These slabs must have received an initial coat of the curing and sealing compound.
- 3.16 SHORES AND SUPPORTS
- A. Comply with ACI 347 for shoring and reshoring in multistory construction, and as herein specified.
 - B. Extend shoring from ground to roof for structures 4 stories or less, unless otherwise permitted.
 - C. Extend shoring generally at least 4 floors under floor or roof being placed for structures over 5 stories. Shore floor directly under floor or roof being placed, so that loads from construction above will transfer directly to these shores. Space shoring in stories below this levels in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members where no reinforcing steel is provided. Extend shores beyond minimums to ensure proper distribution of loads throughout structure. Contractor must provide the services of a registered Professional to determine timing of removal.
 - D. Remove shores and reshore in a planned sequence to avoid damage to partially cured concrete. Locate and provide adequate reshoring to safely support work without excessive stress or deflection.

- E. Keep reshores in place a minimum of 15 days after placing upper tier, and longer if required, until concrete has attained its required 28-day strength and heavy loads due to construction operations have been removed.

3.17 REMOVAL OF FORMS

- A. Formwork not supporting weight of concrete, such as sides of beams, walls, columns, and similar parts of the work, may be removed after cumulatively curing at not less than 50°F (10°C) for 12 hours after placing concrete, provided concrete is sufficiently hard to not be damaged by form removal operations, and provided curing and protection operations are maintained.
- B. Formwork supporting weight of concrete, such as beam soffits, joints, slabs and other structural elements, may not be removed in less than 14 days and until concrete has attained design minimum compressive strength at 28-days. Determine potential compressive strength of in-place concrete by testing field-cured specimens representative of concrete location or members.
- C. Form facing material may be removed 4 days after placement, only if shores and other vertical supports have been arranged to permit removal of form facing material without loosening or disturbing shores and supports.

3.18 RE-USE OF FORMS

- A. Clean and restore surfaces of forms to be re-used in work. Split, frayed, delaminated or otherwise damaged form facing material will not be acceptable for exposed surfaces. Apply new form coating compound as specified for new formwork.
- B. When forms are intended for successive concrete placement, thoroughly clean surfaces, remove fins and laitance, and tighten forms to close joints. Align and secure joint to avoid offsets. Do not use "patched" forms for exposed concrete surfaces, except as acceptable to Commissioner.

3.19 MISCELLANEOUS CONCRETE ITEMS

- A. Filling-In: Fill-in holes and openings left in concrete structures for passage of work by other trades, unless otherwise shown or directed, after work of other trades is in place. Mix, place and cure concrete as herein specified, to blend with in-place construction. Provide other miscellaneous concrete filling shown or required to complete work.
- B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and steel-troweling surfaces to a hard, dense finish with corners, intersections and terminations slightly rounded.
- C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations, as shown on drawings. Set anchor bolts for machines and equipment to template at correct elevations, complying with certified diagrams or templates of manufacturer furnishing machines and equipment.
- D. Grout base plates and foundations as indicated using specified free-flowing non-shrink grout. Use non-metallic grout for exposed conditions, unless otherwise indicated.

- E. Where high fluidity and/or increased placing time is required use the specified high flow grout. This grout must be used for all base plates larger than 10 square feet.
- F. Steel Pan Stairs: Provide concrete fill for steel pan stair treads and landings and associated items. Cast-in safety inserts and accessories as shown on drawings. Screeds, tamp, and finish concrete surfaces as scheduled.
- G. Reinforced Masonry: Provide concrete grout for reinforced masonry lintels and bond beams where indicated on drawings and as scheduled. Maintain accurate location of reinforcing steel during concrete placement.

3.20 CONCRETE SURFACE CORRECTION

- A. Prior to all corrections, an as-built condition sketch and method of correction must be submitted to the Commissioner for review and approval.
- B. Patching Defective Areas: Restore and patch defective areas with cement mortar immediately after removal of forms, when acceptable to Commissioner.
- C. Cut out honeycomb, rock pockets, voids over 1/4" in any dimension, and holes left by tie rods and bolts, down to solid concrete but, in no case to a depth of less than 1". Make edges of cuts perpendicular to the concrete surface. Thoroughly clean, dampen with water, and brush-coat the area to be patched with a bonding grout containing the specified bonding admixture. Place patching mortar after while bonding grout is still tacky.
- D. For exposed-to-view surfaces, blend white Portland cement and standard Portland cement so that, when dry, patching mortar will match color surrounding. Provide test areas at inconspicuous location to verify mixture and color match before proceeding with patching. Compact mortar in place and strike-off slightly higher than surrounding surface.
- E. Restoration of Formed Surfaces: Remove and replace concrete having defective surfaces if defects cannot be corrected to satisfaction of the Commissioner. Surface defects, as such, include color and texture irregularities, cracks, spalls, air bubbles, honeycomb, rock pockets; fins and other projections on surface; and stains and other discoloration's that cannot be removed by cleaning. Flush out form tie holes, fill with dry pack mortar, or pre-cast cement cone plugs secured in place with bonding agent.
- F. Restore concealed formed surfaces, where possible, that contain defects that affect the durability of concrete. If defects cannot be corrected, remove and replace concrete.
- G. Restoration of Unformed Surfaces: Test unformed surfaces, such as monolithic slabs, for smoothness and verify surface plane to tolerances specified for each surface and finish. Correct low and high areas as herein specified. Test unformed surfaces sloped to drain for tureens of slope, in addition to smoothness, using a template having required slope.
- H. Restore finished unformed surfaces that contain defects, which affect durability of concrete. Surface defects, as such, include crazing, cracks in excess of 0.01" wide or which penetrate to reinforcement or completely through non-reinforced sections regardless of width, spalling, pop-outs, honeycomb, rock pockets, and other objectionable conditions.

- I. Correct high areas in unformed surfaces by grinding, after concrete has cured at least 14 days, except at hydrostatic slabs.
 - J. Correct low areas in unformed surfaces during or immediately after completion of surface finishing operations by cutting out low areas and replacing with fresh concrete. Finish restored areas to blend into adjacent concrete. The specified underlayment compound or topping may be used when acceptable to Commissioner.
 - K. Restore defective areas, except random cracks and single holes not exceeding 1" diameter, by cutting out and replacing with fresh concrete. Remove defective areas to sound concrete with clean, square cuts and expose reinforcing steel with at least 3/4" clearance all around. Dampen concrete surfaces in contact with patching concrete and apply bonding compound. Mix patching concrete of same materials to provide concrete of same type or class as original concrete. Place, compact and finish to blend with adjacent finished concrete. Cure in the same manner as adjacent concrete.
 - L. Restore isolated random cracks and single holes not over 1" in diameter by dry-pack method. Groove top of cracks and cutout holes to sound concrete and clean of dust, dirt and loose particles. Dampen cleaned concrete surfaces and apply bonding compound. Mix dry-pack, consisting of one part Portland cement to 2-1/2 parts fine aggregate passing a No. 16 mesh sieve, using only enough water as required for handling and placing. Place dry-pack after bonding compound has dried. Compact dry-pack mixture in place and finish to match adjacent concrete. Keep patched area continuously moist for not less than 72 hours.
 - M. Structural Correction: All structural correction must be made with prior approval of the Commissioner as to method and procedure, using the specified polymer mortar and/or specified epoxy adhesive. Where epoxy injection procedures must be used, an approved low viscosity epoxy made by the manufacturers previously specified must be used. In addition, all cracks must be filled with the specified crack sealer or other method as approved by the Commissioner. All garage slabs must be restored prior to the slab being treated with the specified penetrating anti-spalling sealer.
 - N. Underlayment Application: Leveling of floors for subsequent finishes may be achieved by use of specified underlayment material. Underlayment application must achieve the tolerances specified in "MONOLITHIC SLAB FINISHES" above.
 - O. Specified Polymer Horizontal Mortar: All exposed floors must be leveled, where required, with the specified self-leveling topping.
 - P. Corrective Methods not specified above may be used, subject to acceptance of Commissioner.
- 3.21 FOUNDATION WALLS
- A. The contractor must form and leave openings in walls as shown on drawings and approved shop drawings for work of other trades. These openings must be temporarily closed and when so directed, the contractor must point up in solid and neat manner with waterproofed cement.

3.22 WORK IN CONNECTION WITH OTHER TRADES

- A. Sleeves, pockets, openings, etc., must be set in the concrete walls and arches as required for the mechanical trades as shown on approved shop drawings; these must be encased or built into the concrete work and must be properly placed and secured in position in the forms before concrete is placed.
- B. Provide all chases, pipe slots, etc., required for the mechanical trades (see mechanical drawings), constructed as shown on the approved shop drawings.
- C. Leave temporary access panels where required to install mechanical equipment as required by trade affected. Panels must be formed with construction joints as specified. Details for such panels must be submitted to Commissioner for approval.
- D. Coordinate all penetrations, cutting, and patching with waterproofing trade.

3.23 CUTTING AND PATCHING

- A. Contractor for concrete work must be responsible for all cutting, removing and patching work where concrete surfaces are not installed within the limits shown on the drawings or specified herein. All such work must meet with the approval of the Commissioner.
- B. Where cutting and patching is required to accommodate the work of other subcontractors, such cutting must be done at the expense of said subcontractors but must be performed by the contractor for concrete work.
- C. The location and extent of cutting in completed concrete work and the patching thereof must meet with the approval of the Commissioner.

3.24 QUALITY CONTROL TESTING DURING CONSTRUCTION

- A. The City of New York will employ a testing laboratory to perform tests and to submit test reports for Special Inspections.
- B. Sampling and testing for quality control during placement of concrete may include the following, as directed by Commissioner.
 - 1. Sampling Fresh Concrete: ASTM C 172, except modified for slump to comply with ASTM C 94.
 - 2. Slump: ASTM C 143; one test at point of discharge for each truck; additional tests when concrete consistency seems to have changed.
 - 3. Air Content: ASTM C 173, volumetric method for lightweight or normal weight concrete; ASTM C 231 pressure method for normal weight concrete; one for each truck of air-entrained concrete.
 - 4. Concrete Temperature: Test hourly when air temperature is 40°F (4°C) and below, and when 80°F (27°C) and above; and each time a set of compression test specimens made.
 - 5. Compression Test Specimen: ASTM C 31; one set of 5 standard cylinders for each compressive strength test, unless otherwise directed. Mold and store cylinders for laboratory cured test specimens except when field-cure test specimens are required.
 - 6. Compressive Strength Tests: ASTM C 39; one set for each day's pour exceeding 25 cu. yds. plus additional sets for each 50 cu. yds. over and above the first 25 cu. yds. of each

concrete class placed in any one day; one specimens tested at 7 days, three specimens tested at 28 days, and one specimens retained in reserve for later testing if required.

- a. When frequency of testing will provide less than 5 strength tests for a given class of concrete, conduct testing from at least 5 randomly selected batches or from each batch if fewer than 5 are used.
 - b. When strength of field-cured cylinders is less than 85 percent of companion laboratory-cured cylinders, evaluate current operations and provide corrective procedures for protecting and curing the in-place concrete.
 - c. Strength level of concrete will be considered satisfactory if averages of sets of three consecutive strength test results equal or exceed specified compressive strength, and no individual strength test result falls below specified compressive strength by more than 500 psi.
7. Water Cement Ratio Test: Check water content of concrete in accordance with ‘Standard Method of Test for Water Content of Freshly Mixed Concrete Using Microwave Oven Drying, AASHTO DESIGNATION: TP 23, SHRP DESIGNATION: 2027’ for testing procedure.
8. Test results will be reported in writing to Commissioner, and Contractor within 24 hours after tests. Reports of compressive strength tests must contain the project identification name and number, date of concrete placement, name of concrete testing service, concrete type and class, location of concrete batch in structure, design compressive strength at 28 days, concrete mix proportions and materials; compressive breaking strength and type of break for both 7-day tests and 28-day tests.
- a. Non Compliance: All test reports indicating non-compliance must be faxed immediately to all parties on the test report distribution list and the hard copies submitted on different colored paper.
 - b. Nondestructive Testing: Windsor probes, sonoscope, or other non-destructive device may be permitted but must not be used as the sole basis for acceptance or rejection.
9. Additional Tests: The testing service will make additional tests of in-place concrete when test results indicate specified concrete strengths and other characteristics have not been attained in the structure, as directed by Commissioner. Testing service may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42, or by other methods as directed. Contractor must pay for such tests when unacceptable concrete is verified.

3.25 WASTE MANAGEMENT

- A. Separate and recycle waste materials in accordance with the DDC General Conditions Section 017419 Construction Waste Management and Disposal and to the maximum extent feasible.
- B. Collect cut off steel and discarded reinforcement steel and place in area for recycling.
- C. Place materials defined as hazardous or toxic waste in designated containers.

- D. Use trigger operated spray nozzles for water hoses and closed loop system to reduce water consumption.
- E. Reusable forms should be cleaned immediately after removal and non-reusable forms recycled to the maximum extent economically feasible.
- F. Incorporate crushed concrete or masonry materials in sub-base to the maximum extent feasible in accordance with sub-base specifications.
- G. Before concrete pours, designate location or uses for excess concrete. Options include:
 - 1. Additional paving
 - 2. Post footing anchorage
 - 3. Landscaping -- site concrete features
 - 4. Flowable fill
- H. To avoid contamination of the local landscape, before concrete pours, designate a location for cleaning out concrete trucks where run-off can be contained, reused or incorporated. Options include:
 - 1. Company owned site for that purpose
 - 2. On-site area to be paved later in project

END OF SECTION 03 30 00

PAGE INTENTIONALLY LEFT BLANK

SECTION 03 33 00

ARCHITECTURAL CONCRETE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes architectural cast-in-place concrete.
- B. Related Sections
 - 1. Section 03 30 00 "Cast-in-Place Concrete"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Samples - Submit
 - 1. Cement; 3 to 6 oz. sample of cement submitted prior to design mixes and submitted for each delivery of each cement type to the batch plant during construction. Label sample as to date, truck number, mill, lot number and bin number to which delivered.
 - 2. Fine aggregate; each type, 1 lb.
 - 3. Coarse aggregate; each type, 1 lb.
 - 4. Form contact materials; each type, 12" square with flange.
 - 5. Form gaskets; each type, 12" long.
 - 6. Forms for reveals and rustication; each type, 12" long.
 - 7. Reinforcement supports, chairs, tie wire; each type.
 - 8. Form ties; each type.
 - 9. 12' x 12' x 2-1/2" thick samples with finish and treatment required for each type of cast-in-place concrete work using a mix of the required ingredients, strength and color matching the designated color sample. Concrete samples are to be cast vertical against the same form material to be used in the construction. Resubmit samples until approved by the Commissioner. Include the following finishes:

- a. Off the form.
- b. Light blast (with "black beauty").
- c. Heavy blast (with "black beauty").
- d. Acid etched.
- e. Water washed.

10. Full size mock-up panels.

C. Shop Drawings: Prepare shop drawings for approval, including plans, elevations, sections, details and schedules as required to fully illustrate the work, including the Mock-up, and to meet project conditions. Include the following:

1. Formwork

- a. Submit detailed drawings showing the location of each panel including shop fabricated joints, field splice joints, tie locations, embedment locations, and clean-out openings. Specifically show details of bulkheads, reveals, recesses and corner assemblies and the means to be used to seal all joints and to maintain alignment.
- b. Shop drawings must have the stamp of a Professional Engineer licensed in the State of New York.

2. Reinforcing Steel: Comply with Section 03 30 00 "Cast-in-Place Concrete."

- a. Indicate cover, placing passages, accessories and any special detailing.

3. Placing: Submit deposit sequence within each placement, including equipment and projected time between placements.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. In addition to requirements shown or specified herein and in Section 03 30 00 "Cast-in-Place Concrete," comply with the recommendations of Chapter 11, Formwork Architectural Concrete, and Special Publication No. 4, Formwork for Concrete and ACI 303.1 "Standard Specification for Cast-In-Place Architectural Concrete," as published by ACI.

1.5 MOCK-UP

A. Do not proceed with construction of the mock-up until all other samples are approved by the Commissioner.

B. Construct mock-up of a separate 4' high x 4' wide x 1'-6" thick panel on the job site. It is the intent of this specification that the mock-ups serve as the ultimate basis for final in-place work. As such, all shop drawings, details, techniques, materials, formwork, and crews and foremen used to achieve the final approved mock-ups must also be utilized for further in-place work.

- C. Coordinate with other trades performing work on the mock-up.
- D. Prior to placing architectural concrete erect the mock-up at the job site, where directed, consisting of the elements indicated and conforming with the building details. Provide footings and bracing as required or needed to ensure continuous stability of the mock-up.
- E. Install, patch, and finish concrete as specified for permanent work. Ensure that all agents and admixtures used in forming and pouring concrete can be cleaned from the work without staining, spotting, etc. Mock-up, when approved by the Commissioner, will serve as the approved sample for architectural concrete work as to color, texture, patching and appearance.
- F. If mock-up is not approved by Commissioner, remove and replace with others at no additional cost to the City of New York.
- G. Protect and maintain approved mock-up throughout construction period and remove only when directed by the Commissioner.

1.6 CONSTRUCTION CONFERENCE

- A. Within thirty (30) days following Notice to Proceed, schedule a meeting at a mutually agreeable time to include the Commissioner, the Concrete Supplier and the Formwork Manufacturer to discuss materials, methods of work and forming systems for architectural concrete work.

PART 2 PRODUCTS

2.1 CONCRETE MATERIALS

- A. Cement and Aggregates: Supply cement and aggregates from one domestic raw material and manufacturing source. Do not change source or type of cement or aggregate without Commissioner's written approval.
 - 1. Portland Cement: ASTM C-150 White.
 - 2. Fine Aggregate: ASTM C-33, clean natural sand, consistent in color and gradation in screens finer than #16.
 - 3. Coarse Aggregate: ASTM C-33, clean crushed stone, free of material finer than #165 screen.
- B. Admixtures
 - 1. Air Entraining: Conforming to ASTM C-260, and compatible with other ingredients.
 - 2. High Range Water Reduction (Plant batched superplasticizer): ASTM C-404, Type F or G containing no chlorides.

- a. Basis of Design: Subject to compliance with requirements provide Masterbuilders; Rheobuild 716 or comparable product by one of the following:
 - 1). W.R. Grace
 - 2). Euclid
 - 3). Or approved equal.
3. Other Admixtures: Do not use unless submitted for review and acceptance. Admixtures must be certified in writing by the manufacturer to be in compliance with ASTM C-494.
4. Color Admixtures
 - a. Basis of Design: Subject to compliance with requirements provide L.M. Scofield Co.; Chromix or comparable product by one of the following:
 - 1). Davis Colors
 - 2). Lehigh Cement
 - 3). Or approved equal.
 - b. Color: As selected by the Commissioner.
- C. Water: Conform to ACI 301, Chapter 2, Paragraph 203.

2.2 FORMWORK MATERIALS

- A. Form Facing: Provide flat wall surfaces formed with plastic impregnated (min. 165 gr.), multi-layer (min. 14 plys/in), birch plywood, 3/4" thick.
 1. Basis of Design: Subject to compliance with requirements, provide Plywood and Door Corp.; Finn-Form (Red) or comparable product by one of the following:
 - a. Dayton
 - b. Fitzgerald
 - c. UPM Plywood
 - d. Or approved equal.
- B. Form Gaskets (for sealing form panel joints): Closed cell, foam rubber or neoprene gaskets, with pressure sensitive paperbacked adhesive on surfaces to be bonded to forms. Gaskets must be of sufficient thickness, widths, and compressibility for specific use.
- C. Gasket adhesive remover must not discolor concrete and must thoroughly remove any adhered adhesive.
- D. Reveal Formers and Reformers (see drawings for patterns): Resilient elastomeric with a wood core.
- E. Form Release Coating: Colorless, non-staining and having no deleterious effect on the concrete.

- F. Form Ties: Tapered stud She-Bolts, He-Bolts or Through-the-wall tapered ties. Ties will leave a hole of not more than 9/16" in dia. on the concrete surface, and no metal closer than 1" from the surface. Use ties with external spreading devices. Use stainless steel leave in material.
1. Subject to compliance with requirements, products that may be incorporated into the Work include the following:
 - a. Williams Form Engineering; She-Bolt
 - b. Dayton/Superior Co.; He-Bolt
 - c. Gates & Sons; Through-Taper
 - d. Or approved equal.
- G. Reinforcing: Provide as specified in Section 03 30 00 "Cast-in-Place Concrete" except as hereafter modified:
1. All spacing and support devices must be high density plastic or steel wire with plastic coated feet (dipped type). Color of the plastic must match the concrete color.
 2. Tie Wire: Provide non-corrosive plastic coated tie wire at exposed surfaces or for all work above an exposed soffit or ceiling.

2.3 MISCELLANEOUS MATERIALS

- A. Waterproofing Sealer: Sealer must be compatible with all other sealants it comes in contact with (i.e. expansion joints, sealants or window etc.).
1. Basis of Design: Subject to compliance with requirements, provide Lithofin PSI – Premium Silicone Impregnator by VIC International Corporation or comparable product by one of the following:
 - a. ProSoCo
 - b. Miracle Sealants
 - c. Or approved equal.
- B. Sealant: See Section 07 92 00 "Joint Sealants" for sealant for concrete to concrete in revealed expansion, construction and control joints.
- C. Concrete Etching Solution: Commercial concrete cleaner containing solvents, chloride acid, and stain removers.
- D. Curing Materials: Colorless curing compound conforming to ASTM C309.
- E. Any other miscellaneous materials required, but not specified herein, must conform to the requirements of Section 03 30 00 "Cast-in-Place Concrete."

2.4 MIXES

- A. General: Comply with Section 03 30 00 "Cast-in-Place Concrete" except that slump must be 4" plus or minus 1/2".

- B. All architectural concrete must have water reducing agent.
- C. Mix must be designed with low water content (max. 2"). Fluidity must be attained with addition of high range water reducing agent to a slump of 6" + 1" (including high range water reducing agent in color admixture).

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 FORMWORK

- A. Comply with Section 03 30 00 "Cast-in-Place Concrete" except as hereinafter specified.
 - 1. Formwork foreman must be experienced in architectural concrete formwork.
 - 2. Design forms to permit easy removal. Prying against the face of concrete will not be allowed.
 - 3. The forms must be completely rigid and strong enough to withstand without deflection, movement, or leakage, the full liquid head, and the high hydraulic pressures which result from rapid filling and high-frequency vibration.
 - 4. Use screw-type fastening devices to align and close joints at contact face. Yoke beams and columns where possible with threaded rods and use diagonal rods to hold horizontal wales at corners. Install rods so that the tightening action acts to close form joints.
 - 5. Form Panel Joints: Seal all joints in formwork, wherever located, to remain watertight. Seal as follows:
 - a. Caulked - Butt board ends and plywood edges sealed on contact surfaces.
 - b. Gasketed - Joints erected and stripped in field. Form to form or form to concrete.
- B. Reveal Formers and Reformers: Fabricate and fasten to avoid protruding splinters which may become embedded in the concrete. Fasten to hold alignment during placing.
- C. Construction Joints: Make joints only at revealed form joint locations shown on the architectural drawings. Determine spacing between construction joints by the following:
 - 1. Maximum Area of Wall Placement: 300 sq. ft.
 - 2. Maximum Dimension: 15 ft.
 - 3. The formwork for second placements of construction joints must be gasketed and held tight to the in-place concrete to prevent fluid loss.

- D. Plastic Surfaced Plywood: See architectural drawings for pattern of joints. Back fasten all contact material to supports. Penetrating the face is not permitted. Drill tie holes from contact face using brad point bits. Seal all tie holes and cut edges as directed by the manufacturer.
- E. Form Ties: Locate as detailed on drawings symmetrically in level horizontal rows and plumbed vertically. Ties shown may be used as dummy ties or working ties. Draw tie cones tight against the contact face. Maintain reusable portions of form ties free of rust and damage.
- F. Reuse of Forms: Forms may be reused only when properly maintained and in a satisfactory condition and approved by Commissioner. Do not reuse forms which cannot be tightly butted and made watertight. If reuse of forms is approved by Commissioner, clean forms, and restore damaged surfaces.
- G. Cleaning and Coating of Forms: Clean all form contact faces uniformly and coat with coat of specified form release coating per manufacturer's written instructions. Remove excess form coating and do not allow coating to come in contact with previously placed concrete against which fresh concrete will be placed.
- H. Water Stops: Apply strip to primed concrete surface as directed by the manufacturer. Position strip at edge of joint adjacent to earth for sub-grade installation and inboard of the exterior layer of reinforcing steel for above-grade installations.

3.3 FORMWORK TOLERANCES

- A. Hydraulic Pressure; Design Forms, studs and walers to limit deflections between supports and stiffening members to $L/400$ of the span.
- B. Finish Lines: Position formwork to maintain hardened concrete finish lines within the following permissible deviations.
 - 1. Variations from Plumb
 - a. In 10 ft. $\pm 1/8$ in.
 - 2. Cross-Sectional Dimensions
 - a. Minus 1/8 in.
 - b. Plus 1/4 in.
 - 3. Surface Tolerances
 - a. Maximum offset between butt joints of individual or ganged forms 1/32 in.
 - 4. Line of troweled edge at top of spandrel in 10 ft. $\pm 1/8$ in.

3.4 REINFORCEMENT

- A. General: Comply with Section 03 30 00 "Cast-in-Place Concrete" except as hereinafter modified:
1. Provide no less than 2 inches concrete coverage over reinforcing steel for architectural concrete surfaces, including beam bottoms. Notify the reinforcing steel fabricator that strict compliance to coverage requirements and bent bar details is extremely important.
 2. Cut tie wires as closely as possible to the bars, and bend behind the bars in such a manner that concrete placement will not force the wire ends to the exposed concrete surfaces.
 3. Provide an unobstructed passage, min. 10" long, between the layers of reinforcing steel for placement of tremmies and trunks in placing the concrete. Passage must be a maximum of 8'-0" apart, 4'-0" from each corner.

3.5 PLACING CONCRETE

- A. Coordination: Coordinate batch plant, transit, conveying and placing operations so that all concrete is in its final position within 1-1/2 hrs. (1 hr. when temperature is above 90 deg. F.) from the time the mix is charged with water. Perform this coordination so that any deposit load placed in the forms will be covered by a subsequent deposit within 15 minutes and in a continuous manner. Truck delivery, truck changing, crane positions, bucket size, tremmie numbers and location, lift heights, etc. must be planned and directed toward achieving homogeneous and consistent placements.
- B. General: Place concrete in accordance with Section 03 30 00 "Cast-in-Place Concrete" except as hereinafter modified:
1. Clean truck mixer drums thoroughly prior to batching. Load truck mixers at the volume which will ensure a uniform batch at the slump specified. In the event that mixing is not uniform, the truck may either be rejected and not used on the project, or if warranted, allowed to mix only batches which will ensure delivery of a uniform concrete of the specified slump.
 2. Handle concrete from the mixer to the place of final deposit as rapidly as practical by methods which prevent separation or loss of the ingredients.
 3. Clean transporting and handling equipment at frequent intervals and flush thoroughly with water before and after each day's run.
- C. Retempering: Do not place concrete in forms after it has taken initial set. Retempering of concrete which has partially set is prohibited.
- D. Clean Formwork: Formwork must be clean and free from papers, sawdust, dirt and debris immediately prior to and during the time concrete is placed thereon. Spaces must be thoroughly cleaned prior to closing formwork and maintained clean until concrete is placed. Provide formwork, which will be in place and closed while other

work is being carried out which could impair its cleanliness, with clean-out panels in surfaces not exposed to view, or with panels following approved joint lines; panels must be noted on shop drawings. Just prior to placing concrete thoroughly inspect the interior of formwork and clean out all debris with vacuum cleaners, magnets, air or water jets as required.

- E. Vibration: Compact concrete thoroughly by vibrating using internal vibrators only to produce a dense, homogeneous mass without voids or pockets. Place vibrators in the concrete vertically and thoroughly blend adjacent deposits and layers. After top out leveling of all exposed spandrels allow the concrete to set 10 to 20 minutes then give a final vibration, drawing the head out slowly to remove entrapped air. Immediately thereafter hard trowel surface.
- F. Perform all vibrating operations by the same skilled person responsible for vibrating acceptable concrete in the mock-ups.

3.6 CURING AND PROTECTION

- A. Hot Weather Protection: Comply with Section 03 30 00 "Cast-in-Place Concrete."
- B. Curing: Apply curing compound immediately after form removal in accordance with manufacturer's recommendations for maximum moisture retention and colorless application.
- C. Protect all horizontal and vertical corners of concrete for full length or full height of exposed corner with continuous wood corner guards. In areas where high activity warrants, protect all vulnerable surfaces.

3.7 FORMED CONCRETE FINISHES AND TREATMENTS

- A. Finish and Treatment of Formed Concrete Surfaces: Provide architectural concrete formed surfaces with "as-cast" finish, using forms specified and where indicated on drawings. Provide concrete surfaces with the following treatment as indicated below:
 - 1. Dressing, patching, texturing by etch cleaning, light and heavy blasting, and water washing, and the application of a water repellent.
- B. Final Finish Types: Apply the following finish types as required below:
 - 1. Dressing: Removal of all runs, splatters, fins, projections, and stains, in a manner which avoids scarring, staining or scratching the surface.
 - 2. Patching Exposed Concrete: It is the intent of these specifications that the concrete work will be performed in a manner that no patching of exposed concrete will be required. In the event remedial action is accepted as a means of rendering work acceptable it may consist of patching with a texture-matched technique and color matched mortar. Only areas designated by Commissioner will be patched. Patch after the application of texture treatment and before the water repellent application.
 - 3. Texturing of Concrete: Provide all exposed surfaces with the following treatment:

- a. Light abrasive blast finish to match approved samples and mock-up.
 - b. All concrete to be treated must be a minimum of twenty-one (21) days old.
 - c. Thoroughly clean work areas of waste material as soon as each segment of work is completed, and protect work which may be damaged by this operation in an accepted manner. Be responsible for fallout and for protecting persons, adjacent work and property.
 - d. Etch Cleaning
 - 1). Apply cleaner in an even manner break to break and joint to joint of surface, allow to set and flush in a consistent manner throughout project. Proceed in a manner approved by the product manufacturer.
 - 2). Treatment must produce a "matte" surface by just removing the surface of the cement skin. Treatment must not expose aggregate larger than that passing #20 screen.
 - e. Tie Holes: Tie holes requiring plugging will be plugged with concrete. Spalled or defective tie holes may be required to be patched with approved patching mortar, but only patch if required by Commissioner.
4. Corners, whether horizontal or vertical, must not be chamfered.
 5. Apply waterproofing sealer to wall surfaces in one application following manufacturer's instructions.

END OF SECTION 03 33 00

SECTION 04 20 00

UNIT MASONRY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Concrete block interior partitions.
2. Metal joint reinforcing, anchors, and related accessories for masonry.
3. Control joints in masonry, filled with joint fillers.
4. Chases, recesses, pockets and openings in masonry as required for installation of work by others.
5. Building in of items furnished by others into masonry, including access doors, door frames, anchors, sleeves and inserts, and other similar items to be embedded in masonry.
6. Grouting in of metal items built into masonry work.
7. Protection, pointing and cleaning of masonry.

B. Related Sections

1. Section 07 84 13 "Penetration Firestopping"
2. Section 07 92 00 "Joint Sealants"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit Shop Drawings for the following:
1. Anchoring details.
 2. Control and expansion joint locations and details.

- C. Submit Samples for the following:
 - 1. Joint reinforcing, each type, width and proposed location (labeled).
 - 2. Anchors, each type, width and proposed location (labeled).
 - 3. Joint filler, each type.
 - 4. Mortar color, 12" long cured sample.
- D. Submit technical and installation information for the following:
 - 1. Mortar materials, each material and mortar type.
 - 2. Certification of mortar mix.
 - 3. Concrete block, joint reinforcing, anchors, ties and joint filler; submit manufacturer's technical and descriptive literature.
 - 4. Block manufacturer must submit certifications of compliance with ASTM C 90, C 331 and UL 618 prior to any job site delivery. Field sample of concrete block may be tested by an Independent Testing Laboratory retained by the City of New York according to the requirements of ASTM C 140.
- E. Cleaning Procedures: Submit proposed procedures and materials for cleaning masonry work; including certification that cleaner will not adversely affect gaskets, sealants, etc.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Work of this Section must conform to the requirements of the following:
 - 1. 2011 ACI 530/ASCE 5/TMS 402 Building Code Requirements for Masonry Structures.
 - 2. 2011 ACI 530-1/ASCE 6/TMS 602 Specifications for Masonry Structures.

1.5 PRODUCT HANDLING

- A. General: Deliver, store, handle and protect all materials from damage, moisture, dirt and intrusion of foreign matter. Store all masonry units and mortar materials on raised platforms and under ventilated and waterproof cover. Store packaged materials in manufacturer's unopened containers, marked with manufacturer's name and product brand name. Immediately reseal containers after partial use. Remove and replace damaged materials.
- B. Masonry Units: Pack, deliver and store to prevent breakage, cracking, chipping, spalling or other damage. Store, protect and ventilate units at project site.

- C. Aggregate: Store with provisions for good drainage.
- D. Reinforcement and Anchors: Store and protect so that when placed, joint reinforcement and anchors will be free of soil, dirt, ice, loose rust, scale, or other coatings which would destroy or reduce bond with mortar, and will not be disfigured or bent out of shape.

1.6 CODE REQUIREMENTS

- A. Work of this Section must conform to all applicable requirements of the 2008 New York City Building Code.
 - 1. Concrete block must comply with Chapter 21 of the 2008 New York City Building Code.
 - 2. Concrete block must be type approved by the Board of Standards and Appeals.
 - a. Concrete block used for fireproofing must conform to 2008 New York City Building Code requirements and provide ratings required by the Contract Documents.
- B. Fire rated masonry partitions must have MEA or BSA number.
- C. Conform to New York City Local Law 17-95 for seismic requirements.

1.7 JOB CONDITIONS

- A. Stain Prevention: Prevent grout, mortar, and soil from staining the face of masonry to be left exposed. Immediately remove grout, mortar, and soil that come in contact with such masonry.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Standard Concrete Block
 - 1. Portland cement, ASTM C 150, Type 1, low alkali (less than 0.6%), single source for entire project.
 - 2. Aggregates, ASTM C 331, lightweight expanded shale, clay or slate aggregates, manufactured by the rotary kiln process.
 - a. Product: Subject to compliance with requirements, provide one of the following:
 - 1). Northeast Solite Corp.; Solite
 - 2). Norlite LLC; Norlite
 - 3). Buildex Inc.; Haydite
 - 4). Or approved equal.

- b. Block scheduled to receive painted finish must contain normal weight aggregate meeting ASTM C 33 in addition to lightweight aggregate in order to receive a smooth, uniform finish.
3. Concrete Masonry Units: Load bearing lightweight aggregate concrete masonry units conforming to the requirements of ASTM C 90, Type 1.
 - a. Block for fire-rated walls must be 75% solid units.
4. The producer of the concrete masonry units must furnish certification from an independent testing laboratory confirming that all 8" or larger masonry units meet all of the UL 618 requirements for two (2) hours or better (as required), referencing full scale fire test reports (ASTM E 119). All 4" and 6" units must conform to "National Bureau of Standards" and "National Research Council" full scale fire tests.
5. Sizes and Shapes: Nominal face size 8" x 16" by thickness as indicated on drawings, with stretcher units, jamb units, header units, square corner units (at ends and corners of exposed or painted work), sash units (at control joints within masonry wall), lintel units and other special shapes and sizes required to complete the work.
6. Finish: For exposed or painted block surfaces, in addition to ASTM requirements, block must have uniformly dense, flat, fine grain texture, with no cracks, chips, spalls, or other defects which would impair appearance. For concealed CMU, surfaces must be free from deleterious materials that would stain plaster or corrode metal.
7. Curing: All concrete block must be steam cured, and air dried for not less than thirty (30) days before delivery.
8. Density of concrete block must not exceed one hundred and five (105) lbs. per cubic foot.
9. Shrinkage: Shrinkage of concrete blocks must not exceed 0.065% when tested in accordance with ASTM C 426-16, Standard Test Method for Linear Drying Shrinkage of Concrete Masonry Units.
10. Water Content
 - a. At the time of delivery to the job site, concrete masonry units must have a value, in weight of contained water, of not more than thirty (30) percent of the fully saturated content for the unit tested.
 - b. Ship all units from the factory, and store at the job site, with all necessary protection to prevent increase of water content from rain and other sources.

B. Joint Reinforcing for Masonry Walls

1. For interior block walls and partitions, provide standard reinforcing fabricated of 9 ga. side and cross rods, truss or ladder design, no ties, spaced every other block course. Provide prefabricated pieces at corners and intersections of walls or partitions. Provide mill galvanized reinforcing conforming to ASTM A 641, Class B-1, applied after fabrication.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1). Hohmann & Barnard
 - 2). Heckmann Building Products
 - 3). Wire-Bond
 - 4). Or approved equal
2. Wire used in assemblies noted above must be cold drawn steel wire conforming to ASTM A 82.

C. Anchors

1. Wire Mesh: Galvanized sixteen (16) gauge steel wire, 1/4" square mesh, width 1/2" less than wall thickness, by length to suit condition.
2. For anchoring masonry to structural steel, provide hot-dip galvanized steel anchors. Galvanizing must conform to ASTM A 153, with zinc coating of 1.5 oz. of zinc per sq. ft.
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1). Hohmann & Barnard
 - 2). Heckmann Building Products
 - 3). Wire-Bond
 - 4). Or approved equal
3. For anchoring CMU interior partitions to underside of steel beams, provide hot dip galvanized steel partition top anchors.
 - a. Product: Subject to compliance with requirements, provide one of the following:
 - 1). Heckmann Building Products; No. 419 and No. 421
 - 2). Hohmann & Barnard; No. PTA 420
 - 3). Wire-Bond; PTA #4301
 - 4). Or approved equal.
4. For anchoring CMU interior partitions to underside of structural deck, provide 4" x 4" x 1/4" galvanized steel angles (ASTM A 36), 3'-0" long spaced 3'-0" o.c. alternately on each side of partition. Anchor partition securely to structural deck.

- D. Reinforcing Bars and Rods: ASTM A 615, Grade 60. See Drawings for size.
- E. Control Joint Fillers
 - 1. Vertical Installation Within Concrete Masonry Wall: Extruded high grade neoprene rubber, cross shape, for use with concrete masonry sash units, which provides a force fit in the grooves of the sash block, and has 1/2" diameter tubular ends (compressed 25% when installed in 3/8" wide joint).
 - a. Provide the following sizes:
 - 1). 2-5/8" wide control joint fillers for 4" block walls.
 - 2). 4-5/8" wide for 6" block walls.
 - 3). 6-5/8" wide for 8" block walls.
 - b. Provide backer rod and sealant joint over joint filler as per drawings and Section 07 92 00 "Joints Sealants."
 - 2. Isolation Joint Filler at Abutting Construction and at Intersecting CMU Walls: Compressible and resilient closed cell neoprene gasket with pressure sensitive adhesive backing, thickness 30% greater than thickness of joint. Recess joint filler and install backer rod and sealant as per drawings and Section 07 92 00 "Joints Sealants."
- F. Neoprene Joint Filler: Provide closed cell neoprene, Type NN-1, conforming to ASTM D 1056, Grade 1, high performance
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Williams Products Inc.
 - b. D. S. Brown
 - c. Norton
 - d. Or approved equal.

2.2 MORTAR MATERIALS

- A. Portland Cement: ASTM C 150, Type 1, standard color, one source.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Sand: Clean, washed, buff colored sand, graded per ASTM C 144.
- D. Water: Clean, fresh and suitable for drinking.

2.3 MORTAR MIX

- A. Interior Masonry Construction: Provide Portland cement/lime mortar conforming to ASTM C 270, Type N; for load bearing conditions, provide mortar conforming to ASTM C 270, Type M.

- B. Reinforced Concrete Block: Provide Portland cement/lime mortar conforming to ASTM C 270, Type S.
- C. Grout for Unit Masonry: Comply with ASTM C 476 for grout for use in construction of unit masonry. Use grout of consistency (fine or coarse) at time of placement which will completely fill all spaces intended to receive grout. Provide grout with a minimum compressive strength of 3000 psi when tested in accordance with ASTM C 1019.
- D. Mixing
 - 1. General: Add cement just before mixing and mix dry. Use sufficient amount of water as necessary to produce workable mix. Mix in small batches to make plastic mass.
 - 2. Mixing: Machine mix all mortars in approved type mixer with device to accurately and uniformly control water. Add hydrated lime dry. Mix dry materials not less than two (2) minutes. Add water, then mix not less than three (3) minutes, not to exceed five (5) minutes. Mix only amount of mortar that can be used before initial set. Do not use mortar which has reached its initial set or two (2) hours after initial mixing, whichever comes earlier. Mortar may not be re-tempered. Clean mixer for each batch, whenever mortar type is changed, and at end of each day's work.
 - 3. Acceleration or other admixtures not permitted.
 - 4. Provide mortar with a flow after suction of not less than seventy-five (75) percent of that immediately after mixing as determined by ASTM C 91.
- E. Admixtures
 - 1. Do not use air-entraining admixtures or cementitious materials containing air-entraining admixtures in the mortar.
 - 2. Do not use antifreeze compounds or other substances in the mortar to lower the freezing point.
 - 3. Do not use calcium chloride or admixtures containing calcium chloride in mortar.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. General

- 1. Do not wet concrete block units.

2. Build single wythe walls to the actual thickness of the masonry units, using units of nominal thickness shown.
3. Build chases and recesses as shown or required for the work of other trades.
4. Leave openings for equipment to be installed before completion of masonry work. After installation of equipment, complete masonry work to match work immediately adjacent to the opening.
5. Lay out walls in advance for accurate spacing of surface bond patterns with uniform joint widths and to properly locate openings, movement type joints, returns and off-sets. Avoid the use of less than half size units at corners, jambs and wherever possible.
6. Lay up walls plumb and true with courses level, accurately spaced and coordinated with other work.
7. Pattern Bond: Lay exposed masonry patterns as noted on drawings. If not shown, provide running bond. Lay concealed concrete block with all units in a wythe bonded by lapping not less than two (2) inches. Bond and interlock each course of each wythe at corners. Do not use units of less than four (4) inches horizontal face dimensions at corners or jambs.
8. Where possible, build masonry walls and partitions after all overhead ducts, pipes and conduits are in place and tested. Neatly build masonry around the items above. Walls and partitions must be plumb, true to line and free from defects such as open cells, voids, dry joints and other similar defects. In rooms and spaces scheduled to have concrete block finish, make all such surfaces, including upper wall surfaces up to termination of structural ceiling in spaces without suspended ceilings, suitable for paint application. Cut openings in walls and partitions in place only with the approval of the Commissioner.
9. Execute masonry work that is finish surface precise and clean. Cut block surfaces of block must not be visible. On all architectural surfaces, grout must be flush or concave (to be determined with help of mock-up), and even and consistent throughout.

B. Mortar Bedding and Jointing

1. Lay concrete masonry units with full mortar coverage on horizontal and vertical face shells.
2. Lay masonry walls with 3/8" joints unless otherwise shown on drawings.
3. Exposed joints must be flush with the surface of concrete masonry units. Concealed joints must be struck flush.

4. Remove masonry units disturbed after laying; clean and reset in fresh mortar. Do not pound corners at jambs to fit stretcher units which have been set in position. If adjustments are required, remove units, clean off mortar and reset in fresh mortar.

C. Built-In Work

1. As the work progresses, build in items specified under this and other Sections of these specifications. Fill in solidly with masonry around built-in items.
2. Grout in door frames, access doors, louvers and other metal items embedded or built into masonry work solidly with mortar as the masonry units are laid up.
3. Grout under lintels, bearing plates, and steel bearing on masonry with solid bed grout.
4. Seal sleeves, pipes, ducts and all other items which pass through masonry walls with interior grade sealant meeting requirements of Section 07 92 00 "Joints Sealants," so as to be air tight and prevent air leakage. Refer to Section 07 84 13 "Penetration Firestopping" for packing of voids in rated masonry walls.
5. Fill vertical cells of masonry units solid with grout which have anchoring, reinforcing rods, supporting or hanging devices embedded in the cell, including stone anchors and window or curtain wall anchors.
6. Fill vertical cells of masonry units solid with mortar on each side of door frames to sixteen (16) inches beyond.
7. Unless otherwise noted, fill vertical cells of masonry units solid with grout which are below steel bearing plates, steel beams, and ends of lintels, to eight (8) inches beyond bearing and from floor to bearing.
8. Place wire mesh in horizontal joint below masonry unit cells to be filled with mortar, to prevent mortar from dropping into unfilled cells below.
9. Fill all voids solid with grout in masonry indicated as being reinforced. Consolidate grout in place by vibration or other methods which ensure complete filling of cells. When the least clear dimension of the grouted cell is less than two (2) inches, the maximum height of grout pour must not exceed twelve (12) inches. When the least clear dimension is two (2) inches or more, maximum height of grout pour must not exceed forty-eight (48) inches. When grouting is stopped for one (1) hour or longer, the grout pour must be stopped 1-1/2" below the top of a masonry unit. Accurately place vertical bar reinforcing, hold in position before grouting starts and while being grouted. All such reinforcing must have a minimum clear cover of 5/8". Lap all bars a minimum of forty (40) bar diameters and provide steel spacer ties (not to exceed 1/2 bar diameter) to secure and position all vertical steel and prevent displacement during grouting. Provide continuous horizontal reinforcement embedded in mortar joints every second course.

D. Cutting and Patching

1. Accurately cut to size with motorized carborundum or diamond saw all exposed masonry which requires cutting or fitting, producing cut edges.
2. Neatly drill holes made in exposed masonry units to proper size for attachment of handrail brackets and similar items.
3. All masonry which requires patching in exposed work, if approved by Commissioner, must be patched neatly with mortar to match appearance of masonry as closely as possible and to the Commissioner's satisfaction. Rake back joints and use pointing mortar to match as required.

E. Solid Wall Construction

1. Fill the vertical longitudinal joint between wythes solidly with mortar by parging the in-place wythe and shoving units into the parging.
2. Tie wythes with continuous horizontal reinforcement embedded in mortar joints sixteen (16) inches o.c. vertically.

F. Interior Block Partitions

1. Build to full height unless otherwise shown on drawings. At non-rated partitions fill void between CMU and structural deck with continuous neoprene filler as specified herein. At fire rated partitions, fill void with fire stop material meeting the requirements of Section 07 84 13 "Penetration Firestopping." Fasten to structure at top of partition using steel angles as specified herein.
2. Provide continuous horizontal joint reinforcing every other block course, except as otherwise noted. Fully embed longitudinal side rods in mortar for their entire length with a minimum cover of 5/8". Lap reinforcement a minimum of six (6) inches at ends of units.
3. Provide continuity at corners and wall intersections by use of prefabricated "L" and "T" sections. Cut and bend units as directed by manufacturer for continuity at returns, offsets, column fireproofing, pipe enclosures and other special conditions.
4. Corners
 - a. Provide interlocking masonry unit bond in each course at corners.
 - b. Provide continuity at corners with prefabricated "L" reinforcement units, in addition to masonry bonding.
5. Intersecting and Abutting Walls
 - a. Unless vertical control joints are shown as part of structural frame, provide interlocking masonry bond. Provide starters and special shapes as shown on the drawings to bond these walls.

- b. In addition to masonry bonding, provide horizontal reinforcement using prefabricated "T" units at interior partitions.
- G. Anchoring Masonry to Structure: Provide an open space not less than 1/2" in width between masonry and structural member, unless otherwise shown. Keep open space free of mortar or other rigid materials.
- H. Control Joints
- 1. Provide vertical control and isolation joints in masonry as shown. Build in related items as the masonry work progresses.
 - 2. CMU Control Joint Spacing: If location of control joints is not shown, place vertical joints spaced not to exceed 20'-0" o.c. In addition, locate joints at points of natural weakness in the masonry work, including the following:
 - a. At structural column or joint between bay.
 - b. Above control joints in the supporting structure.
 - c. Above major openings at end of lintels upward and below at ends of sills downward. Place at one side of jamb for openings not less than 7'-0" wide and at both sides for openings over 6'-0" wide.
 - d. At reduction of wall thickness.
 - e. Where masonry abuts supporting structure.
 - f. If additional joints are required, indicate same on approved shop drawings.
- I. Lintels: For concrete block walls, use specially formed U-shaped concrete block lintel units with reinforcing bars in accordance with the following table, filled with grout.

Number and Size of Reinforcing Bars Required at Concrete Block Lintels		
Maximum Clearance Span	Wall Width	Rebar No. - Size
2'-0" to 6'-0"	6"	2 - #3
6'-0" to 8'-0"		2 - #4
2'-0" to 6'-0"	8"	2 - #3
6'-0" to 8'-0"		2 - #4
2'-0" to 6'-0"	12"	3 - #3
6'-0" to 8'-0"		3 - #4

3.3 CLEANING, PROTECTION, ADJUSTMENT

A. Protection

- 1. Take adequate precautions for the protection of all surfaces against mortar spatter. Immediately remove any such spatter should it inadvertently occur, leaving no stain or discoloration.
- 2. Wipe excess mortar off masonry surfaces as work progresses.

3. Place wood coverings over all such masonry surfaces as are likely to be damaged during the progress of the entire project.
 4. Perform protective measures in a manner satisfactory to the Commissioner.
 5. Replace damaged masonry units to satisfaction of the Commissioner.
- B. **Cleaning of Masonry:** Upon completion, thoroughly clean all exposed masonry following recommendations of the BIA Technical Note No. 20. Before applying any cleaning agent to the entire wall, apply it to a sample wall area of approximately 4' x 4' in a location approved by the Commissioner. No further cleaning work may proceed until the sample area has been approved by the Commissioner, after which time the same cleaning materials and method may be used on the remaining wall area. If stiff brushes and water do not suffice, thoroughly saturate the surface with clear water and then scrub with a solution of an approved detergent masonry cleaner, equal to "Vana Trol" made by ProSoCo Inc. or equal made by Diedrich, EaCo Chem, Inc. or approved equal, mixed as per manufacturer's directions, followed immediately by a thorough rinsing with clear water. Thoroughly protect all lintels and other corrodible parts during cleaning.
1. Unless otherwise required by cleaning agent manufacturer use only low pressure device (30 to 50 psi) for application of cleaning agent and water rinsing.
- C. **Pointing:** Point any defective joint with mortar identical with that specified for that joint.

END OF SECTION 04 20 00

SECTION 05 12 00

STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Furnish and deliver for installation by others, anchor bolts, bearing plates and loose lintels with complete instructions and templates to facilitate installation.
2. Furnish and erect all columns, bearing plates, beams, girders, bracing, hangers and all related connections (bolted and welded).
3. Openings (unreinforced and reinforced) in structural steel to accommodate mechanical and electrical work.
4. Shop painting and field touch-up painting.
5. Erection bracing and supports, including steel wedges, shims or nuts required for leveling base plates.
6. Lintels and angles attached to structural steel as shown on drawings.
7. Unless specifically excluded, furnish and install all other items for structural steel work indicated on the drawings, specified, or obviously needed to make the work of this Section complete.
8. Waste Management

B. Related Requirements:

1. DDC General Conditions “Construction Waste Management and Disposal”
2. Section 03 30 00 “Cast-In-Place Concrete”
3. Section 04 20 00 “Unit Masonry”
4. Section 05 31 00 “Steel Decking”
5. Section 05 50 00 “Metal Fabrications”
6. Section 06 20 00 “Finish Carpentry”
7. Section 07 13 00 “Foundation Waterproofing”
8. Section 07 92 00 “Joint Sealants”

C. Related Work Specified Elsewhere

1. Installation of anchor bolts furnished under this section.
2. Grout under base and bearing plates.
3. Installation of loose lintels furnished under this section.
4. Miscellaneous metal work
5. Field painting of structural steel, except as specified herein.
6. Fireproofing systems.

1.3 DEFINITIONS

- A. Structural Steel: Elements of structural-steel frame, as classified by AISC 303, "Code of Standard Practice for Steel Buildings and Bridges."
- B. Seismic-Load-Resisting System: Elements of structural-steel frame designated as "SLRS" or along grid lines designated as "SLRS" on Drawings, including columns, beams, and braces and their connections.

1.4 PERFORMANCE REQUIREMENTS

- A. Connections: Provide details of all connections required by the drawings to be completed by structural steel fabricator (including comprehensive engineering analysis by a qualified Professional Engineer licensed in the State of New York) to withstand loads indicated and comply with other information and restrictions indicated, unless noted otherwise.
 - 1. Select and complete connections using schematic details indicated and AISC 360.
 - 2. Use design method indicated on structural drawings.
 - 3. Moment Connections: Fully restrained unless otherwise noted on drawings.
- B. Lateral Framing Resisting System: Type used is indicated on structural drawings.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product Data: Product data, including manufacturer's specifications, load tables, section properties and installation instructions for each type of decking and accessories.
- C. Shop Drawings: Submit shop drawings in accordance with the specifications as follows:
 - 1. Show clearly all work, including relationship of structural steel to the adjacent work of other trades and to significant lines of finishes of other trades.
 - 2. Do not fabricate or deliver work to the site before drawings reviewed by the Commissioner have been returned.
 - 3. Before preparing steel shop drawings, submit proposed submittal schedule for review by the Commissioner.
 - 4. Before preparing steel shop drawings, submit for review a set of job standards showing all necessary joint details with full particulars of connection pieces, shop and field welds, and holes for erection bolts and permanent bolts. These must include any moment and shear connections. Appropriate marks for designating all types and sizes of joint details must be included. After approval of these job standards, the erection plans are to be submitted and must be marked to indicate unmistakably the type and size of joint to be used for every beam connection. Do not order steel in advance of approval of the job standards and the erection plans with joint marks, except at own risk
 - 5. Submit calculations for design of connections on job standards and all other connections. Calculations must be signed and sealed by a Professional Engineer licensed in the State of New York.
 - 6. Prepare remainder of steel shop drawings after approval of job standards and erection plans. Drawings submitted prior to approval of job standards will be returned without review.

7. Prepare shop drawings in conformance with the applicable procedures shown in "Detailing for Steel Construction," latest edition, published by AISC. Prepare shop drawings under the supervision of competent engineering personnel, licensed by the state in which the construction is to take place. During the preparation of shop drawings, and prior to submittal, coordinate and cross check all shop drawings, including those prepared by subcontractors, for compliance with the Contract Documents.
8. Indicate clearly the size and grade of steel for each component. Identify rolled shapes, tubes and plates by using the standard designations used in "Steel Construction Manual" Latest Edition, by AISC.
9. Indicate welds and nondestructive tests by using the symbols conforming to AWS A2.4 "Symbols for Welding and Nondestructive Testing." Where necessary for clarity, indicate welding procedure designations or other data in the tail of the welding symbol.
10. Show explicitly the type of connection used in each location, the grade, size, and number of bolts; the type, number, position, designation and orientation of each washer; and the size of each hole, whether slotted or round. Ensure that adequate wrench clearance for correct bolt tightening is provided and note special bolt tightening sequences where applicable and necessary.
11. Show all camber dimensions in the shop drawings. Where specific camber is not shown in the drawings, note on each affected shop drawing that such members are to be fabricated with the natural camber up.
12. Show holes required for securing work specified in other sections to structural steelwork, as well as all holes required for passage through structural steelwork of work of other trades. Provide field work drawings for all such holes not shown in shop or erection drawings. Addition of, or change in size or location of openings will not be permitted without prior approval.
13. Use bolted connections wherever possible; avoid field welding unless otherwise noted on drawings.
14. Make details in such a way as to avoid having steel, connections, bracing, bolts, etc., interfere with architectural details or in any way reduce the areas of shafts, openings, clearances, etc.
15. Detail and schedule cleaning and painting data and requirements, including specific indication of "no-paint" areas.
16. The use of the Commissioner 's electronic drawing files as a base for the erection shop drawings will be permitted at the request of the structural steel detailer. The use of the Commissioner 's electronic drawing files as a base for shop drawing details will be not be permitted. The structural steel detailer will be responsible for compatibility of the files with the hardware or software. The electronic files are not to be considered the contract documents, the the Commissioner makes no representation regarding the accuracy or completeness of the electronic files given to the structural steel detailer and their use will be at the structural steel detailer's sole risk. The structural steel detailer must remove the project title box and all references to the structural drawings including drawing numbers and structural drawing sections and details. The structural steel detailer must also remove all reference to work not included in the steel contract.
17. Show clearly the size and location of each member and the erection mark assigned to each member. Show each field connection with all data and details necessary for assembling the structure. Direct special attention to the possible need for special guying, bracing, or shoring to prevent deformation of existing or new structure due to stresses caused by erection procedures and equipment, by construction loadings, and by forces of natural phenomena.
18. Prepare, keep up-to-date, and submit a complete drawing index cross-referencing each

assigned piece mark with the drawing number in which the piece is detailed. Detail drawings submitted without an up-to-date index and the applicable erection drawing(s) showing the location of each piece will be deemed an incomplete submission and will not be accepted as subject to any agreed shop drawing review schedule.

19. Prepare anchor bolt and base plate erection drawings containing complete location and placing details, including details of all templates. Provide anchor bolt erection drawings to the concrete trade in advance of applicable concrete work and in coordination with concrete construction sequence.
20. Submit, in writing, any proposed deviations from the Contract Documents, prior to the submission of shop drawings showing the proposed deviation. Submit requests for deviations on the steelwork subcontractor's letterhead. Deviations not identified, or identified only in letters of transmittal or in shop drawings or both, without the required written request, may not be accepted, and will be sufficient cause for the Commissioner to return each shop drawing containing such deviations without further action. Acceptance of shop drawings containing deviations not detected by the Commissioner during shop drawing review does not relieve the steelwork subcontractor from responsibility to conform strictly to the Contract Documents.
21. Prior to resubmission of shop drawings with additions or corrections, circle or bubble and identify all changes. Drawings submitted without each change being clearly identified are subject to return for resubmission.
22. Prior to making shop drawings for any portion of the work involving alterations to an existing structure, make all necessary field observations, measurements and surveys of existing conditions. If probes are required to accomplish such measurements, give timely notice where probes will be required.

D. Submit certified copies of each survey conducted by a surveyor licensed by the state in which the construction is to take place and employed by the structural steel subcontractor. Survey must show elevations and locations of base plates and anchor bolts to receive structural steel, and final elevations and locations for major members. Indicate discrepancies between actual installation and Contract Documents.

E. Reports:

1. Submit certified copies of mill test reports for all steel furnished. Perform mechanical and chemical tests for all material regardless of thickness or use.
2. Submit certification of recycled steel content. Certification must clearly indicate post-consumer AND post-industrial recycled steel content for the particular member or members used.
3. Submit mill and fabricator certification of compliance with ISO14001.
4. Submit anchor bolt checking certification as required.
5. Submit qualification certificates of all welders who will perform work on the project.
6. Submit survey of erected steelwork as required.

F. Submit verification of bio-degradable or low VOC, and low Hazardous Air Pollutants (HAPS) cleaning solutions. Provide a cut sheet for all cleaning solutions used in the surface preparation of steel components. Highlight VOC limits and chemical component limits.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Except as modified by this specification, comply with the applicable provisions and recommendations of the following codes and standards:

1. New York City Building Code, 2008
2. AISC 360-05 "Specification for the Design, Fabrication and Erection of Structural Steel for Buildings".
3. AISC 303-05 "Code of Standard Practice for Steel Buildings and Bridges".
4. AISC 341-05 "Seismic Provisions for Structural Steel Buildings".
5. Industrial Fasteners Institute "Handbook of Bolt and Bolted Joints" 1998.
6. RCSC 2014 "Specifications for Structural Joints Using ASTM A 325 or A 490 Bolts."
7. ASTM A 6 "General requirements for rolled steel plates, shapes, sheet piling and bars for structural use".
8. AWS D1.1 - 04, "Structural Welding Code."
9. AWS A5.18 & A5.28, Structural Welding Code for GMAW
10. SSPC PB-00802, 2000 "Painting Manual, Volume 2, Systems and Specifications."

C. Qualifications for welding work must be as follows:

1. Qualify welding procedures and welding operators in accordance with the AWS "Standard Qualification Procedure."
 - a. Include amended requirements of the 2008 New York City Building Code.
2. Submit certification that all welders to be employed in work are AWS qualified. If recertification of welders is required, retesting will be responsibility of structural steel subcontractor.
 - a. Include licensing requirements of the 2008 New York City Building Code

1.7 TESTING AND INSPECTION

A. Special Inspection as required by the NYC Building Code of all structural steelwork in the shop and field will be performed by an inspection agency retained by the City of New York. The inspection agency must work under the direction of the City of New York. Contractor must provide the inspection agency with the following:

1. Schedule of all work in both shop and field with at least ten days' written notice before commencement of either activity.
2. A complete set of approved shop and erection drawings.
3. Cutting lists, order sheets, material bills, shipping bills and mill test reports.
4. Information as to time and place of all rollings and shipment of material to shops.
5. Representative sample pieces as requested by the testing agency.
6. Full and ample means and assistance for testing all material.
7. Proper facilities, including scaffolding, temporary work platforms, etc., for inspection of the work in the mills, shop and field.

B. Each person installing connections must be assigned an identifying symbol or mark and all shop and field connections must be so identified so that the inspector can refer back to the person making the connection.

C. The following minimum criteria must be adhered to in testing of welds and bolts:

1. All welds and bolts must be examined by visual means.
 2. 25% of all welds, selected randomly, must be measured.
 3. 25% of all bolts, selected randomly, must be checked with calibrated torque wrench.
 4. In addition, all welds subject to tensile stress must be examined by the Ultrasonic Method for 100% of their length.
 5. 10% of all manual fillet welds must be tested by the magnetic particle method.
 6. 1'-0" at each end of automatic fillet welds must be tested by the magnetic particle method.
 7. 100% of groove welds must be tested by the ultrasonic method.
- D. Shop inspection will include examination of steel for straightness and alignment, fissures, mill scale, and other defects and deformities, as described in ASTM A6, examination of fabricated pieces for conforming to approved shop drawings, testing of bolts and welds, and inspection of shop painting. All shop welds must be visually inspected and spot tested using Ultrasonic Method ASTM E 114 and AWS, Chapter 6, Part C. All inspected welds must be identified by the inspector.
- E. Field inspection will include examination of erected steel for welding, proper fitting and tensioning of bolts, alignment, trueness and plumbness, touching-up of shop coat, level of billets and base plates.
- F. Inspection of welding will be such as to assure that the work is within the quality requirements specified below and elsewhere in this section of the specifications and will include:
1. Ascertainment that the electrodes and flux used for the SAW, GMAW and FCAW welding processes conform to the requirements of this section of the specifications.
 2. Ascertainment that the approved welding procedures and sequence are followed without deviation, unless specific approval for change is obtained from the Commissioner.
 3. The testing agency must be prepared to utilize the following approved methods of testing:
 - a. Liquid penetrant inspection: ASTM E 165.
 - b. Magnetic particle: ASTM A 709.
 - c. Radiographic inspection: ASTM E 94 and E 1032.
 - d. Ultrasonic inspection: ASTM E 114 and AWS, Chapter 6, Section C.
- G. When defects are revealed, additional inspection by whatever method is deemed necessary by the inspector, must be performed to the extent necessary to assure that the full amount of defect has been located. No further work may be done on the assembly or sub-assembly in question until all the necessary corrections have been made. Defects must be corrected, using the same welding procedure that was used initially in making the weld, unless otherwise approved by the Commissioner. Inspection of the corrected weld must be by the same method that was used to reveal the defect. A second correction of a defective area must not be made without approval of the Commissioner.
- H. Apparatus and procedure for measuring torque and tension in high strength bolts and for calibrating wrenches must be furnished and maintained by steel subcontractor, and must be approved by the inspection agency. Wrenches must be calibrated each day at the beginning of the work, each time the bolt size or length of pressure hose is changed, and at such other times as the inspection agency may direct. Periodic checks of high strength steel bolt connections will be made in the field by the inspection agency. The steel subcontractor must maintain at all times during erection a manual torque wrench, and must provide a laborer and scaffolding as

required for the testing of connections by the inspection agency, and will at own expense, furnish such facilities and provide such assistance as may be required for proper inspection.

- I. A distinguishing mark will be placed on all work that has been inspected and approved. Material or work that is not acceptable will be designated by words such as "REJECT" or "REPAIR" marked directly on the material or work.
- J. Inspection of Shop Painting:
 - 1. Visually evaluate surface preparation by comparison with pictorial standards in accordance with SSPC-Vis 1.
 - 2. Measure dry film thickness of each coat with a magnetic film thickness gauge in accordance with SSPC-PA 2.
 - 3. Visually inspect dried film for runs, sags, dry spray, overspray and missed areas.
 - 4. Correct defective or damaged areas in accordance with painting requirements specified. Architecturally exposed structural steel must be free of runs and holidays. Make corrections to shop or field coat as directed.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to site at such intervals to ensure uninterrupted progress of work. Minimize the disturbances to site and soil conditions.
- B. Deliver anchor bolts and anchorage devices, which are to be embedded in cast-in-place concrete, in ample time not to delay work.
- C. Store materials to permit easy access for inspection and identification. Keep steel members in a safe, dry, off ground location, using pallets, platforms, or other supports. Protect steel members and packaged materials from corrosion and deterioration, discoloration or staining.
- D. Do not store materials on structure in a manner that might cause distortion or damage to members of supporting structures. Restore or replace damaged materials or structures as directed.

1.9 PROJECT CONDITIONS

- A. The structural steel subcontractor must coordinate the structural steel work with the work of other Contracts. Verify all dimensions and details of this Trade and those of other Trades that affect the work before proceeding. Any discrepancies must be immediately reported to the Commissioner.
- B. Be fully responsible for the accurate installation of the work. Any discrepancy which arises from failure to execute the work in conformity to the drawings and specifications must be properly remedied at the contractor's own expense and in a manner acceptable to the Commissioner.
- C. Locate dimensionally on setting plans all anchor bolts, inserts, bearing and base plates, etc., and prepare and deliver all required templates and fully dimensioned setting plans in time for the proper execution of the work. Anchor bolts must be set by another subcontractor. The structural steel subcontractor must check all such settings for correctness after they have been cast in place, and before proceeding with erection work.

- D. Report to the Commissioner and certify compliance with the above checking requirements in writing and indicate any inaccuracies found in the location of anchor bolts or inserts, and corrections which must be made to their installation. Any inaccuracies not included in the report and found during or after steel erection will be the responsibility of the structural steel subcontractor.
- E. Use base lines, bench marks, or other standards for survey work that have been provided or verified by others. If permanent building bench marks have been established, these will be used for field checking.
- F. Coordinate with all other trades to ensure that work of this section does not cause undue conflict. Ensure that location of erection devices such as cranes, derricks, booms or hoists, does not cause over-stresses to steel frame to work previously placed by other trades or to existing structures. When required, retain the services of a Professional Engineer licensed in the State of New York to ascertain that erection devices do not create unsafe conditions or cause overstresses.
- G. Ensure full co-ordination with other related trades and professions.

1.10 SUBSTITUTION

- A. Commissioner reserves the right to require substitute shapes of other sizes than those indicated on the drawings when it is apparent that the shapes specified cannot be furnished within the time required for the progress of construction. Make said substitutions without additional cost to the City of New York.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Steel shapes, including structural steel wide flange and structural tee rolled shapes, channels, angles, plates, pipe, and hollow structural sections: As noted on structural drawings.
- B. High Strength Bolts:
 - 1. Slip-critical bolts as noted on structural drawings, with hardened washers
- C. Anchor Bolts: As noted on structural drawings
- D. Filler metal for welding electrodes. As noted on structural drawings.
- E. Structural steel primer paint: rust inhibitive primer conforms to the following criteria
 - 1. Demonstrate a minimum of adhesion as classified by 4B of ASTM D 3359 method A
 - 2. Demonstrate a minimum opacity as determined by ASTM D 2805
 - 3. Demonstrate corrosion resistance per standards ASTM B 117 & ASTM D 5894
 - 4. "Slip Critical" compatible rating where applicable
 - 5. The product must not contain any of the prohibited compounds as listed in Green Seal *Standard for Paintings and Coatings*, GS-11, latest edition and in Master Painters Institute (MPI) *Green Performance Standard*, GPS-1-08.

6. The product must meet the VOC limits as set forth in the MPI Green Performance Standard, GPS-1-08, with a maximum allowable VOC of 340 g/L for rust preventative coatings. Limits are expressed in THINNED state. Preference must be given to products with the least crystalline silica content.
 7. The product must meet all the requirements of MPI Standards: 23, 26, 76, 79, 95, 107, 135, 173, 275. Products not listed with MPI are acceptable if and only if they meet the same environmental criteria for the same product category.
 - a. Exterior exposed steel, normal conditions: Use alkyd or polyamide solvent based paints (MPI #'s 76, 79 & 101)
 - b. Interior exposed steel: Use water based paint (MPI # 107)
 - c. Special Applications, highly corrosive environments: Use zinc rich paints (MPI #'s 20 & 200)
- F. Structural steel field paint for exposed members: rust inhibitive primer conforms to the following criteria
1. Demonstrate a minimum of adhesion as classified by 4B of ASTM D 3359 method A
 2. Demonstrate a minimum opacity as determined by ASTM D 2805
 3. Demonstrate corrosion resistance per standards ASTM B 117 & ASTM D 5894
 4. "Slip Critical" compatible rating where applicable.
 5. The product must not contain any of the prohibited compounds as listed in Green Seal *Standard for Paintings and Coatings*, GS-11, latest edition and in the Master Painters Institute *Green Performance Standard*, GPS-1-08.
 6. The product must meet the VOC limits as set forth in the MPI Green Performance Standard, GPS-1-08, with a maximum allowable VOC of 400 g/L for rust preventative coatings. Limits are expressed in THINNED state. Preference must be given to products with the least crystalline silica content.
 7. The product must meet all the requirements of MPI Standards: 23, 26, 76, 79, 95, 107, 135, 173, 275. Products not listed with MPI are acceptable if and only if they meet the same environmental criteria for the same product category. Products not listed with MPI are acceptable if and only if they meet the same environmental criteria for the same product category.
 - a. Exterior exposed steel, normal conditions: Use alkyd or polyamide solvent based paints (MPI #'s 23, 79)
 - b. Interior exposed steel: Use water based paint (MPI # 107)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 FABRICATION

- A. All shop connections must be high strength bolted unless specifically shown otherwise. Fabricate work in shop in as large assemblies as practicable. Use welded connections only where shown on drawings. If a bolted connection is not possible obtain written approval from the Commissioner for the welded connection.

- B. Camber: As indicated on drawings.
- C. Mill column ends and bearing stiffeners to give full bearing over the cross section. Plane contact surfaces of bearing plates when required by the AISC Specifications. It is not necessary to plane bottom surfaces of plates on grout beds.
- D. Drill or punch holes at right angles to the surface of the metal, not more than 1/16" larger than the connector diameter. Do not make or enlarge holes by burning. Drill material having a thickness in excess of the connector diameter and material thicker than 7/8". Holes must be clean-cut without torn or ragged edges. Remove outside burrs resulting from drilling operations.
- E. Provide holes in members to permit connection of the work of other trades. Use suitable templates for proper location of these holes. Steel requiring adjustment or accurate alignment must be provided with slotted holes or full bearing shims as shown.
- F. Provide holes, slots and openings required by other trades together with necessary reinforcing required. Use suitable templates for proper location of these openings. All such openings must be shown on the shop drawings. No change in size or location will be permitted without prior approval.
- G. Manual flame cutting must be done only with a mechanically guided torch. An unguided torch may be used provided the cut is within 1/8" of the required line.

3.3 SHOP CONNECTIONS

- A. Provide connections as shown on the drawing exactly as detailed. Where connections are not detailed, the minimum connections must comply with appropriate tables headed, "Framed Beam Connections" shown in the AISC "Manual of Steel Construction" unless otherwise noted on the drawings. Use high strength bolts unless otherwise shown.
- B. Do not use welded connections unless shown on details. Filed welding is not allowed without written instruction from the Commissioner.
- C. Proportion and detail all connections on shop drawings to resist forces shown on design drawings. If no reactions are indicated on design drawings, design connections for non-composite beams to resist the end reaction shown in the AISC tables for Uniform Load Constants for Beams. Connections for composite beams must be proportioned to resist 150% of the above mentioned tabulated load.
- D. Bolting
 - 1. Bolts must be of a length that will extend not less than 1/4" beyond the nuts. Enter bolts into holes without damaging the thread.
 - 2. Use high-strength bolts in friction as shown. Make high-strength bolted joints without the use of erection bolts. Bolt heads and nuts must rest squarely against the metal. Where structural members have sloping surface, bolted connections must be provided with beveled washers to afford square seating or framing for bolt heads or nuts. Bring members tightly together with sufficient high-strength "fitting-up" bolts which must be retightened as all the bolts are finally tightened. Manual torque wrenches will not be accepted for final tightening. Protect bolt heads from damage during placing. Final

tightening of high-strength bolts must be by properly calibrated power torque wrenches. Bolts that have been completely tightened must be marked for identification.

E. Welding

1. The following environmentally preferable welding processes must be used as described for the related application without exception:
 - a. Submerged Arc Welding (SAW): Plate girders, fillet and butt joints in pipes, cylinders, columns and beams, and welds where ‘downhand’ or horizontal positions are possible.
 - b. Gas Metal Arc Welding (GMAW) must be used where SAW is not applicable (such as for angled connections and anything irregular or short).
 - c. Field welding must be allowed only in special circumstances; in such cases Flux Core Arc welding (FCAW) must be specified
2. Do not begin structural welding until joint elements are inspected for surface preparation, fit-up, and cleanliness of surface to be welded and are then bolted or tacked in intimate contact and adjusted to dimensions shown on drawings, or both, with allowance for any weld shrinkage that is expected. No members are to be spliced without prior approval by the Commissioner.
 - a. Containment surface preparation debris must meet SSPC-Guide 6 guidelines.
3. Pre-heat and interpass temperature must be in accordance with Table 4.2 (including footnotes) of the AWS Code for Welding in Building Construction. The temperature must be measured from the side opposite to that which the pre-heat is applied, where possible.
4. All groove welds must be continuous and full penetration welds unless otherwise shown on the design drawings. Welds made without the aid of a back-up bar must have their roots chipped, ground or roughened out to sound metal from the second side, before welding is done from the second side.
5. All welds must be sound throughout. There must be no crack in any weld or weld pass. Weld may be considered sound if it contains only slight porosity or fusion defects which are well dispersed.
6. The heat, input, length of weld and sequence of weld must be controlled to prevent distortions. The surfaces to be welded and the filler metals to be used will be subject to inspection before any welding is performed.

3.4 SHOP PAINTING AND CLEANING

A. Finishing, coating, plating

1. Shop painting and factory finishing must be preferred to field painting whenever possible. Where applicable, finishes and surface preparations based on a physical process such as abrasive blasting, grinding, buffing and polishing are preferred to coatings and solvent based cleaning. Where coatings are necessary powder-coated fabrication is preferred to painting and plating. Avoid plated metals especially those using cadmium and chromium as plate material or cyanide or copper/formaldehyde based electroless copper as the plating solution.

- B. Remove all rust, scale, grease and other detrimental foreign matter in accordance with SSPC-SP 3, Power Tool Cleaning, unless conditions/opportunities listed below apply.
 - 1. Use surface preparation classification recommended by paint manufacturer, SSPC or Master Painters Institute (MPI) for paint product used.
 - a. SSPC-Guide 6, Guide for Containing Debris Generated During Paint Removal Operations, must be followed for all applicable surface preparation techniques.
- C. Immediately after surface preparation, apply structural steel primer paint where specified, in accordance with manufacturer's instructions and at a rate to provide dry film thickness of not less than 2.0 mils. Use painting methods which result in full coverage of joints, corners, edges and exposed surfaces. Use type of primer paint as specified in "Materials" article above. Apply two coats to surfaces that will be inaccessible after erection
- D. Paint all structural steel in accordance with the foregoing specification, except as follows:
 - 1. Steel which is to receive spray-on fireproofing.
 - 2. Within 2" of field welds or welds made after paint is applied.
 - 3. Within 3" of high strength friction bolts.
 - 4. Machined surfaces and threaded parts required for adjustment of the structure. Protect these with suitable rust inhibiting coating which may be removed after final installation of the work so that proper finished coatings may be applied.

3.5 SOURCE QUALITY CONTROL

- A. Refer to testing and inspection requirements specified above in Part 2.

3.6 EXAMINATION

- A. Verify field measurements prior to start of erection. Check the alignment and elevation of all column supports and location of all anchor bolts with transit and level instruments before starting erection. Notify Commissioner of any errors. Obtain Commissioner's approval of methods proposed for correcting errors prior to proceeding with corrections and erection.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.7 PREPARATION

- A. Provide temporary shores, guys, braces, and other supports during erection to keep structural steel secure, plumb, and in alignment against temporary construction loads and loads equal in intensity to design loads. Remove temporary supports when permanent structural steel, connections, and bracing are in place unless otherwise indicated.

3.8 ERECTION

- A. Set structural steel accurately in locations and to elevations indicated and according to AISC 303 and AISC 360.
- B. Maintain erection tolerances of structural steel within AISC's "Code of Standard Practice for Steel Buildings and Bridges."

- C. Column billets and bearing plates must be supported and aligned on steel wedges, shims, or leveling nuts. After the supported members have been plumbed and properly positioned by instrument and anchor nuts tightened, the entire bearing area under the plate must be packed solidly with grout specified in another Section. Wedges and shims must be set back a minimum of 3/4" from the edges of plates and must be left in place. Leveling plates are not permitted.
- D. Plumbing, Leveling and Bracing
 - 1. Structural steel must be erected true and level, and temporary bracing must be introduced wherever necessary to provide for all loads to which the structure may be subjected, including equipment and the operation thereof. Such bracing must be left in place as long as may be required for safety. No welding may be done or bolts drawn up tight until structural steel has been properly aligned. Obtain approval for guy locations to assure lack of interference with operations of other trades.
- E. Drifting
 - 1. Light drifting necessary to draw holes together will be permitted, but drifting of unfair holes will not be permitted. Twist drills must be used to enlarge holes as necessary to the next larger size; use next larger size bolts as required. Reaming that weakens the members, or make it impossible to fill the holes properly or to adjust accurately after reaming, will not be allowed.

3.9 FIELD CONNECTIONS

- A. In addition to the requirements for shop connections comply with the following:
 - 1. High-Strength Bolts: Install high-strength bolts according to RCSC's "Specification for Structural Joints Using ASTM A 325 or A 490 Bolts" for type of bolt and type of joint specified.
 - 2. Joint Type: As noted on structural drawings.
- B. Weld Connections: Comply with AWS D1.1/D1.1M and AWS D1.8/D1.8M for tolerances, appearances, welding procedure specifications, weld quality, and methods used in correcting welding work.
 - 1. Comply with AISC 303 and AISC 360 for bearing, alignment, adequacy of temporary connections, and removal of paint on surfaces adjacent to field welds.
 - 2. Assemble and weld built-up sections by methods that will maintain true alignment of axes without exceeding tolerances in AISC 303 for mill material.

3.10 REPAIRS AND PROTECTION

- A. Galvanized Surfaces: Clean areas where galvanizing is damaged or missing and restore galvanizing to comply with ASTM A 780.
- B. Touchup Painting: Immediately after erection, clean exposed areas where primer is damaged or missing and paint with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.
 - 1. Clean and prepare surfaces by SSPC-SP 3, Power Tool Cleaning.

- C. Touchup Painting: Cleaning and touchup painting are specified in Division 9.
- D. After erection, all damaged areas in shop coat, exposed surfaces of bolt heads, nuts and washers, and all field welds and unpainted areas adjacent to field welds and high strength bolts must be painted with a "touch-up" application of same paint used in the shop coat and then painted with same paint used for shop coat tinted another color. Retouch in field, any scraped, abraded, and unpainted surfaces. Painting must be as specified for shop coats.
- E. Structural steel which is to support mechanical equipment and will be left exposed to the weather in the finished project must be field painted with one coat of anti-corrosive paint as described in Part 2 for Paint Materials.

3.11 WASTE MANAGEMENT

- A. Separate and recycle waste materials in accordance with the DDC General Conditions Section 017419 Construction Waste Management and Disposal and to the maximum extent feasible.
- B. Separate for recycling and place in designated containers the following metal waste in accordance with the Waste Management Plans and local recycler standards: Steel, iron, galvanized steel, galvanized sheet steel, stainless steel, aluminum, copper, zinc, lead, brass and bronze.
- C. Collect all metal cut-offs and scraps and recycle as above.
- D. Fold up metal banding, flatten and place in designated area.
- E. Close and seal tightly all partly used paint and finish containers and store protected in a well-ventilated, fire-safe area at moderate temperature.
- F. Designated un-used paint for:
 - 1. Immediate re-use
 - 2. Long term maintenance needs
 - 3. Recycling by an appropriate facility.
 - 4. Donation
- G. Place empty containers of solvent-based paints in areas designated for hazardous materials.
- H. Do not dispose of paints or solvents by pouring on the ground. Place amounts too small to re-use in designated containers for proper disposal
- I. Place materials defined as hazardous or toxic waste in designated containers.

END OF SECTION 05 12 00

SECTION 05 31 00

STEEL DECKING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Roof deck
2. All necessary deck supports and reinforcing other than principal framing members including diagonals at columns, angles, plates, and etc.
3. Waste Management.

B. Related Requirements:

1. Structural steel
2. Shoring of metal deck where unsupported span exceeds the allowable
3. Ceiling systems
4. Mechanical and electrical where supported from deck
5. Fireproofing systems
6. Sheet metal work
7. Waste Management/Recycling Strategies

1.3 PERFORMANCE REQUIREMENTS

- A. Metal deck unit sizes and gages are indicated on the drawings. Gages indicated on the drawings are a minimum. Thickness of deck may be required to be increased by deck manufacturer for loadings indicated on drawings.
- B. Unit must span over three or more supports except where steel layout does not permit.
- C. Maximum allowable deflection under live load plus super imposed dead load must not exceed (1/360) of the span or (1/4) inch whichever is less.
- D. Deck must be sized as unshored. Shoring of deck is not permitted unless specifically shown in areas on the drawings.
- E. Use of piercing, non-piercing, and integral hanger tabs is not permitted at roof deck.
- F. Units included in a fire rated assembly must be classified in appropriate UL design.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
 - B. Product Data: Product data, including manufacturer’s specifications, load tables, section properties and installation instructions for each type of decking and accessories.
 - C. Shop Drawings: Shop drawings for all installations showing gauges, deck layout, type of deck, any shoring required, where located, welding details necessary for fabrication to fit in place, and all accessories. Do not use reproductions of the Design Drawings. In addition include the following:
 - 1. Ceiling tab, fillers, closures and similar items.
 - D. Product Certificates: Certification of specification compliance for each item specified.
 - E. Reports
 - 1. Submit certification of recycled steel content. Certification must clearly indicate post-consumer AND post-industrial recycled steel content for the particular member or members used.
 - 2. Submit mill and fabricator certification if in compliance with ISO14001.
 - 3. Submit verification of finishing process:
 - a. Provide a cut sheet and a Material Safety Data Sheet (MSDS) for all shop and field paints used highlighting VOC limits and chemical and mineral component limits.
 - b. For heavy metals in used plating processes: Provide a cut sheet and a Material Safety Data Sheet (MSDS) for each plating material and related compounds highlighting chemical component limits.
 - c. Certification of recycled zinc content for galvanized products: Provide cut sheets clearly indicating whether the galvanized products used meet the minimums for post-consumer OR post-industrial recycled contents. Or, if cut sheets are not available, obtain a written affidavit from the manufacturer stating the recycled content percentage and if the recycled content is post-consumer or post-industrial.
 - 4. Submit verification of biodegradable or low VOC, and low Hazardous Air Pollutants (HAPS) cleaning solutions. Provide a cut sheet and a Material Safety Data Sheet (MSDS) for all cleaning solutions used in the surface preparation of steel components. Highlight VOC limits and chemical component limits.
 - F. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, indicating that each of the following complies with requirements:
 - 1. Power-actuated mechanical fasteners.
 - 2. Acoustical roof deck.
 - G. Evaluation Reports: For steel deck.
- 1.5 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”

- B. Except as modified by governing codes and by this specification, comply with the applicable provisions and recommendations of the following codes and standards:
1. New York City Building Code, 2008
 2. American Iron and Steel Institute (AISI) "Specification for the Design of Cold-Formed Steel Structural Members".
 3. American Welding Society (AWS), D1.1 "Structural Welding Code" and D1.3 "Structural Welding Code-Sheet Steel".
 4. Steel Deck Institute (SDI) "Design Manual for Composite Decks, Form Decks, and Roof Decks".

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to site at such intervals to ensure uninterrupted progress of work. However, efforts should be made to minimize the disturbance to site and soil conditions for example, by not requiring excessive areas to be put aside for on-site storage.
- B. Store materials to permit easy access for inspection and identification. Keep all materials in a safe, dry, off ground location, using pallets, platforms, or other supports. Protect all materials from corrosion and deterioration, discoloration or staining. Make efforts to minimize any waste and ensure that as much waste as possible is recycled.
- C. Do not store materials on structure in a manner that might cause distortion or damage to members of supporting structures. Correct or replace damaged materials or structures as directed.

1.7 PROJECT CONDITIONS

- A. Examine all work prepared by other trades to receive work of this section and report any defects affecting installation to the contractor for correction. Commencement of work will be construed as complete acceptance of preparatory work by others.
- B. If the supporting beams are not properly aligned or sufficiently level to permit proper bearing of the steel decking units, the steel decking subcontractor must bring the matter to the attention of the contractor for corrective action. The steel decking units are not to be placed until the necessary correlations are made.
- C. Installation of the deck and shear studs will be inspected by Commissioner.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. AISI Specifications: Comply with calculated structural characteristics of steel deck according to AISI's "North American Specification for the Design of Cold-Formed Steel Structural Members."

2.2 MANUFACTURERS

- A. Supply manufactured deck units in accordance with the applicable requirements of the Steel Deck Institute's "Design Manual for Floor Decks and Roof Decks".

B. Deck must be manufactured by one of the following:

1. United Steel Deck (manufactured by Canam)
2. Wheeling Corrugating Co.
3. Vulcraft
4. Or approved equal

2.3 DECK MATERIALS

- A. Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, with the minimum section properties indicated on the drawings. Contractor may provide heavier gauge if minimum gauge indicated is not adequate to support total loads as shown on the drawings.
- B. Acoustical Roof Deck: Fabricate panels, without top-flange stiffening grooves, to comply with "SDI Specifications and Commentary for Steel Roof Deck," in SDI Publication No. 31, with the minimum section properties indicated on the drawings. Contractor must provide heavier gauge if minimum gauge indicated is not adequate to support total loads as shown on the drawings.

2.4 ACCESSORIES

- A. Mechanical Fasteners: Corrosion-resistant, low-velocity, power-actuated or pneumatically driven carbon-steel fasteners; or self-drilling, self-threading screws.
- B. Side-Lap Fasteners: Corrosion-resistant, hexagonal washer head; self-drilling, carbon-steel screws, No. 10 minimum diameter.
- C. Anchor clips, vent clips, welding washers, flashing, saddle plates, sump pans, other accessories must be those types, sizes, and configurations recommended by the decking manufacturer, and must be of the same material and finish as the deck units. All accessories must conform to ASTM A653/A63M.
- D. Cell closure flexible strips, and fillers must be of material in compliance with the 2008 New York City Building Code
- E. Roof sump pans: Fabricate from a single piece of galvanized sheet steel of the same quality as the deck units; not less than nominal 0.0747" (14 gauge) thick before galvanizing; with bottoms level after erection and sloping sides to direct water flow to the drain, unless otherwise shown. Provide sump pans of adequate size to receive roof drains and with bearing flanges not less than 3" wide. Recess pans not less than 1-1/2" below the roof deck surface, unless otherwise shown or required by deck configuration. Weld to deck at maximum 12" o.c.
- F. Paint: Where indicated on drawings, must be compatible with galvanized surfaces such that minimal preparation is required.
1. For decks exposed to exterior conditions or high humidity paint must
 - a. Demonstrate corrosion resistance per standards ASTM B 117 & ASTM D 5894
 2. For all decks paint must

- a. Demonstrate a minimum opacity as determined by ASTM D 2805
 - b. Demonstrate a minimum of adhesion as classified by 4B of ASTM D 3359 method A
3. The product must not contain any of the prohibited compounds as listed in Green Seal *Standard for Paintings and Coatings*, GS-11, latest edition and in Master Painters Institute (MPI) *Green Performance Standard*, GPS-1-08.
 4. The product must meet the VOC limits as set forth in the MPI Green Performance Standard, GPS-1-08, with a maximum allowable VOC of 340 g/L for rust preventative coatings. Limits are expressed in THINNED state. Preference will be given to products with the least crystalline silica content.

2.5 FABRICATION

- A. Fabricate deck units in accordance with the AISI's "Specification for the Design of Cold-Formed Steel Structural Members" and accepted shop drawings. Fabricate deck units to the sizes and configurations indicated and cut to lengths which will span not fewer than three supporting members; use only full length units at overhang where indicated in a manner that laps fit tightly. Locate openings for penetrations where indicated and provide support framing and edge reinforcement for all openings.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements

3.2 EXAMINATION

- A. Examine supporting frame and field conditions for compliance with requirements for installation tolerances and other conditions affecting performance.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION, GENERAL

- A. Install deck panels and accessories according to applicable specifications and commentary in SDI Publication No. 31, manufacturer's written instructions, and requirements in this Section. Erection must closely follow the erection of structural steel.
- B. Install temporary shoring before placing deck panels if required to meet deflection limitations.
- C. Locate deck bundles to prevent overloading of supporting members as per load schedule provided on contract documents.
- D. Cut and neatly fit deck panels and accessories around openings and other work projecting through or adjacent to deck.
- E. Provide additional reinforcement and closure pieces at openings as required for strength, conti-

nunity of deck, and support of other work, per drawings and manufacturer's specifications and .

- F. Comply with AWS requirements and procedures for manual shielded metal arc welding, appearance and quality of welds, and methods used for correcting welding work.
- G. Headed shear studs must be installed by welding through metal deck onto beam below. Automatic welding machinery of approved design, amperage, duration of current, etc., must be used. Studs must be tested by testing laboratory in accordance with AWS Procedures for Bend Test; replace all studs which do not pass test.
- H. All welding must be performed by competent experienced welding mechanics. All welds must be given a protective coat of paint as specified in painting article of section 051200.
- I. All abraded or damaged protective surfaces of steel decking work must be touched up with a protective coat of paint by the contractor as erected.

3.4 ROOF DECK INSTALLATION

- A. Fasten roof-deck panels to steel supporting members per drawings.
- B. Side-Lap and Perimeter Edge Fastening: Fasten side laps and perimeter edges of panels between supports per drawings.
- C. End Bearing: Install deck ends over supporting frame with a minimum end bearing per manufacturer's specification but not less than 1-1/2 inches, with end joints as follows:
 - 1. End Joints: Lapped 2 inches minimum or butted at Contractor's option.
- D. All unframed openings in roof deck must be reinforced per the drawings.
- E. Roof sump pans: Fabricate from a single piece of galvanized sheet steel of the same quality as the deck units; not less than nominal 0.0747" (14 gauge) thick before galvanizing; with bottoms level after erection and sloping sides to direct water flow to the drain, unless otherwise shown. Provide sump pans of adequate size to receive roof drains and with bearing flanges not less than 3" wide. Recess pans not less than 1-1/2" below the roof deck surface, unless otherwise shown or required by deck configuration. Weld to deck at maximum 12" o.c.
- F. Miscellaneous Roof-Deck Accessories: Install ridge and valley plates, finish strips, end closures, and reinforcing channels according to deck manufacturer's written instructions. Weld to substrate to provide a complete deck installation.
 - 1. Weld cover plates at changes in direction of roof-deck panels unless otherwise indicated.

3.5 FIELD QUALITY CONTROL

- A. Special Inspection as required by the 2008 New York City Building Code of all metal decking will be performed by an inspection agency retained by the City of New York. The inspection agency must work under the direction of the Commissioner. Contractor must provide the inspection agency with the following:

1. Schedule of all work in field with at least ten days' written notice before commencement of either activity.
 2. A complete set of approved shop and erection drawings.
 3. Order sheets, material bills, shipping bills and mill test reports.
 4. Representative sample pieces as requested by the testing agency.
 5. Full and ample means and assistance for testing all material.
 6. Proper facilities, including scaffolding, temporary work platforms, etc., for inspection of the work in the mills, shop and field.
- B. Each person installing connections must be assigned an identifying symbol or mark and all shop and field connections must be so identified so that the inspector can refer back to the person making the connection.
- C. The following minimum criteria must be adhered to in testing of welds:
1. All welds must be examined by visual means.
 2. 25% of all welds, selected randomly, must be measured.
 3. In addition, all welds subject to tensile stress must be examined by the Ultrasonic Method for 100% of their length.
 4. 10% of all manual fillet welds must be tested by the magnetic particle method.
 5. 1'-0" at each end of automatic fillet welds must be tested by the magnetic particle method.
 6. 100% of groove welds must be tested by the ultrasonic method.
- D. Field inspection will include examination of decking for welding and touching-up of shop coat.
- E. Inspection of welding will be such as to assure that the work is within the quality requirements specified below and elsewhere in this section of the specifications and will include:
1. Ascertainment that the electrodes and flux used for the SAW, GMAW and FCAW welding processes conform to the requirements of this section of the specifications.
 2. Ascertainment that the approved welding procedures and sequence are followed without deviation, unless specific approval for change is obtained from the Commissioner.
 3. The testing agency must be prepared to utilize the following approved methods of testing:
 - a. Liquid penetrant inspection: ASTM E 165.
 - b. Magnetic particle: ASTM A 709.
 - c. Radiographic inspection: ASTM E 94 and E 1032.
 - d. Ultrasonic inspection: ASTM E 114 and AWS, Chapter 6, Section C.
- F. When defects are revealed, additional inspection by whatever method is deemed necessary by the inspector, must be performed to the extent necessary to assure that the full amount of defect has been located. No further work may be done on the assembly or sub-assembly in question until all the necessary corrections have been made. Defects must be restored, using the same welding procedure that was used initially in making the weld, unless otherwise approved by the Commissioner. Inspection of the weld must be by the same method that was used to reveal the defect. A second restoration of a defective area must not be made without approval of the Commissioner.
- G. A distinguishing mark will be placed on all work that has been inspected and approved. Mate-

rial or work that is not acceptable will be designated by words such as "REJECT" or "REPAIR" marked directly on the material or work.

- H. Testing agency will report inspection results promptly and in writing to Contractor and Commissioner.
- I. Remove and replace work that does not comply with specified requirements.
- J. Additional inspecting, at Contractor's expense, will be performed to determine compliance of corrected work with specified requirements.

3.6 CLEANING UP

- A. Remove all equipment, unused materials and debris from the site immediately upon the completion of this work.

3.7 WASTE MANAGEMENT

- A. Separate and recycle waste materials in accordance with the DDC General Conditions Section 017419 Construction Waste Management and Disposal and to the maximum extent feasible.
- B. Separate for recycling and place in designated containers the following metal waste in accordance with the Waste Management Plans and local recycler standards: Steel, iron, galvanized steel, galvanized sheet steel, stainless steel, aluminum, copper, zinc, lead, brass and bronze.
- C. Collect all metal cut-offs and scraps and recycle as above.
- D. Fold up metal banding, flatten and place in designated area.
- E. Close and seal tightly all partly used paint and finish containers and store protected in a well-ventilated, fire-safe area at moderate temperature.
- F. Designated un-used paint for:
 - 1. Immediate re-use
 - 2. Long term maintenance needs
 - 3. Recycling by an appropriate facility.
 - 4. Donation
- G. Place empty containers of solvent-based paints in areas designated for hazardous materials.
- H. Do not dispose of paints or solvents by pouring on the ground. Place amounts too small to re-use in designated containers for proper disposal
- I. Place materials defined as hazardous or toxic waste in designated containers.

END OF SECTION 05 31 00

SECTION 05 40 00

COLD FORMED METAL FRAMING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. "C" shaped steel studs for exterior non-load bearing wall frame construction.
2. Coordinate with thermal broken panel attachment per Section 074213.
3. "C" shaped steel joists.
4. Anchors and accessories.
5. Gypsum sheathing.
6. Field inspection.

B. Related Sections

1. Section 04 20 00 "Unit Masonry"
2. Section 05 12 00 "Structural Steel Framing"
3. Section 07 21 00 "Thermal Insulation"
4. Section 07 27 00 "Air Barriers"
5. Section 09 29 00 "Gypsum Board" for interior steel stud construction.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: For information only, submit copies of manufacturer's product information and installation instructions for each item of cold-formed framing and accessories.
- C. Shop Drawings

1. Submit shop drawings for special components and installations not fully dimensioned or detailed in manufacturer's product data. Include placing drawings for framing members showing size and gauge designations, number, type, location and spacing. Indicate supplemental bracing, splices, window and door headers accessories and details as may be required for proper installation.
 2. If the Contractor elects to prefabricate framing members into panels for erection, the Contractor must submit shop drawings of such panels at suitable scale showing all dimensions, components, and methods of fastening and support.
- D. For fasteners, submit product data sheet and samples.
- E. Engineering Data
1. Submit Engineering Data drawings to the Commissioner for review. The Contractor is responsible for the structural engineering services and supports for the cold-formed metal frame and must show the proposed system and how the Performance Criteria noted below is accommodated on these drawings.
 2. These drawings must show all load conditions and engineering calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New York and must be signed and sealed by this Engineer.
- F. Quality Assurance Submittals: Submit the following:
1. Qualifications: Proof of manufacturer, installer, and welder qualifications.
 2. Structural engineering services calculations.
 3. Certificates
 - a. Submit mill certificates signed by framing member/accessory manufacturer certifying compliance with material requirements.
 - b. Welder certificates.
 4. Manufacturer's installation instructions for framing members and framing accessories.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Component Engineering: Compute structural properties of studs in accordance with AISI "North American Specification for the Design of Cold Formed Steel Structural Members."
- C. Fire-Rated Assemblies: Where framing units are indicated to be components of fire-resistance rated assemblies, provide cold-formed metal framing identical to that of

assemblies tested for fire resistance per ASTM E 119. Products used in the assembly must carry a classification label from an approved testing and inspection agency.

D. Qualifications

1. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M "Structural Welding Code - Steel" and AWS DL3 "Structural Welding Code – Sheet Steel."

E. Pre-Installation Meeting

1. Convene meeting at project site within one week of scheduled start of installation with representatives of the following in attendance: City of New York, Commissioner, Contractor and installer.
2. Review substrate conditions, requirements of related work, installation instructions, storage and handling procedures, and protection measures.
3. Keep minutes of meeting, including responsibilities of various parties and deviations from specifications and installation instructions. Distribute minutes to attendees within 72 hours.

F. Comply with the following standards:

1. American Iron and Steel Institute (AISI):
 - a. "North American Specification for the Design of Cold-Formed Steel Structural Members," latest edition.
 - b. "Standard for Cold-Formed Steel Framing General Provisions."
2. American Welding Society (AWS):
 - a. Structural Welding Code (D1.1).
 - b. Specifications for Welding Sheet Steel in Structures (E1.3).
3. ASTM:
 - a. ASTM A 653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
 - b. ASTM A 780 - Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
 - c. ASTM A 924 - Standard Requirements for Sheet Steel, Metallic-Coated by the Hot-Dipped Process.
 - d. ASTM C 955 - Standard Specification for Load-Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging for Screw Application of Gypsum Panel Products and Metal Plaster Bases.
 - e. ASTM A 1003 - Standard Specification for Steel Sheet, Carbon, Metallic- and Non-Metallic-Coated for Cold-Formed Framing Members.

- f. ASTM C 1007 - Standard Specification for Installation of Load Bearing (Transverse and Axial) Steel Studs and Related Accessories.
 - g. ASTM C 1513 - Standard Specification for Steel Tapping Screws for Cold-Formed Steel Framing Connections.
- G. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be to be evaluated as part of this specific assembly test.

1.5 PRODUCT DELIVERY AND STORAGE

- A. Protect metal framing units from rusting and damage. Deliver to one project site in manufacturer's unopened containers or bundles, fully identified with name, brand, type and grade. Store off the ground in a dry ventilated space or protect with suitable waterproof coverings. Conform to storage and handling requirements of AISI "Code of Standard Practice."

PART 2 PRODUCTS

2.1 PERFORMANCE CRITERIA

- A. Cold-formed metal framing system must be engineered, fabricated, and installed to withstand a 30 psf suction and pressure load (or greater if required by 2008 New York City Building Code) with a maximum deflection of L/360 with metal panels.
- B. Engineer system to accommodate vertical deflection of structural building frame, live loading, seasonal and day/night temperature ranges and construction tolerances.

2.2 MANUFACTURER

- A. Provide cold-formed steel framing manufactured by Marino/Ware, Dale/Incor, Superior Steel Studs, ClarkDietrich Building Systems, Super Stud Building Products, or approved equal.

2.3 METAL FRAMING: GENERAL

- A. System Components: With each type of metal framing required, provide manufacturer's standard steel runners, (tracks), blocking, lintels, clip angles, shoes, reinforcements, fasteners and accessories, as recommended by manufacturer for the applications indicated, as needed to provide a complete metal framing system.

2.4 MATERIALS

- A. Steel Sheet for Studs and Tracks: ASTM A 1003 Structural Grade, Type H, metallic coated, of grade and coating weight as follows:

1. Grade: As required by structural performance.
 2. Coating: G90 galvanized coating.
- B. Steel Sheet for Clips: ASTM A 653, structural steel, zinc coated, of grade and coating as follows:
1. Grade: As required by structural performance.
 2. Coating G90 galvanized coating.

2.5 FRAMING MEMBERS

- A. Steel Studs: Manufacturer's standard C-shaped steel studs, of web depths indicated, punched, with stiffened flanges; thickness and grade as required by structural performance.
- B. Steel Track: Manufacturer's standard U-shaped steel track, of web depths compatible with studs, un-punched, with un-stiffened flanges; thickness and grade as required by structural performance.

2.6 FRAMING ACCESSORIES

- A. Stamp manufacturer's name on each accessory item.
- B. Provide screws with accessories designated for screw attachment.
- C. Connector Devices
1. Vertical Deflection Clips: "VertiClip," including step bushings, as manufactured by The Steel Network Inc., "FastClip" By ClarkDietrich Building Systems, "ESC" by Scafc, or approved equal. Rigid attachments to structure and screw attachment to stud web using step-bushings to permit frictionless vertical movement. 68 mils minimum thickness, size as required by structural engineering calculations.
 2. Rigid Clip Angles: "StiffClip" as manufactured by The Steel Network Inc., "EasyClip" By ClarkDietrich Building Systems, "Secure Clip" by Scafc, or approved equal, size as required by structural engineering calculations. Rigid attachment to structure and stud web.
- D. Bridging
1. Cold Rolled Channel: 1-1/2" by 1/2" by 56 mil thick.
 - a. Bridging Clip: "BridgeClip" as manufactured by The Steel Network Inc., "FastBridge" by ClarkDietrich Building Systems, "Secure Bridge Clip" by Scafc, or approved equal. Provide attachment through stud punch-out clamping onto stud web and wrapping around bridging channel. Provide holes for screw attachment to stud web and channel.

2. Flat Strap: Width and thickness as required by structural engineering calculations. Rigid attachment to stud flange.
 3. Solid Bridging: Channel shaped bridging with lipped flanges and integral formed clips. Screw attachment to stud. 33 mils minimum thickness, size as required by structural engineering calculations.
 4. Bridging and accessories must be hot dip zinc coated per ASTM A 153.
- E. Header for Window and Door Openings: Provide system complete with all accessories including clips and accessories; finish and gauge to match studs.

2.7 FASTENERS

- A. Screws: Corrosion resistant coated, self-drilling, pan or hex washer head. Provide screw type and size as required by structural engineering calculations.
- B. Anchor Bolts and Studs: ASTM A 307, Grade A, carbon steel, with hex-head carbon steel nuts and flat steel washers. Hot-dip zinc coated in accordance with ASTM A 153. Provide bolt or stud type and size as required by structural engineering calculations.
- C. Expansion Anchors: Fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 5 times design load, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.
- D. Power-Actuated Anchors: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with capability to sustain, without failure, a load equal to 10 times design load, as determined by testing per ASTM E 1190 conducted by a qualified independent testing agency.

2.8 GALVANIZING TOUCH-UP

- A. For touching up damaged galvanized surfaces after erection, provide "Silver Galv" made by Z.R.C. Worldwide, "Brite Zinc" by Brite Products, "ZiRP" by Duncan Galvanizing Corp., or approved equal. Apply to a dry film thickness of 1.5 to 3.0 mils.

2.9 GYPSUM SHEATHING AND RELATED ACCESSORIES

- A. Gypsum Sheathing: 5/8" thick "Dens-Glass Fireguard," Type X, made by Georgia Pacific, "Securock Glass-Mat Sheathing" made by U.S. Gypsum Co., "Gold Bond EXP Extended Exposure Sheathing" made by National Gypsum Co., "Weather Defense" made by Lafarge/Continental, or approved equal, meeting ASTM C 1177, Type X.
- B. Fasteners: 1-1/4" Type S-12 screws with corrosion-resistant finish.
- C. Joint Treatment: Provide a one-part high performance sealant conforming to ASTM C 920, Type S, Grade NS, Class 25 meeting with the approval of the air/vapor barrier manufacturer for compatibility; see Section 07 27 00 "Air Barriers" for description.

Apply a 3/8" bead of sealant to the joint and trowel flat. Apply enough of the same material to each fastener to cover completely when trowelled flat.

2.10 FABRICATION

- A. Framing components may be prefabricated into panels prior to erection. Fabricate panels plumb, square, true to line and braced against racking with joints welded. Perform lifting of prefabricated panels in a manner to prevent damage or distortion in any members in the assembly.
- B. Fastenings: Attach similar components by welding. Attach dissimilar components by welding, bolting or screw fasteners, as standard with manufacturer.
- C. Wire tying of framing components is not permitted.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION: GENERAL

- A. Methods of construction must be piece by piece.
- B. Connections must be accomplished with self-drilling screws or welding so that the connection meets or exceeds the design loads required at that connection.
- C. Studs must be installed seated squarely (within 1/16") against the web portion of the top and bottom tracks. Tracks must rest on a continuous, uniform bearing surface.
- D. Cutting of steel framing members may be accomplished with a saw or shear. Torch cutting of loaded members is not permitted. Cutting of loaded members is not permitted unless under supervision of the Commissioner.
- E. Provide temporary bracing and leave in place until work is permanently stabilized.
- F. Bridging must be of size and type shown on the approved shop drawings and as called for in the engineering calculations.
- G. Install headers in all openings that are larger than the stud spacing in that wall. Form headers as shown on the drawings.
- H. Place insulation meeting the requirements of Section 07 21 00, Thermal Insulation, in all jamb and header type conditions that will be inaccessible after their installation into the wall.
- I. Provide jack studs to support each end of headers. Securely connect these studs to the header, seat squarely in the lower track of the wall, and properly attach to it.

- J. If a header is low in the wall, engineer the less than full-height studs (cripples) that occur over the header to carry all imposed loads.
- K. Do not use wall track to support any load unless specifically engineered for that purpose.
- L. Align all axially loaded members vertically, to allow for full transfer of the loads down to the foundation. Maintain vertical alignment at floor/wall intersections or alternate provisions for load transfer may be made.
- M. Provide holes that are field cut into steel framing members within the limitation of the product and its engineering. Provide reinforcement where holes are cut through load bearing members in accordance with manufacturer's recommendations and as approved by the Commissioner.
- N. Touch up all steel bared by welding using touch-up coating specified herein.
- O. Space studs to suit the engineering requirements and limitations of collateral facing materials.
- P. Care should be taken to allow for additional studs at intersections, corners, doors, windows, control joints, etc., and as called for in the shop drawings or engineering calculations.
- Q. Install supplementary framing, blocking, and bracing in metal framing system wherever walls or partitions are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, and similar work requiring attachment to the wall or partition. Where type of supplementary support is not otherwise indicated, comply with stud manufacturer's recommendations and industry standards in each case, considering weight or loading resulting from item supported.
- R. Provide for structure movement, expansion must be allowed where indicated and necessary by engineering or 2008 New York City Building Code requirements.
- S. Frame both sides of expansion and control joints with separate studs; do not bridge the joint with components of stud system.
- T. Install horizontal bridging in stud system, spaced (vertical distance) at not more than 48 inches on center. Fasten at each intersection.
- U. Splicing of axially loaded members or floor joists will not be permitted.
- V. Wire tying of members is not permitted.

3.3 INSTALLATION OF GYPSUM SHEATHING

- A. Fasten sheathing to exterior of each stud with specified fasteners spaced 3/8" from ends and edges and approx. 8" o.c. at each stud. Install fasteners in accordance with manufacturer's recommendations using 2500-RPM maximum screw gun. Install

sheathing board horizontally. Apply sealant between joints and trowel flush; and apply sealant around sheathing perimeter and at interface with other materials. Cover fastener heads with sealant and trowel flush.

SECTION 05 50 00

METAL FABRICATIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Rough hardware.
2. Alternating tread stair.
3. Ship's ladders.
4. Steel service stairs.
5. Loose steel lintels.
6. Light steel framing and supports, not included as part of work of other trades.
7. Steel gratings and frames.
8. Steel plate covers and frames.
9. Structural steel door frames at service doors.
10. Cast thresholds.
11. Elevator divider beams, guide rail beams and elevator pit hold down beams.
12. Steel dunnage beams; refer to Structural documents.
13. Miscellaneous steel trim, corner guards, angle guards and channels.
14. Countertop supports.
15. Trench drains.
16. Masonry support steel.
17. Sleeves in concrete walls and slabs.

18. Steel framing, bracing, supports, anchors, bolts, shims, fastenings, and all other supplementary parts indicated on drawings or as required to complete each item of work of this Section.
19. Prime painting, touch-up painting, galvanizing and separation of dissimilar metals for work of this Section.
20. Cutting, fitting, drilling and tapping work of this Section to accommodate work of other Sections and of concrete, masonry or other materials as required for attaching and installing work of this Section.

B. Related Sections

1. Section 05 12 00 "Structural Steel Framing"
2. Section 09 90 00 "Painting and Coating"

1.3 PERFORMANCE STANDARDS

- A. Engineer stairs and railings to resist loads per 2008 New York City Building Code.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Manufacturer's Literature: Submit manufacturer's specifications, load tables, dimension diagrams, anchor details and installation instructions for products to be used in the fabrication of miscellaneous metal work, including paint products.
- C. Shop Drawings: Shop drawings for the fabrication and erection of all assemblies of miscellaneous iron work which are not completely shown by manufacturer's data sheets. Include plans and elevations at not less than 1" to 1'-0" scale and include details of sections and connections at not less than 3" to 1'-0" scale. Show anchorage and accessory items.
- D. Engineering Data
1. Before any stairs, ladders or railings are fabricated, submit engineering data drawings to the Commissioner for review indicating how performance standards specified here will be met. The Contractor is responsible for the structural design and supports for these systems and must show the proposed systems on these drawings.
 2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members.
 3. Contractor to engage a Structural Engineer licensed in the State of New York to prepare calculations and drawings. Calculations and drawings must be signed and sealed by this Engineer.

- E. Indicate welding on shop drawings using AWS symbols and show length, size and spacing (if not continuous). Show auxiliary views to clarify all welding. Notes such as 1/4" weld, weld and tack weld are not acceptable.
- F. Certification: For items to be hot-dip galvanized, identify each item galvanized and to show compliance of application. The Certificate must be signed by the galvanizer and must contain a detailed description of the material processed and the ASTM standard used for the coating and, the weight of the coating. In addition, and as attachment to Certification, submit reports of testing and inspections indicating compliance with the provisions of this Section.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Shop Assembly: Pre-assemble items in shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for re-assembly and coordinated installation.
- C. Reference Standards: The work is subject to requirements of applicable portions of the following standards:
 - 1. "Manual of Steel Construction," American Institute of Steel Construction.
 - 2. AWS D1.1 "Structural Welding Code," American Welding Society.
 - 3. SSPC SP-3 "Surface Preparation Specification No. 3, Power Tool Cleaning," Steel Structures Painting Council.
 - 4. SSPC PA-1 "Painting Application Specification," Steel Structures Painting Council.
 - 5. "Handbook on Bolt, Nut and Rivet Standards," Industrial Fasteners Institute.
- D. Steel Materials: For steel to be hot dip-galvanized, provide steel chemically suitable for metal coatings complying with the following requirements: carbon below 0.25 percent, silicon below 0.24 percent, phosphorous below 0.05 percent, and manganese below 1.35 percent. Notify galvanizer if steel does not comply with these requirements to determine suitability for processing.
- E. The galvanizer/galvanizing facility must have an ongoing Quality Control/Quality Assurance program which has been in effect for a minimum of three years and must provide the Commissioner with process and final inspection documentation. The galvanizer/galvanizing facility must have an on-premise testing facility capable of measuring the chemical and metallurgical composition of the galvanizing bath and pickling tanks.

- F. Inspection and testing of hot-dip galvanized coating must be done under the guidelines provided in the American Hot-Dip Galvanizers Association (AGA) publication "Inspection of Products Hot-Dip Galvanized After Fabrication."
- G. Installer Qualifications: An entity meeting the requirements of DDC General Conditions Section 014000 1.7/C/1.

PART 2 PRODUCTS

2.1 MATERIALS

A. Metals

- 1. Metal Surfaces, General: For fabrication of miscellaneous metal work which will be exposed to view, use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness.
 - 2. Steel Plates, Shapes and Bars: ASTM A 36.
 - 3. Steel Bar Grating: ASTM A 1011 or ASTM A 36.
 - 4. Steel Tubing: Cold formed, ASTM A 500; or hot rolled, ASTM A 501.
 - 5. Structural Steel Sheet: Hot rolled, ASTM A 570; or cold rolled, ASTM A 611, Class 1; of grade required for design loading.
 - 6. Galvanized Structural Steel Sheet: ASTM A 924, of grade required for design loading. Coating designation G90.
 - 7. Steel Pipe: ASTM A 53, type and grade as selected by fabricator and as required for design loading; black finish unless galvanizing is indicated; standard weight (Schedule 40), unless otherwise indicated.
 - 8. Gray Iron Castings: ASTM A 48, Class 30, unless another class is indicated or required by structural loads.
 - 9. Malleable Iron Castings: ASTM A 47, grade as selected by fabricator.
 - 10. Brackets, Flanges and Anchors: Cast or formed metal of the same type material and finish as supported rails, unless otherwise indicated.
 - 11. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A 47, or cast steel, ASTM A 27. Provide bolts, washers and shims as required, hot-dip galvanized, ASTM A 153.
- B. Grout: Non-shrink, non-metallic grout conforming to the requirements of Section 03 30 00 Cast-in-Place Concrete.

- C. Fasteners
 - 1. General: Provide zinc-coated fasteners for exterior use or where built into exterior walls. Select fasteners for the type, grade and class required.
 - 2. Bolts and Nuts: Regular hexagon head type, ASTM A 307, Grade A.
 - 3. Anchor Bolts: ASTM F 1554, Grade 36.
 - 4. Lag Bolts: ASME B18.2.1.
 - 5. Machine Screws: ASME B18.6.3.
 - 6. Plain Washers: Round, carbon steel, ASME B18.22.1.
 - 7. Masonry Anchorage Devices: Expansion shields, FS FF-S-325.
 - 8. Toggle Bolts: Tumble-wing type, FS FF-B-588, type, class and style as required.
 - 9. Lock Washers: Helical spring type carbon steel, ASME B18.21.1.
- D. Prime and paint all metal per Section 09 90 00 Painting and Coating.
- E. Bituminous Paint: Cold applied asphalt emulsion complying with ASTM D 1187.
- F. Galvanizing Repair Coating: For touching up galvanized surfaces after erection, provide repair coating that is V.O.C. compliant. Apply to a dry film thickness of 1.5 to 3.0 mils.
 - 1. Product: Subject to compliance with requirements, provide one of the following:
 - a. Z.R.C. Worldwide; Silver Galv
 - b. Brite Products; Brite Zinc
 - c. Duncan Galvanizing Corp.; ZiRP
 - d. Or approved equal.

2.2 PRIME PAINTING

- A. Scope: Clean all ferrous metal (except galvanized steel) and shop paint with one coat of specified ferrous metal primer. No shop prime paint required on galvanized steel or aluminum work.
- B. Cleaning: Conform to Steel Structures Painting Council Surface Preparation Specification SP 3 (latest edition) "Power Tool Cleaning" for cleaning of ferrous metals which are to receive shop prime coat.
 - 1. Steel to get high performance coating as noted in Section 09 90 00 Painting and Coating must be cleaned as per SSPC SP.6 "Commercial Blast Cleaning."

C. Application

1. Apply shop prime coat immediately after cleaning metal. Apply paint in dry weather or under cover. Metal surfaces must be free from frost or moisture when painted. Paint all metal surfaces including edges, joints, holes, corners, etc.
2. Paint surfaces which will be concealed after shop assembly prior to such assembly. Apply paint in accordance with approved paint manufacturer's printed instructions, and the use of any thinners, adulterants or admixtures must be only as stated in said instructions.
3. Paint must uniformly and completely cover the metal surfaces, 2.0 mils minimum dry film thickness. No work may be shipped until the shop prime coat thereon has dried.

D. Touch-Up: In the shop, after assembly and in the field, after installation of work of this Section, touch-up damaged or abraded portions of shop prime paint with specified ferrous metal primer.

E. Apply one shop coat to fabricated metal items, except apply two (2) coats of paint to surfaces inaccessible after assembly or erection. Change color of second coat to distinguish it from the first.

2.3 GALVANIZING

A. Scope: All ferrous metal exposed to the weather, and all ferrous metals indicated on drawings or in specifications to be galvanized, must be cleaned and then hot-dipped galvanized after fabrication.

B. Avoid fabrication techniques that could cause distortion or embrittlement of steel items to be hot-dip galvanized. Fabricator must consult with hot-dip galvanizer regarding potential warpage problems or handling problems during the galvanizing process that may require adjustment of fabrication techniques or design before finalizing shop drawings and beginning of fabrication.

C. Cleaning: Thoroughly clean metal surfaces of all mill scale, rust, dirt, grease, oil, moisture and other contaminants prior to galvanizing.

D. Application: Hot-dip galvanizing must conform to the following::

1. ASTM A 143: Safeguarding Against Embrittlement of Hot-Dip Galvanized Structural Steel.
2. ASTM A 123: Standard Specification for Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products.
3. ASTM A 153: Galvanized Coating on Iron and Steel Hardware - Table 1.

4. ASTM A 384: Practice for Safeguarding Against Warpage and Distortion During Hot-Dip Galvanizing of Steel Assemblies.
 5. ASTM A 385: Practice for Providing High Quality Zinc Coatings.
 6. ASTM A 924: Galvanized Coating on Steel Sheets.
 7. Minimum weight of galvanized coating must be two (2) oz. per square foot of surface.
- E. Fabricate joints which will be exposed to weather in a manner to exclude water or provide weep holes where water may accumulate.
- F. All galvanized materials must be inspected for compliance with these specifications and marked with a stamp indicating the name of the galvanizer, the weight of the coating, and the appropriate ASTM number.
- G. To minimize surface imperfection (eg: flux inclusions), dip material to be galvanized into a solution of Zinc Ammonium Chloride (pre-flux) immediately prior to galvanizing. The type of galvanizing process utilizing a flux blanket overlaying the molten zinc will not be permitted.
- H. After galvanizing all materials not exposed to view must be chromated by dipping material in a 0.2% chromic acid solution.
- I. Galvanized surfaces, where exposed to view, must have a smooth, level surface finish. Where this does not occur, piece must be rejected and replaced to the acceptance of the Commissioner.

2.4 PROTECTIVE COATINGS

- A. Whenever dissimilar metals will be in contact, separate contact surfaces by coating each contact surface prior to assembly or installation with one coat of specified bituminous paint, which must be in addition to the specified shop prime paint. Mask off those surfaces not required to receive protective coating.

2.5 WORKMANSHIP

- A. General
1. Miscellaneous metal work must be fabricated by an experienced fabricator or manufacturer and installed by an experienced tradesman.
 2. Materials, methods of fabrication, fitting, assembly, bracing, supporting, fastening, operating devices, and erection must be in accordance with drawings and specifications, approved shop drawings, and best practices of the industry, using new and clean materials as specified, having structural properties sufficient to safely sustain or withstand stresses and strains to which materials and assembled work will be subjected.

3. All work must be accurately and neatly fabricated, assembled and erected.
- B. Shop Assembly: Insofar as practicable, fitting and assembly of work must be done in shop. Shop assemble work in largest practical sizes to minimize field work. Ensure that the shop-fabricated miscellaneous metal items will properly fit the field condition. In the event that shop-fabricated miscellaneous metal items do not fit the field condition, the item must be returned to the shop for correction.
- C. Cutting: Cut metal by sawing, shearing, or blanking. Flame cutting will be permitted only if cut edges are ground back to clean, smooth edges. Make cuts accurate, clean, sharp and free of burrs, without deforming adjacent surfaces or metals.
- D. Holes: Drill or cleanly punch holes; do not burn.
- E. Connections: Make connections with tight joints, capable of developing full strength of member, flush unless indicated otherwise, formed to exclude water where exposed to weather. Locate joints where least conspicuous. Unless indicated otherwise, weld or bolt shop connections; bolt or screw field connections. Provide expansion and contraction joints to allow for thermal movement of metal at locations and by methods approved by the Commissioner.
 1. Welding
 - a. Must be in accordance with AWS D1.1 Structural Welding Code of the American Welding Society, and must be done with electrodes and/or methods recommended by the manufacturer of the metals being welded.
 - b. Welds must be continuous, except where spot welding is specifically permitted. Welds exposed to view must be ground flush and dressed smooth with and to match finish of adjoining surfaces; undercut metal edges where welds are required to be flush.
 - c. All welds on or behind surfaces which will be exposed to view must be done so as to prevent distortion of finished surface. Remove weld spatter and welding oxides from all welded surfaces.
 2. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts. Bolts and screw heads exposed to view must be flat and countersunk. Cut off projecting ends of exposed bolts and screws flush with nuts or adjacent metal.
- F. Operating Mechanism: Operating devices (i.e. pivots, hinges, etc.) mechanism and hardware used in connection with this work must be fabricated, assembled, installed and adjusted after installation so that they will operate smoothly, freely, noiselessly and without excessive friction.
- G. Built-In Work: Furnish anchor bolts, inserts, plates and any other anchorage devices, and all other items specified under this Section of the Specifications to be built into concrete, masonry or work of other trades, with necessary templates and instructions, and in ample time to facilitate proper placing and installation.

- H. Supplementary Parts: Provide as necessary to complete each item of work, even though such supplementary parts are not shown or specified.
- I. Coordination: Accurately cut, fit, drill and tap work of this Section to accommodate and fit work of other trades. Furnish or obtain, as applicable, templates and drawings to or from applicable trades for proper coordination of this work.
- J. Exposed Work
 - 1. In addition to requirements specified herein and shown on drawings, all surfaces exposed to view must be clean and free from dirt, stains, grease, scratches, distortions, waves, dents, buckles, tool marks, burrs, and other defects which mar appearance of finished work.
 - 2. Metal work exposed to view must be straight and true to line or curve, smooth arrises and angles as sharp as practicable, miters formed in true alignment, profiles accurately intersecting, and with joints carefully matched to produce continuity of line and design.
 - 3. Exposed fastenings, where permitted, must be of the same material, color and finish as the metal to which applied, unless otherwise indicated, and must be of the smallest practicable size.
- K. Preparation for Hot-Dip Galvanizing: Fabricator must correctly prepare assemblies for galvanizing in consultation with galvanizer and in accordance with applicable Reference Standards and applicable AGA publications for the "Design of Products to be Hot-Dip galvanized After Fabrication." Preparation must include but not be limited to the following:
 - 1. Remove welding flux.
 - 2. Drill appropriate vent holes and provide for drainage in inconspicuous locations of hollow sections and semi-enclosed elements. After galvanizing, plug vent holes with shaped lead and grind smooth.

2.6 MISCELLANEOUS METALS ITEMS

- A. Rough Hardware
 - 1. Furnish bent or otherwise custom fabricated bolts, plates, anchors, hangers, dowels and other miscellaneous steel and iron shapes as required for framing and supporting woodwork, and for anchoring or securing woodwork to concrete or other structures. Straight bolts and other stock rough hardware items are specified in Section 06 20 00 Finish Carpentry.
 - 2. Fabricate items to sizes, shapes and dimensions required. Furnish malleable iron washers for heads and nuts which bear on wood connections; elsewhere, furnish steel washers.

B. Alternating Tread Stair

1. Materials

a. Stainless Steel

- 1). Treads: 13 Gauge AISI 316 SS
- 2). Landing & Foot Stampings: 11 Gauge AISI 316 SS
- 3). Stringers:
 - (a). 2" x 1 3/4" x 11 Gauge U section; Minimum 36 ksi yield stress, AISI 316 SS for 56 degree stairs under 10 vertical feet and for 68 degree stairs under 12 vertical feet.
 - (b). 3" x 1 3/4" x 11 Gauge U section; Minimum 36 ksi yield stress, AISI 316 SS 56 degree for stairs over 10 vertical feet and for 68 degree stairs over 12 vertical feet.
- 4). Handrails: 1 1/2" OD x 0.065" 316 SS cold drawn, Minimum 42 ksi yield stress, fully annealed tube per ASTM A269 seamless or ASTM A554 welded.

b. Fasteners

- 1). Bolts: handrail to stringer; Hex Head SAE J429 Grade 5, 1/2" Φ x 13 TPI; Landing to structure; Carriage Head A307 or Hex Head SAE J429 Grade 5, 1/2" Φ x 13 TPI ; dimensions per ANSI/ASME B18.2.1
- 2). Nuts: ASTM A563 Grade A, B, C, D or O; dimensions per ANSI/ASME B18.2.2.
- 3). Washers ASTM F436 or F844, dimensions per ANSI/ASME B18.2.1

2. Finish: Manufacturer's standard finish

3. Basis-of-Design Product: Subject to compliance with requirements, provide Lapeyre Stair Inc.; Alternating Tread Stairs, 56 degree angle, or comparable product by one of the following:

- a. Precision Ladders, LLC
- b. FS Industries.
- c. Vestil
- d. Or approved equal.

C. Ladders

1. Provide sloping ladders (ship's ladders) where noted. Fabricate open type construction with structural steel channel or steel plate stringers, pipe handrails, and open steel grating treads. Provide all necessary brackets and fittings for installation.
2. Ladders must be fabricated to support a live load of one hundred (100) lbs. per square foot and a concentrated load of three hundred (300) lbs. per rung; loads not to act simultaneously.

3. Basis-of-Design Product: Subject to compliance with requirements, provide Alco; 80 degree Pivotal Ships Ladder or comparable product by one of the following:
 - a. Precision Ladders, LLC
 - b. O'Keefe's
 - c. Or approved equal.

D. Service Stairs

1. General: Construct stairs to conform to sizes and arrangements shown; joint pieces together by welding. Provide complete stair assemblies, including metal framing, hangers, railings, newels, balusters, struts, clips, brackets, bearing plates and other components necessary for the support of stairs and platforms and as required to anchor and contain the stairs on the supporting structure.
2. Stair Framing: Fabricate stringers of structural steel members, channels, or plates, or a combination thereof. Fabricate as per the Structural design. Provide closures for exposed ends of stringers. Construct platforms of structural steel channel headers and miscellaneous framing members as shown. Bolt or weld headers to strings and newels and framing members to strings and headers; fabricate and join so that bolts, if used, do not appear on finish surfaces.
3. Attach treads to stringers by means of support angles on tread screw bolt into threaded stringer made of steel and angles or bars. Weld brackets to strings and attach metal treads to brackets by welding, riveting or bolting.
4. Provide platforms of same metal as treads and in thicknesses required to support design loading. Attach platform to platform framing members with welds.
5. Steel Treads and Platforms
 - a. Interior Stair Treads: Provide treads in sizes and thickness as shown on drawings. Provide anti-slip stainless steel surface covering 100% of substrate consisting of a random hatch matrix with a surface hardness between 55 – 63 on the Rockwell 'C' scale and a bond strength of at least 4,000 psi. Non-slip surface must have a minimum coefficient of friction of 0.8 and be listed as slip-resistant by Underwriters Laboratories.
 - 1). Basis-of-Design Product: Subject to compliance with requirements, provide W.S. Molnar Company; SlipNOT "Perf Tread – L-Shape" grit-free, stainless steel Grip Plate/ Grip Grate Grade #1 - Fine or comparable product by one of the following:
 - (a). Harsco Industrial IKG.
 - (b). McNichols
 - (c). Or approved equal.
 - b. Exterior Stair Treads: Form treads and platforms to configurations shown from metal bar grating; fabricate to comply with NAAMM MBG 531, "Metal Bar Grating Manual."

- 1). Fabricate treads and platforms from pressure-locked steel grating with 1-1/2" x 1/8" bearing bars at 1-3/16" o.c. and crossbars at 4" o.c., plain surface, galvanized finish.
- 2). Fabricate grating treads with cast abrasive, diamond-plate steel nosing and with steel angle or steel plate carrier at each end for stringer connections. Secure treads to stringers with bolts. Weld risers to back of tread.
- 3). Fabricate grating platforms with nosing matching that on grating treads. Provide toeplates at open-sided edges of grating platforms. Weld grating to platform framing.

E. Loose Steel Lintels

1. Provide loose structural steel lintels for openings and recesses in masonry walls and partitions as shown. Weld adjoining members together to form a single unit where indicated. Provide not less than eight (8) inches bearing at each side of openings, unless otherwise indicated.
2. Loose lintels must conform to the following Schedule:

Opening Width (Maximum)	Wall Thickness		
	4 inches	6 inches	8 inches*
2'-0"	3-1/2" x 3-1/2" x 1/4"	6" x 4" x 5/16"	3-1/2" x 3-1/2" x 1/4"
3'-0"	3-1/2" x 3-1/2" x 5/16"	6" x 4" x 5/16"	3-1/2" x 3-1/2" x 5/16"
4'-0"	3-1/2" x 3-1/2" x 5/16"	6" x 4" x 5/16"	3-1/2" x 3-1/2" x 5/16"
5'-0"	4" x 3-1/2" x 3/8"	6" x 4" x 3/8"	4" x 3-1/2" x 5/16"
6'-0"	5" x 3-1/2" x 3/8"	6" x 4" x 3/8"	5" x 3-1/2" x 5/16"
7'-0"	5" x 3-1/2" x 3/8"	5" x 5" x 1/2"	5" x 3-1/2" x 3/8"
8'-0"	5" x 3-1/2" x 3/8"	5" x 5" x 5/8"	5" x 3-1/2" x 3/8"

* Two angles at all openings in eight (8) inch walls.

3. At columns or vertical surfaces where lintels cannot bear on masonry, provide clip angles sized for structural capacity of lintel.

F. Miscellaneous Light Steel Framing

1. Light steel framing, bracing, supports, framing, clip angles, shelf angles, plates, etc., must be of such shapes and sizes as indicated on the drawings and details or as required to suit the condition and must be provided with all necessary supports and reinforcing such as hangers, braces, struts, clip angles, anchors, bolts, nuts, welds, etc., as required to properly support and rigidly fasten and anchor same in place and to steel, concrete, masonry and all other connecting and adjoining work.
2. All light steel framing steel must be furnished and erected in accordance with the applicable requirements of the "Specifications for the Design, Fabrication and Erection of Structural Steel for Buildings" by the American Institute of Steel Construction and as specified herein.

G. Steel Gratings and Frames

1. Provide hot dipped galvanized steel gratings complying with FS RR-G-661 with rectangular cross bars welded to bearing bars. Bars to have plain wearing surface.
2. Manufacturer: Provide gratings manufactured by Reliance, Borden, Irving Subway Grating, or approved equal.
3. Hinged Section: Provide hinged sections in areaway gratings where required by the drawings. Each hinged section up to 4'-0" wide must be provided with two (2) five knuckle, fast pin, regular weight, plain bearing, wrought bronze butt hinges. Each hinged section over 4'-0" wide must be provided with three (3) butt hinges. Hinged sections must have provisions for padlocking on the underside.
4. Furnish grating frames, with corners mitered, welded and ground smooth, and with welded-on straps for secure anchorage into concrete. Frames and anchors to be galvanized.
5. Structural Performance: Provide gratings capable of withstanding the following structural loads without exceeding the allowable design working stress of the materials involved, including anchors and connections:
 - a. Floors: Capable of withstanding a uniform load of 250 lbf/sq. ft. or a concentrated load of 3000 lbf, whichever produces the greater stress.
 - b. Walkways and Elevated Platforms Other Than Exits: Capable of withstanding a uniform load of 60 lbf/sq. ft. Limit deflection to L/360 or 1/4", whichever is less.
 - c. Walkways and Elevated Platforms Used as Exits: Capable of withstanding a uniform of 100 lbf/sq. ft. or a concentrated load of 300 lbf on an area of 4 sq. in., whichever produces the greater stress. Limit deflection to L/360 or 1/4", whichever is less.

- H. Pit Covers and Frames:** Provide minimum 1/2" thick steel checkered plate cover, reinforced as required to limit deflection to 1/360 of span, with two (2) recessed lifting handles capable of supporting five hundred (500) lbs. each. Furnish covers with steel angle frames, with corners mitered, welded and ground smooth, and with welded-on

straps for secure anchorage into concrete. Frames and anchors to be galvanized. Plate covers must be capable of supporting same loads as adjacent floor surfaces.

I. Structural Steel Door Frames

1. Fabricate steel door frames of structural shapes and bars, fully welded, uniform, square and true. Plug weld built-up members, continuously weld exposed joints; grind exposed welds smooth. Provide 5/8" x 1-1/2" steel bar stops. Secure removable stops to frame with countersunk machine screws, uniformly spaced at not more than ten (10) inches o.c.
2. Provide necessary reinforcements and drill and tap as required for finish hardware.
3. Provide steel strap anchors for securing door frames into adjoining concrete or masonry, using 1/8" x 2" straps of the length required for a minimum eight (8) inch embedment. Weld anchors to frame jambs no more than twelve (12) inches from both bottom and head of frame and space anchors not more than thirty (30) inches apart.
4. Extend bottom of frames to floor elevation and secure to concrete with steel angle clips welded to frames, anchored with expansion shields and bolts.

J. Cast Thresholds

1. Fabricate of sizes and configurations as shown. Provide cast iron units with integral abrasive finish. Furnish in lengths as required to accurately fit each opening or condition.
 - a. Cast units with an integral abrasive grit consisting of aluminum oxide, silicone carbide, or a combination of both.
2. Provide anchors for embedding units in concrete, either integral or applied to units, as standard with manufacturer.
 - a. Provide two (2) rows of holes for units over five (5) inches wide, with two (2) holes aligned at ends and staggered intermediate holes.
3. Apply black asphaltic coating to concealed bottoms, sides and edges of cast iron units set into concrete.
4. Provide a diamond surface texture.

- K. Miscellaneous Steel Trim:** Provide shapes and sizes for profiles shown. Except as otherwise indicated, fabricate units from structural steel shapes and plates and steel bars, with continuously welded joints and smooth exposed edges. Use concealed field splices wherever possible. Provide cutouts, fittings and anchorages as required for coordination of assembly and installation with other work.

- L. Corner Guards: Provide stainless steel corner guards as specified in Section 05 70 00, Decorative Metal.
- M. Countertop Supports: Steel framing as indicated or required to support countertops. Conceal framing under countertops and within wall behind countertops. Provide supports to withstand a concentrated load of not less than three hundred (300) lbs. applied at any point with a deflection not to exceed L/240 for the length of the countertop.
- N. Trench Drains: Provide Smith Aco 9870-465-SSP heavy-duty perforated stainless steel grate as manufactured by Jay R. Smith Mfg. Co., or comparable product by Zurn, McNichols or approved equal, sizes as shown on drawings. Assembly must have asphalt coating. Grate must be bolted in place with stainless steel hex head cap screws.
- O. Masonry Support Steel: Provide galvanized steel, relieving angles, plates, accessories and other steel shapes for masonry support steel; for lintels refer to Para. E. herein.
 - 1. Fabricate masonry support steel to allow final adjustment with the closest tolerances possible. Relieving angles which require cutting to fit masonry flashing must be straightened without deflections.
 - 2. Coordinate masonry support system with concrete work for locations of wedge inserts.
 - 3. Install to meet requirements of building masonry work, face brick coursing and stone placement. Coordinate final adjustments with masonry work as work progresses.
- P. Sleeves in Concrete Walls and Slabs
 - 1. Provide sleeves through concrete walls of Schedule 40 steel pipe with i.d. two (2) inches larger than o.d. of pipe or conduit (including insulation, if any) to be accommodated. Sleeves will project one-half (1/2) inch on each side of finished wall. Provide rectangular one-quarter (1/4) inch steel plate collar at center, continuously welded to the perimeter of the sleeve, and six (6) inches wider than the o.d.
 - 2. Slots in slabs: 12 gauge steel sheet, galvanized, of dimensions indicated, with strap anchors welded in place not more than twelve (12) inches on centers.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. **Fastening to In-Place Construction:** Provide anchorage devices and fasteners where necessary for securing miscellaneous metal fabrications to in-place construction; including threaded fasteners for concrete and masonry inserts, toggle bolts, through-bolts, lag bolts, wood screws, and other connectors as required.
- B. **Cutting, Fitting and Placement:** Perform cutting, drilling and fitting required for installation of miscellaneous metal fabrications. Set work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items which are to be built into concrete, masonry, or similar construction.
- C. **Fitting Connections:** Fit exposed connections accurately together to form tight hairline joints. Weld connections which are not to be left as exposed joints, but cannot be shop welded because of shipping size limitations. Grind exposed joints smooth and touch up shop paint coat. Do not weld, cut or abrade the surfaces of exterior units which have been hot dip galvanized after fabrication, and are intended for bolted or screwed field connections.
- D. **Field Welding:** Comply with AWS D1.1 for procedures of manual shielded metal-arc welding, appearance, and quality of welds made, and methods used in correcting welding work.
- E. **Touch-Up Painting:** Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint, and paint exposed areas with same material as used for shop painting. Apply by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- F. **Field Touch-Up of Galvanized Surfaces:** Touch-up shop applied galvanized coatings damaged during handling and installation. Use galvanizing repair coating specified herein for galvanized surfaces.

END OF SECTION 05 50 00

SECTION 05 70 00

DECORATIVE METAL

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Stainless steel handrails and brackets.
2. Stainless steel tube sidewall support.
3. Stainless steel countertop with integral sink.
4. Stainless steel bollards.
5. Stainless steel corner guards.
6. Metal clad stair sidewalls.
7. Steel awnings at doors.
8. Aluminum canopy over Stair 2.

B. Related Sections

1. Section 05 50 00 "Metal Fabrications"
2. Section 14 24 00 "Hydraulic Elevators" for elevator entrances.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Shop Drawings: Submit for all items of work of this Section, as enumerated under paragraph 1.2, showing locations, layouts, materials, thicknesses, finishes, dimensions, construction, relation to adjoining construction, erection details, profiles, jointing and all other details to fully illustrate the work of this Section.
- C. Samples: Submit fabricated samples (of sufficient size to fully show construction, materials and finishes) of all items of work as enumerated under paragraph 1.2 herein.

- D. Product Data: Submit manufacturer's, fabricator's and finisher's specifications and installation instructions for products used in ornamental metal work, including finishing materials and methods.
- E. Samples for verification: For each type of exposed finish required, prepared on 1500 mm square samples of metal of same thickness and material indicated for the Work.
- F. Contractor Licensed Engineer Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the Professional Engineer licensed in the State of New York responsible for their preparation.
- G. Coordination Drawings: For decorative formed metal elements that house items specified in other Sections. Show dimensions of housed items, including locations of housing penetrations and attachments and necessary clearances.
- H. Engineering Data
 - 1. Before any railings and supports are fabricated, submit engineering data drawings to the Commissioner for review indicating how performance standards specified here will be met. The Contractor is responsible for the structural design and supports for these systems and must show the proposed systems on these drawings.
 - 2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared by a Structural Engineer licensed in the State of New York and must be signed and sealed by this Engineer.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Field Measurements: Take field measurements prior to preparation of shop drawings and fabrication, where possible, to ensure proper fitting of the work. However, do not delay job progress; allow for adjustments and fitting where taking of field measurements before fabrication might delay the work.
- C. Shop Assembly: Insofar as practicable, fitting and assembly of work will be done in shop. Work that cannot be permanently shop assembled, will be completely assembled, marked and disassembled in shop before shipment to ensure proper assembly in field. Shop assemble work in largest practical sizes to minimize field work. It is the responsibility of the Contractor for this work to ensure that the shop fabricated items will properly fit the field condition. In the event that shop fabricated items do not fit the field condition, the item will be returned to the shop for correction.

1.5 PERFORMANCE STANDARDS

- A. Engineer railings and guardrails to resist loads per 2008 New York City Building Code.

- B. Submit calculations and drawings signed and sealed by a Professional Engineer licensed in the State of New York indicating that railing system can meet these performance criteria.

1.6 COORDINATION

- A. Coordinate installation of anchorages for decorative formed metal items. Furnish setting drawings, templates and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts and items with integral anchors, that are to be embedded in concrete to masonry. Deliver such items to Project site in time for installation.
- B. Coordinate installation of decorative formed metal with adjacent construction to ensure that wall assemblies, flashings, trim and joint sealants, are protected against damage from the effects of weather, age, corrosion and other causes.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Provide materials which have been selected for their surface flatness, smoothness and freedom from surface blemishes where exposed to view in the finished unit. Exposed to view surfaces which exhibit pitting, seam marks, roller marks, "oil-canning," stains, discolorations, or other imperfections on the finished units will not be acceptable.
- B. Aluminum
 - 1. Comply with the following standards for the forms and types of aluminum for the required items of work.
 - a. Alloy and Temper: Provide alloy and temper as indicated or as otherwise recommended by the aluminum producer or finisher.
 - b. Aluminum Plate and Sheet: Alloy and temper recommended by aluminum producer or finisher for type of use and finish indicated, and with not less than the strength and durability properties specified in ASTM B 209, alloy 6061-T6.
- C. Stainless Steel
 - 1. Comply with the following standards for the forms and types of stainless steel for the required items of work.
 - a. Pipe: ASTM A 312, Grade TP 316
 - b. Sheet, Strip, Flat Bar and Plate: ASTM A 666, Type 316.
 - c. Tubing: ASTM A 554, Grade MT 316.
 - d. Castings: ASTM A 743A, Grade CF 8 or CF 20.
 - e. Bars and Shapes: ASTM A 276, Type 316.

- D. Exposed Steel (cold rolled)
 - 1. Structural Shapes and Sheets: ASTM A 1008.
 - 2. Strip: ASTM A109
- E. Steel (Carbon) for Concealed Supports Only
 - 1. Structural Shapes: ASTM A 36.
 - 2. Plates (for forming or bending cold): ASTM A 283, Grade C.
 - 3. Steel Sheets: ASTM A 366, Grade 1.
 - 4. Shop prime with rust inhibitive primer equal to Series 88 Azerox made by Tnemec, or similar product made by Benjamin Moore, Sherwin Williams or approved equal.
- F. Welding Electrodes and Filler Metal: Type and alloy of filler metal and electrodes as recommended by producer of the metal to be welded, and as required for color match, strength and compatibility in the fabricated items.
- G. Fasteners: Furnish basic metal and alloy, matching finished color and texture as the metal being fastened, unless otherwise indicated. Provide Phillips flat-head screws for exposed fasteners, unless otherwise indicated.
- H. Anchors and Inserts: Either furnish inserts to be set in concrete or masonry work, or provide other anchoring devices as required for the installation of ornamental metal items. Provide toothed steel or lead shield expansion bolt devices for drilled-in-place anchors. Provide galvanized or cadmium-coated anchors and inserts for exterior installations.
 - 1. Provide units with exposed surfaces matching the texture and finish of the metal item anchored.
- I. Bituminous Paint: SSPC-Paint 12 (cold-applied asphalt mastic).
- J. Cast-in-Place and Preinstalled Anchors: Anchors fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete.
- K. Sealants, Interior: Nonsag, paintable, nonstaining, latex sealant complying with ASTM C834; of type and grade required to seal joints in decorative formed metal; and as recommended in writing by decorative formed metal manufacturer.
 - 1. Sealants must have a VOC content of not more than 250 g/l when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- L. Filler Metal and Electrodes: Provide type and alloy of filler metal and electrodes as recommended by produced of metal to be welded or brazed and as necessary for strength, corrosion resistance, and compatibility in fabricated items
 - 1. Use filler metals that will match the color of metal being joined and will not cause discoloration.

2.2 FABRICATION

- A. Cutting: Cut metal by sawing, shearing or blanking. Flame cutting will be permitted only if cut edges are ground back to clean, smooth edges. Make cuts accurate, clean, sharp, square and free of burrs, without deforming adjacent surfaces or metals.
- B. Holes: Drill or cleanly punch holes (do not burn), so that holes will be accurate, clean, neat and sharp without deforming adjacent surfaces or metals.
- C. Connections
 - 1. Make connections with tight joints, capable of developing full strength of member, flush unless indicated otherwise, formed to exclude water where exposed to water. Locate joints where indicated on drawings. Provide connections to allow for thermal movement of metal at locations and by methods approved by Commissioner. For work exposed to view, use concealed fasteners (unless welded or other connections indicated) with joints accurately fitted, flush and rigidly secured with hairline contacts.
 - 2. Welding: Welding must be in accordance with recommendations of the American Welding Society and must be done with electrodes and/or methods recommended by the manufacturers of the metals being welded. Welds must be continuous, except where spot welding is specifically permitted. Welds exposed to view must be ground flush and dressed smooth with and to match finish of adjoining surfaces so that joint will not be visible; undercut metal edges where welds are required to be ground flush and dressed smooth. All welds on or behind surfaces which will be exposed to view must be done so that finished surface will be free of imperfections such as pits, runs, splatter, cracks, warping, dimpling, depressions or other forms of distortion or discoloration. Remove weld splatter and welding oxides from all welded surfaces.
 - 3. Bolts and Screws: Make threaded connections tight with threads entirely concealed. Use lock nuts. Bolts and screw heads, where shown to be exposed to view, must be flat and countersunk. Cut off projecting ends of exposed bolts and screws flush with nuts of adjacent metal.
- D. Operating Mechanism: Operating devices, mechanism and hardware used in connection with this work must be fabricated, assembled, installed and adjusted after installation so that they will operate smoothly, freely, noiselessly and without excessive friction.

- E. Built-In Work: Furnish anchor bolts, inserts, plates and any other anchorage devices, and all other items for architectural metal work to be built into concrete, masonry, or work of other trades, with necessary templates and instructions, and in ample time to facilitate proper placing and installation.
- F. Supplementary Parts: Provide as necessary to complete each item of work, even though such supplementary parts are not shown or specified.
- G. Coordination: Accurately cut, fit, drill and tap work of this Section to accommodate and fit work of other trades. Furnish or obtain, as applicable, templates and drawings to or from applicable trades for proper coordination of this work.
- H. Exposed Work: In addition to requirements specified herein or shown on drawings, all surfaces exposed to view must be clean, and free from dirt, stains, grease, scratches, distortions, waves, dents, buckles, tool marks, burrs and other defects which mar appearance of finished work. Ornamental metal work exposed to view must be straight and true to line or curve, smooth arrises and angles as sharp as practicable, miters formed in true alignment, profiles accurately intersecting, and with joints carefully matched to produce continuity of line and design. Exposed fastenings, where permitted, must be of the same material, color and finish as the metal to which applied, unless otherwise indicated, and must be of the smallest practicable size.
- I. Materials used must be of such strength, thickness and alloy that they are capable of meeting all standards and descriptions specified herein and as detailed on drawings.
- J. Bending: Bend sheet metal to the required shape. Bent items must be free of grain separation, oil canning or other distortion.
 - 1. Square Bends: Back-cut sheets to attach maximum square bend possible, with maximum radius of 1/16 in.
 - 2. Knife Edge Bends: Back-cut and back bevel sheets to attain sharpest bend possible, with maximum radius of 1/32 in.

2.3 SHOP FINISHING

A. General

- 1. Comply with NAAMM "Metal Finishes Manual" for finish designations and application recommendations, except as otherwise indicated.
- 2. Provide colors or color matches as indicated on selected samples.
- 3. Protect mechanical finishes on exposed surfaces from damage by application of strippable temporary protective covering prior to shipment.
- 4. Corrosion Protection: Coat concealed surfaces which will be in contact with concrete, masonry, wood or dissimilar metals, in exterior work and work to be

built into exterior and below grade walls and decks, with a heavy coat of bituminous paint. Do not extend coating onto exposed surfaces.

B. Aluminum

1. Class II Clear Anodized Finish: AA-M12C22A31, medium satin directional textured mechanical finish; inhibited chemical cleaning; 0.4 mil minimum thick anodic coating conforming to AAMA Spec. 607.1.

C. Stainless Steel

1. Remove or blend tool and die marks and stretch lines into finish.
2. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.
3. Bright, Directional Polish: No. 4 finish unless otherwise noted.
4. When polishing is complete, passivate and rinse surfaces. Remove foreign matter and leave surface chemically dry.

2.4 PROTECTION

- A. Provide necessary protection to all exposed surfaces of architectural metal work, so as to prevent damage, staining, discoloration, abrasion, etc., to these surfaces from time of shipment from factory to acceptance of work of this project. Protection must be provided by wrappings, strippable coatings, or other means. After installation, remove protective paper or strippable coating and clean exposed surfaces, and then provide additional temporary protection to protect architectural metal work from damage during subsequent construction activities. Surfaces which are damaged, stained, discolored, abraded etc., must be rejected and replaced with new materials, at no cost to the City of New York.

2.5 STEEL FRAMING, BRACING, SUPPORTS AND REINFORCEMENTS

- A. Steel framing, plate reinforcing, supplementary steel framing or reinforcing, bracket assemblies, and the like required for the support, framing, reinforcing, bracing, etc., of work of this Section must be of such sizes and shapes as indicated on the drawings, or as required to suit the conditions, and must be provided with all necessary supports and accessory items such as inserts, hangers, braces, struts, clip angles, anchors, bolts, nuts, welds, etc., as required to properly and rigidly fasten, anchor or attach work of this Section in place and to the concrete, masonry and other connecting and adjoining work.

2.6 ORNAMENTAL HANDRAILS AND RAILINGS

- A. Welded Connections: Fabricate handrails and railings for connecting members by welding. Cope components at perpendicular and skew connections to provide close fit,

or use fittings designed for this purpose. Weld connections continuously to comply with the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.
5. Form changes in direction of railing members by radius bends.
6. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain profile of member throughout entire bend without buckling, twisting, or otherwise deforming exposed surfaces of handrail and railing components.
7. Provide wall returns at ends of wall-mounted handrails, close ends of returns.
8. Close exposed ends of handrail and railing members with prefabricated end fittings.
9. Brackets, Flanges, Fittings, and Anchors: Provide brackets, flanges, miscellaneous fittings, and anchors to interconnect handrail and railing members to other work, unless otherwise indicated.
 - a. Furnish inserts and other anchorage devices for connecting handrails and railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by handrails and railings. Coordinate anchorage devices with supporting structure.
 - b. For railing posts set in concrete, provide preset sleeves of steel, not less than 6 inches long and inside dimensions not less than 1/2 inch greater than outside dimensions of post, with steel plate forming bottom closure.

2.7 STAINLESS STEEL COUNTERTOP WITH INTEGRAL SINK

- A. Stainless Steel Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 316, stretcher leveled, and No. 4 finish.
- B. Apply sound dampening to underside of metal work surfaces, including sinks and similar units. Provide coating with smooth surface and hold coating 1" back from open edges for cleaning.
- C. Counter Tops: Fabricate with reinforced tops to comply with referenced SMACNA standard, unless otherwise indicated, and as follows:

1. Tops: Minimum 0.0781" thick stainless steel, unless otherwise indicated.
 2. Top Reinforcement: Provide minimum 0.0781" thick, stainless steel reinforcing, unless otherwise indicated.
- D. Sinks: Fabricate of minimum 0.0781" thick stainless steel with fully welded, 1 piece construction. Construct 2 sides and bottom of sink compartment from 1 stainless steel sheet with ends welded integral and without overlapping joints or open spaces between compartments. Provide double wall partitions between compartments with 1/2" radius rounded tops that are welded integral with sink body. Cove horizontal, vertical, and interior corners with 3/4" radius. Pitch and crease sinks to waste for drainage without pooling. Seat wastes in die stamped depressions without solder, rivets, or welding.
1. Wastes: 2" nickel plated bronze, rotary handle waste assembly with stainless steel strainer plate and nickel plated brass, connected overflow.
- E. Fabricate assembly in accordance with NSF 2 "food zone" requirements. All welding must be accomplished using welding rod of same composition of metal being welded. Use methods that minimize distortion and develop strength and corrosion resistance of base metal. Provide ductile welds free of mechanical imperfections such as gas holes, pits or cracks.

2.8 STAINLESS STEEL BOLLARDS

- A. Fixed stainless steel bollards:
1. Size: 12" nominal
 2. Height: 36"
 3. Bollard Material: Schedule 80, Type 316 Stainless Steel
 4. Finish: Bead Blasted Stainless Steel
 5. Cap Style: Standard Flat Top
 6. Mounting/Installation Method: Embedded
- B. Basis-of-Design Product: Subject to compliance with requirements, provide Calpipe Security Bollards; SSF12080 or comparable product by one of the following:
1. Ameristar Security Products
 2. SecureUSA
 3. Or approved equal.

2.9 STAINLESS STEEL CORNER GUARDS

- A. Surface Mounted Stainless Steel Corner Guards:

1. Stainless steel 316 or 430 alloy, 16 gauge
 2. Wing Size: 3 1/2 inches.
 3. Angle: 90 or 135 degree corner as shown on Drawings
 4. Corner radius: 1/8 inch
 5. Mounting: Flat-head, countersunk screws through factory-drilled mounting holes.
 6. Height of Corner Guards: Full height and as indicated.
 7. Finish: No. 4 Brushed directional, satin finish, 320 grit or greater
 8. Secure with Torx pin head security screws at 12 inches on center
- B. Basis-of-Design Product: Subject to compliance with requirements, provide Construction Specialties Inc.; C/S Acrovyn Surface Mounted Stainless Steel Corner Guards Model No. CO Series or comparable product by one of the following:
1. In-Pro Corporation (IPC)
 2. Pawling Corporation
 3. Or approved equal.
- C. Unless otherwise noted, provide 3.5" x 3.5" x 1/16" stainless steel angles.
- D. Set and adjust guards to finish flush with adjacent surfaces.

2.10 METAL-CLAD SIDEWALLS

- A. Laminate 0.0403" thick, metal sheets to outside face of stair sidewalls at locations indicated. Use adhesive recommended by metal fabricator that will fully bond metal to substrate and that will prevent telegraphing and oil canning.

2.11 ORNAMENTAL METAL ENCLOSURES

- A. General: Provide sheet metal selected for surface flatness, smoothness, and freedom from surface blemishes where exposed to view in the finished unit. Do not use materials with pitting, seam marks, roller marks, variations in flatness exceeding those permitted by referenced standards for stretcher leveled metal sheet, stains, discoloration, or other imperfections.
- B. Coordinate dimensions and attachment methods of sheet metal fabrications with those of adjoining products and construction to produce integrated assemblies with closely fitting joints and with edges and surfaces aligned with one another in the relationship indicated.

- C. Increase metal thickness or reinforce metal with concealed stiffeners, backing materials, or both, as required to produce surfaces whose variations in flatness do not exceed those permitted by referenced standards for stretcher leveled metal sheet and to impart sufficient strength for indicated use.
 - 1. Support joints with concealed stiffeners as required to hold exposed faces of adjoining sheets in flush alignment.
 - 2. Fill space between stiffeners with sound deadening insulation attached to face sheet with cold applied asphalt mastic, unless otherwise indicated.
 - D. Assemble sheet metal fabrications in the shop to the greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
 - E. Form sheet metal fabrications to profiles indicated in maximum lengths to minimize joints and without exposed cut edges. Fold back exposed ends of unsupported sheet metal to form a 1/2" wide hem on the concealed side, or ease exposed edges with backing to a radius of approximately 1/32". Produce flat, flush surfaces without cracking or grain separation at bends.
 - F. Continuously weld joints and seams, except where other methods of joining are indicated. Grind, fill, and dress welds to produce smooth flush exposed surfaces in which welds are not visible after final finishing is completed.
 - G. Build in straps, plates, and brackets as required for supporting and anchoring fabricated items to adjoining construction. Reinforce sheet metal units as required to attach and support other construction.
 - H. Where noted, shop perforate enclosure following perforation pattern shown on drawings. Roll, press and grind perforated metal to flatten and to remove burrs and deformations.
 - I. Conceal fasteners unless otherwise noted on drawings. Size fasteners to support closures and trim, with fasteners spaced to prevent buckling or waviness in finished surfaces.
 - J. Miter or cope trim members at corners to form tight joints.
- 2.12 STAINLESS STEEL FRAMING
- A. Fabricate frames from stainless steel tubes to the sizes and shapes indicated. Miter and weld frame members at corners. Secure perforated plate in frames with fully continuous welds; all welds must be ground smooth and flush.

2.13 METAL PANELS

- A. Metal panels, fascias and other sheet or plate items must read as flat and free of bow or "oil canning" or "read thru" of stiffeners. To this end, exposed metal faces when supported in the building must be of such flatness that the maximum uniform bow in 2 ft. must not exceed 1/32", and the maximum overall variation in plane between high and low point within a panel must not exceed 1/16".

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. General: Install work of this Section square, plumb, straight, true to line or radius, accurately fitted and located, with flush, tight hairline joints (except as otherwise indicated or to allow for thermal movement), with provisions for other trades, with provisions to allow for thermal movement, with provisions to exclude water where exposed to weather, and with attachment devices as required for secure and rigid installation. It is the responsibility of the Contractor to ensure that shop fabricated architectural metal items will properly fit the field condition. In cases where the shop fabricated architectural metal items do not fit the field condition, the item must be returned to the shop for correction.
- B. Attachments
 - 1. Unless otherwise indicated, anchor work to be built into concrete or masonry with shop welded on galvanized steel strap anchors; anchor work to be attached to concrete or masonry by bolts into embedded inserts or expansion shields; anchor work attached to structural steel by welds or bolts; anchor work attached to metals other than structural steel by bolts or screws. Power actuated fasteners not permitted unless approved by Commissioner. Provide all supplementary parts necessary to complete each item of work of this Section.
 - 2. All attachment devices must be of type, size and spacing to suit condition and as approved by Commissioner. Provide shims, slotted holes, or other means necessary for leveling, plumbing and other required adjustments. Attachment devices for work exposed to view must be concealed, unless indicated otherwise. Where bolts or screws are permitted in work exposed to view, provide oval head and counter sunk, unless otherwise noted, with projecting end cut off flush with nuts or adjacent material, and match adjacent surfaces.
 - 3. Do all necessary drilling, tapping, cutting or other preparations of surrounding construction in the field accurately, neatly and as necessary for the attachment and support of work of this Section, but obtain Commissioner's approval prior to such preparation to work of others.

- C. Tolerances: All work of this Section must be plumb, square, level, true to radius and correctly aligned within the following limitations:
 - 1. Offset from true horizontal, vertical and design location must not exceed 1/16" per ten (10) feet of length for any component, not cumulative.
 - 2. Maximum offset from true alignment between abutting components must not exceed 1/32".
- D. All railings must be installed to withstand loads as required by 2008 New York City Building Code.
- E. Countertops must be installed to support a minimum concentrated live load of 150 lbs. acting downward at mid span at outer edge of counter without causing deformation and damage.
- F. Do not cut or abrade finishes which cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units at Contractor's option.
- G. Install concealed gaskets and joint fillers as the work progresses, so as to make the work soundproof or lightproof as required.
- H. Restore protective coverings which have been damaged during shipment or installation of the work. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at the same location.
- I. Retain protective coverings intact and remove simultaneously from similarly finished items to preclude non-uniform oxidation and discoloration.
- J. Field Welding: Comply with AWS Code for the procedures of manual shielded metal-arc welding, the appearance and quality of welds made, and the methods used in correcting welding work.

3.3 CLEANING

- A. Clean aluminum and stainless steel by washing thoroughly with clean water and soap and rinsing with clean water.

END OF SECTION 05 70 00

SECTION 06 20 00

FINISH CARPENTRY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Blocking and miscellaneous wood, including plywood subflooring and wall lining for telephone and electric closets and stair sidewalls.
2. Rough hardware.
3. Plastic laminate countertops and vanities.
4. Installation only of finish hardware.
5. Installation only of doors and hollow metal frames.

B. Related Sections

1. Section 07 52 00 "Modified Bituminous Membrane Roofing"
2. Section 08 11 13 "Hollow Metal Doors and Frames"
3. Section 08 71 00 "Door Hardware"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Pressure Treatment: Include certification by treating plant stating chemicals and process used, net amount of salts retained and conformance with applicable standards.
- C. Fire-Retardant Treatment: Include certification by treating plant that treatment material complies with 2008 New York City Building Code and that treatment will not bleed through finished surfaces.
- D. Submit 12" x 12" samples of plastic laminate finish of thickness specified for countertops.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Lumber Standard: Comply with PS 20.
- C. Plywood Standard: Comply with PS 1 and American Plywood Assoc. (APA).
- D. Shop fabricate carpentry work to the extent feasible and where shop fabrication will result in better workmanship than feasible for on-site fabrication.
- E. Grade Marks: Identify lumber and plywood by official grade mark.
 - 1. Lumber: Grade stamp to contain symbol of grading agency certified by Board of Review, American Lumber Standards Committee, mill number or name, grade of lumber, species grouping or combination designation, rules under which graded where applicable, and condition of seasoning at time of manufacture.
 - a. MC-15 or KD: Maximum of fifteen (15) percent moisture content.
- F. Installation of doors, frames and hardware must conform to the minimum standards of "Installation Guides for Doors and Hardware" of the Door and Hardware Institute.

1.5 PRODUCT HANDLING

- A. Deliver carpentry materials to the site ready to use with each piece of lumber clearly marked as to grade, type and mill, and place in an area protected from the elements.
- B. Deliver rough hardware in sealed kegs and/or other containers which bear labels as to type and kind.
- C. Pile lumber for rough usage, when delivered to the site in stacks to ensure drainage and with a minimum clearance of six (6) inches above grade. Cover stacks with tarpaulins or other watertight coverings. Store grounds and similar small sized lumber inside the building as soon as possible after delivery.
- D. Do not store seasoned lumber in wet or damp portions of the building.
- E. Protect fire retardant treated materials against high humidity and moisture during storage and erection.
- F. Remove delivered materials which do not conform to specified grading rules or are otherwise not suitable for installation from the job site and replace with acceptable materials.
- G. Hardware must be sorted and stored in space assigned by Contractor and kept at all times under lock and key. The safety and preservation of all items delivered is the responsibility of the Contractor.

1.6 JOB CONDITIONS

- A. Installer must examine the substrates and supporting structure and the conditions under which the carpentry work is to be installed, and notify the Contractor in writing of conditions detrimental to the work. Do not proceed with the installation until unsatisfactory conditions have been corrected in a manner acceptable to the Installer and the Commissioner.
- B. Coordination: Fit carpentry work to other work; scribe and cope as required for accurate fit. Correlate location of furring, nailers, blocking, grounds and similar supports to allow proper attachment of other work.

PART 2 PRODUCTS

2.1 WOOD MATERIAL

- A. General
 - 1. All wood must be sound, flat, straight, well seasoned, thoroughly dry and free from all defects. Do not use warped or twisted wood.
 - 2. For miscellaneous wood blocking, grounds, furring as required, use Utility Grade Coastal Douglas Fir or Southern Pine, fire retardant treated as specified herein, free from knots, shakes, rot or other defects, straight, square edges and straight grain, air seasoned with maximum moisture content of nineteen (19) percent. Wood must be S4S, S-Dry, complying with PS-20.
 - 3. For plastic laminate countertops or vanities provide 3/4" thick B-B EXT-APA plywood, fire retardant treated as specified herein, or "Duraflake FR" fire retardant composite board with hardwood edge, density of forty five (45) lbs./cubic foot, made by Willamette Industries, Inc., Hoover Treated Wood Products, Gulf Coast Lumber or approved equal.
 - 4. Plywood and rough carpentry for telephone and electric closets, provide 3/4" thick C-D EXT-APA plywood, fire retardant treated as specified herein.
- B. Wood Treatment
 - 1. All interior wood material specified herein must be fire retardant treated to comply with the AWWA standard U1 to achieve a flame spread rating of not more than 25 (UL Class "FR-S") when tested in accordance with UL Test 723 or ASTM E 84. The fire retardant chemicals used to treat the lumber must comply with FR-1 of AWWA Standard P49 and be free of halogens, sulfates and ammonium phosphate.
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide Arch Wood Protection Inc.; Dricon or comparable product by one of the following:
 - 1). Koppers

- 2). Hoover
 - 3). Or approved equal.
 - b. After treatment, kiln dry to a moisture content of fifteen (15) percent; if wood is to be painted or finished, kiln dry to a moisture content of twelve (12) percent.
 - c. Provide UL approved identification on treated materials.
2. For exterior blocking, roofing and sheet metal, pressure treat wood with copper azole, Type B (CA-B); ammoniacal copper quat (ACQ) or similar preservative product that contains no arsenic or chromium. Preservative must comply with AWWPA Standard U1, (.25 lbs./cubic foot of chemical in wood).
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide Arch Wood Protection Inc.; Wolmanized Natural Select or comparable product by one of the following:
 - 1). Koppers
 - 2). Hoover
 - 3). Or approved equal.
 - b. After treatment, kiln dry to a maximum moisture content of fifteen (15) percent.
 3. Treated wood which is cut or otherwise damaged must be further treated in accordance with the AWWPA Standard M-4.

2.2 HARDWARE

- A. Rough Hardware for Treated Woods and Exterior Use: Hot-dipped galvanized or Type 304 stainless steel.
- B. Nails: Common steel wire, untreated for interior work as per ASTM F 1667.
- C. Bolts: Standard mild steel, square head machine bolts with square nuts and malleable iron or steel plate washers or carriage bolts with square nuts and cut washers conforming to the following:
 1. Bolts: ASTM A 307, Grade A.
 2. Nuts: ASTM A 563.
 3. Lag Screws and Bolts: ASME B 18.2.1.
- D. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to 6 times the load imposed when installed in unit masonry assemblies and equal to 4 times the load imposed when installed in concrete as determined by testing per ASTM E 488 conducted by a qualified independent testing and inspecting agency.
 1. Material: Carbon-steel components, zinc plated to comply with ASTM B 633, Class Fe/Zn 5.

2. Material: Stainless steel with bolts and nuts complying with ASTM F 593 and ASTM F 594, Alloy Group 1 or 2; use stainless steel for treated woods and exterior use.
- E. Wood Screws: ASME B 18.6.1.
- F. Concrete and Masonry Anchors: Standard expansion-shield self-drilling type concrete anchors where so shown or noted on the drawings, or where approved by the Commissioner.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where carpentry is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.3 INSTALLATION OF FINISH HARDWARE

- A. Hardware must be carefully fitted and securely attached, in accordance with these specifications and the instructions of the various manufacturers.
- B. Unless otherwise noted, mount hardware units at heights established in Section 08 11 13 "Hollow Metal Doors and Frames".
- C. Install each hardware item in compliance with the manufacturer's instructions and recommendations. Wherever cutting and fitting is required to install hardware onto or into surfaces which are later to be painted or finished in another way, install each item completely and then remove and store in a secure place during the finish application. After completion of the finishes, re-install each item. Do not install surface-mounted items until finishes have been completed on the substrate.
- D. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.
- E. Drill and countersink units which are not factory prepared for anchorage fasteners. Space fasteners and anchors in accordance with industry standards.
- F. Cut and fit threshold and floor covers to profile of door frames, with mitered corners and hair-line joints. Join units with concealed welds or concealed mechanical joints. Cut smooth openings for spindles, bolts and similar items, if any.

- G. All keys used must be construction keys which are to be tagged with fiber discs as approved, clearly labeled with identifying inscriptions and then neatly arranged in a temporary cabinet. All construction keys must be returned to the City of New York.
- H. Adjusting and Cleaning
 - 1. Adjust and check each operating item of hardware and each door, to ensure proper operation and function of every unit. Lubricate moving parts with type lubrication recommended by manufacturer (graphite type if no other recommended). Replace units which cannot be adjusted and lubricated to operate freely and smoothly as intended for the application made.
 - 2. Final Adjustment: Wherever hardware installation is made more than one month prior to acceptance or occupancy of a space or area, return to the work during the week prior to acceptance or occupancy, and make a final check and adjustment of all hardware items in such space or area. Clean and re-lubricate operating items as necessary to restore proper function and finish of hardware and doors. Adjust door control devices to compensate for final operation of heating and ventilating equipment.

3.4 INSTALLATION OF DOORS AND FRAMES

A. Preparation

- 1. Remove welded-in shipping spreaders installed at factory.
- 2. Prior to installation and with installation spreaders in place, adjust and securely brace standard steel door frames for squareness, alignment, twist, and plumb to the following tolerances:
 - a. Squareness: Plus or minus 1/16 inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
 - b. Alignment: Plus or minus 1/16 inch, measured at jambs on a horizontal line parallel to plane of wall.
 - c. Twist: Plus or minus 1/16 inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
 - d. Plumbness: Plus or minus 1/16 inch, measured at jambs on a perpendicular line from head to floor.
- 3. Drill and tap doors and frames to receive non-templated mortised and surface-mounted door hardware.

B. Installation

- 1. General: Provide doors and frames of sizes, thicknesses, and designs indicated. Install steel doors and frames plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

2. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces, leaving surfaces smooth and undamaged.
 - a. Install frames in accordance with ANSI 250.11-20001, Recommended Erection Instructions for Steel Frames, unless more stringent requirements are specified herein.
 - b. At fire-protection-rated openings, install frames according to NFPA 80.
 - c. Where frames are fabricated in sections due to shipping or handling limitations, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces.
 - d. Install frames with removable glazing stops located on secure side of opening.
 - e. Frames set in masonry walls must have door silencers installed in frames before grouting.
 - f. Remove temporary braces necessary for installation only after frames have been properly set and secured.
 - g. Check plumb, squareness, and twist of frames as walls are constructed. Shim as necessary to comply with installation tolerances.
3. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor and secure with post-installed expansion anchors.
 - a. Floor anchors may be set with powder-actuated fasteners instead of post-installed expansion anchors if so indicated and approved on Shop Drawings.
4. Metal-Stud Partitions: Solidly pack mineral-fiber insulation behind frames conforming to the requirements of Section 072100, "Thermal Insulation."
5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar; refer to Section 042000 "Unit Masonry" for installation of frames in masonry walls.
6. In-Place Concrete or Masonry Construction: Secure frames in place with post-installed expansion anchors. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
7. In-Place Gypsum Board Partitions: Secure frames in place with post-installed expansion anchors through floor anchors at each jamb. Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.
8. Ceiling Struts: Extend struts vertically from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry or to other structural support at each jamb. Bend top of struts to provide flush contact for securing to supporting construction above. Provide adjustable wedged or bolted anchorage to frame jamb members.

9. Installation Tolerances: Adjust steel door frames for squareness, alignment, twist, and plumb to the tolerance given in HMMA 841 of ANSI/NAAMM, current edition.
 10. Steel Doors: Fit hollow metal doors accurately in frames to the tolerances given in HMMA 841 of ANSI/NAAMM, current edition.
 - a. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
 11. Glazing: Comply with installation requirements in Section 08 81 00 "Glass Glazing" and with standard steel door and frame manufacturer's written instructions.
 - a. Secure stops with countersunk flat- or oval-head machine screws spaced uniformly not more than 9 inches o.c., and not more than 2 inches o.c. from each corner.
- C. Adjustments: Check and readjust operating finish hardware items just prior to final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including doors or frames which are warped, bowed or otherwise unacceptable.
- 3.5 BLOCKING AND MISCELLANEOUS WOOD
- A. General
1. Erect rough carpentry true to line, levels and dimensions required; squared, aligned, plumbed, and securely fastened in place.
 2. Shim where required to true up furring, blocking and the like. Use wood or metal shims only.
 3. Do all cutting, fitting, drilling and tapping of other work as required to secure work in place and to perform the work included herein. Do all the cutting and fitting of carpentry work, for the work of other trades as required.
- B. Blocking and Miscellaneous Wood
1. Furnish and install all wood grounds, furring, blocking, curbs, bucks, nailers, etc., that may be necessary and required in connection with the carpentry and with the work described for any other trades and including required carpentry for electrical fixtures. All blocking and nailers must be continuous wherever required, whether or not so indicated.
 2. Provide blocking as required for the proper installation of the finished work and for items in mechanical sections as required. Blocking, edgings, stops, nailing strips, etc., must be continuous, unless distinctly noted otherwise. Provide blocking as required to install all equipment. Provide blocking and nailers where shown or required to fasten interior sheet metal work.

3. Fastening for wood grounds, furring and blocking must be of metal and of type and spacing as best suited to conditions. Hardened steel nails, expansion screws, toggle bolts, self-clinching nails, metal plugs, inserts or similar fastenings must be used, of suitable type and size to draw the members into place and securely hold same.

C. Rough Lumber for Roofing and Sheet Metal

1. Furnish and install all wood nailing strips and wood blocking required in connection with respective types of roofing, fans, flashings, and sheet metal work, using preservative treated wood as herein before specified.
2. Wood blocking must be of sizes and shapes as indicated on the drawings and/or designed for the reception of curb flashings for roof ventilators and similar items.
3. All nailing strips and blocking must be carried out in accordance with the printed installation instructions, and/or recommendations of the accepted manufacturer of the roofing materials, and in coordination and cooperation with the sheet metal work trades.
4. Firmly secure all blocking and nailing strips in place using counter bored bolt and nut fastenings, or secure by any other proposed flush surfaced fastenings.
5. Furnish wood nailing strips or blocking required to be embedded in concrete work in time due for placing, prior to start of concrete operations. Locate and space nailing strips or blocking in coordination with the concrete trades, as required for respective installations.

3.6 TELEPHONE AND ELECTRIC EQUIPMENT MOUNTING BOARDS

- A. Furnish and install 3/4" thick plywood panels to the walls of the telephone and electric equipment rooms in accordance with the requirements of the local utility company.
- B. Secure to wall using proper devices for substrates encountered, spaced twelve (12) inches o.c., maximum around the edges, 1-1/2" from corners, and in three (3) rows of three (3) each in the field. Recess fastening devices flush with the plywood surface. Adjacent panels must be butted with 1/16" space between without lapping.

3.7 ROUGH HARDWARE

- A. Securely fasten rough carpentry together. Nail, spike, lag screw or bolt as required by conditions encountered in the field and the Contract Documents.
- B. Provide rough or framing hardware, such as nails, screws, bolts, anchors, hangers, clips, inserts, miscellaneous fastenings, and similar items of the best quality and of the proper size and kind to adequately secure the work together and in place, in a rigid and substantial manner.

- C. Secure rough carpentry to masonry with countersunk bolts in expansion sleeves or other acceptable manner, with fastenings not more than sixteen (16) inches apart. Secure woodwork to hollow masonry with toggle bolts spaced not more than sixteen (16) inches apart.
- D. Countersink bolts in nailers and other rough woodwork and include washers and nuts. Cut bolts off flush with surfaces and peen as may be required to receive finished work.
- E. For securing wood nailers to concrete, provide malleable iron threaded inserts with 3/8" diameter bolts of length to allow for countersinking. Locate at end of each nailer and at intervals not exceeding thirty (30) inches o.c.
- F. Furnish to the mason for building into the work, or attaching the work which is to be built in, anchors, bolts, wall plates bolted to masonry, corrugated wall plugs, nailing blocks, etc., which are required for the proper fastening and installation for the work or other items as called for in this Section.
- G. Give detailed instructions with sketches of necessary requirements to the masonry trade showing the location and other details of such nailing devices.

3.8 CLEANING UP

- A. General: Keep the premises in a neat, safe and orderly condition at all times during execution of this portion of the work, free from accumulation of sawdust, cut-ends and debris.
- B. Sweeping
 - 1. At the end of each working day, or more often if necessary, thoroughly sweep all surfaces where refuse from this portion of the work has settled.
 - 2. Remove the refuse to the area of the job site set aside for its storage.
 - 3. Upon completion of this portion of the work, thoroughly broom clean all surfaces.

END OF SECTION 06 20 00

SECTION 06 61 16

SOLID SURFACING FABRICATIONS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Millwork counters.
 - 2. Window sills.
 - 3. Shower wall panels.
- B. Related Sections
 - 1. Section 06 20 00 "Finish Carpentry"

1.3 REFERENCES

- A. ASTM D 256 - Standard Test Method for Determining the Pendulum Impact Resistance of Notched Specimens of Plastics.
- B. ASTM D 570 - Standard Test Method for Water Absorption.
- C. ASTM D 638 - Standard Test Method for Tensile Properties.
- D. ASTM D 696 - Standard Test Method for Coefficient of Linear Thermal Expansion of Plastics Between -30 degrees C. And 30 degrees C.
- E. ASTM D 785 - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials.
- F. ASTM D 790 - Standard Test Methods for Flexural Properties of Un-reinforced and Reinforced Plastics and Electrical Insulating Materials.
- G. ASTM D 785 - Standard Test Method for Rockwell Hardness of Plastics and Electrical Insulating Materials.
- H. ASTM G 22 - Standard Practice for Determining Resistance of Plastics to Bacteria.
- I. NEMA - National Electrical Manufacturers Association.

J. NSF - National Sanitation Foundation.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Shop Drawings: Indicate dimensions, component sizes, fabrication details, attachment provisions and coordination requirements with adjacent work.
- C. Samples: Submit three (3) minimum 12" x 12" samples. Indicate full range of color and pattern variation. Samples must have outside corner/nosing/edging as shown on drawings and fully finished as if it were the final end-product. Approved samples will be retained as a standard for work.
- D. Product Data: Indicate product description, fabrication information, and compliance with specified performance requirements.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Applicable Standards: Standards of the following, as referenced herein:
 - 1. American National Standards Institute (ANSI).
 - 2. American Society for Testing and Materials (ASTM).
- C. Allowable Tolerances:
 - 1. Variation in Component Size: + 1/8".
 - 2. Location of Openings: + 1/8" from indicated location.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver no components to project site until areas are ready for installation. Store indoors.
- B. Handle materials to prevent damage to finished surfaces. Provide protective coverings to prevent physical damage or staining following installation for duration of project.

1.7 WARRANTY

- A. Warranty: The manufacturer shall warrant to the City of New York that the manufacturer will, at own option, restore or replace without charge, such product if it fails due to a manufacturing defect during the first 10 years after substantial completion. This includes all labor charges needed to restore or replace the product covered hereunder.

PART 2 PRODUCTS

2.1 SOLID SURFACING MATERIAL COUNTERS AND SILLS

- A. Provide 1/2" thick solid surfacing material.
B. Material: Cast, filled, acrylic; not coated, laminated or of composite construction, meeting ANSI Z124-1980, Type Six, and ISS FA-2.01 "Classification and Standards Publication of Solid Surfacing Material" as published by the International Solid Surface Fabricators Association (ISSFA).
1. Basis-of-Design Product: Subject to compliance with requirements, provide E.I. duPont de Nemours and Company; Corian "Mochera White" or comparable product by one of the following:
a. Porcelanosa.
b. Wilsonart.
c. Or approved equal.
C. Counters must be adhesively joined with no exposed seams, having edge details shown on drawings.
D. Material must conform to the published performance characteristics of ISSFA-2-01.
E. Performance Standards

Table with 3 columns: PROPERTY, REQUIREMENT, TEST PROCEDURE. Rows include Tensile Strength, Tensile Modulus, Elongation, Hardness, Gloss (60 degree), Color Stability, Wear and Clean, Flammability, Flame Spread, Smoke Developed Class, Water Absorption Weight (% Max.), Izod Impact, Impact Resistance Sheets, Boiling Water Surface.

2.2 ACCESSORY PRODUCTS

- A. Joint Adhesive: Manufacturer's standard two-part adhesive kit to create inconspicuous, non-porous joints.
- B. Adhesive: Manufacturer's standard neoprene-based adhesive meeting ANSI A146.1-1967 and UL listed.
- C. Sealant: Manufacturer's standard mildew-resistant, FDA/UL recognized silicone sealant in colors matching components.

2.3 FABRICATION

- A. Factory fabricate components exactly to sizes and shapes indicated, in accordance with approved shop drawings.
- B. Form joints between components using manufacturer's standard joint adhesive; without conspicuous joints. No joints or seams will be permitted other than those shown on the approved shop drawings, unless specifically approved by the Commissioner.
- C. Provide factory cutouts for plumbing fittings and accessories as indicated on the drawings.
- D. Cut and finish component edges with clean, sharp returns. Route radii and contours to template.
- E. Provide all custom sizes, shapes, curves, configurations, reveals, and edgings as called for and shown on the drawings in the dimension and thicknesses noted.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install components plumb and level, scribed to adjacent finishes, in accordance with approved shop drawings and product installation data.
- B. Form field joints using manufacturer's recommended adhesive, with joints inconspicuous in finished work. Keep components and hands clean when making joints.

- C. All surfaces, other than those surfaces that are the mounting/gluing surfaces, must be fully polished to match the finished face of all components. Unfinished surfaces will be rejected.
- D. Final finished surfaces must be fully and evenly polished with manufacturer's recommended finishing products. Unfinished surfaces will be rejected.
- E. Keep components and hands clean during installation. Remove adhesives, sealants and other stains. Keep clean until Date of Substantial Completion. Replace stained components.
- F. Protect surfaces from damage until Date of Substantial Completion. Restore work or replace damaged work that cannot be restored to Commissioner's satisfaction.

SECTION 07 13 00

FOUNDATION WATERPROOFING

PART 1 –GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes the following:

1. Installation of foundation waterproofing.
2. Handling and protection of foundation waterproofing.
3. Preparation of foundation waterproofing substrate.
4. Material requirements of foundation waterproofing.

- B. Related Sections

1. Section 31 00 00 – Earthwork for Preparation of foundation waterproofing substrate
2. Section 03 30 00 – Cast-in-Place Concrete for Material requirements of foundation waterproofing.

1.3 GENERAL REQUIREMENTS

- A. Work of this section, as shown or specified, must be in accordance with the requirements of the Contract Documents. Contractor must examine all contract drawings to determine sequence of operations, and relation to work of other trades. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.
- B. Provide waterproofing in accordance with the requirements of the Contract Documents. Work of this section includes, but is not necessarily limited to, the following:
1. Below-grade foundation waterproofing of horizontal (floor slab, footings, pits) and vertical (foundation walls and pit walls) surfaces.
 2. Installation accessories including sealers, flashings, fasteners, tapes, reglets, liquid membranes, protection board or drainage mat, and similar accessories.

3. Installation of working surface for horizontal and vertical surfaces.
4. Installation of vertical foundation wall drainage panels.

1.4 PERFORMANCE REQUIREMENTS

- A. Provide waterproofing that prevents the passage of water under hydrostatic pressure and/or water vapor and complies with requirements as demonstrated by testing performed by an independent testing agency of manufacturer's current sheet membrane.

1.5 REFERENCES

- A. Latest editions of the American Society for Testing and Materials (ASTM) Standards:
 1. ASTM C836 – Standard Specification for High Solids Content, Cold Liquid-Applied Elastomeric Waterproofing Membrane for Use with Separate Wearing Course.
 2. ASTM D412 – Standard Test Methods for Vulcanized Rubber and Thermoplastic Rubbers and Thermoplastic Elastomers-Tension.
 3. ASTM D570 – Standard Test Method for Water Absorption of Plastics.
 4. ASTM D903 – Standard Test Method for Peel or Stripping Strength of Adhesive Bonds.
 5. ASTM D1876 – Standard Test Method for Peel Resistance of Adhesives (T-Peel Test).
 6. ASTM D3767 – Standard Practice for Rubber-Measurement of Dimensions.
 7. ASTM D5385 – Standard Test Method for Hydrostatic Pressure Resistance of Waterproofing Membranes.
 8. ASTM E 96 – Water Vapor Transmission of Materials.
 9. ASTM E154 – Water Vapor Retarders Used in Contact with Earth Under Concrete Slabs, on Walls, or as Ground Cover.
- B. Final Geotechnical Engineering Study by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C., dated 17 June 2019.

1.6 RELATED WORK

- A. Section 31 00 00 – Earthwork
- B. Section 03 30 00 – Cast-in-Place Concrete

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit the following information for review by the Commissioner:
 - 1. Manufacturer’s product data, specifications, installation instructions, product samples.
 - 2. Laboratory test results demonstrating that the properties of the product meet or exceed the required values in Part 2.2 of this Section.
 - 3. Written certification that the Installer is certified by the manufacturer and has been actively installing the submitted membrane product (or similar product) for at least five years; and the names, addresses and contact names for three previous waterproofing projects completed by the installer (both supervisor and lead technician).
 - 4. Project-specific shop drawings containing:
 - a. Penetrations, curbs, drains, and projections.
 - b. Flashing details, including inside and outside corner reinforcement and terminations.
 - c. Typical installation details, showing details at intersection of horizontal and vertical surfaces and at penetrations in membrane system.
 - d. Crack and joint treatments, including expansion joints.
 - e. Interface with contiguous materials.
- C. Prior to commencing work, submit the following:
 - 1. Contractor’s Review: Before commencing work submit written statement signed by the Contractor and the Installer stating that the Contract Documents have been reviewed with a qualified representative of the Manufacturer of the waterproofing system, and that they are in agreement that the selected materials are proper, compatible with contiguous materials and adequate for the application shown. Indicate by transmittal form that a copy of the statement has been sent to the Manufacturer.
 - 2. Substrate Acceptability: Submit a certified statement issued by the Manufacturer of the waterproofing materials, and countersigned by the Installer, attesting that all areas and surfaces designated to receive waterproofing have been inspected and found satisfactory for the reception of the Work covered under this Section; and are not in conflict with the “Warranty” requirements. Installation of materials will be construed as acceptance of surfaces.
- D. Upon project closeout, submit the following:
 - 1. Statement of Supervision: Upon completion of Work submit a written statement signed by the Manufacturer stating that the field supervision by the Manufacturer’s representative

was sufficient to ensure proper application of the materials, that the Work was installed in accordance with the Contract Documents and that the installation is acceptable to the Manufacturer.

2. Warranty: Submit Manufacturer’s and Installer’s warranties upon acceptance of completed work, as described herein.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Installer Qualifications: An entity meeting the requirements of DDC General Conditions Section 01 40 00 1.7/C/1 and that employs installers and supervisors who are trained and approved by the manufacturer.
- C. Single-Source Responsibility: Obtain waterproofing materials from a single manufacturer regularly engaged in manufacturing waterproofing.
- D. Pre-installation Conference: Conduct conference at project site to comply with requirements of DDC General Conditions.
 1. Before installing waterproofing, meet with Commissioner, independent testing agency, waterproofing manufacturer, waterproofing subcontractor, and other concerned entities.
 2. Contractor must prepare job site mock-ups to demonstrate splices, corners, transitions, and establish quality control standards during conference.
 3. Review requirements for waterproofing, including surface preparation specified under other Sections waterproofing manufacturer’s requirements, substrate condition and pretreatment, minimum curing period, forecasted weather conditions, special details and sheet flashings, installation procedures, inspection and testing procedures, and protection and corrections.
 4. Notify participants at least seven days before pre-installation conference.
- E. Manufacturer’s Representative/Contractor’s Certification:
 1. Representative of the waterproofing material manufacturer is required to provide field instructions and supervision for the installation of the waterproofing systems at the start of the work of this Section.
 2. The manufacturer’s representative is required to make sure that the workmen for waterproofing systems on the site of the Project are fully instructed in the handling and application of all the materials, and must see that all the materials are correctly installed.

3. Upon completion of the Installation, submit to the Commissioner written certification that the representative of the manufacturer of the waterproofing material has supervised the work of this Section and that all materials were correctly installed.

1.9 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to Project site in original packaging with seals unbroken, labeled with manufacturer's name, product, date of manufacture, and directions for storage.
- B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer. Protect stored materials from direct sunlight.
- C. Liquid Materials, such as adhesives, thinners and primers, must be stored in areas away from sparks, open flames and excessive heat and cold.

1.10 PROJECT CONDITIONS

- A. Maintain adequate ventilation during preparation and application of waterproofing materials.
- B. Environmental Conditions: Apply waterproofing within range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.

1.11 WARRANTY

- A. Warranty: Manufacturer agrees to furnish replacement waterproofing material for waterproofing that does not comply with requirements or that fails to remain watertight within specified warranty period.
 1. Warranty Period: 2 years from date of Substantial Completion.
 2. Manufacturer to perform periodic site visit inspections to verify installation in accordance with Manufacturer's recommendations and requirements.

1.12 PROTECTION

- A. Against Loads: Protect work of this Section against concentrated loads and any other loads or equipment that would damage the materials or work.
- B. Against Traffic: Do not permit traffic on horizontally installed work of this Section, except for workmen doing the work, during the installation, and after the installation until membrane systems are covered with protective boards or with the specified finishing materials.

- C. Against Damage: Protect vertically installed work of this section from damage by reinforcing and concrete placement.
 - 1. Take and maintain necessary preventative measures to protect work of this Section from damage until Project is accepted.
 - 2. Rejection of Damaged Work
 - a. Damaged materials or work will be rejected.
 - b. Rejected materials or work must be immediately removed and replaced with new materials.

PART 2 PRODUCTS

2.1 MEMBRANE MANUFACTURERS

- A. Provide below grade foundation waterproofing system of vertical foundation walls, horizontal slabs, pits, and footings subject to compliance with the requirements herein.
 - 1. Horizontal Applications, horizontal surfaces below slabs, and Sidewalks: “Preprufe 300R” from GCP Applied Technologies or equivalent from Carlisle Coatings & Waterproofing or equivalent from Henry or approved equal.
 - 2. Vertical Applications, “Negative (Blind) Side” Conditions: “Preprufe 160R” from GCP Applied Technologies or equivalent from Carlisle Coatings & Waterproofing or equivalent from Henry or approved equal.
 - 3. Vertical Applications, “Positive Side” Conditions: “Bituthene 4000” from GCP Applied Technologies or equivalent from Carlisle Coatings & Waterproofing or equivalent from Henry or approved equal.
 - 4. Waterproofing Protection: 1/4-inch thick semi-rigid protection board, Bituthene Asphaltic Hardboard from GCP Applied Technologies or equivalent from Carlisle Coatings & Waterproofing or equivalent from Henry or approved equal.
 - 5. Waterstop Applications: Adcor ES hydrophilic waterstop from GCP Applied Technologies or equivalent from Carlisle Coatings & Waterproofing or equivalent from Henry or approved equal.

2.2 MEMBRANE MATERIAL PHYSICAL PROPERTIES

- A. Provide “positive side” waterproofing complying with the following:

- 1. Tensile Strength, Film: 4,000 psi minimum; ASTMD412

2. Low-Temperature Flexibility: Unaffected at -10°F; MOAT 31:6D.
 3. Peel Adhesion to Concrete: 5 lbs/in; MOAT 27:5.1.3.
 4. Lap Adhesion: 2.5 lbs/in minimum; ASTM D1876, modified.
 5. Hydrostatic-Head Resistance: 231 feet; ASTM D5385, modified.
- B. Provide “negative side” waterproofing complying with the following:
1. Compressive Strength: 3,000 psi minimum; ASTM C109 modified
 2. Bond/Adhesion: 220 psi minimum; ASTM C321
 3. Hydrostatic-Head Resistance: 234 ft; ASTM D5385 Modified

2.3 PREFABRICATED DRAINAGE PANELS

- A. Prefabricated composite panels manufactured with geotextile facing laminated to molded plastic drainage core with ½-inch minimum sheet thickness and minimum flow rate of 10 gpm/min/foot.

2.4 AUXILIARY MATERIALS

- A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with waterproofing sheet membrane.
- B. Furnish liquid-type auxiliary materials that meet the project’s VOC limits.
- C. Primer: Bituthene Liquid Primer recommended by manufacturer of sheet waterproofing material for substrate.
- D. Sheet Flashing: Self-adhering, rubberized asphalt composite sheet of same material, construction and thickness as waterproofing sheet membrane.
- E. Liquid Membrane: Elastomeric, 2 component, liquid, cold fluid applied, trowel grade or low viscosity, as recommended by waterproofing manufacturer for application.
- F. Patching Membrane: Low-viscosity, 2 component, asphalt modified coating.
- G. Mastic, Adhesives, and Tape: Liquid mastic and adhesives, and adhesive tapes recommended and supplied by waterproofing manufacturer.
- H. Penetration Seal: Self-adhering reinforced membrane, 2 ½ inches wide, with a tack free protective adhesive coating on one side and release film on self-adhering side.
- I. Metal Termination Bars: Aluminum bars, approximately 1 inch by 1/8 inch thick, predrilled at 22 mm centers.

- J. Waterproofing Protection: 1/4" thick semi-rigid protection board.
- K. Protection Board Adhesive: Protection board adhesive recommended by the manufacturer to secure protection board to waterproofing membrane.
- L. Joint Preprufe Tape: Pressure-sensitive, 4 inch wide, with a release film on adhesive side.
- M. Control Joint Preprufe Tape (Waterproofing Tape): Pressure-sensitive, 8 inch wide, with a release film on adhesive side.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine substrates, areas, and conditions under which waterproofing systems will be applied, with installer present, for compliance with requirements. Do not proceed with installation until unsatisfactory conditions have been corrected.
- B. Do not proceed with installation until after minimum concrete curing period recommended by waterproofing manufacturer.
- C. Verify substrate is visibly dry and free of moisture. Test for capillary moisture for plastic sheet method according to ASTM D4263.
- D. Notify Commissioner in writing of anticipated problems using waterproofing over substrate.
- E. Examine the areas and conditions where drainage system is to be installed and notify the Commissioner of conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected to permit proper installation of the work.

3.3 SUBGRADE SURFACE PREPARATION

- A. Clean, prepare, and treat working surface according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.
- B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage affecting other construction.
- C. Remove grease, oil, form release agents, and other penetrating contaminants.
- D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids larger than 1/4-inch diameter.

- E. Prepare, fill, prime, and treat joints and cracks in substrate. Remove dust and dirt from joints and cracks according to ASTM D4258.
- F. Install membrane strip and center over construction and control joints and cracks exceeding a width of 1/16 inch.
- G. Inside Corners: Prepare, prime, and treat inside corners according to waterproofing manufacturer's written instructions.
- H. Install membrane strip centered over vertical inside corners. Install 19 mm fillets of liquid membrane on horizontal inside corners. All pile footing-to-wall intersections extend liquid membrane each direction from corner or install membrane strip centered over corner.
- I. Outside Corners: Prepare and treat outside corners according to waterproofing manufacturer's written instructions.
 - 1. Install strip of membrane 12 inches wide, centered over corner.
- J. Prepare, treat, and seal horizontal and vertical surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to waterproofing manufacturer's written instructions and approved shop drawings.
 - 1. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge and cover with sheet membrane strips.

3.4 SUBGRADE PREPARATION

- A. Install a minimum 3-inch thick concrete working "mud slab" beneath all building slabs, pits and foundations receiving waterproofing.
- B. Prepare surface of concrete working slab in accordance with paragraph 3.2 above.
- C. Place membrane waterproofing directly on top of concrete working slab, in accordance with paragraph 3.2 above.

3.5 PREPARATION FOR VERTICAL BLIND-SIDE APPLICATIONS

- A. Provide a continuous smooth rigid vertical facing to receive the waterproofing material per manufacturer's recommendations.
 - 1. The material for the elevator pits may consist of plywood or rigid insulation.
- B. Vertical facing to be sufficiently braced and supported so as not to displace during placement of concrete.
- C. Support of Excavation Systems must be treated with a rigid facing.

- D. Timber lagging must be close-butted to provide support and to be less than 0.5 inch out of plumb.

3.6 INSTALLATION OF WATERPROOFING FOR ACCESSIBLE WALLS

- A. General: Conform to recommendations and published specifications of the manufacturer including environmental requirements.
- B. Wall Applications: Refer to manufacturer's literature for complete installation instructions not limited to the following:
 - 1. General: The membrane, when in place, must withstand a minimum static ground water pressure of 150 feet.
 - 2. Priming: Application of primer must be limited to what can be covered with Bituthene Waterproofing Membrane in a given work day. Refer to manufacturers' recommendations for choice of primer and application procedure.
 - 3. Membrane Installation: Apply Bituthene Waterproofing Membrane vertically in sections of 8' in length or less. On higher walls apply two or more sections with the upper overlapping the lower by at least 2-1/2". Press all membrane in place with heavy hand pressure or rollers during application. Back-nail upper edge of membrane if necessary. Seal and cover fasteners with subsequent sheet.
- C. Sealing Edges: Bituthene Waterproofing Membrane must be applied over the edge of the slab or over the top of the foundation or parapet wall. If the membranes are terminated on the vertical surface, a reglet or counter flashing may be used or the membrane may be terminated directly on the vertical surface by pressing very firmly to the wall. Press edges with a metal or hardwood tool such as a hammer or knife handle. Apply a troweled bead of Bituthene Mastic to all vertical and horizontal terminations. Bituthene Liquid Membrane can be used as an alternative method at the Contractor's option. Refer to Contract Drawings for termination details.
- D. Sealing Seams: All edges and end seams must be overlapped at least 2-1/2". Apply succeeding sheets with a minimum 2-1/2" overlap and stagger end laps. Roll or press the entire membrane firmly and completely as soon as possible. Patch misaligned or inadequately lapped seams with Bituthene Membrane. Slit any fish mouths, overlap the flaps, and correct with a patch of Bituthene and press or roll in place. The edges of the patch must be sealed with a troweling of mastic. Laps within 12" of all corners must be sealed with a troweling of mastic.
- E. Corner Forming: Outside corners must be free of sharp edges. Inside corners must receive a fillet formed with Liquid Membrane. Do not use fiber or wood cants. One of two methods may be used for treating corners at the Contractor's option:
 - 1. Apply Bituthene Liquid Membrane 6" in each direction from the corner and form a fillet with a minimum 3/4" face.

2. Install an 11" minimum strip of Bituthene Membrane centered on the corner. Install Bituthene Membrane over the treated inside and outside corners.
- F. Over waterproofing, apply protection, and/or drainage composite board per contract documents by adhering board to cured membrane using tape or adhesive per manufacturer's recommendations.
- G. Seal penetrations through membrane to provide watertight seal with penetration seal patches or wrapping and liquid membrane fillet as recommended by the waterproofing system manufacturer.
- 3.7 **INSTALLATION OF WATERPROOFING FOR BLINDSIDE WALLS AND UNDERSLAB WATERPROOFING**
- A. General: Install waterproofing membrane sheet according to waterproofing manufacturer's written instructions.
- B. Wall Applications: Refer to manufacturer's literature for complete installation instructions not limited to the following:
1. Apply membrane in accordance with the manufacturer's recommendations to the soil retention system or adjacent foundation.
 2. Apply succeeding sheets by overlapping the previous sheet 3 inches along the uncoated edge of the membrane.
 3. Overlap the ends of the membrane 3 inches. Apply waterproofing tape centered over the end lap and roll firmly. Remove release liner.
 4. Concrete must be poured within 30 days of membrane application.
 5. Protect membrane until concrete pour.
 6. If membrane ties into a vertical membrane, leave an additional 12-inch flap of waterproofing membrane to tie into Bituthene membrane. Protect membrane from damage and direct sunlight.
- C. Underslab Applications: Refer to manufacturer's literature for complete installation instructions not limited to the following:
1. Apply membrane to the approved substrate 3-inch-minimum mud slab in accordance with the manufacturer's recommendations and approved shop drawings. Remove the release liner and fasten membrane to substrate firmly.
 2. Apply a Bituthene liquid membrane termination bead at the edge of the sheet membrane.
 3. Secure the sheet membrane and liquid membrane by applying waterproofing tape centered over the end lap and roll firmly. Remove the release liner.

4. Seal all penetrations and perimeter of installation.
5. Concrete must be poured within 30 days of membrane application.
6. Protect membrane until concrete pour.

3.8 SEAM REINFORCEMENT FOR PREPRUFE SHEETS ONLY

- A. Provide a 6-inch strip of waterproofing tape centered behind all laps.
- B. At locations where a salvage edge is not present and at end laps, lap sheets 6 inches, apply a 1/8-inch thick by 6-inch wide application of liquid membrane between sheets, to provide a 6-inch wide seal.
- C. Integration of old onto new pre-applied sheet membrane.
 1. Integration of Sheet Membrane onto Sheet Membrane that has been installed in excess of 30 days prior.
 - a. Lap sheets 12 inches and apply a 1/8-inch thick by 12-inch wide application of fluid membrane between sheets, to provide a 12-inch wide seal at this location.
 - b. Install waterproofing tape centered at edge of lap and roll firmly into place with an approved roller.
 - c. Install additional waterproofing tape to cover white film that has been installed over 30 days prior.
 2. Correction of pre-applied sheet membrane
 - a. Scratch on white coating exposing underlying black surfacing of Sheet Membrane: Install Waterproofing Tape at areas where the white coating of the membrane is damaged, including boot scuff marks and abrasions by rebar.
 - b. Damage or Puncture of Sheet Membrane: Install Patch of short Membrane set in Liquid Membrane. Patch must extend 3 inches in every direction around extent of damaged area. Install Waterproofing Tape centered over the edge of the patch. If the damaged area does not have 5 inches of sound material around it, inject Liquid Membrane into puncture until Liquid Membrane backs out, and proceed with patch as space allows.

3.9 WATER STOP INSTALLATION

- A. Provide hydrophilic waterstop at the locations of cold joints, namely interface of foundation walls and slabs, slabs and elevator pits.

3.10 PROTECTION AND CLEANING

- A. Pre-inspect membrane just prior to pouring slabs or installing second side of foundation wall forms.
- B. Protect waterproofing from damage and wear during application and remainder of construction period, especially during installation of steel reinforcement, according to manufacturer's written instructions.
- C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.
- D. Horizontal Applications: Protect top surface of membrane with protection board from punctures, tears, or burns.
- E. Vertical Applications: Protect membrane waterproofing from damage due to uneven substrate. This includes placement of a rigid barrier such as a plywood or rigid insulation between the membrane waterproofing and the soil backfill material.

END OF SECTION 07 13 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 07 21 00

THERMAL INSULATION

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Foundation insulation.
2. Rigid insulation.
3. Continuous fiberglass batt insulation.
4. Mineral wool insulation.
5. Attachment devices.

- B. Related Sections

1. Section 07 52 00 "Modified Bituminous Membrane Roofing" for roof insulation.
2. Section 07 84 13 "Penetration Firestopping"
3. Section 09 29 00 "Gypsum Board" for acoustical insulation.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit product data for each type of product indicated, including recycled content.
- C. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, for insulation products.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Surface-Burning Characteristics: As determined by testing identical products according to ASTM E 84 by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.
- C. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be to be evaluated as part of this specific assembly test. The basis of design product listed below is a component of the design test assembly selected by the Commissioner.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Protect insulation materials from physical damage and from deterioration due to moisture, soiling, and other sources. Store inside and in a dry location. Comply with manufacturer's written instructions for handling, storing, and protecting during installation.
- B. Protect foam-plastic board insulation as follows:
 - 1. Do not expose to sunlight except to necessary extent for period of installation and concealment.
 - 2. Protect against ignition at all times. Do not deliver foam-plastic board materials to Project site before installation time.
 - 3. Quickly complete installation and concealment of foam-plastic board insulation in each area of construction.

PART 2 PRODUCTS

2.1 FOUNDATION WALL AND RIGID INSULATION

- A. Provide extruded polystyrene board insulation equal to "Styrofoam" manufactured by Dow Chemical Co., or approved equal made by Owens Corning or PACTIV Building Products or approved equal, conforming to ASTM C 578, Type IV, with a maximum flame spread and smoke developed indices of 75 and 450 respectively.
- B. Insulation must have an aged R value of not less than 5/inch; 2" thick unless otherwise noted on the drawings.

2.2 FIBERGLASS BATT INSULATION

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. CertainTeed Corporation.

2. Johns Manville.
 3. Knauf Insulation.
 4. Owens Corning.
 5. Or approved equal
- B. Reinforced-Foil-Faced, Glass-Fiber Blanket Insulation: ASTM C 665, Type III (reflective faced), Class A (faced surface with a flame-spread index of 25 or less); Category 1 (membrane is a vapor barrier), faced with foil scrim, foil-scrim Kraft, or foil-scrim polyethylene.
1. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

2.3 MINERAL-WOOL BOARD INSULATION

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Roxul; Comfortboard 110 or comparable product by one of the following:
1. Johns Manville
 2. Rockwool
 3. Or approved equal
- B. Unfaced, Mineral-Wool Board Insulation: ASTM C 612; with maximum flame-spread and smoke-developed indexes of 15 and zero, respectively, per ASTM E 84; passing ASTM E 136 for combustion characteristics.
1. Nominal density of 11 lb/cu. ft., Type IVB, thermal resistivity of 4.35 deg F x h x sq. ft./Btu x in. at 75 deg F.
 2. Fiber Color: Darkened, where indicated.

2.4 ACCESSORIES

- A. Adhesive for Bonding Insulation: The type recommended by the insulation manufacturer, and complying with fire-resistance requirements.
1. For bonding rigid polystyrene insulation to masonry or concrete, provide adhesive equal to "Foamgrab PS" made by Dacor Products Co. or equal made by ChemRex Inc., Miracle Adhesives or approved equal.
- B. Protection Board: Premolded, semi-rigid asphalt/fiber composition board, 1/4" thick, formed under heat and pressure, standard sizes.

2.5 INSULATION FASTENERS

- A. Adhesively Attached, Spindle-Type Anchors: Plate welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
 - 1. Plate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
 - 2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.
- B. Adhesively Attached, Angle-Shaped, Spindle-Type Anchors: Angle welded to projecting spindle; capable of holding insulation of specified thickness securely in position indicated with self-locking washer in place.
 - 1. Angle: Formed from 0.030-inch-thick, perforated, galvanized carbon-steel sheet with each leg 2 inches square.
 - 2. Spindle: Copper-coated, low-carbon steel; fully annealed; 0.105 inch in diameter; length to suit depth of insulation indicated.
- C. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick galvanized-steel sheet, with beveled edge for increased stiffness, sized as required to hold insulation securely in place, but not less than 1-1/2 inches square or in diameter.
 - 1. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in the following locations:
 - a. Crawl spaces.
 - b. Ceiling plenums.
 - c. Attic spaces.
 - d. Where indicated.
- D. Insulation Standoff: Spacer fabricated from galvanized mild-steel sheet for fitting over spindle of insulation anchor to maintain air space of 2 inches between face of insulation and substrate to which anchor is attached.
- E. Anchor Adhesive: Product with demonstrated capability to bond insulation anchors securely to substrates indicated without damaging insulation, fasteners, and substrates.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where thermal insulation is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.3 INSTALLATION, GENERAL

- A. Clean substrates of substances that are harmful to insulation including removing projections capable of puncturing vapor retarders, or that interfere with insulation attachment.
- B. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.
- C. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.
- D. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.
- E. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.4 INSTALLATION OF BELOW-GRADE INSULATION

- A. On vertical surfaces, set insulation units using manufacturer's recommended adhesive according to manufacturer's written instructions.
 - 1. If not otherwise indicated, extend insulation a minimum of 24 inches below exterior grade line.
- B. On horizontal surfaces, loosely lay insulation units according to manufacturer's written instructions. Stagger end joints and tightly abut insulation units.
 - 1. If not otherwise indicated, extend insulation a minimum of 36 inches in from exterior walls.

3.5 INSTALLATION OF BLANKET INSULATION FOR FRAMED CONSTRUCTION

- A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

- B. Glass-Fiber or Mineral-Wool Blanket Insulation: Install in cavities formed by framing members according to the following requirements:
1. Use insulation widths and lengths that fill the cavities formed by framing members. If more than one length is required to fill the cavities, provide lengths that will produce a snug fit between ends.
 2. Place insulation in cavities formed by framing members to produce a friction fit between edges of insulation and adjoining framing members.
 3. Maintain 3-inch clearance of insulation around recessed lighting fixtures not rated for or protected from contact with insulation.
 4. For metal-framed wall cavities where cavity heights exceed 96 inches, support unfaced blankets mechanically and support faced blankets by taping flanges of insulation to flanges of metal studs.
 5. For wood-framed construction, install blankets according to ASTM C 1320 and as follows:
 - a. With faced blankets having stapling flanges, secure insulation by inset, stapling flanges to sides of framing members.
 - b. With faced blankets having stapling flanges, lap blanket flange over flange of adjacent blanket to maintain continuity of vapor retarder once finish material is installed over it.
 6. Vapor-Retarder-Faced Blankets: Tape joints and ruptures in vapor-retarder facings, and seal each continuous area of insulation to ensure airtight installation.
 - a. Exterior Walls: Set units with facing placed toward interior of construction as indicated on Drawings.

3.6 INSTALLATION OF SEMI-RIGID INSULATION FOR FRAMED CONSTRUCTION

- A. Install wall insulation with edges closely butted, with joints square, straight and in alignment (no staggered), and with vapor barrier facing on warm side of building, and with exposed faces flush and in the same plane without warp or twist. Cut and fit insulation to closely fit intersecting or penetrating surfaces. Seal joints between insulation, between insulation and intersecting or penetrating surfaces and between insulation and perimeter surfaces with 4" wide vaporproof aluminum tape applied on the vapor barrier side. Friction fit insulation between furring channels or studs.

3.7 INSTALLATION OF BOARD INSULATION FOR CONCRETE SUBSTRATES

- A. Install board insulation on concrete substrates by adhesively attached, spindle-type insulation anchors as follows:

1. Fasten insulation anchors to concrete substrates with insulation anchor adhesive according to anchor manufacturer's written instructions. Space anchors according to insulation manufacturer's written instructions for insulation type, thickness, and application indicated.
2. Apply insulation standoffs to each spindle to create cavity width indicated between concrete substrate and insulation.
3. After adhesive has dried, install board insulation by pressing insulation into position over spindles and securing it tightly in place with insulation-retaining washers, taking care not to compress insulation below indicated thickness.
4. Where insulation will not be covered by other building materials, apply capped washers to tips of spindles.

3.8 PROTECTION

- A. Protect installed insulation from damage due to harmful weather exposures, physical abuse, and other causes. Provide temporary coverings or enclosures where insulation is subject to abuse and cannot be concealed and protected by permanent construction immediately after installation.

SECTION 07 27 00

AIR BARRIERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Vapor retarder/air barrier applied over sheathing board and cold formed metal framing.
2. Materials and installation to bridge and seal the following air leakage pathways and gaps:
 - a. Connections of the walls to the roof.
 - b. Connections of the walls to the foundations.
 - c. Seismic and expansion joints.
 - d. Openings and penetrations of window frames, storefront, curtain wall.
 - e. Door frames.
 - f. Piping, conduit, duct and similar penetrations.
 - g. Masonry ties, screws, bolts and similar penetrations.
 - h. All other air leakage pathways in the building envelope.

B. Related Sections

1. Section 05 40 00 "Cold Formed Metal Framing" for exterior non-load bearing wall frame construction, including sheathing.

1.3 PERFORMANCE REQUIREMENTS

- A. Provide air/vapor barrier constructed to perform as a continuous air/vapor barrier, and as a liquid water drainage plane flashed to discharge to the exterior any incidental condensation or water penetration. Membrane must accommodate movements of building materials by providing expansion and control joints as required, with accessory air seal materials at such locations, changes in substrate and perimeter conditions.
- B. Provide an air barrier assembly that has been tested in accordance with the Air Barrier Association of America's (ABAA's) approved testing protocol to provide air leakage results not to exceed:
1. 0.01 cfm/sf @ 1.57 psf

- C. Connections to Adjacent Materials: Provide connections to adjacent materials at the following locations and show same on shop drawings:
1. Foundation and walls, including penetrations, ties and anchors.
 2. Walls, windows, curtain walls, storefronts, louvers or doors.
 3. Different wall assemblies, and fixed openings within those assemblies.
 4. Wall and roof connections.
 5. Floors over unconditioned space.
 6. Walls, floor and roof across construction, control and expansion joints.
 7. Walls, floors and roof to utility, pipe and duct penetrations.
 8. Seismic and expansion joints.
 9. All other leakage pathways in the building envelope.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit shop drawings showing locations and extent of air/vapor barrier and details of all typical conditions, intersections with other envelope systems and materials, membrane counter-flashings, and details showing how gaps in the construction will be bridged, how inside and outside corners are negotiated and how miscellaneous penetrations such as conduits, pipes electric boxes and the like are sealed.
- C. Submit manufacturer's product data sheets for each type of membrane, including manufacturer's printed instructions for evaluating, preparing, and treating substrate, temperature and other limitations of installation conditions, technical data, and tested physical and performance properties.
- D. Submit manufacturer's data showing solids content of fluid applied membranes and coverage rates and wet film thickness upon application in order to achieve minimum dry film thickness required by this specification.
- E. Submit manufacturer's installation instructions.
- F. Submit certification of compatibility by air/vapor barrier manufacturer, listing all materials on the project that it connects to or that come in contact with it, including sealant as specified in Section 054000 for caulking joints between sheathing panels.
- G. Submit samples, 3 by 4 inch minimum size, of each air/vapor barrier material required for Project.
- H. Test results of air permeability testing of primary air barrier material (ASTM E 2178-01)

- I. Test results of assembly in accordance with ASTM E 2357.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Single-Source Responsibility: Obtain air/vapor barrier materials from a single manufacturer regularly engaged in manufacturing the product.
- C. Field-Constructed Mock-Ups: Prior to installation of air/vapor barrier, apply air/vapor barrier as follows to verify details under shop drawing submittals and to demonstrate tie-ins with adjoining construction, and other termination conditions, as well as qualities of materials and execution:
 - 1. Construct typical exterior wall panel, 8 feet long by 8 feet wide and one of sheathed areas, incorporating back-up wall, cladding, window and doorframe and sill, insulation, flashing, building corner condition, and typical penetrations and gaps; illustrating materials interface and seals.
- D. Test mock-up in accordance with ASTM E 783 and ASTM E1105 for air and water infiltration.
- E. Manufacturer must be on-site at least once a week to observe installation and provide written report within 3 days.
- F. Manufacturer must confirm all termination details and compatibility with materials being terminated to.
- G. Vertical and Lateral Fire Propagation Test Characteristics: The exterior wall assembly is required to comply with NFPA 285 "Standard Method of Test for the Evaluation of Flammability Characteristics of Exterior Nonload-bearing Wall Assemblies Containing Combustible Components." The base wall, stud cavity insulation, wall sheathing, air barrier, continuous wall rigid insulation and exterior cladding are components that are required to be evaluated as part of this specific assembly test. The basis of design product listed in Part 2 is a component of the design test assembly selected by the Commissioner.

1.6 DELIVERY, STORAGE, AND HANDLING

- A. Deliver materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product, date of manufacture, and directions for storage.
- B. Store materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by air/vapor barrier manufacturer. Protect stored materials from direct sunlight.
- C. Avoid spillage. Immediately notify Commissioner if spillage occurs and start clean up procedures.
- D. Clean spills and leave area as it was prior to spill.

1.7 WARRANTY

- A. System Warranty: Provide the manufacturer's three (3) year system warranty, including the primary air/vapor barrier and installed accessory sealant and membrane materials which fail to achieve air tight and watertight seal, exhibit loss of adhesion or cohesion, or do not cure.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Liquid Membrane: Vapor Permeable Fluid-Applied Membrane.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; Air-Bloc 31 Vapor Permeable Fluid-Applied Membrane or comparable product by one of the following:
 - a. GCP Applied Technologies.
 - b. Carlisle.
 - c. Sika.
 - d. Or approved equal.
- B. Sheet Transition Membrane
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; Blueskin SA or Blueskin VP 160 or comparable product by one of the following:
 - a. GCP Applied Technologies.
 - b. Carlisle.
 - c. Sika.
 - d. Or approved equal.
- C. Window and Door Opening Flashing
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; Blueskin SA or Metal Clad or comparable product by one of the following:
 - a. GCP Applied Technologies.
 - b. Carlisle.
 - c. Sika.
 - d. Or approved equal.
- D. Liquid Applied Flashing
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; Air-Bloc LF or comparable product by one of the following:
 - a. GCP Applied Technologies.

- b. Carlisle.
 - c. Sika.
 - d. Or approved equal.
- E. Through-Wall Flashing
- 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; Blueskin TWF or comparable product by one of the following:
 - a. GCP Applied Technologies.
 - b. Carlisle.
 - c. Sika.
 - d. Or approved equal.
- F. Primer for Sheet Transition Membrane and Flashing
- 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; Blueskin LVC Adhesive or comparable product by one of the following:
 - a. GCP Applied Technologies.
 - b. Carlisle.
 - c. Sika.
 - d. Or approved equal.
- G. Air Barrier Sealant
- 1. Basis-of-Design Product: Subject to compliance with requirements, provide Henry Company; HE 925 BES Sealant or comparable product by one of the following:
 - a. GCP Applied Technologies.
 - b. Carlisle.
 - c. Sika.
 - d. Or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where the above grade waterproof membrane is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected to permit proper installation of the work.

3.3 SURFACE PREPARATION

- A. All surfaces must be sound, dry, clean and free of oil, grease, dirt, excess mortar or other contaminants.
- B. Cracks in masonry and concrete up to 1/4" wide must be filled with a trowel application of liquid membrane and allowed to cure overnight prior to application of the liquid membrane to the surface, or alternatively, the cracks may be sealed with a strip of transition membrane applied to the substrate. Cracks wider than 1/4" should be sealed with transition membrane adhered to the substrate lapped a minimum of 3" on both sides of the crack.
- C. Surfaces should be tied in with beams, columns, window and door frames, etc. using strips of transition membrane lapped a minimum of 3" on both substrates. Mechanical attachment should be made to all window and door frames, or a properly designed sealant joint provided.

3.4 TRANSITION MEMBRANE

- A. Align and position self-adhering transition membrane, remove protective film and press firmly into place. Ensure minimum 3" overlap at all ends and side laps.
- B. Tie-in to window frames, metal door frames, etc., and at the interface of dissimilar materials as indicated on the Drawings.
- C. Promptly roll all laps and membrane with a counter top roller to effect seal.
- D. Ensure all preparatory work is complete prior to applying liquid membrane.

3.5 THROUGH-WALL FLASHING MEMBRANE

- A. Align and position the leading edge of self-adhering through-wall flashing membrane with the front horizontal edge of the foundation walls or shelf angles, partially remove protective film and roll membrane over surface and up vertically.
- B. Press firmly into place. Ensure minimum 50mm overlap at all end and side laps.
- C. Promptly roll all laps and membrane to effect the seal.
- D. Ensure all preparatory work is complete prior to applying self-adhering through-wall flashing membrane.
- E. Ensure through-wall flashing membrane extends fully to the exterior face of the exterior masonry veneer. Trim off excess as directed by the Commissioner.
- F. Apply through-wall flashing membrane along the base of masonry veneer walls, over windows, doors and all other wall openings. Membrane must form continuous flashing and must extend up a minimum of 4-1/2" up the back-up wall.
- G. When flashing at window openings, wrap the entire window opening with air barrier flashing membrane.

3.6 LIQUID MEMBRANE APPLICATION

- A. Apply liquid membrane to wall substrates in a continuous coat at manufacturer's recommended rate by spray or trowel to provide a minimum wet film thickness of 0.093".
 - 1. Minimum dry film thickness must be 0.078".
- B. Overlap liquid membrane on to transition membrane at connections a minimum of 1".
- C. Trowel liquid membrane around ties and other projections to ensure a complete seal.
- D. Do not leave membrane exposed for any longer than 6 weeks.
- E. Penetrations: Seal all penetrations with termination mastic liquid membrane, sealant, flashing or other procedures in accordance with manufacturer's instructions.

3.7 PROTECTING AND CLEANING

- A. Protect air/vapor barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
- B. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.
- C. Protect air/vapor barrier from exposure to the elements as required by the manufacturer.
- D. Remove any masking materials after installation. Clean any stains on materials that would be exposed in the completed work using procedures as recommended by manufacturer.
 - 1. Schedule work to ensure that the air and vapor barrier system is covered as soon as possible after installation. Protect air and vapor barrier system from damage during subsequent operations. If the air and vapor barrier system cannot be permanently covered within 30 days after installation, apply temporary UV protection such as dark plastic sheet or tarpaulins.

3.8 FIELD TESTING

- A. Contractor must hire testing laboratory to confirm that the system has been tested and passed requirements in accordance ASTM E 783 and ASTM E 1105 for air and water infiltration. Submit test results to Commissioner.

SECTION 07 42 13

METAL WALL PANELS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Custom solid aluminum façade panels with factory-applied finish.
2. Perforated aluminum façade panels with factory-applied finish.
3. Sub-girts, trim, and accessories required for complete installation.
4. Aluminum copings, heads and sills in conjunction with metal wall panel assembly.
5. Sealant in conjunction with metal wall panels work.

- B. Related Sections

1. Section 05 40 00 "Cold Formed Metal Framing"

1.3 PERFORMANCE CRITERIA

- A. Engineering Services: Engineer calculations, signed and sealed by a Professional Engineer licensed in the State of New York, must be submitted to verify load carrying capability of panel system. Panel system must be capable of resisting a minimum positive and negative wind load as specified in structural documents, with a deflection of L/180.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Manufacturer's Data: Submit standard detail drawings and installation instructions for preformed metal siding. Include manufacturer's certification or other data substantiating that the materials and finishes comply with the requirements.
- C. Samples: Submit twelve (12) inch long by full width samples of preformed metal siding, complete with factory applied finish. Samples will be reviewed by Commissioner for pattern, texture and color only. Compliance with other requirements is the exclusive responsibility of the Contractor.

- D. Shop Drawings: Submit shop drawings showing the profiles of preformed metal siding units, and the details of forming, jointing (gaskets, if any), internal supports, anchorages, trim, flashing, and accessories. Show details of weatherproofing at edges, terminations, and penetrations of the metal siding work. Show small scale layout and elevations of entire work.
- E. Engineering Data: Submit engineering and test data and tables showing performance characteristics of the panels for loads, deflections and infiltration of air and water meeting standards specified herein.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: An entity meeting the requirements of DDC General Conditions Section 014000 1.7/C/1.
- C. Manufacturer Qualifications: Manufacturer meeting the requirements in DDC General Conditions Section 014000 1.7/C/5.

1.6 WARRANTY

- A. Exterior panel finish must be warranted against failures of any kind for a period of ten (10) years from date of Substantial Completion.
- B. Wall system must be warranted against failures of any kind for a period of five (5) years from date of Substantial Completion.

1.7 COORDINATION

- A. Contractor must carefully coordinate work with work of other trades that are penetrating through, or connecting to the metal siding. Openings required in siding to accommodate penetrations must be neatly and accurately made in the shop prior to job site delivery.
- B. Provide concealed reinforcing plates, anchors and supports to receive items mounted on siding as required to prevent deflection of siding.
- C. Provide all necessary trim, flashing, sealant as specified herein to ensure watertight integrity of siding where penetrations occur.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. Basis-of-Design Product: Subject to compliance with requirements, provide MetalTech-USA; product listed in Part 2 or comparable product by one of the following:
 - 1. Pohl
 - 2. Protean

3. Or approved equal.
 - B. Provide perforated metal as indicated on drawings.
 - C. Provide solid metal as indicated on drawings.
- 2.2 MATERIALS
- A. Panels: ASTM B209, Type 5005.
 - B. Flat Panels: 6 and 13 inch, .063 inch
 1. 5005 aluminum, 0.063" thickness., clear coat
 2. Concealed fasteners.
 3. Panel width: 18", panel depth: 1".
 4. Bending outside radius: 3/32"
 5. Finish: clear coating: 3-part PVDF Coating, Base of Design: Kynar 500, Valspar, Hylar or approved equal
 6. Basis-of-Design Product: Subject to compliance with requirements, provide MetalTech-USA; Interlocking Reveal Panel or comparable product by one of the following:
 - a. Pohl
 - b. Protean
 - c. Or approved equal.
 - C. Accordion Fold Rainscreen: 0.08 inch
 1. 5005 aluminum, 0.08" thickness,
 2. Concealed fasteners,
 3. Panel width: varies, panel depth: varies.
 4. Perforations as per drawings.
 5. Bending outside radius: 1/8"
 6. Finish: clear coating: 3-part PVDF Coating, Basis-of-Design: Kynar 500, Valspar, Hylar or approved equal
 7. Parapet and Soffit Caps as per drawings and to match the panels in material, thickness and finish.
 8. Basis-of-Design Product: Subject to compliance with requirements, provide MetalTech-USA; Custom Super-Reveal Panel or comparable product by one of the following:

- a. Pohl
 - b. Protean
 - c. Or approved equal.
- D. High-Performance Organic Finish: Three-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat.
1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
- E. Trim Material: Furnish necessary trim in conjunction with the metal wall system, including top, bottom, corner, end wall jamb, sill, and head. Provide material that is the same substrate, finish, and gauge as the exterior panel. Provide preformed panel corners.
- F. Sealant: One part silicone conforming to the requirements of Section 079200, "Joint Sealers."
- G. Rainscreen Ventilation Strips - Basis-of-Design Product: Subject to compliance with requirements, provide Cor-A-Vent Inc.; Coravent SV-5 or comparable product by one of the following:
1. Delta Fassade
 2. InvAir
 3. Or approved equal.
- H. Vapor-Permeable, Non-Bituminous, Air Barrier Sheet
1. Air Permeance: Maximum 0.004 cfm/sq. ft. of surface area at 1.57-lbf/sq. ft. pressure difference; ASTM E 2178.
 2. Water Vapor Permeance: 42 perms; ASTM E 96, Method B.
 3. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.
 4. Color: Black.
 5. Basis-of-Design Product: Subject to compliance with requirements, provide VaproShield LLC; RevealShield IT or comparable product by one of the following:
 - a. Henry Company
 - b. GCP Applied Technologies, Inc.
 - c. Or approved equal.

2.3 WALL SUPPORT FRAMING SYSTEM

A. Thermally Broken Rain Screen Attachment System

1. Attachment clip: 4" depth clip.
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide Spring Valley Corp; i-Clad Thermal Insulator "i-Clad H-100" or comparable product by one of the following:
 - 1). Cascadia
 - 2). NVELOPE
 - 3). Or approved equal.
2. Horizontal Z-girts: Min. 18-gauge thickness cold-formed steel.
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide Spring Valley Corp; i-Clad Horizontal Rail or comparable product by one of the following:
 - 1). Cascadia
 - 2). NVELOPE
 - 3). Or approved equal.
3. Gauge, Configuration, Dimensions, and Spacing: Minimum 18-gauge and as needed to conform to design criteria for each assembly.
4. Material: ASTM A635M, Coating Designation Z100 min.

B. Wall Brackets:

1. Minimum 0.046-inch-thick (18-gauge) sheet steel.
2. Pre-Punched Holes: For minimum two wall anchors per bracket.
3. Dimensions: As needed to offset cladding from wall plane where meeting substrate and to allow for installation of insulation equal in thickness to offset.
4. Bracket Base Dimension – Minimum 3.25-inch-high and 2.125 inch-wide
5. Offset Brackets – 3, 4, 5 or 6-inch depth.
6. Basis-of-Design Product: Subject to compliance with requirements, provide Spring Valley Corp; i-CLAD Substructure or comparable product by one of the following:
 - a. Cascadia
 - b. NVELOPE
 - c. Or approved equal.

C. Vertical or Horizontal Rail:

1. Minimum 0.046-inch thick (18 gauge) cold-formed steel.

2. Basis-of-Design Product: Subject to compliance with requirements, provide Spring Valley Corp; i-CLAD Vertical or Horizontal Rail or comparable product by one of the following:
 - a. Cascadia
 - b. NVELOPE
 - c. Or approved equal.

- D. Rain Screen Components Thermal Isolation:
 1. Insulation Material: Injection molded Polypropylene Impact Copolymer non-fiber reinforced
 2. Tensile Modulus: 182.75 per ISO 527-2/1
 3. Melting Temperature: 318 degrees Fahrenheit per ISO 3146
 4. Rockwell Hardness: 88 as per ASTM D785
 5. Size: as per details
 6. Basis-of-Design Product: Subject to compliance with requirements, provide Spring Valley Corp; i-CLAD Thermal Insulator or comparable product by one of the following:
 - a. Cascadia
 - b. NVELOPE
 - c. Or approved equal.

- E. Connectors and Anchors:
 1. For steel stud framing substrate: Self-drill hex-washer-head stainless steel with 1,000-hour salt-spray rated thermoset polyester coating.
 2. Embedment depth: 0.625 inches or three full threads minimum, whichever is greater.
 3. Minimum ultimate pull-out capacity from 18-gauge steel: 450 pounds
 4. For concrete and concrete masonry unit substrate:
 5. Embedment depth: 1 inch minimum for concrete masonry 1.75" for poured concrete
 6. Minimum ultimate pull-out capacity from substrate material: 450 pounds
 7. 1/4" fasteners recommended by system manufacturer.
 8. 1/4" diameter self-drilling screws with required pull-out strength.

9. For horizontal rail to vertical rail connection: Self-drill hex-washer-head stainless steel with 1,000-hour salt-spray rated thermoset polyester coating.
 10. Embedment depth: 0.625 inches or three full threads minimum, whichever is greater.
 11. Minimum ultimate pull-out capacity from 18-gauge steel: 450 pounds
- F. Provide nylon washers on both sides of the aluminum panels.
- G. Connectors or Anchors for clips, girts and panels Gauge, Configuration, Dimensions, and Spacing: Minimum gauge and as required to conform to design criteria for each assembly.
1. Galvanic Protection: Utilize tapes and other methods as necessary to separate and prevent contact between dissimilar metals. Coordinate between aluminum and stainless steel materials.

2.4 FABRICATION

- A. Comply with dimensions, profile limitations, gauges and fabrication details shown and specified.
- B. Fabricate components of the system at factory, ready for field assembly.
- C. Fabricate components and assemble units to comply with performance requirements specified.
- D. Apply specified finishes in conformance with manufacturer's standards, and according to coating manufacturer's instructions.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. General: Comply with panel manufacturer's instructions for assembly, installation and erection of metal wall panels.
- B. Metal Separation: Apply a coat of bituminous paint, concealed, on both surfaces wherever dissimilar metals would otherwise be in contact. Use gasket fasteners where needed to eliminate the possibility of corrosive or electrolytic action between metals.
- C. Anchor sub-girts to stud back-up, spacing sub-girts not to exceed 16" o.c. unless closer spacing required to meet deflection criteria. Use stainless steel anchors to fasten sub-girts to stud framing; space anchors 8" o.c. at each stud.

- D. Erect panels plumb, level and true to line with tolerances not exceeding 1/16" in runs of 20' and within 1/16" of adjoining faces.
- E. Fasteners: Exposed, self sealing type in and ordered manner. Finish fastener to match wall panel.
- F. Joint Sealers: Install gaskets, joint fillers and sealants where required for weatherproof performance of panel systems. Provide types of gaskets and sealants/fillers recommended by panel manufacturer.
- G. Damaged Material: Remove and replace panels and component parts of the work which have been damaged (including finish) beyond successful restoration, as directed by the Commissioner. Restore materials and finishes with minor damage.

3.3 CLEANING AND PROTECTION

- A. Clean exposed surfaces (exterior and interior) of metal wall panels work promptly after completion of installation. Comply with recommendations of both the panel and coating manufacturer.
- B. Protection: The Installer of metal wall panels must advise the Contractor in writing of protection and surveillance procedures which can be foreseen as needed to ensure that the work will be without damage or deterioration at the time of final acceptance after completion of other construction work.

END OF SECTION 07 42 13

SECTION 07 52 00

MODIFIED BITUMINOUS MEMBRANE ROOFING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. SBS modified bitumen roofing, five-ply system.
2. Roof insulation.
3. SBS modified flashing.
4. Accessories, including walkway pads.
5. Temporary roofing.

- B. Related Sections

1. Section 06 20 00 "Finish Carpentry" for wood blocking.
2. Section 07 62 00 "Sheet Metal Flashing and Trim" for flashing and sheet metal.
3. Section 22 14 23 "Storm Drainage Piping Specialties" for roof drains.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical product data, installation instructions and recommendations for each type of roofing product required. Include data substantiating that materials comply with requirements.
1. For asphalt bitumen, provide label on each container or certification with each load of bulk bitumen, indicating flash point (FP), finished blowing temperature (FBT), softening point (SP) and equiviscous temperature (EVT).
- C. Pre-Roofing Conference: Submit copies of pre-roofing conference records.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: An entity meeting the requirements in DDC General Conditions Section 014000 1.7/C/3.
- C. Obtain primary roofing products, including roofing sheets (felts), bitumen, composition flashings, and vapor barrier from a single manufacturer. Provide secondary materials as recommended by manufacturer of primary materials.
- D. Pre-Roofing Conference: Prior to installation of roofing and associated work, meet at project site, or other mutually agreed location, with Installer, roofing manufacturer, installers of related work, Contractor and other entities concerned with roofing performance, including the Commissioner and City of New York. Record discussions and agreements and furnish copy to each participant. Provide at least seventy-two (72) hours advance notice to participants prior to convening pre-roofing conference. Review methods and procedures related to roofing work, including but not limited to the following:
 - 1. Tour representative areas of roofing substrates (decks), inspect and discuss condition of substrate, roof drains, curbs, penetrations and other preparatory work performed by other trades.
 - 2. Review roofing system requirements (drawings, specifications and other Contract Documents.
 - 3. Review required submittals, both completed and yet to be completed.
 - 4. Review and finalize construction schedule related to roofing work and verify availability of materials, Installer's personnel, equipment and facilities needed to make progress and avoid delays.
 - 5. Review required inspection, testing, certifying and material usage accounting procedures.
 - 6. Review weather and forecasted weather conditions, and procedures for coping with unfavorable conditions, including possibility of temporary roofing (if not a mandatory requirement).
- E. UL Listing: Provide labeled materials which have been tested and listed by UL in "Building Materials Directory" for application indicated, with "Class A" rated materials/system for roof slopes shown.
 - 1. Provide roof covering materials bearing Classification Marking (UL) on bundle, package or container indicating that materials have been produced under UL's Classification and follow-up Service.
- F. Fire Performance Characteristics: Provide insulation materials which are identical to those whose fire performance characteristics, as listed for each material or assembly of which insulation is a part, have been determined by testing, per methods indicated

below, by UL or other testing and inspecting agency acceptable to the City of New York:

1. Surface Burning Characteristics: ASTM E 84.
 2. Fire Resistance Rating: ASTM E 119.
 3. Combustibility Characteristics: ASTM E 136.
- G. Provide roofing system and component materials which have been evaluated by Factory Mutual System for fire spread, wind-uplift Class 90, and hail damage and are listed in "Factory Mutual Approval Guide" for Class I construction. System must also meet ASCE-7 for wind uplift standards.
1. Provide roof covering materials bearing FM approval marking on bundle, package or container, indicating that material has been subjected to FM's examination and follow-up inspection service.

1.5 JOB CONDITIONS

- A. Weather Condition Limitations: Proceed with roofing work only when existing and forecasted weather conditions will permit work to be performed in accordance with manufacturer's recommendations and warranty requirements.

1.6 PRODUCT HANDLING

- A. Store and handle roofing sheets in a manner which will ensure that there is no possibility of significant moisture pick-up.
- B. Store in a dry, well ventilated, weather-tight place. Unless protected from weather or other moisture sources, do not leave unused felts on the roof overnight or when roofing work is not in progress. Store rolls of felt and other sheet materials on end on pallets or other raised surface. Handle and store materials or equipment in a manner to avoid significant or permanent deflection of deck.

1.7 WARRANTY/GUARANTEE

- A. Special Project Warranty: Provide written warranty, signed by Manufacturer of primary roofing materials, agreeing to restore or replace defective materials and workmanship as required to maintain roofing system in watertight condition.
- B. Warranty period for manufacturer is twenty (20) years after date of Substantial Completion; no dollar limit.
- C. Guarantee period for installer is two (2) years after date of Substantial Completion; no dollar limit.

PART 2 PRODUCTS

2.1 ROOFING SYSTEM

- A. SBS-modified bituminous sheet roofing five-ply, including vapor retarder. Provide hot-asphalt applied roofing system with a solid white reflective mineral-surfaced (cool roof), SBS-modified bituminous cap sheet.
- B. Primer: Asphalt cut-back primer, complying with ASTM D 41.
- C. Bitumen: Roofing asphalt complying with ASTM D 312, type as recommended by roofing manufacturer.
- D. Basis-of-Design Product: Subject to compliance with requirements, provide Johns Manville; 4CID CR or comparable product by one of the following:
 - 1. Firestone
 - 2. GAF
 - 3. Siplast
 - 4. Soprema
 - 5. Or approved equal.

2.2 ROOF INSULATION

- A. Polyisocyanurate Board Roof Insulation: Rigid, sloped (1/4" per foot) and flat, cellular thermal insulation with polyisocyanurate closed-cell foam core and manufacturer's standard facing laminated to both sides; complying with ASTM C1289, average LTTR value as designated at mean temperatures indicated, after testing per ASTM C1303 as follows:
 - 1. Surface Burning Characteristics: Maximum flame spread of 25.
 - 2. LTTR R-Value: 7.2/inch at 75 deg. F.
 - 3. Roof membrane manufacturer must approve insulation in writing.
 - 4. Basis-of-Design Product: Subject to compliance with requirements, provide Johns Manville; E'NRGY' 3 ISO or comparable product by one of the following:
 - a. Apache
 - b. GAF
 - c. Or approved equal.
- B. Cover insulation with 3/4" thick protection board recommended by roofing manufacturer.

2.3 MODIFIED BITUMINOUS BASE FLASHING

- A. Provide modified bituminous base flashing system as determined by edge details and that is acceptable to roofing manufacturer.

2.4 CANT STRIPS

- A. Provide cant strips formed of rigid insulation matching roof insulation or molded asphalt or coal tar impregnated organic fiber insulation material, 45° cant, unless otherwise indicated.

2.5 MISCELLANEOUS MATERIALS

- A. Flashing at penetrations: PMMA liquid type as part of manufacturers system.
- B. Lead flashing sheet of 4 lb. flashing lead for pipe flashing of common desilverized pig lead.
- C. FM approved mechanical fasteners for attaching insulation to cement deck.
- D. Walkway Pads: 3/8" thick, 32" x 32" skid resistant modified asphalt with ceramic granular surface on both sides.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Johns Manville; Dyna Tred Plus roof pads or comparable product by one of the following:
 - a. Firestone
 - b. GAF
 - c. Siplast
 - d. Soprema
 - e. Or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION, GENERAL

- A. Install roofing in accordance with manufacturer's recommendations and requirements of the New York City Building Code.
- B. Provide clean, smooth and dry substrate, free of projections which might puncture the felts.
- C. Ensure that all drains, curbs, blocking and roof penetrating components are in place before any roofing work starts. See that all roof drains are set 1" below the normal

finish roof level to ensure that additional flashing around the drains will not be built-up above the normal roof level and prevent proper drainage.

- D. Provide a visible thermometer and thermostatic controls on all kettles. Discard any bitumen not heated in accordance with manufacturer's recommendations.
- E. Provide a tarpaulin covering the wall below the bucket hoist to prevent staining of the wall with spilled bitumen.
- F. Provide protection of coping, cant strips and other building components adjacent to the roof deck unloading area.
- G. Ensure good adhesion between substrate and members when temperature drops below 40 deg. F. Provide the following precautions:
 - 1. No overheating of bitumen to compensate for rapid chilling is permitted.
 - 2. Insulate buckets to carry hot bitumen.
 - 3. Manual mopping no farther than 5 ft. in front of the felt rolls, and immediate unrolling of felts.
 - 4. Immediate application of top pour and aggregate, before stored heat in the membrane dissipates.
 - 5. Below 32 deg. F., store felts in a warm enclosure or pre-heat felts before application.
- H. Install flashing, including counter flashing, as roof application progresses. If delay is unavoidable, trowel the top of the flashing with flashing cement close to the joint to prevent water from entering behind the flashing until the counter flashing is in place.
- I. Start roofing application at far points of the deck and work toward area where base materials are fastened to the roof deck (to minimize traffic over newly applied roofing).
- J. Weigh down all membrane edges left incomplete before splicing with other sections of membrane.
- K. Provide enveloping of perimeter felts to prevent bitumen drippage.
- L. Prohibit phased application in which saturated felts are left exposed overnight or longer before top plies and topcoat are applied. Place aggregate surface on same day as felts.
- M. Inspect roof drains for obstructions and debris after the roofing work is completed.
- N. Prime deck as recommended by roof membrane manufacturer.

3.3 INSULATION

- A. Extend insulation and Perlite board full thickness over entire surface to be insulated. Cut and fit tightly around obstructions, and fill voids with insulation and mastic.

- B. Apply a double layer of insulation of the required thickness, to make up the total thickness. Stagger joints between layers as recommended by the manufacturer.
- C. Set first layer of insulation using adhered using adhesive approved by manufacturer in accordance with FM requirements to meet I-90 wind uplift. Apply second layer of insulation and Perlite board in steep asphalt.
- D. Do not advance the laying of insulation ahead of roofing more than necessary for sequence of operations. Cover insulation exposed at end of each day's work (and when rain threatens) with waterproofing materials. Do not permit insulation to become wet. Remove and dispose of insulation which has become wet; replace before proceeding with roofing work.
- E. Lay with edges in moderate contact but do not force into place.
- F. Stagger end joints; or tape joints where recommended by the manufacturer.
- G. Install temporary water cut-offs at completion of each day's work and remove upon resumption of work.

3.4 ROOFING

- A. Do not apply hot bitumen under any condition that would cause foaming. Test substrate for excessive moisture by pouring one pit of steep asphalt at 400 deg. F. on the deck, at the start of each day's work, and at the start of each roof area or place. Substrate is too wet if test sample foams or can be easily (cleanly) stripped after cooling.
- B. Bitumen Heating: Do not raise the temperature above the min. normal fluid-holding temperature more than one hour prior to time of application. Discard bitumen which has been held at an elevated temperature (as required for application) for a period exceeding 3 hrs. Do not heat bitumen above the temperature required to ensure that the application viscosity results in adequate mopping weight and maximum adhesion to substrates. Determine the flash point of the bitumen, either by information from the bitumen producer or by suitable tests, and determine the maximum fire-safe handling temperature, and do not exceed that temperature in heating bitumen; but in no case heat bitumen to a temperature higher than 25 deg. F. below the flash point.
- C. Shingling of Plies: Lay plied bituminous membranes over insulation and Perlite board with felts shingled uniformly to achieve the required plies in accordance with manufacturer's instructions.
- D. Set on Accessories: Where small roof accessories are set on built-up roofing membrane, set metal flanges in a bed of roofing cement, and seal penetration of membrane with bead of roofing cement to prevent flow of bitumen from membrane.
- E. Install walkway pads in hot asphalt in configuration shown on drawings.
- F. Ensure all bleed outs during application are covered with cool roof granules to create uniform white appearance of entire roof.

3.5 COMPOSITION FLASHING AND STRIPPING

- A. Provide composition flashing at cant strips and other sloping and vertical surfaces, and at roof edges, and at penetrations through roof. Nail or provide other forms of mechanical anchorage of composition flashing to vertical surfaces, as recommended by manufacturer of primary roofing materials. Except where concealed by elastic flashing, apply a heavy coating of roofing cement over composition flashing.

3.6 ROOF DRAINS

- A. Install 1-1/2" x 18" Tapered Edge Strips to form a gradually tapered sump transition from top of insulation to roof drain flange. Minimum sump size to be 4 ft. by 4 ft.
- B. Install roofing plies, starting at the low point (roof drain) in a shingle fashion so that four plies are provided, trimming felt plies at edge of drain flange.
- C. Install a 4# lead flashing (minimum size 30" x 30"), set in bed of flashing cement, on top of roofing plies. Form lead to shape of sump and into drain bowl, trimming neatly approx. 1" beyond ring. Install clamping ring immediately.
- D. Prime top surface of lead with asphalt primer. Allow to dry completely.
- E. Strip in lead with one ply of SBS Modified Bitumen membrane, extending from clamping ring out a minimum of 6" beyond lead; using modified bitumen trowel grade flashing cement.

3.7 CLEANING UP

- A. Take special care to prevent splashing bitumens onto adjacent surfaces and immediately remove all traces of such splashed and/or spilled material.

END OF SECTION 07 52 00

SECTION 07 62 00

SHEET METAL FLASHING AND TRIM

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Stainless steel cap metal flashing.
2. Stainless steel scupper, conductor heads and downspouts.
3. Aluminum cap flashing.
4. Stainless steel through wall flashing.
5. Field fabricating (including bending, cutting, soldering, etc.), if required, of stainless steel flashing.
6. Stainless steel flashing elsewhere, where metal flashing is indicated on drawings.
7. Separation of contacting surfaces of dissimilar metals.

B. Related Sections

1. Section 04 20 00 "Unit Masonry"
2. Section 07 52 00 "Modified Bituminous Membrane Roofing"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Shop Drawings: Submit, showing all materials, finishes, fastenings, joint details, fabrication, construction and relation to adjoining construction.
- C. Samples: Submit 12" x 12" samples of flashing materials and finishes.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 PRODUCTS

2.1 MATERIALS

A. Stainless Steel Flashing Materials

1. Stainless Steel Flashing: ASTM A 240, Type 304, stainless steel, with 2D finish, dead soft temper, fully annealed, as manufactured by International Nickel Co., Republic Steel Corp., United States Steel, Washington Steel Corp. or approved equal. Thickness as listed below.
 - a. Concealed Flashings: 0.012" thick, thirty (30) gauge (U.S. Standard).
 - b. Exposed Flashings: 0.015" thick, twenty-eight (28) gauge (U.S. Standard).
 - c. Edge Strips: 0.025" thick, twenty-four (24) gauge (U.S. Standard).
2. Through-Wall Flashing: Stainless steel, with sawtooth ribs at three (3) inch intervals.
3. Accessories and Fastenings: AISI, Types 302 and 304 stainless steel.
4. Solder: Composed of sixty (60) percent block tin and forty (40) percent pig lead, except that solder at seams exposed to public view provide eighty (80) percent tin and twenty (20) percent lead.
5. Flux: An acid type flux manufactured specifically for soldering stainless steel, as approved.

B. Downspouts: 4" SCH 10 304 stainless steel pipe.

C. Aluminum Flashing: ASTM B 209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; mill finish for concealed flashing; 0.032" thick.

1. Accessories and Fastenings: AISI, Types 302 and 304 stainless steel, or aluminum.
2. Exposed Coil-Coated Finish: Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - a. Color: As selected by the Commissioner.

D. Bituminous Coating: Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat. Provide inert-type non-corrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 METAL FLASHING INSTALLATION

- A. Reference Standard: Conform to the requirements of 7th Edition of the Sheet Metal and Air Conditioning Contractors Association (SMACNA) Architectural Sheet Metal Manual.
- B. General: Fabricate and install metal flashing work in accordance with details and specifications of above Reference Standard, with manufacturer's instructions, and as herein specified, to provide a watertight installation. Apply metal flashing to smooth, even, sound, clean, dry surfaces free from defects. Make provisions to allow for expansion and contraction of metal flashing work. Wherever practicable, shop form all metal flashing work and deliver ready for installation. Form metal flashing work accurately to required profiles, with flat surfaces, straight edges and corners, free from defects. Fold exposed metal edges back not less than 1/2" and form drip.
- C. Nailing: Confine to sheets twelve (12) inches or less in width. Confine nailing to one edge only, locate nails where concealed. Use No. 12 x 1" long flat headed, annular threaded, Type 302 stainless steel nails for nailing to wood blocking; use one (1) inch long masonry nails for nailing to concrete. Space nails four (4) inches o.c. maximum.
- D. Cleating: Use cleats where sheets are more than twelve (12) inches in width. Space cleats approximately twelve (12) inches o.c.. Cleats two (2) inches wide by three (3) inches long, of the same material and weight as the metal flashing being installed. Secure one end of the cleat with two (2) nails and fold edge back over the nail heads. Lock other end into seam or into folded edge of metal flashing sheets. Pre-tin cleats for soldered seams.
- E. Joining: Join metal flashings with one (1) inch locked and soldered seams except at slip joints. Mallet seams flat and solder full length of seam as specified below.
- F. Soldering: Mechanically clean all metal surfaces to be soldered with steel wool. Clean and pre-tin edges of metal flashing to be soldered before soldering is begun with solder on both sides for a width of not less than 1-1/2". Solder slowly with well heated metal surfaces. Use ample solder. Show not less than one full inch of evenly flowed solder on seam. Provide liberal amount of flux brushed in at seams before commencing soldering. Where soldering paste or killed acid is employed as a flux, soldering must follow immediately after application of the flux. Upon completion of soldering, clean surfaces of all flux.
- G. Slip Joints: Locate slip joints not more than twenty four (24) feet apart and within 2' of corners and changes in direction. Form slip joints as three (3) inch wide joints with cover piece behind flashing, and fill locked ends neatly with sealant.

- H. Cap Flashing: Install over base flashings, in eight (8) to ten (10) foot lengths, lapped six (6) inches at ends. Increase cap flashing longitudinally to produce spring action to hold bottom edge of cap flashing firmly against base flashing. Lap cap flashing over base flashing at least four (4) inches, with exposed bottom edge at a forty five (45) degree angle downward and folded back on underside at least 1/2" to form drip. Make cap flashing continuous at corners and angles.
- I. Miscellaneous Flashing: Provide all other miscellaneous metal flashing not specifically mentioned herein, but indicated on drawings and/or required to provide a watertight installation.
- J. Separation of Dissimilar Materials: Back paint surfaces of metal flashing in contact with dissimilar metals or with concrete or masonry with bituminous paint.
- K. Reglets
 - 1. Provide watertight reglets in masonry and concrete work to receive cap flashing. Form reglets of stainless steel using same thickness as stainless steel sheet metal specified.
 - 2. In masonry work use open or closed slot reglets with slot at least one (1) inch deep and 3/16" wide. Provide hook dams or turn-ups for anchoring securely into mortar joints. Insert cap flashing into slot full depth using button punch or lead wedges to lock in place.
 - 3. In concrete work, use open or closed slot reglets with slot sloped upward at forty five (45) degrees, at least one (1) inch deep and 3/16" wide. For fastening reglets to concrete forms use double-head stainless steel nails spaced twelve (12) inches apart maximum.
 - 4. Insert cap flashing full depth into reglet slot, and wedge in place using lead strips spaced on twelve (12) inch centers maximum or lead caulking rope. When lead strips are used for continuous caulked reglets, use approved weather-resistant fibrous compounds.
- L. Through-the-Wall Flashings: Provide through-the-wall flashings as shown. Form bonding features so as not to puddle water on surface. Lap cross joints to interlock design pattern at least three (3) inches. Stop typical flashings in mortar joint 1/2" from exterior face of wall.
- M. Scupper: Continuously support scupper, set to correct elevation, and seam frames to interior wall face, over cants or tapered edge strips, and under roofing membrane.

END OF SECTION 07 62 00

SECTION 07 71 00

ROOF SPECIALTIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Aluminum gravel stops and copings.
2. Roof hatches.
3. Prefabricated roof curbs.
4. Non-penetrating safety guardrail system.

- B. Related Sections

1. Section 07 52 00 "Modified Bituminous Membrane Roofing"
2. Section 07 62 00 "Sheet Metal Flashing and Trim" for sheet metal flashing.
3. Section 08 62 00 "Unit Skylights"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Before any roof specialties and accessories are delivered to the job site, submit shop drawings showing profiles and anchoring devices.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 PRODUCTS

2.1 ALUMINUM GRAVEL STOPS AND COPINGS

- A. Fabricate of .063" thick aluminum alloy 5005-H154, smooth, no pattern.

- B. Provide concealed splice plates 12'-0" o.c. fabricated of .050" thick aluminum to match exposed aluminum; finished to match exposed aluminum.
- C. Provide prefabricated mitered and welded corner units.
- D. For gravel stops, provide concealed anchors and hold down clips 24" o.c.
- E. For copings, provide galvanized steel anchor plates, anchors spaced 6'-0" o.c. and snap-lock coping design; all anchors concealed.
- F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat.
 - 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 - 2. Custom color and gloss as selected by the Commissioner.
- G. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Hickman
 - 2. Cheney
 - 3. Johns Manville
 - 4. Or approved equal.

2.2 ROOF HATCH

- A. Provide shop-primed, aluminum roof hatch units of sizes shown on drawings, with 1" rigid insulation at curbs and door and standard self-lifting mechanism. Provide manufacturer's standard hardware, including hold-open device, hinges, latch and operating handles for inside operation. Construct units for 40 lbs. per sq. ft. live load.
- B. Safety Railing System: Manufacturer's standard complete system including rails, clamps, fasteners, safety barrier at railing opening, and all accessories required for a complete installation.
 - 1. Height: 42 inches above finished roof deck.
 - 2. Test load per 2008 New York City Building Code requirements.
 - 3. Provide self-latching gate fabricated of same materials as safety railing system.
- C. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Bilco
2. Babcock-Davis
3. Milcor
4. Or approved equal.

2.3 PREFABRICATED ROOF CURBS

- A. Provide manufacturer's standard shop fabricated units made of 14 ga. zinc coated steel factory primed with rust inhibitive primer, and insulated with 1-1/2" thick fiberglass board. Provide units manufactured by Pate, Louvers & Dampers, Inc., Industrial Louvers, Inc., or approved equal.
- B. Reinforce units over 8'-0" long and units requiring reinforcement due to heavy loads by forming units of double-walled box-type construction with stiffeners of heavy gauge with flanges as required to provide sufficient rigidity and strength to withstand max. lateral forces in addition to super imposed vertical loads.
- C. Sloping roof decks: For deck slopes of 1" per ft. and more, fabricate curb units (except expansion joint curbs) to form a level top edge. Where slope is less than 1" per ft., and curb is used to support equipment with moving parts, or supports vertical elements such as gravity ventilators which are intended to be plumb, provide tapered wood nailers (treated wood) at top of curb units to form a level top edge.
- D. Provide treated wood nailer, not less than 1-5/8" thick and of the width shown, but not less than the width of the curb wall assembly. Anchor nailer securely to the top of the metal frame unit. Refer to Section 062000 Finish Carpentry for pressure treatment required for wood nailers.
- E. Provide 22 ga. galvanized steel curb liners; where required extend curb liners through deck construction to coordinate with work below.
- F. Provide 18 ga. galvanized steel cap flashing to cover a min. of 3" over roof flashing.
- G. Where curb units are shown to support shop fabricated items of equipment, do not proceed with fabrication of curb units until size or dimensions have been checked for coordination with equipment.

2.4 NON-PENETRATING SAFETY GUARDRAIL SYSTEM

- A. Guardrail system must meet OSHA 1910.23(c) and 1926.502(b).
 1. Configuration/Size: As indicated on Drawings.
 2. Color: As selected by Commissioner.

- B. Basis-of-Design Product: Subject to compliance with requirements, provide Garlock Safety Systems; Railguard 200 Non-Penetrating Safety Guardrail System or comparable product by one of the following:
1. Kee Safety Inc.
 2. Dakota Safety
 3. Or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. General: Comply with manufacturer's instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive accessory units, and with roof insulation, roofing and flashing; as required to ensure that each element of the work performs properly, and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.
- B. Isolation: Where metal surfaces of units are to be installed in contact with non-compatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide other permanent separation.
- C. Cap Flashing: Where cap flashing is required as component of accessory, install to provide adequate waterproof overlap with roofing or roof flashing (as counter flashing). Seal with thick bead of mastic sealant, except where overlap is indicated to be left open for ventilation.
- D. Operational Units: Test operational units with operable components. Clean and lubricate joints and hardware. Adjust for proper operation.

END OF SECTION 07 71 00

SECTION 07 81 00

APPLIED FIREPROOFING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
1. Spray-on fireproofing for structural steel.
 2. Seal coat over fireproofing in special areas.
 3. Preparation of surfaces.
 4. Field quality control.
- B. Related Sections
1. Section 05 12 00 "Structural Steel Framing"
 2. Section 07 84 13 "Penetration Firestopping"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: For each fire-resistive product specified.
- C. Shop Drawings: Submit structural framing plans indicating the following:
1. Locations and types of surface preparations required before applying sprayed fire-resistive material.
 2. Extent of sprayed fire-resistive material for each construction and fire-resistance rating, including the following:
 - a. Applicable fire-resistive design designations of a qualified testing and inspecting agency acceptable to New York City Building Department.
 - b. Minimum thicknesses needed to achieve required fire-resistance ratings of structural components and assemblies.

3. Identify restrained and unrestrained assemblies on shop drawings, show required thickness of fireproofing for each assembly.
- D. Product Certificates: Signed by manufacturer of sprayed fire-resistive material certifying that the products furnished comply with requirements.
 - E. Installer Certificates: Signed by manufacturer certifying that installers comply with specified requirements.
 - F. Qualification Data: For firms and persons specified in "Quality Assurance" Article to demonstrate their capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of commissioners and City of New Yorks, and other information specified.
 - G. If primer is to be used steel and/or metal deck, submit certifications by supplier of primer that primer is compatible with materials, and will not impair the required performance of the installed fireproofing. Such certification must be accompanied by evidence that the primer was successfully used in conjunction with the fireproofing material in a UL test applicable to the construction. Submit this certification prior to application of primer.
 1. Coordinate with Section 05 12 00 – Structural Steel Framing, and Structural Drawings prior to application of primer.
 - H. Product Test Reports: Indicate that physical properties of proposed sprayed fire-resistive materials comply with specified requirements based on comprehensive testing of current product formulations by a qualified testing and inspecting agency according to requirements specified in "Quality Assurance" Article.
 - I. Code Compliance: Proposed product must comply with the 2008 New York City Building Code and be approved by New York City Building Department.
 - J. Letter from manufacturer stating that the UL Design selected for the project are not load restricted.
- 1.4 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
 - B. Installer Qualifications: Engage an experienced installer.
 - C. Submit data indicating that products containing no detectable asbestos as determined according to the method specified in 40 CFR, Part 763, Subpart E, Appendix E, Section 1, "Polarized Light Microscopy."
 - D. Mockups: After processing of initial submittals and before delivery and installation of fireproofing materials, prepare a sample installation of fireproofing work, approximately 100 sq. ft. in area; providing an example of each type required, applied on each different substrate, to produce each different rating as required and reasonably

representative of entire sprayed on fireproofing work, for joint approval by representative of fire resistant material manufacturer and City of New York. Work in other areas must not proceed until mock-up has been completed. Mock-up work which remains in compliance with requirements and is in undamaged and acceptable condition may be retained as final work in place.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Deliver products to Project site in original, unopened packages with intact and legible manufacturers' labels identifying product and manufacturer; date of manufacture; shelf life, if applicable; and fire-resistance ratings applicable to Project.
- B. Use materials with limited shelf life within period indicated. Remove from Project site and discard materials whose shelf life has expired.
- C. Store materials inside, under cover, aboveground, so they are kept dry until ready for use. Remove from Project site and discard materials that have deteriorated.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Do not apply sprayed fire-resistive material when ambient or substrate temperatures are 40 deg F. or lower, unless temporary protection and heat is provided to maintain temperatures at or above this level for 24 hours before, during, and for 24 hours after product application.
- B. Ventilation: Ventilate building spaces during and after application of sprayed fire-resistive material to achieve a minimum of four air changes per hour. Use natural means or, where this is inadequate, forced-air circulation until fire-resistive material dries thoroughly.

1.7 SEQUENCING

- A. Sequence and coordinate application of sprayed fire-resistive materials with other related work specified in other Sections to comply with the following requirements:
 - 1. Provide temporary enclosures for interior applications to prevent deterioration of fire-resistive material due to exposure to unfavorable environmental conditions.
 - 2. Avoid unnecessary exposure of fire-resistive material to abrasion and other damage likely to occur during construction operations subsequent to its application.
 - 3. Do not apply fire-resistive material to metal roof deck substrates until roofing has been completed; prohibit roof traffic during application and drying of fire-resistive material. Fireproofing may be considered dry when the moisture content is 6% or less.
 - 4. Do not begin applying fire-resistive material until clips, hangers, supports, sleeves, and other items penetrating fire protection are in place.

5. Defer installing ducts, piping, and other items that would interfere with applying fire-resistive material until application of fire protection is completed.
6. Do not install enclosing or concealing construction until after fire-resistive material has been applied, inspected, tested, and corrections have been made to defective applications.
7. Protect permanently exposed walls, floor or special surfaces.

PART 2 PRODUCTS

2.1 CONCEALED SPRAYED FIRE-RESISTIVE MATERIALS

- A. General: For concealed applications of sprayed fire-resistive materials, provide manufacturer's standard products complying with requirements indicated in this Article for material composition and physical properties representative of installed products.
- B. UL design listings must state that the loading was determined by Allowable Stress Design Method or Load and Resistance Factor Design Method. UL design listings requiring a load restriction factor will not be allowed.
- C. Material Composition: Cementitious sprayed fire-resistive material consisting of factory-mixed, dry formulation of gypsum or Portland cement binders and lightweight mineral or synthetic aggregates mixed with water at Project site to form a slurry or mortar for conveyance and application.
- D. Physical Properties: Minimum values, unless otherwise indicated, or higher values required to attain designated fire-resistance ratings, measured per standard test methods referenced with each property listed as follows:
 1. Dry Density: Minimum 15 lb./cu. ft. for average and individual densities regardless of density indicated in referenced fire-resistive design, or greater if required to attain fire-resistance ratings indicated, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination."
 2. Thickness: Provide minimum average thickness required for fire-resistive design shown on approved submittals.
 - a. Fireproofing must be of thicknesses and density to meet the requirements of the 2008 New York City Building Code for Type of construction indicated on drawings for 2 hour rating.
 3. Bond Strength: Not less than 200 lbf/sq. ft. per ASTM E 736.
 4. Compressive Strength: 5.21 lbf/sq. in. as determined in the laboratory per ASTM E 761. Minimum thickness of sprayed fire-resistive material tested must be

0.75 inch and minimum dry density must be as specified, but not less than 15 lb./cu. ft.

5. Corrosion Resistance: No evidence of corrosion per ASTM E 937.
 6. Deflection: No cracking, spalling, delamination, or the like per ASTM E 759.
 7. Effect of Impact on Bonding: No cracking, spalling, delamination, or the like per ASTM E 760.
 8. Air Erosion: Maximum weight loss of 0.025 g/sq. ft. in 24 hours per ASTM E 859. For laboratory tests, minimum thickness of sprayed fire-resistive material is 0.75 inch, maximum dry density is 15 lb./cu. Ft., test specimens are not prepurged by mechanically induced air velocities, and tests are terminated after 24 hours.
 9. Fire-Test-Response Characteristics: Provide sprayed fire-resistive materials with the following surface-burning characteristics as determined by testing identical products per ASTM E84 by UL or another testing and inspecting agency acceptable to New York City Building Department.
 - a. Flame Spread: 10 or less.
 - b. Smoke Developed: 0.
 10. Fungal Resistance: No observed growth on specimens per ASTM G 21.
- E. Product: Subject to compliance with requirements, provide one of the following:
1. Pyrolite 5GP; Carbolite Co., Fireproofing Products Div.
 2. Monokote Type MK-6; W.R. Grace & Co. - Conn., Construction Products Div.
 3. Cafco 300; Isolatek International Corp., Cafco Products.
 4. Type F3; Promat Firetemp.
 5. Or approved equal.

2.2 AUXILIARY FIRE-RESISTIVE MATERIALS

- A. General: Provide auxiliary fire-resistive materials that are compatible with sprayed fire-resistive materials and substrates and are approved by UL or another testing and inspecting agency acceptable to New York City Building Department for use in fire-resistive designs indicated.
- B. Adhesive for Bonding Fire-Resistive Material: Product approved by manufacturer of sprayed fire-resistive material, used where required by manufacturer to ensure proper bond.

- C. Metal Lath: Expanded metal lath fabricated from material of weight, configuration, and finish required to comply with fire-resistive designs indicated and fire-resistive product manufacturer's written recommendations. Include clips, lathing accessories, corner beads, and other anchorage devices required to attach lath to substrates and to receive sprayed fire-resistive material.
- D. Sealer for Sprayed Fire-Resistive Material in Elevator Shafts and Open Area Plenums: Transparent-drying, water-dispersible protective coating compatible with sprayed fire-resistive material and recommended by sprayed fire-resistive material manufacturer.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Clean substrates of substances that could impair bond of fire-resistive material, including oil, grease, rolling compounds, incompatible primers, and loose mill scale.
- B. For exposed applications, restore substrates to remove any surface imperfections that could affect uniformity of texture and thickness in finished surface of sprayed fire-resistive material. Remove minor projections and fill voids that would telegraph through fire-resistive products after application.
- C. Cover other work subject to damage from fallout or overspray of fire-resistive materials during application. Provide temporary enclosure as required to confine spraying operations, protect the environment, and ensure maintenance of adequate ambient conditions for temperature and ventilation.

3.3 INSTALLATION

- A. Comply with fire-resistive material manufacturer's written instructions for mixing materials, application procedures, and types of equipment used to convey and spray on fire-resistive material, as applicable to particular conditions of installation and as required to achieve fire-resistance ratings indicated.
- B. Install metal lath, as required, to comply with fire-resistance ratings and fire-resistive material manufacturer's written recommendations for conditions of exposure and intended use. Securely attach lath to substrate in position required for support and reinforcement of fire-resistive material. Use anchorage devices of type recommended in writing by fire-resistive material manufacturer. Attach lathing accessories where indicated or required for secure attachment to substrate.
- C. Coat substrates with adhesive before applying fire-resistive material where required to achieve fire-resistance rating or as recommended in writing by fire-resistive material manufacturer for material and application indicated.

- D. Extend fire-resistive material in full thickness over entire area of each substrate to be protected.
- E. Spray apply fire-resistive materials to maximum extent possible. Following the spraying operation in each area, complete the coverage by method recommended by the manufacturer.
- F. Where sealers are used, apply products that are tinted to differentiate them from the sprayed fire-resistive material over which they are applied. Apply sealers at rated recommended by sprayed fire-resistive material manufacturer to maintain fire-resistance ratings.
- G. Maintain ambient conditions during installation and for cure period following installation, as recommended by manufacturer. Provide ventilation and avoid excessive rate of drying.
- H. Fireproofing to the underside of roof deck assemblies must be done only after roofing application is complete, all roof mounted mechanical equipment is in place, and the roof is watertight.
- I. No fireproofing may be applied prior to completion of concrete work on steel decking.
- J. Installation Sequence of Fireproofing
 - 1. Perform all patching and restoration of sprayed fireproofing, due to cutting trades or testing and inspection, under this Section.
- K. Make provisions for ventilation to properly dry the fireproofing after application. In enclosed areas lacking natural ventilation, air circulation and ventilation must be provided.

3.4 FIELD QUALITY CONTROL

- A. Testing Agency for Special Inspections: City of New York will engage a qualified independent testing and inspecting agency to perform field tests and inspections and to prepare test reports.
 - 1. Testing and inspecting agency will interpret tests and state in each report whether tested work complies with or deviates from requirements.
- B. Testing and inspecting of completed applications of sprayed fire-resistive material will take place in successive stages, in areas of extent and using methods as follows. Do not proceed with application of fire-resistive material for the next area until test results for previously completed applications of fire-resistive material show compliance with requirements.
 - 1. For each 1000-sq. ft. area, or partial area, on each floor, testing and inspecting agency will evaluate the following characteristics. Tested values must equal or exceed values indicated and values required for approved fire-resistance design.

- a. Thickness for Floors, Roofs, and Walls: From the average of 10 measurements from a 144-sq. in. sample area, with sample width of not less than 6 inches per ASTM E 605.
2. Thickness for Structural Frame Members: From a sample of 25 percent of structural members per floor, taking 9 measurements at a single cross section for structural frame beams or girders, 7 measurements of a single cross section for joists and trusses, and 12 measurements of a single cross section for columns per ASTM E 605.
3. For each 10,000 sq. ft. area, or partial area, on each floor, testing and inspection agency will evaluate the following characteristics. Tested values must equal or exceed values indicated and values required for approved fire resistance design.
 - a. Bond Strength for Floors, Roofs, Walls, and Structural Framing Members: Cohesion and adhesion at frequency and from sample size indicated for determining thickness of each type of construction, per ASTM E 736.
4. Density for Floors, Roofs, Walls, and Structural Frame Members: At frequency and from sample size indicated for determining thickness of each type of construction, per ASTM E 605 or AWCI Technical Manual 12-A, Appendix A, "Alternate Method for Density Determination."
5. When testing discovers applications of fire-resistive material not in compliance with requirements, testing and inspecting agency will perform additional random testing to determine extent of noncompliance.
- C. Remove and replace applications of fire-resistive material where test results indicate that they do not comply with specified requirements for cohesion and adhesion or for density, or both.
- D. Apply additional fire-resistive material per manufacturer's written instructions where test results indicate that thickness does not comply with specified requirements.
- E. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

END OF SECTION 07 81 00

SECTION 07 84 13

PENETRATION FIRESTOPPING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Penetrations through fire-resistance-rated floor and roof construction including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.
2. Penetrations through fire-resistance-rated walls and partitions including both empty openings and openings containing cables, pipes, ducts, conduits, and other penetrating items.
3. Penetrations through smoke barriers and construction enclosing compartmentalized areas involving both empty openings and openings containing penetrating items.
4. Sealant joints in fire-resistance-rated construction.
5. Penetrations at each floor level in shafts and/or stairwells.
6. Construction joints, including those between top of fire rated walls and underside of floors above; and those between exterior curtain walls and the outer perimeter edge of floor assemblies.

B. Related Sections

1. Section 03 30 00 "Cast-in-Place Concrete"
2. Section 04 20 00 "Unit Masonry"
3. Section 07 92 00 "Joint Sealants"
4. Section 09 29 00 "Gypsum Board"

1.3 REFERENCES

- A. ASTM E 814 "Standard Method of Fire Tests of Through-Penetration Firestops."

- B. UL 1479, UBC 7-5 (Both are same as A. above).
- C. ASTM E 136 "Standard Test Method for Assessing Combustibility of Materials.
- D. UL 263, UBC 7-1 (Both are same as C. above).
- E. UL 2079 "Tests for Fire Resistance of Building Joint Systems."
- F. ASTM E 1399 "Test for Dynamic Movement Conditions."
- G. ASTM E 1966 (Same as E. above).
- H. Published Through-Penetration Systems by recognized independent testing agencies.
 - 1. UL Fire Resistance Directory, Volume II of current year.
 - 2. Warnock Hersey Certification Listings, current year.
 - 3. Omega Point Laboratories, current year.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit manufacturer's product literature for each type of firestop material to be installed. Submit literature indicating product characteristics, typical uses, performance, limitation criteria, test data and indication that products comply with specified requirements.
- C. Submit shop drawings detailing materials, installation methods, and relationships to adjoining construction for each firestop system, and each kind of construction condition penetrated and kind of penetrating item. Include firestop design designation of qualified testing and inspection agency evidencing compliance with requirements for each condition indicated.
 - 1. Submit documentation, including illustrations, for proposed UL listed (or equal) firestop and smoke seal assembly required for the Project.
- D. Material Safety Data Sheets: Submit MSDS for each firestop product.
- E. Qualification Data: For Installer.
- F. Manufacturer's Letters: For installations or configurations not covered by a UL or Warnock Hersey design number, obtain a recommendation from the manufacturer, in writing, for the specific application.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. General: Provide firestopping systems that are produced and installed to resist the spread of fire, and the passage of smoke and other gases.

- C. Firestopping materials must conform to Flame (F) and Temperature (T) ratings as required by 2008 New York City Building Code and as tested by nationally accepted testing agencies per ASTM E 814 or UL 1479. The F-rating must be a minimum of one (1) hour, but not less than the fire resistance rating of the assembly being penetrated. T-rating, when required by 2008 New York City Building Code, must be based on measurement of the temperature rise on the penetrating item(s). The fire test must be conducted with a minimum positive pressure differential of 0.01 inches of water column.
- D. Firestopping products must be asbestos free and free of any PCBs.
- E. Do not use any product containing solvents or that requires hazardous waste disposal.
- F. Do not use firestop products which after curing, dissolve in water.
- G. Do not use firestop products that contain ceramic fibers.
- H. Installer Qualifications: A firm that has been approved by FM Approval according to FM Approval 4991, "Approval Standard for Firestop Contractors," or been evaluated by UL and found to comply with its "Qualified Firestop Contractor Program Requirements."
- I. Mock-Up: Prepare job site mock-ups of each typical Firestop System proposed for use in the project. Approved mock-ups will be left in place as part of the finished project and will constitute the quality standard for the remaining work.
- J. For firestopping exposed to view, traffic, moisture, and physical damage, provide products that do not deteriorate when exposed to these conditions.
 - 1. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.
 - 2. For floor penetrations with annular spaces exceeding 4 inches or more in width and exposed to possible loading and traffic, provide firestop systems capable of supporting the floor loads involved either by installing floor plates or by other means.
 - 3. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials in manufacturer's original unopened containers with manufacturer's name, product identification, lot numbers, UL or Warnock Hersey labels, and mixing and installation instructions, as applicable.
- B. Store materials in the original, unopened containers or packages, and under conditions recommended by manufacturer.
- C. All firestop materials must be installed prior to expiration of shelf life.

1.7 PROJECT CONDITIONS

- A. Do not use materials that contain solvents, show sign of damage or are beyond their shelf life.
- B. During installation, provide masking and drop cloths as needed to prevent firestopping products from contaminating any adjacent surfaces.
- C. Conform to ventilation requirements if required by manufacturer's installation instructions or Material Safety Data Sheet.
- D. Weather Conditions: Do not proceed with installation of firestop products when temperatures are in excess or below the manufacturer's recommendations.
- E. Schedule installation of firestop products after completion of penetrating item installation but prior to covering or concealing of openings.

1.8 SEQUENCING AND SCHEDULING

- A. Pre-Installation Conference: Convene a pre-installation conference to establish procedures to maintain optimum working conditions and to coordinate this work with related and adjacent work.
- B. Install all firestop systems after voids and joints are prepared sufficiently to accept the applicable firestop system.
- C. Do not cover firestop systems until they have been properly inspected and accepted by the inspecting agency.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products of one of the following manufacturers:
 - 1. Tremco
 - 2. Bio-Fireshield
 - 3. 3M
 - 4. Specified Technologies Inc.
 - 5. U.S. Gypsum Co.
 - 6. Nelson
 - 7. Hilti, Inc.
 - 8. Grace Flame Safe

9. Or approved equal.

2.2 FIRESTOPPING, GENERAL

- A. Compatibility: Provide firestopping composed of components that are compatible with each other, the substrates forming openings, and the items, if any, penetrating the firestopping under conditions of service and application, as demonstrated by firestopping manufacturer based on testing and field experience.
- B. Accessories: Provide components for each firestopping system that are needed to install fill materials. Use only components specified by the firestopping manufacturer and approved by the qualified testing and inspecting agency for the designated fire-resistance-rated systems. Accessories include but are not limited to the following items:
 - 1. Permanent forming/damming/backing materials including the following:
 - a. Semirefractory fiber (mineral wool) insulation.
 - b. Sealants used in combination with other forming/damming materials to prevent leakage of fill materials in liquid state.
 - c. Fire-rated form board.
 - d. Joint fillers for joint sealants.
 - 2. Temporary forming materials.
 - 3. Substrate primers.
 - 4. Collars.
 - 5. Steel sleeves.
- C. Applications: Provide firestopping systems composed of materials specified in this Section that comply with system performance and other requirements.
- D. Smoke seals at top of partitions must be flexible to allow for partition deflection.

2.3 FILL MATERIALS FOR THROUGH-PENETRATION FIRESTOP SYSTEMS

- A. Endothermic, Latex Compound Sealant: Single-component, endothermic, latex formulation.
- B. Intumescent, Latex Sealant: Single-component, Intumescent, latex formulation.
- C. Intumescent Putty: Non-hardening, dielectric, water-resistant putty containing no solvents, inorganic fibers, or silicone compounds.
- D. Intumescent Wrap Strips: Single-component, elastomeric sheet with aluminum or polyethylene foil on one side.

- E. Job-Mixed Vinyl Compound: Prepackaged vinyl-based powder product for mixing with water at Project site to produce a paintable compound, passing ASTM E 136, with flame-spread and smoke-developed ratings of zero per ASTM E 84.
- F. Mortar: Prepackaged dry mix composed of a blend of inorganic binders, fillers, and lightweight aggregate formulated for mixing with water at Project site to form a non-shrinking, homogeneous mortar.
- G. Pillows/Bags: Re-usable, heat-expanding pillows/bags composed of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.
- H. Silicone Foam: Two-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, non-shrinking foam.
- I. Silicone Sealant: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealant of grade indicated below:
 - 1. Grade: Pourable (self-leveling) formulation for openings in floors and other horizontal surfaces and non-sag formulation for openings in vertical and other surfaces requiring a non-slumping/gunnable sealant, unless firestop system limits use to non-sag grade for both opening conditions.

2.4 FIRE-RESISTIVE ELASTOMERIC JOINT SEALANTS

- A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing, elastomeric sealant of base polymer indicated that complies with ASTM C 920 requirements, including those referenced for Type, Grade, Class, and Uses, and requirements specified in this Section applicable to fire-resistive joint sealants.
 - 1. Sealant Colors: Color of exposed joint sealants as selected by the Commissioner.
- B. Single-Component, Neutral-Curing Silicone Sealant: Type S; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, G, A, and (as applicable to joint substrates indicated) O.
 - 1. Additional Movement Capability: Provide sealant with the capability to withstand 33 percent movement in both extension and compression for a total of 66 percent movement.
- C. Multi-Component, Non-Sag, Urethane Sealant: Type M; Grade NS; Class 25; exposure-related Use NT, and joint-substrate-related Uses M, A, and (as applicable to joint substrates indicated) O.
 - 1. Additional Movement Capability: Provide sealant with the capability to withstand 40 percent movement in extension and 25 percent in compression for a total of 65 percent movement in joint width existing at time of installation, when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, and remain in compliance with other requirements of ASTM C 920 for uses indicated.

- D. Single-Component, Non-Sag, Urethane Sealant: Type S; Grade NS; Class 25; and Uses NT, M, A, and (as applicable to joint substrates indicated) O.
- 2.5 MINERAL FIBER/CERAMIC WOOL NON-COMBUSTIBLE INSULATION (FIRE SAFING)
- A. Provide min. 4 pcf safing insulation to suit conditions and to comply with fire resistance and firestop manufacturer's requirements.
- B. Material must be classified non-combustible when tested per ASTM E 136.
- C. Product: Subject to compliance with requirements, provide one of the following:
1. Thermafiber, Inc. (an Owens Corning company); Thermafiber Safing Mineral Wool Insulation
 2. Rockwool; Roxul Safe Fire Safing Insulation
 3. Johns Manville; Mineral Wool Safing
 4. Or approved equal.
- 2.6 MIXING
- A. For those products requiring mixing prior to application, comply with firestopping manufacturer's directions for accurate proportioning of materials, water (if required), type of mixing equipment, selection of mixer speeds, mixing containers, mixing time, and other procedures needed to produce firestopping products of uniform quality with optimum performance characteristics for application indicated.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Surface Cleaning: Clean out openings and joints immediately prior to installing firestopping to comply with recommendations of firestopping manufacturer and the following requirements:
1. Remove all foreign materials from surfaces of opening and joint substrates and from penetrating items that could interfere with adhesion of firestopping.
 2. Clean opening and joint substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.
 3. Remove laitance and form release agents from concrete.

- B. Priming: Prime substrates where recommended by firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
- C. Masking Tape: Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed upon completion of work and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials. Remove tape as soon as it is possible to do so without disturbing seal of firestopping with substrates.

3.3 CONDITIONS REQUIRING FIRESTOPPING

A. Building Exterior Perimeters

- 1. Where exterior facing construction is continuous past a structural floor, and a space (i.e. construction joint) would otherwise remain open between the inner face of the wall construction and the outer perimeter edge of the structural floor, provide firestopping to equal the fire resistance of the floor assembly.
 - a. If mineral wool is part of firestop system, the mineral wool must be completely covered by appropriate thickness of UL or Warnock Hersey listed firestop sealant or spray.
 - b. Refer to Article 3.6 herein for description of fire safing insulation.
- 2. Provide firestopping whether or not there are any clips, angles, plates, or other members bridging or interconnecting the facing and floor systems, and whether or not such items are continuous.
- 3. Where an exterior wall passes a perimeter structural member, such as a girder, beam, or spandrel, and the finish on the interior wall face does not continue up to close with the underside of the structural floor above, thus interrupting the fire-resistive integrity of the wall system, and a space would otherwise remain open between the interior face of the wall and the structural member, provide firestopping to continuously fill such open space.

B. Interior Walls and Partitions

- 1. Firestop construction joints between top of fire rated walls and underside of floors above.
- 2. Test installed firestop system by either UL or Omega Point, including exposure to hose stream test and including for use with steel fluted deck floor assemblies.
- 3. Firestop system used must allow for deflection of floor above.

C. Penetrations

- 1. Penetrations include conduit, cable, wire, pipe, duct, or other elements which pass through one or both outer surfaces of a fire rated floor, wall, or partition.

2. Except for floors on grade, where a penetration occurs through a structural floor or roof and a space would otherwise remain open between the surfaces of the penetration and the edge of the adjoining structural floor or roof, provide firestopping to fill such spaces in accordance with ASTM E 814.
 3. These requirements for penetrations apply whether or not sleeves have been provided, and whether or not penetrations are to be equipped with escutcheons or other trim. If penetrations are sleeved, firestop annular space, if any, between sleeve and wall of opening.
- D. Provide firestopping to fill miscellaneous voids and openings in fire rated construction in a manner essentially the same as specified herein before.

3.4 INSTALLING THROUGH PENETRATION FIRESTOPS

- A. General: Comply with the through penetrations firestop manufacturer's installation instructions and drawings pertaining to products and applications indicated.
- B. Install forming/damming materials and other accessories of types required to support fill materials during their application and in the position needed to produce the cross sectional shapes and depths required to achieve fire ratings of designated through-penetration firestop systems. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.
- C. Install fill materials for through penetration firestop systems by proven techniques to produce the following results:
 1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.
 2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
 3. For fill materials that will remain exposed after completing work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.5 INSTALLING FIRE RESISTIVE JOINT SEALANTS

- A. General: Comply with ASTM C 1193, and with the sealant manufacturer's installation instructions and drawings pertaining to products and applications indicated.
- B. Install joint fillers to provide support of sealants during application and at position required to produce the cross sectional shapes and depths of installed sealants relative to joint widths that allow optimum sealant movement capability and develop fire resistance rating required.
- C. Install sealants by proven techniques that result in sealants directly contacting and fully wetting joint substrates, completely filling recesses provided for each joint configuration, and providing uniform, cross sectional shapes and depths relative to joint

width that optimum sealant movement capability. Install sealants at the same time joint fillers are installed.

- D. Tool no sag sealants immediately after sealant application and prior to the time skinning or curing begins. Form smooth, uniform beads of configuration indicated or required to produce fire resistance rating, as well as to eliminate air pockets, and to ensure contact and adhesion of sealants with sides of joint. Remove excess sealant from surfaces adjacent to joint. Do not use tooling agents that discolor sealants or adjacent surfaces or are not approved by sealant manufacturer.

3.6 INSTALLING FIRESAFING INSULATION

- A. Install fire safing insulation utilizing welded or screw applied galvanized steel impaling pins and retaining clips; space clips or pins 24" o.c. maximum.
- B. Completely fill voids in areas where safing insulation is required. At spandrel conditions/floor edges, provide insulation at least four (4) inches deep top to bottom.
- C. Cover top of all safing insulation with firestop sealant or spray.

3.7 FIELD QUALITY CONTROL

- A. Special inspecting agency employed and paid by the City of New York will examine completed firestopping to determine, in general, if it is being installed in compliance with requirements.
- B. Inspecting agency will report observations promptly and in writing to Contractor and Commissioner.
- C. Do not proceed to enclose firestopping with other construction until reports of examinations are issued.
- D. Where deficiencies are found, Contractor must restore or replace firestopping so that it complies with requirements.

3.8 CLEANING

- A. Clean off excess fill materials and sealants adjacent to openings and joints as work progresses by methods and with cleaning materials approved by manufacturers of firestopping products and of products in which opening and joints occur.
- B. Protect firestopping during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion. If, despite such protection, damage or deterioration occurs, cut out and remove damaged or deteriorated firestopping immediately and install new materials to product firestopping complying with specified requirements.

END OF SECTION 07 84 13

SECTION 07 92 00

JOINT SEALANTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Flashing reglets and retainers.
2. Coping joints.
3. Exterior wall joints not specified to be sealed in other Sections of work.
4. Interior wall joints not specified to be sealed in other Sections of work, including caulking to fill between architectural woodwork and any wall, floor and/or ceiling imperfections.
5. Control and expansion joints in walls.
6. Joints at wall penetrations.
7. Joints between items of equipment and other construction.
8. All other joints required to be sealed to provide a positive barrier against penetration of air and moisture.

B. Related Sections

1. Section 07 52 00 "Modified Bituminous Membrane Roofing"
2. Section 07 84 13 "Penetration Firestopping"
3. Section 08 81 00 "Glass Glazing" for glazing sealants.
4. Section 09 29 00 "Gypsum Board" for sealant within drywall construction.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

- B. Shop Drawings: Submit shop drawings showing all joint conditions, indicating relation of adjacent materials, all sealant materials (sealant, bond breakers, backing, primers, etc.), and method of installation.
 - 1. Submit joint sizing calculations certifying that movement capability of sealant is not being exceeded.
- C. Samples: Submit the following:
 - 1. Color samples of sealants, submit physical samples (not color chart).
 - 2. Sealant bond breaker and joint backing.
- D. Product Data: Submit manufacturer's technical information and installation instructions for:
 - 1. Sealant materials, indicating that material meets standards specified herein.
 - 2. Backing rods.
- E. Submit manufacturer's certification as required by Article 1.5 herein.
- F. Submit results of testing required in Article 1.4 herein.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Qualification of Installers: Use only personnel who are thoroughly familiar, skilled and experienced in the techniques of sealant work, and who are completely familiar with the published recommendations of the sealant manufacturer.
- C. Pre-Construction Field Adhesion Testing: Before installing elastomeric sealants, field test their adhesion to project joint substrates according to the method in ASTM C 794 and C 1521 that is appropriate for the types of Project joints.
- D. Perform testing per ASTM C 1248 on interior and exterior sealants to determine if sealants or primers will stain adjacent surfaces. Do not start sealant work until results of these tests have been submitted and Commissioner has given written approval to proceed with the work.

1.5 MANUFACTURER'S RESPONSIBILITY AND CERTIFICATION

- A. Contractor must require sealant manufacturer to review the Project joint conditions and details for this Section of the work. Contractor must submit to the Commissioner written certification from the sealant manufacturer that joints are of the proper size and design, that the materials supplied are compatible with adjacent materials and backing, that the materials will properly perform to provide permanent watertight, airtight or vaportight seals (as applicable), and that materials supplied meet specified performance requirements.

1.6 ENVIRONMENTAL CONDITIONS

- A. Temperature: Install all work of this Section when air temperature is above forty (40) degrees F. and below eighty (80) degrees F., unless manufacturer submits written instructions permitting sealant use outside of this temperature range.
- B. Moisture: Do not apply work of this Section on surfaces which are wet, damp, or have frost.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Storage: Store sealant materials and equipment under conditions recommended by their manufacturer.
 - 1. Do not use materials stored for a period of time exceeding the maximum recommended shelf life of the material.
 - 2. Store material in unopened containers with manufacturers' name, batch number and date when shelf life expires.

1.8 WARRANTY

- A. Provide a written, notarized warranty from the manufacturer stating that the applied sealants will show no material failure for a period of ten (10) years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 SEALANT MATERIALS

- A. Exterior Wall Sealant: Provide one (1) part non-sag sealant conforming to the minimum standards of ASTM C 920, Type S, Grade NS, Class 50.
 - 1. Product: Subject to compliance with requirements, provide one of the following:
 - a. Dow Corning; No. 790 or 795
 - b. G.E.; Silpruf SCS 2000 or LM SCS 2700
 - c. Tremco; Spectrem 1 or Spectrem 3
 - d. Sonneborn; Sonolastic 150
 - e. Or approved equal.
- B. Interior Sealant: Provide a one (1) part acrylic based sealant conforming to ASTM C 834.
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide Pecora; AC-20+ Silicone or comparable product by one of the following:
 - a. Tremco
 - b. Sherwin Williams

c. Or approved equal.

C. Colors: Colors selected from manufacturer's standard selection.

2.2 MISCELLANEOUS MATERIALS

A. Back-Up Materials: Provide back-up materials and preformed joint fillers, non-staining, non-absorbent, compatible with sealant and primer, and of a resilient nature, twenty-five (25) percent wider than joint width. Do not use materials impregnated with oil, bitumen or similar materials. Provide back-up materials only as recommended by sealant manufacturer in writing.

B. Provide bond breakers, where required, of polyethylene tape as recommended by manufacturer of sealant.

C. Provide primers recommended by the sealant manufacturer for each material to receive sealant. Note that each exterior joint must be primed prior to sealing.

D. Provide solvent, cleaning agents and other accessory materials as recommended by the sealant manufacturer.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

A. Sealant Installation Standard: Comply with instructions and recommendations of the manufacturer and in accordance with ASTM C 1193 for use of joint sealants as applicable to materials, applications and conditions required by this Project where more stringent installation requirements are specified herein, such requirements apply.

B. Sample Section of Sealant

1. During sealant installation work in exterior wall, the manufacturer of sealant must send a representative to the site, under whose supervision a section of the wall (used as "control section") must be completed for purposes of determining performance characteristics of sealant in joints. Commissioner must be informed of time and place of such installation of control section.

2. Install control section according to specification given herein and will not be considered as acceptable until written acceptance is provided by the Commissioner.

3. Accepted control section will be standard to which all other sealant work must conform.

- C. Supervision: Submit to the Commissioner written certification from the sealant manufacturer that the applicators have been instructed in the proper application of their materials. Use only skilled and experienced workmen for installation of sealant.
- D. Apply sealant under pressure with a hand or power actuated gun or other appropriate means. Use gun with nozzle of proper size and provide sufficient pressure to completely fill joints as detailed. Neatly point or tool joint to provide the contour as indicated on the drawings.
- E. Preparation and Application
 - 1. Thoroughly clean all joints, removing all foreign matter such as dust, oil, grease, water, surface dirt and frost. Sealant must be applied to the base surface. Previously applied film must be entirely removed.
 - 2. Clean stone, masonry and concrete surfaces to receive sealant by grinding, water blast cleaning, mechanical abrading, or combination of these methods as required to provide a clean, sound base surface for sealant adhesion.
 - a. Do not use any acid or other material which might stain surfaces.
 - b. Remove laitance by grinding or mechanical abrading.
 - c. Remove loose particles present or resulting from grinding, abrading, or blast cleaning by blowing out joints with compressed air, oil and water free, or vacuuming joints prior to application of primer or sealant.
 - 3. Clean non-porous surfaces such as metal and glass chemically. Remove protective coatings on metallic surfaces by solvent that leaves no residue and is compatible with sealant. Use solvent and wipe dry with clean, dry lint free paper towels. Do not allow solvent to air dry without wiping. Clean joint areas protected with masking tape or strippable films as above after removal of tape film.
 - 4. Do not seal joints until they are in compliance with drawings, or meet with the control section standard.
 - 5. Joint Size and Sealant Size: Minimum 1/4" wide. In joint 1/4" to 3/8" wide, provide sealant 1/4" deep. In joints wider than 3/8" and up to 1" wide, provide sealant depth one half the joint width. For joints wider than 1", provide sealant depth as recommended by the sealant manufacturer. Depth of joint is defined as distance from outside face of joint to closest point of the filler.
 - 6. Primer: Thoroughly clean joints and apply primer to all surfaces that will receive sealant. Apply primer on clean, dry surfaces, and prior to installation of joint backing. Completely wet both inner faces of the joint with primer. Mask adjacent surfaces of joint with non-staining masking tape prior to priming. Apply primer with clean brush and only when temperature is above 45 deg. F.
 - 7. Joint Backing: In joints where depth of joint exceeds required depth of sealant, install joint backing (after primer is dry) in joints to provide backing and proper

joint shape for sealant. Proper shape for sealant is a very slight "hourglass" shape, with back and front face having slight concave curvature. Use special blunt T-shaped tool or roller to install joint backing to the proper and uniform depth required for the sealant. Install joint backing with approximately twenty-five (25) percent compressions. Do not stretch, twist, braid, puncture, or tear joint backing. Butt joint backing at intersections.

8. Bond Breaker: Install bond breaker smoothly over joint backing so that sealant adheres only to the sides of the joint and not backing.
9. Sealant Application: Apply sealant in accordance with the manufacturer's application manual and manufacturer's instructions, using hand guns or pressure equipment, on clean, dry, properly prepared substrates, completely filling joints to eliminate air pockets and voids. Mask adjacent surfaces of joint with non-staining masking tape. Force sealant into joint in front of the tip of the "caulking gun" (not pulled after it) and force sealant against sides to make uniform contact with sides of joint and to prevent entrapped air or pulling of sealant off of sides. Fill sealant space solid with sealant.
10. Tooling: Tool exposed joints to form smooth and uniform beds, with slightly concave surface conforming to joint configuration per Figure 5A in ASTM C 1193. Finished joints must be straight, uniform, smooth and neatly finished. Remove masking tape immediately after tooling of sealant and before sealant face starts to "skin" over. Neatly remove any excess sealant from adjacent surfaces of joint, leaving the work in a neat, clean condition.

END OF SECTION 07 92 00

SECTION 08 11 13

HOLLOW METAL DOORS AND FRAMES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Interior and exterior hollow metal doors and frames for fire rated and unrated door openings.
2. Exterior doors and frames prepared and finished per Section 09 90 00, Painting and Coating.
3. Preparation of metal doors and frames to receive finish hardware, including reinforcements, drilling and tapping necessary.
4. Preparation of hollow metal doors to receive glazing where required.
5. Furnishing anchors for building into masonry and drywall.
6. Factory prime painting of work of this Section.

B. Related Sections

1. Section 04 20 00 "Unit Masonry"
2. Section 06 20 00 "Finish Carpentry" for installation of doors and frames.
3. Section 08 71 00 "Finish Hardware"
4. Section 08 81 00 "Glass Glazing"
5. Section 09 29 00 "Gypsum Board"
6. Section 09 90 00 "Painting and Coating"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

- B. Product Data: Include construction details, material descriptions, core descriptions, label compliance, compliance with standards referenced herein, sound and fire-resistance ratings, and finishes for each type of door and frame specified.
- C. Shop Drawings: Show fabrication and installation of doors and frames. Include details of each frame type, elevations of door design types, conditions at openings, details of construction, reinforcement for surface applied hardware, dimensions of profiles and hardware preparation, location and installation requirements of door and frame hardware and reinforcements, and details of joints and connections. Show anchorage and accessories.
- D. Door Schedule: Submit schedule of doors and frames using same reference numbers for details and openings as those on Drawings.
 - 1. Coordinate glazing frames and stops with glass and glazing requirements.
- E. Oversize Construction Certification: For door assemblies required to be fire rated and exceeding limitations of labeled assemblies, submit UL certification that each door and frame assembly has been constructed to comply with design, materials, and construction equivalent to requirements for labeled construction.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Manufacturer Qualifications: A firm experienced in manufacturing custom steel doors and frames similar to those indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.
- C. Testing Agency Qualifications: An independent agency qualified according to ASTM E 329 for testing indicated.
- D. Source Limitations: Obtain custom steel doors and frames through one source from a single manufacturer.
- E. Fire-Rated Door and Frame Assemblies: Assemblies complying with NFPA 80, Standard for Fire Doors and Other Opening Protectives, that are listed and labeled by UL, for fire-protection ratings indicated.
 - 1. Test Pressure: Test according to NFPA 252, Standard Methods of Fire Tests of Door Assemblies, or UL 10C, Standard for Positive Pressure Fire Tests of Door Assemblies. After 5 minutes into the test, the neutral pressure level in furnace must be established at 40" or less above the sill.
 - 2. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide UL certification that doors comply with standard construction requirements for tested and labeled fire-protection-rated door assemblies except for size.

3. Temperature-Rise Rating: At exit enclosures, provide doors that have a temperature-rise rating as required by 2008 New York City Building Code in 30 minutes of fire exposure.
 - F. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80, Standard for Fire Doors and Other Opening Protectives, that are listed and labeled, by a testing and inspecting agency acceptable to the Commissioner, for fire-protection ratings indicated, based on testing according to NFPA 257, Standard on Fire Test for Window and Glass Block Assemblies, or UL 9, Standard for Fire Tests of Window Assemblies. Label each individual glazed lite.
 - G. Smoke-Control Door Assemblies: Comply with NFPA 105, Standard for Smoke Door Assemblies and Other Opening Protectives, or UL 1784, Standard for Air Leakage Tests of Door Assemblies and Other Opening Protectives.
- 1.5 DELIVERY, STORAGE, AND HANDLING
- A. Deliver doors and frames palleted, wrapped, or crated to provide protection during transit and Project site storage. Do not use nonvented plastic.
 - B. Store doors and frames under cover at building site. Conform to the requirements of ANSI/SDI A250.11, Recommended Erection Instructions for Steel Frames, for site storage unless more stringent requirements are noted herein. Place units on minimum 4-inch high wood blocking. Avoid using nonvented plastic or canvas shelters that could create a humidity chamber. If wrappers on doors become wet, remove cartons immediately. Provide minimum 1/4-inch spaces between stacked doors to permit air circulation.

PART 2 PRODUCTS

2.1 FABRICATION - GENERAL

- A. Fabricate hollow metal units to be rigid, neat in appearance and free from defects, warp or buckle. Accurately form metal to required sizes and profiles. Weld exposed joints continuously, grind, dress, and make smooth, flush and invisible. Metallic filler to conceal manufacturing defects is not acceptable.
- B. Unless otherwise indicated, provide countersunk flat Phillips or Jackson heads for exposed screws and bolts.
- C. Prepare hollow metal units to receive finish hardware, including cutouts, reinforcing, drilling and tapping in accordance with Finish Hardware Schedule and templates provided by hardware suppliers. Comply with applicable requirements of ANSI A115 "Specifications for Door and Frame Preparation for Hardware."
- D. Locate finish hardware as shown on final shop drawings in accordance with locations noted herein.

2.2 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Steelcraft
 2. Curries
 3. Ceco Door Products
 4. Or approved equal.

2.3 FRAMES

- A. Materials
1. Frames for exterior openings: Commercial grade cold-rolled steel conforming to ASTM A 1008, Standard Specification For Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy With Improved Formability, Solution Hardened, And Bake Hardenable, Type B not less than 14 ga., and with a hot dipped galvanized coating conforming to ASTM A 924, Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process, and A 653, Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvanized) by the Hot-Dip Process, with A-60 coating. Provide zinc-alloy coating with a dull matte surface treated for paint adhesion.
 2. Frames for interior openings: Either commercial grade cold-rolled steel conforming to ASTM A 1008, Standard Specification for Steel, Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy, High-Strength Low-Alloy With Improved Formability, Solution Hardened, And Bake Hardenable, Type B or commercial grade hot-rolled steel conforming to ASTM A 1011, Commercial Steel, Type B. Metal thickness: As shown on the drawings.
- B. Design and Construction
1. All frames must be welded units with integral trim, of the sizes and shapes shown on approved shop drawings. Knocked down frames are not permitted.
 2. All finished work must be strong and rigid, neat in appearance, square, true and free of defects, warp or buckle. Molded members must be clean cut, straight and of uniform profile throughout their lengths.
 3. Jamb depths, trim, profile and backbends: As shown on drawings.

- a. Frames at drywall partitions: Formed with double return backbends to prevent cutting into drywall surface.
4. Provide welded frames with corners mitered and reinforced and faces of welded frames continuously back welded full depth and width of frame conforming to NAAMM Standard HMMA-820; provide hairline face joints.
5. Minimum depth of stops: 5/8"
6. Frames for multiple or special openings must have mullion and/or rail members which are closed tubular shapes having no visible seams or joints. All joints between faces of abutting members must be securely welded and finished smooth.
 - a. Mullions must have 16 ga. internal steel stiffeners welded not less than 4" o.c.
7. Hardware Reinforcements
 - a. Frames must be mortised, reinforced, drilled and tapped at the factory for fully-templated mortised hardware only, in accordance with approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware is to be applied, frames must have reinforcing plates.
 - b. Minimum thickness of hardware reinforcing plates:
 - 1). Hinge and pivot reinforcements - seven (7) ga., 1-1/4" x 10" minimum size.
 - 2). Strike reinforcements - twelve (12) gauge
 - 3). Flush bolt reinforcements - twelve (12) gauge
 - 4). Closer reinforcements - twelve (12) gauge
 - 5). Reinforcements for surface mounted hardware - twelve (12) gauge.
8. Floor Anchors
 - a. Provide adjustable floor anchors, providing not less than two (2) inch height adjustment.
 - b. Minimum thickness of floor anchors: Fourteen (14) gauge.
9. Jamb Anchors
 - a. Provide frames for installation in masonry walls with adjustable jamb anchors of the wire type. Anchors: Minimum 0.156" diameter steel wire. The number of anchors provided on each:
 - 1). Frames up to 7'-6" height - three (3) anchors.
 - 2). Frames 7'-6" to 8'-0" height - four (4) anchors.
 - 3). Frames over 8'-0" height - one (1) anchor for each 2'-0" or fraction thereof in height.

- b. Provide frames for installation in stud partitions with steel anchors of suitable design, not less than eighteen (18) gauge thickness, securely welded inside each jamb as follows:
 - 1). Frames up to 7'-6" height - four (4) anchors.
 - 2). Frames 7'-6" to 8'-0" height - five (5) anchors.
 - 3). Frames over 8'-0" height - five (5) anchors plus one additional for each 2'-0" or fraction thereof over 8'-0".
 - c. Provide frames to be anchored to previously placed concrete or masonry with minimum 3/8" concealed bolts set into expansion shields or inserts at six (6) inches from top and bottom and twenty-four (24) inches o.c. Reinforce frames at anchor locations with sixteen (16) gauge sheet steel stiffeners welded to frame at each anchor.
- 10. Anchors in exterior frames and in masonry walls: Hot dip galvanized per ASTM A 153.
 - 11. Provide frames for installation in masonry wall openings more than 4'-0" in width with an angle or channel stiffener factory welded into the head. Such stiffeners must be not less than twelve (12) gauge steel and not longer than the opening width, and must not be used as lintels or load bearing members.
 - 12. Provide dust cover boxes (or mortar guards) of not thinner than twenty-six (26) gauge steel at all hardware mortises on frames to be set in masonry or plaster partitions.
 - 13. Ceiling Struts: Minimum 3/8" thick x 2" wide steel.
 - 14. Provide all frames with a steel spreader temporarily attached to the feet of both jambs to serve as a brace during shipping and handling.
 - 15. Loose glazing stops: Cold rolled steel, not less than twenty (20) gauge thickness, butted at corner joints and secured to the frame with countersunk cadmium-or zinc-plated screws. Interior frames may be provided with snap-on glazing stops.
 - 16. Except on weatherstripped frames, drill stops to receive three (3) silencers on strike jambs of single door frames and two (2) silencers on heads of double-door frames.
- C. Finish: After fabrication, remove all tool marks and surface imperfections, and dress smooth exposed faces of all welded joints. Then chemically treat frames to ensure maximum paint adhesion and coat on all surfaces with one coat of rust-inhibitive baked-on alkyd primer standard with the manufacturer which is fully cured before shipment to a dry film thickness of 2.0 mils.
- 1. Grout in frames set in masonry walls as described in Section 04 20 00, "Unit Masonry."

2. Epoxy coating for surfaces in contact with grout: Epoxy coating spray applied at 4 to 6 mils, passing NFPA 101, Class A for smoke and flame spread, tested per ASTM E 84.
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide Tnemec; Series 27 FC Typoxy or comparable product by one of the following:
 - 1). PPG
 - 2). Benjamin Moore
 - 3). Sherwin Williams
 - 4). Or approved equal.

2.4 HOLLOW METAL DOORS

- A. Materials: Commercial quality, level, cold rolled steel conforming to ASTM A 1008/A, Commercial Steel, Type B and free of scale, pitting or other surface defects.
 1. Face sheets for interior doors: As shown on the drawings.
 2. Face sheets for exterior doors: As shown on the drawings.
 3. Prepare and finish doors per Section 09 90 00, Painting and Coating, for exterior steel elements.
- B. Design and Construction
 1. Provide doors of the types and sizes shown on the approved shop drawings, of fully welded seamless construction with no visible seams or joints on their faces or vertical edges. Minimum door thickness: 1-3/4".
 2. All doors must be strong, rigid and neat in appearance, free from warpage or buckles. Corner bends must be true and straight and of minimum radius for the gauge of metal used.
 3. Face sheets must be stiffened by continuous vertical formed steel sections spanning the full thickness of the interior space between door faces. These stiffeners must be not less than twenty two (22) gauge spaced not more than six (6) inches apart and securely attached to face sheets by spot welds not more than five (5) inches o.c. Spaces between stiffeners must be sound deadened and thermal insulated the full height of the door with an inorganic non-combustible batt type material.
 4. Door faces must be joined at their vertical edges by a continuous weld extending the full height of the door. All such welds must be ground, filled and dressed smooth to make them invisible and provide a smooth flush surface.
 5. Top and bottom edges of all doors must be closed with a continuous recessed steel channel not less than fourteen (14) gauge, extending the full width of the door and spot welded to both faces.
 6. Edge profiles must be provided on both vertical edges of doors as follows:

- a. Single-acting swing doors - beveled 1/8" in two (2) inches.
- b. Double acting swing doors - rounded on 2-1/8" radius.
- c. No square edge doors permitted.

7. Hardware Reinforcements

- a. Doors must be mortised, reinforced, drilled and tapped at the factory for fully templated hardware only in accord with the approved hardware schedule and templates provided by the hardware supplier. Where surface-mounted hardware (or hardware, the interrelation of which is to be adjusted upon installation - such as top and bottom pivots, floor closers, etc.) is to be applied, doors must have reinforcing plates.
- b. Minimum gauges for hardware reinforcing plates must be as follows:
 - 1). Hinge and pivot reinforcement - seven (7) gauge.
 - 2). Reinforcement for lock face, flush bolts, concealed holders, concealed or surface mounted closers - twelve (12) gauge.
 - 3). Reinforcements for all other surface mounted hardware - sixteen (16) gauge.

8. Glass Moldings and Stops

- a. Where specified or scheduled, provide doors with hollow metal moldings to secure glazing by others in accordance with glass opening sizes shown on drawings.
- b. Securely weld fixed moldings to the door on the security side.
- c. Loose stops: Minimum twenty (20) gauge steel, with mitered corner joints, secured to the framed opening by cadmium or zinc-coated countersunk screws spaced eight (8) inches o.c. Snap-on attachments will not be permitted. Provide stops flush with face of door.

C. Finish: After fabrication, remove all tool marks and surface imperfections, and dress, fill and sand as required to make all faces and vertical edges smooth, level and free of all irregularities. Then chemically treat doors to ensure maximum paint adhesion and coat on all exposed surfaces with manufacturer's standard rust-inhibitive alkyd primer as specified for frames which is fully cured before shipment.

D. Flatness: Maintain a flatness tolerance of 1/16" maximum for doors, in any direction, including in a diagonal direction.

2.5 LABELED DOORS AND FRAMES

- A. Provide labeled doors and frames for those openings requiring fire protection ratings as scheduled on drawings. Such doors and frames must be labeled by Underwriters' Laboratories or other nationally recognized agency having a factory inspection service.
- B. If any door or frame specified by the Commissioner to be fire-rated cannot qualify for appropriate labeling because of its design, size, hardware or any other reason, advise the Commissioner before fabricating work on that item is started.

2.6 HARDWARE LOCATIONS

- A. The location of hardware on doors and frames must be as noted in "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames" of the Door Hardware Institute unless otherwise required by 2008 New York City Building Code.

2.7 CLEARANCES

- A. Fabricate doors and frames to meet edge clearances as follows:
 - 1. Jambs and Head: 1/8" plus or minus 1/16".
 - 2. Meeting Edges, Pairs of Doors: 1/8" Plus or minus 1/16".
 - 3. Bottom: 3/4", if no threshold.
 - 4. Bottom: 3/8", at threshold.
- B. Fire rated doors must have clearances as required by NFPA 80.

2.8 MANUFACTURING TOLERANCES

- A. Maintain manufacturing tolerance within the limits given in HMMA 841 of ANSI/NAAMM, current edition.

2.9 PREPARATION FOR FINISH HARDWARE

- A. Prepare door and frames to receive hardware:
 - 1. Hardware supplier must furnish hollow metal manufacturer approved hardware schedule, hardware templates, and samples of physical hardware where necessary to ensure correct fitting and installation.
 - 2. Preparation includes sinkages and cut-outs for mortise and concealed hardware.
- B. Provide reinforcements for both concealed and surface applied hardware:
 - 1. Drill and tap mortise reinforcements at factory, using templates.
 - 2. Install reinforcements with concealed connections designed to develop full strength of reinforcements.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Refer to Section 06 20 00, Finish Carpentry, for installation procedures for all work of this Section.

END OF SECTION 08 11 13

SECTION 08 31 13

ACCESS DOORS AND FRAMES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Frameless recessed panel access doors at drywall ceilings and walls.
2. Framed flush panel access doors at masonry walls.
3. GFRG access panels for drywall ceilings.
4. Frameless access panels for tile walls.
5. Provide access doors and frames for access from occupied spaces to the following, where indicated or required.
 - a. All shutoff or balancing valves.
 - b. Fire dampers, as required.
 - c. Points of duct access.
 - d. Pull boxes.
 - e. Controls of mechanical and electrical items.
 - f. Masonry shafts for pipes and conduits, as required.
 - g. Pipe spaces, if required.
 - h. Inlets of fans.
 - i. Fusible link and splitter damper at filter bank.
 - j. Automatic damper and motor.
 - k. Equipment not otherwise accessible.

B. Related Sections

1. Section 04 20 00 "Unit Masonry"
2. Section 09 29 00 "Gypsum Board"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

- B. Before any materials of this Section are delivered to the job site, submit complete manufacturer's literature to the Commissioner. Submit plans and schedules showing size and location of each and every access door for the Commissioner's acceptance prior to installation.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. For actual installation of the work of this Section, use only personnel who are thoroughly familiar with the manufacturer's recommended methods of installation and experienced in the skills required.
- C. Fire-Resistance Ratings: Wherever a fire-resistance classification is shown, or for construction where access doors are installed, provide required access door assembly with panel door, frame, hinge and latch from manufacturers listed in Underwriters' Laboratories, Inc. "Classified Building Materials Index" for the rating shown.
 - 1. Provide UL label on each access panel.
 - 2. Provide flush, key operated cylinder lock.
- D. Size Variations: Obtain Commissioner's acceptance of manufacturer's standard size units which may vary slightly from sizes shown or scheduled.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Milcor Inc.
 - 2. Nystrom Inc.
 - 3. Karp Associates, Inc.
 - 4. Or approved equal.

2.2 MATERIALS AND FABRICATION

- A. Assembly must be an integral unit complete with all parts and ready for installation.
- B. Fabricate units of continuous welded steel construction. Grind welds smooth and flush with adjacent surfaces. Provide attachment devices and fasteners of the type required to secure access panels to the types of supports shown.

- C. Frames for Masonry Wall Only (Flush Panel Units): Fabricate frame from sixteen (16) gauge steel. Provide frame with exposed flange not less than one (1) inch wide around perimeter of frame for exposed masonry.
 - 1. For installation in masonry construction, provide frames with adjustable metal masonry anchors.
- D. Frameless Units for Drywall Surfaces (Recessed Panel Units): Provide access doors without exposed frames for drywall adhered to recessed panel.
- E. Panels: Fabricate from fourteen (14) gauge steel, with concealed spring hinges set to open to 175 degrees. Provide removable pin type hinges of the quantity required to support the access panel sizes used in the work. Finish with manufacturer's factory applied baked enamel prime coat applied over phosphate protective coating on steel.
- F. Locking Devices
 - 1. For non-rated access doors, provide flush, screwdriver operated cam locks of number required to hold door in flush, smooth plane when closed.
 - 2. For fire rated doors, provide locks as described in paragraph 1.4, C. herein.
- G. Inserts and Anchorage: Furnish inserts and anchoring devices which must be built into masonry for the installation of access panels. Provide setting drawings, templates, instructions, and directions for installation of anchorage devices.

2.3 GFRG ACCESS PANELS

- A. Provide access panels made from glass fiber reinforced gypsum (GFRG) as manufactured by Castle Access Panels and Forms Inc., or equivalent product of Wind-Lock, Formglas, IntexForms, or approved equal.
 - 1. Corners: Rounded corners.
 - 2. Provide access panels architecturally designed to blend seamlessly with drywall ceiling and wall construction. Coordinate work with Section 092900, "Gypsum Board."
 - 3. Panels must be Class A rated, with a flame spread and smoke developed index of 0 in accordance with ASTM E 84.

2.4 FRAMELESS ACCESS PANELS

- A. Recessed Frameless for Tile Wall Only: Karp DSC-210 by Karp or equal by Milcor, Nystrom or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 COORDINATION

- A. Coordinate all work with the mechanical trades to ensure proper locations and in a timely manner to permit orderly progress of the total work.
- B. Set frames accurately in position and securely attach to supports with face panels plumb or level in relation to adjacent finish surfaces.
- C. Adjust hardware and panels after installation for proper operation.

END OF SECTION 08 31 13

SECTION 08 33 23

OVERHEAD COILING DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. High-speed roll up doors.
 - 2. Hardware and accessories.
 - 3. Motor operation.
- B. Related Sections
 - 1. Section 08 71 00 "Finish Hardware"
 - 2. Section 09 90 00 "Painting and Coating"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's product data, roughing-in diagrams, and installation instructions for each type and size of overhead coiling door. Include operating instructions and maintenance information.
- C. Shop Drawings: Submit shop drawings for special components and installations which are not fully dimensioned or detailed on manufacturer's data sheets. Final sign off of shop drawings are required by the City of New York.
 - 1. Shop drawings must include attachment to structural elements and identify whether structural elements are in place or provided as part of submittal package.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Furnish each roll up door as a complete unit produced by one manufacturer, including hardware, accessories, mounting and installation components.

- C. Provide each type of roll up door by one manufacturer for entire project.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. Provide insulated high-speed roll up doors “Spiral LH” manufactured by Ryttec Corporation, or equal by Albany Door Systems, Cornell Iron Works, Raynor or approved equal.

2.2 DOOR CURTAIN MATERIALS AND CONSTRUCTION OF INSULATED DOOR

- A. Door Panel: Double-walled, aluminum slats are 6 inches high by 1 3/16 inches thick. Integral rubber weatherseal between each of the panels. Door slats are connected by hinge system to provide additional rigidity and security to door panel. Door curtain does not require a tensioning system for additional wind/pressure resistance. Doors which require the use of a tensioning system for additional wind/pressure resistance will not be accepted.
- B. Side Frames: Galvanized steel side frames with full height weatherseal on both sides to seal against door panel. Dual thru-beam photo-eyes mounted within door jamb. Doors using an external coil cord will not be accepted.
- C. Bottom Bar: Extruded aluminum bottom bar with electric, reversing edge that reverses the door upon contacting an object.
- D. Counterbalance: Up to six extension springs in each side column, depending on the size of the door. Springs assist the motor in opening the door. Mechanical release lever on side column allows door to be easily opened in the event of a power failure. Doors using torsion springs for counterbalance or doors with springs located within a barrel will not be accepted.
- E. Drive system: Minimum 2 HP motor with variable speed AC drive which allows for soft acceleration and braking. Doors using a motor with a clutch or pump will not be accepted.
- F. Travel Speed: Opens at up to 60 inches per second and closes at 30 inches per second.
- G. Door to use rotary encoder to regulate door travel limits. Limits to be self-adjusting without the use of tools from floor level at the control panel. Doors using mechanical limits switches or doors that require tools to set the limits will not be accepted.
- H. Door Track: Spiral LH track design features no metal-to-metal contact which results in whisper-quiet, low maintenance operation and eliminates wear on panel slats. Overhead tracks roll back and travel horizontally to accommodate limited headroom of as little as 11”. Doors that roll up on a barrel or whose track design allows metal-to-metal contact will not be accepted
- I. All components must be factory finished.

- J. Electrical Requirements: 208V, 3PH, 5HP.

2.3 INSERTS AND ANCHORAGES

- A. Furnish inserts and anchoring devices which must be set in concrete or built into masonry for installation of units. Provide setting drawings, templates, instructions and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay.
- B. Refer to concrete and masonry Sections of these specifications for installation of inserts and anchorage devices.

2.4 ELECTRIC DOOR OPERATIONS

- A. Provide electric door operator assembly of the size and capacity recommended and provided by the door manufacturer, complete with electric motor and factory-prewired motor controls, gear reduction unit, solenoid operated brake, clutch, remote control stations and control devices. Operator: Trolley type with worm gear drive.
- B. Provide a hand-operated disconnect or a mechanism for automatically engaging a sprocket chain operator and releasing brake for emergency manual operation. Include an interlock device to automatically prevent the motor from operating when emergency sprocket is engaged.
- C. Design operator so that motor may be removed without disturbing the limit-switch adjustment and without affecting the emergency auxiliary operator.
- D. Provide high-starting torque, reversible, constant duty, Class A insulated electric motors with overload protection, sized to move door in either direction, from any position, at not less than 2/3' or more than 1' per second. Coordinate wiring requirements and current characteristics of motors with electrical system of the building.
- E. Provide momentary-contact, key controlled 3-button control station with push button controls labeled "open," "close" and "stop" enclosed in general purpose NEMA Type 1 enclosure.
- F. Automatic Reversing Control: Furnish each door with automatic safety switch, extending full width of door bottom, and located within neoprene or rubber astragal mounted to bottom door rail. Contact with switch will immediately reverse downward door travel. Furnish manufacturer's standard take-up reel or self-coiling cable.
 - 1. Provide electrically actuated automatic bottom bar.
- G. Door closing to be timer adjustable.
- H. Provide closing loops.
- I. Provide safety related automatic reversing devices that consist of a light beam crossing under the door.

- J. Provide timing package to call for contacts for access control systems.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install roll up door and operating equipment complete with necessary hardware, jamb and head mold strips, anchors, inserts, hangers, and equipment supports in accordance with final shop drawings, manufacturer's instructions, and as specified herein.
- B. Upon completion of installation, including work by other trades, lubricate, test and adjust roll up doors to operate easily, free from warp, twist or distortion and fitting weather-tight for entire perimeter.

END OF SECTION 08 33 23

SECTION 08 36 13

SECTIONAL DOORS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Steel sectional overhead doors.
 - 2. Tracks and hardware.
 - 3. Motor operation.
 - 4. Coordinate overhead support with Section 05 50 00.
- B. Related Sections
 - 1. Section 05 50 00 "Metal Fabrications"
 - 2. Section 09 90 00 "Painting and Coating"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's product data, roughing-in diagrams, and installation instructions for each type and size of overhead door. Include manufacturer's operating instructions and maintenance data.
- C. Shop drawings: Submit shop drawings for special components and installations which are not fully dimensioned or detailed in manufacturer's data.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Provide each sectional overhead door as a complete unit produced by one manufacturer, including frames, sections, brackets, guides, tracks, counterbalance mechanisms, hardware, operators and installation accessories, to suit openings and head room allowable.

- C. Wind Loading: Design and reinforce sectional overhead doors to withstand a 30 lb. per sq. ft. wind loading pressure with a maximum deflection of 1/120 of opening width.

1.5 WARRANTY

- A. Special Warranty: Manufacturer agrees to restore or replace components of doors that fail in materials or workmanship within specified warranty period.
 - 1. Warranty Period: Five (5) years from date of Substantial Completion

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Fimbel Door Corporation; Model SI-2024A or comparable product by one of the following:
 - 1. Cornell
 - 2. Overhead Door Company
 - 3. Or approved equal.

2.2 MATERIALS

- A. Construct door sections from 20 ga. galvanized structural quality carbon steel sheets complying with ASTM A924, with a minimum yield strength of 33,000 psi, and a minimum G90 zinc coating complying with ASTM A653. Provide ribbed or fluted sheet to suit manufacturer's standard.
- B. Fabricate sections from a single sheet to provide units not more than 24" high, and nominal 2" deep. Roll horizontal meeting edges to a continuous shiplap rabbeted, or keyed weather seal, with a reinforcing flange return.
- C. Enclose open section with 16 ga. galvanized steel channel end stiles welded in place. Provide intermediate stiles, cut to door section profile, spaced at not more than 48" o.c. and welded in place.
- D. Door shall consist of horizontal, flush steel-insulated sections. Each intermediate section shall be tongue and groove top and bottom to fit together with horizontal joints. No part of door shall project into opening when door is in fully raised position.
- E. Number of panels created by vertical intermediate stiles in each section shall be as follows:
 - 1. Doors 12'-6" wide and less: 3 Panels Across
 - 2. Doors 12'-7" to 16'-2" wide: 4 Panels Across
 - 3. Doors 16'-3" to 20'-2" wide: 5 Panels Across

4. Doors 20'-3" wide and over: 6 Panels Across
 - F. Maximum distance between hinges shall be 48".
 - G. Each section shall be designed to ride with HR-743 or approved equal, 3" sealed solid rollers in the 3" vertical and horizontal tracks, mounted on the interior side of each vertical jamb and overhead under ceiling.
 - H. Horizontal edge of exposed bottom rail of door shall be scribed to contour of grade.
 - I. Measurements of door as indicated hereinafter include a minimum (if field conditions permit) 2 1/2" lap at each existing door opening jamb and 1" lap at head of door opening. Finished thickness of door shall be 2".
 - J. Furnish and install manufacturer's nameplate and rigidly secure to underside of horizontal track angle nearest to chain hoist unit of door. Plate shall permanently indicate name of manufacturer, actual weight of door, length, stretch and pull of each extension spring. Nameplate shall be made of engraved bakelite material with legible letter on a red background.
 - K. Panels: Exterior face to be flush continuous 20 gauge steel. Interior to be continuous embossed 24 gauge aluminum magnesium. Both skins to be laminated to a high density molded foam core to form a rigid sandwich panel with a R12 min energy value and a 30 P.S.F. wind-load rating.
 1. Replacement Sections: Furnish additional Original Equipment Manufactured replacement panels for door as follows:
 - a. Furnish and deliver to City of New York two (2) replacement sections, one bottom and one intermediate, for each door opening. Furnish and install a door label for each replacement (spare) section. Label shall contain the following information: Address, Engine or Ladder Co., size of panel, and whether it as a bottom or intermediate section.
 - b. Hang replacement sections on wall of apparatus floor in area shown on drawings. Provide and install three (3) equidistant painted steel brackets (12" to 18" deep), 8'-10" AFF.
 - 1). Finish paint color: As selected Commissioner.
 - L. Stiles: End stiles to be double end type, 13 gauge, for doors thru 20'-2" wide and triple end type for doors over 20'-2" wide. Intermediate overlay vertical hinge plates to be 3" wide, full section height minimum 16 gauge.
 - M. Finishes: Exterior face to be galvanized with baked-on epoxy primer and factory finished with two (2) coats of electro-statically applied enamel; exterior color to be PPG Industries #3HR 762 691, Tiger Drylac, Ben Moore Industrial or approved equal, Tru-Form Red. Interior skin to have epoxy primer and baked-on white finish.

- N. Windows: For standard design, doors up to 18' wide shall have 2 windows. Doors wider than 18' shall have 4 windows. Windows shall have a rectangular frame 12" x 25", glazed with clear safety glass. Locate windows in third section up from bottom of door, at quarter points of the panel.
- O. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in concrete or built into masonry for installation of units. Provide setting drawings, templates, and directions for installation of anchorage devices. Coordinate delivery with other work to avoid delay.
 - 1. See Section 03 30 00 "Cast-in-Place Concrete" and Section 04 20 00 "Unit Masonry" for installation of inserts and anchorage devices.

2.3 TRACKS, SUPPORTS AND ACCESSORIES

- A. Furnish and install door tracks not less than 11 gauge, 3" x 1-1/2" rolled steel, with vertical tracks inclined rearward in height of each door opening.
- B. Vertical tracks shall be mounted on, and arc welded to, minimum 3" x 3" x 3/16" continuous, structural steel angles. Angles shall extend from grade to a position 12" above cross head shaft over door opening. Angles shall be mounted on, and arc welded to, minimum 4" x 4" x 5/16" continuous structural steel angles, or larger if needed and as specified by Commissioner.
- C. Horizontal tracks shall be mounted on, and arc welded to, minimum 3" x 2" x 3/16" continuous, structural steel angles, supported from steel beams above.
- D. Tracks shall be arc welded to angles with welds not less than 1" in length, spaced not more than 24" o.c.

2.4 HARDWARE

- A. All hinges shall be 11 gauge. Top and bottom fixtures shall be heavy duty type, not less than 13 gauge, of galvanized steel sheet. They shall be graduated in height and agree with inclination of vertical tracks in order to ensure a uniform tight fit to jambs and head of opening when door is in closed position. Hinges and fixture rollers shall operate in perfect freedom from drag or binding at jambs when door is in operation.
- B. End hinges and top fixtures shall be double on all doors thru 20'-2" wide, and triple on all doors over 20'-2" wide. Intermediate hinges shall be installed at every vertical hinge plate. Bottom lifting fixtures shall be reinforced at corner edges and case hardened bolt area. Roller retaining bracket shall be completely welded to bottom fixtures. Attach hinges with heavy duty serrated head lags.
- C. Guide roller shall be solid steel tire, Fimbel Model HR743, or comparable product by Cornell, Overhead Door Company or approved equal, extra heavy duty permanently sealed type with automotive quality bearing. Stem shall be designed with 3/4" x 3/4" reinforcement collar and shall be extra long to accommodate double or triple hinges.

- D. Galvanized steel, reinforcing struts, shall be provided at bottom and top rails and at all intermediate, horizontal section joints as per the following schedule:
1. Doors up to 12'-6" wide: No struts
 2. Doors 12'-7" to 16'-2" wide: 2" high struts
 3. Doors 16'-3" to 19'-2" wide: 2-1/2" high struts
 4. Doors 19'-3" wide and over: 3" high struts

2.5 COUNTERBALANCING MECHANISMS

- A. Coil Springs: Counterbalance door by using heavy duty, high cycle parallel, oil tempered steel coil springs, extension type, with internal coil springs as required. New springs shall be of sufficient size to carry the weight of the door. Door parts shall be mounted above each horizontal door track, at right angles to door opening. Provide a tag wired to each spring, indicating length, stretch and pull. Door shall be balanced, adjusted and installed so that bottom edge of door is above head of required clear opening when in fully open position with hand chain not secured in locking position.
1. Provide a tag wired to each spring indicating length, stretch, pull, and noting High Life Cycle Spring with a single stripe down entire length of spring. Color of painted stripe shall correspond to NAGDM official color codes.
- B. Load Chains: Door shall be hung with heavy duty, straight-link, electrically welded, case hardened, steel load chains that shall be fastened to the bottom cornered lifting fixtures by hardened steel pins or bolts. Chain shall pass up and over minimum 6" cast iron pocket wheels, mounted to cross header shaft and to heavy duty cast iron clevis pulleys at front end of each spring assembly. Pocket wheels shall be a minimum of 6" diameter, keyed and secured to cross head shaft with 1/4" square keys of sufficient length and two (2) set screws.
- C. Shaft: Door shall be provided with a split 1-1/4" diameter, fully round, solid steel, cross head shaft with keyways. Intermediate bearing support assemblies shall be provided for shaft as per manufacturer's recommendation. End bearing plates and intermediate bearings shall be provided for shaft. End bearing plates and intermediate bearings shall be sealed roller bearings.
- D. Cast iron, adjustable coupling sets with keyways shall be provided at center of each shaft as job conditions permit, and at end of shaft that joins operator drive shaft. Couplings shall be secured to shafting with 1/4" square keys of sufficient length and provided with two (2) set screws for each flange end.
- E. Provide split collars on shafting adjacent to pocket wheels, shaft supports and adjustable couplings to prevent walking of operating parts and square keys.

2.6 ACCESSORIES

- A. Spring Guards: Steel guards shall be provided and attached to each horizontal track angle to position springs and pulleys above horizontal track angles. Install in such a manner that they do not interfere with normal operation of extension springs and clevis pulleys.
- B. Safety Wire Cables: Furnish and install safety wire cables (3/16" dia.) which shall run horizontally through extension springs from rear hanger of each horizontal track angle to end plates of front shaft. Cable tension shall be adjusted to withstand spring failure whiplash. Install double ferrules at one end of cable and double clamps at other end.
- C. Weatherstripping
 - 1. Provide and install a 1-1/2" high electrically actuated yellow safety edge to bottom of each door.
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide MillerEdge; ME123 or comparable product by one of the following:
 - 1). Zero International,
 - 2). NN Williams
 - 3). Or approved equal.
 - 2. Top of each door will have a factory applied EPDM top seal.
 - 3. For steel jamb applications provide an EPDM jamb and header seal to be fastened to track by means of a clip system to allow for easy adjustment or replacement.
- D. Caulking: Caulk edges of mounting, angles that abut existing steel jamb plates.

2.7 ELECTRIC WORK

- A. New electric door operator, etc.
 - 1. Operator
 - a. Provide and install side-mounted type industrial operator equipped with an emergency hand chain hoist for manual operation of door in case of an electrical malfunction or power failure.
 - 1). Basis-of-Design Product: Subject to compliance with requirements, provide Fimbel Door Corporation; Model WL or comparable product by one of the following:
 - (a). Cornell
 - (b). Overhead Door Company
 - (c). Or approved equal.
 - b. Operator must be mounted vertically and secured to structural steel and/or walls.
 - c. Operator must be installed near overhead door.

2. Motor
 - a. Furnish and install an instant reversing motor, high torque, totally enclosed, of sufficient horsepower to satisfactorily operate door at a speed of 3/4 ft. per second with 12 ft. high doors, taking 16 seconds to open. Motor shall not be less than 3/4 H.P., 208 volts, 3 phase. If Firehouse service is single phase 208/120v, then overhead motor shall be specified as per service.
 - b. Motor shall be tested for dielectric strength, heating and efficiency in accordance with A.I.E.E.E. standards. Insulation resistance and dielectric strength shall meet requirements of these standards as well. Verify by field testing at City of New York facility required phase for new motor and assume full responsibility for motor's voltage and phase.
3. Reduction Unit: Motor shall be connected to a gear reduction unit which is separate from motor. Unit shall employ worm gears running in high grade oil. Output shaft shall be 3/4" diameter with an outboard bearing support. Connection of motor to gear reducer shall be with flexible coupling.
4. Clutch: Operator shall employ an adjustable, friction type, safety clutch which will provide protection for door, operator and obstruction, should door travel become restricted. Spring tension of clutch mechanism shall be adjustable by means of an adjustable nut and spring in order that proper slippage be obtained in starting door from rest. This would allow clutch to slip should movement of door be obstructed. Clutch shaft shall be supported with heavy duty spherical type bearings.
5. Brake: Operator shall employ a brake drum coupling assembly with solenoid of sufficient power to stop and hold door in any position.
6. Starter: Operator shall have an enclosed magnetic reversing starter with an overload protection interlock so that "open" and "close" contactor not be closed at same time. Starter shall be installed as an integral part of motor and shall be factory wired. In the event that starter is furnished separately, contractor supplying equipment shall bear expense for field installation and connection. Operator shall have a thermal overload protection device or a motor controlling device to protect motor and shall have a separate manual reset button, externally operated without removing electrical box cover. Overload and related control box shall be properly labeled to identify which overhead door this overload is connected to. For example:
 - a. Overload
 - b. Engine Overhead Door 1
7. Limit Switches: Operator shall have two (2) limit switches for automatically stopping motor at extreme "open" and "close" door positions. These switches shall be enclosed in a box mounted on operator.
8. Emergency and Normal Manual Operation

- a. To slow speed shaft of operating unit, a jaw disconnecting clutch shall be applied to release lever. A wire cable or heavy duty chain shall be attached and carried to a convenient point mounted on wall under electric operator. Door shall be released quickly from electric operation to emergency chain hoist operation. Provide two (2) rubber ball grips on cable or sash chain to facilitate quick and easy release. Ball grips shall be positioned to provide maximum leverage. Locate top ball grip 6'-3" above finished floor. The second rubber ball to be mounted in a position to slide under slot located in the chain keeper to keep unit in manual operation. See item "c" below.
 - b. Emergency and normal hand operation shall consist of an auxiliary geared chain hoist mounted integrally with operating unit. Hand chain shall extend to within 24 inches of floor. Hand chain shall have rust-resistant finish with chain links solid and welded. Hoist guard collar shall be rigidly secured to shaft by pinning through shaft.
 - c. Install a heavy duty steel angle (3/16" thick) locking bracket or hand chain keeper with a slot, steel lock pin and 3/16" lever for locking hand chain in position. Bracket slot shall accommodate a link from each hand chain run in addition to cable or sash chain release. Steel pin shall have a minimum length of 2-1/2" and shall be attached to bracket with a wire cable. A slot shall also be provided for release line to be held in position. This shall provide for hand operation of chain hoist unit.
 - d. Door shall be made available for hand operation by pulling release lever chain, disconnecting motor from door and engaging auxiliary chain hoist gears directly to door operating mechanism.
- B. Installation of door operator, etc.
1. Motor drive support: Motor drive equipment shall be supported by a heavy steel angle frame with frame braced to wall and ceiling. Operator shall be side mounted, independent of door track angle installation with a 8" minimum clear space (where available) provided between operator parts and horizontal track angle edge. Wall supports shall be mounted vertically below operator and diagonally braced with operator frame. Install cleat, hanger and diagonal bracing supports at other end of operator frame and above same.
 2. Connections to Door: New operating mechanism shall be directly coupled to overhead door's cross head shaft with a keyed, adjustable, cast iron coupling or heavy duty sprockets using #50 Roller Chain. Furnish 16 tooth # 50 sprocket on main shaft of door and 12 tooth # 50 sprocket on final output shaft of operator.
- C. Disconnect switch
1. Coordinate with Electrical trade to install and wire electrical disconnect switch in vicinity of electric operator mechanism. Disconnect switch shall be used to disconnect power to operator for its maintenance. Operator drive shaft shall be aligned with crosshead shaft of door.
- D. Control devices and accessories

1. Push Button Control Station
 - a. One heavy duty, 3-button control station to be provided on each jamb of the door opening (Total of 2 control stations per door. However, location depends on specific site conditions, which may dictate a different location. Station shall be of momentary contact type, push button control station with (3) buttons marked “Open”, “Close” and “Stop”. Locate on interior front wall, near vertical track angle. Mount (5) feet above floor and label per this specification.
 - b. Provide two-button control stations (one for each door). Coordinate with electrical trade.

2. Overhead door warning bell
 - a. Furnish a heavy duty, 4", 24-volt, weatherproof, slotted gong type, warning bell with weatherproof back box. Bell is to ring continuously unless door is fully opened or fully closed (includes both chain hoist and electrical operation.
 - b. Noise intensity of bell shall be cut in half by appropriate means.

- E. Safety reverse feature
 1. Provide at bottom-side of door an electric yellow safety edge to reverse downward motion of door upon hitting any obstacle. Safety edge shall be connected to electrical operator using a heavy-duty four (4) wire coiled cord. Reversing edge electrical circuit shall be provided with a “fail-safe” monitoring system, which shall notify personnel that edge has become inoperative. Upon detecting an edge failure, this module shall turn on an LED indicator. In addition, module shall automatically change the “down” control button from “MOMENTARY” contact to “CONSTANT” contact requiring that someone must remain at door, depressing button until door is closed. Upon detecting that edge has been restored or replaced, this module shall automatically turn off LED Indicator and return “down” control button to “MOMENTARY” contact.

- F. Photoelectric Eyes: omitted –do not provide.

- G. Door Buzzer System
 1. Where a pass door is required, provide and install a heavy-duty 24 volt, AC buzzer system with two (2) remotely located buzzers. Buzzers shall be located on apparatus floor and in dining area. Each time pass door is opened; a continuous buzzer will sound until door is closed.

2. Buzzers shall be vibrating, dust-proofed, heavy-duty, fully enclosed, adjustable volume type of mechanism. Intensity of buzzer can be adjusted.
 3. Transformer shall be a heavy-duty 120/24 volts, 50 watt.
 4. All other materials not specifically described but required for a complete and proper installation of all work in this Paragraph G shall be provided and installed by the Contractor and subject to approval of Commissioner. Magnetic contacts will not be accepted.
- H. Installation of Wiring, Conduits, Etc.
1. Conduit, Wiring, Etc.
 - a. Coordinate with electrical trade to install switches, relays, and other electrical materials required to interconnect and make the operator, switches, controls, bell and light system circuits, etc. operational.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where sectional overhead doors are to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.3 MISCELLANEOUS WORK AT EACH DOOR

- A. Cycle Counter: Provide at each overhead door a non-resettable counter for each overhead door. Counter shall be located inside door control panel.
- B. Overhead Door Adjustments, Operations, Etc.
 1. Door shall be neatly installed in its proper position with fixed units firmly fastened in place and operating units adjusted to work properly and easily including disengagement mechanism.
 2. Door shall have minimum clearances necessary for operating without binding. Provide and install any additional hardware, equipment, devices, etc. that is

necessary for operation of door in accordance with New York City Building Code requirements mentioned herein. Adjust positioning of track angles as necessary.

3. Adjust tension of all springs as necessary for proper emergency chain hoist operation.
4. Electrical door operator and door component parts including warnings bells shall be adjusted to work properly. Tighten all set screws on various components of Units. Remove excess slack in roller chains. Adjust electrical limits as necessary to place each door into proper operation.
5. Lubricate track curvature.
6. Furnish and install an LED light to indicate that door safety edge is not working. Light shall be located above door control button. Above light, install a sign stating:

WARNING
IF LIGHT IS ON, OVERHEAD DOOR SAFETY EDGE IS NOT WORKING
CALL FOR EMERGENCY SERVICE IMMEDIATELY
NUMBER AS PROVIDED BY NYPD

7. Sign shall be 6" wide by 2 1/2" high. Letters shall be white color, 3/8" high, with a red background.
8. Provide and install name plates on two (2) and three (3) button stations, LED indicator, operator disconnect switch and overload button.
 - a. Nameplate shall read "Overhead Door #_____" and shall be made of engraved Bakelite material with 3/8" white letters on a red background.

3.4 START-UP

- A. Start-up services: Engage a factory-authorized service representative to perform start-up services and to instruct City of New York's maintenance personnel as specified below.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Instruct City of New York's maintenance personnel on procedures and schedules related to start-up and shutdown, troubleshooting, servicing, and preventative maintenance.
- D. Review data in maintenance manuals.
- E. Schedule instruction with City of New York giving at least 7 days advance notice.

3.5 DRILLING, CUTTING, PATCHING, ETC.

- A. Provide all drilling, cutting, patching and restoration required by the work, and restore any existing work damaged by installation. All work shall be restored to Commissioner's satisfaction. Any work which is inferior or unsatisfactory to Commissioner's judgment shall be removed and restored to the Commissioner's satisfaction.
- B. Restoration – If such drilling or cutting is done on finished surfaces of equipment structure, any marring of surface shall be made good by restoration or replacement by Contractor. Contractor shall be held responsible for restoration due to excessive cutting or drilling; and any damage to the building or its contents caused by Contractor or Contractor's workers.

END OF SECTION 08 36 13

SECTION 08 44 13

GLAZED ALUMINUM CURTAIN WALLS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Aluminum and glass curtain wall assemblies.
2. Glass and glazing in conjunction with the work of this Section.
3. Curtain wall insulation, fire separation, fire safing and smoke stop.
4. All necessary steel or aluminum members where required to support, strengthen and/or reinforce aluminum members.
5. Sealants, caulking, joint fillers, gaskets, fasteners, vents and weeps, weep tubes, bellows, closures, gutters, end dams, flashings, trim, as shown or as may be required in conjunction with the system or to joint the system to adjacent construction.
6. Anchors, inserts and insert setting diagrams, furnishing of inserts and insert setting diagrams, support brackets, reinforcing, bracing, stiffeners, flashing.
7. Shop drawings engineering calculations, erection drawings, samples and conformance test data.
8. Field check for water leakage.
9. Protection and cleaning, as defined herein.
10. Field measurements of adjacent and/or supporting construction and verification of existing conditions.

B. Related Sections

1. Section 07 21 00 "Thermal Insulation"
2. Section 07 92 00 "Joint Sealants"

3. Section 08 81 00 "Glass Glazing" for glazing other than in conjunction with the metal work of this Section.

1.3 PERFORMANCE REQUIREMENTS

- A. General Performance: Comply with performance requirements specified, as determined by manufacturer's documented performance criteria and field testing of glazed aluminum curtain walls representing those indicated for this Project without failure due to defective manufacture, fabrication, installation, or other defects in construction.
 1. Glazed aluminum curtain walls shall withstand movements of supporting structure and deflection from uniformly distributed and concentrated live loads.
 2. Failure also includes the following:
 - a. Thermal stresses transferring to building structure.
 - b. Glass breakage.
 - c. Noise or vibration created by wind and thermal and structural movements.
 - d. Loosening or weakening of fasteners, attachments, and other components.
 - e. Failure of operating units.
- B. Engineering Services: Engineer glazed aluminum curtain walls, including comprehensive engineering analysis by a Professional Engineer licensed in the State of New York, including, but not limited to story drift, twist, column shortening, long term creep, using performance requirements and design criteria indicated.
- C. Design Wind Loads: Comply with 2008 New York City Building Code or ASCE-7, whichever is more stringent.
- D. Structural-Test Performance: Test according to ASTM E 330 as follows:
 1. When tested at positive and negative wind-load design pressures, assemblies do not evidence deflection exceeding specified limits.
 2. When tested at 150 percent of positive and negative wind-load design pressures, assemblies, including anchorage, do not evidence material failures, structural distress, and permanent deformation of main framing members exceeding 0.2 percent of span.
 3. Test Durations: As required by design wind velocity, but not less than 10 seconds.
- E. Deflection of Framing Members: At design wind pressure, as follows:
 1. Deflection Normal to Wall Plane: Limited to edge of glass in a direction perpendicular to glass plane not exceeding $L/175$ of the glass edge length for each individual glazing lite or an amount that restricts edge deflection of individual glazing lites to 3/4 inch, whichever is less.

2. Deflection Parallel to Glazing Plane: Limited to $L/360$ of clear span or 1/8 inch, whichever is smaller.
 3. Cantilever Deflection: Where framing members overhang an anchor point, limit deflection to two times the length of cantilevered member, divided by 175.
- F. Seismic Performance: Glazed aluminum curtain walls shall withstand the effects of earthquake motions determined according to SEI/ASCE 7.
- G. Story Drift: Accommodate design displacement of adjacent stories indicated.
1. Design Displacement: Coordinate with Commissioner.
 2. Test Performance: Meeting criteria for passing based on building occupancy type when tested according to AAMA 501.4 at 1.5 times the design displacement.
- H. Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft.
- I. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed glazing and framing areas when tested according to AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 6.24 lbf/sq. ft.
1. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.
- J. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:
1. Temperature Change (Range): 120 deg F, ambient; 180 deg F, material surfaces.
 2. Test Interior Ambient-Air Temperature: 75 deg F.
 3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.
- K. Energy Performance: Glazed aluminum curtain walls shall have certified and labeled energy performance ratings in accordance with NFRC.
1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than 0.45 Btu/sq. ft. x h x deg F as determined according to NFRC 100.

2. Solar Heat Gain Coefficient: Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.37 as determined according to NFRC 200.
 3. Air Infiltration: Maximum air leakage through fixed glazing and framing areas of 0.30 cfm/sq. ft. of fixed wall area as determined according to ASTM E 283 at a minimum static-air-pressure differential of 6.24 lbf/sq. ft.
 4. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC-certified condensation resistance rating of no less than 65 as determined according to NFRC 500.
- L. Sound Transmission: Provide glazed aluminum curtain walls with fixed glazing and framing areas having the following sound-transmission characteristics:
1. Outdoor-Indoor Transmission Class: Minimum 30 when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.
- M. Dimensional Tolerances: Provide glazed aluminum curtain wall system, including anchorage, that accommodates dimensional tolerances of building frame and other adjacent construction.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit Product Data for each product specified, including details of construction relative to materials, dimensions of individual components, profiles, and finishes.
- C. Submit Shop Drawings showing fabrication and installation of glazed aluminum curtain wall system including plans, elevations, sections, details of components, and attachments to other units of Work.
 1. For installed products indicated to comply with certain design loadings, include structural analysis data signed and sealed by a Professional Engineer licensed in the State of New York responsible for their preparation.
- D. Submit samples for verification of each type of exposed finish required in manufacturer's standard sizes. Where finishes involve normal color and texture variations, include Sample sets showing the full range of variations expected.
- E. Submit cutaway sample of each vertical-to-horizontal intersection of system, made from 12-inch lengths of full-size components and showing details of the following:
 1. Joinery.
 2. Anchorage.
 3. Expansion provisions.

4. Glass and glazing.
5. Flashing and drainage.
- F. Submit welder certificates indicating that welders comply with requirements specified in "Quality Assurance" Article.
- G. Submit installer certificates signed by manufacturer certifying that installers comply with requirements in "Quality Assurance" Article.
- H. Submit product test reports from a qualified independent testing agency evidencing compliance of glazed aluminum curtain wall system with requirements based on comprehensive testing of manufacturer's current system.
- I. Submit test reports, calculations, computer analysis and other necessary data from a qualified independent inspecting and testing agency retained by the Contractor indicating compliance with performance requirements of glazed aluminum curtain wall system.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Testing Agency Qualifications: To qualify for approval, an independent testing agency must demonstrate to Commissioner's satisfaction, based on evaluation of agency-submitted criteria conforming to ASTM E 699, that it has the experience and capability to satisfactorily conduct the testing indicated without delaying the Work.
- C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice in New York and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of glazed aluminum curtain wall systems that are similar to those indicated for this Project in material, design, and extent.
- D. Installer Qualifications: Engage an experienced installer to perform work of this Section who has specialized in installing glazed aluminum curtain wall systems similar to those required for this Project and who is acceptable to manufacturer.
 1. Engineering Services: Engage a qualified professional engineer licensed in the State of New York to prepare or supervise the preparation of data for glazed aluminum curtain wall systems, including drawings, testing program development, test-result interpretation, and comprehensive engineering analysis that shows systems' compliance with specified requirements. Submit to Commissioner for review and approval.
- E. Source Limitations: Obtain each type of glazed aluminum curtain wall system from one source and by a single manufacturer.

- F. **Product Options:** Information on Drawings and in Specifications establishes requirements for system's aesthetic effects and performance characteristics. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sight lines and relationships to one another and to adjoining construction. Performance characteristics are indicated by criteria subject to verification by one or more methods including preconstruction testing, field testing, or in-service performance.
1. Do not modify intended aesthetic effects, as judged solely by Commissioner, except with Commissioner's approval and only to the extent needed to comply with performance requirements. Where modifications are proposed, submit comprehensive explanatory data to Commissioner for review.
- G. **Welding Standards:** Comply with applicable provisions of AWS D1.2, "Structural Welding Code--Aluminum."
1. Engage welders who have satisfactorily passed AWS qualification tests for welding processes involved and who are currently certified for these processes.
- H. **Mockups:** Prior to installing glazed aluminum curtain wall system, construct mockups for each form of construction and finish required to verify selections made under Sample submittals and to demonstrate aesthetic effects as well as qualities of materials and execution. Build mockups to comply with the following requirements, using materials indicated for Work.
1. Locate mockups on-site in the location and of the size indicated or, if not indicated, as directed by Commissioner.
 2. Notify Commissioner 7 days in advance of the dates and times when mockups will be constructed.
 3. Demonstrate the proposed range of aesthetic effects and workmanship.
 4. Obtain Commissioner's approval of mockups before start of Work.
 5. Retain and maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
 - a. Approved mockups in an undisturbed condition may become part of the completed Work.
- I. **Preinstallation Conference:** Conduct conference at Project site. Review methods and procedures related to glazed aluminum curtain wall system including, but not limited to, the following:
1. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
 2. Review structural loading limitations.

3. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Review required inspecting, testing, and certifying procedures.
5. Review weather and forecasted weather conditions and procedures for coping with unfavorable conditions.

1.6 PROJECT CONDITIONS

- A. Field Measurements: Verify dimensions by field measurements before fabrication and show recorded measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the Work.
1. Where field measurements cannot be made without delaying the Work, guarantee dimensions and proceed with fabrication without field measurements. Coordinate construction to ensure that actual dimensions correspond to guaranteed dimensions.

1.7 WARRANTY

- A. Manufacturer's Warranty: Submit a written warranty executed by the manufacturer agreeing to restore or replace components of a glazed aluminum curtain wall system that fail in materials or workmanship within the specified warranty period. Failures include, but are not limited to, the following:
1. Structural failures including, but not limited to, excessive deflection.
 2. Noise or vibration caused by thermal movements.
 3. Failure of system to meet performance requirements.
 4. Failure of operating components to function normally.
 5. Water leakage.
 6. Glazing breakage.
- B. Warranty Period: 10 years from date of Substantial Completion (except as noted below).
- C. Finish Warranty: Standard form in which manufacturer agrees to restore finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.
1. Deterioration includes, but is not limited to, the following:
 - a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.

- b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
 - c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.
2. Warranty Period: 20 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Wausau Window and Wall Systems; SuperWall or comparable product by one of the following:
1. Kawneer
 2. YKK America AP
 3. Or approved equal.

2.2 METALS

- A. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated, complying with the requirements of standards indicated below.
1. Sheet and Plate: ASTM B 209.
 2. Extruded Bars, Rods, Shapes, and Tubes: ASTM B 221.
 3. Extruded Structural Pipe and Tubes: ASTM B 429.
 4. Structural Profiles: ASTM A 1008.
 5. Welding Rods and Bare Electrodes: AWS A5.10.
- B. Steel Reinforcement: Manufacturer's standard zinc-rich, corrosion-resistant primer complying with SSPC-PS Guide No. 12.00; applied immediately after surface preparation and pretreatment. Select surface preparation methods according to recommendations in SSPC-SP COM and prepare surfaces according to applicable SSPC standard.
1. Structural Shapes, Plats, and Bars: ASTM A 36.
 2. Cold Rolled Sheet and Strip: ASTM A 1008.
 3. Hot Rolled Sheet and Strip: ASTM A 1011.

2.3 FRAMING

- A. Framing Members: Extruded or formed aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Construction: Thermally broken.
 2. Glazing System: Retained mechanically with gaskets on four sides.
 3. Glazing Plane: Front.
- B. Brackets and Reinforcements: Manufacturer's standard high strength aluminum with non-staining, non-ferrous shims for aligning system components.
- C. Fasteners and Accessories: Manufacturer's standard corrosion resistant, non-staining, non-bleeding fasteners and accessories compatible with adjacent materials.
1. Use self locking devices where fasteners are subject to loosening or turning out from thermal and structural movements, wind loads, or vibration.
 2. Reinforce members as required to receive fastener threads.
 3. Use exposed fasteners with countersunk Phillips screw heads, finished to match framing system.
- D. Anchors: Three way adjustable anchors with minimum adjustment of 2" that accommodate fabrication and installation tolerances in material and finish compatible with adjoining materials and recommended by manufacturer.
1. Concrete and Masonry Inserts: Hot dip galvanized cast iron, malleable iron, or steel inserts complying with ASTM A 123, or ASTM A 153 requirements.

2.4 GLASS

- A. Glass shall be of the types and minimum thickness, as shown on the drawings and specified herein, and shall, in addition, meet the requirements of the following paragraphs.
- B. All glass shall be the manufactured product of one (1) company. All fabricated glass products shall be the fabricated and coated products of one (1) company. All glass shall be delivered to the site bearing the manufacturer's label, complete with glazing instructions where applicable.
- C. Insulating glass units shall be 1" thick (minimum), consisting of two lites of 1/4" (minimum) glass separated by desiccant filled metal spacers with welded, fused, soldered or bent corners and welded, fused or soldered splices or joints to provide 1/2" hermetically sealed and dehydrated spaces. Insulating glass shall be dual seal and certified for compliance with seal classification "CBA" by the Insulating Glass Certification Council (IGC) and tested in accordance with the following ASTM Test methods. Secondary seal on structural silicone glazed units shall be a special silicone edge seal certified for use in structural silicone glazing applications over the temperature range and structural loading as called for under the performance criteria section of this Specification.

1. ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation.
 2. ASTM E 546-88 Standard Test Method for Frost Point of Sealed Insulating Glass Units.
 3. ASTM E 576-88 Standard Test Method for Dew/Frost Point of Sealed Insulating Glass Units in Vertical Position.
- D. The lites comprising insulating glass units shall be annealed, heat strengthened, (or fully tempered where required to meet wind load or safety glazing requirements), as shown, specified, required, or recommended by the specified glass fabricator to ensure against heat breakage and to ensure adequate glass performance at the specified design pressures specified under the performance criteria herein.
- E. Glass shall conform to the requirements of ASTM C 1036. Heat strengthened and tempered glass shall conform to the requirements of ASTM C 1048. Tempered glass shall also conform to ANSI Z97.1-1975. All heat strengthening and tempering shall be by the horizontal process, and processed in such a manner as to have all roller distortion in a horizontal direction as installed on the building.
- F. All fully tempered glass shall be heat soaked (checked) at glass surface temperatures of not less than 400 deg. F. for 4 hours, if this procedure is available from the glass manufacturer. Glass manufacturer shall submit for approval their proposal for meeting this requirement.
- G. Where glass manufacturer cannot ensure adequate structural performance of insulating glass units, based upon combination of inner/outer lite, assume outer lite alone must satisfy structural requirements. Method of installation must be in accordance with the manufacturer's published literature, as well as the latest standards of the FGMA and SIGMA. Method of installation shall make provision to weep all sill glazing rabbets.
- H. Contractor shall provide certification from glass producer/fabricator that glass producer/fabricator has reviewed all glazing details and thicknesses and finds same suitable for the purpose intended in accordance with these specifications. This shall include a written wind load and thermal stress analysis showing a probability of failure of no greater than 8 lites per thousand for conventional glazing and 4 lites per thousand for structural silicone glazing at the design loads and local climatic thermal conditions.
- I. Glass producer/fabricator shall make regular inspections (maximum interval semi-monthly) of glazing work in progress at the point of glazing for both mock-up and job production units to verify that glazing is proceeding in accordance with any recommendations. Glass producer/fabricator shall attend the mock-up test at no additional cost to the City of New York.
- J. Insulating glass units shall be installed in such manner as to adequately drain the glazing rabbet in a manner, as approved in writing, by the insulating unit glass manufacturer.

- K. Contractor shall include in the design provision for reglazing vision lites with access from the interior except for structurally glazed lites which shall be reglazed from the exterior and spandrel lites with access from the exterior only. Mock-up shall include lites shop glazed in the initial installation as well as field glazed in the replacement mode.
- L. Glass deflection at full design load shall be limited to the lesser of $L/100$ or $3/4"$. In event specified glass cannot meet these requirements, Contractor shall submit calculations establishing anticipated deflections and reduction in glass bite as a consequence of deflections, along with the drawings. Submittal shall include a statement from glass manufacturer/fabricator that reduction in glass bite will not result in a reduction in load resistance capacity, an increase in breakage probability and that all specified warranties shall remain in effect.

2.5 GASKETS/WEATHERSTRIPPING

- A. All gaskets/weatherstripping shall be neoprene, except where used in contact with a silicone sealant. In contact with silicone sealants, gaskets and spacers shall be preformed heat cured silicone rubber, chemically compatible with the silicone sealant and suitable for the specific purpose intended or equal, as recommended by the sealant manufacturer and approved by the Commissioner. All gaskets/weatherstripping/spacers shall have continuous mechanical engagement to framing members; adhesive attachment is not acceptable. All weatherstrips and gaskets shall be continuous with vulcanized/ molded corners where possible.
- B. Sponge gaskets/weatherstripping/spacers shall be extruded black neoprene or silicone rubber (or equal as provided for in 2.4 A) with a hardness of $40 + 5$ durometer Shore A and conform to ASTM C 509-79 (for neoprene). Sponge gaskets shall be compressed 20% to 35% in the final installed position.
- C. Dense gaskets/weatherstripping shall be extruded black neoprene conforming to NAAMM SG-1-70 or silicone rubber (or equal as provided for in 2.04 A) with a hardness of $75 + 5$ durometer Shore A for hollow profiles and $60 + 5$ for solid profiles.

2.6 SEALANTS (NON-STRUCTURAL)

- A. All joints, which are sealed with sealant as part of the fabrication or erection procedure, shall be sealed with an approved butyl (concealed) or low modulus silicone (exposed or concealed) sealant in color to match the adjoining surfaces or as may be required by the Commissioner. All perimeter sealant (metal to adjacent construction) shall be low or medium modulus silicone sealant.
- B. In using specified sealants, strictly observe the printed instructions of sealant manufacturer regarding joint size, limitations, backer rod, mixing, cleaning, surface preparation, priming and application. A primer shall be used, unless printed instructions advise to the contrary, and sealant manufacturer certifies that the use thereof will reduce its performance. Sealant shall not be applied when substrates are wet or when the temperature is below 40 deg. F.

- C. Care shall be exercised to ensure against "Three Surface Adhesion." Bond breakers shall be provided where necessary.
- D. Contractor shall provide certification from sealant manufacturer that the sealant manufacturer has reviewed all sealant details and finds same suitable for the purpose intended, compatible with and will not stain the surfaces with which they are in contact. Statement as to compatibility, adhesion sufficiency and non-staining shall be accompanied by actual test results on production substrates performed in accordance with applicable ASTM procedures.

2.7 SEALANTS (STRUCTURAL)

- A. Structural Glazing Sealants: ASTM C 1184, chemically curing silicone formulation that is compatible with system components with which it comes in contact, specifically formulated and tested for use as structural sealant and approved by structural-sealant manufacturer for use in curtain-wall assembly indicated.
- B. All components which are adhered with a structural silicone sealant/adhesive as part of the fabrication, glazing or erection procedure, shall be sealed/adhered with an approved structural silicone.
- C. In using specified sealants, strictly observe the printed instructions of sealant manufacturer regarding joint size, limitations, backer rod, mixing, cleaning, surface preparation, priming and application. A primer shall be used, unless printed instructions advise to the contrary. Sealant shall not be applied when substrates are wet or when the temperature is below 40 deg. F. Units shall not be moved until structural silicone seal has achieved full cure.
- D. Care shall be exercised to ensure against "Three Surface Adhesion." Bond breakers shall be provided where necessary.
- E. Contractor shall provide certification from sealant manufacturer that the sealant manufacturer has reviewed all sealant details and tested all contact surfaces, and finds same suitable for use with proposed sealant, the purpose intended and compatible with the surfaces with which they are in contact. Sealant manufacturer's certification shall include the following based upon tests performed on production run materials:
 - 1. Test data of adhesion to production samples of metal and glass, tested in accordance with ASTM C 794.
 - 2. Compatibility statement that the materials in contact with the sealant such as gaskets, spacers, setting blocks, are compatible with the sealant after 21 days exposure to ultra violet, 2000 - 4000 (micro watt u.v. radiation).
 - 3. Stress statement that when exposed to the specified wind load the stress in the silicone sealant of dimensions shown does not exceed 20 psi with a safety factor of 6:1.

- F. Where silicone bonds to a metal or glass surface, the weakest element in the line of stress must have a minimum strength of 120 psi. For each combination of substrates submit report from an independent laboratory for tests performed in the following manner:
1. Assemble and fully cure a minimum of 6 samples using actual substrates and a minimum sample length of 5".
 2. Subject sample to a tensile load such that nominal stress on silicone is 20 psi, hold for one minute and remove load. Repeat for additional loadings, increasing nominal silicone stress by 20 psi with each successive loading. Continue until failure occurs or until 200 psi is successfully applied.
 3. All 6 samples must successfully withstand at least 120 psi. Report maximum stress and mode of failure. If one or more samples do not meet this criteria, revise failed element and repeat tests with 6 new samples. Repeat until all 6 samples are successfully tested.
 4. Testing shall be performed in such a manner as to establish stress and safety factor over the temperature range described herein.
 5. Prepare an outline for a quality assurance program for evaluation of adhesion and other physical attributes of sealants and submit to Commissioner for review and approval.
 6. Program shall cover both initial testing of components for sealant adhesion/compatibility, etc., and also random testing of production run materials, etc. Include testing at full negative design pressure, one unit per one hundred units manufactured for the project. Also include methods which will be employed to monitor sealant application to ensure full sealant contact. No sealant work shall be performed prior to approval of program.

2.8 GLAZING BLOCKS

- A. Provide setting blocks at the sill quarter points of all glass lites. Setting blocks shall be black dense neoprene or heat cured silicone rubber with a hardness of 80 to 90 durometer, Shore A, a minimum length of 4", and a minimum width, which will permit full support of both panes of glass in an insulating glass unit or a monolithic unit no matter how positioned within the glazing rabbet.
- B. Shims used in conjunction with setting blocks must be of the same materials, hardness, length and width as the setting blocks.
- C. Provide side blocks within the upper half of both jambs of all glass lites. Side blocks shall be black dense neoprene or heat cured silicone rubber with a 60 to 70 durometer, Shore A, or as recommended by the selected glass manufacturer. Provide 1/8" clearance between block and bearing surface.

2.9 MISCELLANEOUS MATERIALS

- A. Provide straps, plates and brackets, built-in inserts, as required for support and anchorage of the fabricated items to adjacent surfaces.
- B. Where steel reinforcement of units is required for strength or other unavoidable necessity and concealed within (encased) in aluminum sections or employed in potentially wetted areas, hot dip galvanize the pieces after fabrication with 2.0 ounce zinc coating, complying with ASTM A 123. All other steel reinforcement shall be coated with two (2) heavy coats of zinc rich primer in differing colors.
- C. Slip Joint Linings/Sleeves: Provide stainless steel sleeve spacers and/or suitable bearing pads, as required, to ensure free movement between surfaces where expansion and deflection movements are intended. Provide polystyrene shims or pads or equivalent plastic units of sizes and thicknesses (minimum 1/16") recommended by the manufacturer to permanently prevent "freeze up" of joints. All sleeves, spacers, bracing pads and shims must be incombustible and rated by UL.
- D. Flashing required within the system shall be 26 ga. stainless steel.
- E. Flashing required to join the system to adjacent construction shall be 26 ga. stainless steel.

2.10 INSULATION AND FIRESAFING

- A. Provide thermal and fire separation insulation where shown and where required, with a minimum thickness of 4" (or thicker if required to meet specified thermal performance) and the foil vapor barrier (permeability not to exceed 0.020 Perms) at interior surface and all edges. Provide insulation and "fire wrap" at mullions and/or stiffeners as required to meet overall thermal and condensation resistance requirements and as required by 2008 New York City Building Code.
- B. Tape and seal all joints in vapor barrier and along edges and supports to ensure continuous vapor barrier.
- C. Apply insulation utilizing welded or screw applied impaling pins and retaining clips. Adhesive attachment will not be accepted.
- D. Provide 5" thick (minimum) insulation at full perimeter at each floor level between floor edge and curtain wall to meet requirements of 2008 New York City Building Code. Provide hourly rating as required by 2008 New York City Building Code. Seal all edges with an approved fire resistant sealant to provide a continuous fire/smoke barrier.
- E. Insulation and firesafing shall be suitably isolated/separated from direct contact with spandrel glass.

2.11 THERMAL BREAK

- A. Provide thermal break or thermally improved construction, complying with the requirements of these Specifications and which have been in service on comparable installations for no less than three (3) years. Submit data to prove structural sufficiency over full exterior thermal range specified, and anticipated wind loading. In the event a structural thermal break is employed, manufacturer shall establish structural properties over full thermal range.

2.12 FABRICATION

- A. General: Fabricate glazed aluminum curtain wall system according to Shop Drawings. Fabricate components that, when assembled, will have accurately fitted joints with ends coped or mitered to produce hairline joints free of burrs and distortion. After fabrication, clearly mark components to identify their locations in Project according to Shop Drawings.
- B. Forming: Form shapes with sharp profiles, straight and free of defects or deformations, before finishing.
- C. Prepare components to receive concealed fasteners and anchor and connection devices.
- D. Fabricate components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.
- E. Welding: Weld components to comply with referenced standard and Shop Drawings, unless otherwise indicated. Weld before finishing components. Weld in concealed locations to greatest extent possible to minimize distortion or discoloration of finish. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.
- F. Glazing Pockets: Provide minimum clearances for thickness and type of glass indicated according to GANA's "Glazing Manual."
- G. Glazing Pockets: Provide minimum clearances for thickness and type of plastic sheet indicated according to plastic sheet manufacturer's recommendations.
- H. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete or masonry, protect against corrosion by painting contact surfaces with bituminous paint.
- I. Frame Units: Factory assemble frame units according to Shop Drawings to greatest extent possible. Rigidly secure non-movement joints. Seal joints watertight, unless otherwise indicated. Assemble components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.

1. Install glazing according to approved Shop Drawings.
 - J. All machining, cutting and welding shall be done before finish is applied.
- 2.13 ALUMINUM FINISHES
- A. General: Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations relative to applying and designating finishes.
 - B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in the same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.
 - C. High-Performance Organic Finish: Four-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Colors
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide Lintec "Bone White" LT609-70 or comparable product by one of the following:
 - 1). PPG
 - 2). Valspar
 - 3). Or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. General: Comply with manufacturer's written instructions for protecting, handling, and installing glazed aluminum curtain wall system. Do not install damaged components. Fit joints to produce hairline joints free of burrs and distortion. Rigidly secure non-movement joints. Seal joints watertight, unless otherwise indicated. Provide means to drain water to the exterior to produce a permanently weatherproof system.
- B. Metal Protection: Where aluminum will contact dissimilar metals, protect against galvanic action by painting contact surfaces with primer or by applying sealant or tape recommended by manufacturer for this purpose. Where aluminum will contact concrete

or masonry, protect against corrosion by painting contact surfaces with bituminous paint.

- C. Install components to drain water passing joints, condensation occurring in glazing channels, condensation occurring within framing members, and moisture migrating within the system to the exterior.
- D. Install framing members plumb and true in alignment with established lines and grades.
- E. Install factory-assembled frame units plumb and true in alignment with established lines and grades.
- F. Install column covers plumb and true in alignment with established lines and grades.
- G. Anchorage: After system components are positioned, fix connections to building structure as indicated on Shop Drawings.
 - 1. Provide separators and isolators to prevent metal corrosion and electrolytic deterioration and to prevent impeding movement of moving joints.
- H. Welding: Weld components to comply with referenced standard and Shop Drawings, unless otherwise indicated. Weld in concealed locations to minimize distortion or discoloration of finish. Protect glazing surfaces from welding.
- I. Install glazing according to approved Shop Drawings.
- J. Install sealant according to approved Shop Drawings. Comply with requirements of Section 07 92 00, "Joint Sealants."
- K. Install firesafing in locations indicated. Comply with requirements of Section 07 84 13, "Penetration Firestopping."
- L. Erection Tolerances: Install glazed aluminum curtain wall system to comply with the following maximum tolerances:
 - 1. Plumb: 1/16" in 10 feet; 1/8" in 40 feet.
 - 2. Level: 1/16" in 20 feet; 1/8" in 40 feet.
 - 3. Alignment: Where surfaces abut in line, limit offset from true alignment to 1/16"; where a reveal or protruding element separates aligned surfaces by less than 2", limit offset to 1/4".
 - 4. Location: Limit variation from plane or location shown on Shop Drawings to 1/8" in 12 feet; 1/4" over total length.

3.3 FIELD QUALITY CONTROL

- A. Testing Agency: Contractor shall engage a qualified independent testing agency to perform testing indicated.

- B. Static air infiltration test(s) as well as the static pressure water test(s) shall be performed on 100 sq feet to determine if curtain wall meets performance requirements specified herein under Article 1.3.
- C. Test for water infiltration per AAMA 501.2. Test within the first 10% of work complete, area to be a minimum of 100 SF of wall and including a perimeter where CW adjoins masonry construction. Interior finishes must not interfere with observation of test area or be removed from test area. Not appropriate for operable windows and doors.
 - 1. This test (AAMA 501.2) shall be performed infield on new construction.

END OF SECTION 08 44 13

SECTION 08 51 13

ALUMINUM WINDOWS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Composite frame fixed and casement windows.
2. Miscellaneous insulation at window frames.
3. Anchors, hardware and accessories including trim pieces and panning.

- B. Related Sections

1. Section 07 92 00 "Joint Sealants"
2. Section 08 81 00 "Glass Glazing"

1.3 PERFORMANCE REQUIREMENTS

- A. Windows must conform to the "Voluntary Specification for Aluminum Prime Windows & Sliding Glass Doors" as published by ANSI/AAMA 101/I.S.2-97 unless more stringent requirements are specified. Windows must conform to minimum standards of AW60 for projected, casement and fixed windows.

- B. Performance and Testing: Except as otherwise indicated, comply with air infiltration tests, water resistance tests and applicable load tests specified in ANSI/AAMA 101/I.S.2-97 for type and classification of window units required in each case.

1. Testing: Where manufacturer's standard window units comply with requirements and have been tested in accordance with specified tests, provide certification by manufacturer to the Commissioner showing compliance with such tests; otherwise, perform required tests through an AAMA-accredited testing laboratory or agency, and provide certified test results to the Commissioner.
2. Test reports must be not more than four years old.
3. Sample submitted for tests will be manufacturer's standard construction and whose overall dimensions must be at least the lay-out size window and window/door unit

required for this Project. Sequence of test may be optional between manufacturer and the testing laboratory except that in all cases, air infiltration test must be performed before water resistance test. Sash in sample will contain the approximate configuration as that of windows to be tested.

4. To evaluate testing and measure product performance, conduct testing on manufacturer's standard product glazed with type of glazing material specified herein.
- C. Conduct a thermal transmittance test and a condensation resistance test according to AAMA 1503-04, "Voluntary Test Method for Thermal Transmittance and Condensation Resistance of Windows, Doors and Glazed Wall Sections." Use standard test conditions as specified in Section 9.1 of the 1503.1-04. Windows must meet the following minimum criteria:
1. Condensation Resistance Test (CRF)
 - a. With window sash and ventilators closed and locked, test unit in accordance with AAMA 1502.7.
 - b. Condensation Resistance Factor (CRF): Not less than 50.0 for glass and 55.0 for frame.
 2. Thermal Transmittance Test (Conductive U-Value)
 - a. With window sash and ventilators closed and locked, test unit in accordance with AAMA 1503.0.
 - b. Conductive thermal transmittance (U-value): Not more than 0.60 BTU/hr/sf/deg. F.
- D. Provide anchorage of window to building substrate to withstand pressure or suction winds loads per requirements of the 2008 New York City Building Code but not less than 30 psf.
- E. Life Cycle Testing: When tested in accordance with AAMA 910-93, there is to be no damage to fasteners, hardware parts, support arms, activating mechanisms or any other damage which would cause the window to be inoperable at the conclusion of testing. Air infiltration and water resistance tests must not exceed the primary performance requirements specified.
- F. Fabricate and install window to allow for thermal movement of materials when subject to a temperature differential from -30 deg. F. to +180 deg. F. without damage of any finish.
- G. Take field measurements of existing openings prior to submitting shop drawings and show same on shop drawings for each opening. Note that the Contract Drawings show general locations and sizes of windows, but the Contractor remains responsible for all field measurements, quantities, etc.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Shop Drawings
 - 1. Show in detail and fully indicate the location and the quantities of all the work, the kind, finish, size, section of each unit, overall and detail dimensions, factory and field joint locations, arrangements and details, location and detail of each piece of anchorage, flashings, supporting construction provisions for the work of others.
 - 2. Show all surrounding conditions on elevations and details, including steel, concrete, masonry, lintels, block, and anchorage; all correctly dimensioned.
 - 3. Shop drawings of building elevations must be at scale of 1/8" = 1'-0", or larger. Other shop drawings may be at a scale that is normal to trade, or larger if required by the Commissioner.
 - 4. Contract drawings may not be used (reproduced, enlarged, reduced, etc.) by Subcontractor for shop drawings.
 - 5. Shop drawings also must fully demonstrate all requirements respecting the manufacture, finishing, handling, storage, carting sequence and erection of all materials specified herein.
 - 6. Show joinery techniques, provision for horizontal and vertical expansion, drainage and weep systems, glass and metal thicknesses and framing member profiles.
 - 7. Identify all materials, including metal alloys, glass types, fasteners, and glazing materials. Identify all shop and field sealants by product name and locate on drawings. Glazing details must be at full size scale.
 - 8. Show dimensioned position of glass edge relative to metal rabbet.
 - 9. Show attachments of window assemblies to adjoining construction and location of all work; kind, finish and size of frames, overall and detail dimensions, location and detail of each anchorage; supporting and adjoining construction; provision for the work of other trades; and all other required information.
 - 10. Contractor must verify all measurements of existing window openings in the field before commencing fabrication.
 - 11. Any proposed deviations from work shown on the Contract drawings must be indicated and so identified on shop drawings for the Commissioner's review.
- C. Samples
 - 1. Submit 12" long sample of extrusion with specified finish.
 - 2. Full size corner section of all types of aluminum frame, showing construction, glass and finishing - 12" x 12".

3. All fasteners, straps, hardware, locks and keys, sealant, etc.
 - D. Submit certified test results as required herein.
 - E. Warranty as noted in Article 1.8.
- 1.5 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- 1.6 DELIVERY, STORAGE AND HANDLING
- A. Protection
 1. Pack, load, ship, unload, store and protect materials in a manner which will avoid abuse, damage and defacement in accordance with the recommendations contained in the AAMA Aluminum Curtain Wall Manual #10 entitled "Care and Handling of Architectural Aluminum From Shop to Site."
 2. Remove all paper type wrappings and interleavings that are wet or which could become wet when unloading materials.
 3. Store inside structure in space designated by the City of New York.
 4. Stack vertically or on edge so that water cannot accumulate on or within materials using wood or plastic shims between components to provide water drainage and air circulation.
 5. Cover materials with tarpaulins or plastic hung on frames to provide air circulation and prevent contaminants from contacting aluminum.
 6. Keep water away from stored assemblies.
 7. The Contractor is responsible for taking the steps necessary to protect the materials from careless handling of tools, weld splatter, acids, roofing tar, solvents, abrasive cleaners, and other items that could damage window components and finish.
- 1.7 MANUFACTURER'S REPRESENTATIVE
- A. Contractor shall require representative of manufacturer of the windows to provide field instructions and supervision of the installation of the windows.
 - B. Contractor shall require the manufacturer's representative to make sure that the subcontractor's workmen are fully instructed and experienced in the handling and application of all the materials, and shall see that all the materials are correctly installed.
 - C. Upon completion of the installation, the Contractor shall submit to the Commissioner in written form certification that the representative of the manufacturer of the windows has supervised the work of this Section and that all windows are correctly installed.

1.8 WARRANTY

- A. Aluminum Windows and Related Materials: Manufacturer's ten (10) year warranty on materials and workmanship, including finish on aluminum and on glass and glazing.

PART 2 PRODUCTS

2.1 WINDOWS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Wausau Window and Wall Systems; 2250i-XP INvent PLUS Inswing Casement Windows and Fixed Windows or comparable product by one of the following:

1. Kawneer
2. Graham
3. Or approved equal.

2.2 PROJECTED, FIXED AND CASEMENT WINDOWS

- A. Aluminum Windows and Components

1. Extruded aluminum prime billet 6063-T5 alloy, conforming to ASTM B 221.
2. Aluminum sheet alloy 3003-H14, conforming to ASTM B 209.
3. Minimum principal window member wall thickness 1/8".
4. Minimum frame and vent depth, front to back: 3-1/2". Vent to be flush with frame.
5. Maximum exposed metal sightlines of main frame members: 2" at all members except 3" at horizontal intermediate between fixed and operable areas.
6. Glass plane must be recessed 1" from exterior plane of window members. Framing members must possess a sloped profile duplicating an existing exterior putty glazed steel window profile.
7. There may be no change in exterior sightlines between fixed and operable units including spandrel areas.
8. Vent sections must be tubes.

- B. Hardware - General

1. All steel components 300 Series stainless steel (SS) (except roto-operator arms) i.e. - keepers, fasteners, hold open arms, tracks, etc.
2. All aluminum components 6063-T5 (T6) or 6105-T6.

3. Locking handles and cases, white bronze.
 4. Hardware members bridging frame or vent thermal barrier to be nylon or suitable low conductivity, non-metallic material.
- C. Thermal-Break, Frame and Vent: Factory poured in place polyurethane into prefinished cavity in manufacturer's plant providing minimum 3/8" separation.
- D. Weatherstripping: Extruded sponge neoprene meeting ASTM C509.
- E. Glass and Glazing: Shop glaze, see Section 088100, Glass Glazing, for material description.
- F. Fabrication
1. General
 - a. Finish, fabricate and shop assemble frame and sash members into complete windows under responsibility of one manufacturer.
 - b. No bolts, screws or fastenings to bridge thermal barriers or impair independent frame movement.
 2. Casement Ventilator: Miter all corners and mechanically stake over solid aluminum, corner block minimum 1/4" thick, set and sealed in epoxy leaving hairline joinery, then seal weathertight. Joinery methods must not discolor finish or be unsightly.
 3. Main Frame Members: Miter all corners and continuously weld along unexposed surfaces so as not to affect the structural or thermal integrity of the thermal barrier, then seal weathertight.
 4. Weatherstripping
 - a. Two rows (both inner and outer overlap contacts) of extruded neoprene meeting ASTM C 509 in extruded races about perimeter of operating sash.
 - b. Securely stake and join at corners.
 5. Glass Drainage: Ensure that water will not accumulate and remain in contact with the perimeter areas of sealed insulating glass.
 6. Hardware
 - a. Hinges
 - 1). Provide each operating sash with a minimum of two extruded aluminum, three knuckle hinges with stainless steel pins. Provide windows over 4'-4" in height with an intermediate hinge.
 - 2). Attach the hinge to both the frame and sash with concealed fasteners. The hinge must match the window.
 - b. Locks

- 1). Provide each operating sash with a minimum of one die cast euro-style locking handle up to a ventilator height of 4'-0" and two locking handles on vents over 4'-0" high.
- 2). Provide all locking hardware with a stainless steel strike backed up with an extruded aluminum leg a minimum of .125" in thickness. Locking directly against aluminum, will not be accepted.
- c. Riser Blocks: Equip each operating vent with a nylon riser block at the sill.

2.3 FINISH OF ALUMINUM

- A. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in color coat.
 1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
 2. Colors
 - a. Clerestory Windows (1st floor):
 - 1). Interior: Benjamin Moore "Black Panther" 2125-10 or comparable color by Sherwin Williams, PPG Paints or approved equal.
 - 2). Exterior: Match Benjamin Moore "Black Panther" 2125-10 or comparable color by Sherwin Williams, PPG Paints or approved equal.
 - b. Casement Windows (2nd floor):
 - 1). Interior: Match Lintec "Bone White LT 609-70 or comparable color by Sherwin Williams, PPG Paints or approved equal.
 - 2). Exterior: Match Benjamin Moore Whale Gray or comparable color by Sherwin Williams, PPG Paints or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Use only skilled tradesman with work done in accordance with approved Shop Drawings and specifications.
- B. Plumb and align window faces in a single plane for each wall plane and erect windows and materials square and true adequately anchored to maintain positions permanently when subjected to normal thermal and building movement and specified wind loads.
- C. Adjust windows for proper operation after installation.

- D. Furnish and apply sealants to provide a weathertight installation at all metal-to-metal joints and intersections of frames and at opening perimeters. Wipe off excess material and leave all exposed surfaces and joints clean and smooth.
- E. Insulate aluminum from direct contact with steel, masonry, concrete, or non-compatible materials by bituminous paint, zinc chromate primer, or other suitable insulation material.
- F. Install blanket insulation behind aluminum covers, panning and trim to ensure thermally insulated seal.

3.3 ADJUSTING AND CLEANING

- A. After completion of window installation, inspect, adjust, and put windows into working order. Leave windows clean, free of labels, etc.
- B. Replace glass that is broken, damaged, cracked, or permanently stained.
- C. Perform final cleaning of finish in accordance with AAMA 610.1.

END OF SECTION 08 51 13

SECTION 08 62 00

UNIT SKYLIGHTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Modular skylights
- B. Related Sections
 - 1. Section 07 52 00 "Modified Bituminous Membrane Roofing"
 - 2. Section 07 62 00 "Sheet Metal Flashing and Trim"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product data for each type of skylight specified, including details of construction relative to materials, dimensions of individual components, profiles, finishes, and glazing light transmission and thermal characteristics.
- C. Shop drawings showing fabrication and installation of skylights, including plans, elevations, sections, details of components, and attachments to other unit of Work.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: An entity meeting the requirements of DDC General Conditions Section 014000 1.7/C/1.
- C. Manufacturer Qualifications: Manufacturer meeting the requirements in DDC General Conditions Section 014000 1.7/C/5.

1.5 PERFORMANCE REQUIREMENTS

- A. Skylight shall withstand dead and live loads caused by pressure and uplift of wind acting normal to plane of roof as tested in accordance with ICBO Evaluation Service

Criteria AC-17 to a download pressure of 190 psf and 100 psf uplift as measured in accordance with ANSI/ASTM E 330.

- B. Per NY energy code 2010:
 - 1. U-factor assembly: 0.60 maximum.
 - 2. SHGC assembly: 0.40 maximum.
- C. Air Infiltration: Provide unit skylights with maximum air leakage through assembly of 0.2 cfm/sq. ft. when tested according to ASTM E 283 at a minimum static-air-pressure difference of 1.57 lbf/sq. ft.
- D. Water Penetration: Provide unit skylights that do not evidence water penetration through assembly when tested according to ASTM E 331 at a zero static-air-pressure difference across unit.

1.6 WARRANTY

- A. Skylight Warranty: Provide written warranty signed by manufacturer, agreeing to restore or replace work that exhibits defects in materials or workmanship and guaranteeing weathertight and leak-free performance. "Defects" is defined as uncontrolled leakage of water and abnormal aging or deterioration.
 - 1. Warranty Period: 10 years from date of Substantial Completion.
- B. Finish Warranty: Provide written warranty signed by manufacturer agreeing to restore or replace work with finish defects. "Defects" is defined as peeling, chipping, chalking, fading, abnormal aging or deterioration, and failure to perform as required.
 - 1. Warranty Period for Fluoropolymer Finish: 10 years from date of Substantial Completion for color and film integrity.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Available Manufacturers: Subject to compliance with requirements, provide Modular Fixed VMZ Longlight skylights as manufactured by Velux America Inc. or equivalent product of Bristolite, Wasco, or an approved equal acceptable to the Commissioner.

2.2 MATERIALS

- A. Frame and sash constructed of protruded composite material consisting of 80% glass fiber and 20% polyurethane, NCS-S0500-Nm RAL 9003, aluminum cap, Granite Grey color.
 - 1. Interior surface treated with white paint in color NCS S0500-N, gloss 30 (nearest RAL color 9003) When connecting two modules, the visible sash profile will measure 55 mm with a 10 mm dark grey shadow groove in the middle.

2. Exterior cladding surface is covered with extruded aluminum, coated with scratch resistant powder lacquer granite grey Akzo Nobel "Noir 2100 Sable" (60-120 my), PPG, Valspar or approved equal.

B. Flashings

1. Type: Prefabricated, modular standard flashings top, sides and bottom produced to fit the individual skylight modules.
2. Materials: Aluminium, grey painted
3. Surface: Powder coated polyamide polyester lacquer, NCS S 7500-N; RAL 7043, 1mm thickness

- C. Pane Construction:** Insulating glass unit 34mm IGU 8mm outer toughened glass, 20mm cavity- Argon gas-filled, Low E on cavity side, 6.76mm inner laminated float pane- consisting of 2 layers of 0.36mm interlayer foil.

- D. Hardware:** Manufacturer's standard.

- E. Motor Operator:** Manufacturer's standard electric motor and remote control.

2.3 MISCELLANEOUS MATERIALS

- A. Fasteners: Same metal as metals being fastened, or nonmagnetic stainless steel or other non-corrosive metal as recommended by manufacturer. Match finish of exposed fasteners with finish of material being fastened.
- B. Mastic Sealant: Polyisobutylene; non-hardening, non-skinning, non-drying, non-migrating sealant.
- C. Elastomeric Sealant: Generic type recommended by unit manufacturer that is compatible with joint surfaces. ASTM C 920; Type S; Grade NS; Class 25; and Uses NT, G, A, and (as applicable to joint substrates indicated) O.

2.4 FINISH FOR ALUMINUM

- A. Fluoropolymer, Two-Coat Coating System: Manufacturer's standard two-coat thermocured system, complying with AAMA 2605.2, composed of specially formulated inhibitive primer and fluoropolymer color topcoat containing not less than 70 percent polyvinylidene resin by weight; complying with AAMA 605.2.

1. Colors 2nd floor, Interior

- a. Basis-of-Design Product: Subject to compliance with requirements, provide Lintec "Bone White" LT609-70 or comparable product by one of the following:
 - 1). PPG
 - 2). Valspar
 - 3). Or approved equal.

2.5 FABRICATION

- A. General: Factory-assembled unit consisting of specified glazing, extruded aluminum glazing retainer, gasketing, inner frame designed to mount on separate curb, and self-contained flashing.
- B. Curb: Nominal 1-1/2-inch-thick treated wood curbs with cants or formed flashing flange to receive roof flashing and counterflashing. Wood to meet requirements of Section 062000 Finish Carpentry.
- C. Condensation Control: Fabricate skylight units with integral internal gutters and non-clogging weeps to collect and dispose of condensation.
- D. Thermal Break: Fabricate skylight units with thermal barrier separating interior metal framing from materials exposed to outside temperature.
- E. Glazing Gaskets: Manufacturer's standard glazing system of EPDM or neoprene, closed-cell sponge neoprene, or EPDM, or of partially vulcanized butyl tape or liquid-applied elastomeric sealant.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. General: Conform with manufacturer's instructions and recommendations. Coordinate with installation of roof deck and other substrates to receive skylight units. Coordinate with installation of vapor barriers, roof insulation, roofing, and flashing as required to assure that each element of the work performs properly and that combined elements are waterproof and weathertight. Anchor units securely to supporting structural substrates, adequate to withstand lateral and thermal stresses as well as inward and outward loading pressures.
 - 1. Except as otherwise indicated, install roof skylights according to construction details of "NRCA Roofing and Waterproofing Manual."
- B. Isolation: Where metal surfaces of units are to be installed in contact with incompatible metal or corrosive substrates, including wood, apply bituminous coating on concealed metal surfaces, or provide another permanent separation.
- C. Flange Seals: Except as otherwise indicated, set flanges of accessory units in a thick bed of roofing cement to form a seal.
- D. Cap Flashing: Where cap flashing is required as component of the skylight, install to provide an adequate waterproof overlap with roofing or roof flashing (as counterflashing). Seal with thick bead of mastic sealant, except where overlap is indicated to be left open for ventilation.

3.3 ADJUSTING, CLEANING AND PROTECTION

- A. Lubricate hardware and moving parts. Adjust operating sash, operators, and accessories for a tight fit at contact points and for smooth operation and weathertight closure.
- B. Adjust hardware for proper alignment, smooth operation, and proper latching without unnecessary force or excessive clearance.
- C. Clean exposed metal and glass surfaces according to manufacturer's instructions. Touch up damaged metal coatings.
- D. Clean and polish glazed skylight units, inside and out, not more than 5 days prior to date of substantial completion.

END OF SECTION 08 62 00

SECTION 08 71 00

DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY:

A. Section Includes: Finish Hardware for door openings, except as otherwise specified herein.

1. Door hardware for steel (hollow metal) doors.
2. Door hardware for aluminum doors.
3. Door hardware for wood doors.
4. Door hardware for other doors indicated.
5. Keyed cylinders as indicated.

B. Related Sections:

1. 06 20 00 Finish Carpentry.
2. 08 44 13 Glazed Aluminum Curtain Walls
3. 08 11 13 Hollow Metal Doors and Frames.

C. References: Comply with applicable requirements of the following standards. Where these standards conflict with other specific requirements, the most restrictive shall govern.

1. Builders Hardware Manufacturing Association (BHMA)
2. NFPA 101 Life Safety Code
3. NFPA 80 -Fire Doors and Windows
4. ANSI-A156.xx- Various Performance Standards for Finish Hardware
5. UL10C – Positive Pressure Fire Test of Door Assemblies
6. ANSI-A117.1 – Accessible and Usable Buildings and Facilities
7. DHI /ANSI A115.IG – Installation Guide for Doors and Hardware

D. Intent of Hardware Groups

1. Should items of hardware not definitely specified be required for completion of the Work, furnish such items of type and quality comparable to adjacent hardware and appropriate for service required.

1.3 SUBMITTALS:

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Special Submittal Requirements: Coordinate submittals of this Section with related Sections to ensure the "design intent" of the system/assembly is understood and can be reviewed together.
- C. Product Data: Manufacturer's specifications and technical data including the following:
 - 1. Detailed specification of construction and fabrication.
 - 2. Manufacturer's installation instructions.
 - 3. Wiring diagrams for each electric product specified. Coordinate voltage with electrical before submitting.
 - 4. Submit 6 copies of catalog cuts with hardware schedule.
- D. Shop Drawings - Hardware Schedule: Submit 6 complete reproducible copy of detailed hardware schedule in a vertical format.
 - 1. List groups and suffixes in proper sequence.
 - 2. Completely describe door and list architectural door number.
 - 3. Manufacturer, product name, and catalog number.
 - 4. Function, type, and style.
 - 5. Size and finish of each item.
 - 6. Mounting heights.
 - 7. Explanation of abbreviations and symbols used within schedule.
 - 8. Detailed wiring diagrams, specially developed for each opening, indicating all electric hardware, security equipment and access control equipment, and door and frame rough-ins required for specific opening.
- E. Templates: Submit templates and "reviewed Hardware Schedule" to door and frame supplier and others as applicable to enable proper and accurate sizing and locations of cutouts and reinforcing.
 - 1. Templates, wiring diagrams and "reviewed Hardware Schedule" of electrical terms to electrical for coordination and verification of voltages and locations.
- F. Samples: (If requested by the Commissioner)
 - 1. 1 sample of Lever and Rose/Escutcheon design, (pair).
 - 2. 3 samples of metal finishes
- G. Contract Closeout Submittals: Comply with DDC General Conditions including specific requirements indicated.
 - 1. Operating and maintenance manuals: Submit 3 sets containing the following.
 - a. Complete information in care, maintenance, and adjustment, and data on repair and replacement parts, and information on preservation of finishes.

- b. Catalog pages for each product.
 - c. Name, address, and phone number of local representative for each manufacturer.
 - d. Parts list for each product.
2. Copy of final hardware schedule, edited to reflect, "As installed".
 3. Copy of final keying schedule, to be approved by client prior to finalization.
 4. As installed "Wiring Diagrams" for each piece of hardware connected to power, both low voltage and 110 volts.
 5. One set of special tools required for maintenance and adjustment of hardware, including changing of cylinders.

1.4 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1. Statement of qualification for distributor and installers.
2. Statement of compliance with regulatory requirements and single source responsibility.
3. Distributor's Qualifications: Firm with 3 years experience in the distribution of commercial hardware.
 - a. Distributor to employ full time Architectural Hardware Consultants (AHC) for the purpose of scheduling and coordinating hardware and establishing keying schedule.
 - b. Hardware Schedule shall be prepared and signed by an AHC.
4. Regulatory Label Requirements: Provide testing agency label or stamp on hardware for labeled openings.
 - a. Provide UL listed hardware for labeled and 20 minute openings in conformance with requirements for class of opening scheduled.
 - b. Underwriters Laboratories requirements have precedence over this specification where conflict exists.
5. Single Source Responsibility: Except where specified in hardware schedule, furnish products of only one manufacturer for each type of hardware.

B. Review Project for extent of finish hardware required to complete the Work. Where there is a conflict between these Specifications and the existing hardware, notify the Commissioner in writing and furnish hardware in compliance with the Specification unless otherwise directed in writing by the Commissioner.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Packing and Shipping: Comply with DDC General Conditions.

1. Deliver products in original unopened packaging with legible manufacturer's identification.
2. Package hardware to prevent damage during transit and storage.
3. Mark hardware to correspond with "reviewed hardware schedule".
4. Deliver hardware to door and frame manufacturer upon request.

- B. Storage and Protection: Comply with manufacturer's recommendations.

1.6 PROJECT CONDITIONS:

- A. Coordinate hardware with work of other trades. Furnish hardware items of proper design for use on doors and frames of the thickness, profile, swing, security and similar requirements indicated, as necessary for the proper installation and function, regardless of omissions or conflicts in the information on the Contract Documents.
- B. Review Shop Drawings for doors and entrances to confirm that adequate provisions will be made for the proper installation of hardware.

1.7 WARRANTY:

- A. Manufacturer's Warranty:
 - 1. Closers: Ten years
 - 2. Exit Devices: Three Years
 - 3. Locksets & Cylinders: Three years
 - 4. All other Hardware: Two years.

1.8 BUILDING USERS' INSTRUCTION:

- A. Instruct building personnel in operation and maintenance of hardware units.

1.9 SERVICE

- A. Service Materials
 - 1. Special Tools: Provide special wrenches and tools applicable to each different or special hardware component.
 - 2. Maintenance Tools: Provide maintenance tools and accessories supplied by hardware component manufacturer.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

<u>Item:</u>	<u>Basis of Design</u> <u>Manufacturer:</u>	<u>Additional:</u>
Hinges	Stanley	Bommer, Hager, or approved equal
Offset Pivot Set	Rixon	LCN, Dorma, or approved equal
Locksets	Corbin Russwin	Schlage, Yale, or approved equal
Cylinders	Corbin Russwin	Schlage, Yale, or approved equal
Exit Devices (Entry Door)	Van Duprin	Falcon, Stanley, or approved equal
Exit Devices (others)	Adams Rite	Falcon, Stanley, or approved equal
Closers	Norton	Stanley, LCN, or approved equal

Floor Closers, Pivots	Dorma	Rixon, Dorma, or approved equal
Magnetic Locks	Dorma	Norton, Allegion or approved equal
Power supply	Dorma	Norton, Allegion or approved equal
Push/Pull Plates	Burns	Rockwood, Trimco, or approved equal
Push/Pull Bars	Burns	Rockwood, Trimco, or approved equal
Protection Plates	Burns	Rockwood, Trimco, or approved equal
Door Stops	Rockwood	Burns, Trimco, or approved equal
Kick-Down Floor Stop	Rockwood	Stanley, Burns or approved equal
Threshold & Gasketing	Reese	National, Zero, or approved equal
Kick Plates	Trimco	Allegion, Rockwood or approved equal
Key Control Cabinet	Lund	Barska, Kekab, or approved equal

2.2 MATERIALS:

A. Hinges:

1. Template screw hole locations
2. Minimum of 2 permanently lubricated non-detachable bearings
3. Equip with easily seated, non-rising pins
4. Sufficient size to allow 180-degree swing of door
5. Furnish hinges with five knuckles and concealed bearings
6. Provide hinge type as listed in schedule.
7. Furnish 3 hinges per leaf to 7 foot 6 inch height. Add one for each additional 30 inches in height or fraction thereof.
8. Tested and approved by BHMA for all applicable ANSI Standards for type, size, function and finish
9. UL10C listed for Fire

B. Offset Pivot Sets

1. Approved for exterior and interior applications.
2. Rated for weight up to 650lbs.
3. Rated for door width up to 4'-0" width.
4. Heavy weight pivot set.
5. Must allow for 180 degree door swing, trim permitting.

C. Mortise Type Locks and Latches:

1. Tested and approved by BHMA for ANSI A156.13, Series 1000, Operational Grade 1, Extra-Heavy Duty, Security Grade 2 and be UL10C
2. Fit ANSI A115.1 door preparation
3. Functions and design as indicated in the hardware groups
4. Solid, one-piece, 3/4-inch (19mm) throw, anti-friction latchbolt made of self-lubricating stainless steel
5. Deadbolt functions shall have 1 inch (25mm) throw bolt made of hardened stainless steel
6. Latchbolt and Deadbolt are to extend into the case a minimum of 3/8 inch (9.5mm) when fully extended
7. Auxiliary deadlatch to be made of one piece stainless steel, permanently lubricated
8. Provide sufficient curved strike lip to protect door trim

9. Lever handles must be of forged or cast brass, bronze or stainless steel construction and conform to ANSI A117.1. Levers that contain a hollow cavity are not acceptable
10. Lock shall have self-aligning, thru-bolted trim
11. Levers to operate a roller bearing spindle hub mechanism
12. Mortise cylinders of lock shall have a concealed internal setscrew for securing the cylinder to the lockset. The internal setscrew will be accessible only by removing the core, with the control key, from the cylinder body.
13. Spindle to be designed to prevent forced entry from attacking of lever
14. Provide locksets with 7-pin removable and interchangeable core cylinders
15. Each lever to have independent spring mechanism controlling it
16. Core face must be the same finish as the lockset
17. Provide (5) keys per cylinder
18. Provide a biting chart from manufacturer showing depth of cuts of all keys for replacement purposes

D. Exit Devices shall:

1. Tested and approved by BHMA for ANSI 156.3, Grade 1
2. Provide a deadlocking latchbolt
3. Non-fire rated exit devices shall have cylinder dogging.
4. Touchpad shall be “U” style for entry door and “T” style for all others.
5. Exposed components shall be of architectural metals and finishes.
6. Lever design shall match lockset lever design
7. Provide strikes as required by application.
8. Fire exit devices to be listed for UL10C
9. UL listed for Accident Hazard
10. Shall consist of a cross bar or push pad, the actuating portion of which extends across, shall not be less than one half the width of the door leaf.
11. Provide vandal resistant or breakaway trim

E. Cylinders:

1. Provide the necessary cylinder housings, collars, rings & springs as recommended by the manufacturer for proper installation.
2. Provide the proper cylinder cams or tail piece as required to operate all locksets and other keyed hardware items listed in the hardware sets.
3. Coordinate and provide as required for related sections.
4. Provide (5) keys per cylinder
5. Provide a biting chart from manufacturer showing depth of cuts of all keys for replacement purposes

F. Door Closers shall:

1. Tested and approved by BHMA for ANSI 156.4, Grade 1
2. The sweep period of the closer shall be adjusted so that from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 in (75 mm) from the latch, measured to the leading edge of the door.
3. The maximum force for pushing or pulling open a door shall be as follows:

- a. Fire doors shall have the minimum opening force allowable by the appropriate administrative authority.
 - b. Other doors:
 - i. exterior hinged doors: 8.5 lbf
 - ii. interior hinged doors: 5 lbf (22.2N)
 - iii. sliding or folding doors: 5 lbf (22.2N)
 4. If automatic door closer is used it shall comply with ANSI/BHMA A156.10-1984.
 5. UL10C certified
 6. Closer shall have extra-duty arms and knuckles
 7. Conform to ANSI 117.1
 8. Maximum 2 7/16 inch case projection with non-ferrous cover
 9. Separate adjusting valves for closing and latching speed, and backcheck
 10. Provide adapter plates, shim spacers and blade stop spacers as required by frame and door conditions
 11. Full rack and pinion type closer with 1½“ minimum bore
 12. Mount closers on non-public side of door, unless otherwise noted in specification
 13. Closers shall be non-handed, non-sized and multi-sized.
- G. Door Stops: Provide a dome floor or wall stop for every opening as listed in the hardware sets.
1. Wall stop and floor stop shall be heavy-duty wrought brass or stainless steel.
 2. Provide fastener suitable for wall construction.
 3. Coordinate reinforcement of walls where wall stop is specified.
 4. Provide dome stops where wall stops are not practical. Provide spacers or carpet riser for floor conditions encountered
- H. Kick-Down Door Stops: Provide a kick-down door stop for every opening as listed in the hardware sets.
1. Kick-down door stop shall be heavy duty wrought brass or stainless steel with ribbed rubber foot.
 2. Spring design to hold the stop in the up position.
 3. Provide fastener suitable for door construction.
- I. Push Plates: Provide with four beveled edges ANSI J301, .050 thickness, size as indicated in hardware set. Furnish oval-head countersunk screws to match finish.
- J. Pulls with plates: Provide with four beveled edges ANSI J301, .050 thickness Plates with ANSI J401 Pull as listed in hardware set. Provide proper fasteners for door construction.
- K. Push Pull Bars: Provide ANSI J504, .1” Dia. Pull and push bar model and series as listed in hardware set. Provide proper fasteners for door construction.
- L. Pulls: Solid Brass, Center to Center: 8”, Length: 8-1/2”, Projection: 2-1/2”.
- M. Power Supply: Provide power supply for (ELR) Electric Latch Retraction exit devices
1. Motherboard will accept up to four plug-in Control Modules. Provide the appropriate necessary control module to operate the number of ELR exit devices used at each opening. The Control Module shall include a Time delay Feature, variable (0-4 minutes) latch retraction period in response to a momentary input.

2. UL Listed for class II output
 3. Include circuit breakers for protection of motherboard
 4. 115 or 230 Volt user selectable switch, with AC input= 115 Volt at 1 Amp
 5. Control module shall include Fire alarm terminal and Auxiliary contacts for remote signaling.
 6. Precision ELR150 Series with the required modules.
- N. Power Supply: PS160 Use with a variety of applications including Electric Locking and Exit Alarm The power supply uses 120 VAC at 0.8 amp input. A 230 VAC at 0.3 ampere is available. The power shall be able to control up to (4) Delayed Egress Exit devices. The filtered and regulated output power is field selectable for 12 or 24 VDC at 2 amps.
1. Fire Alarm release that accepts normally closed contact
 2. AC input is protected via a manually reset circuit breaker
 3. DC output is protected via an auto-reset fuse (PTC)
 4. Box shall include a key lock.
- O. Electromagnetic Locks: BHMA A156.23; electrically powered, of strength and configuration indicated; with electromagnet attached to frame and armature plate attached to door
1. Type: Full exterior or full interior, as required by application indicated.
 2. Strength Ranking: 1500 lbf.
- P. Power Supply: Field Selectable 12VDC or 24VDC output. The power supply will be specifically designed to support electric locks and access controls. The power supply uses 115 VAC at 800mA input. The power shall be able to be expanded to four station controls. The filtered and regulated output power is field selectable for 12 or 24 VDC.
1. Fire Alarm/Life Safety emergency release included in power supply.
- Q. Door Position Switch: Provide door position switch for door status monitoring as indicated in hardware sets.
1. At all fired rated doors the door and frame hardware preparation will be provided by the door and frame manufacturer or by an authorized label service agent.
- R. Seals: All seals shall be finished to match adjacent frame color. Seals shall be furnished as listed in schedule. Material shall be UL listed for labeled openings.
- S. Weatherstripping: Provide at head and jambs only those units where resilient or flexible seal strip is easily replaceable. Where bar-type weatherstrip is used with parallel arm mounted closers install weatherstrip first.
1. Weatherstrip shall be resilient seal of (Neoprene, Polyurethane, Vinyl, Pile, Nylon Brush, Silicone)
 2. UL10C Positive Pressure rated seal set when required.
- T. Door Bottoms/Sweeps: Surface mounted or concealed door bottom where listed in the hardware sets.
1. Door seal shall be resilient seal of (Neoprene, Polyurethane, Nylon Brush, Silicone)
 2. UL10C Positive Pressure rated seal set when required.

- U. Thresholds: Thresholds shall be aluminum beveled type with maximum height of ½” for conformance with ADA requirements. Furnish as specified and per details. Provide fasteners and screws suitable for floor conditions.
- V. Silencers: Furnish silencers on all interior frames, 3 for single doors, 2 for pairs. Omit where any type of seals occurs.
- W. Kick Plates: Furnish .050” thick heavy duty kick plates at all interior doors for push and pull sides. Install with countersunk stainless steel screws.
- X. Key Control System: Provide heavy gauge steel wall-mount key cabinet large enough to accommodate all keys of all doors, mechanical equipment and furniture keys with 50% spare. Matte grey finish. Verify precise key capacity, locking mechanism (key or combination lock) and color with commissioner.

2.3 FINISH:

- A. Designations used in Schedule of Finish Hardware - 3.5, and elsewhere to indicate hardware finishes are those listed in ANSI/BHMA A156.18 including coordination with traditional U.S. finishes shown by certain manufacturers for their products
- B. Powder coat door closers to match other hardware, unless otherwise noted.
- C. Aluminum items shall be finished to match predominant adjacent material. Seals to coordinate with frame color.

2.4 KEYS AND KEYING:

- A. Provide keyed brass construction cores and keys during the construction period. Construction control and operating keys and core shall not be part of the City of New York's permanent keying system or furnished in the same keyway (or key section) as the City of New York's permanent keying system. Permanent cores and keys (prepared per the approved keying schedule, sequentially numbered and supplied with key tags) will be furnished directly to the City of New York.
- B. Cylinders, removable and interchangeable core system: Basis of Design Product: Subject to compliance with requirements, provide Best Cormax Patented 7-pin, or comparable product by one of the following:
 - 1. Schlage
 - 2. Yale
 - 3. Or approved equal
- C. Permanent keys and cores: Stamped with the applicable key mark for identification. These visual key control marks or codes will not include the actual key cuts. Permanent keys will also be stamped "Do Not Duplicate."
- D. Transmit permanent keys and cores, Grand Masterkeys, Masterkeys and other Security keys to City of New York by Registered Mail, return receipt requested.
- E. Furnish keys in the following quantities:

1. Grand Masterkey: 1 each
 2. Masterkeys: 4 each
 3. Change keys each keyed core: 5 each
 4. Construction masterkeys: 15 each
 5. Control keys: 1 each
- F. The City of New York will install permanent cores and return the construction cores to the Hardware Supplier. Construction cores and keys remain the property of the Hardware Supplier.
- G. Keying Schedule: Arrange for a keying and programming meeting with Commissioner, Building personnel and hardware supplier, and other involved parties to ensure locksets and locking hardware, are functionally correct and keying and programming complies with project requirements. Furnish 3 typed copies of keying and programming schedule to Commissioner.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Verification of conditions: Examine doors, frames, related items and conditions under which Work is to be performed and identify conditions detrimental to proper and or timely completion.
1. Do not proceed until unsatisfactory conditions have been corrected.

3.3 HARDWARE LOCATIONS:

- A. Mount hardware units at heights indicated in the following publications except as specifically indicated or required to comply with the governing regulations.
1. Recommended Locations for Builder's Hardware for Standard Steel Doors and Frames, by the Door and Hardware Institute (DHI).
 2. Recommended locations for Architectural Hardware for flush wood doors (DHI).
 3. WDMA Industry Standard I.S.-1A-04, Industry Standard for Architectural wood flush doors.

3.4 INSTALLATION:

- A. Install each hardware item per manufacturer's instructions and recommendations. Do not install surface mounted items until finishes have been completed on the substrate. Set units level, plumb and true to line and location. Adjust and reinforce the attachment substrate as necessary for proper installation and operation.
- B. Conform to local governing agency security ordinance.

- C. Install Conforming to ICC/ANSI A117.1 Accessible and Usable Building and Facilities.
 - 1. Adjust door closer sweep periods so that from the open position of 70 degrees, the door will take at least 3 seconds to move to a point 3 inches from the latch, measured to the landing side of the door.
- D. Installed hardware using the manufacturers fasteners provided. Drill and tap all screw holes located in metallic materials. Do not use “Riv-Nuts” or similar products.

3.5 FIELD QUALITY CONTROL AND FINAL ADJUSTMENT

- A. Contractor/Installers, Field Services: After installation is complete, contractor shall inspect the completed door openings on site to verify installation of hardware is complete and properly adjusted, in accordance with both the Contract Documents and final shop drawings.
 - 1. Check and adjust closers to ensure proper operation.
 - 2. Check latchset, lockset, and exit devices are properly installed and adjusted to ensure proper operation.
 - a. Verify levers are free from binding.
 - b. Ensure latchbolts and dead bolts are engaged into strike and hardware is functioning.
 - 3. Report findings, in writing, to Commissioner indicating that all hardware is installed and functioning properly. Include recommendations outlining corrective actions for improperly functioning hardware if required.

3.6 SCHEDULE OF FINISH HARDWARE:

- A. Basis of Design manufacturers are listed below. Refer to Article 2.1 for additional manufacturers and approved equal.

Manufacturer List

<u>Code</u>	<u>Name</u>
AR	Adams Rite
BE	Best Access Systems
BY	By Others
CR	Corbin Russwin
DM	Dorma Door Controls
EM	Emtek
KA	Kant-Slam
NA	National Guard
NO	Norton
PR	Precision
RO	Rockwood
RS	Reese Enterprises Inc.
RX	Rixon

SR	Sargent
ST	Stanley
TR	Trimco
IV	Ives
VD	Van Duprin

Finish List

<u>Code</u>	<u>Description</u>
AL	Aluminum
US28	Aluminum
626	Satin Chromium Plated
628	Satin Aluminum, Clear Anodized
630	Satin Stainless Steel
689	Aluminum Painted
US10	Dull Bronze
US26D	Chromium Plated, Dull
US32D	Stainless Steel, Dull
OB	Oil Rubbed Bronze
DBAA	Dark Bronze Anodized Aluminum
PC	Powder Coated Finish

Option List

<u>Code</u>	<u>Description</u>
18	CONCEALED WIRES - 18 AWG (8)
AC	MOUNTING KIT - FOR ALUMINUM DOORS
BF	BARRIER FREE OPENING FORCE
CD	CYLINDER DOGGING
CE	CONC. WIRES-USE WITH 18,54,56,58 SUFFIX
FL	Fire Exit Hardware
ATR	ALUMINUM TOP RAIL ARMATURE BRACKET
B4E	BEVELED 4 EDGES
ELR	ELECTRIC LATCH RETRACTION
NRP	NON REMOVEABLE PIN HINGE
N-MD	"N" THRU BUTTON MTG - HM DRS
C-SUNK-KP	COUNTER SINKING OF KICK PLATES

Hardware Sets

HARDWARE SET A.1 (1Fl Exterior Doors):

2 Hinges	FBB179 4 1/2 X 4 1/2 NRP	26D	ST
1 Hinge	CEFBB179 4 1/2 X 4 1/2 18 4" long wires	26D	ST
1 Lockset	ML20906xSEC (maglock/fail secure)	630	CR
1 Strike (for Lockset above)	Strike Box & Straight Lip Strike Plate	630	CR
1 Cylinder	6-Pin, interchangeable 8000 series core - keyed to match SET A.3	630	CR
1 Lever/Escutcheon Set	Lustra LWM	630	CR
1 Door Closer	PR8501M (parallel rigid arm) door stop point to be set at 100° - VIF	689	NO
1 Kick-Down Door Stop	461	626D	RO
1 Gasketing	5050 B @ Head and Jambs		NA
1 Finned Vinyl Door Shoe	312V (7/16" high – provide door undercut)	US28	NA
2 Kick Plates	custom 1/16" thick SS w/ rounded corners, 12" high		
1 Threshold	277A Corrugated Flat Plate	US28	RS
2 Threshold Cap	S247A Assembly Component	US28	RS
1 Wiring Diagram	ALL ELECTRIFIED ITEMS		

HARDWARE SET A.2 (2Fl Exterior Door at Stair 2):

2 Hinges	FBB179 4 1/2 X 4 1/2 NRP	26D	ST
1 Hinge	CEFBB179 4 1/2 X 4 1/2 18 4" long wires	26D	ST
1 Lockset	ML20906xSEC (maglock/fail secure)	630	CR
1 Strike (for Lockset above)	Strike Box & Straight Lip Strike Plate	630	CR
1 Cylinder	6-Pin, interchangeable 8000 series core - keyed to match SET A.3	630	CR
1 Lever/Escutcheon Set	Lustra LWM	630	CR
1 Door Closer	PR8501M (parallel rigid arm) door stop point to be set at 95° - VIF	689	NO
1 Floor Door Stop w/Keeper	472	626	RO
1 Gasketing	5050 B @ Head and Jambs		NA
1 Finned Vinyl Door Shoe	312V (7/16" high – provide door undercut)	US28	NA
2 Kick Plates	K0050, 10" high	630	TR
1 Threshold	280A Corrugated Flat Plate	US28	RS
2 Threshold Cap	S247A Assembly Component	US28	RS
1 Wiring Diagram	ALL ELECTRIFIED ITEMS		

HARDWARE SET A.3 (Stair 1):

3 Hinges	FBB179 4 1/2 X 4 1/2 NRP	26D	ST
1 Lockset	ML2067, Apartment or Dormitory (ANSI F20)	630	CR
1 Strike (for Lockset above)	Strike Box & Straight Lip Strike Plate	630	CR
1 Cylinder	6-Pin, interchangeable 8000 series core - keyed to match SET A.1	630	CR
1 Lever/Rose Set	Lustra LWA	630	CR
1 Door Closer	PR8501M (parallel rigid arm) door stop point to be set at 90° - VIF	689	NO
1 Floor Door Stop w/Keeper	472	626	RO
1 Power Supply	PS160		PR

1	Gasketing	5050 B @ Head and Jambs		NA
1	Finned Vinyl Door Shoe	312V (7/16" high – provide door undercut)	US28	NA
2	Kick Plates	K0050, 10" high	630	TR
1	Threshold	235A Corrugated Flat Plate	US28	RS

END OF SECTION 08 71 00

SECTION 08 81 00

GLASS GLAZING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:

1. Windows.
2. Doors.
3. Entrances.
4. Storefront framing.
5. Interior borrowed lites.
6. Interior mirrors, frameless.

- B. Related Sections

1. Section 08 11 13 "Hollow Metal Doors and Frames"
2. Section 08 51 13 "Aluminum Windows"
3. Section 10 28 00 "Toilet, Bath and Laundry Accessories" for framed mirrors.

1.3 REFERENCES

- A. Comply with the recommendations of the following references unless more stringent requirements are indicated herein.
1. FGMA Publications: FGMA Glazing Manual.
 2. AAMA Publications: AAMA TIR-A7 Sloped Glazing Guidelines and Glass Design for Sloped Glazing.
 3. LSGA Publications: LSGA Design Guide.

4. SIGMA Publications: TM-3000 Vertical Glazing Guidelines and TB-3001 Sloped Glazing Guidelines.
5. Safety Glass: Products complying with ANSI Z97.1 and testing requirements of 16 CFR Part 1201.
6. Fire-Resistive Glazing Products for Door Assemblies: Products identical to those tested per ASTM E152, labeled and listed by UL or another testing and inspecting agency acceptable to the Commissioner.
7. Fire-Resistive Glazing Products for Window Assemblies: Products identical to those tested per ASTM E163, labeled and listed by UL or another testing and inspecting agency acceptable to the Commissioner.
8. 16 CFR 1201, Safety Standards for Architectural Glazing, Sealed Insulating Glass Manufacturing Association.
9. ASTM C 920, Elastomeric Joint Sealant.
10. Insulating Glass Criteria - IGCC International Glass Cert. Council.

1.4 PERFORMANCE REQUIREMENTS

- A. General: Provide glazing systems capable of withstanding normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, and installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.
- B. Glass Design: Glass thicknesses indicated on drawings and/or specified herein are minimums and are for detailing only. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites for various size openings in nominal thicknesses indicated, but not less than thicknesses and in strengths (annealed or heat treated) required to meet or exceed the following criteria:
 1. Glass Thicknesses: Select minimum glass thicknesses to comply with ASTM E 1300, according to the following requirements:
 - a. Specified Design Wind Loads: 30 psf or greater if required by 2008 New York City Building Code.
 2. Probability of Breakage for Vertical Glazing:
 - a. 8 lites per 1000 for lites set vertically or not more than 15 degrees off vertical and under wind action.
 - b. 1 lite per 1000 for lites installed 15 degrees from the vertical and under wind action.
 - c. Load Duration: 60 seconds or less.

3. Maximum Lateral Deflection: For glass supported on all four edges, provide thickness required that limits center deflection at design wind pressure to 1/100 times the short side length or 0.5", whichever is less.
 4. Thermal Movements: Provide glazing that allows for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures acting on glass framing members and glazing components. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
 - a. Temperature Change (Range): 120 deg. F ambient; 180 deg F, material surfaces.
 5. Thermal Solar Performance: See Article 2.2 herein.
- C. Glass units shall be annealed, heat strengthened, fully tempered or laminated where required to meet wind and/or snow loads and safety glazing requirements, as shown, specified or recommended by the glass fabricator and as required by 2008 New York City Building Code.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's printed product data, specifications, standard details, glazing instructions, use limitations and recommendations for each material used. Provide certifications that materials and systems comply with specified requirements, including performance requirements.
- C. Submit compatibility and adhesion test reports from sealant manufacturer indicating materials were tested for compatibility and adhesion with glazing sealant, as well as other glazing materials including insulation units.
- D. Initial Selection Samples: Submit samples of each glass and glazing material showing complete range of colors, textures, and finishes available for each material used.
 1. Submit complete range of samples of standard colors and patterns for ceramic frits at insulating glass.
 2. Submit complete range of samples of sandblasted glass showing variations of grits and opacity achieved.
- E. Verification Samples: Submit representative samples of each glass and glazing material that is to be exposed in completed work. Show full color ranges and finish variations expected. Provide glass samples having minimum size of 144 sq. in. and 6 in. long samples of sealants and glazing materials; all samples shall bear the name of the manufacturer, brand name, thickness, and quality.

- F. Calculations: Provide wind load charts, calculations, thermal stress analysis, and certification of performance of this work. Indicate how design requirements for loading and other performance criteria have been satisfied. Document shall be signed and sealed by a Professional Engineer licensed in the State of New York.
- G. Test Reports: Provide certified reports for specified tests.
- H. Warranties: Provide written warranties as specified herein.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source: For each glass and glazing type required for work of this Section, provide primary materials which are products of one manufacturer. Provide secondary or accessory materials which are acceptable to manufacturers of primary materials.
- C. Glass Thickness: Glass thicknesses shown on drawings and/or specified herein are minimum thicknesses. Determine and provide size and thickness of glass products that are certified to meet or exceed performance requirements specified in this Section.
- D. Glazing Publications: Comply with published recommendations of glass product manufacturers and organizations below, unless more stringent requirements are indicated.
 - 1. GANA Publications: GANA'S "Glazing Manual" and "Laminated Glass Design Guide."
 - 2. IGMA Publications: IGMA TM-3000, "Vertical Glazing Guidelines for Sealed Insulating Glass Units."
- E. Glazing for Fire-Rated Door Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to the Commissioner, for fire-protection ratings indicated, based on testing according to NFPA 252.
- F. Glazing for Fire-Rated Window Assemblies: Glazing for assemblies that comply with NFPA 80 and that are listed and labeled by a testing and inspecting agency acceptable to the Commissioner, for fire ratings indicated, based on testing according to NFPA 257.
- G. Safety Glazing Products: Comply with testing requirements in 16 CFR 1201 and, for wired glass, ANSI Z97.1.
 - 1. Subject to compliance with requirements, obtain safety glazing products permanently marked with certification label of the Safety Glazing Certification Council.

2. Where glazing units, including Kind FT glass and laminated glass, are specified in Part 2 Articles for glazing lites more than 9 sq. ft. in exposed surface area of one side, provide glazing products that comply with Category II materials, for lites 9 sq. ft. or less in exposed surface area of one side, provide glazing products that comply with Category I or II materials, except for hazardous locations where Category II materials are required by 16 CFR 1201 and regulations of 2008 New York City Building Code.
- H. Insulating Glass Certification Program: Permanently marked on spacers with appropriate certification label of the following testing and inspecting agency:
 1. Insulating Glass Certification Council.
 2. Associated Laboratories, Inc.
 3. Insulating Glass Manufacturers Alliance.
- I. Manufacturer shall be ISO 9001-2000 Certified.

1.7 TESTS

- A. Preconstruction Sealant Test: Submit samples of materials to be used to glazing sealant manufacturer to determine sealant compatibility. Include samples of glass, gaskets, glazing materials, framing members, and other components and accessories of glazing work. Test in accordance with ASTM C 794 to verify what type of primers (if any) are required to ensure sealant adhesion to substrates.
 1. Submit minimum of nine pieces of each type and finish of framing member, and nine pieces of each type, class, kind, condition, and form of glass, including monolithic, laminated, and insulating glass for adhesion tests.
 2. Provide manufacturer's written report and recommendations regarding proper installation.

1.8 PROJECT CONDITIONS

- A. Weather: Perform work of this Section only when existing or forecasted weather conditions are within limits established by manufacturers of materials and products used.
- B. Temperature Limits: Install sealants only when temperatures are within limits recommended by sealant manufacturer, except, never install sealants when temperatures are below 40 deg. F.

1.9 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and products in unopened, factory labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations and GANA Manual.

1. Protect materials from moisture, sunlight, excess heat, sparks and flame.
2. Sequence deliveries to avoid delays, but minimize on-site storage.

1.10 WARRANTIES

- A. **Manufacturer's Warranty on Coated Glass Products:** Provide written warranty signed by manufacturer of coated glass agreeing to furnish f.o.b. point of manufacture, within specified warranty period indicated below, replacements for those coated glass units which develop manufacturing defects. Manufacturing defects are defined as peeling, cracking or deterioration in metallic coating due to normal conditions and not due to handling or installation or cleaning practices contrary to glass manufacturer's published instructions.
1. **Warranty Period:** Manufacturer's standard but not less than five (5) years after date of substantial completion.
- B. **Manufacturer's Warranty on Insulating Glass:** Provide written warranty signed by manufacturer of insulating glass agreeing to furnish f.o.b. point of manufacture, freight allowed project site, within specified warranty period indicated below, replacements for those insulating glass units developing manufacturing defects. Manufacturing defects are defined as failure of the hermetic seal of air space (beyond that due to glass breakage) as evidenced by intrusion of dirt or moisture, internal condensation or fogging, deterioration of protected internal glass coatings, if any, and other visual indications of seal failure or performance; provided the manufacturer's instructions for handling, installing, protecting and maintaining units have been complied with during the warranty period.
1. **Warranty Period:** Manufacturer's standard but not less than ten (10) years after date of substantial completion.
- C. **Manufacturer's Warranty on Laminated Glass:** Manufacturer's standard form, made out to the City of New York and signed by laminated glass manufacturer agreeing to replace laminated glass units that deteriorate as defined in "Definitions" Article, f.o.b. the nearest shipping point to Project site, within specified warranty period indicated below.
1. **Warranty period** five (5) years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS/FABRICATORS

- A. All glass and glazing used at the exterior of the Project shall be manufactured by the same manufacturer. The same manufacturer and the same furnace shall be used for all tempered and heat strengthened glass used throughout the project. Subject to compliance with requirements, provide products by one of the following:

1. PPG Industries.
2. Guardian Industries.
3. Pilkington.
4. AFG.
5. JE Berkowitz, LP.
6. Viracon.
7. Or approved equal.

2.2 GLASS MATERIALS AND PRODUCTS

- A. Clear Float Glass: ASTM C 1036, Type I (Transparent, Flat), Class 1 (Clear), Quality q3, minimum 1/4" thick.
- B. Clear Tempered Glass: ASTM C 1048, Condition A (Uncoated), Type I (Transparent, Flat), Class 1 (Clear), Quality q3, Kind FT, minimum 1/4" thick. Tempered glass must be certified by SGCC to meet applicable standards. Tempered glass shall also conform to the following:
 1. Length and Width: For 2.9 mm to 6.0 mm; +/-1.6 mm.
 2. Diagonal: +/- 3.0 mm.
 3. Edgework: Belt seaming or diamond wheels. 1.5 mm seam of upper and lower glass edges. No sharp edges.
 4. Corners: No more than 3.0 mm from square.
 5. Float Glass Defects: Must meet the requirements of ASTM C 1036. The most common defects are scratches, stones gaseous bubbles and edge chips. Tables in the glass standards have limits for size/quantity of defects.
 6. Tempered glass shall have a minimum surface compression of 10,000 psi.
 7. Tempered glass to be heat-treated by horizontal (roller hearth) process with inherent roller-wave distortion parallel to the bottom edge of the glass when installed.
 8. Flatness Tolerances
 - a. Roller-Wave or Ripple: The deviation from flatness at any peak shall be targeted not exceed 0.003" as measured per peak to valley for 1/4" (6mm) thick glass.
 - b. Bow and Warp: The bow and warp tolerances shall not exceed 1/32" per linear foot.

- c. Fully tempered glass shall be heat soaked to EN 14179-1:2005-European Heat Soaking Standard.

C. Low 'E' Coated Glass: Provide high-performance, clear, metallic coating, equal to Solarban 60, as manufactured by Vitro Architectural Glass (basis of design), Viracon, Guardian or equal. Provide Low 'E' coating which has the following performance characteristics when applied to the No. 2 surface of 1" insulating units, both lites 1/4" clear, or when applied to the No. 2 and No. 4 surfaces of 1-3/4" insulating units, all lites 1/4" clear:

	1" IGU	1-3/4" IGU
1. Visible Transmittance:	0.46%	0.37%
2. Winter U-value	0.32	0.20
3. Solar Heat Gain Coefficient (SHGC)	0.26	0.21

D. Laminated Safety Glass: Provide two glass panes of equal thickness, laminated together with a polyvinyl butyl interlayer, conform to ASTM C 1172, and as follows:

- 1. Interlayer Color: Clear.
- 2. Interlayer Material: Provide Monsanto "Saflex" or DuPont "Butacite," 0.030" thick at vertical applications, and 0.060" thick at sloped or horizontal applications.
- 3. Minimum thickness of 1/4".

E. Insulating Glass

- 1. Provide factory assembled units of originally sealed panes of glass enclosing a hermetically sealed dehydrated air space comply with ASTM E2190.
- 2. Double Pane IGU's at Light Court:
 - a. Glazing Description: 6mm SB60 ARG 6mm CL. All glass to be tempered for internal stresses due to coatings. Glass thicknesses to be 1/4", tint to be clear. Gap widths to be 1/2", gap fill to be Argon 90 and spacer to be TS-D. No divider.
- 3. Triple Pane at IGU's at 1st Floor Clerestory:
 - a. Glazing Description: 6mm SB60 ARG 6mm CL. All panes to be Low Iron Glass. All glass to be tempered for internal stresses due to coatings. Glass thicknesses to be 1/4", tint to be clear. Gap widths to be 1/2", gap fill to be Argon 90 and spacer to be TS-D. No divider.
- 4. Triple Pane at IGU's at 2nd floor Casements:

- a. Glazing Description: 6mm, SB60 ARG 6mm CL. All glass to be tempered for internal stresses due to coatings. Glass thicknesses to be 1/4", tint to be clear. Gap widths to be 1/2", gap fill to be Argon 90 and spacer to be TS-D. No divider.
5. Sealing System: Dual Seal.
6. Primary Sealant: Polyisobutylene.
7. Secondary Sealant: Silicone, General Electric IGS 3204 or IGS 3100, or Dow Corning 982, Dymax Corp. or approved equal.
 - a. For structurally glazed IG units, secondary seal shall conform to ASTM C 1249.
8. Primary and secondary seals shall not contain voids and must be continuously bonded to the glass structure.
9. Warm Edge Spacer: Grey color at Light Well and 2nd Floor. Black at 1st Floor Clerestory.
10. Desiccant: Molecular sieve, silica gel, or blend of both.
11. Air Space Thickness: 1/2". (2 x 1/4")
12. Glass Thickness: 1/4" minimum.
13. Units shall be certified for compliance with seal classification "CBA" by the Insulating Glass Certification Council (IGCC) or by IGMA, and tested in accordance with the above ASTM Test Methods.
14. Insulating glass shall conform to the following tolerances:
 - a. Length and Width: + 3.0 mm/ -2.0 mm.
 - b. Diagonal: +/- 3.0 mm.
 - c. Thickness: As agreed +/- 1.0 mm.
 - d. Edge-Deletion of Coating: Minimum 8 mm wide. Width of deletion must be more than the width of the secondary seal. Silver layer(s) must be completely removed. Appearance must be uniform.
 - e. Primary PIB Seal: Must be complete with no breaks. Appearance must be uniform. PIB bead must overlap coating. No visible bright line when glass is viewed in transmission. The width of the PIB bead shall be 4.0 mm + 3.0/ - 1.5 mm.
 - f. Secondary Seal: Nominal 6 mm + 3.0/ - 1.5 mm. The minimum width of the secondary silicone seal for IG units that are glazed structurally must be determined according to ASTM C 1249. The secondary seal must be uniformly applied without bubbles, cavities or gaps. Avoid excess sealant that will need to be trimmed off later.

15. Additional requirements and properties for primary and secondary insulating glass seals and spacers:
 - a. All glass units shall comply with IGMA Guidelines which limits the dimension of the visible edge seal encroachment into the vision area to be no greater than the “sightline infringement of 3mm(0.12”).
 - b. Insulating glass unit hermetic seal to consist of butyl primary and silicone secondary seals with bent, welded, or soldered interpane spacer corners; keyed corners are not acceptable unless also soldered or welded. Spacers shall be aluminum or stainless steel. Locate spacer joint at the top or sides of the units, but in no instances at the sill. Design units to minimize the number of spacer joints. Provide solid keys, embedded in butyl sealant on all four sides, at spacer joints.
 - c. Hermetic seals must be continuous and intimately bonded to both lites of glass. Provide primary seal of uniform depth with a nominal width of 1/8 to 3/16 in. Hermetic seals shall not be contaminated with debris, fingerprints, or other foreign matter and shall not contain voids or air pockets that decrease the width of the seal below the minimum widths listed in these Specifications, or that breach the seal. The width of the primary seal shall not be less than 1/16 in., and the total cumulative length of the primary seal between 1/16 in. and 1/8 in. shall be less than 12 in. in any one insulating glass unit. The primary seal shall not have a reduced thickness at the corners. An increased thickness of the primary seal at the corners is acceptable.
 - d. Provide secondary seal of uniform depth with a nominal width of 1/4 in. Provide a total width of the primary and secondary seal of 1/2 in. Units shall carry CBA rating as established by ASTM E774 and shall meet SIGMA 65-7-2, latest edition. Units shall not contain breather or capillary tubes or similar penetrations.

2.3 GLAZING MATERIALS AND PRODUCTS

- A. General: Provide sealants and gaskets with performance characteristics suitable for applications indicated. Ensure compatibility of glazing sealants with insulating glass sealants, with laminated glass interlayers, and with any other surfaces in contact.
- B. General Glazing and Cap Bead Sealant: Provide sealant with maximum Shore A hardness of 50. Provide one of the following:
 1. Dow Corning 795.
 2. General Electric Silglaze N 2500 or Contractors SCS-1000.
 3. Tremco Spectrem 2.
 4. Or approved equal.
- C. Weather Seal Sealant: Provide non-acid curing sealant with movement range $\pm 50\%$, ASTM C 719. Provide one of the following:
 1. Dow Corning 795.

2. General Electric Silpruf.
 3. Tremco Spectrem 2.
 4. Or approved equal.
- D. Backer Rod: Closed cell non-gassing polyethylene rod with rod diameter 25% wider than joint width.
- E. Dense Elastomeric Compression Seal Gaskets: Provide molded or extruded neoprene or EPDM gaskets, Shore A hardness of 75 ± 5 for hollow profile, and 60 ± 5 for solid profiles, ASTM C 864.
- F. Cellular, Elastomeric Preformed Gaskets: Provide extruded or molded closed cell, integral-skinned neoprene, Shore A 40 ± 5 , and 20% to 35% compression, ASTM C 509; Type II.
- G. Preformed Glazing Tape: Provide solvent-free butyl-polyisobutylene rubber with 100% solids content complying with ASTM C1281 AAMA A 800 with integral continuous EPDM shim. Provide preformed glazing tape in extruded tape form.
- H. Setting Blocks: Provide 100% silicone blocks with Shore A hardness of 80-90. Provide products certified by manufacturer to be compatible with silicone sealants. Length to be not less than 4". Width for setting blocks to be 1/16" more than glass thickness and high enough to provide the lite recommended by glass manufacturer. When thickness of setting block exceeds 3/4" the glass manufacturer must be consulted for sizes and configuration. In a vented system, setting block shall be designed so as to not restrict the flow of water within the glazing rabbet to the weep holes.
1. Shims: For shims used with setting blocks, provide same materials, hardness, length and width as setting blocks.
 2. Structural Silicone Glazing: Provide silicone setting blocks where structural silicone occurs at sills and at insulating units with silicone edge seals.
- I. Edge Blocks: Provide neoprene or silicone as required for compatibility with glazing sealants. Provide blocks with Shore A hardness of 55 ± 5 .
- J. Spacers: Elastomeric blocks or continuous extrusions with a Shore A durometer hardness required by glass manufacturer to maintain glass lites in place.
- K. Miscellaneous Glazing Materials: Provide sealant backer rods, primers, cleaners, and sealers of type recommended by glass and sealant manufacturers.
- L. Mirror Mastic: An adhesive setting compound, asbestos-free, produced specifically for setting mirrors and certified by both mirror and mastic manufacturer as compatible with glass coating and substrates on which mirrors will be installed.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C. R. Laurence Co., Inc.
 - b. Palmer Products Corporation
 - c. Pecora Corporation
 - d. Or approved equal.

- M. Clips: No. 4 finish Type 304 stainless steel.

2.4 FABRICATION OF GLASS AND OTHER GLAZING PRODUCTS

- A. Fabricate glass and other glazing products in sizes required to glaze openings indicated for Project, with edge and face clearances, edge and surface conditions, and bite complying with written instructions of product manufacturer and referenced glazing standard, to comply with system performance requirements.
- B. Clean-cut or flat-grind vertical edges of butt-glazed monolithic lites in a manner that produces square edges with slight kerfs at junctions with indoor and outdoor faces.
- C. Grind smooth and polish exposed glass edges.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine framing glazing, with Installer present, for compliance with the following:
 - 1. Manufacturing and installation tolerances, including those for size, squareness, and offsets at corners.
 - 2. Presence and functioning of weep system.
 - 3. Minimum required face or edge clearances.
 - 4. Effective sealing between joints of glass-framing members.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Clean glazing channels and other framing members receiving glass immediately before glazing. Remove coatings not firmly bonded to substrates.

3.4 GENERAL GLAZING STANDARDS

- A. Install products using the recommendations from the manufacturer of glass, sealants, gaskets and other glazing materials, except where more stringent requirements are indicated, including those in the "GANA Glazing Manual".
- B. Verify that Insulating Glass (IG) Unit secondary seal is compatible with glazing sealants.
- C. Install glass in prepared glazing channels and other framing members.
- D. Install setting blocks in rabbets as recommended by referenced glazing standards in "GANA Glazing Manual" and "IGMA Glazing Guidelines".

- E. Provide bite on glass, minimum edge and face clearances and glazing material tolerances recommended by “GANA Glazing Manual”.
- F. Provide weep system as recommended by “GANA Glazing Manual”.
- G. Set glass lites in each series with uniform pattern, draw, bow and similar characteristics.
- H. Distribute the weight of glass unit along the edge rather than the corner.
- I. Comply with manufacturers and referenced industry standards on expansion joint and anchors; accommodating thermal movement; glass openings; use of setting blocks, edge, face, and bite clearances; use of glass spacers; edge blocks and installation of weep systems.
- J. Protect glass edge damage during handling and installation.
- K. Prevent glass from contact with contaminating substances that result from construction operations, such as weld spatter, fireproofing or plaster.
- L. Remove and replace glass that is broken, chipped cracked or damaged in any way.

3.5 GLAZING

- A. Glazing channel dimensions, as indicated on Shop Drawings, provide necessary bite on glass, minimum edge and face clearances, and adequate sealant thicknesses, with reasonable tolerances. Adjust as required by Project conditions during installation.
- B. Protect glass edges from damage during handling and installation. Remove damaged glass from Project site and legally dispose of off Project site. Damaged glass is glass with edge damage or other imperfections that, when installed, could weaken glass and impair performance and appearance.
- C. Apply primers to joint surfaces where required for adhesion of sealants, as determined by preconstruction sealant-substrate testing.
- D. Install setting blocks in sill rabbets, sized and located to comply with referenced glazing publications, unless otherwise required by glass manufacturer. Set blocks in thin course of compatible sealant suitable for heel bead. Install setting blocks at the one greater points of each lite along the horizontal mullion.
- E. Do not exceed edge pressures stipulated by glass manufacturers for installing glass lites.
- F. Provide spacers for glass lites where the length plus width is larger than 50 inches as follows:
 - 1. Locate spacers directly opposite each other on both inside and outside faces of glass. Install correct size and spacing to preserve required face clearances, unless gaskets and glazing tapes are used that have demonstrated ability to maintain required face clearances and to comply with system performance requirements.
 - 2. Provide 1/8-inch minimum bite of spacers on glass and use thickness equal to sealant width. With glazing tape, use thickness slightly less than final compressed thickness of tape.

- G. Provide edge blocking where indicated or needed to prevent glass lites from moving sideways in glazing channel, as recommended in writing by glass manufacturer and according to requirements in referenced glazing publications.
- H. Set glass lites in each series with uniform pattern, draw, bow, and similar characteristics.
- I. Where wedge-shaped gaskets are driven into one side of channel to pressurize sealant or gasket on opposite side, provide adequate anchorage so gasket cannot walk out when installation is subjected to movement.
- J. Square cut wedge-shaped gaskets at corners and install gaskets in a manner recommended by gasket manufacturer to prevent corners from pulling away; seal corner joints and butt joints with sealant recommended by gasket manufacturer.
- K. Flush Glazing
 - 1. If the butt joint in the metal framing is in the vertical direction, the glazier shall run the tape initially on the head and sill members going directly over this joint. Should the butt joint in the metal framing run horizontally, tapes must first be applied to the jambs so that it crosses over the joint.
 - 2. Each tape section shall butt the adjoining tape and be united with a tool to eliminate any opening.
 - 3. Do not overlap the adjoining length of tape or rubber shim as this will prevent full contact around the perimeter of glass.
- L. Off-Set Glazing
 - 1. Where the glazing legs are off-set, the difference in the rabbet width shall be compensated by employing different glazing tapes with different diameter shims. The difference in shim shall be equal to the size of the off-set. The thinner tape shall be positioned first on the glazing leg closest to the interior. The thicker tape shall be cut to the exact length of the dimension between the applied tapes, and installed on the outermost glazing leg.
 - 2. Immediately prior to setting glass, paper backing shall be removed. Apply a toe bead of sealant 6" in each direction, from each corner.
 - 3. Locate setting blocks in the sill member at quarter points, or if necessary to within 6" of each corner. Setting blocks must be set equal distance from center line of the glass and high enough to provide the recommended bite and edge clearances.
 - 4. Set edge block according to glass manufacturer's recommendations.
 - 5. Set Glass: The glass shall be pressed firmly against the tape to achieve full contact.
 - 6. In a vented system, apply a heel bead (air seal) of sealant around the perimeter of glass, between the sole of the I.G. unit and the base of the rabbet of the metal framing developing a positive bond to the unit and to the metal framing. The bead of the sealant shall be deep enough so that it will partially fill the channel to a depth of 1/4" between the glass edge and the base of the metal framing rabbet.

7. Interior stops shall be set, and glazing tape spline for the appropriate face clearance shall be rolled into place, compressing the glass to the shim within the glazing tape.

3.6 TAPE GLAZING

- A. Position tapes on fixed stops so that, when compressed by glass, their exposed edges are flush with or protrude slightly above sightline of stops.
- B. Install tapes continuously, but not necessarily in one continuous length. Do not stretch tapes to make them fit opening.
- C. Where framing joints are vertical, cover these joints by applying tapes to heads and sills first and then to jambs. Where framing joints are horizontal, cover these joints by applying tapes to jambs and then to heads and sills.
- D. Place joints in tapes at corners of opening with adjoining lengths butted together, not lapped. Seal joints in tapes with compatible sealant approved by tape manufacturer.
- E. Do not remove release paper from tape until just before each glazing unit is installed.
- F. Apply heel bead of elastomeric sealant as recommended by glass manufacturer or glass frame manufacturer.
- G. Center glass lites in openings on setting blocks and press firmly against tape by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings.
- H. Apply cap bead of elastomeric sealant over exposed edge of tape where noted on approved shop drawings.

3.7 GASKET GLAZING (DRY)

- A. Fabricate compression gaskets in lengths recommended by gasket manufacturer to fit openings exactly, with stretch allowance during installation.
- B. Insert soft compression gasket between glass and frame or fixed stop so it is securely in place with joints miter cut and bonded together at corners.
- C. Center glass lites in openings on setting blocks and press firmly against soft compression gasket by inserting dense compression gaskets formed and installed to lock in place against faces of removable stops. Start gasket applications at corners and work toward centers of openings. Compress gaskets to produce a weathertight seal without developing bending stresses in glass. Seal gasket joints with sealant recommended by gasket manufacturer.
- D. Install gaskets so they protrude past face of glazing stops.

3.8 SEALANT GLAZING (WET)

- A. Install continuous spacers, or spacers combined with cylindrical sealant backing, between glass lites and glazing stops to maintain glass face clearances and to prevent sealant from extruding into glass channel and blocking weep systems until sealants cure. Secure

spacers or spacers and backings in place and in position to control depth of installed sealant relative to edge clearance for optimum sealant performance.

1. Exterior glazing gasket shall be set a minimum of 1/8" below exterior glazing stop to create a channel for sealant installation.
- B. Force sealants into glazing channels to eliminate voids and to ensure complete wetting or bond of sealant to glass and channel surfaces.
- C. Tool exposed surfaces of sealants to provide a substantial wash away from glass.

3.9 FRAMELESS MIRRORS

- A. Apply mastic to back of mirror "pats" spaced 4 pats/sq. ft.; adjust mirror so that it is plumb and in place to avoid distortion of reflecting images. Allow 1/8" space between back of mirror and wall surface.
- B. Apply stainless steel clips at mirror top and bottom; securely clip to substrate using non-corrosive anchors. At drywall back-up anchors must be secured to studs or steel wallplate spanning from stud to stud.

3.10 PROTECTION AND CLEANING

- A. Protect exterior glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.
- B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.
- C. Examine glass surfaces adjacent to or below exterior concrete and other masonry surfaces at frequent intervals during construction, but not less than once a month, for build-up of dirt, scum, alkaline deposits, or stains; remove as recommended by glass manufacturer.
- D. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged in any way, including natural causes, accidents, and vandalism, during construction period.
- E. Clean excess sealant or compound from glass and framing members immediately after application, using solvents or cleaners recommended by manufacturers.
- F. Glass to be cleaned according to:
 1. GANA Glass Informational Bulletin GANA 01-0300 – "Proper Procedure for Cleaning Architectural Glass Products".
 2. GANA Glass Informational Bulletin GANA TD-02-0402 – "Heat Treated Glass Surfaces are Different".

G. Do not use razor blades, scrapers or metal tools to clean glass.

SECTION 08 95 43

FLOOD VENTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes flood vents.
- B. Related Sections
 - 1. Section 03 30 00 "Cast-in-Place Concrete"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: A complete and detailed description of all foundation flood vents shall be submitted with all pertinent data from the NES Testing Service showing the vents are Certified. Catalog cuts and drawings shall be submitted as well as installation instructions.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Use adequate numbers of skilled workmen who are thoroughly instructed and experienced in the necessary crafts and who are completely familiar with the specified requirements and the methods needed for proper performance of the work of this Section.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. Basis-of-Design Product: Subject to compliance with requirements, provide flood vents by Smart Vent (models described in Article 2.2), or a comparable product by one of the following:
 - 1. Flood Flaps

2. Flood Barrier America
3. Or approved equal.

2.2 MATERIALS

- A. General: Vents shall be constructed of stainless steel formed and smooth-welded construction. The frame shall be rigid and designed to be installed in stud walls. It shall have a pivoting door assembly that is fitted with two patented sealed floats that immediately and automatically release the door upon contact with rising water to relieve unbalanced lateral forces on foundation walls. The door shall swing open to provide two horizontal slot openings with a total combined unobstructed area of 76 square inches. The lower slot provides a 3" clear opening. One Single unit shall be used to relieve 200 square feet of enclosed area.
- B. Flood Vent Type (as listed by Samrt Vent or one of the manufacturers above)
 1. Type A: Multi-frame model ss insulated vent, 4Wx2H (8 door/unit). Model #1540-150402 or comparable product by a manufacturer in 2.1.A or approved equal.
 - a. Provide sleeve and trim. Model #1540-531-15.
 2. Type B: Smart vent model ss insulated vent (single door). Model #1540-520 or comparable product by a manufacturer in 2.1.A or approved equal.
 - a. Provide sleeve and trim. Model #1540-531-12.
 3. Type C: Smart vent model ss insulated vent (single door). Model #1540-520 or comparable product by a manufacturer in 2.1.A or approved equal.
 - a. Provide sleeve and trim. Model #1540-531-12
 - b. Provide fire damper #1540-530
- C. Installation
 1. Stainless Steel straps, four for each vent, and masonry or concrete urethane base adhesive.
 2. Adjustable wrench for through-bolted models and screwdriver for stud wall models.
 3. NOTE: Caulk may be used to seal certain areas that require extra attention; only fire-rated caulk shall be used in fire-rated walls or openings.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install each vent in accordance with manufacturer's instructions and recommendations spaced evenly around foundation perimeter, maximum 12 inches above grade to bottom of vent.
- B. Install one quad flood vent for every 800 square feet of enclosed space below flood plain.
- C. Adjust flood vents for proper operation.

GYPSUM BOARD

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Gypsum board work for partitions, ceilings, column enclosures, furring, and elsewhere where gypsum drywall work is shown on drawings.
2. Metal supports for gypsum drywall construction.
3. Acoustical insulation for gypsum drywall work.
4. Sealant for gypsum drywall work.
5. Concealed metal reinforcing for attachment of railings, toilet partitions and other items supported on drywall partitions and walls.
6. Taping and finishing of drywall joints.
7. Installing rings and frames in drywall surfaces for grilles, registers and lighting fixtures.
8. Bracing and connections.

B. Related Sections

1. Section 07 21 00 "Thermal Insulation"
2. Section 08 11 13 "Hollow Metal Doors and Frames"
3. Section 08 31 13 "Access Doors and Frames"
4. Section 09 90 00 "Painting and Coating"
5. Section 23 37 13 "Diffusers, Registers and Grilles"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Submit shop drawing for each drywall partition, furring and ceiling system showing size and gauges of framing members, hanger and anchorage devices, wallboard types, insulation, sealant, methods of assembly and fastening, control joints indicating column lines, corner details, joint finishing and relationship of drywall work to adjacent work.
- C. Samples: Each material specified herein, 12" x 12", or 12" long, or in manufacturer's container, as applicable for type of material submitted.
- D. Manufacturer's Literature: Submit technical and installation instructions for each drywall partition, furring and ceiling system specified herein, and for each fire-rated and sound-rated gypsum board assembly. Submit other data as required to show compliance with these specifications, including data for mold resistant joint compound.
- E. Test Reports: This Contractor shall submit test report, obtained by drywall manufacturer, indicating conformance of drywall assemblies to required fire ratings and sound ratings.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. The following standards, as well as other standards which may be referred to in this Section, shall apply to the work of this Section:
 - 1. The Gypsum Construction Handbook, latest edition, USG.
 - 2. Construction Guide, latest edition, National Gypsum.
 - 3. ASTM A 568 "Standard Specification for Steel, Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements For"
 - 4. ASTM C 475 "Standard Specification for Joint Treatment Materials For Gypsum Wallboard Construction"
 - 5. ASTM C 645 "Standard Specification for Non-Structural Steel Framing Members"
 - 6. ASTM C 754 "Standard Specification for Installation of Steel Framing Members to Receive Screw Attached Gypsum Panel Products"
 - 7. ASTM C 840 "Standard Specification for Application and Finishing of Gypsum Board"
 - 8. ASTM C 919 "Standard Specification for Use of Sealants in Acoustical Applications"

9. ASTM C 954 "Standard Specification for Steel Drill Screws For the Application of Gypsum Board or Metal Plaster Bases to Steel Studs From 0.033 in. to 0.112 in. in Thickness"
 10. ASTM C 1002 "Standard Specification for Steel Self-Piercing Tapping Screws For the Application of Gypsum Board"
 11. ASTM C 1177 "Standard Specification for Glass Mat Gypsum Substrate for Use as Sheathing"
 12. ASTM C 1178 "Standard Specification for Glass Mat Water Resistant Gypsum Backing Board"
 13. ASTM C 1278 "Standard Specification for Fiber-Reinforced Gypsum Panel"
 14. ASTM C 1396 "Standard Specification for Gypsum Board"
 15. ASTM D 3273 "Standard Test Method for Resistance to Growth of Mold on the Surface of Interior Coatings in an Environmental Chamber"
- C. Allowable Tolerances: 1/32" offsets between planes of board faces, and 1/16" in 8'-0" for plumb, level, warp and bow.
- D. System Design Load
1. Provide standard drywall wall assemblies designed and tested by manufacturer to withstand a lateral load of 5 lbs. per sq. ft. for the maximum wall height required, and with deflection limited to L/240 of partition height.
 - a. Drywall assemblies with tile finish shall have a deflection limit of L/360.
 2. Provide drywall ceiling assemblies designed, fabricated and installed to have a deflection not to exceed L/360.
- E. Fire-Resistance Rating: Where gypsum drywall with fire resistance ratings are indicated, provide materials and installations which are identical with those of applicable assemblies tested per ASTM E 119 by fire testing laboratories, or to design designations in UL "Fire Resistance Directory" or in listing of other testing agencies acceptable to the Commissioner, and compliant with UL Test #2079; criteria for cycle movement for all field height wall sections requiring allowance for vertical deflection within framing details.
- F. Comply with New York City Official Compilation of the Rules of the City of New York regarding "Impact Resistant Stair and Elevator Enclosures" when such enclosures are of gypsum drywall construction.

1.5 PRODUCT HANDLING AND PROTECTION

- A. Deliver, store and handle drywall work materials to prevent damage. Deliver materials in their original, unopened containers or bundles, and store where protected from moisture, damage and from exposure to the elements. Store wallboard in flat stacks.
- B. Protect wallboard from becoming wet.

1.6 ENVIRONMENTAL CONDITIONS

- A. Provide and maintain minimum temperature of fifty-five (55) degrees F. and adequate ventilation to eliminate excessive moisture within the building in the area of the drywall work for at least twenty-four (24) hours, prior to, during and after installation of drywall work. Installation shall not start until windows are glazed and doors are installed, unless openings are temporarily closed. Space above suspended ceilings shall be vented sufficiently to prevent temperature and pressure build up.

1.7 JOB MOCK-UP

- A. At a suitable location, where directed by the Commissioner, lay up a portion of a finished wall and ceiling demonstrating the quality of work, including finishing, to be obtained under this Section. Omit drywall boards in locations as directed by the Commissioner to show stud spacing and attachments; after acceptance, complete assembly.
- B. Adjust the finishing techniques as required to achieve the finish required by the Commissioner as described in this Section of these specifications.
- C. Upon approval of the mock-up, the mock-up may be left in place as a portion of the finished work of this Section.
- D. All drywall work shall be equal in quality to approved mock-up.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers for Gypsum Drywall Panels and Accessories: Subject to compliance with requirements, provide products by one of the following:
 - 1. U.S. Gypsum Co.
 - 2. Georgia Pacific
 - 3. CertainTeed Corporation
 - 4. Continental
 - 5. National Gypsum Co.

6. Or approved equal.
- B. Manufacturers for Metal Supports of Drywall Assemblies: Subject to compliance with requirements, provide products by one of the following unless otherwise noted:
 1. ClarkDietrich Building Systems
 2. Super Stud Building Products
 3. Marino/Ware
 4. Or approved equal.

2.2 METAL SUPPORTS

- A. Metal Floor and Ceiling Runners
 1. Channel Type: Formed from 20 U.S. Std. gauge (unless otherwise noted) galvanized steel, width to suit channel type metal studs. Use 20 ga. top runners with 1-1/4" minimum flanges.
 2. Ceiling runners and head of wall connections at rated partitions shall conform to UL #2079 for cycle movement. Provide positive mechanical connection of framing to structure, allowing for vertical movement within connections. Minimum of 20 ga. galvanized steel for clips, 25 ga. galvanized steel for ceiling runners. Providing a friction free – anti-seizure movement capacity.
 - a. Basis of Design Product: Subject to compliance with requirements, provide Steel Network; VertiClip or VertiTrack or comparable product by one of the following:
 - 1). Metal-Lite Inc.
 - 2). Fire Trak Corporation
 - 3). Or approved equal.
 - b. Basis of Design Product: Subject to compliance with requirements, provide Fire Trak Corporation; FireTrak (including stud clips) or comparable product by one of the following:
 - 1). Metal-Lite Inc.
 - 2). ClarkDietrich Building Systems
 - 3). Or approved equal.
- B. Metal Studs, Framing and Furring
 1. Channel Type Studs: Channel type with holes for passage of conduit formed from minimum 20 U.S. Std. gauge (unless heavier gauge is required to meet deflection limits) galvanized steel, width as shown on drawings.
 2. Furring Channels: Hat shaped, formed from galvanized steel, 25 U.S. Std. gauge.

3. Continuous 16 gauge x 8" wide steel wall plate screwed to studs as required for support of railings, toilet partitions and other items supported on drywall partitions and walls.

C. Suspended Ceiling and Fascia Supports

1. Main Runners: 1-1/2" steel channels, cold rolled at 0.475 lbs. per ft., rust-inhibitive paint finish.
2. Furring Members: Screw-type hat-shaped furring channels of 25 ga. zinc-coated steel; comply with ASTM C 645.
3. Hangers: Galvanized, 1" x 3/16" flat steel slats capable of supporting 5x calculated load supported.
4. Hanger Anchorages: Provide inserts, clips, bolts, screws and other devices applicable to the required method of structural anchorage for ceiling hangers. Size devices for 5x calculated load supported.
5. Furring Anchorages: 16 ga. galvanized wire ties, manufacturer's standard clips, bolts or screws as recommended by furring manufacturer.

D. All galvanized steel members shall have coating conforming to ASTM A 653, G60.

2.3 GYPSUM WALLBOARD TYPES

A. Gypsum Wallboard: 5/8" thick unless otherwise noted, 48" wide, in maximum lengths available to minimize end-to-end butt joints.

1. Product: Subject to compliance with requirements, provide one of the following:
 - a. USG; Sheetrock
 - b. National Gypsum; Gold Bond
 - c. CertainTeed Corp.; Regular Gypsum
 - d. Or approved equal.

B. Fire-Rated Gypsum Wallboard: 5/8" thick unless otherwise noted, 48" wide, in maximum lengths available to minimize end-to-end butt joints.

1. Product: Subject to compliance with requirements, provide one of the following:
 - a. USG; Sheetrock Firecode C
 - b. Lafarge/Continental; Firecheck Type C
 - c. National Gypsum; Gold Bond Fireshield
 - d. Or approved equal.

C. Moisture/Mold-Resistant Gypsum Wallboard (at locations indicated on the drawings): 5/8" thick unless otherwise noted, 48" wide, in maximum lengths available to minimize

end-to-end butt joints. Board must have a rating of 10 per ASTM D 3273 with a core that meets ASTM C 1396, Section 6 or ASTM C 1658.

1. Product: Subject to compliance with requirements, provide one of the following:
 - a. USG; Mold Tough or Mold Tough FR
 - b. Georgia Pacific; DensArmor Plus
 - c. Lafarge/Continental; Mold Defense and/or Mold Defense Type X
 - d. National Gypsum; Gold Bond EXP Interior Extreme Gypsum Board
 - e. Or approved equal.

D. Abuse Resistant Wallboard: 5/8" thick unless otherwise noted, 48" wide, in maximum lengths available to minimize end-to-end butt joints.

1. Board must achieve a Level 1 rating per ASTM C 1629.
2. Provide two layers of very high impact/abuse resistant wallboard in all occupied spaces.
3. Product: Subject to compliance with requirements, provide one of the following:
 - a. USG; Fiberock Brand Panel VHI Abuse Resistant
 - b. Georgia Pacific; Dens Armor Plus Abuse Resistant Panels
 - c. Lafarge/Continental; Protecta AR100 or Protecta HIR 300
 - d. National Gypsum; EXP Interior Extreme AR or Gold Bond Brand Hi-Abuse XP
 - e. Or approved equal.

2.4 ACCESSORIES

A. Acoustical Insulation: Paper-less, non-combustible, semi-rigid mineral fiber, 2" thick, in walls (unless otherwise indicated), 3 lb./cu. ft. maximum density

1. Product: Subject to compliance with requirements, provide one of the following:
 - a. Thermafiber LLC; Thermafiber
 - b. Roxul; Comfortbatt
 - c. Owens Corning; Sound Attenuation Fire Batt Insulation/MW
 - d. Or approved equal.

B. Fasteners for Wall Board: USG Brand Screws; Type S Bugle Head for fastening wallboard to lighter gauge interior metal framing (up to 20 ga.). Type S-12 Bugle Head for fastening wallboard to heavier gauge interior metal framing (20 ga. to 12 ga.); Type S and Type S-12 Pan Head for attaching metal studs to door frames and runners; and Type G Bugle Head for fastening wallboard to wall board. Lengths specified below under "Part 3 - Execution" Articles and as recommended by drywall manufacturer.

C. Laminating Adhesive: As recommended by gypsum board manufacturer.

- D. Metal Trim - Corner Beads: For 90 degree External Corners - 27 U.S. Std. ga. galvanized steel, 1-1/4" x 1-1/4", for 90 degree external corners; ASTM C 1047.
- E. Metal Trim - Edge Beads: Paper-faced galvanized-steel sheet; ASTM C 1047.
- F. Metal Trim Treatment Materials and Joint Treatment Materials for Gypsum Drywall Boards: Paper tape for joint reinforcing; setting type or lightweight setting type joint compound for taping and topping; and ready-mix compound for finishing.
 - 1. For mold-resistant drywall, water resistant drywall, and tile backer board, use glass mesh tape with setting joint compound that is rated 10 when tested in accordance with ASTM D 3273 and evaluated in accordance with ASTM D 3274.
 - 2. Joint Compound
 - a. Product: Subject to compliance with requirements, provide one of the following:
 - 1). CTS Cement Manufacturing Corp.; Rapid Set One Pass
 - 2). Lafarge North America; Rapid Joint
 - 3). CertainTeed; M2Tech 90
 - 4). Or approved equal.
- G. Control Joints
 - 1. Basis-of-Design Product: Subject to compliance with requirements, provide USG; No. 0.093 or comparable product by one of the following:
 - a. Lafarge
 - b. National Gypsum
 - c. Or approved equal.
- H. Acoustical Sealant
 - 1. Product: Subject to compliance with requirements, provide one of the following:
 - a. USG; Sheetrock Brand Acoustical Sealant
 - b. Tremco Mfg. Co.; Tremco Acoustical Caulking
 - c. Pecora; AIS-919
 - d. Or approved equal.
- I. Neoprene Gaskets: Conform to ASTM D 1056.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL INSTALLATION REQUIREMENTS

A. General

1. Install drywall work in accordance with drywall manufacturer's printed instructions and as indicated on drawings and specified herein.
2. All metal framing for drywall partitions shall extend from floor to underside of structural deck above. Provide for vertical deflection with positive mechanical connections of framing members to structure.
3. Provide concealed reinforcement, 16 ga. thick by eight (8) inches wide or as detailed or as recommended by manufacturer, for attachment of railings, toilet partitions, and other items to be supported on the partitions which cannot be attached to the metal framing members. Concealed reinforcement shall span between metal studs and be attached thereto using two (2) self-tapping pan head screws at each stud.
 - a. Back of drywall shall be scored or notched to prevent bulging out where reinforcement plate occurs.

B. Fire-Rated Assemblies: Install fire-rated assemblies in accordance with requirements of the 2008 New York City Building Code, Underwriters' Laboratories and test results obtained and published by the drywall manufacturer, for the fire-rated drywall assembly types indicated on the drawings.

C. Acoustical Assemblies: Install acoustically-rated assemblies to achieve a minimum STC as noted on drawings, in accordance with test results obtained and published by the drywall manufacturer, for the drywall assembly type indicated on the drawings.

D. Sealant

1. Install continuous acoustical sealant bead at top and bottom edges of wallboard where indicated or required for sound rating as wallboard is installed, and between metal trim edge beads and abutting construction.
2. Install acoustical sealant in 1/8" wide vertical control joints within the length of the wall or partitions, and in all other joints, specified below under "Control Joints." Install bead of acoustical sealant around electric switch and outlet boxes, piping, ducts, and around any other penetration in the wallboard; place sealant bead between penetrations and edge of wallboard.
3. Where sealant is exposed to view, protect adjacent surfaces from damage and from sealant material, and tool sealant flush with and in same plane as wallboard surface. Sealant beads shall be 1/4" to 3/8" diameter.

E. Wall Board Application

1. Do not install wallboard panels until steel door frames are in place; coordinate work with Section 08 11 13, "Hollow Metal Doors and Frames."
 2. See drawings for all board types. Use fire-rated wallboard for fire-rated assemblies. Use water-resistant wallboard where indicated on drawings and where wallboard would be subject to moisture. Install water-resistant wallboard in full, large sheets (no scraps) to limit number of butt joints.
 3. Apply wallboard with long dimension parallel to stud framing members, and with abutting edges occurring over stud flanges.
 4. Install wallboard for partitions from floor to underside of structure above and secure rigidly in place by screw attachment, unless otherwise indicated.
 5. Provide fire safing insulation meeting standards of Section 07 84 13 "Penetration Firestopping " at flutes of metal deck where partitions carry up to bottom of metal deck.
 6. Neatly cut wallboard to fit around outlets, switch boxes, framed openings, piping, ducts, and other items which penetrate wallboard; fill gaps with acoustic sealant.
 7. Where wallboard is to be applied to curved surfaces, dampen wallboard on back side as required to obtain required curve. Finish surface shall present smooth, even curve without fluting or other imperfections.
 8. Screw fasten wallboard with power-driven electric screw driver, screw heads to slightly depress surface of wallboard without cutting paper, screws not closer than 3/8" from ends and edges of wallboard.
 9. Where studs are doubled-up, screw fasten wallboard to both studs in a staggered pattern.
- F. Metal Trim: Install and mechanically secure in accordance with manufacturer's instructions; and finish with three (3) coats of joint compound, feathered and finish sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions.
1. Corner Beads: Install specified corner beads in single lengths at all external corners, unless corner lengths exceed standard stock lengths.
 2. Edge Beads: Install specified edge beads in single lengths at all terminating edges of wallboard exposed to view, where edges abut dissimilar materials, where edges would be exposed to view, and elsewhere where shown on drawings. Where indicated on drawings, seal joint between metal edge bead and adjoining surface with specified gasket, 1/8" wide minimum and set back 1/8" from face of wallboard, unless other size and profile indicated on drawings.
 3. Casing beads shall be set in long lengths, neatly butted at joints. Provide casing beads at juncture of board and vertical surfaces and at exposed perimeters.

- G. Control Joint Locations: Gypsum board surfaces shall be isolated with control joints where:
1. Ceiling abuts a structural element, dissimilar wall or other vertical penetration.
 2. Construction changes within the plane of the partition or ceiling.
 3. Shown on approved shop drawings.
 4. Ceiling dimensions exceed thirty (30) feet in either direction.
 5. Wings of "L," "U," and "T" shaped ceiling areas are joined.
 6. Expansion or control joints occur in the structural elements of the building.
 7. Shaftwall runs exceed 30' without interruption.
 8. Partition or furring abuts a structural element or dissimilar wall or ceiling.
 9. Partition or furring runs exceed 30' without interruption.
 10. Where control joints are required, ceiling height door frames may be used as control joints. Less than ceiling height frames shall have control joints extending to the ceiling from both corners.
- H. Joint Treatment and Spackling
1. Joints between face wallboards in the same plane, joints at internal corners of intersecting partitions and joints at internal corners of intersections between ceilings and walls or partitions shall be filled with joint compound.
 2. Screw heads and other depressions shall be filled with joint compound. Joint compound shall be applied in three (3) coats, feathered and finish surface sanded smooth with adjacent wallboard surface, in accordance with manufacturer's instructions. Treatment of joints and screw heads with joint compound is also required where wallboard will be covered by finish materials which require a smooth surface, such as vinyl wall coverings.

3.3 FURRED WALLS AND PARTITIONS

- A. Use specified metal furring channels. Run metal furring channel framing members vertically, space sixteen (16) inches o.c. maximum. Fasten furring channels to concrete or masonry surfaces with power-driven fasteners or concrete stub nails spaced sixteen (16) inches o.c. maximum through alternate wing flanges (staggered) of furring channel. Furring channels shall be shimmed as necessary to provide a plumb and level backing for wallboard. At inside of exterior walls, an asphalt felt protection strip shall be installed between each furring channel and the wall. Furring channel and splices shall be provided by nesting channels at least eight (8) inches and securely anchoring to concrete or masonry with two (2) fasteners in each wing.

- B. Wallboard Installation: Same as specified under Article 3.4 - "Metal Stud Partitions."

3.4 METAL STUD PARTITIONS

- A. Unless otherwise noted, steel framing members shall be installed in accordance with ASTM C754.
- B. Runner Installation: Use channel type. Align accurately at floor according to partition layout. Anchor runners securely sixteen (16) inches o.c. maximum with power-driven anchors to floor slab, with power-driven anchors to structural slab above. See "Stud Installation" below for runners over heads of metal door frames. Where required, carefully remove sprayed-on fireproofing to allow partition to be properly installed.
- C. Stud Installation
1. Use channel type, positioned vertically in runners, spaced as noted on drawings, but not more than sixteen (16) inches o.c.
 2. Anchor studs to floor runners with screw fasteners. Provide snap-in or slotted hole slip joint bolt connections of studs to ceiling runners leaving space for movement. Anchor studs at partition intersections, partition corners and where partition abuts other construction to floor and ceiling runners with sheet metal screws through each stud flange and runner flange.
 3. Connection at ceiling runner for non-rated partitions shall be snap-in or slotted hole slip joint bolt connection that shall allow for movement. Seal studs abutting other construction with 1/8" thick neoprene gasket continuously between stud and abutting construction.
 4. Connections for fire rated partitions at ceiling runners shall conform to UL Design #2079.
 5. Install metal stud horizontal bracing wherever vertical studs are cut or wallboard is cut for passage of pipes, ducts or other penetrations, and anchor horizontal bracing to vertical studs with sheet metal screws.
 6. At jambs of door frames and borrowed light frames, install doubled-up studs (not back to back) from floor to underside of structural deck, and securely anchor studs to jamb anchors of frames and to runners with screws. Provide cross braces from hollow metal frames to underside of slab.
 7. Over heads of door frames, install cut-to-length section of runner with flanges slit and web bent to allow flanges to overlap adjacent vertical studs, and securely anchor runner to adjacent vertical studs with sheet metal screws. Install cut-to-length vertical studs from runner (over heads of door frame) to ceiling runner sixteen (16) inches maximum o.c. and at vertical joints of wallboard, and securely anchor studs to runners with sheet metal screws.

8. At control joints, in field of partition, install double-up studs (back to back) from floor to ceiling runner, with 1/4" thick continuous compressible gasket between studs. When necessary, splice studs with eight (8) inches minimum nested laps and attach flanges together with two (2) sheet metal screws in each flange. All screws shall be self-tapping sheet metal screws.
- D. Runners and Studs at Chase Wall: As specified above for "Runners" and "Studs" and as specified herein. Chase walls shall have either a single or double row of floor and ceiling runners with metal studs sixteen (16) inches o.c. maximum and positioned vertically in the runners so that the studs are opposite each other in pairs with the flanges pointing in the same direction. Anchor all studs to runner flanges with sheet metal screws through each stud flange and runner flange following requirements of paragraph 3.5, B. Provide cross bracing between the rows of studs by attaching runner channels or studs set full width of chase attached to vertical studs with one self-tapping screw at each end. Space cross bracing not over thirty-six (36) inches o.c. vertically.
- E. Wallboard Installation - Single Layer Application (Screw Attached)
1. Install wallboard with long dimension parallel to framing member and with abutting edge joints over web of framing member. Install wallboard with long dimension perpendicular to framing members above and below openings in drywall extending to second stud at each side of opening. Joints on opposite sides of wall shall be arranged so as to occur on different studs.
 2. Boards shall be fastened securely to metal studs with screws as specified. Where a free end occurs between studs, back blocking shall be required. Center abutting ends over studs. Correct work as necessary so that faces of boards are flush, smooth, true.
 3. Wallboard screws shall be applied with an electric screw gun. Screws shall be driven not less than 3/8" from ends or edges of board to provide uniform dimple not over 1/32" deep. Screws shall be spaced twelve (12) inches o.c. in the field of the board and 8" o.c. staggered along the abutting edges.
 4. All ends and edges of wallboard shall occur over screwing members (studs or furring channels). Boards shall be brought into contact but shall not be forced into place. Where ends or edges abut, they shall be staggered. Joints on opposite sides of a partition shall be so arranged as to occur on different studs.
 5. At locations where piping receptacles, conduit, switches, etc., penetrate drywall partitions, provide non-drying sealant and an approved sealant stop at cut board locations inside partition.
- F. Wallboard Installation - Double-Layer Application
1. General: See drawings for wallboard partition types required.
 2. First Layer (Screw Attached): Install as described above for single layer application.

3. Second Layer (Screw Attached): Screw attach second layer, unless laminating method of attachment indicated on drawings or necessary to obtain required sound rating or fire rating. Install wallboard vertically with vertical joints offset thirty-two (32) inches from first layer joints and staggered on opposite sides of wall. Attach wallboard with 1-5/8" screws sixteen (16) inches o.c. along vertical joints and sixteen (16) inches o.c. in the field of the wallboard. Screw through first layer into metal framing members.
 4. Second Layer (Laminated): Install wallboard vertically. Stagger joints of second layer from first layer joints. Laminate second layer with specified laminating adhesive in beads or strips running continuously from floor to ceiling in accordance with manufacturer's instructions. After laminating, screw wallboard to framing members with 1-5/8" screws, spaced twelve (12) inches o.c. around perimeter of wallboard.
- G. Wallboard Installation - Laminated Application: Where laminated wallboard is indicated, use specified laminating adhesive, install wallboard vertically and maintain tolerances as specified for screw attached wallboard.
- H. Insulation Installation: Install where indicated on drawings. Place blanket tightly between studs.
- I. Deflection of Structure Above: To allow for possible deflection of structure above partitions, provide top runners for non-rated partitions with 1-1/4" minimum flanges and do not screw studs or drywall to top runner. Where positive anchorage of studs to top runner is required, anchorage device shall be by means of slotted hole (in clip connection with screw attachment to web of steel through bushings located in slots of clips), or other anchorage device approved by Commissioner.
- J. Control Joints
1. Leave a 1/2" continuous opening between gypsum boards for insertion of surface mounted joint.
 2. Back by double framing members.
 3. Attach control joint to face layer with 9/16" galvanized staples six (6) inches o.c. at both flanges along entire length of joint.
 4. Provide two (2) inch wide gypsum panel strip or other adequate seal behind control joint in fire rated partitions and partitions with safing insulation.
- 3.5 DRYWALL FASCIAS AND CEILINGS
- A. Furnish and install inserts, hanger clips and similar devices in coordination with other work.
 - B. Secure hangers to inserts and clips. Clamp or bolt hangers to main runners.

- C. Space main runners 4'-0" o.c. and space hangers 4'-0" o.c. along runners, except as otherwise shown.
- D. Level main runners to a tolerance of 1/4" in 12'-0", measured both lengthwise on each runner and transversely between parallel runners.
- E. Metal Furring Channels: Space sixteen (16) inches o.c. maximum. Attach to 1-1/2" main runner channels with furring channel clips (on alternate sides of main runner channels). Furring channels shall not be let into or come in contact with abutting masonry walls. End splices shall be provided by nesting furring channels no less than eight (8) inches and securely wire tying. At any openings that interrupt the furring channels, install additional cross reinforcing to restore lateral stability.
- F. Mechanical accessories, hangers, splices, runner channels and other members used in suspension system shall be of metal, zinc coated, or coated with rust inhibitive paint, of suitable design and of adequate strength to support units securely without sagging, and such as to bring unit faces to finished indicated lines and levels.
 - 1. Provide special furring where ducts are over two (2) feet wide.
- G. Apply board with its long dimension at right angles to channels. Locate board butt joints over center of furring channels. Attach board with one (1) inch self-drilling drywall screws twelve (12) inches o.c. in field of board at each furring channel; eight (8) inches o.c. at butt joints located not less than 3/8" from edges.

3.6 ERECTION AT COLUMN ENCLOSURES

- A. Metal furring supports shall be provided under work of this Section, and shall be cut to lengths as necessary for tight fit such that spacing is not more than sixteen (16) inches o.c.
- B. Board shall be fastened securely to supports with screws as specified. Place boards in position with minimum amount of joints. Where free ends occur between supports, back-blocking or furring shall be required. Center abutting ends over supports. Correct work as necessary so that faces of boards are flush, smooth and true. Provide clips or cross furring for attachment as required.
- C. All layers shall be screw attached to furring.
- D. When column finish called for on drawings to be in the same plane as drywall finish layer, maintain even, level plane.

3.7 FINISHING

- A. Taping: A thin, uniform layer of compound shall be applied to all joints and angles to be reinforced. Reinforcing tape shall be applied immediately, centered over the joint, seated into the compound. A skim coat shall follow immediately, but shall not function as a fill or second coat. Tape shall be properly folded and embedded in all angles to provide a true angle.

- B. Filling: After initial coat of compound has hardened, additional compound shall be applied, filling the board taper flush with the surface. The fill coat shall cover the tape and feather out slightly beyond the tape. On joints with no taper, the fill coat shall cover the tape and feather out at least four (4) inches on either side of the tape. No fill coat is necessary on interior angles.
- C. After compound has hardened, a finishing coat of compound shall be spread evenly over and extending slightly beyond the fill coat on all joints and feathered to a smooth, uniform finish. Over tapered edges, the finished joint shall not protrude beyond the plane of the surface. All taped angles shall receive a finish coat to cover the tape and taping compound, and provide a true angle. Where necessary, sanding shall be done between coats and following the final application of compound to provide a smooth surface, ready for painting.
- D. Fastener Depressions: Compound shall be applied to all fastener depressions followed, when hardened by at least two (2) coats of compound, leaving all depressions level with the plane of the surface.
- E. Finishing Beads and Trim: Compound shall be applied to all bead and trim and shall be feathered out from the ground to the plane of the surface. When hardened, this shall be followed by two (2) coats of compound each extending slightly beyond the previous coat. The finish coat shall be feathered from the ground to the plane of the surface and sanded as necessary to provide a flat, smooth surface ready for decoration.
- F. Except as otherwise noted, level of finish for surface exposed to view shall conform to Level 4 of ASTM C 840 and GA-214 of the Gypsum Association.
 - 1. For drywall boards with fiberglass facing, provide Level 5 finish of ASTM C840 and GA-214.
- G. Drywall construction with defects of such character which will mar appearance of finished work, or which is otherwise defective, will be rejected and shall be removed and replaced at no expense to the City of New York.

END OF SECTION 09 29 00

SECTION 09 30 13

CERAMIC TILING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Ceramic wall tile and base.
 - 2. Setting beds, grout, sealant and waterproofing membrane.
- B. Related Sections
 - 1. Section 09 29 00 "Gypsum Board"

1.3 REFERENCES

- A. ANSI A108 Series/A118 Series - American National Standards for Installation of Ceramic Tile.
- B. ANSI A136.1 - American National Standards for Organic Adhesives for Installation of Ceramic Tile.
- C. ASTM C 144 - Standard Specification for Aggregate for Masonry Mortar.
- D. ASTM C 150 - Standard Specification for Portland Cement.
- E. TCNA - Handbook for Ceramic, Glass and Stone Tile Installation; Tile Council of North America.
- F. ISO 13007 - International Standards Organization; Classification for Grout and Adhesives.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Samples

1. Before any ceramic tile is delivered to the job site, submit to the Commissioner sample panels, approx. 12" x 12", mounted on hardboard back-up with selected grout color for each color and pattern of ceramic tile and grout specified.
 2. Submit 12" x 12" samples of waterproofing membrane.
- C. Master Grade Certificates: Prior to opening ceramic tile containers, submit to the Commissioner a Master Grade Certificate, signed by an officer of the firm manufacturing the ceramic tile used, and issued when the shipment is made, stating the grade, kind of tile, identification marks for tile containers, and the name and location of the project.
- D. Mock-Ups
1. At an area on the site where approved by the Commissioner, provide a mock-up ceramic tile installation.
 - a. Make the mock-up approximately 36" x 36" in dimension.
 - b. Provide one mock-up for each type, class, and color of installation required under this Section.
 - c. The mock-ups may be used as part of the Work, and may be included in the finished Work when so approved by the Commissioner.
 - d. Revise as necessary to secure the Commissioner's approval.
 2. The mock-ups, when approved by the Commissioner, will be used as datum for comparison with the remainder of the work of this Section for the purposes of acceptance or rejection.
 3. If the mock-up panels are not permitted to be part of the finished Work, completely demolish and remove them from the job site upon completion and acceptance of the work of this Section.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Qualifications of Installers: For cutting, installing and grouting of ceramic tile, use only thoroughly instructed and experienced tile setters who are completely familiar with the requirements of this work, and the recommendations contained in the referenced standards.

PART 2 PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

- A. Manufacture all ceramic tile in accordance with Standard Grade Requirements of ANSI A-137.1.

- B. Install all ceramic tile in accordance with the recommendations contained in "Tile Council of North America Handbook for Ceramic, Glass, and Stone Tile Installation (TCNA)," latest edition.

2.2 MANUFACTURERS OF TILE

- A. Provide tile by Topcer or equal by Daltile, Summit Tile or approved equal meeting these specifications. The Commissioner reserves the right to pick tile from any price group.

2.3 WALL TILE AND BASE

- A. Provide 4x4, ceramic, unglazed, through-color, 1/4" thick, matte tile in color, material and finish per Finish Key or as selected by Commissioner.
- B. Provide sanitary cove base to match wall tile.

2.4 TRIM AND SPECIAL SHAPES

- A. Provide external and internal corners, trim shapes at openings, and all other trim and special shapes to match the tile specified herein, as required by field conditions and drawing details.

2.5 SETTING BEDS AND GROUT

- A. Portland Cement: ASTM C 150, Type 1.
- B. Hydrated Lime: ASTM C 207, Type S.
- C. Sand: ASTM C 144, clean and graded natural sand.
- D. Latex Admixture for Mortar Bed
 - 1. MAPEI, Planicrete AC, blended with a 3:1 site mix.
 - 2. Laticrete 333.
 - 3. Pro Spec; Acrylic Additive.
 - 4. Custom Building Products; Custom Crete Thin Set Additive.
 - 5. Or approved equal.
- E. Latex-Portland Cement Bond Coat, complying with ANSI A118.4 and ISO 13007, C2ES2P2 with minimum compressive strength of 400 psi.
 - 1. MAPEI, Keralastic System thin set mortar, consisting of Kerabond dry-set mortar and Keralastic latex admixture.
 - 2. Laticrete; 211 dry-set mortar and 4237 latex admixture.

3. Pro Spec; Permalastic System consisting of Permalastic Dryset Mortar and Permalastic Admixture
 4. Custom Building Products; Pro-Lite.
 5. Or approved equal.
- F. Wall and Base Tile
1. Over cement board, use a Latex Portland cement mortar bond coat, MAPEI, Kerabond/Keralastic System, Custom Mega Flex or equal by Laticrete or Pro Spec or approved equal, conforming to ANSI A118.4, ISO 13007-C2ES2P2, and TCA Detail W-244; coat back of board with waterproof membrane as specified below.
 2. Over glass mat water resistant gypsum backer board, use a Latex Portland cement mortar bond coat, MAPEI, Kerabond/Keralastic System, or equal by Laticrete or Pro Spec or approved equal, conforming to ANSI A118.4, ISO 13007-C2ES2P2, and TCA Detail W-245.
- G. Waterproofing Membrane: Complying with ANSI A118.10 and ANSI A118.12; and having IAPMO certification as a shower pan liner; provide "Mapelastic 400" by Mapei with factory blended "Bio-Block" antimicrobial protection, "Laticrete 9235 with Microban" by Laticrete International, "B6000" by ProSpec, "9240" by Custom Building Products or approved equal.
1. Reinforce membrane with polyester fabric.
- H. Water: Clean, fresh and suitable for drinking.
- I. Grout complying with A118.7; and ISO 13007, CG2WAF: For grouting ceramic tile, provide a commercial Portland cement grout; "Ultracolor Plus" (additive not required) by MAPEI, "Permacolor Select" by Laticrete, "Prism Sure Color Grout" (additive not required) by Custom or approved equal. Add latex additive to grout as required by manufacturer; additive shall be made by same manufacturer as grout.
1. Color: As selected by Commissioner.
- J. Physical Properties: The setting beds and grouts must meet the following physical requirements:
1. Compressive Strength: 3000 psi min.
 2. Shear Bond Strength: 500 psi min.
 3. Water Absorption: 4.0% max.
 4. Service Rating (ASTM C 627): Extra Heavy Duty.
- K. Sealer: Seal all grout joints and all unglazed tile using water-based penetrating sealer.

- L. Temporary Protective Coating: Either product indicated below that is applied in the tile manufacturer's factory and formulated to protect exposed surfaces of tile against adherence of mortar and grout; compatible with tile, mortar, and grout products; and easily removable after grouting is completed without damaging grout or tile.
 - 1. Petroleum paraffin wax, applied hot, fully refined and odorless, containing at least 0.5 percent oil with a melting point of 120 to 140 deg. F. per ASTM D 87.
 - 2. Grout release in form of manufacturer's standard proprietary liquid coating that is specially formulated and recommended for use as temporary protective coating for tile.
- M. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

2.6 SEALANT

- A. Joint Backing: Preformed, compressible, resilient, non-extruding, non-staining strips of foam neoprene, foam polyethylene, or other material recommended by sealant manufacturer.
- B. Bond Breaker: Polyethylene tape, 3 mils thick, or other material recommended by sealant manufacturer.
- C. Sealant Primer: Colorless, non-staining, or type to suit substrate surface, as recommended by sealant manufacturer.
- D. Sealant: One-part silicone based sanitary sealant, conforming to ASTM C 920, Type S, Grade NS, Class 25. Sealant hardness upon full cure shall be between 20-30 Shore "A" Durometer. Color of sealant to blend with or match adjacent materials, and as selected by the Commissioner.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where ceramic tile is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.3 PREPARATION

- A. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved samples. If not factory blended, either return to manufacturer or blend tiles at project site before installing.
- B. Field Applied Temporary Protective Coating: Pre-coat tile with continuous film of temporary protective coating, taking care not to coat unexposed tile surfaces.

3.4 JOINTS IN TILE WORK

- A. Joint Widths: 1/16" wide in ceramic tile.
- B. Alignment: Wall, base and floor joints shall align through the field and trim. Direction and location of all joints as directed by the Commissioner.
- C. Movement Joints: Conform to TCA Detail EJ171. Locate where movement joints are in back-up material. Provide movement joint at joints between mop receptors and ceramic tile. Provide movement joint at all vertical internal joints of wall tile. Movement joints 1/8" wide in ceramic tile. Fill all movement joints with specified backing and sealant. Use bond breaker where sufficient space for joint backing does not exist.
 - 1. Provide sealant between ceramic tile and plumbing fixtures, mirrors, pipes, countertops and other dissimilar materials penetrating or adjacent to ceramic tile.

3.5 INSTALLATION

- A. Comply with the following installation standards:
 - 1. Wall tile over cement board or glass mat backer board using dry set mortar with latex additive - ANSI A118.4 and ISO 13007, C2ES2P2.
- B. Backs of tile must be cleaned before installation.
- C. All setting beds and/or adhesives shall provide for an average contact area of not less than 95% coverage.
- D. Allowable Variations in Finished Work: Do not exceed the following deviations from level and plumb, and from elevations, locations, slopes and alignment shown.
 - 1. Walls: 1/8" in 8'-0" run, any direction; 1/8" at any location; offset at any location, 1/32".
 - 2. Joints: +/- 1/32" joint width variation of any location; 1/16" in 3'-0" run deviation from plumb and true.
- E. Waterproofing Membrane: Install the membrane in strict accordance with manufacturer's written recommendations.

- F. Handle, store, mix and apply setting and grouting materials in compliance with the manufacturer's instructions.
- G. Extend tile work into recesses and under equipment and fixtures, to form a complete covering without interruptions. Terminate work neatly at obstructions, edges and corners without disruption of pattern or joint alignment.
- H. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight, aligned joints. Fit tile closely to electrical outlets, piping and fixtures so that plates, collars, or covers overlap tile.
- I. Lay tile in grid pattern. Align joints when adjoining tiles on floor, base, walls and trim are the same size. Lay out tile work and center tile fields both directions in each space or on each wall area. Adjust to minimize tile cutting. Provide uniform joint widths.

3.6 CLEANING AND PROTECTION OF CERAMIC TILE

- A. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.
 - 1. Remove grout residue from tile as soon as possible.
 - 2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use cleaners only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning to ensure removal of all cleaning material.
 - 3. Remove temporary protective coating by method recommended by coating manufacturer and that is acceptable to tile and grout manufacturer. Trap and remove coating to prevent drain clogging.
- B. Protect installed tile work with Kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. Apply coat of sealer to all grout joints and all unglazed tile.
- C. Before final inspection, remove protective coverings from tile surfaces.
- D. Leave finished installation clean and free of cracked, chipped, broken, unbonded or otherwise defective tile work.

SECTION 09 67 23

RESINOUS FLOORING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes resinous flooring and base for Mechanical Equipment Room and wherever else noted on Finish Schedule.
- B. Related Sections
 - 1. Section 03 30 00 "Cast-in-Place Concrete"
 - 2. Section 22 13 19 "Sanitary Waste Piping Specialties" for floor drains.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Samples for initial selection purposes in form of manufacturer's color charts showing full range of colors and finishes available.
 - 1. Submit three (3) 2-1/2" x 4" samples of each material specified herein with color from color chart selection designated by the Commissioner.
- C. Material certificates signed by manufacturer certifying that the composition flooring complies with requirements specified herein.
- D. Maintenance written instructions for recommended maintenance practices.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Installer Qualifications: Engage an experienced Installer or applicator who has specialized in installing flooring types similar to that required for this Project and who is acceptable to manufacturer of primary materials.
- C. Single-Source Responsibility: Obtain resinous flooring materials, including primers, resins, hardening agents, and finish or sealing coats, from a single manufacturer.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials in original packages and containers with seals unbroken and bearing manufacturer's labels containing brand name and directions for storage and mixing with other components.
- B. Store materials to comply with manufacturer's directions to prevent deterioration from moisture, heat, cold, direct sunlight, or other detrimental effects.

1.6 PROJECT CONDITIONS

- A. Environmental Conditions: Comply with resinous flooring manufacturer's directions for maintenance of ambient and substrate temperature, moisture, humidity, ventilation, and other conditions required to execute and protect Work.

1.7 WARRANTY

- A. Provide manufacturer's warranty with flashing endorsement, signed by manufacturer, and warranting flooring materials against failures resulting from normal exposure for a period of three (3) years.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Subject to compliance with the requirements of this specification, resinous flooring shall be:
 - 1. Stonclad GS with Stonproof ME 7 and Stonkote GS4 as manufactured by Stonhard Corp. at nominal 3/16" thick.
 - 2. Tnemec 237/237C Power Tread, (1/16"), 206 Subflex EP (30-40 dft) and 280 Tneme Glaze (10-15 dft).
 - 3. Dex-O-Tex M-E Flooring System membrane and Floor Finish as manufactured by Crossfield Products Corp. at nominal 3/16" thick.
 - 4. Sherwin Williams (G-P) EPO-Flex MER III Mechanical Equipment Room System.
 - 5. Or approved equal.

2.2 SUPPLEMENTAL MATERIALS

- A. Flashing, Sheets, Cant Strips and Accessories: Types as recommended by flooring materials manufacturer, supplied for locations indicated and for locations recommended by manufacturer.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where resinous flooring is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions have been corrected by the Contractor in a manner acceptable to the Commissioner.

3.3 PREPARATION

- A. Substrate: Perform preparation and cleaning procedures according to flooring manufacturer's instructions for particular substrate conditions involved, and as specified. Provide clean, dry, and neutral substrate for flooring application.
- B. Concrete Surfaces: Shot-blast, acid etch or power scarify as required to obtain optimum bond of flooring to concrete. Remove sufficient material to provide a sound surface free of laitance, glaze, efflorescence, and any bond-inhibiting curing compounds or form release agents. Remove grease, oil, and other penetrating contaminants. Restore damaged and deteriorated concrete to acceptable condition. Leave surface free of dust, dirt, laitance, and efflorescence.
- C. Materials: Prepare materials according to flooring system manufacturer's instructions.
- D. Starting of work implies acceptance of slab.

3.4 APPLICATION

- A. General: Apply each component of resinous flooring system according to manufacturer's directions to produce a uniform monolithic flooring surface at the nominal thickness required.
 - 1. Start installation of flooring only in presence of manufacturer's technical representative who must approve (in writing to the Commissioner) condition of the prepared floor slab.
- B. Flooring system shall include the following minimum applications:
 - 1. Detail all cracks and control joints according to manufacturer's requirements.
 - 2. Bonding coat per manufacturer's requirements.
 - 3. Membrane coat per manufacturer's requirements.
 - 4. Reinforcement fabric as required by manufacturer.
 - 5. Smoothing coat for reinforced membrane systems as required by manufacturer.

6. Wear course as required by manufacturer.
7. Topcoat/Sealer: One or two topcoats as required by manufacturer.

3.5 TESTING

- A. Test installation for leaks immediately after nominal cure of the completed flooring. Flood each area to a depth of one inch for 24 hours. Restore all leaking areas and repeat test until no leakage is observable.

3.6 CURING, PROTECTION AND CLEANING

- A. Cure resinous flooring materials according to manufacturer's directions, taking care to prevent contamination during application stages and before completing curing process. Close application area for a minimum of 24 hours.

END OF SECTION 09 67 23

SECTION 09 90 00

PAINTING AND COATING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section includes:

1. Prime painting unprimed surfaces to be painted under this Section.
2. Painting all items furnished with a prime coat of paint, including touching up or restoring of abraded, damaged or rusted prime coats applied by others.
3. Painting all ferrous metal (except stainless steel) exposed to view.
4. Painting all galvanized ferrous metals exposed to view.
5. Painting interior concrete block exposed to view.
6. Painting gypsum drywall exposed to view.
7. Painting of wood exposed to view, except items which are specified to be painted or finished under other Sections of these specifications. Back painting of all wood in contact with concrete, masonry or other moisture areas.
8. Painting pipes, pipe coverings, conduit, ducts, insulation, hangers, supports and other mechanical and electrical items and equipment exposed to view.
9. Painting surfaces above, behind or below grilles, gratings, diffusers, louvers, lighting fixtures, and the like, which are exposed to view through these items.
10. Incidental painting and touching up as required to produce proper finish for painted surfaces, including touching up of factory finished items.
11. Painting of any surface not specifically mentioned to be painted herein or on drawings, but for which painting is obviously necessary to complete the job, or work which comes within the intent of these specifications, shall be included as though specified.

B. Related Sections

1. Shop priming is required on some, but not all of the items scheduled to be field painted. Sections including shop primed items include, but are not limited to, the following:
 - a. Section 05 50 00 – Metal Fabrications
 - b. Section 08 11 13 - Hollow Metal Doors and Frames
 - c. Section 08 31 13 - Access Doors and Frames
2. Shop Coat on Machinery and Equipment: Refer to the Sections under which various items of manufactured equipment with factory applied shop prime coats are furnished. All items of equipment furnished with prime coat finish shall be finish painted under this Section.
3. Color Coding of Mechanical Piping and Electrical Conduits
 - a. Section 22 11 13 - Facility Water Distribution Piping and Meter
 - b. Section 23 31 13 - Metal Ducts
 - c. Section 26 05 33 - Raceways and Boxes for Electrical Systems
 - d. Color Coding consists of an adhesive tape system and is in addition to painting of piping and conduits under this Section, as specified above.

1.3 MATERIALS AND EQUIPMENT NOT TO BE PAINTED

- A. Items of equipment furnished with complete factory finish, except for items specified to be given a finish coat under this Section.
- B. Factory-finished toilet partitions.
- C. Non-ferrous metals, except for items specified and/or indicated to be painted.
- D. Finished hardware, excepting hardware that is factory primed.
- E. Surfaces not to be painted shall be left completely free of droppings and accidentally applied materials resulting from the work of this Section.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Materials List: Submit a complete list of materials proposed to be furnished and installed under this portion of the work.
- C. Samples
 1. Samples for Initial Selection: Accompanying the materials list, submit samples of the full range of colors available in each of the proposed products.
 2. Samples for Verification: Submit samples of each of the selected colors and glosses painted onto 8-1/2" x 11" x 1/4" thick material; whenever possible, the material for Samples shall be the same material as that on which the coating will be applied in the work.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Job Mock-Up
 - 1. In addition to the samples specified herein to be submitted for approval, apply in the field, at their final location, each type and color of approved paint materials, applied 10 feet wide, floor to ceiling of wall surfaces, before proceeding with the remainder of the work, for approval by the Commissioner. Paint mock-ups to include door and frame assembly.
 - 2. These applications when approved will establish the quality and workmanship for the work of this Section.
 - 3. Repaint individual areas which are not approved, as determined by the Commissioner, until approval is received. Assume at least two paint mock-ups of each color and gloss for approval.
- C. Qualification of Painters: Use only qualified painters for the mixing and application of paint on exposed surfaces.
- D. Paint Coordination: Provide finish coats which are compatible with the prime paints used. Provide barrier coats over incompatible primers or remove and re-prime as required.

1.6 JOB CONDITIONS

- A. Apply water-based paints only when the temperature of surfaces to be painted and the surrounding air temperatures are between 50 degrees F. and 90 degrees F., unless otherwise permitted by the paint manufacturer's printed instructions.
- B. Apply solvent-thinned paints only when the temperature of surfaces to be painted and the surrounding air temperatures are between 45 degrees F. and 95 degrees F. unless otherwise permitted by the paint manufacturer's printed instructions.
- C. Do not apply paint in snow, rain, fog or mist; or when the relative humidity exceeds eighty-five (85) percent; or to damp or wet surfaces; unless otherwise permitted by the paint manufacturer's printed instructions.
- D. Painting may be continued during inclement weather only if the areas and surfaces to be painted are enclosed and heated within the temperature limits specified by the paint manufacturer during application and drying periods.

PART 2 PRODUCTS

2.1 PAINT MANUFACTURERS

- A. Except as otherwise noted, provide the painting products listed for all required painting made by one of the manufacturers listed in the paint schedule (Section 2.4). These

companies are Benjamin Moore, Akzo Nobel Paint (Glidden Professional), Sherwin Williams (S-W) or approved equal. Comply with number of coats and required minimum mil thicknesses as specified herein.

2.2 MATERIALS

- A. Provide undercoat paint produced by the same manufacturer as the finish coats. Use only thinners approved by the paint manufacturer, and use only to recommended limits.
- B. Colors and Glosses: All colors and glosses shall be as per finish schedule or as selected by the Commissioner. Certain colors will require paint manufacturer to prepare special factory mixes to match colors selected by the Commissioner. Color schedule (with gloss) shall be furnished by the Commissioner. Colors include, but are not limited to, the following:
- C. Coloring Pigment: Products of or furnished by the manufacturer of the paint or enamel approved for the work.
- D. Linseed Oil: Raw or boiled, as required, of approved manufacture, per ASTM D 234 and D 260, respectively.
- E. Turpentine: Pure distilled gum spirits of turpentine, per ASTM D 13.
- F. Shellac: Pure gum shellac (white or orange) cut in pure denatured alcohol using not less than four (4) lbs. of gum per gallon of alcohol.
- G. Driers, Putty, Spackling Compound, Patching Plaster, etc.: Best quality, of approved manufacture.
- H. Heat Resistant Paint: Where required, use heat resistant paint when applying paint to heating lines and equipment.

2.3 GENERAL STANDARDS

- A. Painting materials shall bear identifying labels on the containers with the manufacturer's instructions printed thereon.
- B. Paint shall not be badly settled, caked or thickened in the container, shall be readily dispersed with a paddle to a smooth consistency and shall have excellent application properties.
- C. Paint shall arrive on the job color-mixed except for tinting of undercoats and possible thinning.
- D. All thinning and tinting materials shall be as recommended by the manufacturer for the particular material thinned or tinted.

2.4 SCHEDULE OF FINISHES

- A. Paint on Exterior Steel Surfaces, including but not limited to: structural steel (stair 2), steel stair guards (with SS handrails), Hollow metal entry doors north and south and steel panels adjacent to entry doors.

1. Surface Preparation: SSPC-SP6 Commercial Blast
2. Provide the following system by Tnemec or comparable system by International Protective Coatings, Carboline, Akzo, Cortech/Moore, Sherwin-Williams or approved equal:
 - a. Coat 1: Tnemec Series 394 PerimePrime at 2.5-3.5 mils DFT (shop applied)
 - b. Coat 2: Tnemec Series 27 Typoxy at 4-6 mils DFT
 - c. Coat 3: Tnemec Series 1075U EnduraShield at 2-3 mils DFT
3. Coordinate shop applied primer (Series 394) with structural steel specification to ensure steel fabricator applies correct primer.

- B. Interior Ferrous Metal

1. Satin Finish/Latex
 - a. Primer:
 - 1). 1 coat Ben Moore Alkyd Metal Primer (Z06)
 - 2). 1 coat Akzo Devflex 4020 PF DTM Prime/Flat Finish or touch-up shop primer
 - 3). 1 coat Sherwin-Williams Pro Industrial Pro-Cryl Universal Primer B66-310
 - 4). or approved equal
 - b. First Coat:
 - 1). 1 coat Ben Moore Ultra Spec-HP DTM Acrylic Low Luster P25
 - 2). 1 coat Akzo: Glidden Professional Diamond 350 Acrylic Eggshell GP1403
 - 3). 1 coat S-W Pro-Classic Waterborne Acrylic Satin, B20
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Ultra Spec-HP DTM Acrylic Low Luster P25
 - 2). 1 coat Akzo: Glidden Professional Diamond 350 Acrylic Eggshell GP1403
 - 3). 1 coat S-W Pro-Classic Waterborne Acrylic Satin, B20
 - 4). or approved equal
 - d. Total DFT not less than: 3.9 mils
2. Semi-Gloss Finish/Latex
 - a. Primer:
 - 1). 1 coat Ben Moore Super Spec-HP Acrylic Metal Primer (P04)
 - 2). 1 coat Akzo Devflex 4020 PF DTM Primer/Flat Finish or touch-up shop primer.

- 3). 1 coat Sherwin-Williams, Pro Industrial Pro-Cryl Universal Primer B66-310
- 4). or approved equal
- b. First Coat:
 - 1). 1 coat Moore Ultra Spec HP DTM Acrylic Semi-Gloss (P29)
 - 2). 1 coat Akzo: Glidden Professional Diamond 350 Acrylic S/G GP1407
 - 3). 1 coat S-W Pro-Classic Waterborne Acrylic Semi-Gloss, B31
 - 4). or approved equal
- c. Second Coat:
 - 1). 1 coat Moore Ultra Spec HP DTM Acrylic Semi-Gloss (P29)
 - 2). 1 coat Akzo: Glidden Professional Diamond 350 Acrylic S/G GP1407
 - 3). 1 coat S-W Pro-Classic Waterborne Acrylic Semi-Gloss, B31
 - 4). or approved equal
- d. Total DFT not less than: 4.0 mils

C. Interior Concrete Block

1. Flat Finish/Vinyl Acrylic Latex over Filler

- a. Block Filler:
 - 1). 1 coat Ben Moore Super Spec Masonry Int./Ext. High Build Block Filler (206)
 - 2). 1 coat Akzo Glidden Professional Concrete Coatings Block Filler GP 3010-1200
 - 3). 1 coat S-W Preprite Block Filler, B25W25
 - 4). or approved equal
- b. First Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Flat Latex (N536)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Flat, B30-2600
 - 4). or approved equal
- c. Second Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Flat Latex (N536)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Flat, B30-2600
 - 4). or approved equal
- d. Total DFT not less than: 10.7 mils

2. Eggshell Finish/Vinyl Acrylic Latex Over Filler

- a. Block Filler:
 - 1). 1 coat Ben Moore Super Spec Masonry Int./Ext. High Build Block Filler (206)
 - 2). 1 coat Akzo Glidden Professional Concrete Coatings Block Filler GP 3010-1200
 - 3). 1 coat S-W Preprite Block Filler, B25W25
 - 4). or approved equal

- b. First Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Eggshell (N538)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP1403
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Eggshell, B20-2600
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Eggshell (N538)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP1403
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Eggshell, B30-2600
 - 4). or approved equal
 - d. Total DFT not less than: 10.9 mils
3. Semi-Gloss Finish/Vinyl Acrylic Latex over Filler
- a. Block Filler:
 - 1). 1 coat Ben Moore Super Spec Masonry Int./Ext. High Build Block Filler (206)
 - 2). 1 coat Akzo Glidden Professional Concrete Coatings Block Filler GP 3010-1200
 - 3). 1 coat S-W Preprite Block Filler, B25W25
 - 4). or approved equal
 - b. First Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Gloss (N540)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex S. Gloss, B31-2600
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Gloss (N540)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex S. Gloss, B31-2600
 - 4). or approved equal
 - d. Total DFT not less than: 10.7 mils

D. Interior Drywall

- 1. Flat Finish/Vinyl Acrylic Latex
 - a. Primer:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Primer (N534)
 - 2). 1 coat Akzo Glidden Professional Gripper GP 3210
 - 3). 1 coat S-W Promar 200 Interior Latex Primer
 - 4). or approved equal
 - b. First Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Latex Flat (N536)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201

- 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Flat, B30-2600
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Latex Flat (N536)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Flat GP 1201
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Flat, B30-2600
 - 4). or approved equal
 - d. Total DFT not less than: 3.6 mils
 2. Eggshell Finish/Vinyl Acrylic Latex
 - a. Primer:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Primer (N534)
 - 2). 1 coat Akzo Glidden Professional Gripper GP 3210
 - 3). 1 coat S-W Promar 200 Interior Latex Primer,
 - 4). or approved equal
 - b. First Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Eggshell (N538)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP 1403
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Egg-Shell, B20-2600
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Ultra Spec 500 Interior Latex Eggshell (N538)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP 1403
 - 3). 1 coat S-W Promar 200 "O" VOC Interior Latex Egg-Shell B20-2600
 - 4). or approved equal
 - d. Total DFT not less than: 3.8 mils
- E. Interior Painted Wood:
1. Satin Finish/Latex
 - a. Primer:
 - 1). 1 coat Ben Moore Advance Waterborne Int. Alkyd Primer (790)
 - 2). 1 coat Akzo Glidden Professional Gripper GP 3210
 - 3). 1 coat S-W Premium Wall and Wood Primer B28W111
 - 4). or approved equal
 - b. First Coat:
 - 1). 1 coat Moore Advance Waterborne Int. Alkyd Satin (792)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP 1403
 - 3). 1 coat S-W Pro Classic Interior WB, Acrylic/Alkyd Classic B20.
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Advance Waterborne Int. Alkyd Satin (792)

- 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic Eggshell GP 1403
 - 3). 1 coat S-W Pro Classic Interior WB, Acrylic/Alkyd Classic B20.
 - 4). or approved equal
 - d. Total DFT not less than: 4.0 mils
2. Semi-Gloss Finish/Latex
- a. Primer:
 - 1). 1 coat Ben Moore Advance Waterborne Int. Alkyd Primer (790)
 - 2). 1 coat Akzo Glidden Professional Gripper GP 3210
 - 3). 1 coat S-W Premium Wall and Wood Primer B28W111
 - 4). or approved equal
 - b. First Coat:
 - 1). 1 coat Ben Moore Advance Waterborne Int. Alkyd (793)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
 - 3). 1 coat S-W Pro Classic Interior WB, Acrylic/Alkyd Classic Semi-Gloss B31
 - 4). or approved equal
 - c. Second Coat:
 - 1). 1 coat Ben Moore Advance Waterborne Int. Alkyd (793)
 - 2). 1 coat Akzo Glidden Professional Diamond 350 Acrylic S/G GP 1407
 - 3). 1 coat S-W Pro Classic Interior WB, Acrylic/Alkyd Classic Semi-Gloss B31
 - 4). or approved equal
 - d. Total DFT not less than: 3.8 mils

2.5 PIPING AND MECHANICAL EQUIPMENT EXPOSED TO VIEW

- A. Paint all exposed piping, conduits, ductwork and mechanical and electrical equipment. Use heat resisting paint when applied to heating lines and equipment. The Contractor is cautioned not to paint or otherwise disturb moving parts in the mechanical systems. Mask or otherwise protect all parts as required to prevent damage.
- B. Exposed Uncovered Ductwork, Piping, Hangers and Equipment: Latex Enamel Undercoater and one (1) coat Acrylic Latex Flat.
- C. Exposed Covered Piping, Duct Work and Equipment: Primer/Sealer and one (1) coat Acrylic Latex Flat.
- D. Panel Boards, Grilles and Exposed Surfaces of Electrical Equipment: Latex Enamel Undercoater and two (2) coats Latex Semi-Gloss.
- E. Equipment or Apparatus with Factory-Applied Paint: Refinish any damaged surfaces to match original finish. Do not paint over name plates and labels.
- F. All surfaces of insulation and all other work to be painted shall be wiped or washed clean before any painting is started.

- G. All conduit, boxes, distribution boxes, light and power panels, hangers, clamps, etc., are included where painting is required.
- H. All items of Mechanical and Electrical trades which are furnished painted under their respective Contracts shall be carefully coordinated with the work of this Section so as to leave no doubt as to what items are scheduled to be painted under this Section.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL WORKMANSHIP REQUIREMENTS

- A. Application may be by brush or roller. Spray application only upon acceptance from the Commissioner in writing.
- B. Remove and protect hardware, accessories, device plates, lighting fixtures, and factory finished work, and similar items, or provide ample in place protection. Upon completion of each space, carefully replace all removed items by workmen skilled in the trades involved.
- C. Remove electrical panel box covers and doors before painting walls. Paint separately and re-install after all paint is dry.
- D. All materials shall be applied under adequate illumination, evenly spread and flowed on smoothly to avoid runs, sags, holidays, brush marks, air bubbles and excessive roller stipple.
- E. Coverage and hide shall be complete. When color, stain, dirt or undercoats show through final coat of paint, the surface shall be covered by additional coats until the paint film is of uniform finish, color, appearance and coverage.
- F. Do not apply paint behind frameless mirrors that use mastic for adhering to wall surface.

3.3 PREPARATION OF SURFACES

- A. Metal Surfaces
 - 1. Weld Fluxes: Remove weld fluxes, splatters, and alkali contaminants from metal surfaces in an approved manner and leave surface ready to receive painting.
 - 2. Bare Metal: Thoroughly clean off all foreign matter such as grease, rust, scale and dirt before priming coat is applied. Clean surfaces, where solder flux has been used, with benzene. Clean surfaces by flushing with mineral spirits. For aluminum surfaces, wipe down with an oil free solvent prior to application of any pre-treatment.

- a. Bare metal to receive high performance coating specified herein must be blast cleaned SSPC SP-6 prior to application if field applied primer; coordinate with steel trades furnishing ferrous metals to receive this coating to ensure that this cleaning method is followed.
 3. Shop Primed Metal: Clean off foreign matter as specified for "Bare Metal." Prime bare, rusted, abraded and marred surfaces with approved primer after proper cleaning of surfaces. Sandpaper all rough surfaces smooth.
 4. Galvanized Metal: Prepare surface as per the requirements of ASTM D 6386.
 5. Metal Filler: Fill dents, cracks, hollow places, open joints and other irregularities in metal work to be painted with an approved metal filler suitable for the purpose and meeting the requirements of the related Section of work; after setting, sand to a smooth, hard finish, flush with adjoining surface.
- B. Plaster Surfaces: Scrape off all plaster nibs or other projections and sand smooth or finish to match adjoining surface texture. Cut out all scratches, cracks, holes, depressions and similar voids and fill with non-shrinking grout, spackles, patching plaster or other approved patching material; allow to dry, refill if necessary, then sand smooth (or refinish) to provide a flush, smooth surface of the same texture as the adjacent plaster surface.
1. Allow at least 28 days, from installation of final plaster coat, before starting work.
- C. Gypsum Drywall Surfaces: Scrape off all projections and splatters, spackles all holes or depressions, including taped and spackled joints, sand smooth. Conform to standards established in Section 09 29 00, "Gypsum Board."
- D. Wood Surfaces: Sand to remove all roughness, loose edges, splinters, or splinters and then brush to remove dust. Wash off grease or dirt with an approved cleaner. Fill all cracks, splits, nail holes, screw holes, and surface defects with putty after the priming coat has been applied. Putty shall be brought up flush with the surface and sanded smooth and touched-up with primer when dry.
- E. Block Masonry Surfaces: Thoroughly clean off all grit, grease, dirt mortar drippings or splatters, and other foreign matter. Remove nibs or projections from masonry surfaces. Fill cracks, holes or voids, not filled under Section 04 20 00, Unit Masonry, with Portland cement grout, and bag surface so that it has approximately the same texture as the adjacent masonry surface.
- F. Testing for Moisture Content: Contractor shall test all plaster, masonry, and drywall surfaces for moisture content using a reliable electronic moisture meter. Contractor shall also test latex type fillers for moisture content before application of top coats of paint. Do not apply any paint or sealer to any surface or to latex type filler where the moisture content exceeds seven (7) percent as measured by the electronic moisture meter.
- G. Touch-Up: Prime paint all patched portions in addition to all other specified coats.

3.4 MATERIALS PREPARATION

- A. Mix and prepare painting materials in strict accordance with the manufacturer's directions.
- B. Stir all materials before application to produce a mixture of uniform density, and as required during the application of the materials. Do not stir any film which may form on the surface into the material. Remove the film and, if necessary, strain the material before using.
- C. Tint each undercoat a lighter shade to facilitate identification of each coat where multiple coats of the same material are to be applied. Tint undercoats to match the color of the finish coat but provide sufficient difference in shade of undercoats to distinguish each separate coat.

3.5 APPLICATION

- A. General: Apply paint by brush or roller in accordance with the manufacturer's directions. Use brushes best suited for the type of material being applied. Use rollers of carpet, velvet back, or high pile sheep's wool as recommended by the paint manufacturer for material and texture required.
 - 1. The number of coats and paint film thickness required is the same regardless of the application method. Do not apply succeeding coats until the previous coat has completely dried. Sand between each enamel or varnish coat application with fine sandpaper or rub surfaces with pumice stone where required to produce an even, smooth surface in accordance with the coating manufacturer's directions.
 - 2. Apply additional coats when undercoats, stains, or other conditions show through the final coat of paint, until the paint film is of uniform finish, color and appearance. Ensure that all surfaces, including edges, corners, crevices, welds, and exposed fasteners receive a film thickness equivalent to that of flat surfaces.
 - 3. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment or furniture with prime coat only.
 - a. "Exposed surfaces" is defined as those areas visible when permanent or built-in fixtures, convactor covers, covers for finned tube radiation, grilles, etc., are in place in areas scheduled to be painted.
 - 4. Paint interior surfaces of ducts, where visible through registers or grilles, with a flat, non-specular black paint, before final installation of equipment.
 - 5. Paint the back sides of access panels, removable or hinged covers to match the exposed surfaces.
 - 6. Finish doors on tops, bottoms, and side edges the same as the faces, unless otherwise indicated.

7. Enamel finish applied to wood or metal shall be sanded with fine sandpaper and then cleaned between coats to produce an even surface.
 8. Paste wood filler applied on open grained wood after beginning to flatten, shall be wiped across the grain of the wood, then with a circular motion, to secure a smooth, filled, clean surface with filler remaining in open grain only. After overnight dry, sand surface with the grain until smooth before applying specified coat.
- B. Prime Coats: Re-coat primed and sealed walls and ceilings where there is evidence of suction spots or unsealed areas in first coat, to ensure a finish coat with no burn-through or other defects due to insufficient sealing.
- C. Pigmented (Opaque) Finishes: Completely cover to provide an opaque, smooth surface of uniform finish, color, appearance and coverage.
- D. Touching-Up of Factory Finishes: Unless otherwise specified or shown, materials with a factory finish shall not be painted at the project site. To touch up, the Contractor shall use the factory finished material manufacturer's recommended paint materials to restore abraded, chipped, or otherwise defective surfaces.

SECTION 10 11 00

VISUAL DISPLAY UNITS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Bulletin boards and cases.
 - 2. Markerboards.
 - 3. Frames, trim and accessories.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical data and installation instructions for each material and component part, including data substantiating that materials comply with requirements.
- C. Shop Drawings: Submit for each type of visual display surface. Include sections of typical trim members and dimensioned elevations. Show anchors, grounds, reinforcement, accessories, and installation details.
- D. Samples: Submit full range of color samples for each type of visual display surface, trim and accessories required. Provide 12" square samples of sheet materials and 12" lengths of trim members for color verification after selections have been made.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Qualifications of Installers: For installation of visual display surfaces, use only personnel who are thoroughly instructed and experienced in the skills involved and who are completely familiar with the manufacturer's recommended methods of installation.

- C. Installation Methods: The recommended installation methods of the manufacturer shall become the basis for acceptance or rejection of actual installation methods used in the work.
- D. Manufacturer: Furnish all visual display surfaces by one manufacturer for entire project.

PART 2 PRODUCTS

2.1 BULLETIN BOARD AND CASE

- A. Bulletin Board and Case: Factory-fabricated unit including manufacturer's standard cabinet with tack assembly insert on back inside surface and glazed doors at front.
 - 1. Provide Hinged Door Bulletin Cases, HBS Series by Platinum Visual Systems or equal by Claridge Products and Equipment, Inc., PolyVision Corporation or approved equal.
 - a. Metal trim and accessories: HBS Series aluminum extrusions with clear satin anodized finish.
 - 1). Housing HS600: One piece aluminum housing with reinforced corners.
 - 2). Door Frame CH350: Standard channel frame with 1 3/8" face with plastic seal surrounding glass.
 - 3). Hinge: Continuous stainless steel piano hinge.
 - 4). Lock: Tumbler lock.
 - b. Back Panel: Vinyl cork tackboard.
 - c. Size: As shown on drawings.
 - d. Color: As selected by Commissioner from manufacturer's standard colors.
- B. Materials
 - 1. Vinyl Face Sheets: Vinyl surface will be Type II self-healing, weighing not less than 21 ounces per lineal yard. Pattern to be a Harborweave.
 - a. Vinyl shall be washable and mildew resistant.
 - 2. Core Material: 1/4" natural cork.
 - 3. Backing Material: 1/4" medium density fiberboard.
 - 4. Metal Trim and Accessories: 6063 aluminum alloy with a T5 temper.
 - 5. Glass: 1/4" tempered safety glass

2.2 MARKERBOARDS

- A. Provide Markerboards, FCS Series by Platinum Visual Systems or equal by Claridge Products and Equipment, Inc., PolyVision Corporation or approved equal.
 - 1. Metal trim and accessories: FCS Series aluminum extrusions with clear satin anodized finish.
 - a. Frame CH358: Channel frame with 3/4" face. No exposed fasteners permitted.
 - b. Chalktray CR310: Standard continuous solid magnetic chalktray with ribbed section and smoothly curved ends. Length to be 24". One per elevation.
 - c. Spline: Continuous aluminum stabilizing spline at each joint.
 - 2. Floor to Ceiling Markerboard Panels:
 - a. Panel Sizes: Width to be 4' wide with equal size panels at ends. Height to be a maximum of 12' high.
 - b. Joints: Butt joint factory-fired edges vertically to form smooth transition from panel to panel.
 - c. Splines: Panels to be factory-milled to accept aluminum stabilizing spline at each joint.
 - 3. Size: As shown on drawings.
 - 4. Color: As selected by Commissioner from manufacturer's standard colors.
- B. Materials
 - 1. Steel Face Sheets: Writing surface will be Writanium 28 gauge steel face with porcelain enamel finish fused to the steel sheet using a continuous coil process.
 - a. Markerboard surface shall be fused at a temperature of 1450 degrees and 1200 degrees, respectively.
 - b. The gloss of the writing surface will not increase more than three units when subjected to wearability tests specified in testing procedures for 30 hours.
 - 2. Core Material: 1/2" particleboard.
 - 3. Backing Material: .005" aluminum backing sheet.
 - 4. Metal Trim and Accessories: 6063 aluminum alloy with a T5 temper.
 - 5. Adhesive: As recommended by manufacturer for project conditions.

2.3 ACCESSORIES

- A. Provide clips, anchors and fasteners required for complete installation.

2.4 FABRICATION

- A. Assembly: Provide factory-assembled visual display surfaces unless field-assembled units indicated.
- B. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, balanced around center of board, as acceptable to Commissioner. Provide manufacturer's standard vertical joint system between abutting sections of markerboard.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Deliver factory-built visual display surfaces completely assembled in one piece without joints, whenever possible. Where dimensions exceed panel size, provide 2 or more pieces of equal length as acceptable to the Commissioner. When overall dimensions require delivery in separate units, prefit at factory, disassembled for delivery, and make final joints at site. Use splines at joints to maintain surface alignment.
- B. Install units in locations and mounting heights as shown on drawings and in accordance with manufacturer's instructions, keeping perimeter lines straight, plumb and level. Provide all grounds, clips, backing materials, adhesives, brackets, anchors, trim and accessories for complete installation.
- C. Coordinate job-assembled units with grounds, trim and accessories. Join all parts with neat, precision fit.

3.3 ADJUST AND CLEAN

- A. Verify accessories required for each unit properly installed and operating units properly functioning.
- B. Clean units in accordance with manufacturer's instructions, breaking in only as recommended.

END OF SECTION 10 11 00

SECTION 10 14 00

SIGNAGE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes identifying devices.
- B. Related Sections
 - 1. Section 26 50 00 "Lighting" for exit signs.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical data and installation instructions for each type of identifying device required.
- C. Samples: Submit samples of each identifying device showing finishes, colors, surface textures and qualities of manufacture and design of each sign component including graphics.
- D. Shop Drawings: Submit shop drawings for fabrication and erection of identifying devices. Include plans, elevations, and large scale details of sign wording and lettering layout. Show anchorage and accessory items. Furnish location template drawings for items supported or anchored to permanent construction.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. For actual installation of the identifying devices, use only personnel who are thoroughly familiar with the manufacturer's recommended methods of installation and who are experienced in the required skills.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Provide aluminum plate room identification signage as indicated on Drawings.
 - 1. Size: 7" x 7"
 - 2. 1/4" thick aluminum backplate.
 - 3. Corners: Eased.
 - 4. Finish:
 - a. Face: Non-directional brushed.
 - b. Returns: Satin brushed.
 - c. Spray clear protective coating at face and returns.
 - 5. Mounting: Tape and silicone, adhered directly to wall.
 - 6. Lettering: Raised 1/32" type in Gravotac; material to match 100% Black.
 - 7. Tactile Characters: Characters and Grade 2 Braille raised 1/32 inch above surfaces, matching backplate.
 - 8. Provide Typestyle set.
- B. Basis of Design Product: Subject to compliance with requirements, provide aluminum plate room identification signage manufactured by MS Signs, Inc. or a comparable product by one of the following:
 - 1. ASI Sign Systems, Inc.
 - 2. Andco Industries Corp.
 - 3. Or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install units and components at the locations directed by the Commissioner, securely mounted with concealed theft-resistant fasteners. Attach to substrates in accordance with the manufacturer's instructions.

- B. Install level, plumb, and at the proper height. Cooperate with other trades for installation of sign units to finish surfaces.

END OF SECTION 10 14 00

SECTION 10 21 13

TOILET COMPARTMENTS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Floor mounted solid polyethylene toilet partitions.
 - 2. Urinal screens.
 - 3. Panels adhered to walls at showers.
 - 4. Hardware and accessories.
- B. Related Sections
 - 1. Section 04 20 00 "Unit Masonry"
 - 2. Section 09 29 00 "Gypsum Board"
 - 3. Section 10 28 00 "Toilet, Bath and Laundry Accessories"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Shop Drawings: Before any of the materials of this Section are delivered to the job site, submit the following:
 - 1. Room layouts and elevations for all areas, with dimensions based on actual dimensions taken at site.
 - 2. Materials, finishes, details of construction, gauges of metal, hardware, fastening and anchoring conditions and relation to adjoining construction.
- C. Samples - Submit:
 - 1. Solid plastic panel, each color - 12" x 12".

2. All hardware and fitting items and fastenings for same. Include all items listed under 2.3 C. below.

D. Templates: Submit templates to other trades as required for support of toilet partitions.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Field Measurements: Take field measurements prior to fabrication to ensure proper fitting of the work.
- C. Inserts and Anchorages: Furnish inserts and anchoring devices which must be built into other work for the installation of toilet partitions and related work. Coordinate delivery with other work to avoid delay.

1.5 WARRANTY

- A. Provide manufacturer's written warranty covering all components against breakage, corrosion and delamination for a period of 15 years from date of Substantial Completion.

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide floor mounted, overhead-braced, solid-polyethylene assemblies with non-corrosive doors, panels, and pilasters in Shale color and OP (orange peel) texture equal to Eclipse Partitions by Scranton Products Inc. or a comparable product by one of the following:
 1. Bradley Corporation
 2. Metpar Corp.
 3. Or approved equal.
- B. Provide wall hung urinal screens of same material as toilet partitions.

2.2 MATERIALS AND COMPONENTS

- A. Panels, doors, and pilasters shall be fabricated from high-density polyethylene (HDPE) containing a minimum of 10% recycled material manufactured under high pressure forming a single component section which is waterproof, nonabsorbent, and has a self-lubricating surface that resists marking with pens, pencils, or other writing utensils. All panels, doors, and pilasters to arrive at job-site with special protective plastic covering.

B. Characteristics

1. Dual component compression molded high-density polyethylene (HDPE) of solid Poly-Mar HD, virgin resin materials in colors that extend throughout the surface; the panels, doors, and pilasters shall have combined recycled and/or virgin material (HDPE) as the core material.
2. Doors, panels, and pilasters shall be a minimum of 1" thick and all edges machined to a radius of 0.250" and all exposed surfaces to be free of saw marks.

2.3 HARDWARE

A. Door hardware shall be as follows:

1. Hinges shall be integral hinge system. Pilaster to be machined to accept door and hinge mechanism. Hinge mechanism consists of a two-piece 1/2" diameter nylon pin with "cam action" and a 3/16" stainless steel pin inserted into lower portion of pilaster and door. A one-piece 1/2" diameter, 4" long nylon pin to be inserted into the top portion of the pilaster and door. Door closures to be factory set to accommodate all conditions and allow for a positive opening and closing action free of impediment.
 2. Each handicapped door to include (1) door pull and (1) wall stop.
 3. Door strike and keeper shall be fabricated from aluminum extrusion (6364-T5 Alloy) with clear anodized finish with wraparound flange surface mounted and thru-bolted to pilaster with one-way sex bolts. Size of strike shall be 6" in length.
 4. Door latch housing shall be fabricated from heavy aluminum extrusion (6364-T5 Alloy) with clear anodized finish, surface mounted, and thru-bolted to door with one-way sex bolts. Slide bolt and button shall be heavy aluminum with black anodized finish.
- B. Solid color plastic pilaster shoes shall be anchored to finished floor with plastic anchors and 1-1/2" #14 stainless steel Phillips head screws.
- C. Full-length continuous plastic wall brackets (shall be solid color) weighing not less than 0.822 lbs. per linear foot. Brackets shall be used for all panels to pilaster, pilasters to wall, and panel to wall connections. Wall brackets shall be thru-bolted to panels and pilasters with one-way sex bolts. Attachment of brackets to adjacent wall construction shall be accomplished by 1-1/2" #14 stainless steel Phillips head screws anchored directly behind the vertical edge of panels and pilasters at 13" intervals along the full length of bracket and at each 13" interval alternately spaced between anchor connections.
- D. Headrail shall be heavy aluminum extrusion (6364-T5 Alloy) with bright-dipped anodized finish in anti-grip configuration weighing not less than 1.188 lbs. per linear foot. Headrail shall be fastened to tops of pilasters and headrail brackets by thru-bolting with one-way stainless steel sex bolts (no cadmium plated sex bolts allowed).

- E. Headrail brackets shall be 18 gauge stainless steel.

2.4 FABRICATION

- A. Dividing panels shall be 55" high and mounted at 14" above finished floor, unless otherwise noted.
- B. Doors shall be 55" and mounted at 14" above finished floor, unless otherwise noted.
- C. Pilasters shall be 82" high, mounted within a one-piece plastic shoe with one-way theft-proof stainless steel sex bolts.
- D. Aluminum edging strips to be fastened to the bottom edge of all doors and panels using vandal-proof stainless steel fasteners.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install work of this Section in a rigid and permanent manner, straight and plumb, with all horizontal lines level.
- B. Install panels and doors 14" above finished floor, unless otherwise indicated. Toilet compartment doors shall be centered on water closets, unless otherwise indicated.
- C. Maintain uniform clearance of approx. 1/2" between pilasters and panels, and 1/2" between pilasters or panels and finished wall.
- D. Maintain uniform clearance of 1/4" or less between vertical edges of doors and pilasters.
- E. Set pilaster units with anchorages having not less than two (2) inches penetration into structural floor. Level, plumb, and tighten installation with devices furnished. Hang doors and adjust so that tops of doors are level with tops of pilasters when doors are in closed position.

END OF SECTION 10 21 13

SECTION 10 28 00

TOILET, BATH AND LAUNDRY ACCESSORIES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes toilet accessories.
- B. Related Sections
 - 1. Section 04 20 00 "Unit Masonry"
 - 2. Section 09 29 00 "Gypsum Board"
 - 3. Section 10 21 13 "Toilet Compartments"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical data, catalogue cuts and installation instructions for each toilet accessory.
- C. Setting Drawings: Provide setting drawings, templates, instructions, and directions for installation of anchorage devices in other work
- D. Submit schedule of accessories indicating quantity and location of each item.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in concrete or built into masonry; coordinate delivery with other work to avoid delay.
- C. Accessory Locations: Coordinate accessory locations with other work to avoid interference and to ensure proper operation and servicing of accessory units. Accessories shall be installed at heights in compliance with 2008 New York City Building Code.

- D. Products: Unless otherwise noted, provide products of same manufacturer for each type of unit and for units exposed in same areas.

1.5 PRODUCT HANDLING

- A. Deliver accessories to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type or material, manufacturer's name and brand name. Delivered materials shall be identical to approved samples.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Stainless Steel: AISI Type 302/304, with polished No. 4 finish, 22 gauge minimum, unless otherwise indicated.
- B. Brass: ASTM B 19 flat products; ASTM B 16, rods, shapes, forgings, and flat products with finished edges; or ASTM B 30, castings.
- C. Galvanized Steel Sheet: ASTM A 653, G60.
- D. Chromium Plating: Nickel and chromium electro-deposited on base metal, ASTM B 456, Type SC 2.
- E. Mirrors: ASTM C 1503, mirror glazing quality, clear glass mirrors, nominal 1/4" thick.

2.2 FASTENING DEVICES

- A. Exposed Fasteners: Theftproof type, chrome plated, or stainless steel; match finishes on which they are being used.
- B. Concealed Fasteners: Galvanized (ASTM A 123) or cadmium plated.
- C. No exposed fastening devices permitted on exposed frames.
- D. For metal stud drywall partitions, provide ten (10) gauge galvanized sheet concealed anchor plates for securing surface mounted accessories.

2.3 FABRICATION

- A. General: Stamped names or labels on exposed faces of toilet accessory units are not permitted. Unobtrusive labels on surfaces not exposed to view are acceptable. Where locks are required for a particular type of toilet accessory, provide same keying throughout project. Furnish two keys for each lock.
- B. Surface-Mounted Toilet Accessories, General: Fabricate units with tight seams and joints, exposed edges rolled. Hang doors or access panels with continuous stainless steel piano hinge. Provide concealed anchorage.

- C. Recessed Toilet Accessories, General: Fabricate units of all welded construction, without mitered corners. Hang doors of access panels with full-length stainless steel piano hinge. Provide anchorage which is fully concealed when unit is closed.

2.4 MANUFACTURERS

- A. Provide products manufactured by Bobrick Washroom Equipment Co., American Specialties, Inc., Bradley Corp., A & J Washroom Accessories or approved equal.

2.5 ACCESSORY SCHEDULE

- A. Provide the following basis of design accessories or comparable product by one of the manufacturers listed in 2.4.A or approved equal.
 - 1. AC-H1: Washroom hook: Bobrick, B-211, exposed mounting, satin nickel-plated fin.
 - 2. AC-TPD1: Toilet paper dispenser: Bobrick B-2840, surface mounted w/ utility shelf, ss. satin-fin.
 - 3. AC-M1: Framed mirror: Bobrick B-292 2436, ss. satin-fin. frame
 - 4. AC-M2: Framed tilt mirror (ADA): Bobrick B-293-1836, ss. satin-fin. frame
 - 5. AC-PTD1: Paper towel dispenser: Bobrick B-263, surface mounted, ss. satin-fin.
 - 6. AC-SND1: Sanitary napkin disposal: Bobrick B-270, surface mounted, ss. satin-fin.
 - 7. AC-WR1: Waste receptacle: Bobrick B-2250, floor-standing, ss. satin-fin.
 - 8. AC-SCR1: Shower curtain rod: Bobrick B-6047, ss. satin-fin, w/ shower hooks: Bobrick 204-1, ss.
 - 9. AC-SS1: Shower seat (ADA): Bobrick B-5181, matte-fin. surface, ss. satin-fin. frame
 - 10. AC-G1: Grab bar: Bobrick B-5806 x 18
 - 11. AC-G2: Grab bar: Bobrick B-6806 x 30
 - 12. AC-G3: Grab bar: Bobrick B-6806 x 36
 - 13. AC-G4: Grab bar: Bobrick B-6806 x 42
 - 14. AC-HD1: Hand dryer: World dryer Air-max DM5, brushed ss finish.
 - 15. AC-MH1: Mop holder: Elkay LK403 ss.
 - 16. AC-LB1: Locker bench: Robinson Steel Company ADAWMB-SS, ss.

- a. Locations: Jan. Rm. 211 and Util. Rm. 106
- 17. AC-H2: Coat hook: Bobrick B-6827, ss. satin-fin.
- 18. AC-SD1: Soap dispenser: Bobrick B-2111. ss. satin-fin.
- 19. AC-M3: Full height mirror: Bobrick B-290 2472, ss. satin-fin. frame
- 20. AC-BB1: Bulletin board: Platinum Visual Systems (PVS) 2'x3' 8221203 bulletin board, color selected by Commisisoner.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Accessories which are to be partition mounted shall be closely coordinated with other trades, so that the necessary reinforcing is provided to receive the accessories.
- B. Furnish templates and setting drawings and anchor plates required for the proper installation of the accessories at gypsum drywall and masonry partitions. Coordinate the work to ensure that base plates and anchoring frames are in the proper position to secure the accessories.
- C. Verify by measurements taken at the job site those dimensions affecting the work. Bring field dimensions which are at variance with those on the approved shop drawings to the attention of the Commissioner. Obtain decision regarding corrective measures before the start of fabrication of items affected.
- D. Cooperate in the coordination and scheduling of the work of this Section with the work of other Sections so as not to delay job progress.

3.3 INSTALLATION

- A. Install accessories at locations indicated on the drawings, using skilled mechanics, in a plumb, level and secure manner.
- B. Concealed anchor assemblies for gypsum drywall partitions shall be securely anchored to metal studs to accommodate accessories. Assemblies shall consist of plates and/or angles tack welded to studs.
- C. Secure accessories in place, at their designated locations by means of theftproof concealed set screws, so as to render removing of the accessory with a screwdriver impossible.

- D. Unless otherwise indicated, accessories shall conform to heights from the finished floor as shown on the drawings. Where locations are not indicated, such locations shall be as directed by the Commissioner.
- E. Installed accessories shall operate quietly and smoothly for use intended. Doors and operating hardware shall function without binding or unnecessary friction. Dispenser type accessories shall be keyed alike. Prior to final acceptance, master key and one duplicate key shall be given to Commissioner.
- F. The Commissioner shall be the sole judge of workmanship. Workmanship shall be of the highest quality. Open joints, weld marks, poor connections, etc., will not be permitted. The Commissioner has the right to reject any accessory if workmanship is below the standards of this project.
- G. Grab bars shall be installed so that they can support a three hundred (300) lb. load for five minutes per ASTM F 446.

END OF SECTION 10 28 00

SECTION 10 44 13

FIRE PROTECTION CABINETS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes fire extinguisher cabinets.
- B. Related Sections
 - 1. Section 04 20 00 "Unit Masonry"
 - 2. Section 09 29 00 "Gypsum Board"
 - 3. Section 21 10 00 "Water-Based Fire Suppression Systems"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical data and installation instructions for fire extinguisher cabinets. Include roughing-in dimensions, and details showing mounting methods, relationships to surrounding construction, door hardware, cabinet type and materials, trim style and door construction, style and materials. Where color selections by the Commissioner are required, include color charts showing full range of manufacturer's standard colors and designs available.
- C. Samples: Submit samples, 6" square, of each required finish. Prepare samples on metal of same gauge as metal to be used in the work.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 PRODUCTS

2.1 MANUFACTURERS

- A. Subject to compliance with requirements, provide products of one of the following:

1. Larsen's Mfg. Co.
2. J.L. Industries.
3. Potter Roemer.
4. Or approved equal.

2.2 CABINETS

- A. Recessed Cabinets: Cold-rolled steel with powder coat finish, with horizontal duo door with clear acrylic glazing; sized to fit within the partition or wall depth. Provide fire rated cabinets within fire rated partitions.
1. Basis-of-Design Product: Subject to compliance with requirements, provide Larsen's Mfg. Co.; Model G-2409-R7 with 1-1/4" trim or comparable product by one of the following:
 - a. J. L. Industries
 - b. Potter Roemer
 - c. Or approved equal.
- B. Surface-Mounted Cabinets: Cold-rolled steel with powder coat finish, with horizontal duo door with clear acrylic glazing.
1. Basis-of-Design Product: Subject to compliance with requirements, provide Larsen's Mfg. Co.; Architectural Series Model 2409-SM or comparable product by one of the following:
 - a. J. L. Industries
 - b. Potter Roemer
 - c. Or approved equal.
- C. Fire Extinguisher Cabinet Schedule
1. FEC1: Surface mounted on concrete wall, stainless steel.
 2. FEC2: Semi-recessed into CMU wall, baked enamel finish to match adjacent wall color.
 3. FEC2: Semi-recessed into GWB wall, baked enamel finish to match adjacent wall color.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install items included in this Section in locations indicated and at heights to comply with 2008 New York City Building Code.
 - 1. Prepare recesses in walls for fire extinguisher cabinets as required by type and size of cabinet and style of trim and to comply with manufacturer's instructions.
 - 2. Securely fasten fire extinguisher cabinets to structure, square and plumb, to comply with manufacturer's instructions.

3.3 IDENTIFICATION

- A. Identify fire extinguisher cabinet with lettering spelling "FIRE EXTINGUISHER" painted on door by silk-screen process. Provide lettering on door as selected by Commissioner from manufacturer's standard letter sizes, styles, colors and layouts.

SECTION 10 51 13

METAL LOCKERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Steel wardrobe lockers.
 - 2. Benches.
 - 3. Trim, closures, anchors and accessories.
- B. Related Sections
 - 1. Section 03 30 00 "Cast-in-Place Concrete"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Shop Drawings: Before any materials of this Section are delivered to the job site, submit complete shop drawings, technical data and installation instructions to the Commissioner. Shop drawing must show method of installation, fillers, trim and accessories. Include locker sequencing information.
- C. Samples: Submit 6" x 6" samples of manufacturer's standard finish.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Qualifications of Installers: For installation of lockers, use only personnel who are thoroughly instructed and experienced in the skills involved and who are completely familiar with the manufacturer's recommended methods of installation.
- C. Uniformity: Provide each locker as produced by a single manufacturer, including necessary mounting accessories, fittings and fastenings.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. Provide single tier steel wardrobe lockers by Lyon Workspace Products listed below, or equal by Republic Storage Systems Company, Penco Products, Inc. or approved equal.
1. Type 1: Cat. No. 5104
 - a. Size: 18"w x 24"d x 78"h (with legs)
 - b. Color: As selected by Commissioner.
 - c. Handle: ADA compliant
 2. Type 2: Cat. No. 5578
 - a. Size: 24"w x 24"d x 78"h (with legs)
 - b. Color: As selected by Commissioner.
 - c. Handle: ADA compliant

2.2 MATERIALS

- A. Sheet Steel: Mild cold-rolled and leveled steel, free from buckle, scale, and surface imperfections.

2.3 FABRICATION, GENERAL

- A. Construction: Fabricate lockers square, rigid, and without warp, with metal faces flat and free of dents or distortion. Make all exposed metal edges safe to touch. Weld or rivet connections; bolted connections not permitted. Grind exposed welds flush. Do not expose rivet heads on fronts of locker doors or frames.
- B. Finishing: Chemically pretreat metal with degreasing and phosphatizing process. Apply baked-on enamel finish to all surfaces, exposed and concealed, except plates and non-ferrous metal.
1. Color: Provide locker units in color(s) as selected by Commissioner from manufacturer's standards. Concealed parts may be manufacturer's standard neutral color.
- C. Door Frames: Frames shall be 16 gauge formed in a channel shape. Vertical members shall have additional flange to provide a continuous door strike. Cross frame members shall also be 16 gauge channel shaped, including intermediate cross frames on double and triple tier lockers.
- D. Doors: Doors shall be 16 gauge, with louvers for ventilation; channel shaped on both the lock and hinge side, with angle formations across the top and bottom.
- E. Body: Bottoms shall be 16 gauge. Tops, sides, backs, and shelves shall be 24 gauge. Bolt spacing shall not exceed 9" o.c.

- F. Hinges: Hinges shall be full length 16 gauge continuous piano type riveted to both door and frame.
- G. Handles: Handles shall be one-piece 20 gauge deep drawn stainless steel cup designed to accommodate locks.
- H. Latching: Lifting trigger shall be 14 gauge steel, attached to the latching channel. The trigger shall have a padlock eye for use with 9/32" diameter padlock shackle. Doors to have latch clip engaging frame at three points on doors over 42" high and two points on all other doors. Locking device to be positive automatic type, whereby locker door may be locked when open, then closed without unlocking. A rubber silencer shall be firmly secured to the frame at each latch hook.

2.4 LOCKER ACCESSORIES

- A. Equipment: Furnish each locker with hat shelf, hang rod, and not less than 2 single-prong wall hooks.
 - 1. Type 1: Provide 1 double and 3 single prong hooks.
 - 2. Type 2: Provide 1 double and 4 single prong hooks.
- B. Number Plates: Manufacturer's standard etched, embossed, or stamped, non-ferrous metal number plates with numerals not less than 3/8" high. Number lockers in sequence as directed by Commissioner. Attach plates to each locker door, near top, centered, with at least 2 fasteners of same finish as number plate.
- C. Continuous Sloping Tops: Not less than 20 ga. sheet steel, approx. 25 degree pitch, in lengths as long as practicable but not less than 4 lockers. Provide closures at ends. Finish to match lockers, unless otherwise indicated.
- D. Filler Panels: Provide filler panels where required of not less than 16 ga. steel sheet, factory-fabricated and finished to match locker units.

2.5 LOCKER ROOM BENCHES

- A. Bench Tops: Manufacturer's standard 1-piece units 14 inch wide by 1-1/4 inches thick, with rounded corners and edges, fabricated from laminated maple with one coat of clear sealer on all surfaces, and two coats of clear lacquer on top and sides.
- B. Freestanding Pedestals: Manufacturer's standard supports, with predrilled fastener holes for attaching bench top, complete with fasteners and anchorage, and as follows
 - 1. Freestanding Isosceles Trapezoid Base: 1/4-inch-thick by 3-inch-wide anodized aluminum bar stock, shaped into isosceles trapezoidal form; with nonskid rubber pads at bottom. Provide minimum two pedestals for each bench. Maximum spacing 6 feet.
 - 2. Size: 14 inches wide and 16-1/2 inches high.

- C. Custom Bench Sizes: Length and width as indicated on the Drawings.
 - 1. Stain Color: As selected by the Commissioner.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install metal lockers at locations shown in accordance with manufacturer's instructions for plumb, level, rigid and flush installation.
- B. Space fastenings 36" o.c. and apply through back-up reinforcing plates where necessary to avoid metal distortion; conceal all fasteners.
- C. Install trim, sloping top units, and metal filler panels using concealed fasteners to provide flush, hairline joints against adjacent surfaces.
- D. Install benches to comply with manufacturer's instructions in such a manner that they resist a 200 lb. load applied laterally to benches.

3.3 ADJUST AND CLEAN

- A. Adjust doors and latches to operate easily without binding. Verify that integral locking devices are operating properly.
- B. Touch-up marred finishes, but replace units which cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

END OF SECTION 10 51 13

SECTION 10 56 13

METAL STORAGE SHELVING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes metal storage shelving.
- B. Related Sections
 - 1. Section 04 20 00 "Unit Masonry"
 - 2. Section 09 29 00 "Gypsum Board"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data
 - 1. Manufacturer's catalogue and specifications.
 - 2. Recommended installation procedures.
- C. Shop Drawings
 - 1. Elevations and sections.
 - 2. Method of anchoring and connecting to surrounding construction.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Products shall be standard best quality for the particular kind of material required.

1.5 DELIVERY, STORAGE AND HANDLING

- A. Deliver storage shelving in ample time to facilitate the work of this Section.
- B. Take care to protect components during handling and storage.

PART 2 PRODUCTS

2.1 MATERIALS

- A. Storage shelving shall be cantilever type, adjustable, open front shelving with no posts.
 - 1. Size and configuration: As indicated on the Drawings.
 - 2. Color: As selected by Commissioner from manufacturer's standard range.
- B. Provide "Cantilever Shelving and Hardware" by E-Z Shelving Systems, Inc. or equal by Penco Products, Inc., Lyon Metal Products or approved equal.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Comply with manufacturers' installation procedures.
- B. Install storage shelves square, level and true anchoring firmly to walls.
- C. Install required accessories as recommended by the manufacturer.

3.3 ADJUST AND CLEAN

- A. Clean and leave free from blemishes, defects and dirt. Use only cleaning agents recommended by the manufacturer.
- B. Adjust hardware and accessories for maximum efficiency.

END OF SECTION 10 56 13

SECTION 12 24 13

ROLLER WINDOW SHADES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Manually-operated window shades.
 - 2. Field measurements of as-built conditions.
 - 3. Accessories and hardware required for complete installation and operation.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: For each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.
- C. Shop Drawings: Submit floor layout and elevations, indicating location of all window treatments, mechanism details, type and size of each unit, type and location of controls. Shop drawings must also show seaming of shade fabric. Submit shop drawings showing details of installation and relation to adjoining construction and conditions.
- D. Samples: Submit full size sample of each shade type.
- E. Mock-Up
 - 1. Install each type of shade assembly on one complete column bay for Commissioner's acceptance of installation details, workmanship and operation.
 - 2. Approved mock-up shall be used as the standard for installation of work under this Section, and no further installation work shall proceed before Commissioner's acceptance of the mock-up.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Provide assemblies which are complete assemblies produced by one manufacturer, including hardware, accessory items, mounting brackets, and fastenings.
- C. Provide materials in colors as selected by the Commissioner from manufacturer's standard colors.

1.5 WARRANTY

- A. Manufacturer's standard non-depreciating 25-year limited warranty covering all hardware, chains, and shade cloth.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Protect shades from damage, soiling and deterioration during transit, storage and handling to, until City of New York's acceptance.

PART 2 PRODUCTS

2.1 MANUALLY OPERATED SHADES

- A. Provide manually operated shade system equal to "Mechoshade/5 System," made by the Mecho-Shade Corp. or equal made by Sol-R-Veil Inc., Draper, or approved equal conforming to standards specified herein.
- B. Shade system shall be pre-engineered overrunning clutch design that disengages to 90% during the raising and lowering of the shade. The brake can stand a pull force of 40 lb. in the stop position. Requires no adjustment. Self-lubricating hub on to which the brake system is mounted includes an articulated brake assembly which ensures smooth, non-jerky operation in raising and lowering the shades. System shall include the following components:
 - 1. Provide shade hardware allowing for the removal of shade roller tube from brackets without removing hardware from opening and without requiring end or center supports to be removed.
 - 2. Provide shade hardware that allows for removal and remounting of the shade bands without having to remove the shade tube, drive or operating support brackets.
 - 3. Provide for universal, regular and offset drive capacity, allowing drive chain to fall at front, rear or non-offset for all shade drive end brackets. Universal offset shall be adjustable for future change.
 - 4. Provide shade hardware system that allows for removable regular and/or reverse roll fascias to be mounted continuously across two or more shade bands without requiring exposed fasteners of any kind.
 - 5. Provide shade hardware system that allow for operation of multiple shade bands (multi-banded shades) by a single chain operator. Connectors shall be offset to ensure alignment from the first to the last shade band.

6. Provide shade hardware constructed of minimum 1/8" thick plated steel or heavier as required to support 150% of the full weight of each shade.
 7. Drive Bracket/ Brake Assembly:
 - a. MechoShade Drive Bracket M5 or equal by other manufacturers noted herein.
 - b. Drive Chain: #10 qualified stainless steel chain rated to 90 lb. minimum breaking strength. Nickel plate chain shall not be accepted.
- C. Fascia: Extruded aluminum in shape shown on drawings, baked enamel white finish.
- D. Shade Bands: Construction of shade band includes the fabric, the hem weight, hem pocket, shade roller tube, and the attachment of the shade band to the roller tube. Sewn hems and open hem pockets are not acceptable.
1. Hem Pockets and Hem Weights: Fabric hem pocket with RF welded seams (including welded ends) and concealed hem weights. Hem weights shall be of appropriate size and weight for shade band. Hem weight shall be continuous inside a sealed hem pocket. Hem pocket construction and hem weights shall be the same, for all shades within one room.
 2. Shade Band and Shade Roller Attachment:
 - a. Provide extruded aluminum shade roller tube of a diameter and wall thickness required to support shade fabric without deflection. Provide for positive mechanical engagement with drive/ brake mechanism.
 - b. Provide for positive mechanical attachment of shade band to roller tube; shade band shall be made removable/ replaceable with a snap-on/snap-off spline mounting, without having to remove shade roller from shade brackets.
 - c. Mounting spline shall not require use of adhesives, adhesive tapes, staples and/or rivets.

2.2 SHADE CLOTH

- A. Basis-of-Design Product: Subject to compliance with requirements, provide MechoShade; Thermoveil Dense Privacy Weave 900 Series, Openness factor 0-1%, color 0903 Grey, or comparable product by one of the following:
1. Sol-R-Veil Inc.
 2. Draper.
 3. Or approved equal.

2.3 FABRICATION

- A. The shade and the fabric shall hang flat without buckling or distortion. The edge, when trimmed, shall hang straight without curling or raveling. An unguided roller shade cloth shall roll true and straight, without shifting sideways more than +/- 1/8" in either

direction due to warp distortion or weave design. Shades shall fill window openings from head to sill and jamb to jamb.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION: GENERAL

- A. Coordinate with the work of other trades to ensure proper and adequate provision in the work of those trades for interface with the work of this Section.
- B. Install the work of this Section in strict accordance with the indicated design and the installation recommendations of the manufacturer as approved by the Commissioner.
- C. Upon completion of the installation, put all components through at least ten (10) complete cycles of operation, adjusting as necessary to achieve optimum operation.

3.3 INSTALLATION OF MANUAL ROLLER SHADES

- A. Install roller shades level, plumb, square, and true according to manufacturer's written instructions and located so shade band is not closer than 2" to interior face of glass. Allow proper clearances for window operation hardware.
- B. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.
- C. Clean roller shade surfaces after installation, according to manufacturers written instructions.

END OF SECTION 12 24 13

SECTION 13 31 33

FRAMED FABRIC STRUCTURES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes tensioned fabric structures including, but not limited to, the following principal items:
1. The architectural membrane as indicated on the drawings and in these specifications.
 2. Cables and end fittings.
 3. Perimeter, catenary, and sectionalized aluminum clamping system.
 4. Structural steel, including masts, trusses, struts, beams, and/or weldments, as indicated on the drawings.
 5. Fasteners and gasketing.
- B. The Contractor will be responsible for the engineering, detailing, fabrication, supply, and installation of the Work specified herein. The intent of this specification is to establish in the first instance an undivided, single-source responsibility of the Contractor for all of the foregoing functions.

1.3 REFERENCES

- A. American Society for Testing and Materials (ASTM).
1. ASTM A 586 – Standard Specification for Zinc-Coated Parallel and Helical Steel Wire Structural Strand.
 2. ASTM A 603 – Standard Specification for Zinc-Coated Steel Structural Wire Rope
 3. ASTM E 84 – Standard Test Method for Surface Burning Characteristics of Building Materials.
 4. ASTM E 108 – Standard Test Methods of fire Tests of Roof Coverings.
 5. ASTM E 136 – Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 deg. C.

1.4 PERFORMANCE REQUIREMENTS

- A. Comply with the New York City Building Code project has been filed under, particularly as regards wind loading and seismic loading, and snow loading if applicable.
- B. Engineer, fabricate, and install custom tensioned fabric and steel support structures in accordance with the design intent as indicated on the Drawings and as specified herein. Any changes required to the design requires approval by the Commissioner prior to commencement of construction.
- C. Perform structural analysis of tensioned fabric and steel support structures by Professional Engineer licensed in the State of New York with experience in membrane structures using large displacement finite element techniques. Utilize this analysis to prepare shop drawings.
- D. Ensure structural integrity is maintained for life-safety issues in the event of a tear developing in the fabric.
- E. Engineer tensioned fabric structures to ensure tensioned fabric has a smooth uniform surface with even curved edges without wrinkling, cuts, abrasions, stains, marks, or surface defects.
- F. Fire Performance
 - 1. Burning Characteristics (ASTM E 84)
 - a. Flame Spread 5 max.
 - b. Smoke Generation (Tunnel Test) 20 max.
 - 2. Fire Resistance of Roof Coverings (ASTM E 108)
 - a. Burning Brand Class A
 - 3. Incombustibility of Substrates (ASTM E 136)
 - a. Substrate Noncombustible Pass
 - 4. Flame Resistance (NFPA 701 Small Scale, UL 94).
 - a. Flame Out 1 second after
 - b. Char Length 0.25-inch max.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical data, catalog cuts, and installation instructions for each component of the tensioned fabric structures.

- C. Shop Drawings: Shop drawings are to be wholly created by the contractor in CAD, drawn to scale and fully dimensioned, and specific to the project showing all typical and unique conditions. Do not submit copies of the design drawings, manufacturer's typical details, or details from industry standard publications as shop drawings. Shop drawings are to show all materials intended for installation and integration with work by adjacent trades. Shop drawings are to show conditions listed herein, including, but not limited to:
1. Submit shop drawings for special components and installations not fully dimensioned or detailed in manufacturer's product data. Include placing drawings for steel members (posts, poles, cables, etc.) showing size and gauge designations, number, type, location and spacing. Indicate supplemental bracing, splices, accessories and details as may be required for proper installation.
 2. Shop drawing shall define the complete structure, except interface geometry determination and definitions, coordination between fabric and structural supports, reaction loads imposed by fabric roof, connections, details, and interfaces to the base foundation support.
 3. Shop drawings must be prepared, signed and sealed by a Professional Engineer licensed in the State of New York
- D. Engineering Data:
1. Submit Engineering Data drawings to the Commissioner for review. The manufacturer is responsible for the structural design and supports for the tensioned fabric structures, and must show the proposed system and how the Performance Criteria is accommodated on these drawings.
 2. These drawings must show all load conditions and design calculations relative to connections, fastening devices and anchorage, as well as size and gauge of members. Calculations and drawings must be prepared, signed and sealed by a Professional Engineer licensed in the State of New York.
- E. Quality Assurance Submittals: Submit the following:
1. Qualifications: Proof of manufacturer, installer, and welder qualifications.
 2. Structural design calculations.
 3. Manufacturer's installation instructions for framing members and fabric.
- F. Samples: Submit samples of materials that demonstrate product type, color and finish.
1. Submit 12 inches x 12 inches sample of fabric.
 2. Submit 12 inches x 12 inches sample showing reinforcement.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Inserts and Anchorages: Furnish inserts and anchoring devices which must be set in other construction; coordinate delivery with other work to avoid delay.
- C. Accessory Locations: Coordinate accessory locations with other work to avoid interference and to ensure proper operation and servicing of accessory units.

1.7 PRODUCT HANDLING

- A. Deliver accessories to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type or material, manufacturer's name and brand name. Delivered materials shall be identical to approved samples.

1.8 WARRANTY

- A. Workmanship: 1 year.
- B. Fabric: Manufacturer's standard fabric warranty, 10 years minimum.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. Basis-of-Design Product: Subject to compliance with requirements, provide a framed fabric structure by Fabric Structures USA (type and model described herein) or comparable product by one of the following:
 - 1. Clear Span Structures
 - 2. Pavilion Structures USA
 - 3. Or approved equal.

2.2 ENGINEERED TENSIONED FABRIC STRUCTURES

- A. Tensioned Fabric Canopy System
 - 1. Structural Fabric: 28 oz. PVC, white
 - 2. Cables and End Fittings: All cables shall be Class A zinc coated. Cables in contact with fabric shall be PVC coated.
 - a. Structural Wire Ropes Cables: ASTM A 603.
 - b. Structural Strand Cables: ASTM A 586.
 - c. 7-Wire Prestressing Strand: ASTM A 416, Grade 270.
 - 3. Steel Supports: Comply with Section 051200, "Structural Steel."
 - 4. All fabric, fittings, posts, poles, cables and connections shall be provided by the manufacturer as a complete engineered system.

5. The fabric structure must:
 - a. Have a base fabric that passes as noncombustible in accordance with ASTM E 136 (Incombustibility of Substrate).
 - b. Have resistance to exterior fire exposure consistent with the overall construction classification in accordance with ASTM E 108 (Fire Resistance of Coverings).
 - c. Have a resistance to spread of flame and limit smoke generation for interior finishes consistent with classification of the structure in accordance with ASTM E 84 (Surface Burning Characteristics).
6. Provide calculations for all system elements signed and sealed by a Professional Engineer licensed in the State of New York. Calculations shall include all foundation reactions.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSPECTION

- A. Examine the areas and conditions where tensioned fabric roof system is to be installed and correct any conditions detrimental to the proper and timely completion of the work. Do not proceed with the work until unsatisfactory conditions are corrected to permit proper installation of the work.

3.3 FABRICATION OF MEMBRANE PANELS, GENERAL

- A. Membrane assembly shop drawings shall include all information necessary for the fabrication by the Contractor of the tensile membrane structure. They shall include size and shape of envelope, type and location of shop and field connections, size, type, and extent of all heat-welded seams.
- B. The Contractor shall take necessary care to plan and assemble the fabricated sections such that the assembly has no shop patches. Splices, if any, shall be patterned into a symmetrical and repetitive geometric arrangement within the assembly, shown on the shop drawings and, where feasible, hidden by structural members.
- C. All fabricated joints shall have a minimum of 90% of the total strength of the coated membrane in strip tensile testing. All structural joints shall be fused in accordance with industry standards and shall maintain the integrity of the coating. PTFE-coated woven fiberglass membranes shall be heat-sealed only.
- D. Biaxial Test: At least one (1) representative sample of the outer membrane shall be biaxially test loaded. Membrane compensation in patterning shall be based upon the results of the biaxial test loading.

3.4 ERECTION OF MEMBRANE ASSEMBLIES

- A. Prior to installation of the membrane assemblies, the Installer to meet with Contractor and Commissioner to review the erection procedure and scheduling. The Contractor shall coordinate all work with other trades.
- B. No trade shall have access to, or work from the membrane, unless authorized by the Commissioner in writing.
- C. Erection of Structural Steel.
 - 1. The Contractor shall employ a competent foreman to supervise all work of steel erection. This foreman shall be present at all times during the Contractor's scope of work.
 - 2. All precautions shall be taken to ensure an accurately located and completely safe and stable structure at all times. Adequate guy cables shall be used throughout the work and all erection bolts shall be drawn up tight.
 - 3. All steel shall be accurately aligned before permanent connections are made.
 - 4. Temporary bracing shall be left in place as long as may be required for safety. The bracing shall be located so it does not interfere with the erection of the tensile membrane structure, and can be removed as required during construction.
 - a. The structure is to be self-supporting and stable after the building is fully completed. It is the Contractor's sole responsibility to determine the erection procedure and sequence and to ensure the safety of the building and its component parts during erection. This includes the addition of whatever temporary bracing, guys or tie-downs that may be necessary. Such materials shall be removed by the Contractor and remain the Contractor's property after completion of the project.
 - 5. Erection tolerances shall be specified in the AISC 303-05, unless otherwise indicated.

3.5 PROTECTION AND CLEANING

- A. Protect work from damage and deterioration during installation.
- B. Upon completion of tensile membrane structure installation:
 - 1. The Contractor shall clean all surfaces of the system's components in conformance with the membrane manufacturer's recommendations.
 - 2. Inspect the system and restore membrane panels that have become damaged. Restoration shall be executed in such a way that it is visually acceptable.

END OF SECTION 13 31 33

SECTION 14 24 00 - HYDRAULIC ELEVATOR

PART 1 - GENERAL

1.1 RELATED DOCUMENT:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (the City of New York Standard Construction Contract).

1.2 SUMMARY

- A. These specifications are intended to cover the complete installation of one (1) twin jack holeless hydraulic elevator designated "PE-1".

1.3 RELATED WORK

- A. A mainline fused disconnect switch shall be provided for the elevator. The mainline disconnect switch shall be located approximately 18" from the strike side of the machine room door and 52" above the floor. Provide an auxiliary contact for battery lowering device.
- B. 110 Volt circuit breaker panel with lockout capabilities.
- C. Machine room lighting with the light switch located directly adjacent to the strike jamb and two (2) 20 AMP G.F.I. outlets.
- D. A phone line circuit in the machine room for emergency communications (24 hour emergency communications to an accessible location must be provided.).
- E. Adequate mechanical ventilation of machine room and/or machinery space to maintain temperature between 55°F and 90°F. and not to exceed 85% relative humidity.
- F. Provisions for natural ventilation directly to the outside air.
- G. A weather resistant type lighting fixture and G.F.I. outlet in the elevator pit. (The bulb must be protected by a grounded metal guard or lexan cover.) The switch shall be located adjacent to the strike side of the pit access door. Final locations of light, outlet and switch to be field coordinated in accordance with the elevator layout drawings.
- H. Smoke detectors as required in the elevator lobbies, machine room and hoistway including wiring and activation signals brought to the elevator machine room terminating in a junction box located adjacent to the elevator controller.
- I. Enclosed and protected machine room and/or machinery space. Minimum machine room height shall be 8' - 0".

- J. Access to machine room and/or machinery space to be a minimum of 3' – 6" wide by 6' – 8" high and shall be self-closing and locking. The lock shall be non-canceling and operate from within the room without the use of a key.
- K. Clear hoistway plumb from top to bottom with variations not to exceed one 1" at any point in the first 100 feet. Tolerance may increase at 1/32" for each additional ten (10) feet up to a maximum displacement of 2".
- L. Beveled guards are required for projections, recesses and setbacks in the hoistway that project more than 2" inside the general line of the hoistway on sides not used for loading or unloading.
- M. Hoistway protection in case of fire. (Two (2) hour rated enclosure or as required by the Building Code of the City of New York.)
- N. Supports for guide rail fastenings at each floor and/or intermediate supports. Provisions for bracket spacing should not exceed 10' - 0".
- O. Recesses, fireproofing and patching, as required, to accommodate hall button boxes, signal fixtures, hoistway entrance frames, etc.
- P. Vertical, noncombustible ladder for the elevator extending 42" above the sill of the access door where the pit extends more than 36" below the sill of the access door.
- Q. Dry pit including sump pit, pump or drains. Drains connected directly to sewers shall not be installed. Provide covers over sump pits or drains. Provide pump with oil minder switch and associated accessories.
- R. Pit reinforced to sustain vertical forces from guide rails, buffers and cylinders.
- S. Entrance walls for elevator are not to be constructed until door frames and sills are in place.
- T. Furnishing, installing and maintaining the required fire rating of elevator hoistway walls, including the penetration of fire wall by elevator fixture boxes.
- U. The interface of the elevator wall with the hoistway entrance assembly shall be in strict compliance with the elevator supplier's/contractor supplier's requirements.
- V. Door frames are to be anchored to walls and properly grouted in place if installed in masonry walls to maintain fire ratings. The head jamb of the entrance frames shall not be used to support the weight of the wall over the frame.
- W. Support for sills the full width of hoistway, with 2 ½" minimum recesses including grouting after sills are set in place.
- X. Stainless steel governor access door (24" x 24") at top of shaft as shown on the drawings with contact. Provide a steel access ladder.

- Y. Provide sill support angles.
- Z. Refer to the drawings for additional related work items.
- AA. Refer to all Contract Documents for additional construction details. All Related Work must be coordinated by the Contractor.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Contractor shall be an established firm of at least three (3) years in existence and have installed elevators of similar size and application to this project.

1.5 STANDARDS

- A. Except as modified by governing codes and by this Division, the work shall comply with provisions of the latest editions of the following, and in the event of conflict between these standards, the Commissioner’s determination shall be final:
 - 1. ASME A17.1: The American Society of Mechanical Engineers - Safety Code for Elevators and Escalators including Supplements as adopted by the New York City Department of Buildings, Elevator Division.
 - 2. ANSI A117.1: American National Standards for Buildings and Facilities Providing Accessibility and Usability for Physically Handicapped People.
 - 3. ADA: Americans with Disabilities Act.
 - 4. Building Code of the City of New York.

1.6 SUBMITTALS:

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. The Shop Drawings shall show material type and gauge, general dimensions, methods of attachment, location and size of reinforcements and openings, and a general arrangement of components. Approval thereof shall not relieve the Contractor of compliance with the specification, unless the attention of the Commissioner is called to the non-complying features in writing. Shop drawings shall be reflective of all Contract Documents.
- C. The Drawings submitted shall be as follows:
 - 1. Elevator section showing overhead, pit and floor to floor dimensions. The drawing shall be scaled and shall show all structure and beam locations and details. Details shall include the height of the cab, door operator and crosshead, including details of rope shackle.

2. Hoistway plan shall clearly show all typical dimensions to scale. In addition, plan shall identify all structural beam and divider beam locations and sizes; widths and depth of beams as they relate to the clear hoistway and hoistway walls; column pads in the pit and all column intrusions into the shaft. Provide large scale drawings and details of sill support condition and column encroachments.
3. Provide machine room plan showing all typical dimensions and equipment layout. Show clearly all electrical disconnects or switchgear in the code compliant location and to scale.
4. Provide large scale drawings for the car enclosure showing cab plan, reflective ceiling, wall elevations, front returns and car station integration. Detail section through wall panel from canopy to platform. Detail section through suspended ceiling including attachment to canopy. Detail typical joints, reveals and panel edging, panel attachments, handrail fastening and pad button attachment to shell. Include all gauges of steel components. Provide thickness and type of materials used for wall panels and ceiling along with lamination details.
5. Entrance details with the same specifics and quality of information provided for the cab details.
6. Provide fixture drawings job specific in large scale. Identify all engraving including font, depth of engravings and infill color material. (No applied or recessed plates shall be acceptable except for Braille plates.) Provide gauges of all material used. Provide faceplate fastener and hinging method and type.
7. Provide cut section through emergency light, position indicator, intercom/auto-dial telephone, buttons, Braille plates and service cabinet. (If requested)
8. Car frame and car platform construction details and layout complete. (If requested)
9. Machine isolation foundation fastening details and hydraulic oil line isolation fastening details (as applicable). Include manufacturer's data of all isolation equipment used.

D. Sample submissions shall include:

1. Cab or fixture material and finishes.
2. Braille plates and jamb designation.
3. Push-buttons, position indicators, emergency lighting fixture.

E. Sixty (60) days prior to the substantial completion of the work of the contract, the Contractor shall submit to the Commissioner six (6) copies of an Operation Maintenance and Parts Manual and six (6) complete sets of as-built. These shall be reviewed, and if approved, shall become the property of the City of New York.

1.7 PERMITS

- A. The Contractor shall file all necessary plans and application with the Building Department of the City of New York and obtain the required permits and approvals.
- B. The Contractor shall submit to the Commissioner a copy of the permit application, elevator specs, permit and print of elevator drawings as submitted and approved by the Building Department of the City of New York.

- C. Upon completion of the work, and prior to final payments, tests may be made by the Commissioner of all materials and appliances installed hereunder. The Contractor shall furnish all labor and materials required for such tests.
 - 1. Should the tests show that any of the materials, appliances or workmanship are not first class or not in compliance with the Specifications, the Contractor, on written notice from the Commissioner, shall remove same and promptly replace them with other materials and appliances in conformity with the Specifications.
- D. The Contractor shall perform all tests required by the Building Department of the City of New York in the presence of an authorized inspector to obtain Final Certificate of Inspection prior to turnover of the elevator to the City of New York.

1.8 PROTECTION

- A. Protect all items against dirt and damage. The Contractor shall be held fully responsible for all damage until final acceptance. Any equipment or property of the Commissioner damaged by this Contractor or the Contractor's employees, shall be restored to its original condition or replaced without cost to the Commissioner.

1.9 GUARANTEE

- A. Guarantee the materials and workmanship of the apparatus furnished under these specifications and shall make good any defects which may develop within 12 months from the date of substantial completion.

1.10 GUARANTEE SERVICE

- A. Furnish guarantee service on the equipment described herein for a period of one (1) year from the date of substantial completion. The service shall include systematic monthly examinations, adjustments and lubrication of all equipment. Also restore or replace any parts of equipment whenever this is required during the service period and shall use only genuine standard parts produced by the manufacturer of the equipment installed.
- B. All work under the service provisions shall be performed by competent personnel under the supervision and in the direct employ of the Contractor and 24-hour emergency call back service shall be available at all times and be included in the cost of the contract. Maximum response time for an entrapment shall not exceed 30 minutes and shall not exceed 2 hours for non-emergency shutdowns.
- C. Guarantee service requirements:
 - 1. Regularly and systematically examine, adjust, lubricate, clean and when conditions warrant restore or replace the following items and all other mechanical or electrical equipment.
 - 2. Hydraulic power unit and accessories: pump, motor, valves, operating valves, pulleys, drive belts, flexible hydraulic hose and fitting assemblies, oil tank, muffler, strainer, sound isolating coupling, plunger, packing gland, scavenger system, piping and other components.

3. Controller, Selector and Dispatching Equipment: all components including all relays, solid state components, resistors, condensers, transformers, contacts, leads, dashpots, computer devices, selector switches, mechanical or electrical driving equipment, coils, magnet frames, contact switch assemblies, springs, solenoids, resistance grids, hoistway vanes, magnets and inductors.
4. Hoistway door interlocks or locks and contacts, hoistway door hangers and tracks, bottom door gibs, cams, rollers, and auxiliary door closing devices for power operated doors. Chains, tracks, cams, interlocks, sheaves for vertical bi-folding doors.
5. Hoistway limit switches, slowdown switches, leveling switches and associated cams, vanes, and electronic components.
6. Guide shoes including rollers or replaceable gibs.
7. Automatic power operated door operators, door protective devices, car door hangers, tracks and car door contacts for both side slide and vertical bi-folding doors.
8. Traveling cables.
9. Elevator control wiring in hoistway and machine room.
10. Car safety mechanism and load weighing equipment.
11. Buffers.
12. Fixture contacts, push-buttons, key switches, locks, lamps and sockets of button stations (car and corridor), corridor lanterns, position indicators (car and corridor), direction indicators.
13. The guide rails shall be kept free of rust. Where roller guides are used, rails shall be kept dry and properly lubricated when sliding guides are used. Renew guide shoe rollers and gibs as required to ensure smooth and satisfactory operation.
14. Examine, and make necessary adjustments or restorations to the following accessory equipment including relamping of signal equipment: corridor lanterns, car and corridor position indicators, car stations, traffic director station, electric door operators, interlocks, door hangers, safety edge, and intercom systems.
15. Examine regularly and systematically all safety devices, and conduct an annual no load test, and each third year perform a full load, full speed test of safety mechanism and car buffers. The car balance shall be checked. All tests shall be performed in accordance with the provisions of the American National Standard, Safety Code for Elevators and Escalators (ANSI/ASME A1 7.A), current edition. Restore or replace conductor cables and hoistway and machine room elevator wiring.
16. Maintain all elevator equipment in hoistways, machine rooms, and pits in a clean, orderly condition, free of dirt, dust and debris.
17. Furnish lubricants compounded specifically for elevator usage.
18. Emergency calls and minor restorations shall be answered at all hours of the day or night. Minor restorations shall mean service which can be remedied by replacing a spare component stored on-site as further specified. Major restorations and normal preventative service work shall be performed during normal business hours.
19. The Contractor shall check the group dispatching systems (if applicable) and make necessary tests to ensure that all circuits and time settings are properly adjusted, and that the system performs as designed and installed.
20. Contractor shall perform the required mandated inspections and tests as required the Building Code of the City of New York during the term of the included one (1) year guarantee service.

- D. The Contractor shall keep the elevator maintained to operate at the original contract speed, keeping the original performance time, including acceleration and retardation as designed and installed by the manufacturer. The door operation shall be adjusted as required to maintain the original door opening and door closing times, within legal limits.
- E. The City of New York reserves the right to make inspections and tests as and when deemed advisable. If it is found that the elevator and associated equipment are deficient either electrically or mechanically, the Contractor will be notified of these deficiencies in writing, and it shall be the Contractor’s responsibility to make the necessary corrections within 30 days after the receipt of such notice.
- F. Approximately six months prior to the end of the guarantee period, the City of New York may make a thorough maintenance inspection of the elevator. At the conclusion of this inspection, the City of New York may give the Contractor written notice of any deficiencies found. The Contractor shall be responsible for correction of these deficiencies within 30 days after receipt of such notice.

1.11 KEYS

- A. At the completion of all work, the Contractor shall furnish ten (10) sets of keys for each key device installed.

PART 2 - PRODUCTS

2.1 DESCRIPTION OF ELEVATOR SYSTEM

A. ELEVATOR "PE-1"

1. Quantity	One (1) Twin Jack Holeless Hydraulic Passenger Elevator
2. Capacity	6,000 Pounds Class “A” Freight Loading
3. Speed	80 FPM
4. Travel	17’ – 0”
5. Number of Landings	Two (2) @ 1, 2
6. Number of Openings	Two (2)
7. Operation	Simplex Selective Collective
8. Control	Microprocessor

- | | |
|-----------------------------|---|
| 9. Platform Size | 7' - 0" Wide x 9' - 0" Deep |
| 10. Buffers | Spring |
| 11. Car Enclosures | Refer to Section 2.33 |
| 12. Landing Doors | 5' - 0" Wide x 7' - 6" High |
| 13. Door Operation | Two-Speed Center Opening |
| 14. Machine Location | Adjacent @ 1 |
| 15. Communication Equipment | Auto-Dial Telephone
(Car and Machine Room) |
| 16. Power Supply | 3 Phase Building Voltage (40 Hp)
Disconnect to Include Contact |

2.2 MANUFACTURERS

- A. Subject to compliance with requirements, provide products from one of the following:
1. Canton Elevator, Inc.
 2. Minnesota Elevator Company
 3. Otis Elevator Company
 4. Schindler Elevator Company
 5. Thyssen Elevator Company
 6. Or approved equal
- B. Additional equipment manufacturers. Subject to compliance with requirements, provide products from one of the following:
1. Controller - MCE, G.A.L., ESI, or approved equal
 2. Fixtures - EPCO, G.A.L., Monitor, National, or approved equal
 3. Door Protective Device – G.A.L., Janus, Tri-Tronics, or approved equal
 4. Cabs and Entrances – CEC, EDI/ECI, National Cab & Door, or approved equal

2.3 POWER UNIT

- A. The power unit shall be compactly and neatly designed with all components combined in a self-contained unit and with all adjustment features accessible. It shall include (at a minimum) a constant displacement rotary screw-type, pump motor designed for oil hydraulic elevator service, oil reservoir (minimum 10-gallon reserve) with an oil-level indicator, control valve, tank strainer in the suction line, integral pressure gauge and blowout proof muffler to reduce pulsations that may occur in the system. The power unit shall be tested and adjusted at the factory by operating a test elevator loaded to conform to the elevator specified herein.
- B. The motor shall be designed for 80 starts per hour.

2.4 POWER UNIT ISOLATION

- A. The power unit shall be mounted on vibration sound dampeners designed to isolate the unit from the building structure. Sound and vibration isolation pads shall be installed between the motor/pump assembly and the power unit structure and between the power unit and the machine room floor.
 - 1. Provide neoprene vibration isolator pads.
 - 2. All wiring connections to the power unit shall be flexible conduit, minimum 36" long, and installed slack.

2.5 VALVES

- A. A control valve including safety check valve, up direction valve with high pressure relief including up leveling and soft stop features, lowering valve including down leveling and manual leveling feature shall be mounted in a compact unit assembly. Control valves shall be solenoid operated and designed to open and close gradually to give smooth control. All valves shall be readily accessible for adjustment. The valve shall be equipped with a "no pressure sensing device" which will disable the piston from dropping if the car is blocked for any reason.

2.6 AUTOMATIC TWO-WAY LEVELING

- A. An automatic two-way leveling device shall be provided so that the car will approach landing stops at reduced speed from either direction of travel. The leveling device shall, within its zone, be entirely independent of the operating device and shall automatically stop and maintain the car within 1/4" level with the landing, regardless of change in load.

2.7 JACK UNIT

- A. Design and construct the jack unit in accordance with the applicable requirements of the ASME Code. It shall be of sufficient size to lift the gross load at the rated speed to the height specified and shall be factory tested to ensure adequate strength and freedom from leakage. No brittle material, such as gray cast iron, shall be used in the jack construction.
- B. The jack unit shall consist of the following parts: a plunger of heavy seamless steel tubing accurately turned and polished; a stop ring electrically welded to the plunger to positively prevent the plunger leaving its cylinder; an internal babbitt-lined guide bearing, packing or seal of suitable design and quality, a drip ring around cylinder top and a cylinder made of steel pipe and provided with a pipe connection and air bleeder.
- C. Install jack unit plumb with heavy duty clamps to attached guide rail brackets and/or building structure and intervals not to exceed 7' - 0" or as recommended by the equipment supplier.

2.8 PACKING GLAND AND OIL RETRIEVAL SYSTEM

- A. A steel packing gland with phenolic guide bearing, wiper ring and packing especially designed for hydraulic elevator service shall be provided. An oil retrieval system shall be furnished to return oil leakage back to the storage tank.

2.9 PIPING

- A. All hydraulic piping outside the power unit shall be seamless Schedule 80 Pipe with threaded connections.

2.10 HYDRAULIC MUFFLER AND ISOLATION COUPLINGS

- A. A muffler shall be provided in the oil line near the power unit. The muffler shall be designed to reduce pulsation and noise which may be present in the flow of the hydraulic fluid.
 - 1. Provide sound isolation couplings in the oil line. The couplings shall incorporate neoprene seals and gaskets to limit the transmission of vibrations.
 - 2. When the hydraulic pipe penetrates a wall or slab, the gap shall be filled with properly sized isolation and sealed accordingly.

2.11 CONTROLLER AND OPERATION

- A. A generic non-proprietary microprocessor-based controller shall be provided including necessary starting switches together with all relays, switches, solid state components and hardware required for operation, including door operation, as described herein. Operational control shall be by microprocessor. A three-phase overload device shall be provided to protect the motor against overloading.
- B. The elevator shall not require the functioning or presence of the microprocessor to operate on car top inspection or hoistway access operation to provide a reliable means of moving the car if the microprocessor fails.
- C. A motor limit timer function shall be provided which, in case of the pump motor being energized longer than a predetermined time, shall cause the car to descend to the lowest landing and park, open the doors automatically and then close them. Car calls shall be canceled and the car taken out of service automatically. Operation may be restored by cycling the main line disconnect switch or putting the car on access or inspection operation. Door reopening devices shall remain operative.
- D. A valve limit timer shall be provided which shall automatically cut off current to the down valve solenoids if they have been energized longer than a predetermined time. The car calls shall then be canceled and the car taken out of service automatically. Operation may be restored by cycling the main line disconnect switch or putting the car on access or inspection operation. Door reopening devices shall remain operative.
- E. A selector switch shall be provided on the controller to select high or low speed during access or inspection operation as long as contract speed does not exceed 150 feet per minute.
- F. Viscosity control shall cause the car to accomplish the following operation. A temperature sensor shall be provided to determine if the oil is too cold, and if there are no calls registered, the car shall go to the bottom landing and, as long as the doors are closed, the pump motor shall run without the valve coils energized to circulate and heat the oil to the desired temperature. In the event that the temperature sensor fails, a timer shall prevent continuous running of the pump motor.

- G. The control system shall provide comprehensive means of accessing the computer memory for elevator diagnostic purposes. It shall have permanent indicators for important elevator statuses as an integral part of the controller.
- H. Failure of any single magnetically operated switch, contactor, or relay to release in the intended manner; the failure of any static control device, speed measuring circuit, or speed pattern generating circuit to operate as intended; the occurrence of a single accidental ground or short circuit; shall not permit the car to start or run if any hoistway door or gate interlock is unlocked or if any hoistway door or car door or gate contact is not in the made position. Furthermore, while on car top inspection or hoistway access operation, failure of any single magnetically operated switch, contactor or relay to release in the intended manner; the failure of any static control device to operate as intended; or the occurrence of a single accidental ground, shall not permit the car to move even with the hoistway door locks and car door contacts in the closed or made position.
- I. Dedicated permanent status indicators shall be provided on the controller to indicate when the safety string is open, when the door locks are open, when the elevator is operating at high speed, when the elevator is on independent service, when the elevator is on fire service, when the elevator out of service timer has elapsed, and when the elevator has failed to successfully complete its intended movement. In addition, a means shall be provided to display other special or error conditions that are detected by the microprocessor.
- J. An out of service timer shall be provided to take the car out of service if the car is delayed in leaving the landing while there are calls existing in the system.
- K. Door Protection Timers:
 - 1. Door protection timers shall be provided for both the opening and closing directions, which will protect the door motor and will help prevent the car from getting stuck at a landing. The door open protection timer shall cease attempting to open the door after a predetermined time in the event that the doors are prevented from reaching the open position. In the event that the door closing attempt fails to make up the door locks after a predetermined time, the door close protection timer shall reopen the doors for a short time. If, after a predetermined number of attempts, the doors cannot successfully be closed, the doors shall be opened and the car removed from service.
 - 2. A minimum of four different door standing open times shall be provided. A car call time value shall predominate when only a car call is canceled. A hall call time value shall predominate whenever a hall call is canceled. In the event of a door reopen caused by the safety edge, photo eye, etc., a separate short door time value shall predominate. A separate door standing open time shall be available for lobby return.
 - 3. If the doors are prevented from closing for longer than a predetermined time, door nudging operation shall cause the doors to move at slow speed in the closed direction. A buzzer shall sound during the nudging operation.
- L. Car and hall call registration and lamp acknowledgment shall be by means of a single wire per call, in addition to the ground and the power bus. Systems that register the call with one wire and light the call acknowledgment lamp with a separate wire, are not acceptable.

- M. Fire Phase I emergency recall operation and Phase II emergency in-car operation shall be provided according to applicable Building Code of the City of New York.
- N. Independent service operation shall be provided in such a way that actuation of a key switch in the car operating panel will cancel any existing car calls, and hold the doors open at the landing. The car will then respond only to car calls. Car and hoistway doors will only close with constant pressure on a car call push-button or the door close button. While on independent service, hall arrival lanterns or jamb mounted arrival lanterns shall be inoperative.
- O. Simplex Selective Collective automatic operation shall be provided for the installations. Operation of one or more car or hall call push-buttons shall cause the car to start and run automatically, provided the hoistway door interlocks and car door contacts are closed. The car shall stop at the first car or hall call set for the direction of travel. Stops shall be made in the order in which car or hall calls set for the direction of travel are reached, regardless of the order in which they were registered. If only hall calls set for the opposite direction of travel of the elevator exist ahead of the car, the car shall proceed to the most distant hall call, reverse directions, and start collecting the calls.
- P. A relay panel inspection switch and an up/down switch shall be provided in the controller to place the elevator on inspection operation and give the ability for the user to move the car in the hoistway. The car top inspection switch shall render the relay panel inspection switch inoperative.
- Q. A timer shall be provided to limit the amount of time a car is held at a floor due to a defective hall call or car call, including stuck push-buttons. Call demand at another floor shall cause the car, after a predetermined time, to ignore the defective call and continue to provide service in the building.
- R. The microprocessor boards shall be equipped with on-board diagnostics for ease of troubleshooting and field programmability of specific control variables. The field changes shall be stored permanently, using non-volatile memory. The microprocessor board shall provide the features below.
 - 1. On-board diagnostic switches and an alphanumeric display. These switches and displays shall provide user-friendly interaction between the mechanic and the controller.
 - 2. On-board real time clock. The real time clock shall display the time and date and is adjustable by means of on-board switches.
 - 3. Field programmability of specific timer values (i.e., door times)
- S. As an integral part of the controller, the capability shall be provided to attach on-site or remote computer peripherals, yielding additional adjustment or diagnostic capabilities.
- T. Hoistway Access Key Switch operation at the terminal landings are to gain access to the top of the car from the top landing and to gain access to the pit from the bottom landing.
- U. Provide a keyed floor lockout.

2.12 REDUCED CURRENT STARTING

- A. Reduced current starting shall be furnished which shall limit both the initial starting current and peak current drawn by the motor.
 - 1. Provide solid state reduced voltage starting systems.

2.13 LOW OIL CONTROL

- A. In the event of a low oil condition, a low oil control feature shall be provided designed to automatically cause an up traveling car to descend to the lowest terminal landing to permit passengers to egress. The doors shall then automatically close and all control buttons, except the "Door Open" button in the car operating panel, shall be made ineffective. The oil reservoir should be refilled before the elevator is returned to service. The low oil control may be utilized as part of the Automatic Lowering Feature as specified herein.

2.14 AUTOMATIC POWER FAILURE SAFETY SYSTEM

- A. Provide a battery powered Auto-Lowering System.

2.15 MAIN GUIDE RAILS

- A. Provide machine standard (15 lb./ft.), "T" section guide rails with tongue and grooved joints for the car's main rails. Use not less than 3/4" thick steel machined fishplates to form rail joints. Connect rails to fishplates with four (4) bolts. Brackets shall be used to support the rails from the hoistway framing, pre-cast concrete planks and/or inserts. Rails to be attached to the brackets with clips. Provide rail backing where no intermediate support framing is shown on the drawing. All guide rails shall be erected plumb and parallel to a maximum deviation of 1/8" (plus or minus 1/16").
 - 1. Inserts (if used) shall be coordinated with other trades. Provide the Commissioner with clear insert location drawings (shaft plan and section).

2.16 CAR SLING

- A. The car frame shall be constructed of structural steel.
- B. Design the car frame for a 8' - 6" overall cab height, (8' - 0" clear cab).
- C. Design for Class "A" Freight loading.

2.17 PLATFORM

- A. The platform shall be steel construction mounted on manufacturer's standard vibration isolation pads. The sub-flooring is to be constructed of two (2) layers of 3/4" marine-grade plywood (finished flooring is by other trades). The underside of the platform shall be properly fireproofed with 26 gauge galvanized steel metal in a maximum of two (2) sections.

- B. Provide an extruded nickel-silver car sill.
- C. Recess the platform as required for the finish flooring.
- D. Design for Class "A" Freight loading.

2.18 CAR GUIDE SHOES

- A. The car frame shall 6" roller guide shoes attached at the upper and lower portion of the stiles. These roller-guide shoes shall be adjustable, spring loaded type with adjustable mounting base, rigidly bolted to the top and bottom of each side of the car frame. Provide roller guide shoes.

2.19 BUFFERS

- A. Spring buffers shall be provided in the elevator pit. Means shall be provided for mounting buffers securely on channels at the pit floor.

2.20 HOISTWAY ENTRANCES

- A. Hoistway entrances of the hollow metal horizontal sliding, single speed type, shall be provided at each hoistway opening. Each entrance shall include 14 gauge steel unit frames (corners to be welded and ground smooth), flush design 16 gauge door panels, sight guards, extruded nickel-silver sills, strut angles, headers, hanger covers, fascia plates, toe guards, dust covers and necessary hardware.

- B. Material and Finish shall be as follows:

1. Frames: Stainless Steel Brushed Finish
2. Door Panels: Stainless Steel Brushed Finish
3. Sight Guards: Stainless Steel Brushed Finish

- C. Fascias, hanger covers, toe guards and dust covers shall be a minimum of 16 gauge and have the manufacturer's standard enamel or galvanized finish. Structural members shall have prime coat finish.

1. Header, Struts and strut extensions shall be a minimum of 10 gauge formed steel.

- D. Sills, struts, headers, hanger covers and unit frames shall be erected prior to the erection of rough walls and set in proper relation to the car guide rails. Door panels shall be installed after the walls are finished.

- E. Provide keyholes for each landing door in accordance with equipment requirements with stainless steel ferrule insert.

- F. Use sill mounted spring closers.

- G. Provide 5" x 5" x 3/8" sill support angles.

2.21 MASTER DOOR OPERATOR

- A. A Master Door Operator with a ½ Hp direct current motor shall be provided to open and close the car and hoistway doors simultaneously, at a maximum speed of not less than 1 ½ feet per second. Door movement shall be cushioned or checked at both limits of travel. An electro-mechanical interlock shall be provided on each hoistway door to prevent the operation of the elevator unless all doors are closed and locked. An electric contact shall be provided on the car door to prevent the operation of the elevator unless the car door is closed.
- B. The door operator shall be arranged so that, in case of interruption or failure of electric power from any cause, the doors can be readily operated by hand from within the car. Emergency devices and keys for operating the doors from the landing shall be provided unless otherwise specified by the Building Code of the City of New York.
- C. The doors shall open automatically when the car is leveling at the respective landings and shall close after a predetermined time interval or immediately upon pressing a car button. A "Door Open" button shall be provided in the car, the momentary pressing of which shall reopen the doors and reset the time.

2.22 DOOR EDGE PROTECTIVE DEVICE

- A. Provide an infra-red curtain type reopening device with proximity detector that will stop and reopen the car door and hoistway door automatically if the door becomes obstructed by an object or person. The device shall be capable of completing these operations without required contact for an obstruction passing through the opening. The device shall be a non-reflective through beam system with a minimum of forty sensors per edge. It shall have a maximum sensor spacing of 1.8" or less. It shall incorporate a microprocessor controlled fail-safe system. It shall be capable of self-adjustment to compensate for varying environmental conditions. Provide approved proximity type device.

2.23 DOOR HANGERS AND TRACKS

- A. Hangers and tracks shall be provided at each car and hoistway entrance. Tracks shall be of bar steel with the working surface contoured to match the sheaves. The hangers shall be designed for power operation and have provisions for vertical and lateral adjustment. Hangers shall be designed for two point suspension of the door panel.
- B. Hanger sheaves shall be polyurethane with pre-lubricated and sealed-for-life bearings. Car door hangers shall have 3 ¼" diameter sheaves. Hoistway door hangers shall have 3 ¼" diameter sheaves.

2.24 INSPECTOR'S OPERATING STATION

- A. An inspector's operating station shall be provided on top of the elevator car consisting of "Up" and "Down" constant pressure buttons, incandescent light with guard, 110 Volt G.F.I. work outlet and an emergency stop switch.

1. Provide an additional light with guard and G.F.I. work outlet mounted to the bottom of the car and located towards the front for easy access.

2.25 PIT EMERGENCY STOP SWITCH

- A. An emergency stop switch shall be provided in the elevator pit, designed to cut off current supply to motor and "down" direction valves and bring the car to rest independent of the regular operating devices.

1. Locate the pit stop switch in accordance with the Building Code of the City of New York.

2.26 ALARM BELL

- A. An electric signal bell shall be provided in or adjacent to the elevator hoistway as directed. This bell shall be connected to the alarm button in the car operating panel.

2.27 CAR OPERATING PANEL

- A. A car operating panel shall be furnished in the car containing illuminating buttons for each landing, flush-mounted Braille tags, emergency car light with flush lens, door open and close buttons, autodial telephone station, emergency stop switch, F.E.R. Phase II key switch, indicator light and signage, alarm button and key switches for light, fan and independent service. All fixture components shall be back plate mounted and shall be incorporated into the swing front return panel of the cab.

1. The auto-dial telephone unit shall be mounted to the backplate and concealed behind the swing front return. Provide a perforated hold pattern in the swing front return panel for speakers and microphone voice transmission.
2. Provide an L.E.D. position indicator with a minimum 2" high characters.
3. The light, fan an independent service key switch along with a 110 Volt G.F.I. outlet, shall be located in a key-locked service cabinet below the body of the car station. The service cabinet door shall be flush with the swing front return with concealed hinges.
4. Provide car stations with all signage and components to comply with NYC Appendix K and all ADA requirements.

2.28 ILLUMINATED CALL AND CAR BUTTON

- A. Call registration lights shall be provided in each push-button unit. When a button is pressed, it shall illuminate, signaling to the waiting passenger that the call has been registered. Each button shall remain illuminated until the call has been answered.

1. Provide non-directional satin stainless steel buttons throughout. Acceptable manufacturers are EPCO, Innovation, Monitor or approved equal. Button finish shall match the finish of surrounding cab swing front return panel.

2.29 CAR LANTERNS

- A. Lanterns with one stroke up, two strokes down gongs shall be provided.
- B. As soon as the car has reached a predetermined distance from a landing and is set to stop at that landing, the corresponding lantern shall be illuminated and the gong shall sound whether the hall button has been pressed or not and the lantern shall remain illuminated until the car has left that landing. All visual and audible signal timing shall be in accordance with A.D.A. requirements.
- C. Provide backplate mounted fixtures with only the lens projections through the swing front return jamb.

2.30 HALL CALL STATIONS

- A. Provide unit with No. 4 stainless steel faceplates with (1/8" thick) beveled edges and tamper proof fasteners.
- B. Provide F.E.R. Phase I key switch at the main egress level and LED position and direction indicators at each floor.
- C. Include all fire fighter instructions and as required by Appendix K.
- D. Include L.E.D. position and direction indicator in each hall call station.

2.31 ELECTRIC WIRING

- A. Furnish and install complete, necessary, insulated wiring to connect all parts of the equipment. Wiring, conduit, fittings and installation shall be in accordance with Division 26, and comply with the requirements of the National Electric Code.
- B. Insulated wiring shall have a flame retarding and moisture resisting outer cover and shall run in concealed galvanized metal conduit, metallic tubing or wire ducts.
 - 1. Flexible metal conduit shall be permitted for short runs only.
- C. Traveling cables between car and hoistway shall have a flame retarding and moisture resisting outer cover. They shall be flexible and suitably suspended to relieve strains in the individual conductors. The traveling cable shall also include:
 - 1. A minimum of 10% spare conductors, (ends to be left accessible to facilitate connections at a later date).
 - 2. Wiring as required for the auto-dial telephone and firemen's communication as required by the Building Code of the City of New York.
 - 3. A video co-axial cable type RG 59U, (leave adequate slack in the machine room and top of car to facilitate final hookup).
 - 4. Six (6) pairs of 18 gauge shielded cables, (terminating on terminal strips in the controller and in the car operating station).

2.32 TERMINAL LIMIT SWITCHES

- A. Terminal limit switches shall be provided in the hoistway, designed to automatically stop the car at the terminal landings, within the designated top and bottom overtravels.
 - 1. The switches shall be rail mounted with rubber (or similar) rollers which are engaged by a car mounted cam. The beveled section of the cam shall be designed for smooth, quiet engagement of the switches.

2.33 CAR ENCLOSURE

- A. A description of the cab interior is as follows:
 - 1. Shell - 14 gauge steel walls shall be laminated in 1/8" thick aluminum diamond plate and 12 gauge steel for canopy. Individual panels shall be reinforced to provide for a flat, rigid surface. Apply spray on sound deadening on rear of shell. Sound deadening material shall be non-combustible and applied in accordance with manufacturer's recommendation. Provide a minimum 1/8" consistent thickness on all surfaces.
 - a. Provide welded re-enforcement grounds (minimum 1/4" thick with weld nut) on the rear of the shell for handrail mounting. Provide all cutouts in the shell as required for ventilation and fixture installation.
 - 2. Front Return Panels - Provide 14 gauge brushed stainless steel full front swing return panels. The swing return panels shall have a concealed continuous hinge and a substantial locking system. Provide no more than a 1/4" clearance between the swing return panel and the finish floor and a 1/16" between the swing return panel and transom.
 - a. The swing return panels and hinging system shall be suitably re-enforced to prevent appreciable or permanent sagging or deflection when opened for maintenance.
 - 4. Transom - 14 gauge brushed stainless steel in a pattern as selected by the Commissioner. Apply sound deadening to the back of the transom as specified above.
 - 5. Doors - 16 gauge brushed satin stainless steel with full height rubber astegral at the leading edge of each door panel. Provide the same construction as for the hoistway doors.
 - 6. Sills - Extruded nickel-silver.
 - 7. Ceiling - 1/8" thick aluminum diamond plate on 3/4" MDF backer board. All edges to be aluminum.
 - a. One ceiling panel shall be removable for top emergency egress. A substantial, positive locking mechanism shall be utilized to hold the removable panel in place, flush with the adjoining panels and flat throughout. Show all details on the shop drawings.
 - b. Provide rimless 3" dia. aperture light fixtures 3000k, 85 cri, base of design: Edison Price LED/4 narrow flood, fully diffuse clear.
 - 8. Handrails - Provide 1-1/2" diam. brushed stainless steel handrail along the back wall. Design the handrail to withstand a minimum 500 lb. vertical point load at the center between handrail supports.
 - a. Handrail mounting equipment shall be solid non-directional satin stainless steel and spaced no more than 24" apart.
 - 9. Exhaust Fan - Two-speed Nylube fan, mounted on vibration isolation pads.

10. Protection Pads - Provide one (1) set of protection pads per elevator (cost is included in the base bid). Provide heavy-duty vinyl impregnated nylon with 1/4" thick padding. Pads are to be fire retardant and treated to be self-extinguishing. Include a metal stiffening bar on top of pads and include retaining clips to hold the pads in place. Provide pads in a color as selected by the Commissioner.
11. Pad Buttons - Provide extended type stainless steel pad buttons bolted through the shell. Provide weld nuts on rear of shell to accept the pad buttons.
12. Base - 12 gauge brushed satin stainless steel.
13. Concealed Vent Slots - Design the cab interior to provide for ventilation openings in the base of the cab.
14. Flooring - 1/8" thick aluminum diamond plate.
15. Reveals, Frieze All exposed reveals, friezes, etc. shall be non-directional satin stainless and Other Exposed Areas shall be steel with a nondirectional satin finish.
16. Engraving - No applied plates will be accepted. No manufacturer's logos shall be visible.

2.34 PERFORMANCE

- A. Speed to be within 5% of rated speed in both directions of travel and under any load.
- B. Leveling to be within 1/4" of the Hoistway Sill level.
- C. Maximum 400 psi working pressure.

2.35 HANDICAPPED REQUIREMENTS AND COMMUNICATIONS

- A. Locate a door reopening device at 5" and 29" above the finish floor, the alarm button and emergency stop switch at 35" and the floor and control button not more than 54".
- B. Provide raised markings in the panel to the left of the floor and control buttons. Letters and numbers shall be a minimum of 5/8" and raised .03" and shall be in contrasting color to the call buttons. Plates, if used, shall be stud mounted and recessed flush with the car station.
- C. The centerline of the hall push-button station shall be 42" above the floor. The hall lanterns or cab lantern shall sound once for the "up" direction and twice for the "down" direction.
- D. Provide floor designations at each entrance on both sides of jamb at a height of 60" above the floor. Designations shall be 2" high, raised .03" and shall be as selected by the Commissioner.
- E. Provide an audible signal to tell passenger that the car is stopping or passing a floor served by the elevator.
- F. Provide emergency communications and auto-dial telephone in the elevator cab and machine room. System shall provide for communications between the machine room and cab in accordance with the Building Code of the City of New York. At a minimum, the auto-dial telephone shall include the following features:

1. Fully A.D.A. compliance including "Call Acknowledged Indicator".
2. Powered by phone line only.
3. Two number capability.
4. Automatic location identification message.
5. Non-volatile memory.
6. Remote programming.
7. Adjustable line disconnect timer.
8. Call back capabilities.
9. Communication between machine room and cab to comply with Appendix K and all related requirements of the Building Code of the City of New York.

2.36 MATERIALS

- A. Sheet Steel for Exposed Work: Stretcher-leveled, cold rolled, commercial-quality carbon steel, complying with ASTM A366, matte finish.
- B. Sheet Steel for Unexposed Work: Hot-rolled, commercial quality carbon steel, pickled and oiled, complying with ASTM A569.
- C. Structural Steel Shapes and Plates: ASTM A36 and AISI 1018.
- D. Stainless Steel: Type 300 Series complying with ASTM A167, with standard tempers and hardness required for fabrication, strength and durability. Supply with mechanical finish on fabricated work in the location shown or specified with texture and reflectivity required (Federal and NAAMM nomenclature). Protect with adhesive plastic film or paper covering. All finishes specified as "satin" to be Manufacturer's standard directional polish that complies with commercial No. 4 requirements. All finishes specified as "mirror" to be Manufacturer's standard mirror polish that complies with commercial No. 8 requirements.
- E. Bronze: Cold finished muntz metal type UNS C28000-HO2 complying with ASTM B36/B36M. Supply with mechanical finish on fabricated work in the location shown or specified with texture and reflectivity required (Federal and NAAMM nomenclature). Protect with adhesive plastic film or paper covering. All finishes specified as "satin" to be Manufacturer's standard directional polish that complies with commercial No. 4 requirements. All finishes specified as "mirror" to be Manufacturer's standard mirror polish that complies with commercial No. 8 requirements.
- F. Aluminum: Extrusions per ASTM B221; sheet and plate per ASTM B209.
- G. Plastic Laminate: ASTM E84 Class A and NEMA LD3, 0.050" (1.3 mm) up to 1/16" (1.6 mm) nominal thickness. Exposed surfaces to have color selected by Commissioner from Manufacturer's standard selection.
- H. Fire Retardant Treated Particle Board Panels: Minimum 3/4" (13mm) thick backup for plastic laminate veneered panels provided with suitable anti-warp backing; to meet ASTM E84 Class "A" rating with flame-spread rating of 25 or less.

- I. Paint: Unexposed Steel and/or Iron: Clean metal of oil, grease, scale and other foreign matter and paint one shop coat of Manufacturer's standard rust-resistant primer. Primer shall be of a low V.O.C. water-based type. Galvanized metal need not be painted.
- J. Exposed Steel: Clean exposed metal of oil, grease, scale and other foreign matter. Eliminate any dents, scratches, or other defects that would affect the final finish. For material delivered with primer coat only, apply two coats of manufacturer's standard baked enamel primer. For material delivered with a finished coat, apply an additional two coats of manufacturer's standard baked enamel of a color selected by the Commissioner from the manufacturer's standard color selection.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 Design Requirements:

- A. Electrical Design and Wiring:
 1. All wiring shall be Underwriters approved stranded type in accordance with the latest International Electrical Code. Minimum size permitted shall be No. 18 AWG. These wires shall be installed in conduit with steel outlet boxes. All electrical boxes (Hall pushbutton boxes, Car Stations, Terminal boxes, pull boxes, etc.) and other similar items shall be of approved construction, hot-dip galvanized or electroplated with Zinc Dichromate. All electrical boxes exceeding 150 cubic inches shall be supported independently of the conduits.
 2. All raceway shall be galvanized EMT and/or trough.
 3. Furnish all materials and completely wire all parts of the electrical equipment of the elevator, including electrical devices on hatch doors.
 4. Switches, relays, etc. on controller, starter, and signal panels and similar items on other parts of the equipment, shall be the latest model. Any parts showing wear or damage during the guarantee period to the extent that abnormal maintenance is required or indicated shall be replaced by the Contractor.
 5. Contacts in elevator motor circuits, which are intended to be opened by the governors or other safety devices, shall be copper to carbon, or other approved non-fusing type. Relays shall be designed for visual inspection and easy replacement of contacts with minimal disassembly, and keyed parts for ease in reassembly. They shall be equipped with suitable blowout coils, vanes, barriers, etc., to prevent undue arcing and heating. Current ratings for silver-to-silver contacts on relays used in motor circuit applications shall be at least three times the current draw of the running ratings of the motor. Contacts on control and signal relays and switches shall generally be of silver alloy.
 6. Conduits shall be run and connected to suitable approved connection boxes at all outlets, apparatus and panels.

7. The conduits shall be of such size that the wires or cables can be readily installed and replaced, if necessary. No conduit or raceway shall be less than 3/4 inch trade size, except that for small devices such as door switches, interlocks, etc. for which, 1/2 inch conduit may be used. The total overall cross-sectional area of the wires contained in any conduit shall not exceed 40 percent of the internal area of the conduit. Approved strain boxes shall be installed for all vertical runs in accordance with the Building Code of the City of New York.
8. Conduits shall be neatly and systematically run. All exposed conduit and boxes shall be supported by straps (wire or plastic ties are not acceptable), hangers, or clamps to the structural steel, reinforced concrete, or other approved supports. Riser conduits and/or trough in hoistway shall be supported at each floor level.
9. Connections of all wires larger than No. 8 AWG shall be made with copper connectors except for Mainline Disconnect switches where UL approved aluminum lugs/connectors may be used. Metal eyelets pressed around the strands shall be used for all connections of smaller stranded conductors.
10. All terminals shall be tagged or identified in a permanent legible manner to match car and hoistway junction boxes and controllers.
11. In all machine rooms, hoistways, etc., install the equipment to provide for easy access for maintenance.
12. All screws used for terminal connections of all wiring (machine room, hoistway and pit) shall be of proper size and type as approved.
13. All connections of wires to controller and motor lead terminals from external circuits shall be made with "copper" soldered lugs or "copper" eyelet compression type lugs.
14. All elevator lights (top and bottom of car and pit) and A.C. alarm bells shall be fused and located in the elevator machine room in a separate approved box, or on the controller. The fuses shall be identified (permanent label) "lights and alarm bells".
15. All receptacles in elevator machine room, pits, and car shall be Ground-Fault Circuit Interrupter type (GFCI).
16. All grounding shall be done in accordance with the latest International Electrical Code as adopted by the Building Code of the City of New York. Grounding of machine to bedplate is not permitted.

B. Mechanical Design Requirements:

1. All bearings, pivots, guides, guide shoes, gearing, door hanger sheaves, door hanger tracks, and elements subject to friction or rolling wear shall be accurately finished and arranged for convenient lubrication. Provide means for flushing and draining the larger bearings and gear cases. All oiling holes shall have dustproof, self-closing caps.
2. All bearings shall be sized for heavy-duty commercial elevator usage.
3. Ball and roller bearings shall be fully enclosed. Loading, lubrication, support and all other conditions of use shall be in accordance with the recommendations of the bearing manufacturer. Bearings for motors shall be of the open (non-sealed) type with approved fittings for grease lubrication or approved sealed bearings. The bearings shall not be part of the end bell housing, but shall be separate for easy removal and replacement.

4. All bolts used to connect moving parts, bolts carrying hoisting stresses, and all other bolts except guide rail bolts, subject to vibration or shock, shall be designed to prevent loosening of the nuts and bolts. Bolts transmitting shearing stresses between machine parts shall have tight body fit in drilled and reamed holes. All bolts subject to vibration shall be provided with split ring lock washers. All guide rail vane brackets shall be through bolted and provided with proper bolts, nuts and lock washers.
5. All parts shall be manufactured to high precision standards so that wearing parts will be readily interchangeable with stock service parts with a minimum of field fittings.
6. All bearing and sliding surfaces of shafts, pins, bearings, bushings, guides, etc., shall be smoothly and accurately finished. During the guarantee service period, all bearings shall be regularly checked for any tendency to run hot and any defects corrected.
7. Protection for moving parts: Belts, pulleys, chains, gears, couplings, projecting set screws, keys, and other rotating parts located so that any person can come in close proximity thereto, shall be fully enclosed or properly guarded.
8. All exposed hardware on public hall side shall be of tamperproof design constructed of stainless steel with No. 4 satin finish.
9. Tamperproof stainless steel spanner head screws shall be used for all exposed locations, for all landing button panels, certificate frames, interlocks and car lighting fixtures. Supply one Spanner head wrench for each size screw. Tamperproof screws shall be of the "captive type". Self-tapping screws or self-tapping machine screws shall not be permitted.
10. All locks and key operated switches shall be five (5) pin tumbler type. All keys where permitted shall be of the captive type. Furnish two (2) keys for each lock and/or switch for each elevator. All locks shall be mastered to one master key. Furnish four (4) master keys. Firemen's Service keys shall meet requirements of the Building Code of the City of New York.

3.3 WORKMANSHIP AND INSTALLATION

A. Inspection and Tests:

1. Keep the shutdown time within the specified limit. Any delays in the approved schedule shall be brought immediately to the attention of the Commissioner, in writing, along with the proposed revised schedule.
2. Arrange and schedule final inspection of all work and notify the Commissioner in writing that the work has been thoroughly checked and is ready for final inspection. Testing shall be performed under the direction of authorized Inspectors.
3. When the elevator work is completed, conduct operating tests to the satisfaction of the Commissioner. The inspection procedure outlined in the ASME A17.2 for the Inspection of Elevators, Escalators and Moving Walks, Inspector's Manual will form a part of the final inspection.
4. Furnish all test instruments, labor and materials, required at the time of final inspection. They shall include, but not necessarily be limited to, standard 500 pound test weights.
5. Certificates: Before final acceptance, furnish all certificates required by the Building Department of the City of New York. All certificates shall be turned over to the City of New York with copies to the Commissioner.

6. If requested by the Commissioner, the following tests shall be made by the Contractor, with the Commissioner present, at the time of final inspection:
 - a. FULL LOAD-RUN TEST: Shall be for one hour continuous run, with full specified rated load in the car. During the test run, the car shall be stopped at all floors in both directions of travel for a standing period of ten (10) seconds per floor.
 - b. SPEED TEST: The actual speed of the elevator car shall be determined in both directions of travel and with full contract load and no load in the elevator car. Speed tests shall be made before and also after the full load run test. Speed shall be determined by applying a tachometer to the car hoisting cables. The actual measured speed of elevator car with full load in "UP" direction shall be within 5 percent of specified rated speed.
 - c. TEMPERATURE RISE TEST: The temperature rise of the hoisting motor shall be determined during the full load test run. Temperatures shall be measured by the use of thermometer on top of windings and shielded by cotton waste or putty. Temperature rise of the equipment shall not exceed the temperature rise for the class of insulation used in the motor tests, shall be started only when all parts of the equipment are within 5° centigrade of the ambient temperature at time of starting test.
 - d. CAR STOPPING ACCURACY: Elevator stopping shall be tested for accuracy of landing within 1/2 inch plus or minus (from finished floor) at all floors with no load in car, balanced load in car and full load, in both directions of travel. Accuracy of floor landing shall be determined both before and after the full load run test.
 - e. INSULATION RESISTANCE TEST: The complete wiring systems of elevator shall be free from short circuits and grounds, and the insulation resistance of systems determined by use of a "Megger", shall be not less than one megohm. (Solid State Controllers are excluded from this test).
 - f. CAR SAFETY AND GOVERNOR TESTS: The car safety and governor shall be tested as outlined in Section 1003 ASME A17.1 Code.
 - g. STATIC CAR BALANCING: The car shall be statically balanced in its sling so that the total lateral force on top car guide assemblies shall be a maximum of forty pounds (40 lbs.) for all positions of the car in the shaftway.
 - h. DYNAMIC SYSTEM BALANCING: Car and counterweight suspension system shall be dynamically balanced so that total weight of counterweight and its frame shall be equal to total weight of unloaded car and its sling, plus forty percent (40%) of contract load with an accuracy of plus or minus fifty pounds (50 lbs).
 - i. ELECTRICAL PROTECTIVE DEVICES: All electrical protective devices in the wiring system (Fuses, Overloads, etc.) shall be tested for proper operation.
 - j. The FIREMAN'S SERVICE SYSTEM shall be tested for proper operation.
 - k. PASSENGER OVERLOAD TEST: The car shall be tested with 125% of rated load and shall conform to all passenger overload regulations in ASME A17.1. In addition, the car shall be subjected to the Acceptance and 5 Year Tests for Drive Machine Brakes in ASME A17.2.1, Inspectors' Manual for Electric Elevators.
 - l. BUFFER TEST: Car and Counterweight Oil Buffers shall be tested in accordance with the requirements for Acceptance and 5 Year Tests for Oil Buffers, as described in ASME A17.2.1, Inspectors' Manual for Electric Elevators.
 - m. TEST SECURITY INTEGRATION

B. Cleaning, Adjustment, and Final Acceptance:

1. At the end of each day, remove and legally dispose of all refuse and dirt resulting from work of this contract. All work areas shall be left "broom clean". After completion of work, thoroughly clean and adjust elevators so that they are in proper operating condition. Remove from site, all materials which are not required as part of finished work.

C. Safety of Persons and Property:

1. Plan the work and execute in an organized and orderly manner. Danger and warning signs shall be prominently displayed, and exercise every precaution to protect pedestrians.
2. Erect construction barriers around the work area. Keep dust and noise at a minimum. Barricades shall not have protruding nails or sharp jagged edges.

D. Protection:

1. Protect all items against dirt and damage. The Contractor shall be held fully responsible for all damage until final acceptance. Any equipment or property of the City of New York damaged by this Contractor or the Contractor's employees shall be restored to its original condition or replaced without cost to the City of New York.

E. Contractor's Shop:

1. Contractor must maintain or have access to an adequate shop within proximity of the project, carry in stock, all spare parts furnished under this Section which are subject to periodic failure.

F. Storage:

1. The Commissioner will designate a suitable area where the Contractor may store equipment until the work is completed. All equipment shall be stored at the sole risk of the Contractor.
2. The Contractor shall provide his own lock and key. The assigned storage area shall be left clear and unencumbered of material or debris and shall be left in a broom-clean condition at the completion of the work. An approved Type "C" fire extinguisher shall be provided and installed on a wall, for each storage area assigned to the Contractor.

G. Access to Elevator Equipment:

1. The Contractor shall provide keys for access to all the elevator equipment.

H. Punch List Items:

1. All punch list items shall be completed within thirty (30) consecutive calendar days of receipt of Punch List items.

3.4 SHAFT CLEANING

- A. The entire shaft, from the pit floor to the underside of the machine room slab, shall be thoroughly cleaned of all debris, lint, grease, dust, etc.

3.5 HOISTWAY PROJECTIONS

- A. Provide seventy-five (75°) degree concrete bevels on all ledge projections in excess of two inches of all elevator hoistways on all floors.

3.6 PAINTING

- A. Summary of Work Included:

1. Clean all ironwork and paint with one shop coat of primer coating. Do not paint galvanized steel with enamel coating. After erection, touch up bare spots on iron work. Apply final field coat of paint similar to shop coat.
2. Touch up any wall and ceiling surfaces damaged by work of this project with at least two coats of paint to match finish.
3. Paint metal with one coat of an oil based rust inhibitive primer and one coat of an enamel alkyd paint.

- B. Samples:

1. Before placing orders for materials, submit the name or names of manufacturers for approval.
2. Upon approval of the manufacturer, submit samples of all materials. Approval of the samples will be based upon manufacturers certifying that the products proposed are the standard best or top brands produced by them and are readily obtainable as such in "over the counter" sales. Do not proceed until all samples are approved.
3. All materials shall be further subject to field tests from time to time as the work progresses.

- C. General Painting Requirements

1. Delivery: Deliver all material in their original containers with seals unbroken. Order in advance, in large enough quantities and in ample time to facilitate the work.
2. Storage of Materials: Store materials where directed. Keep storage space clean and accessible at all times. Remove paint or oil-soaked rags, waste, etc. from the premises at the close of each day's work. Absolutely no flammable or combustible materials are to be stored on the City of New York's property.
3. Protection: Provide suitable coverings to protect all work and all adjacent surfaces and objects.
4. Cleaning Up: Upon completion of the work, remove all surplus materials, empty containers, rags, and other debris from the premises. Touch up finished work where directed. Remove daubs or spatters of paint from all surfaces.

D. Workmanship:

1. Carefully prepare all surfaces to be painted. Do not apply paint until the surfaces are absolutely dry and clean.
2. Shop or priming coats shall be put in good condition; touch up any bare or abraded spots.
3. Wire brush all metal surfaces. Remove all abrasions in the prime coat, rust, scale, etc. Clean and touch up damaged areas to match prime coat. Clean metal work with solvent to remove all dirt and grease.
4. Clean concrete and masonry surfaces to be painted of all grit, dirt and loose material. Patch scratches, cracks, holes and similar defects in wall and ceiling surfaces to provide a smooth flush surface. Patched portions shall be given a coat of primer sealer in addition to all other specified coats.
5. Each coat of paint shall dry before subsequent coat is applied. The finished work shall be free from runs or sags, defective brushing or brush marks, and clogging of lines and angles. Exposed surfaces shall be left clean.

END OF SECTION 14 24 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 210500

COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following:
1. Piping materials and installation instructions common to most piping systems.
 2. Mechanical sleeve seals.
 3. Sleeves.
 4. Escutcheons.
 5. Grout.
 6. Fire-suppression demolition.
 7. Concrete bases.
 8. Supports and anchorages.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “ Submittals Procedures”.

1.4 SUBMITTALS

- A. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements.”
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."
- C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."

1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

D. Electrical Characteristics for Fire-Suppression Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment must comply with requirements.

1.6 DEFINITIONS

- A. Finished Spaces: Spaces other than mechanical and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and mechanical equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

- A. Refer to Division 21 Section 211000 "Water-Based Fire Suppression System" for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

- A. Refer to individual Division 21 piping Sections for special joining materials not listed below.
- B. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.

- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series or BAg1, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12.
- G. Solvent Cements for Joining CPVC Plastic Piping: ASTM F 493.

2.3 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.
- B. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
- C. Pressure Plates: Carbon steel. Include two for each sealing element.
- D. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.4 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.

2.5 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.

- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated.
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated.

2.6 GROUT

- A. Description: ASTM C 1107, Grade B, non-shrink and nonmetallic, dry hydraulic-cement grout.
 - 1. Characteristics: Post-hardening, volume-adjusting, non-staining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
 - 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
 - 3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 FIRE-SUPPRESSION DEMOLITION

- A. Refer to Division 02 Section 024116.13 "Building Demolition" for general demolition requirements and procedures.
- B. Disconnect, demolish, and remove fire-suppression systems, equipment, and components indicated to be removed.
 - 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 - 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 - 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 - 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 - 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver as instructed by Commissioner.

- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division Section 211000 "Water-Based Fire Suppression System" specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.

3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section 078413 "Penetration Firestopping" for materials.
- Q. Verify final equipment locations for roughing-in.
- R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.4 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 21 Section 211000 "Water-Based Fire Suppression System" specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.

2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.
- I. Plastic Piping Solvent-Cement Joints: Clean and dry joining surfaces. Join pipe and fittings according to the following:
 1. Comply with ASTM F 402, for safe-handling practice of cleaners, primers, and solvent cements.
 2. CPVC Piping: Join according to ASTM D 2846/D 2846M Appendix.
- J. Plastic Pressure Piping Gasketed Joints: Join according to ASTM D 3139.

3.5 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 7. Use 3000-psi, 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section "Cast-in-Place Concrete".

3.6 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section 051200 "Structural Steel Framing" and Section 055000 "Metal Fabrications".
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor fire-suppression materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.7 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor fire-suppression materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.8 GROUTING

- A. Mix and install grout for fire-suppression equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

END OF SECTION 210500

SECTION 21 08 00
COMMISSIONING OF FIRE SUPPRESSION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This section includes commissioning process requirements for Fire Suppression systems, assemblies, and equipment.
- B. Related Sections:
1. DDC General Conditions – Section 01 91 13 “General Commissioning Requirements for MEP Systems”

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system’s installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
1. Verify that applicable equipment and systems are installed according to the manufacturer’s recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by the Contractor.
 2. Verify and document proper performance of equipment and systems.
 3. Verify that Operation & Maintenance documentation is complete and transferred to the City of New York.
 4. Verify that the City of New York’s maintenance personnel are adequately instructed.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.
- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx

activities with the Commissioner and Contractor.

- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s role.
- B. Refer to the DDC General Conditions Section 01 33 00 “Submittal Procedures.”
- C. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: The Contractor will comply with test equipment manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. The Contractor shall provide all standard testing equipment for the electrical systems and controls systems in Division 21. The Contractor shall ensure a sufficient quantity of two-way radios are provided.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. The Contractor shall ensure that proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York

upon completion of the commissioning process.

- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of the City of New York.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Contract Documents.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
 - 1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The Contractor will create the as-built drawings.
- C. Operation and Maintenance Data:
 - 1. The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 - 2. The CxA will review the O&M literature once for conformance to project requirements.
 - 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Instruction:
 - 1. The Contractor will provide demonstration and instruction as required by the Contract Documents.
 - 2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
 - 3. An instruction agenda for each instruction session must be submitted to the CxA one (1) week prior the instruction session.
 - 4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and the Commissioner. A copy of the test record shall be provided to the CxA and the Commissioner.
 - 5. Engage a Factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.
 - 6. Instruct the City of New York's maintenance personnel on procedures and schedules for

starting and stopping, trouble shooting, servicing, and maintaining equipment.

7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. The commissioning responsibilities applicable to the Division 21 trade are as follows (all references apply to commissioned equipment only):
 1. Perform commissioning tests at the direction of the CxA.
 2. Attend construction phase controls coordination meetings.
 3. Participate in Fire Suppression systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
 4. Provide information requested by the CxA for final commissioning documentation.
 5. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
 6. Prepare preliminary schedule for Fire Suppression system orientations and inspections, operation and maintenance manual submissions, instruction sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.
 7. Update schedule as required throughout the construction period.
 8. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
 9. Perform all verification and functional performance tests in the presence of the CxA as required.
 10. Provide measuring instruments and logging devices to record test data and provide data acquisition equipment to record data for the complete range of testing for the required test period.
 11. Gather operation and maintenance literature on all equipment and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
 12. Coordinate with the CxA to provide 72-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
 13. Notify the CxA a minimum of two weeks in advance for start of the testing work.
 14. Participate in, and schedule vendors and subcontractors to participate in the instruction sessions.
 15. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 - a. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
 - b. Fire detection and smoke detection devices furnished under other divisions of the

specification.

16. The Contractor shall ensure that the equipment suppliers shall document the performance of the equipment.
 17. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
 18. Provide instruction to the City of New York’s maintenance personnel using expert qualified personnel, as specified.
 19. Contractor shall direct equipment suppliers to:
 - a. Provide all requested submittal data, including detailed start-up procedures and specific requirements needed to keep warranties in force.
 - b. Assist in equipment testing.
 - c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- B. Refer to the DDC General Conditions for additional Contractor responsibilities.

3.3 CxA'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that Fire Suppression systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Fire Suppression instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- C. Prepare detailed testing plans, procedures, and checklists for Fire Suppression systems,

subsystems, and equipment with guidance from CxA.

- D. Tests will be performed using design conditions whenever possible, as determined by the Commissioner.
- E. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- F. The CxA may direct that set points be altered when simulating conditions is not practical.
- G. If tests cannot be completed because of a deficiency outside the scope of the Fire Suppression system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- H. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 FIRE SUPPRESSION SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 21 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CxA.
- B. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item, device and panel section to be tested.
- C. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The scope of commissioning work shall include but not limited to the following equipment and systems:
 - 1. Fire Protection System
 - a. Wet Sprinkler Piping
 - b. Dry Sprinkler Piping
 - c. Jockey Pump
 - d. Sprinkler Booster Pump
 - e. Fire Alarm System Interactions

3.7 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.
- B. Refer to the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for the Commissioner and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.8 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

- A. Refer to the DDC Standard General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to instruction.
- B. Contractor’s instruction responsibilities pertaining to Fire Suppression work:
 - 1. Provide the CxA with an Instruction Plan two weeks before the planned instruction.
 - 2. Provide comprehensive orientation and instruction in the understanding of the systems and the operation and maintenance of each major piece of commissioned Fire Suppression equipment or system to City of New York’s maintenance personnel.
 - 3. Instruction shall start with classroom sessions, if necessary, followed by hands on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
 - 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 - 5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing subcontractor or manufacturer’s representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
 - 6. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
 - 7. Instruction shall include:
 - a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
 - c. Discuss relevant health and safety issues and concerns.
 - d. Discuss warranties and guarantees.
 - e. Cover common troubleshooting problems and solutions.
 - f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
 - g. Discuss any peculiarities of equipment installation or operation.
 - i. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.

- ii. Fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
- iii. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 21 08 00

SECTION 211000

WATER-BASED FIRE-SUPPRESSION SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following fire-suppression piping inside the building:
 - 1. Wet-pipe sprinkler systems.
 - 2. Dry-pipe sprinkler system.
- B. See Division 10 Sections 104416 "Fire Extinguisher" for cabinets and fire extinguishers.
- C. See Division 21 Section 213113 "Electric-Drive, Centrifugal Fire Pumps" for fire pumps, pressure-maintenance pumps, and pump controllers.
- D. See Division 28 Section 284600 "Fire Detection and Alarm" for alarm devices not specified in this Section.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Product Data: For each product indicated.
- B. Approved Sprinkler Piping Drawings: Working plans, prepared according to NFPA 13-2007, that have been approved by Commissioner, including hydraulic calculations.
- C. Field test reports and certificates.
- D. Field quality-control test reports.
- E. Operation and maintenance data.

1.5 PERFORMANCE REQUIREMENTS

- A. Standard Piping System Component Working Pressure: Listed for at least 175 psig (1200 kPa).
- B. Fire-suppression sprinkler system design must be approved by Commissioner.
 - 1. Margin of Safety for Available Water Flow and Pressure: 5 percent, including losses through water-service piping, valves, and backflow preventers.
 - 2. Sprinkler Occupancy Hazard Classifications:
 - a. Electrical Equipment Rooms: Ordinary Hazard, Group 1.
 - b. General Storage Areas: Ordinary Hazard, Group 1.
 - c. Mechanical Equipment Rooms: Ordinary Hazard, Group 1.
 - d. Garage: Ordinary Hazard, Group 1.
 - e. Public Areas: Light Hazard.
 - f. Offices: Light Hazard.
 - 3. Minimum Density for Automatic-Sprinkler Piping Design:
 - a. Light-Hazard Occupancy: 0.10 gpm/sq.ft. over 1500 sq. ft. (4.1 L/min. per sq. m over 139 sq. m).
 - b. Ordinary-Hazard, Group 1 Occupancy: 0.15 gpm/sq.ft. over 1500 sq. ft. (6.1 over L/min. per sq. m over 139 sq. m)
 - c. Ordinary-Hazard, Group 2 Occupancy: 0.2 gpm/sq.ft. over 1500 sq. ft. (8.2 L/min. per sq. m over 139 sq. m)
 - 4. Maximum Protection Area per Sprinkler:
 - a. Apartments, Office Spaces: 225 sq. ft. (20.9 sq. m).
 - b. Commercial Areas: 225 sq. ft. (20.9 sq. m).
 - c. Storage Areas: 130 sq. ft. (12.1 sq. m).
 - d. Mechanical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
 - e. Electrical Equipment Rooms: 130 sq. ft. (12.1 sq. m).
 - f. Other Areas: According to NFPA 13 recommendations, unless otherwise indicated.
- C. Seismic Performance: Fire-suppression piping must be capable of withstanding the effects of earthquake motions determined according to NFPA 13-2007 and New York City Building Code, 2014 Edition.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.

- B. Installer Qualifications: Installer's responsibilities include designing, fabricating, and installing fire-suppression systems and providing professional engineering services by a professional engineer licensed in State of New York needed to assume engineering responsibility. Base calculations on results of fire-hydrant flow test.
 - 1. Engineering Responsibility: Preparation of working plans, calculations, and field test reports by a professional engineer licensed in State of New York.
- C. Standards: Fire-suppression-system equipment, specialties, accessories, installation, and testing must comply with the following:
 - 1. New York City Building Code, 2014 Edition and Referenced NFPA 13-2007, "Installation of Sprinkler Systems."

PART 2 - PRODUCTS

2.1 STEEL PIPE AND FITTINGS

- A. Threaded-End, Standard-Weight Steel Pipe: ASTM A 53/A 53M, ASTM A 135, or ASTM A 795, Schedule 40. Hot-dipped galvanized for dry-pipe system.
 - 1. 2" and smaller: standard weight pattern Cast Iron Threaded Fittings: ASME B16.4.
 - 2. 2-1/2" to 6": standard weight pattern malleable iron fittings: ASME B 16.3.
- B. Grooved-End, Standard-Weight Steel Pipe: ASTM A 53, ASTM A 135, or ASTM A 795, Schedule 40, factory-formed, roll-grooved ends. Hot-dipped galvanized for dry-pipe system.
 - 1. Grooved-Joint Piping Systems:
 - a. Manufacturers:
 - 1) Anvil International, Inc.
 - 2) Central Sprinkler Corp.
 - 3) Ductilic, Inc.
 - 4) JDH Pacific, Inc.
 - 5) National Fittings, Inc.
 - 6) Star Pipe Products; Star Fittings Div.
 - 7) Victaulic Co. of America.
 - 8) Approved Equal
 - b. Grooved-End Fittings: UL-listed, ASTM A 536, ductile-iron casting with OD matching steel-pipe OD.

- c. Grooved-End-Pipe Couplings: UL 213 and AWWA C606, rigid pattern, unless otherwise indicated; gasketed fitting matching steel-pipe OD. Include ductile-iron housing with keys matching steel-pipe and fitting grooves, pre-lubricated rubber gasket listed for use with housing, and steel bolts and nuts.

2.2 SPRINKLER SPECIALTY FITTINGS

- A. Sprinkler specialty fittings must be UL listed with 175-psig (1200-kPa) minimum working-pressure rating and made of materials compatible with piping.
- B. Outlet Specialty Fittings:
 1. Manufacturers:
 - a. Anvil International, Inc.
 - b. Central Sprinkler Corp.
 - c. Ductilic, Inc.
 - d. JDH Pacific, Inc.
 - e. National Fittings, Inc.
 - f. Shurjoint Piping Products, Inc.
 - g. Southwestern Pipe, Inc.
 - h. Star Pipe Products; Star Fittings Div.
 - i. Victaulic Co. of America.
 - j. Ward Manufacturing.
 - k. Approved Equal.
 2. Mechanical-T and -Cross Fittings: UL 213, ductile-iron housing with gaskets, bolts and nuts, and threaded, locking-lug, or grooved outlets.
 3. Snap-On and Strapless Outlet Fittings: UL 213, ductile-iron housing or casting with gasket and threaded outlet.
- C. Sprinkler Drain and Alarm Test Fittings: Cast- or ductile-iron body; with threaded or locking-lug inlet and outlet, test valve, and orifice and sight glass, AGF Model 1000 or approved equal from the following manufacturers:
 1. Manufacturers:
 - a. Central Sprinkler Corp.
 - b. Fire-End and Croker Corp.
 - c. Viking Corp.
 - d. Victaulic Co. of America.
 - e. AGF Manufacturing Inc.
 - f. Approved Equal.
- D. Sprinkler Branch-Line Test Fittings: Brass body with threaded inlet, capped drain outlet, and threaded outlet for sprinkler.

1. Manufacturers:
 - a. Elkhart Brass Mfg. Co., Inc.
 - b. Fire-End and Croker Corp.
 - c. Potter-Roemer; Fire-Protection Div.
 - d. Approved Equal.

E. Sprinkler Inspector's Test Fitting: Cast- or ductile-iron housing with threaded inlet and drain outlet and sight glass.

1. Manufacturers:
 - a. AGF Manufacturing Co.
 - b. Central Sprinkler Corp.
 - c. G/J Innovations, Inc.
 - d. Triple R Specialty of Ajax, Inc.
 - e. Approved Equal.

F. Drop-Nipple Fittings: UL 1474, adjustable with threaded inlet and outlet, and seals.

1. Manufacturers:
 - a. CECA, LLC.
 - b. Merit.
 - c. Central Sprinkler Corp.
 - d. Approved Equal.

2.3 LISTED FIRE-PROTECTION VALVES

A. Valves must be UL listed or FMG approved, 175-psig minimum pressure rating.

B. Butterfly Valves, NPS 2 (DN 50) and Smaller:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Global Safety Products, Inc.
 - b. Milwaukee Valve Company.
 - c. NIBCO
 - d. Approved Equal.
2. Description:
 - a. Standard: UL 1091.
 - b. Body Materials: Bronze.
 - c. Ends: Threaded.

d. Pressure Rating: 175 psig minimum.

C. Butterfly Valves, NPS 2-1/2 (DN 65) and Larger:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO.
 - b. Central Sprinkler Corp.
 - c. Global Safety Products, Inc.
 - d. McWane, Inc.; Kennedy Valve Div.
 - e. Mueller Company.
 - f. Pratt, Henry Company.
 - g. Victaulic Co. of America.
 - h. Approved Equal.
2. Description:
 - a. CWP Rating: 250 psi wwp.
 - b. Body Material: Bronze, cast iron or ductile iron body.
 - c. Ends: Wafer type or Grooved Ends.
 - d. Internal Monitoring Switch: Required.

D. Gate Valves NPS 2 (DN 50) and Smaller:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO.
 - b. Global Safety Products, Inc.
 - c. Milwaukee Valve Company.
 - d. Approved Equal.
2. Description:
 - a. CWP Rating: 175 psi wwp.
 - b. Body Material: Bronze body.
 - c. Ends: Threaded.
 - d. Monitoring Switch: Required.
 - e. Type: OS&Y

E. Gate Valves NPS 2-1/2 (DN 65) and Larger:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO.
 - b. Global Safety Products, Inc.

- c. Milwaukee Valve Company.
 - d. Approved Equal.
 - 2. Description:
 - a. CWP Rating: 175 psi wwp.
 - b. Body Material: Cast iron or ductile iron.
 - c. Ends: Flanged.
 - d. Monitoring Switch: Required.
 - e. Type: OS&Y
- F. Check Valves NPS 2 (DN 50) and Smaller:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO.
 - b. Global Safety Products, Inc.
 - c. Milwaukee Valve Company.
 - d. Approved Equal.
 - 2. Description:
 - a. CWP Rating: 175 psi wwp.
 - b. Body Material: Bronze body.
 - c. Ends: Threaded.
 - d. Type: Spring Actuated.
- G. Check Valves NPS 2-1/2 (DN 65) and Larger:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. NIBCO.
 - b. Global Safety Products, Inc.
 - c. Milwaukee Valve Company.
 - d. Approved Equal.
 - 2. Description:
 - a. CWP Rating: 175 psi wwp.
 - b. Body Material: cast iron or ductile iron.
 - c. Ends: Threaded.
 - d. Type: Spring Actuated.

2.4 SPRINKLERS

- A. Sprinklers must be UL listed or FMG approved, quick response, standard spray, with 175-psig (1200-kPa) minimum pressure rating.
- B. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Central Sprinkler Corp.
 - 2. Globe Fire Sprinkler Corporation.
 - 3. Grinnell Fire Protection.
 - 4. Reliable Automatic Sprinkler Co., Inc.
 - 5. Star Sprinkler Inc.
 - 6. Victaulic Co. of America.
 - 7. Viking Corp.
 - 8. Approved Equal.
- C. Automatic Sprinklers: With heat-responsive element complying with the following:
 - 1. UL 199, for nonresidential applications.
- D. Sprinkler Types and Categories: Quick response, nominal 1/2-inch (12.7-mm) orifice for "Ordinary" temperature classification rating, unless otherwise indicated or required by application.
- E. Sprinkler types, features, and options as follows:
 - 1. Concealed ceiling sprinklers, including cover plate.
 - 2. Pendent sprinklers.
 - 3. Quick-response sprinklers.
 - 4. Concealed sidewall sprinklers, including escutcheon.
 - 5. Upright sprinklers.
- F. Sprinkler Finishes: White unless otherwise shown on drawings.
- G. Sprinkler Escutcheons: Materials, types, and finishes for the following sprinkler mounting applications. Escutcheons for concealed, flush, and recessed-type sprinklers are specified with sprinklers.
 - 1. Ceiling Mounting: Plastic, white finish, one piece, flat; unless otherwise shown on drawings
- H. Sprinkler Guards: Wire-cage type, including fastening device for attaching to sprinkler.

2.5 ALARM DEVICES

- A. Alarm-device types must match piping and equipment connections.
- B. Water-Flow Indicator: UL 346, electrical-supervision, paddle-operated-type, water-flow detector with 250-psig (1725-kPa) pressure rating and designed for horizontal or vertical installation. Include two single-pole, double-throw circuit switches for isolated alarm and auxiliary contacts, 7 A, 125-V ac and 0.25 A, 24-V dc; complete with factory-set, field-adjustable retard element to prevent false signals and tamperproof cover that sends signal if removed.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. ADT Security Services, Inc.
 - b. Grinnell Fire Protection.
 - c. ITT McDonnell & Miller
 - d. Potter Electric Signal Company.
 - e. System Sensor.
 - f. Viking Corp.
 - g. Approved Equal.
- C. Valve Supervisory Switch: UL 753, electrical, single-pole, double-throw switch with normally closed contacts. Include design that signals controlled valve is in other than fully open position.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. McWane, Inc.; Kennedy Valve Div.
 - b. Potter Electric Signal Company.
 - c. System Sensor.
 - d. Approved Equal.

2.6 PRESSURE GAGES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. AGF Manufacturing Co.
 - 2. AMETEK, Inc.; U.S. Gauge.
 - 3. Brecco Corporation.
 - 4. Dresser Equipment Group; Instrument Div.
 - 5. Marsh Bellofram.
 - 6. WIKA Instrument Corporation.
 - 7. Approved Equal.

- B. Description: UL 393, 3-1/2- to 4-1/2-inch (90- to 115-mm-) diameter, dial pressure gage with range of 0 to 250 psig (0 to 1725 kPa) minimum.
1. Water System Piping: Include caption "WATER" or "AIR/WATER" on dial face.

2.7 SIAMESE CONNECTIONS

- A. Basis-of-Design Product: Subject to the compliance with requirements, provide siamese connection two-way type, having a cast brass clapper body, polished brass plate, two polished brass double female snoots with rigid end NYFD threads, pin lug thread swivels with plug and chain. Siamese connection Potter- Roemer Model 5023 or comparable product by one of the following:
1. Elkhart Brass Manufacturing Co.
 2. Viking Corp.
 3. Approved Equal.
- B. Siamese connection must be polished chrome plated. Lettering must be "AUTO SPKR".

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS, GENERAL

- A. Flanges, flanged fittings, unions, nipples, and transition and special fittings with finish and pressure ratings same as or higher than system's pressure rating may be used in aboveground applications, unless otherwise indicated.

3.3 WET SPRINKLER SYSTEM PIPING APPLICATIONS

- A. NPS 2 (DN 50) and Smaller: Threaded-end, black, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
- B. NPS 2-1/2" (DN 65) and Larger: Grooved-end, black, standard-weight steel pipe; grooved-end malleable-iron fittings; grooved-end-pipe couplings; and grooved joints.

3.4 DRY-PIPE SPRINKLER SYSTEM PIPING APPLICATIONS

- A. NPS 2-1/2" (DN 65) and Smaller: Threaded-end, hot-dipped galvanized, standard-weight steel pipe; cast- or malleable-iron threaded fittings; and threaded joints.
- B. NPS 2-1/2" (DN 65) and Larger: Grooved-end, hot-dipped galvanized, standard-weight steel pipe; grooved-end malleable-iron fittings; grooved-end-pipe couplings; and grooved joints.

3.5 VALVE APPLICATIONS

- A. Drawings indicate valve types to be used.
- B. Flanged OS&Y gate valves must be used on fire services and for fire pump.
- C. Where specific valve types are not indicated, the following requirements apply:
 - 1. Listed Fire-Protection Valves: UL listed and FMG approved for applications where required by NYC Building Code - 2014 and referenced standards.
 - a. Shutoff Duty: Gate valves.

3.6 JOINT CONSTRUCTION

- A. Refer to Division 21 Section 210500 "Common Work Results for Fire Suppression" for basic piping joint construction.
- B. Threaded Joints: Comply with NFPA 13-2007 for pipe thickness and threads. Do not thread pipe smaller than NPS 8 (DN 200) with wall thickness less than Schedule 40 and threads are checked by a ring gage and comply with ASME B1.20.1.
- C. Grooved Joints: Assemble joints with listed coupling and gasket, lubricant, and bolts.
 - 1. Ductile-Iron Pipe: Radius-cut-groove ends of piping. Use grooved-end fittings and grooved-end-pipe couplings.
 - 2. Steel Pipe: Square-cut or roll-groove piping as indicated. Use grooved-end fittings and rigid, grooved-end-pipe couplings, unless otherwise indicated.

3.7 SERVICE-ENTRANCE PIPING

- A. Connect fire-suppression piping to water-service piping of size and in location indicated for service entrance to building. Refer to Division 22 Section 221113 "Facility Water Distribution Piping" for exterior piping.

- B. Install shutoff valve, backflow preventer, pressure gage, drain, and other accessories indicated at connection to water-service piping. Refer to Division 22 Section 221119 "Domestic Water Piping Specialties" for backflow preventers.
- C. Fire Protection Service and backflow preventer must be installed by licensed Plumber. Alarm Devices for service and backflow preventer valves must be provided by Contractor.

3.8 PIPING INSTALLATION

- A. Refer to Division 21 Section 210500 "Common Work Results for Fire Suppression" for basic piping installation.
- B. Locations and Arrangements: Drawing plans, schematics, and diagrams indicate general location and arrangement of piping. Install piping as indicated, as far as practical.
 - 1. Deviations from approved working plans for piping require written approval Commissioner. File written approval with Commissioner before deviating from approved working plans.
- C. Use approved fittings to make changes in direction, branch takeoffs from mains, and reductions in pipe sizes.
- D. Install unions adjacent to each valve in pipes NPS 2 (DN 50) and smaller. Unions are not required on flanged devices or in piping installations using grooved joints.
- E. Install flanges or flange adapters on valves, apparatus, and equipment having NPS 2-1/2 (DN 65) and larger connections.
- F. Install "Inspector's Test Connections" in sprinkler system piping, complete with shutoff valve, sized and located according to NFPA 13-2007.
- G. Install sprinkler piping with drains for complete system drainage.
- H. Install sprinkler zone control valves, test assemblies, and drain risers adjacent to standpipes when sprinkler piping is connected to standpipes.
- I. Provide pressure relief valve downstream from all pressure reducing valves. Set pressure relief valve at 175 psi as recommended by pressure reducing valve manufacturer.
- J. Install drain valves on standpipes.
- K. Install ball drip valves to drain piping between fire department connections and check valves. Drain to floor drain or outside building.
- L. Install alarm devices in piping systems.

- M. Hangers and Supports: Comply with NFPA 13-2007 for hanger materials.
 - 1. Install sprinkler system piping according to NFPA 13-2007.
- N. Install pressure gages on riser or feed main, at each sprinkler test connection, and at top of each standpipe. Include pressure gages with connection not less than NPS 1/4 (DN 8) and with soft metal seated globe valve, arranged for draining pipe between gage and valve. Install gages to permit removal, and install where they will not be subject to freezing.
- O. Fill wet-standpipe system piping with water.
- P. Fill wet-pipe sprinkler system piping with water.
- Q. Connect compressed-air supply to dry-pipe sprinkler piping.
- R. Connect air compressor to the following piping and wiring:
 - 1. Pressure gages and controls.
 - 2. Electrical power system.
 - 3. Fire-alarm devices, including low-pressure alarm.
- S. Drain dry-pipe sprinkler piping.
- T. Pressurize and check dry-pipe sprinkler system piping, air-pressure maintenance devices and air compressors.
- U. Install dry-pipe auxiliary drains at low points or sections with entrapped water in dry-pipe piping.

3.9 VALVE INSTALLATION

- A. Install listed fire-protection valves, unlisted general-duty valves, specialty valves and trim, controls, and specialties according to NFPA 13-2007.
- B. Install listed fire-protection shutoff valves supervised-open, located to control sources of water supply except from fire department connections. Install permanent identification signs indicating portion of system controlled by each valve.
- C. Install check valve in each water-supply connection. Install backflow preventers instead of check valves in potable-water supply sources.
- D. Alarm Check Valves: Install in vertical position for proper direction of flow, including bypass check valve and retarding chamber drain-line connection.

3.10 SPRINKLER APPLICATIONS

- A. Drawings indicate sprinkler types to be used. Where specific types are not indicated, use the following sprinkler types:
1. Rooms without Ceilings: Upright sprinklers.
 2. Rooms with Suspended Ceilings: Concealed sprinklers.
 3. Sprinkler Finishes:
 - a. Upright, Pendent, and Concealed Sidewall Sprinklers: White unless otherwise shown on drawings or approved by Commissioner.
 - b. Concealed Sprinklers: Rough brass, with factory-painted white cover plate or non-ferrous finish where shown on construction drawings.
 - c. Flush Sprinklers: Bright chrome, with painted white escutcheon.

3.11 SPRINKLER INSTALLATION

- A. Install sprinklers in suspended ceilings in center of acoustical ceiling panels and tiles.
- B. Do not install pendent or sidewall, wet-type sprinklers in areas subject to freezing. Use dry-type sprinklers with water supply from heated space.
- C. Provide UL-listed protective guards for upright or pendent sprinklers in all electrical and IT closets or where sprinkler heads are subject to damage or installed lower than 7.5 ft from floor.
- D. Provide 12 spare heads for each type of sprinklers used in the building. Located heads in Spare Head Boxes in Fire Pump Room.

3.12 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. Connect water-supply piping to fire-suppression piping. Include backflow preventer between potable-water piping and fire-suppression piping. Refer to Division 22 Section 221119 "Domestic Water Piping Specialties" for backflow preventers.
- D. Install ball drip valves at each check valve for fire department connection. Drain to floor drain or outside building.
- E. Connect piping to specialty valves, hose valves, specialties, fire department connections, and accessories.

- F. Electrical Connections: Power wiring is specified in Division 26.
- G. Connect alarm devices to fire alarm.
- H. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems."
- I. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.13 LABELING AND IDENTIFICATION

- A. Install labeling and pipe markers on equipment and piping according to requirements in New York City Building Code – 2014.
- B. Pipes and Valves must be painted in accordance with New York City Building Code-2014.

3.14 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Hydrostatic Test: Fire Protection system must be tested hydrostatically at not less than 200 psi (20.7 bar) of pressure for on (1) hour. For systems where the maximum system pressure exceeds 250 psi (17.2 bar), such systems must be tested for 1 hour at a minimum pressure of 50 psi (3.5 bar) above maximum expected system pressure.
 - 2. Leak Test: After installation, charge system and test for leaks. Fix leaks and retest until no leaks exist.
 - 3. Flush, test, and inspect sprinkler systems according to NFPA 13-2007, "Systems Acceptance" Chapter.
 - 4. Coordinate with fire alarm tests. Operate as required.
 - 5. Verify that equipment hose threads are same as local fire department equipment.
- B. Report test results promptly and in writing to Commissioner.

END OF SECTION 211000

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 213113

ELECTRIC-DRIVE, CENTRIFUGAL FIRE PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes electric-drive, split-case centrifugal and vertical fire pumps, and the following:
1. Full-service fire-pump controllers.
 2. Fire-pump accessories and specialties.
 3. Pressure-maintenance pumps, controllers, accessories, and specialties.
 4. Alarm panels.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include rated capacities, certified pump performance curves with each selection point indicated, operating characteristics, and furnished accessories and specialties for each fire pump and pressure-maintenance pump.
- B. Product Certificates: For each type of fire pump and fire-pump controller, signed by product manufacturer.
- C. Source quality-control test reports.
- D. Field quality-control test reports.
- E. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Source Limitations: Obtain fire pumps, pressure-maintenance pumps, and controllers through one source from a single manufacturer for each type of equipment.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, Article 100 and marked for intended use.
- D. Comply with NFPA 20-2007 "Installation of Stationary Pumps for Fire Protection" standards pertaining to materials, hose threads, and installation.
- E. Comply with NFPA 20-2007 "Installation of Stationary Pumps for Fire Protection" for fire pumps, drivers, controllers, accessories, and their installation.

PART 2 - PRODUCTS

2.1 FIRE PUMPS

- A. Basis-of-Design Product: subject to compliance with requirements, provide fire pump Aurora Pump Model 4-383-7B, vertical mounted, inline, centrifugal pump or comparable product by one of the following:
 - 1. GA Fleet, Inc
 - 2. Fairbanks.
 - 3. Patterson.
 - 4. Or Approved Equal.
- B. Fire pump system will be vertical inline Fire Pump System complete with pump, driver, controller, and accessories. The pumping unit must be listed by Underwriters Laboratories, Inc., and approved by Associated Factory Mutual. The NYC MEA # is 261-03-E. The pumping unit will meet all requirements of the National Fire Protection Association Pamphlet #20. The fire pump must be designed to deliver 500 GPM when operating at 60 PSIG boost. The pump must also deliver not less than 150% of rated capacity at a pressure not less than 65% of rated pressure. The shut off pressure must not exceed 150% of rated pressure. Suction pressure is 30 PSI. The pump must operate at a maximum speed of 3550 RPM.
- C. The driver will be a Vertical solid shaft 25HP open drip-proof certified and rated for Fire Service, ball bearing type, AC, induction, squirrel cage motor; 208 Volts, 3 Phase, 60 Cycles. Locked rotor current will not exceed the values specified in NFPA Pamphlet #20.
- D. Fire Pump will be furnished with a cast iron motor bracket which is bolted to the vertical casing, the motor bracket will be machined with a register fit to ensure proper alignment of motor and

pump shaft. Pump and motor will be checked for alignment before and after the pump has been installed and grouted in place.

- E. Casings will be of cast iron having a minimum tensile strength of 30,000 pounds. Bearing housing supports, and suction and discharge flanges will be integrally cast with the lower half of the casing. Removal of the upper half of the casing must allow the rotating element to be removed without disconnecting the suction and discharge flanges.
- F. Impellers will be of the enclosed type and will be bronze. Impellers will be dynamically balanced, keyed to the shaft, and held in place with threaded shaft sleeves.
- G. The pump shaft will be made of SAE 1045 steel or equal, accurately machined to give a true running rotating element. Shaft will be protected by bronze sleeves which are key locked and threaded so that the sleeves tighten with the rotation of the shaft. A O ring will seal between the impeller hub and the shaft sleeve to protect the pump shaft.
- H. Pump will be equipped with renewable casing rings so designed that hydraulic pressure will seat them against a shoulder in the pump case around the full periphery of the wearing ring. The wearing rings will be locked by doweling to prevent rotation. The rotating element uses heavy duty grease lubricated ball bearings and will be equipped with the water slingers. Bearing housings will be so designed to flush lubricant through the bearing.
- I. All packed pumps will be provided with a lantern ring connected to the pressure side of pump. Stuffing boxes will be equipped with split packing glands designed for easy removal for packing inspection and maintenance.
- J. The pumping unit will include the following accessories:
 - 1. Eccentric tapered suction reducer
 - 2. Concentric tapered discharge increaser
 - 3. Hose Valves
 - 4. Caps and Chains
 - 5. Hose Valve Header
 - 6. Pressure Gauges
 - 7. Main Relief Valve
 - 8. Circulation/Casing Relief Valve
 - 9. Relief Cone-Enclosed
 - 10. Automatic Air Release Valve
 - 11. Balldrip Valve
 - 12. Fire Flow Metering System
- K. The fire pump motor control will be completely assembled, wired and tested by the manufacturer before shipment from the factory, and will be marked "Fire Pump Controller". The controller will be located as close to as practical and within sight of the motor. The controller will be so located or protected that it will not be injured by water escaping from the pump or connection. The controller will be of the combined manual and automatic, Autotransformer Soft Starting type, rated for

fire protection use UL listed and FM approved, and will be complete with: externally operable disconnect switch, circuit breaker with an interrupting capacity of 100,000 amperes, magnetic starter, pressure switch, pilot lamp to indicate circuit breaker closed and power available, plus manual start-stop feature.

2.2 JOCKEY PUMP

- A. Basis-of-Design Product: subject to compliance with requirements, provide a Sta-Rite Model HP jockey pump, to operate at 3550 RPM with a capacity of 5 GPM at a 66 PSIG boost, or comparable product by one of the following:
1. Aurora.
 2. Fairbanks.
 3. Patterson.
 4. Or Approved Equal.
- B. The pump will be bronze fitted construction and equipped with a mechanical seal. Unit will be close coupled and driven by a 3/4 HP, 208 volt, 3 phase, 60 cycle, ODP motor. The pump will be equipped with a relief valve.
- C. The jockey pump control panel will be NEMA II, wall mounted, and contain a fused disconnect switch, magnetic A-T-L starter, H-O-A selector switch, overload relays, and necessary circuitry to provide automatic start and stop from panel mounted pressure switch.

2.3. PRESSURE GAGES

- A. Description: UL 393, 3-1/2- to 4-1/2-inch- (90- to 115-mm-) diameter dial with range of 0- to 250-psig minimum. Include caption "WATER" on dial face.
1. Manufacturers:
 - a. AGF Manufacturing Co.
 - b. AMETEK, Inc.; U.S. Gauge.
 - c. Brecco Corporation.
 - d. Dresser Equipment Group; Instruments Div.
 - e. Marsh Bellofram.
 - f. WIKA Instrument Corporation.
 - g. Or Approved Equal.

2.4. GROUT

- A. Description: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, non-shrink and nonmetallic grout; suitable for interior and exterior applications.

2. Properties: Nonstaining, noncorrosive, and nongaseous.
3. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

2.5 SOURCE QUALITY CONTROL

- A. Test and inspect fire pumps with their controllers according to NFPA 20 for certified shop tests.
- B. Verification of Performance: Rate fire pumps according to requirements indicated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for fire pumps, pressure-maintenance pumps, and controllers. Refer to Division 21 Section 210500 "Common Work Results for Fire Suppression."
 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.3 INSTALLATION

- A. Install and align fire pump, pressure-maintenance-pump, and controller according to NFPA 20.
- B. Install pumps and controllers to provide access for periodic maintenance including removal of motors, impellers, couplings, and accessories.
- C. Set base-mounting-type pumps on concrete bases. Disconnect coupling halves before setting. Do not reconnect couplings until alignment operations have been completed.

1. Support pump baseplate on rectangular metal blocks and shims or on metal wedges having small taper, at points near anchor bolts to provide 3/4- to 1-1/2-inch (19- to 38-mm) gap between pump base and foundation for grouting.
 2. Adjust metal supports or wedges until pump and driver shafts are level. Verify that coupling faces and pump suction and discharge flanges are level and plumb.
- D. Install suction and discharge piping equal to or greater than diameter of fire-pump nozzles.
- E. Install valves that are same size as piping connecting fire pumps, bypasses, test headers, and other piping systems.
- F. Install pressure gages on fire-pump suction and discharge at pressure-gage tappings.
- G. Support pumps and piping separately so weight of piping does not rest on pumps.
- H. Install piping accessories, hangers and supports, anchors, valves, meters and gages, and equipment supports.
- I. Install electrical devices furnished by equipment manufacturers but not specified to be factory mounted. Furnish copies of manufacturers' wiring diagram submittals to electrical Installer.
- J. Align split-case fire-pump and driver shafts after complete unit has been leveled on concrete base, grout has set, and anchor bolts have been tightened.
- K. After alignment is correct, tighten anchor bolts evenly. Fill baseplate completely with grout, with metal blocks and shims or wedges in place. Tighten anchor bolts after grout has hardened. Check alignment and make required corrections.
- L. Align piping connections.
- M. Align pump and driver shafts for angular and parallel alignment according to HI 1.4 and to tolerances specified by manufacturer.
- N. Piping installation requirements are specified in Division 211000 Section "Water-Based Fire-Suppression Systems." Drawings indicate general arrangement of piping, fittings, and specialties.
- O. Install piping adjacent to pumps and equipment to allow service and maintenance.
- P. Connect water supply and discharge piping to fire pumps. Connect water supply and discharge piping to pressure-maintenance pumps.
- Q. Connect relief-valve discharge to point of disposal.
- R. Connect controllers to pumps.

- S. Connect fire-pump controllers to building fire-alarm system. Refer to Division 28 Section 284600 "Fire Detection and Alarm."
- T. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems."
- U. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. Perform field tests for each fire pump when installation is complete. Comply with operating instructions and procedures in NFPA 20-2007 to demonstrate compliance with requirements. Where possible, field correct malfunctioning equipment, then retest to demonstrate compliance. Replace equipment that cannot be satisfactorily corrected or that does not perform as indicated, then retest to demonstrate compliance. Verify that each fire pump performs as indicated.
- C. Perform the following field tests and inspections and prepare test reports:
 - 1. Leak Test: After installation, charge system and test for leaks. Fix leaks and retest until no leaks exist.
 - 2. Final Checks before Startup: Perform the following preventive-maintenance operations and checks:
 - a. Lubricate oil-lubrication-type bearings.
 - b. Remove grease-lubrication-type bearing covers, flush bearings with kerosene, and clean thoroughly. Fill with new lubricant according to manufacturer's written instructions.
 - c. Disconnect coupling and check electric motor for proper rotation. Rotation will match direction of rotation marked on pump casing.
 - d. Verify that pump is free to rotate by hand. If pump is bound or if it drags even slightly, do not operate until cause of trouble is determined and corrected.
 - 3. Starting procedure for pumps is as follows:
 - a. Prime pump by opening suction valve and closing drains and prepare pump for operation.
 - b. Open sealing-liquid supply valves if pump is so fitted.
 - c. Start motor.
 - d. Open discharge valve slowly.

- e. Observe leakage from stuffing boxes and adjust sealing-liquid valve for proper flow to ensure lubrication of packing. Do not tighten gland immediately but let packing run in before reducing leakage through stuffing boxes.
 - f. Check general mechanical operation of pump and motor.
4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York maintenance personnel to adjust, operate, and maintain fire pumps, drivers, controllers, and pressure-maintenance pumps. Also refer to DDC General Conditions.

END OF SECTION 213113

SECTION 22 05 00

COMMON WORK RESULTS FOR PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following:
1. Piping materials and installation instructions common to most piping systems.
 2. Dielectric fittings.
 3. Mechanical sleeve seals.
 4. Sleeves.
 5. Escutcheons.
 6. Grout.
 7. Plumbing demolition.
 8. Equipment installation requirements common to equipment sections.
 9. Concrete bases.
 10. Supports and anchorages.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “ Submittal Procedures”.

1.4 SUBMITTALS

- A. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Steel Support Welding: Qualify processes and operators according to AWS D1.1, "Structural Welding Code--Steel."

- C. Steel Pipe Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications."
 - 1. Comply with provisions in ASME B31 Series, "Code for Pressure Piping."
 - 2. Certify that each welder has passed AWS qualification tests for welding processes involved and that certification is current.

- D. Electrical Characteristics for Plumbing Equipment: Equipment of higher electrical characteristics may be furnished provided such proposed equipment is approved in writing and connecting electrical services, circuit breakers, and conduit sizes are appropriately modified. If minimum energy ratings or efficiencies are specified, equipment must comply with requirements.

1.6 DEFINITIONS

- A. Finished Spaces: Spaces other than plumbing and electrical equipment rooms, furred spaces, pipe chases, unheated spaces immediately below roof, spaces above ceilings, unexcavated spaces, crawlspaces, and tunnels.
- B. Exposed, Interior Installations: Exposed to view indoors. Examples include finished occupied spaces and plumbing equipment rooms.
- C. Exposed, Exterior Installations: Exposed to view outdoors or subject to outdoor ambient temperatures and weather conditions. Examples include rooftop locations.
- D. Concealed, Interior Installations: Concealed from view and protected from physical contact by building occupants. Examples include above ceilings and in chases.
- E. Concealed, Exterior Installations: Concealed from view and protected from weather conditions and physical contact by building occupants but subject to outdoor ambient temperatures. Examples include installations within unheated shelters.

PART 2 - PRODUCTS

2.1 PIPE, TUBE, AND FITTINGS

- A. Refer to Division 22 piping Sections for pipe, tube, and fitting materials and joining methods.
- B. Pipe Threads: ASME B1.20.1 for factory-threaded pipe and pipe fittings.

2.2 JOINING MATERIALS

- A. Refer to individual Division 22 piping Sections for special joining materials not listed below.

- B. Pipe-Flange Gasket Materials: ASME B16.21, nonmetallic, flat, asbestos-free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
- C. Plastic, Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8, BCuP Series or BAg1, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12.
- G. Solvent Cements for Joining Plastic Piping:
 - 1. ABS Piping: ASTM D 2235.
 - 2. CPVC Piping: ASTM F 493.
 - 3. PVC Piping: ASTM D 2564. Include primer according to ASTM F 656.
 - 4. PVC to ABS Piping Transition: ASTM D 3138.

2.3 DIELECTRIC FITTINGS

- A. Description: Combination fitting of copper alloy and ferrous materials with threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.
- B. Insulating Material: Suitable for system fluid, pressure, and temperature.
- C. Dielectric Unions: Factory-fabricated, union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).
- D. Dielectric Flanges: Factory-fabricated, companion-flange assembly, for 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.
- E. Dielectric Couplings: Galvanized-steel coupling with inert and noncorrosive, thermoplastic lining; threaded ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).
- F. Dielectric Nipples: Electroplated steel nipple with inert and noncorrosive, thermoplastic lining; plain, threaded, or grooved ends; and 300-psig (2070-kPa) minimum working pressure at 225 deg F (107 deg C).

2.4 MECHANICAL SLEEVE SEALS

- A. Description: Modular sealing element unit, designed for field assembly, to fill annular space between pipe and sleeve.

- B. Sealing Elements: EPDM interlocking links shaped to fit surface of pipe. Include type and number required for pipe material and size of pipe.
- C. Pressure Plates: Carbon steel. Include two for each sealing element.
- D. Connecting Bolts and Nuts: Carbon steel with corrosion-resistant coating of length required to secure pressure plates to sealing elements. Include one for each sealing element.

2.5 SLEEVES

- A. Galvanized-Steel Sheet: 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- B. Steel Pipe: ASTM A 53, Type E, Grade B, Schedule 40, galvanized, plain ends.
- C. Cast Iron: Cast or fabricated "wall pipe" equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.
- D. Stack Sleeve Fittings: Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
 - 1. Underdeck Clamp: Clamping ring with set screws.

2.6 ESCUTCHEONS

- A. Description: Manufactured wall and ceiling escutcheons and floor plates, with an ID to closely fit around pipe, tube, and insulation of insulated piping and an OD that completely covers opening.
- B. One-Piece, Deep-Pattern Type: Deep-drawn, box-shaped brass with polished chrome-plated finish.
- C. One-Piece, Cast-Brass Type: With set screw.
 - 1. Finish: Polished chrome-plated and rough brass.
- D. Split-Casting, Cast-Brass Type: With concealed hinge and set screw.
 - 1. Finish: Polished chrome-plated and rough brass.

2.7 GROUT

- A. Description: ASTM C 1107, Grade B, nonshrink and nonmetallic, dry hydraulic-cement grout.

1. Characteristics: Post-hardening, volume-adjusting, nonstaining, noncorrosive, nongaseous, and recommended for interior and exterior applications.
2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.
3. Packaging: Premixed and factory packaged.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PLUMBING DEMOLITION

- A. Refer to Division 02 Section 024116.13 "Building Demolition" for general demolition requirements and procedures.
- B. Disconnect, demolish, and remove plumbing systems, equipment, and components indicated to be removed.
 1. Piping to Be Removed: Remove portion of piping indicated to be removed and cap or plug remaining piping with same or compatible piping material.
 2. Piping to Be Abandoned in Place: Drain piping and cap or plug piping with same or compatible piping material.
 3. Equipment to Be Removed: Disconnect and cap services and remove equipment.
 4. Equipment to Be Removed and Reinstalled: Disconnect and cap services and remove, clean, and store equipment; when appropriate, reinstall, reconnect, and make equipment operational.
 5. Equipment to Be Removed and Salvaged: Disconnect and cap services and remove equipment and deliver to the Commissioner.
- C. If pipe, insulation, or equipment to remain is damaged in appearance or is unserviceable, remove damaged or unserviceable portions and replace with new products of equal capacity and quality.

3.3 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. Install piping according to the following requirements and Division 22 Sections specifying piping systems.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.

- C. Install piping in concealed locations, unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above ceilings to allow sufficient space for access panel access.
- F. Install piping to permit valve servicing.
- G. Install piping at indicated slopes.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Install piping to allow application of insulation.
- K. Select system components with pressure rating equal to or greater than system operating pressure.
- L. Install escutcheons for penetrations of walls, ceilings, and floors.
- M. Install sleeves for pipes passing through concrete and masonry walls, gypsum-board partitions, and concrete floor and roof slabs.
- N. Aboveground, Exterior-Wall Pipe Penetrations: Seal penetrations using sleeves and mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Install steel pipe for sleeves smaller than 6 inches (150 mm) in diameter.
 - 2. Install cast-iron "wall pipes" for sleeves 6 inches (150 mm) and larger in diameter.
 - 3. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.
- O. Underground, Exterior-Wall Pipe Penetrations: Install cast-iron "wall pipes" for sleeves. Seal pipe penetrations using mechanical sleeve seals. Select sleeve size to allow for 1-inch (25-mm) annular clear space between pipe and sleeve for installing mechanical sleeve seals.
 - 1. Mechanical Sleeve Seal Installation: Select type and number of sealing elements required for pipe material and size. Position pipe in center of sleeve. Assemble mechanical sleeve seals and install in annular space between pipe and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

- P. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Refer to Division 07 Section 078413 "Penetration Firestopping" for materials.
- Q. Verify final equipment locations for roughing-in.
- R. Refer to equipment specifications in other Sections of these Specifications for roughing-in requirements.

3.4 PIPING JOINT CONSTRUCTION

- A. Join pipe and fittings according to the following requirements and Division 22 Sections specifying piping systems.
- B. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- C. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Construct joints according to ASTM B 828 or CDA's "Copper Tube Handbook," using lead-free solder alloy complying with ASTM B 32.
- E. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter, using copper-phosphorus brazing filler metal complying with AWS A5.8.
- F. Threaded Joints: Thread pipe with tapered pipe threads according to ASME B1.20.1. Cut threads full and clean using sharp dies. Ream threaded pipe ends to remove burrs and restore full ID. Join pipe fittings and valves as follows:
 - 1. Apply appropriate tape or thread compound to external pipe threads unless dry seal threading is specified.
 - 2. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.
- G. Welded Joints: Construct joints according to AWS D10.12, using qualified processes and welding operators according to Part 1 "Quality Assurance" Article.
- H. Flanged Joints: Select appropriate gasket material, size, type, and thickness for service application. Install gasket concentrically positioned. Use suitable lubricants on bolt threads.

3.5 PIPING CONNECTIONS

- A. Make connections according to the following, unless otherwise indicated:

1. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment.
2. Install flanges, in piping NPS 2-1/2 (DN 65) and larger, adjacent to flanged valves and at final connection to each piece of equipment.
3. Dry Piping Systems: Install dielectric unions and flanges to connect piping materials of dissimilar metals.
4. Wet Piping Systems: Install dielectric coupling and nipple fittings to connect piping materials of dissimilar metals.

3.6 EQUIPMENT INSTALLATION - COMMON REQUIREMENTS

- A. Install equipment to allow maximum possible headroom unless specific mounting heights are not indicated.
- B. Install equipment level and plumb, parallel and perpendicular to other building systems and components in exposed interior spaces, unless otherwise indicated.
- C. Install plumbing equipment to facilitate service, maintenance, and repair and replacement of components. Connect equipment for ease of disconnecting, with minimum interference to other installations. Extend grease fittings to accessible locations.
- D. Install equipment to allow right of way for piping installed at required slope.

3.7 CONCRETE BASES

- A. Concrete Bases: Anchor equipment to concrete base according to equipment manufacturer's written instructions and according to seismic codes at Project.
 1. Construct concrete bases of dimensions indicated, but not less than 4 inches (100 mm) larger in both directions than supported unit.
 2. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of the base.
 3. Install epoxy-coated anchor bolts for supported equipment that extend through concrete base, and anchor into structural concrete floor.
 4. Place and secure anchorage devices. Use supported equipment manufacturer's setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 5. Install anchor bolts to elevations required for proper attachment to supported equipment.
 6. Install anchor bolts according to anchor-bolt manufacturer's written instructions.
 7. Use 3000-psi (20.7-MPa), 28-day compressive-strength concrete and reinforcement as specified in Division 03 Section 033000 "Cast-in-Place Concrete" and Section 033300 "Architectural Concrete".

3.8 ERECTION OF METAL SUPPORTS AND ANCHORAGES

- A. Refer to Division 05 Section 051200 "Structural Steel Framing" and Section 055000 "Metal Fabrications" for structural steel.
- B. Cut, fit, and place miscellaneous metal supports accurately in location, alignment, and elevation to support and anchor plumbing materials and equipment.
- C. Field Welding: Comply with AWS D1.1.

3.9 ERECTION OF WOOD SUPPORTS AND ANCHORAGES

- A. Cut, fit, and place wood grounds, nailers, blocking, and anchorages to support, and anchor plumbing materials and equipment.
- B. Select fastener sizes that will not penetrate members if opposite side will be exposed to view or will receive finish materials. Tighten connections between members. Install fasteners without splitting wood members.
- C. Attach to substrates as required to support applied loads.

3.10 GROUTING

- A. Mix and install grout for plumbing equipment base bearing surfaces, pump and other equipment base plates, and anchors.
- B. Clean surfaces that will come into contact with grout.
- C. Provide forms as required for placement of grout.
- D. Avoid air entrapment during placement of grout.
- E. Place grout, completely filling equipment bases.
- F. Place grout on concrete bases and provide smooth bearing surface for equipment.
- G. Place grout around anchors.
- H. Cure placed grout.

SECTION 22 05 23

GENERAL-DUTY VALVES FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes:

1. Brass ball valves.
2. Bronze ball valves.
3. Iron, single-flange butterfly valves.
4. Bronze swing check valves.
5. Iron swing check valves.
6. Iron swing check valves with closure control.
7. Bronze gate valves.
8. Iron gate valves.
9. Bronze globe valves.
10. Iron globe valves.

B. Related Sections:

1. Division 22 plumbing piping Sections 221113, 221116, 221316, 221413 for specialty valves applicable to those Sections only.
2. Division 22 Section 220523 "Identification for Plumbing Piping and Equipment" for valve tags and schedules.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Product Data: For each type of valve indicated.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. ASME Compliance: ASME B16.10 and ASME B16.34 for ferrous valve dimensions and design criteria.
- C. NSF Compliance: NSF 61 for valve materials for potable-water service.

1.6 LEAD-FREE” CERTIFICATION

- A. All products to be used in Domestic Hot and Cold Water systems must have “LEAD-FREE” certification.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR VALVES

- A. Refer to valve schedule articles for applications of valves.
- B. Valve Pressure and Temperature Ratings: Not less than indicated and as required for system pressures and temperatures.
- C. Valve Sizes: Same as upstream piping unless otherwise indicated.
- D. Valve Actuator Types:
 - 1. Gear Actuator: For quarter-turn valves NPS 8 (DN 200) and larger.
 - 2. Handwheel: For valves other than quarter-turn types.
 - 3. Handlever: For quarter-turn valves NPS 6 (DN 150) and smaller except plug valves.
- E. Valves in Insulated Piping: With 2-inch (50-mm) stem extensions and the following features:
 - 1. Gate Valves: With rising stem.
 - 2. Ball Valves: With extended operating handle of non-thermal-conductive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation.
 - 3. Butterfly Valves: With extended neck.
- F. Valve-End Connections:
 - 1. Flanged: With flanges according to ASME B16.1 for iron valves.
 - 2. Solder Joint: With sockets according to ASME B16.18.
 - 3. Threaded: With threads according to ASME B1.20.1.

2.2 BRONZE BALL VALVES

- A. Two-Piece, Full-Port, “Lead-Free” certified, Bronze Ball Valves with Bronze Trim:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - a. American Valve, Inc.
 - b. Conbraco Industries, Inc.; Apollo Valves.
 - c. Crane Co.; Crane Valve Group; Crane Valves.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - g. Approved Equal.
 2. Description:
 - a. Standard: MSS SP-110.
 - b. SWP Rating: 150 psig (1035 kPa).
 - c. CWP Rating: 600 psig (4140 kPa).
 - d. Body Design: Two piece.
 - e. Body Material: Bronze.
 - f. Ends: Threaded.
 - g. Seats: PTFE or TFE.
 - h. Stem: Bronze.
 - i. Ball: Chrome-plated brass.
 - j. Port: Full.

2.3 BRONZE SWING CHECK VALVES

- A. Class 125, “Lead-Free” certified, Bronze Swing Check Valves with Bronze Disc:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - a. American Valve, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - g. Approved Equal.
 2. Description:
 - a. Standard: MSS SP-80, Type 3.
 - b. CWP Rating: 200 psig (1380 kPa).

- c. Body Design: Horizontal flow.
- d. Body Material: ASTM B 62, bronze.
- e. Ends: Threaded.
- f. Disc: Bronze.

2.4 BRONZE GATE VALVES

A. Class 125, “Lead-Free” certified, RS Bronze Gate Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - a. American Valve, Inc.
 - b. Crane Co.; Crane Valve Group; Crane Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - g. Approved Equal.
- 2. Description:
 - a. Standard: MSS SP-80, Type 2.
 - b. CWP Rating: 200 psig (1380 kPa).
 - c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
 - d. Ends: Threaded.
 - e. Stem: Bronze.
 - f. Disc: Solid wedge; bronze.
 - g. Packing: Asbestos free.
 - h. Handwheel: Malleable iron.

2.5 IRON GATE VALVES

A. Class 125, OS&Y, Iron Gate Valves:

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Jenkins Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Division.
 - d. Milwaukee Valve Company.
 - e. NIBCO INC.
 - f. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
 - g. Approved Equal.

2. Description:

- a. Standard: MSS SP-70, Type I.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM A 126, gray iron with bolted bonnet.
- d. Ends: Flanged.
- e. Trim: Bronze.
- f. Disc: Solid wedge.
- g. Packing and Gasket: Asbestos free.

2.6 BRONZE GLOBE VALVES

A. Class 125, “Lead-Free” certified, Bronze Globe Valves with Bronze Disc:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:

- a. Crane Co.; Crane Valve Group; Crane Valves.
- b. Crane Co.; Crane Valve Group; Stockham Division.
- c. Hammond Valve.
- d. Kitz Corporation.
- e. Milwaukee Valve Company.
- f. NIBCO INC.
- g. Powell Valves.
- h. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
- i. Approved Equal.

2. Description:

- a. Standard: MSS SP-80, Type 1.
- b. CWP Rating: 200 psig (1380 kPa).
- c. Body Material: ASTM B 62, bronze with integral seat and screw-in bonnet.
- d. Ends: Threaded.
- e. Stem and Disc: Bronze.
- f. Packing: Asbestos free.
- g. Handwheel: Malleable iron.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 VALVE INSTALLATION

- A. Install valves with unions or flanges at each piece of equipment arranged to allow service, maintenance, and equipment removal without system shutdown.
- B. Locate valves for easy access and provide separate support where necessary.
- C. Install valves in horizontal piping with stem at or above center of pipe.
- D. Install valves in position to allow full stem movement.

3.3 ADJUSTING

- A. Adjust or replace valve packing after piping systems have been tested and put into service but before final adjusting and balancing. Replace valves if persistent leaking occurs.

3.4 GENERAL REQUIREMENTS FOR VALVE APPLICATIONS

- A. If valve applications are not indicated, use the following:
 - 1. Shutoff Service: Ball or gate valves.
 - 2. Throttling Service: Globe valves.
 - 3. Pump-Discharge Check Valves:
- B. If valves with specified SWP classes or CWP ratings are not available, the same types of valves with higher SWP class or CWP ratings may be substituted.
- C. Select valves, except wafer types, with the following end connections:
 - 1. For Copper Tubing, NPS 2 (DN 50) and Smaller: Threaded ends except where solder-joint valve-end option is indicated in valve schedules below.
 - 2. For Copper Tubing, NPS 2-1/2 to NPS 4 (DN 65 to DN 100): Flanged ends except where threaded valve-end option is indicated in valve schedules below.

3.5 DOMESTIC, HOT- AND COLD-WATER VALVE SCHEDULE

- A. Domestic Water Service Pipe NPS 3 (DN 75) and Smaller (including MOCV and MICV):
 - 1. Iron Gate Valves, NPS 2-1/2 to NPS 4 (DN 65 to NPS 100) with flanged ends, Class 125, OS&Y.
- B. Distribution Pipe NPS 2 (DN 50) and Smaller:
 - 1. Bronze Valves: May be provided with solder-joint ends instead of threaded ends.
 - 2. Bronze Angle Valves: Class 125, bronze disc.

3. Ball Valves: Two piece, full port, bronze with bronze trim.
4. Bronze Swing Check Valves: Class 125, bronze disc.
5. Bronze Gate Valves: Class 125, RS.
6. Bronze Globe Valves: Class 125, bronze disc.

SECTION 22 05 29

HANGERS AND SUPPORTS FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following:
1. Steel pipe hangers and supports.
 2. Trapeze pipe hangers.
 3. Metal framing systems.
 4. Thermal-hanger shield inserts.
 5. Fastener systems.
 6. Equipment supports.
- B. See Division 05 Section 051200 "Structural Steel Framing" and Section 055000 "Metal Fabrications" for structural-steel shapes and plates for trapeze hangers for pipe and equipment supports.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Product Data: For the following:
1. Steel pipe hangers and supports.
 2. Thermal-hanger shield inserts.
 3. Powder-actuated fastener systems.
- B. Shop Drawings: Show fabrication and installation details and include calculations for the following:

1. Trapeze pipe hangers. Include Product Data for components.
2. Metal framing systems. Include Product Data for components.
3. Equipment supports.

C. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Welding: Qualify procedures and personnel according to ASME Boiler and Pressure Vessel Code: Section IX.

1.6 DEFINITIONS

- A. Terminology: As defined in MSS SP-90, "Guidelines on Terminology for Pipe Hangers and Supports."

1.7 PERFORMANCE REQUIREMENTS

- A. Design supports for multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.
- B. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- C. Design seismic-restraint hangers and supports for piping and equipment and certified by professional engineer licensed in the State of New York.

PART 2 - PRODUCTS

2.1 STEEL PIPE HANGERS AND SUPPORTS

- A. Description: MSS SP-58, Types 1 through 58, factory-fabricated components. Refer to Part 3 "Hanger and Support Applications" Article for where to use specific hanger and support types.
- B. Manufacturers:
 1. AAA Technology & Specialties Co., Inc.
 2. Bergen-Power Pipe Supports.
 3. B-Line Systems, Inc.; a division of Cooper Industries.
 4. Carpenter & Paterson, Inc.

5. Empire Industries, Inc.
6. ERICO/Michigan Hanger Co.
7. Globe Pipe Hanger Products, Inc.
8. Grinnell Corp.
9. GS Metals Corp.
10. National Pipe Hanger Corporation.
11. PHD Manufacturing, Inc.
12. PHS Industries, Inc.
13. Piping Technology & Products, Inc.
14. Tolco Inc.
15. Approved Equal.

- C. Galvanized, Metallic Coatings: Pre-galvanized or hot dipped.
- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.
- E. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion for support of bearing surface of piping.

2.2 TRAPEZE PIPE HANGERS

- A. Description: MSS SP-69, Type 59, shop- or field-fabricated pipe-support assembly made from structural-steel shapes with MSS SP-58 hanger rods, nuts, saddles, and U-bolts.

2.3 METAL FRAMING SYSTEMS

- A. Description: MFMA-3, shop- or field-fabricated pipe-support assembly made of steel channels and other components.

B. Manufacturers:

1. B-Line Systems, Inc.; a division of Cooper Industries.
2. ERICO/Michigan Hanger Co.; ERISTRUT Div.
3. GS Metals Corp.
4. Power-Strut Div.; Tyco International, Ltd.
5. Thomas & Betts Corporation.
6. Tolco Inc.
7. Unistrut Corp.; Tyco International, Ltd.
8. Approved Equal.

- C. Coatings: Manufacturer's standard finish, unless bare metal surfaces are indicated.

- D. Nonmetallic Coatings: Plastic coating, jacket, or liner.

2.4 THERMAL-HANGER SHIELD INSERTS

- A. Description: 100-psig- (690-kPa-) minimum, compressive-strength insulation insert encased in sheet metal shield.
- B. Manufacturers:
 - 1. Carpenter & Paterson, Inc.
 - 2. ERICO/Michigan Hanger Co.
 - 3. PHS Industries, Inc.
 - 4. Pipe Shields, Inc.
 - 5. Approved Equal
- C. Insulation-Insert Material for Cold Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass.
- D. Insulation-Insert Material for Hot Piping: Water-repellent treated, ASTM C 533, Type I calcium silicate or ASTM C 552, Type II cellular glass.
- E. For Trapeze or Clamped Systems: Insert and shield must cover entire circumference of pipe.
- F. For Clevis or Band Hangers: Insert and shield must cover lower 180 degrees of pipe.
- G. Insert Length: Extend 2 inches (50 mm) beyond sheet metal shield for piping operating below ambient air temperature.

2.5 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 - 1. Manufacturers:
 - a. Hilti, Inc.
 - b. ITW Ramset/Red Head.
 - c. Masterset Fastening Systems, Inc.
 - d. Powers Fasteners.
 - e. Approved Equal.
- B. Mechanical-Expansion Anchors: Insert-wedge-type zinc-coated steel, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
 - 1. Manufacturers:

- a. B-Line Systems, Inc.; a division of Cooper Industries.
- b. Empire Industries, Inc.
- c. Hilti, Inc.
- d. Powers Fasteners.
- e. Approved Equal.

2.6 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural-steel shapes.

2.7 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 2. Design Mix: 5000-psi (34.5-MPa), 28-day compressive strength.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 HANGER AND SUPPORT APPLICATIONS

- A. Specific hanger and support requirements are specified in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-69 for pipe hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized, metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use padded hangers for piping that is subject to scratching.

- F. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated stationary pipes, NPS 1/2 to NPS 30 (DN 15 to DN 750).
 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of 120 to 450 deg F (49 to 232 deg C) pipes, NPS 4 to NPS 16 (DN 100 to DN 400), requiring up to 4 inches (100 mm) of insulation.
 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes, NPS 3/4 to NPS 24 (DN 20 to DN 600), requiring clamp flexibility and up to 4 inches (100 mm) of insulation.
 4. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated stationary pipes, NPS 1/2 to NPS 8 (DN 15 to DN 200).
 5. U-Bolts (MSS Type 24): For support of heavy pipes, NPS 1/2 to NPS 30 (DN 15 to DN 750).
 6. Pipe Saddle Supports (MSS Type 36): For support of pipes, NPS 4 to NPS 36 (DN 100 to DN 900), with steel pipe base stanchion support and cast-iron floor flange.
 7. Single Pipe Rolls (MSS Type 41): For suspension of pipes, NPS 1 to NPS 30 (DN 25 to DN 750), from 2 rods if longitudinal movement caused by expansion and contraction might occur.
 8. Complete Pipe Rolls (MSS Type 44): For support of pipes, NPS 2 to NPS 42 (DN 50 to DN 1050), if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is not necessary.
- G. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers, NPS 3/4 to NPS 20 (DN 20 to DN 500).
 2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers, NPS 3/4 to NPS 20 (DN 20 to DN 500), if longer ends are required for riser clamps.
- H. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches (150 mm) for heavy loads.
 2. Steel Clevises (MSS Type 14): For 120 to 450 deg F (49 to 232 deg C) piping installations.
- I. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.

2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb (340 kg).
 - b. Medium (MSS Type 32): 1500 lb (680 kg).
 - c. Heavy (MSS Type 33): 3000 lb (1360 kg).
 8. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 9. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
- J. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
 2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
 3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- K. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches (32 mm).
 2. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41 roll hanger with springs.
 3. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to absorb expansion and contraction of piping system from base support.
- L. Comply with MSS SP-69 for trapeze pipe hanger selections and applications that are not specified in piping system Sections.
- M. Comply with MFMA-102 for metal framing system selections and applications that are not specified in piping system Sections.
- N. Use powder-actuated fastener or mechanical-expansion anchors instead of building attachments where required in concrete construction.

3.3 HANGER AND SUPPORT INSTALLATION

- A. Steel Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Install hangers, supports, clamps, and attachments as required to properly support piping from building structure.
- B. Trapeze Pipe Hanger Installation: Comply with MSS SP-69 and MSS SP-89. Arrange for grouping of parallel runs of horizontal piping and support together on field-fabricated trapeze pipe hangers.
 - 1. Pipes of Various Sizes: Support together and space trapezes for smallest pipe size or install intermediate supports for smaller diameter pipes as specified above for individual pipe hangers.
 - 2. Field fabricate from ASTM A 36/A 36M, steel shapes selected for loads being supported. Weld steel according to AWS D1.1.
- C. Metal Framing System Installation: Arrange for grouping of parallel runs of piping and support together on field-assembled metal framing systems.
- D. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.
- E. Fastener System Installation:
 - 1. Install powder-actuated fasteners in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- F. Install hangers and supports complete with necessary inserts, bolts, rods, nuts, washers, and other accessories.
- G. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- H. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- I. Install lateral bracing with pipe hangers and supports to prevent swaying.
- J. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, [NPS 2-1/2 (DN 65)] and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.

- K. Load Distribution: Install hangers and supports so piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- L. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and so maximum pipe deflections allowed by ASME B31.9 (for building services piping) are not exceeded.
- M. Insulated Piping: Comply with the following:
 - 1. Attach clamps and spacers to piping.
 - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
 - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
 - c. Do not exceed pipe stress limits according to ASME B31.9 for building services piping.
 - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
 - 3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields must span an arc of 180 degrees.
 - 4. Shield Dimensions for Pipe: Not less than the following:
 - a. NPS 1/4 to NPS 3-1/2 (DN 8 to DN 90): 12 inches (305 mm) long and 0.048 inch (1.22 mm) thick.
 - b. NPS 4 (DN 100): 12 inches (305 mm) long and 0.06 inch (1.52 mm) thick.
 - c. NPS 5 and NPS 6 (DN 125 and DN 150): 18 inches (457 mm) long and 0.06 inch (1.52 mm) thick.
 - 5. Pipes NPS 8 (DN 200) and Larger: Include wood inserts.
 - 6. Insert Material: Length at least as long as protective shield.
 - 7. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

3.4 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make smooth bearing surface.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.5 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1 procedures for shielded metal arc welding, appearance and quality of welds, and methods used in correcting welding work, and with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.
 - 4. Finish welds at exposed connections so no roughness shows after finishing and contours of welded surfaces match adjacent contours.

3.6 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.

3.7 PAINTING

- A. Touch Up: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils (0.05 mm).
- B. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint and restore to comply with ASTM A 780.

END OF SECTION 220529

SECTION 22 05 33

HEAT TRACING FOR PLUMBING PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENT:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes plumbing piping heat tracing for freeze prevention.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: Include rated capacities, operating characteristics, furnished specialties, and accessories for each type of product indicated.
 - 1. Schedule heating capacity, length of cable, spacing, and electrical power requirement for each electric heating cable required.
- B. Shop Drawings for Snow Melting System: Include plans, sections, details, and attachments to other work.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Field quality-control test reports.
- D. Operation and maintenance data.
- E. Warranty: Special warranty specified in this Section.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality requirements”.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, Article 100, by a testing agency acceptable to City of New York and marked for intended use.

1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to replace electric heating cable that fails in materials or workmanship within specified warranty period.
 - 1. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SELF-REGULATING, PARALLEL-RESISTANCE HEATING CABLES FOR FREEZE PROTECTION:

- A. Basis of Design Product: Subject to compliance with requirements, provide products by Raychem; a division of Pentair Thermal Management (XL Trace) or comparable product by one of the following:
 - 1. Danfoss, Inc.
 - 2. Briskheat, Inc
 - 3. Technitrace
 - 4. Or Approved Equal
- B. Heating Element: Pair of parallel No. 16 AWG, nickel-coated, stranded copper bus wires embedded in crosslinked conductive polymer core, which varies heat output in response to temperature along its length. Terminate with waterproof, factory-assembled non-heating leads with connectors at one end, and seal the opposite end watertight. Cable must be capable of crossing over itself once without overheating.
- C. Electrical Insulating Jacket: Flame-retardant polyolefin.
- D. Cable Cover: Tinned copper braid, and polyolefin outer jacket with UV inhibitor.
- E. Maximum Operating Temperature (Power On): 150 deg F
- F. Maximum Exposure Temperature (Power Off): 185 deg F
- G. Maximum Operating Temperature: 300 deg F
- H. Capacities and Characteristics:
 - 1. Maximum Heat Output 8 W/ft.

2. Number of Parallel Cables: 1
3. Spiral Ratio: 1.3
4. Volts: 208 V.
5. Phase: 1 phase
6. Hertz: 60
7. Maximum heater length :250 ft for each 30 amp breaker rating.

- I. Multiple Circuits: Where the rating of the activator would be exceeded, it must be used in conjunction with a Relay Panel for activation of multiple heater circuits.

2.2 POWER DISTRIBUTION PANELS

- A. Provide dedicated power distribution, control, ground-fault protection, monitoring, and alarm panel . This system is used for freeze protection control, broadband maintenance temperature control, or applications in which multiple circuits (branch circuit breakers) are energized at one time.
- B. The panel must consist of wall-mounted enclosure contains an assembled panelboard, main contractor. Main contactor can be an ambient sensing thermostat (mounted remotely), an electronic controller, a snow sensor controller, or any device with a contact that changes state when the heat tracing is energized.
- C. Enclosure must be NEMA 4 rated.
- D. Contractor must determine required no of breakers based on total # of circuits.

2.3 CONTROLS

- A. Pipe-Mounting Thermostats for Freeze Protection:
 1. Remote bulb unit with adjustable temperature range from 30 to 50 deg F.
 2. Snap action; open-on-rise, single-pole switch with minimum current rating adequate for connected cable.
 3. Remote bulb on capillary, resistance temperature device, or thermistor for directly sensing pipe-wall temperature.
 4. Corrosion-resistant, waterproof control enclosure.

2.4 ACCESSORIES

- A. Cable Installation Accessories: Fiberglass tape, heat-conductive putty, cable ties, silicone end seals and splice kits, and installation clips all furnished by manufacturer, or as recommended in writing by manufacturer.
- B. Warning Labels: Refer to Division 26 Section 260553 " Identification for Electrical Work"

- C. Warning Tape: Continuously printed "Electrical Tracing"; vinyl, at least 3 mils thick, and with pressure-sensitive, permanent, waterproof, self-adhesive back.
 - 1. Width for Markers on Pipes with OD, Including Insulation, Less Than 6 Inches: 3/4 inch minimum.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 APPLICATIONS

- A. Install the following types of electric heating cable for the applications described:
 - 1. Freeze Protection: Self-regulating, parallel-resistance heating cable.

3.3 INSTALLATION

- A. Install electric heating cable for new plumbing piping. Refer to Plumbing drawings for exact length of heat traced pipes.
- B. Install systems and components in accordance to manufacturer's recommendations.
- C. Electric Heating Cable Installation for Freeze Protection for Piping:
 - 1. Install electric heating cables after piping has been tested and before insulation is installed.
 - 2. Install electric heating cables according to IEEE 515.1.
 - 3. Install insulation over piping with electric cables according to Division 22 Section 220700 "Plumbing Insulation."
 - 4. Install warning tape on piping insulation where piping is equipped with electric heating cables.
- D. Set field-adjustable switches and circuit-breaker trip ranges.
- E. Protect installed heating cables, including non-heating leads, from damage.
- F. Ground equipment according to Division 26 Section 260533 "Grounding and Bonding for Electrical Systems."
- G. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

- H. System test and initial start-up must be proved in presence of manufacturer’s representative.

3.4 FIELD QUALITY CONTROL

- A. Testing: Perform tests after cable installation but before application of coverings such as insulation, wall or ceiling construction, or concrete.
 - 1. Test cables for electrical continuity and insulation integrity before energizing.
 - 2. Test cables to verify rating and power input. Energize and measure voltage and current simultaneously.
- B. Repeat tests for continuity, insulation resistance, and input power after applying thermal insulation on pipe-mounting cables.
- C. Remove and replace malfunctioning units and retest as specified above.

SECTION 22 05 53

IDENTIFICATION FOR PLUMBING PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes:
1. Equipment labels.
 2. Warning signs and labels.
 3. Pipe labels.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop drawings: show locations, mock-up labels for font, size, layout.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:

1. Material and Thickness: Brass, 0.032-inch (0.8-mm) or Stainless steel, 0.025-inch (0.64-mm), Aluminum, 0.032-inch (0.8-mm) or anodized aluminum, 0.032-inch (0.8-mm) minimum thickness, and having predrilled or stamped holes for attachment hardware.
2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
3. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
4. Fasteners: Stainless-steel rivets or self-tapping screw.
5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/16 inch (1.6 mm) thick, and having predrilled holes for attachment hardware.
2. Letter Color: Black.
3. Background Color: White.
4. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
6. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
7. Fasteners: Stainless-steel rivets.
8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.

D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch (A4) bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule must be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch (3.2 mm) thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: Yellow.

- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- F. Minimum Letter Size: 1/4 inch (6.4 mm) for name of units if viewing distance is less than 24 inches (600 mm), 1/2 inch (13 mm) for viewing distances up to 72 inches (1830 mm), and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction. Indicate on shop drawings location, provide mockup of labels for font, size, layout.
- B. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions, or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches (38 mm) high.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

- A. Piping Color-Coding: Painting of piping is specified in Division 09 Section 099000 "Painting and Coating".
- B. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 50 feet (15 m) along each run. Reduce intervals to 25 feet (7.6 m) in areas of congested piping and equipment.
 - 7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
 - 8. Where possible, align center line of labels with adjacent labels.
- C. Pipe Label Color Schedule:
 - 1. Domestic Water Piping:
 - a. Background Color: Green.
 - b. Letter Color: White.
 - 2. Sanitary Waste, Vent and Storm Drainage Piping:
 - a. Background Color: White.
 - b. Letter Color: Green.
 - 3. Compressed Air Piping:
 - a. Background Color: White.
 - b. Letter Color: Blue.

END OF SECTION 220553

SECTION 22 07 00

PLUMBING INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes:

1. Insulation Materials:
 - a. Flexible elastomeric.
 - b. Mineral fiber.
 - c. Polyolefin.
2. Insulating cements.
3. Adhesives.
4. Mastics.
5. Sealants.
6. Factory-applied jackets.
7. Field-applied fabric-reinforcing mesh.
8. Field-applied jackets.
9. Tapes.
10. Securements.
11. Corner angles.

B. Related Sections include the following:

1. Division 23 Section 230700 "HVAC Insulation."

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.

B. Shop Drawings:

1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
2. Detail attachment and covering of heat tracing inside insulation.
3. Detail insulation application at pipe expansion joints for each type of insulation.
4. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
5. Detail removable insulation at piping specialties, equipment connections, and access panels.
6. Detail application of field-applied jackets.
7. Detail application at linkages of control devices.
8. Detail field application for each equipment type.

C. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.

B. Fire-Test-Response Characteristics: Insulation and related materials must have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84 by nationally recognized testing laboratories . Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials must be applied.
- B. Products must not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel must have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.

- D. Insulation materials for use on austenitic stainless steel must be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials must not use CFC or HCFC blowing agents in the manufacturing process.
- F. Mineral-Fiber, Preformed Pipe Insulation:
 - 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Fibrex Insulations Inc.; Coreplus 1200.
 - b. Johns Manville; Micro-Lok.
 - c. Knauf Insulation; 1000 Pipe Insulation.
 - d. Manson Insulation Inc.; Alley-K.
 - e. Owens Corning; Fiberglas Pipe Insulation.
 - f. Approved equal
 - 2. Type I, 850 deg F (454 deg C) Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
- G. Mineral-Fiber, Pipe and Tank Insulation: Mineral or glass fibers bonded with a thermosetting resin. Semirigid board material with factory-applied ASJ jacket complying with ASTM C 1393, Type II or Type IIIA Category 2, or with properties similar to ASTM C 612, Type IB. Nominal density is 2.5 lb/cu. ft. (40 kg/cu. m) or more. Thermal conductivity (k-value) at 100 deg F (55 deg C) is 0.29 Btu x in./h x sq. ft. x deg F (0.042 W/m x K) or less. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 - 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. CertainTeed Corp.; CrimpWrap.
 - b. Johns Manville; MicroFlex.
 - c. Knauf Insulation; Pipe and Tank Insulation.
 - d. Manson Insulation Inc.; AK Flex.
 - e. Owens Corning; Fiberglas Pipe and Tank Insulation.
 - f. Approved Equal

2.2 INSULATING CEMENTS

- A. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.

1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Insulco, Division of MFS, Inc.; SmoothKote.
 - b. P. K. Insulation Mfg. Co., Inc.; PK No. 127, and Quik-Cote.
 - c. Rock Wool Manufacturing Company; Delta One Shot.
 - d. Approved equal.

2.3 ADHESIVES

- A. Materials must be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
- B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-82.
 - b. Foster Products Corporation, H. B. Fuller Company; 85-20.
 - c. ITW TACC, Division of Illinois Tool Works; S-90/80.
 - d. Marathon Industries, Inc.; 225.
 - e. Mon-Eco Industries, Inc.; 22-25.
 - f. Approved equal.
- C. ASJ Adhesive, and FSK and PVDC Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-82.
 - b. Foster Products Corporation, H. B. Fuller Company; 85-20.
 - c. ITW TACC, Division of Illinois Tool Works; S-90/80.
 - d. Marathon Industries, Inc.; 225.
 - e. Mon-Eco Industries, Inc.; 22-25.
 - f. Approved equal.
- D. PVC Jacket Adhesive: Compatible with PVC jacket.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:

- a. Dow Chemical Company (The); 739, Dow Silicone.
- b. Johns-Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
- c. P.I.C. Plastics, Inc.; Welding Adhesive.
- d. Red Devil, Inc.; Celulon Ultra Clear.
- e. Speedline Corporation; Speedline Vinyl Adhesive.
- f. Approved equal

2.4 MASTICS

- A. Materials must be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-35.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-90.
 - c. ITW TACC, Division of Illinois Tool Works; CB-50.
 - d. Marathon Industries, Inc.; 590.
 - e. Mon-Eco Industries, Inc.; 55-40.
 - f. Vimasco Corporation; 749.
 - g. Approved equal
 2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm (0.009 metric perm) at 43-mil (1.09-mm) dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 180 deg F (Minus 29 to plus 82 deg C).
 4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
 5. Color: White.
- C. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-10.
 - b. Foster Products Corporation, H. B. Fuller Company; 35-00.
 - c. ITW TACC, Division of Illinois Tool Works; CB-05/15.
 - d. Marathon Industries, Inc.; 550.
 - e. Mon-Eco Industries, Inc.; 55-50.
 - f. Vimasco Corporation; WC-1/WC-5.
 - g. Approved equal

2. Water-Vapor Permeance: ASTM F 1249, 3 perms (2 metric perms) at 0.0625-inch (1.6-mm) dry film thickness.
3. Service Temperature Range: Minus 20 to plus 200 deg F (Minus 29 to plus 93 deg C).
4. Solids Content: 63 percent by volume and 73 percent by weight.
5. Color: White.

2.5 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-76.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - f. Vimasco Corporation; 750.
 - g. Approved equal.
2. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-70.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45/30-46.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
 - f. Approved equal.
3. Materials must be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: Minus 100 to plus 300 deg F (Minus 73 to plus 149 deg C).
6. Color: White or gray.

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-76-8.
 - b. Foster Products Corporation, H. B. Fuller Company; 95-44.

- c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
 - f. Approved equal.
2. Materials must be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 5. Color: Aluminum.
- C. ASJ Flashing Sealants, and Vinyl, PVDC, and PVC Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products, Division of ITW; CP-76-8.
 - b. Foster Products Corporation, H. B. Fuller Company; 95-44.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
 - f. Approved equal.
 2. Materials must be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F (Minus 40 to plus 121 deg C).
 5. Color: White.

2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.

2.7 FIELD-APPLIED JACKETS

- A. Field-applied jackets must comply with ASTM C 921, Type I, unless otherwise indicated.
- B. Aluminum Jacket.
- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.

1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto PVC Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - e. Approved equal.
2. Adhesive: As recommended by jacket material manufacturer.
3. Color: White.
4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
5. Factory-fabricated tank heads and tank side panels.

2.8 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
 - b. Compac Corp.; 104 and 105.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
 - d. Approved equal.
 2. Width: 3 inches (75 mm).
 3. Thickness: 11.5 mils (0.29 mm).
 4. Adhesion: 90 ounces force/inch (1.0 N/mm) in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch (7.2 N/mm) in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. PVC Tape: White vapor-retarder tape matching field-applied PVC jacket with acrylic adhesive. Suitable for indoor and outdoor applications.

1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0555.
 - b. Compac Corp.; 130.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 370 White PVC tape.
 - d. Venture Tape; 1506 CW NS.
 - e. Approved equal.
2. Width: 2 inches (50 mm).
3. Thickness: 6 mils (0.15 mm).
4. Adhesion: 64 ounces force/inch (0.7 N/mm) in width.
5. Elongation: 500 percent.
6. Tensile Strength: 18 lbf/inch (3.3 N/mm) in width.

2.9 SECUREMENTS

- A. Aluminum Bands: ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch (0.51 mm) thick, 3/4 inch (19 mm) wide with wing or closed seal.
 1. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - a. Childers Products; Bands.
 - b. PABCO Metals Corporation; Bands.
 - c. RPR Products, Inc.; Bands.
 - d. Approved equal.
- B. Insulation Pins and Hangers:
 1. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series T.
 - 2) GEMCO; Perforated Base.
 - 3) Midwest Fasteners, Inc.; Spindle.
 - 4) Approved equal.

- b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Copper- or zinc-coated, low carbon steel, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 2. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) GEMCO; Nylon Hangers.
 - 2) Midwest Fasteners, Inc.;
 - 3) Nylon Insulation Hangers.
 - 4) Approved equal.
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch (0.76 mm) thick by 1-1/2 inches (38 mm) in diameter.
 - c. Spindle: Nylon, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches (63 mm).
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 3. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) AGM Industries, Inc.; Tactoo Insul-Hangers, Series TSA.
 - 2) GEMCO; Press and Peel.
 - 3) Midwest Fasteners, Inc.; Self Stick.
 - 4) Approved equal.
 - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch (0.76 mm) thick by 2 inches (50 mm) square.
 - c. Spindle: Copper- or zinc-coated, low carbon steel, fully annealed, 0.106-inch- (2.6-mm-) diameter shank, length to suit depth of insulation indicated.

- d. Adhesive-backed base with a peel-off protective cover.
- 4. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick, aluminum sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following products:
 - 1) AGM Industries, Inc.; RC-150.
 - 2) GEMCO; R-150.
 - 3) Midwest Fasteners, Inc.; WA-150.
 - 4) Nelson Stud Welding; Speed Clips.
 - 5) Approved Equal.
 - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
- 5. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- (0.41-mm-) thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches (38 mm) in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following available products that may be incorporated into the Work include, but are not limited to, the following:
 - 1) GEMCO.
 - 2) Midwest Fasteners, Inc.
 - 3) Nelson Stud Welding.
 - 4) Approved Equal.
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- (19-mm-) wide, stainless steel or Monel.
- D. Wire: 0.080-inch (2.0-mm) nickel-copper alloy.
 - 1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
 - a. C & F Wire.
 - b. Childers Products.
 - c. PABCO Metals Corporation.
 - d. RPR Products, Inc.
 - e. Approved Equal.

2.10 CORNER ANGLES

- A. PVC Corner Angles: 30 mils (0.8 mm) thick, minimum 1 by 1 inch (25 by 25 mm), PVC according to ASTM D 1784, Class 16354-C. White or color-coded to match adjacent surface.
- B. Aluminum Corner Angles: 0.040 inch (1.0 mm) thick, minimum 1 by 1 inch (25 by 25 mm), aluminum according to ASTM B 209 (ASTM B 209M), Alloy 3003, 3005, 3105 or 5005; Temper H-14.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that apply to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment and piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment and pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.

- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.
- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.
- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch- (75-mm-) wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches (100 mm) o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches (38 mm). Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches (50 mm) o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 - 4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
 - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to pipe flanges and fittings.
- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- N. Finish installation with systems at operating conditions. Restore joint separations and cracking due to thermal movement.

- O. Restore damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches (100 mm) beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.
- P. For above ambient services, do not install insulation to the following:
 - 1. Vibration-control devices.
 - 2. Testing agency labels and stamps.
 - 3. Nameplates and data plates.
 - 4. Manholes.
 - 5. Handholes.
 - 6. Cleanouts.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches (50 mm) below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.
- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches (50 mm).
 - 4. Seal jacket to wall flashing with flashing sealant.
- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions.
 - 1. Comply with requirements in Division 07 Section 078413 " Penetration Firestopping" and Section 079200 "Joint Sealants".
- F. Insulation Installation at Floor Penetrations:
 - 1. Pipe: Install insulation continuously through floor penetrations.
 - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Division 07 Section 078413 "Penetration Firestopping".

3.5 GENERAL PIPE INSULATION INSTALLATION

- A. Requirements in this article generally apply to all insulation materials except where more specific requirements are specified in various pipe insulation material installation articles.
- B. Insulation Installation on Fittings, Valves, Strainers, Flanges, and Unions:
 - 1. Install insulation over fittings, valves, strainers, flanges, unions, and other specialties with continuous thermal and vapor-retarder integrity, unless otherwise indicated.
 - 2. Insulate pipe elbows using preformed fitting insulation or mitered fittings made from same material and density as adjacent pipe insulation. Each piece must be butted tightly against adjoining piece and bonded with adhesive. Fill joints, seams, voids, and irregular surfaces with insulating cement finished to a smooth, hard, and uniform contour that is uniform with adjoining pipe insulation.
 - 3. Insulate tee fittings with preformed fitting insulation or sectional pipe insulation of same material and thickness as used for adjacent pipe. Cut sectional pipe insulation to fit. Butt each section closely to the next and hold in place with tie wire. Bond pieces with adhesive.
 - 4. Insulate valves using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. For valves, insulate up to and including the bonnets, valve stuffing-box studs, bolts, and nuts. Fill joints, seams, and irregular surfaces with insulating cement.
 - 5. Insulate strainers using preformed fitting insulation or sectional pipe insulation of same material, density, and thickness as used for adjacent pipe. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker. Fill joints, seams, and irregular surfaces with insulating cement. Insulate strainers so strainer basket flange or plug can be easily removed and replaced without damaging the insulation and jacket. Provide a removable reusable insulation cover. For below ambient services, provide a design that maintains vapor barrier.

6. Insulate flanges and unions using a section of oversized preformed pipe insulation. Overlap adjoining pipe insulation by not less than two times the thickness of pipe insulation, or one pipe diameter, whichever is thicker.
 7. Cover segmented insulated surfaces with a layer of finishing cement and coat with a mastic. Install vapor-barrier mastic for below ambient services and a breather mastic for above ambient services. Reinforce the mastic with fabric-reinforcing mesh. Trowel the mastic to a smooth and well-shaped contour.
 8. For services not specified to receive a field-applied jacket except for flexible elastomeric and polyolefin, install fitted PVC cover over elbows, tees, strainers, valves, flanges, and unions. Terminate ends with PVC end caps. Tape PVC covers to adjoining insulation facing using PVC tape.
 9. Stencil or label the outside insulation jacket of each union with the word "UNION." Match size and color of pipe labels.
- C. Insulate instrument connections for thermometers, pressure gages, pressure temperature taps, test connections, flow meters, sensors, switches, and transmitters on insulated pipes, vessels, and equipment. Shape insulation at these connections by tapering it to and around the connection with insulating cement and finish with finishing cement, mastic, and flashing sealant.
- D. Install removable insulation covers at locations indicated. Installation must conform to the following:
1. Make removable flange and union insulation from sectional pipe insulation of same thickness as that on adjoining pipe. Install same insulation jacket as adjoining pipe insulation.
 2. When flange and union covers are made from sectional pipe insulation, extend insulation from flanges or union long at least two times the insulation thickness over adjacent pipe insulation on each side of flange or union. Secure flange cover in place with stainless-steel or aluminum bands. Select band material compatible with insulation and jacket.
 3. Construct removable valve insulation covers in same manner as for flanges except divide the two-part section on the vertical center line of valve body.
 4. When covers are made from block insulation, make two halves, each consisting of mitered blocks wired to stainless-steel fabric. Secure this wire frame, with its attached insulation, to flanges with tie wire. Extend insulation at least 2 inches (50 mm) over adjacent pipe insulation on each side of valve. Fill space between flange or union cover and pipe insulation with insulating cement. Finish cover assembly with insulating cement applied in two coats. After first coat is dry, apply and trowel second coat to a smooth finish.
 5. Unless a PVC jacket is indicated in field-applied jacket schedules, finish exposed surfaces with a metal jacket.

3.6 CELLULAR-GLASS INSULATION INSTALLATION

- A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient services, secure laps with outward clinched staples at 6 inches (150 mm) o.c.
4. For insulation with factory-applied jackets on below ambient services, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with cut sections of cellular-glass block insulation of same thickness as pipe insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available. Secure according to manufacturer's written instructions.
2. When preformed sections of insulation are not available, install mitered sections of cellular-glass insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of cellular-glass insulation to valve body.
2. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
3. Install insulation to flanges as specified for flange insulation application.

3.7 MINERAL-FIBER INSULATION INSTALLATION

A. Insulation Installation on Straight Pipes and Tubes:

1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches (150 mm) o.c.

4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.

B. Insulation Installation on Pipe Flanges:

1. Install preformed pipe insulation to outer diameter of pipe flange.
2. Make width of insulation section same as overall width of flange and bolts, plus twice the thickness of pipe insulation.
3. Fill voids between inner circumference of flange insulation and outer circumference of adjacent straight pipe segments with mineral-fiber blanket insulation.
4. Install jacket material with manufacturer's recommended adhesive, overlap seams at least 1 inch (25 mm), and seal joints with flashing sealant.

C. Insulation Installation on Pipe Fittings and Elbows:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.

D. Insulation Installation on Valves and Pipe Specialties:

1. Install preformed sections of same material as straight segments of pipe insulation when available.
2. When preformed sections are not available, install mitered sections of pipe insulation to valve body.
3. Arrange insulation to permit access to packing and to allow valve operation without disturbing insulation.
4. Install insulation to flanges as specified for flange insulation application.

3.8 FIELD-APPLIED JACKET INSTALLATION

A. Where FSK jackets are indicated, install as follows:

1. Draw jacket material smooth and tight.
2. Install lap or joint strips with same material as jacket.
3. Secure jacket to insulation with manufacturer's recommended adhesive.
4. Install jacket with 1-1/2-inch (38-mm) laps at longitudinal seams and 3-inch- (75-mm-) wide joint strips at end joints.
5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.

B. Where PVC jackets are indicated, install with 1-inch (25-mm) overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.

1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- C. Where metal jackets are indicated, install with 2-inch (50-mm) overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches (300 mm) o.c. and at end joints.
- D. Where PVDC jackets are indicated, install as follows:
1. Apply three separate wraps of filament tape per insulation section to secure pipe insulation to pipe prior to installation of PVDC jacket.
 2. Wrap factory-presize jackets around individual pipe insulation sections with one end overlapping the previously installed sheet. Install presize jacket with an approximate overlap at butt joint of 2 inches (50 mm) over the previous section. Adhere lap seal using adhesive or SSL, and then apply 1-1/4 circumferences of appropriate PVDC tape around overlapped butt joint.
 3. Continuous jacket can be spiral wrapped around a length of pipe insulation. Apply adhesive or PVDC tape at overlapped spiral edge. When electing to use adhesives, refer to manufacturer's written instructions for application of adhesives along this spiral edge to maintain a permanent bond.
 4. Jacket can be wrapped in cigarette fashion along length of roll for insulation systems with an outer circumference of 33-1/2 inches (850 mm) or less. The 33-1/2-inch- (850-mm-) circumference limit allows for 2-inch- (50-mm-) overlap seal. Using the length of roll allows for longer sections of jacket to be installed at one time. Use adhesive on the lap seal. Visually inspect lap seal for "fishmouthing," and use PVDC tape along lap seal to secure joint.
 5. Repair holes or tears in PVDC jacket by placing PVDC tape over the hole or tear and wrapping a minimum of 1-1/4 circumferences to avoid damage to tape edges.

3.9 FINISHES

- A. Equipment and Pipe Insulation with ASJ or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 Section 099000 "Painting and Coating".
1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.
- C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.

- D. Do not field paint aluminum or stainless-steel jackets.

3.10 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Inspect field-insulated equipment, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection must be limited to one location(s) for each type of equipment defined in the "Equipment Insulation Schedule" Article. For large equipment, remove only a portion adequate to determine compliance.
 - 2. Inspect pipe, fittings, strainers, and valves, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection must be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.11 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Underground piping.
 - 2. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.12 INDOOR PIPING INSULATION SCHEDULE

- A. Domestic Hot Water and Recirculated Hot Water: Insulation must be the following:
 - 1. Mineral-Fiber, Preformed Pipe Insulation with factory applied jacket and PVC fittings, Type I: 1 inch for all pipes including branches. For exposed pipe jacketing refer to section 3.16.

- B. Domestic Cold Water: Insulation must be the following:
 - 1. Mineral-Fiber, Preformed Pipe Insulation with factory applied jackets and PVC fittings, Type I: 1 inch for all pipes including branches. For exposed pipe jacketing refer to section 3.12.
- C. Storm Water Pipes (Horizontal and Vertical):
 - 1. Mineral-Fiber, Preformed Pipe Insulation with factory applied jacket and PVC fittings, Type I: 1inch for all pipes including branches. For exposed pipe jacketing refer to section 3.16.
- D. Sanitary Pipes with Heat tracing:
 - 1. Mineral-Fiber, Preformed Pipe Insulation with factory applied jacket and PVC fittings, Type I: 1inch for all pipes including branches. For exposed pipe jacketing refer to section 3.16.

3.13 INDOOR, FIELD-APPLIED JACKET SCHEDULE

- A. Install jacket over insulation material. For insulation with factory-applied jacket, install the field-applied jacket over the factory-applied jacket.
- B. If more than one material is listed, selection from materials listed is Contractor's option.
- C. Piping, Concealed:
 - 1. None.
- D. Hot, Hot Water Return and Cold Water Piping and Sanitary Pipes, Exposed on Apparatus Floor or in finish areas on 2nd floor:
 - 1. Aluminum Jacket
- E. Hot, Hot Water Return and Cold Water Piping, Exposed in Mechanical Rooms
 - 1. PVC: 20 mils (0.5 mm) thick.

END OF SECTION 220700

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 08 00 COMMISSIONING OF PLUMBING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This section includes commissioning process requirements for Plumbing systems, assemblies, and equipment.
- B. Related Sections:
 - 1. DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems.”

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system’s installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer’s recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by the Contractor.
 - 2. Verify and document proper performance of equipment and systems.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to the City of New York.
 - 4. Verify that the City of New York’s maintenance personnel are adequately instructed.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.
- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner, and the Contractor.
- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s role.
- B. Refer to the DDC General Conditions Section 013300 “Submittal Procedures” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for specific requirements. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. For example, the plumbing trade subcontractor under the direction of the Contractor shall ultimately be responsible for all standard testing equipment for the plumbing system in Division 22, except for equipment specific to and used by TAB in their commissioning responsibilities. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. The Contractor shall ensure proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment, if provided by the CxA, shall not become the property of the City of New York.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Contract Documents. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers

shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for commissioned components, equipment, and systems.
- B. Red-lined Drawings:
 - 1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The Contractor will create the as-built drawings.
- C. Operation and Maintenance Data:
 - 1. The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 - 2. The CxA will review the O&M literature once for conformance to project requirements.
 - 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Instruction:
 - 1. The Contractor will provide demonstration as required by the Contract Documents.
 - 2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
 - 3. An instruction agenda for each instruction session must be submitted to the CxA one (1) week prior the instruction session.
 - 4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and the Commissioner. A copy of the test record shall be provided to the CxA and Commissioner.
 - 5. Engage a Factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.
 - 6. Instruct the City of New York's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
 - 7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Attend domestic water balancing review and coordination meetings.
- D. Participate in Plumbing systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- E. Provide information requested by the CxA for final commissioning documentation.
- F. Include requirements for submittal data, operation and maintenance data, and instruction in each

- purchase order or sub-contract written.
- G. Prepare preliminary schedule for Plumbing system orientations and inspections, operation and maintenance manual submissions, instruction sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for the Commissioner. Distribute preliminary schedule to commissioning team members.
 - H. Update schedule as required throughout the construction period.
 - I. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
 - J. Assist the CxA in all verification and functional performance tests.
 - K. Provide measuring instruments and logging devices to record test data and provide data acquisition equipment to record data for the complete range of testing for the required test period.
 - L. Gather operation and maintenance literature on all equipment and assemble in binders as required by the Contract Documents. Submit to CxA (45) days after submittal acceptance.
 - M. Coordinate with the CxA to provide (48) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
 - N. Notify the CxA a minimum of (2) weeks in advance of the time for start of the balancing work. Attend the initial balancing meeting for review of the balancing procedures.
 - O. Participate in, and schedule vendors and subcontractors to participate in the instruction sessions.
 - P. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 - 1. Plumbing equipment including backflow preventers, domestic water heaters, pumps, plumbing fixtures, and all other equipment furnished under Division 22.
 - 2. Gas piping, sanitary waste and vent piping, storm drainage piping, sump pumps and, sewage ejectors.
 - Q. The Contractor shall ensure the equipment suppliers shall document the performance of their equipment.
 - R. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
 - S. The Contractor shall direct the TAB subcontractor to:
 - 1. Attend initial commissioning coordination meeting scheduled by the CxA.
 - 2. Submit the site specific balancing plan to the CxA and Commissioner for review and acceptance.
 - 3. Attend the balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in balancing the Plumbing system.
 - 4. Participate in verification of the balancing report, which will consist of repeating measurements contained in the balancing reports. Assist in diagnostic purposes when directed.
 - T. Provide instruction to the City of New York's maintenance personnel using expert qualified personnel, as specified.
 - U. The Contractor shall direct equipment suppliers to:
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific

- requirements needed to keep warranties in force.
 - 2. Assist in equipment testing.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- V. Refer to the DDC General Conditions for additional Contractor responsibilities.

3.3 CxA'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that Plumbing systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Plumbing instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Set systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 DOMESTIC WATER BALANCING VERIFICATION

- A. Prior to performance of Domestic Water Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- B. Notify the CxA at least ten (10) days in advance of testing and balancing work and provide access for the CxA to witness balancing work.
- C. Provide technicians, instrumentation, and tools to verify testing and balancing of Plumbing systems at the direction of the CxA.
 - 1. The CxA will notify the Contractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
 - 2. Use the same instruments (by model and serial number) that were used when original data were collected.
 - 3. Failure of an item includes a deviation of more than 10 percent. Failure of more than 10 percent of selected items shall result in rejection of final balancing report.
 - 4. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of

the CxA.

- B. Scope of Plumbing testing shall include entire Plumbing installation. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the Contractor, Plumbing subcontractor and balancing subcontractor shall prepare detailed testing plans, procedures, and checklists for Plumbing systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible, as determined by the Commissioner.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct that set points be altered when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the Plumbing system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 PLUMBING SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 22 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. Plumbing Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 22. Assist the CxA with preparation of testing plans.
- C. Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment: Test requirements are specified in Division 22 piping Sections. Plumbing subcontractor, under the direction of the Contractor, shall prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA.
- D. Plumbing Distribution System Testing: Provide technicians, instrumentation, tools, and equipment to test performance of air, fuel gas, and sanitary waste and vent piping, storm drainage piping, sprinkler and domestic water distribution systems.
- E. Vibration and Sound Tests: Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- F. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The systems shall be evaluated shall include, but not limited to:

1. One (1) Elevator Sump Pump
2. One (1) Electric Water Heater
3. One (1) Hot Water Circulating Pump
4. One (1) Expansion Tank
5. Domestic Water Pump Skid
6. Associated Plumbing Work

3.8 SEASONAL TESTING

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to seasonal testing.

3.9 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems.”
- B. Refer to the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for the Commissioner and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.10 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

- A. Refer to the DDC General Conditions Section 01 79 00 “Demonstration and Owner’s Pre-Acceptance Orientation” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to instruction.
- B. The Contractor shall have the following instruction responsibilities:
 1. Provide the CxA with an instruction plan two weeks before the planned instruction.
 2. Provide comprehensive orientation and instruction in the understanding of the systems and the operation and maintenance of each piece of Plumbing equipment to the City of New York’s maintenance personnel.
 3. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 4. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing subcontractor or manufacturer’s representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
 5. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
 6. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
 7. Fully explain and demonstrate the operation, function and overrides of any local packaged controls.

8. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 22 08 00

SECTION 22 11 13

FACILITY WATER DISTRIBUTION PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes water-distribution piping and related components outside the building for water service and fire-service mains.
- B. Utility-furnished products include water meters that will be furnished to the site, ready for installation.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Detail precast concrete vault assemblies and indicate dimensions, method of field assembly, and components.
- C. Field quality-control test reports.
- D. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Regulatory Requirements:
 - 1. Comply with requirements of utility company supplying water. Include tapping of water mains and backflow prevention.

2. Comply with NYC Plumbing Code, 2014 Edition for potable-water-service piping, including materials, installation, testing, and disinfection.
 3. Comply NYC Plumbing, 2014 Edition and NYC Fire Code, 2014 Edition for fire-suppression water-service piping, including materials, hose threads, installation, and testing.
- C. Piping materials must bear label, stamp, or other markings of specified testing agency.
 - D. Comply with ASTM F 645 for selection, design, and installation of thermoplastic water piping.
 - E. Comply with FMG's "Approval Guide" or UL's "Fire Protection Equipment Directory" for fire-service-main products.
 - F. NFPA Compliance: Comply with NFPA 24, 2007 for materials, installations, tests, flushing, and valve and hydrant supervision for fire-service-main piping for fire suppression.
 - G. Copper pipes and other materials used in Domestic Water system must be “Lead-Free” certified.
 - H. NSF Compliance:
 1. Comply with NSF 61 for materials for water-service piping and specialties for domestic water.
- 1.6 COORDINATION
- A. Coordinate connection to water main with utility company.

PART 2 - PRODUCTS

2.1 PIPE AND FITTINGS

- A. Soft Copper Tube: “Lead-Free” certified, ASTM B 88, Type K (ASTM B 88M, Type A) and ASTM B 88, Type L (ASTM B 88M, Type B), water tube, annealed temper.
 1. Copper, Solder-Joint Fittings: “Lead-Free” certified, ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- B. Hard Copper Tube: “Lead-Free” certified, ASTM B 88, Type K (ASTM B 88M, Type A) and ASTM B 88, Type L (ASTM B 88M, Type B), water tube, drawn temper.
 1. Copper, Solder-Joint Fittings: “Lead-Free” certified, ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- C. Mechanical-Joint, Ductile-Iron Pipe: AWWA C151, with mechanical-joint bell and plain spigot end unless grooved or flanged ends are indicated.

1. Mechanical-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 2. Glands, Gaskets, and Bolts: AWWA C111, ductile- or gray-iron glands, rubber gaskets, and steel bolts.
- D. Push-on-Joint, Ductile-Iron Pipe: AWWA C151, with push-on-joint bell and plain spigot end unless grooved or flanged ends are indicated.
1. Push-on-Joint, Ductile-Iron Fittings: AWWA C110, ductile- or gray-iron standard pattern or AWWA C153, ductile-iron compact pattern.
 2. Gaskets: AWWA C111, rubber.
- E. Grooved-Joint, Ductile-Iron Pipe: AWWA C151, with cut, rounded-grooved ends.
1. Grooved-End, Ductile-Iron Pipe Appurtenances:
 - a. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Anvil International, Inc.
 - 2) Victaulic Company of America.
 - 3) U.S. Pipe and Foundry Company.
 - 4) Or Approved Equal.

2.2 JOINING MATERIALS

- A. Refer to Division 22 Section 220500 "Common Work Results for Plumbing" for commonly used joining materials.
- B. Brazing Filler Metals: AWS A5.8, BCuP Series.
- C. Bonding Adhesive for Fiberglass Piping: As recommended by fiberglass piping manufacturer.
- D. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.

2.3 PIPING SPECIALTIES

- A. Transition Fittings: Manufactured fitting or coupling same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
- B. Tubular-Sleeve Pipe Couplings:
 1. Description: Metal, bolted, sleeve-type, reducing or transition coupling, with center sleeve, gaskets, end rings, and bolt fasteners and with ends of same sizes as piping to be joined.

- a. Standard: AWWA C219.

2.4 GATE VALVES

A. AWWA, Cast-Iron Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American AVK Co.; Valves & Fittings Div.
 - b. American Cast Iron Pipe Co.; American Flow Control Div.
 - c. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
 - d. Crane Co.; Crane Valve Group; Stockham Div.
 - e. East Jordan Iron Works, Inc.
 - f. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
 - g. McWane, Inc.; Kennedy Valve Div.
 - h. McWane, Inc.; M & H Valve Company Div.
 - i. McWane, Inc.; Tyler Pipe Div.; Utilities Div.
 - j. Mueller Co.; Water Products Div.
 - k. NIBCO INC.
 - l. U.S. Pipe and Foundry Company.
 - m. Or Approved Equal.
2. Nonrising-Stem, Metal-Seated Gate Valves:
 - a. Description: Gray- or ductile-iron body and bonnet; with cast-iron or bronze double-disc gate, bronze gate rings, bronze stem, and stem nut.
 - 1) Standard: AWWA C500.
 - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
 - 3) End Connections: Mechanical joint.
 - 4) Interior Coating: Complying with AWWA C550.
3. Nonrising-Stem, Resilient-Seated Gate Valves:
 - a. Description: Gray- or ductile-iron body and bonnet; with bronze or gray- or ductile-iron gate, resilient seats, bronze stem, and stem nut.
 - 1) Standard: AWWA C509.
 - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
 - 3) End Connections: Mechanical joint.
 - 4) Interior Coating: Complying with AWWA C550.
4. Nonrising-Stem, High-Pressure, Resilient-Seated Gate Valves:
 - a. Description: Ductile-iron body and bonnet; with bronze or ductile-iron gate, resilient seats, bronze stem, and stem nut.

- 1) Standard: AWWA C509.
 - 2) Minimum Pressure Rating: 250 psig (1725 kPa).
 - 3) End Connections: Push on or mechanical joint.
 - 4) Interior Coating: Complying with AWWA C550.
5. OS&Y, Rising-Stem, Metal-Seated Gate Valves:
- a. Description: Cast- or ductile-iron body and bonnet, with cast-iron double disc, bronze disc and seat rings, and bronze stem.
 - 1) Standard: AWWA C500.
 - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
 - 3) End Connections: Flanged.
6. OS&Y, Rising-Stem, Resilient-Seated Gate Valves:
- a. Description: Cast- or ductile-iron body and bonnet, with bronze or gray- or ductile-iron gate, resilient seats, and bronze stem.
 - 1) Standard: AWWA C509.
 - 2) Minimum Pressure Rating: 200 psig (1380 kPa).
 - 3) End Connections: Flanged.
- B. UL/FMG, Cast-Iron Gate Valves:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Co.; American Flow Control Div.
 - b. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
 - c. Crane Co.; Crane Valve Group; Stockham Div.
 - d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
 - e. McWane, Inc.; Kennedy Valve Div.
 - f. McWane, Inc.; M & H Valve Company Div.
 - g. Mueller Co.; Water Products Div.
 - h. NIBCO INC.
 - i. U.S. Pipe and Foundry Company.
 - j. Or Approved Equal.
 2. UL/FMG, Nonrising-Stem Gate Valves:
 - a. Description: Iron body and bonnet with flange for indicator post, bronze seating material, and inside screw.
 - 1) Standards: UL 262 and FMG approved.
 - 2) Minimum Pressure Rating: 175 psig (1207 kPa).
 - 3) End Connections: Flanged.

3. OS&Y, Rising-Stem Gate Valves:
 - a. Description: Iron body and bonnet and bronze seating material.
 - 1) Standards: UL 262 and FMG approved.
 - 2) Minimum Pressure Rating: 175 psig (1207 kPa).
 - 3) End Connections: Flanged.

C. Bronze Gate Valves:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Crane Co.; Crane Valve Group; Crane Valves.
 - b. Crane Co.; Crane Valve Group; Jenkins Valves.
 - c. Crane Co.; Crane Valve Group; Stockham Div.
 - d. Hammond Valve.
 - e. Milwaukee Valve Company.
 - f. NIBCO INC.
 - g. Red-White Valve Corporation.
 - h. Or Approved Equal.
2. OS&Y, Rising-Stem Gate Valves:
 - a. Description: Bronze body and bonnet and bronze stem.
 - 1) Standards: UL 262 and FMG approved.
 - 2) Minimum Pressure Rating: 175 psig (1207 kPa).
 - 3) End Connections: Threaded.
3. Nonrising-Stem Gate Valves:
 - a. Description: Class 125, Type 1, bronze with solid wedge, threaded ends, and malleable iron handwheel.
 - 1) Standard: MSS SP-80.

2.5 GATE VALVE ACCESSORIES AND SPECIALTIES

A. Tapping-Sleeve Assemblies:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. American Cast Iron Pipe Co.; Waterous Co. Subsidiary.
 - b. East Jordan Iron Works, Inc.
 - c. Flowserve.

- d. McWane, Inc.; Clow Valve Co. Div. (Oskaloosa).
 - e. McWane, Inc.; Kennedy Valve Div.
 - f. McWane, Inc.; M & H Valve Company Div.
 - g. Mueller Co.; Water Products Div.
 - h. U.S. Pipe and Foundry Company.
 - i. Or Approved Equal.
2. Description: Sleeve and valve compatible with drilling machine.
 - a. Standard: MSS SP-60.
 - b. Tapping Sleeve: Cast- or ductile-iron or stainless-steel, two-piece bolted sleeve with flanged outlet for new branch connection. Include sleeve matching size and type of pipe material being tapped and with recessed flange for branch valve.
 - c. Valve: AWWA, cast-iron, nonrising-stem, resilient-seated gate valve with one raised face flange mating tapping-sleeve flange.
 - B. Valve Boxes: Comply with AWWA M44 for cast-iron valve boxes. Include top section, adjustable extension of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over valve and with a barrel approximately 5 inches (125 mm) in diameter.
 1. Operating Wrenches: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and socket matching valve operating nut.
 - C. Indicator Posts: UL 789, FMG-approved, vertical-type, cast-iron body with operating wrench, extension rod, and adjustable cast-iron barrel of length required for depth of burial of valve.
- 2.6 CORPORATION VALVES AND CURB VALVES.
- A. Manufacturers:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Amcast Industrial Corporation; Lee Brass Co.
 - b. Ford Meter Box Company, Inc. (The); Pipe Products Div.
 - c. Jones, James Company.
 - d. Master Meter, Inc.
 - e. McDonald, A. Y. Mfg. Co.
 - f. Mueller Co.; Water Products Div.
 - g. Red Head Manufacturing & Supply.
 - h. Or Approved Equal.
 - B. Service-Saddle Assemblies: Comply with AWWA C800. Include saddle and valve compatible with tapping machine.

1. Service Saddle: Copper alloy with seal and AWWA C800, threaded outlet for corporation valve.
 2. Corporation Valve: Bronze body and ground-key plug, with AWWA C800, threaded inlet and outlet matching service piping material.
 3. Manifold: Copper fitting with two to four inlets as required, with ends matching corporation valves and outlet matching service piping material.
- C. Curb Valves: Comply with AWWA C800. Include bronze body, ground-key plug or ball, and wide tee head, with inlet and outlet matching service piping material.
- D. Service Boxes for Curb Valves: Similar to AWWA M44 requirements for cast-iron valve boxes. Include cast-iron telescoping top section of length required for depth of burial of valve, plug with lettering "WATER," and bottom section with base that fits over curb valve and with a barrel approximately 3 inches (75 mm) in diameter.
1. Shutoff Rods: Steel, tee-handle with one pointed end, stem of length to operate deepest buried valve, and slotted end matching curb valve.

2.7 WATER METERS

- A. Water meters will be provided by Plumber.
- B. Manufacturers:
1. Basis-of-Design Product: Subject to compliance with NYC DEP requirements, provide NYC DEP water meter Elster (Amco) evoQ4 Electronic or a comparable product by one of the following:
 - a. AMCO Water Metering Systems.
 - b. Actaris
 - c. Metron-Farnier Spectrum
 - d. Or Approved Equal
- C. Single Jet or Electromagnetic Water Meters:
1. Description: With bronze main case.
 - a. Standard: AWWA C700.
 - b. Registration: Flow in gallons (liters) and cubic feet (cubic meters).
- D. Provide NYC DEP approved strainer.
- E. Provide meter with provision for AMR system and with remote reading device located on the exterior of the building. Remote reading pad location must be coordinated with Commissioner.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EARTHWORK

- A. Refer to Division 31 Section 312300 "Excavation and Fill" for excavating, trenching, and backfilling.

3.3 PIPING APPLICATIONS

- A. General: Use pipe, fittings, and joining methods for piping systems according to the following applications.
- B. Transition couplings and special fittings with pressure ratings at least equal to piping pressure rating may be used, unless otherwise indicated.
- C. Do not use flanges or unions for underground piping.
- D. Flanges, unions, and special fittings may be used, instead of joints indicated, on aboveground piping and piping in vaults.
- E. Underground water-service piping NPS 2 (DN 50) the following:
 - a. Hard Copper Tube: "Lead-Free" certified, ASTM B 88, Type K water tube, drawn temper.
 - b. Copper, Solder-Joint Fittings: "Lead-Free" certified, ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- F. Above ground water-service piping NPS 2 (DN 50) the following:
 - b. Hard Copper Tube: "Lead-Free" certified, ASTM B 88, Type L water tube, drawn temper.
 - c. Copper, Solder-Joint Fittings: "Lead-Free" certified, ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint pressure type. Furnish only wrought-copper fittings if indicated.
- G. Underground Fire-Service-Main Piping NPS 4 to NPS 8 (DN 100 to DN 200) any of the following:

1. Ductile-iron, lined, push-on-joint pipe; ductile-iron, push-on-joint fittings; and gasketed mechanical-joint pipe; ductile-iron, mechanical-joint fittings; and mechanical grooved-end pipe; ductile-iron-pipe appurtenances; and grooved joints.

3.4 VALVE APPLICATIONS

- A. General Application: Use mechanical-joint-end valves for NPS 3 (DN 80) and larger underground installation. Use threaded- or flanged-end valves for installation in vaults. Use UL/FMG, nonrising-stem gate valves for installation with indicator posts. Use corporation valves and curb valves with ends compatible with piping, for NPS 2 (DN 50) and smaller installation.
- B. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
 1. Underground Valves, NPS 3 (DN 80) and Larger: AWWA, cast-iron, nonrising-stem, resilient-seated gate valves with valve box.
 2. Underground Valves, NPS 4 (DN 100) and Larger, for Indicator Posts: UL/FMG, cast-iron, nonrising-stem gate valves with indicator post.
 3. Use the following for valves in vaults and aboveground:
 - a. Gate Valves, NPS 2 (DN 50) and Smaller: Bronze, rising stem.
 - b. Gate Valves, NPS 3 (DN 80) and Larger: AWWA, UL/FMG, cast iron, OS&Y rising stem.

3.5 PIPING SYSTEMS - COMMON REQUIREMENTS

- A. See Division 22 Section 220500 "Common Work Results for Plumbing" for piping-system common requirements.

3.6 PIPING INSTALLATION

- A. Water-Main Connection: Arrange with utility company for tap of size and in location indicated in water main.
- B. Water-Main Connection: Tap water main according to requirements of water utility company and of size and in location indicated.
- C. Make connections larger than NPS 2 (DN 50) with tapping machine according to the following:
 1. Install tapping sleeve and tapping valve according to MSS SP-60.
 2. Install tapping sleeve on pipe to be tapped. Position flanged outlet for gate valve.
 3. Use tapping machine compatible with valve and tapping sleeve; cut hole in main. Remove tapping machine and connect water-service piping.
 4. Install gate valve onto tapping sleeve. Comply with MSS SP-60. Install valve with stem pointing up and with valve box.

- D. Make connections NPS 2 (DN 50) and smaller with drilling machine according to the following:
 - 1. Install service-saddle assemblies and corporation valves in size, quantity, and arrangement required by utility company standards.
 - 2. Install service-saddle assemblies on water-service pipe to be tapped. Position outlets for corporation valves.
 - 3. Use drilling machine compatible with service-saddle assemblies and corporation valves. Drill hole in main. Remove drilling machine and connect water-service piping.
 - 4. Install corporation valves into service-saddle assemblies.
 - 5. Install manifold for multiple taps in water main.
 - 6. Install curb valve in water-service piping with head pointing up and with service box.
- E. Comply with NFPA 24 for fire-service-main piping materials and installation.
 - 1. Install copper tube and fittings according to CDA's "Copper Tube Handbook."
- F. Install ductile-iron, water-service piping according to AWWA C600 and AWWA M41.
- G. Install PE pipe according to ASTM D 2774 and ASTM F 645.
- H. Install PVC, AWWA pipe according to ASTM F 645 and AWWA M23.
- I. Bury piping with depth of cover over top at least 48 inches, below level of maximum frost penetration.
- J. Extend water-service piping and connect to water-supply source and building-water-piping systems at outside face of building wall in locations and pipe sizes indicated.
 - 1. Terminate water-service piping at building wall until building-water-piping systems are installed. Terminate piping with caps, plugs, or flanges as required for piping material. Make connections to building-water-piping systems when those systems are installed.
- K. Sleeves are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- L. Mechanical sleeve seals are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- M. Install underground piping with restrained joints at horizontal and vertical changes in direction. Use restrained-joint piping, thrust blocks, anchors, tie-rods and clamps, and other supports.

3.7 JOINT CONSTRUCTION

- A. See Division 22 0500 Section 220500 "Common Work Results for Plumbing" for basic piping joint construction.
- B. Make pipe joints according to the following:

1. Ductile-Iron Piping, Gasketed Joints for Water-Service Piping: AWWA C600 and AWWA M41.
2. Ductile-Iron Piping, Gasketed Joints for Fire-Service-Main Piping: UL 194.
3. Ductile-Iron Piping, Grooved Joints: Cut-groove pipe. Assemble joints with grooved-end, ductile-iron-piping couplings, gaskets, lubricant, and bolts according to coupling manufacturer's written instructions.
4. PE Piping Insert-Fitting Joints: Use plastic insert fittings and fasteners according to fitting manufacturer's written instructions.
5. PVC Piping Gasketed Joints: Use joining materials according to AWWA C900. Construct joints with elastomeric seals and lubricant according to ASTM D 2774 or ASTM D 3139 and pipe manufacturer's written instructions.
6. Dissimilar Materials Piping Joints: Use adapters compatible with both piping materials, with OD, and with system working pressure. Refer to Division 22 Section 220500 "Common Work Results for Plumbing" for joining piping of dissimilar metals.

3.8 ANCHORAGE INSTALLATION

- A. Anchorage, General: Install water-distribution piping with restrained joints. Anchorages and restrained-joint types that may be used include the following:
 1. Concrete thrust blocks.
 2. Locking mechanical joints.
 3. Set-screw mechanical retainer glands.
 4. Bolted flanged joints.
 5. Heat-fused joints.
 6. Pipe clamps and tie rods.
- B. Install anchorages for tees, plugs and caps, bends, crosses, valves, and hydrant branches. Include anchorages for the following piping systems:
 1. Gasketed-Joint, Ductile-Iron, Water-Service Piping: According to AWWA C600.
 2. Gasketed-Joint, PVC Water-Service Piping: According to AWWA M23.
 3. Fire-Service-Main Piping: According to NFPA 24, 2010 Edition.
- C. Apply full coat of asphalt or other acceptable corrosion-resistant material to surfaces of installed ferrous anchorage devices.

3.9 VALVE INSTALLATION

- A. AWWA Gate Valves: Comply with AWWA C600 and AWWA M44. Install each underground valve with stem pointing up and with valve box.
- B. UL/FMG, Gate Valves: Comply with NFPA 24-2010. Install each underground valve and valves in vaults with stem pointing up and with vertical cast-iron indicator post.
- C. MSS Valves: Install as component of connected piping system.

- D. Corporation Valves and Curb Valves: Install each underground curb valve with head pointed up and with service box.

3.10 WATER METER INSTALLATION

- A. Install water meters, piping, and specialties according to utility company's written instructions.
- B. Water Meters: Include shutoff valves on water meter inlets and outlets and valved bypass around meters. Support meters, valves, and piping on brick or concrete piers.

3.11 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. See Division 22 Section 220500 "Common Work Results for Plumbing" for piping connections to valves and equipment.
- C. Connect water-distribution piping to utility water main. Use tapping sleeve and tapping valve or service clamp and corporation valve.
- D. Connect water-distribution piping to interior domestic water and fire-suppression piping.

3.12 FIELD QUALITY CONTROL

- A. Piping Tests: Conduct piping tests before joints are covered and after concrete thrust blocks have hardened sufficiently. Fill pipeline 24 hours before testing and apply test pressure to stabilize system. Use only potable water.
- B. Hydrostatic Tests: Test at not less than one-and-one-half times working pressure for two hours.
 - 1. Increase pressure in 50-psig (350-kPa) increments and inspect each joint between increments. Hold at test pressure for 1 hour; decrease to 0 psig (0 kPa). Slowly increase again to test pressure and hold for 1 more hour. Maximum allowable leakage is 2 quarts (1.89 L) per hour per 100 joints. Remake leaking joints with new materials and repeat test until leakage is within allowed limits.
- C. Prepare reports of testing activities.

3.13 IDENTIFICATION

- A. Install continuous underground detectable warning tape during backfilling of trench for underground water-distribution piping. Locate below finished grade, directly over piping. Underground warning tapes are specified in Division 31 Section 312300 "Excavation and Fill".

- B. Permanently attach equipment nameplate or marker indicating plastic water-service piping, on main electrical meter panel. See Division 22 Section 220500 "Common Work Results for Plumbing" for identifying devices.

3.14 CLEANING

- A. Clean and disinfect water-distribution piping as follows:
 - 1. Purge new water-distribution piping systems and parts of existing systems that have been altered, extended, or restored before use.
 - 2. Use purging and disinfecting procedure use procedure described in NFPA 24-2010 for flushing of piping. Flush piping system with clean, potable water until dirty water does not appear at points of outlet.
 - 3. Use purging and disinfecting use procedure described in AWWA C651 or do as follows:
 - a. Fill system or part of system with water/chlorine solution containing at least 50 ppm of chlorine; isolate and allow to stand for 24 hours.
 - b. Drain system or part of system of previous solution and refill with water/chlorine solution containing at least 200 ppm of chlorine; isolate and allow to stand for 3 hours.
 - c. After standing time, flush system with clean, potable water until no chlorine remains in water coming from system.
 - d. Submit water samples for test to an inspection lab as directed by the Commissioner. Repeat procedure if biological examination shows evidence of contamination.
- B. Prepare reports of purging and disinfecting activities.

END OF SECTION 221113

SECTION 22 11 16

DOMESTIC WATER PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes domestic water piping inside the building.
- B. See Division 22 Section 221113 "Facility Water Distribution" for water-service piping and water meters outside the building from source to the point where water-service piping enters the building.
- C. See Division 22 Section 221119 "Domestic Water Piping Specialties" for water distribution piping specialties.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Field quality-control test reports.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements".
- B. Comply with NSF 14, "Plastics Piping System Components and Related Materials," for plastic, potable domestic water piping and components.
- C. "LEAD-FREE" Certification: copper pipes and other materials used in domestic water cold and hot water systems must be "LEAD-FREE" certified.

- D. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9," for potable domestic water piping and components.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Refer to Part 3 "Pipe and Fitting Applications" Article for applications of pipe, tube, fitting, and joining materials.
- B. Transition Couplings for Aboveground Pressure Piping: Coupling or other manufactured fitting the same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.
- C. Soft Copper Tube: "LEAD-FREE" certified, ASTM B 88, Types K and L (ASTM B 88M, Types A and B), water tube, annealed temper.
 - 1. Copper Pressure Fittings: "LEAD-FREE" certified, ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
 - 2. Bronze Flanges: "LEAD-FREE" certified, ASME B16.24, Class 150, with solder-joint ends. Furnish Class 300 flanges if required to match piping.
 - 3. Copper Unions: "LEAD-FREE" certified, MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.
- D. Hard Copper Tube: "LEAD-FREE" certified, ASTM B 88, Types L and M (ASTM B 88M, Types B and C), water tube, drawn temper.
 - 1. Copper Pressure Fittings: "LEAD-FREE" certified, ASME B16.18, cast-copper-alloy or ASME B16.22, wrought-copper, solder-joint fittings. Furnish wrought-copper fittings if indicated.
 - 2. Bronze Flanges: "LEAD-FREE" certified, ASME B16.24, Class 150, with solder-joint ends. Furnish Class 300 flanges if required to match piping.
 - 3. Copper Unions: "LEAD-FREE" certified, MSS SP-123, cast-copper-alloy, hexagonal-stock body, with ball-and-socket, metal-to-metal seating surfaces, and solder-joint or threaded ends.

2.2 VALVES

- A. Bronze and cast-iron, general-duty valves are specified in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping."
- B. Balancing and drain valves are specified in Division 22 Section 221119 "Domestic Water Piping Specialties."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXCAVATION

- A. Excavating, trenching, and backfilling are specified in Division 31 Section 312300 "Excavation and Fill".

3.3 PIPE AND FITTING APPLICATIONS

- A. Transition and special fittings with pressure ratings at least equal to piping rating may be used in applications below, unless otherwise indicated.
- B. Flanges may be used on aboveground piping, unless otherwise indicated.
- C. Fitting Option: Extruded-tee connections and brazed joints may be used on aboveground copper tubing.
- D. Under-Building-Slab, Water-Service Piping on Service Side of Water Meter: Refer to Division 22 Section 221113 "Facility Water Distribution Piping."
- E. Domestic Water Piping on Service Side of Water Meter inside the Building: Use the following piping materials for each size range:
 - 1. NPS 2: Hard copper tube, Type L; copper pressure fittings; and soldered joints.
- F. Under-Building-Slab, Domestic Water Piping on House Side of Water Meter, NPS 4 (DN 100) and Smaller: Hard copper tube, Type K; brazed joints.
- G. Aboveground Domestic Water Piping: Use any of the following piping materials for each size range:
 - 1. NPS 1 (DN 25) and Smaller: Hard copper tube, Type L (Type B); copper pressure fittings; and soldered joints.
 - 2. NPS 1-1/4 and NPS 1-1/2 (DN 32 and DN 40): Hard copper tube, Type L (Type B) copper pressure fittings; and soldered joints.
 - 3. NPS 2 (DN 50): Hard copper tube, Type L (Type B); copper pressure fittings; and brazed joints.

3.4 VALVE APPLICATIONS

- A. Drawings indicate valve types to be used. Where specific valve types are not indicated, the following requirements apply:
1. Shutoff Duty: Use bronze ball or gate valves for piping NPS 2 (DN 50) and smaller. Use cast-iron gate valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
 2. Throttling Duty: Use bronze ball or globe valves for piping NPS 2 (DN 50) and smaller. Use cast-iron butterfly valves with flanged ends for piping NPS 2-1/2 (DN 65) and larger.
 3. Hot-Water-Piping, Balancing Duty: Memory-stop balancing valves.
 4. Drain Duty: Hose-end drain valves.
- B. Install shutoff valve close to water main on each branch and riser serving plumbing fixtures or equipment, on each water supply to equipment, and on each water supply to plumbing fixtures that do not have supply stops. Use ball or gate valves for piping NPS 2 (DN 50) and smaller. Use butterfly or gate valves for piping NPS 2-1/2 (DN 65) and larger.
- C. Install drain valves for equipment at base of each water riser, at low points in horizontal piping, and where required to drain water piping.
1. Install hose-end drain valves at low points in water mains, risers, and branches.
 2. Install stop-and-waste drain valves where indicated.
- D. Install balancing valve in each hot-water circulation return branch and discharge side of each pump and circulator. Set balancing valves partly open to restrict but not stop flow. Use ball valves for piping NPS 2 (DN 50) and smaller and butterfly valves for piping NPS 2-1/2 (DN 65) and larger. Balancing valves are specified in Division 22 Section 221119 "Domestic Water Piping Specialties."
- E. Install calibrated balancing valves in each hot-water circulation return branch and discharge side of each pump and circulator. Set calibrated balancing valves partly open to restrict but not stop flow. Calibrated balancing valves are specified in Division 22 Section 221119 "Domestic Water Piping Specialties."

3.5 PIPING INSTALLATION

- A. Basic piping installation requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- B. Install under-building-slab copper tubing according to CDA's "Copper Tube Handbook."
- C. Install cast-iron or steel sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section 220500 "Common Work Results for Plumbing."

- D. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance. Drain valves and strainers are specified in Division 22 Section 221119 "Domestic Water Piping Specialties."
- E. Install domestic water piping level without pitch and plumb.
- F. Rough-in domestic water piping for water-meter installation according to utility company's requirements.

3.6 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- B. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.
- C. Extruded-Tee Connections: Form tee in copper tube according to ASTM F 2014. Use tool designed for copper tube; drill pilot hole, form collar for outlet, dimple tube to form seating stop, and braze branch tube into collar.

3.7 ROUGHING-IN FOR WATER METERS

- A. Rough-in domestic water piping for water meter installation according to utility company's requirements.

3.8 HANGER AND SUPPORT INSTALLATION

- A. Pipe hanger and support devices are specified in Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
 - 1. Vertical Piping: MSS Type 8 or Type 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs: According to the following:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m): MSS Type 49, spring cushion rolls, if indicated.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Install supports according to Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced 1 size for double-rod hangers, to a minimum of 3/8 inch (10 mm).
- E. Install supports for vertical steel piping every 15 feet (4.5 m).
- F. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 3/4 (DN 20) and Smaller: 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 1 and NPS 1-1/4 (DN 25 and DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 - 3. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 - 4. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
 - 5. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
- G. Install supports for vertical copper tubing every 10 feet (3 m).
- H. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.9 CONNECTIONS

- A. Install piping adjacent to equipment and machines to allow service and maintenance.
- B. Connect domestic water piping to exterior water-service piping. Use transition fitting to join dissimilar piping materials.
- C. Connect domestic water piping to water-service piping with shutoff valve, and extend and connect to the following:
 - 1. Booster Pumps: Cold-water suction and discharge piping.
 - 2. Water Heaters: Cold-water supply and hot-water outlet piping in sizes indicated, but not smaller than sizes of water heater connections.
 - 3. Plumbing Fixtures: Cold- and hot-water supply piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 22 Section 224000 "Plumbing Fixtures."
 - 4. Equipment: Cold- and hot-water supply piping as indicated, but not smaller than equipment connections. Provide shutoff valve and union for each connection. Use flanges instead of unions for NPS 2-1/2 (DN 65) and larger.

3.10 FIELD QUALITY CONTROL

- A. Inspect domestic water piping as follows:

1. Do not enclose, cover, or put piping into operation until it has been inspected and approved by Commissioner.
 2. During installation, notify Commissioner before inspection must be made. Perform tests specified below:
 - a. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
 - b. Final Inspection: Arrange final inspection for Commissioner to observe tests specified below and to ensure compliance with requirements.
 3. Reinspection: If Commissioner finds that piping will not pass test or inspection, make required corrections and arrange for reinspection.
 4. Reports: Prepare inspection reports and have them signed by Commissioner.
- B. Test domestic water piping as follows:
1. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
 2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or restored leak free. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
 3. Leave new, altered, extended, or replaced domestic water piping uncovered and unconcealed until it has been tested and approved. Expose work that was covered or concealed before it was tested.
 4. Cap and subject piping to static water pressure of 50 psig (345 kPa) above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be restored.
 5. Repair leaks and defects with new materials and retest piping or portion thereof until satisfactory results are obtained.
 6. Prepare reports for tests and required corrective action.

3.11 CLEANING

- A. Clean and disinfect potable domestic water piping using purging and disinfecting procedures prescribed by NFPA 24, 2007.
- B. Submit water samples in sterile bottles to testing agency as determined by Commissioner. Repeat procedures if biological examination shows contamination.
- C. Prepare and submit reports of purging and disinfecting activities.

END OF SECTION 221116

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 11 19

DOMESTIC WATER PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following domestic water piping specialties:
1. Vacuum breakers.
 2. Backflow preventers.
 3. Balancing valves.
 4. Temperature-actuated water mixing valves.
 5. Hose bibbs.
 6. Wall hydrants.
 7. Hose Stations
 8. Drain valves.
 9. Water hammer arresters.
 10. Trap-seal primer valves.
- B. See Division 22 Section 221113 "Facility Water Distribution Piping" for water meters.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Field quality-control test reports.
- C. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. NSF Compliance:
 - 1. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic domestic water piping components.
 - 2. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9."

1.6 LEAD-FREE” CERTIFICATION

- A. All products used in Domestic Water cold and hot water systems must be “LEAD-FREE” certified.

1.7 PERFORMANCE REQUIREMENTS

- A. Minimum Working Pressure for Domestic Water Piping Specialties: 125 psig (860 kPa), unless otherwise indicated.

PART 2 - PRODUCTS

2.1 VACUUM BREAKERS

- A. Pipe-Applied, Pressure-Type, Spill-Resistant Vacuum Breakers:
 - 1. Basis-of- Design Product: Subject to compliance with requirements, provide vacuum breaker Watts Model LF008CQT-SC or comparable product by one of the following:
 - a. Ames Co.
 - b. Cash Acme.
 - c. Conbraco Industries, Inc.
 - d. FEBCO; SPX Valves & Controls.
 - e. Zurn Plumbing Products Group; Wilkins Div.
 - f. Or Approved Equal.
 - 2. Standard: ASSE 1001.
 - 3. “LEAD-FREE” Certification: Required
 - 4. Size: NPS 1/4 to NPS 3 (DN 8 to DN 80), as required to match connected piping.
 - 5. Body: Bronze.
 - 6. Inlet and Outlet Connections: Threaded.
 - 7. Finish: Chrome plated.
- B. Hose-Connection Vacuum Breakers:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Arrowhead Brass Products, Inc.
 - b. Cash Acme.
 - c. Conbraco Industries, Inc.
 - d. Legend Valve.
 - e. MIFAB, Inc.
 - f. Prier Products, Inc.
 - g. Watts Industries, Inc.; Water Products Div.
 - h. Woodford Manufacturing Company.
 - i. Zurn Plumbing Products Group; Light Commercial Operation.
 - j. Zurn Plumbing Products Group; Wilkins Div.
 - k. Or Approved Equal.
2. Standard: ASSE 1001.
3. “LEAD-FREE” Certification: Required
4. Body: Bronze, nonremovable, with manual drain.
5. Outlet Connection: Garden-hose threaded complying with ASME B1.20.7.
6. Finish: Chrome or nickel plated.

2.2 BACKFLOW PREVENTERS

A. Reduced-Pressure-Principle Backflow Preventers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide “LEAD-FREE” certified, backflow preventer by Wilkins Model 975XL-MS with Flood Control System Zurn Model FCIS, which includes Solenoid Control Valve Zurn Model ZW206 and signal Relay Zurn Model EST or comparable product by one of the following:
 - a. Wilkins.
 - b. Febco.
 - c. AMES.
 - d. Or Approved Equal.
1. Standard: ASSE 1013.
2. “LEAD-FREE” Certification: Required
3. Operation: Continuous-pressure applications.
4. Pressure Loss: 13 psig (83 kPa) maximum, through middle 1/3 of flow range.
5. Size: 1-1/2”.
6. Body: Bronze.
7. End Connections: Threaded.
8. Configuration: Designed for horizontal, straight through flow.
9. Accessories:
 - a. Valves: Outside screw and yoke gate-type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.

- b. Air-Gap Fitting: ASME A112.1.2, matching backflow-preventer connection, Model MG.
 - c. Integral Relief Valve Monitoring Switch with dry contact to transmit signal to remote location.
 - d. Alarm Signal must be transmitted to BMS.
10. Device must be installed as per NYC DEP Cross-Connection requirements and in compliance with approved application. Device must be provided with air gap fitting and integral Relief monitoring switch. All deviations from the approved application must be brought to the attention of Commissioner prior to the installation.

B. Double-Check Detector Backflow-Prevention Assemblies:

1. Basis-of-Design Product: Subject to compliance with requirements, provide “LEAD-FREE” certified, backflow preventer by Wilkins Model 350 DA or comparable product by one of the following:
 - a. Wilkins.
 - b. Febco.
 - c. AMES.
 - d. Or Approved Equal.
2. Standard: ASSE 1015.
3. “LEAD-FREE” Certification: Required
4. listing: UL Listed
5. Operation: Continuous-pressure applications, unless otherwise indicated.
6. Size: 3”.
7. Pressure Loss at Design Flow Rate: 8 psig.
8. Body: ductile iron with interior lining complying with AWWA C550 or that is FDA approved.
9. End Connections: Flanged for NPS 2-1/2 (DN 65) and larger.
10. Configuration: Designed for horizontal, straight through.
11. Accessories:
 - a. Valves: outside screw and yoke gate-type with flanged ends on inlet and outlet of NPS 2-1/2 (DN 65) and larger.
 - b. NYC Approved 3/4” meter and RPZ on by-pass.
12. Device must be installed as per NYC DEP Cross-Connection requirements and in compliance with approved application. All deviations from the approved application must be brought to the attention of Commissioner prior to the installation.

C. Backflow-Preventer Test Kits:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Wilkins.
 - b. Febco.

- c. AMES.
 - d. Approved Equal.
2. Description: Factory calibrated, with gages, fittings, hoses, and carrying case with test-procedure instructions.

2.3 BALANCING VALVES

A. Basis-of-Design Product: Subject to compliance with requirements, provide memory-stop balancing valves Watts Model LFCSM-61 or comparable product by one of the following:

1. Conbraco Industries, Inc.
2. Crane Co.; Crane Valve Group; Crane Valves.
3. Milwaukee Valve Company.
4. NIBCO INC.
5. Red-White Valve Corp.
6. Or Approved Equal.

B. Description:

1. Standard: MSS SP-110 for two-piece, copper-alloy ball valves.
2. “LEAD-FREE” Certification: Required
3. Pressure Rating: 400-psig (2760-kPa) minimum CWP.
4. Size: NPS 2 (DN 50) or smaller.
5. Body: Brass or Copper alloy.
6. Port: Standard or full port.
7. Ball: Chrome-plated brass.
8. Seats and Seals: Replaceable.
9. End Connections: Solder joint or threaded.
10. Handle: Vinyl-covered steel with memory-setting device.

2.4 TEMPERATURE-ACTUATED WATER MIXING VALVES

A. Basis-of-Design Product: Subject to compliance with requirements, provide Thermostatic Mixing Valve, high-low Parallel Installation, with adjustable high temperature limit stop and inlet check stops, Leonard TM-26-LF or HOLBY Valve or comparable product by one of the following:

1. Armstrong International, Inc.
2. Leonard Valve Company.
3. Symmons Industries, Inc.
4. Approved Equal.

B. Description:

1. Standard: ASSE 1017.
2. “LEAD-FREE” Certification: Required
3. Pressure Rating: 125 psig (860 kPa).

4. Type: Exposed-mounting, thermostatically controlled water mixing valve.
5. Material: Bronze body with corrosion-resistant interior components.
6. Connections: Union inlets and outlet.
7. Accessories: Manual temperature control, check stops on hot- and cold-water supplies, and adjustable, temperature-control handle.
8. Valve Pressure Rating: 125 psig (860 kPa) minimum, unless otherwise indicated.
9. Tempered-Water Setting: 90 deg F.
11. Tempered-Water Design Flow Rates: Varies.
12. Valve Finish: Rough bronze.
13. Piping Finish: Copper.

2.5 HOSE BIBB:

- A. Basic-of-Design Product: Subject to compliance with requirements, provide hose bibb Woodford Model 24 or comparable product by one of the following:

1. Leonard.
2. Armstrong.
3. Woodford.
4. Approved Equal.

B. Description:

1. Standard: ASSE 1011.
2. Body Material: Bronze.
3. Seat: Bronze, replaceable.
4. Supply Connections: NPS 1/2 or NPS 3/4 (DN 15 or DN 20) threaded or solder-joint inlet.
5. Outlet Connection: Garden-hose thread complying with ASME B1.20.7.
6. Pressure Rating: 125 psig (860 kPa).
7. Vacuum Breaker: Integral, nonremovable, drainable, hose-connection vacuum breaker complying with ASSE 1011.
8. Finish for Equipment Rooms: Rough bronze, or chrome or nickel plated.
9. Finish for Service Areas: Rough bronze.
10. Finish for Finished Rooms: Chrome or nickel plated.
11. Operation for Equipment Rooms: Wheel handle or operating key.
12. Operation for Service Areas: Wheel handle.
13. Operation for Finished Rooms: Operating key.
14. Include operating key with each operating-key hose bibb.
15. Include wall flange with each chrome- or nickel-plated hose bibb.

2.6 WALL HYDRANTS

- A. Basic-of-Design Product: Subject to compliance with requirements, provide bronze nickel plated, quarter turn, non-freeze Wall Hydrants WH J.R. Smith Model 5609QT-WC or comparable product by one of the following:

1. Josam Company.
2. MIFAB, Inc.
3. Watts Drainage Products Inc.
4. Zurn Plumbing Products Group; Light Commercial Operation.
5. Zurn Plumbing Products Group; Specification Drainage Operation.
6. Approved Equal.

B. Description:

1. Standard: ASME A112.21.3M for concealed-outlet, self-draining wall hydrants.
2. Pressure Rating: 125 psig (860 kPa).
3. Operation: Loose key.
4. Casing and Operating Rod: Of length required to match wall thickness. Include wall clamp.
5. Inlet: NPS 3/4 (DN 20).
6. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
7. Box: n/a
8. Backer Plate Finish: Chrome Plated.
9. Outlet: Concealed, with integral vacuum breaker and garden-hose thread complying with ASME B1.20.7.
10. Nozzle and Wall-Plate Finish: Nickel bronze.
11. Operating Keys(s): Two with each wall hydrant.
12. Vacuum breaker: Integrated

2.7 HOSE STATION and ACCESSORIES:

- A. Basic-of-Design Product:** Subject to compliance with requirements, provide Hose Station with hot and cold water inlets, thermostatic mixing valve, vacuum breaker, hose rack, hose connection, thermometer, wall support, heavy duty hose and hose nozzle, Leonard THS-25-VBD-CW or comparable product by one of the following:

1. Leonard.
2. Armstrong.
3. Woodford.
4. Approved Equal.

B. Description:

1. Pressure Rating: 125 psig (860 kPa).
2. Operation: Color coded heat resistant valves on inlets.
3. Inlets: NPS 3/4 (DN 20).
4. Box: n/a
5. Backer Plate Finish: Chrome Plated.
6. Thermostatic Mixing valve: thermostatic mixing valve and solid bimetal thermostat directly linked to valve porting.
7. Heat Resistant temperature adjusting lever.

8. Vacuum Breaker.
9. Outlet with dial thermometer (20 to 240 degree F)
10. Stainless steel hose rack.
11. 75 lf heavy duty ¾” flexible hose and hose nozzle.
12. Hose Rack: heavy-duty stainless steel hose rack.

2.8 DRAIN VALVES

A. Ball-Valve-Type, Hose-End Drain Valves:

1. Standard: MSS SP-110 for standard-port, two-piece ball valves.
2. Pressure Rating: 400-psig (2760-kPa) minimum CWP.
3. Size: NPS 3/4 (DN 20).
4. Body: Copper alloy.
5. Ball: Chrome-plated brass.
6. Seats and Seals: Replaceable.
7. Handle: Vinyl-covered steel.
8. Inlet: Threaded or solder joint.
9. Outlet: Threaded, short nipple with garden-hose thread complying with ASME B1.20.7 and cap with brass chain.

2.9 WATER HAMMER ARRESTERS

A. Water Hammer Arresters:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. AMTROL, Inc.
 - b. Josam Company.
 - c. MIFAB, Inc.
 - d. PPP Inc.
 - e. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - f. Tyler Pipe; Wade Div.
 - g. Watts Drainage Products Inc.
 - h. Zurn Plumbing Products Group; Specification Drainage Operation.
 - i. Approved Equal.
2. Standard: ASSE 1010 or PDI-WH 201.
3. “LEAD-FREE” Certification: Required
4. Type: Copper tube with piston.
5. Size: ASSE 1010, Sizes AA and A through F or PDI-WH 201, Sizes A through F.

2.10 TRAP PRIMER

A. Trap primer for floor drains in finish areas:

1. Basis-of-design Product: Subject to compliance with requirements, provide trap primer J. R. Smith “Prime-Eze” or comparable product by one of the following:
 - a. PPP Inc.
 - b. Zurn.
 - c. Mifab.
 - d. Or Approved Equal.
- B. Trap primers in mechanical rooms:
 1. Basis-of-design Product: Subject to compliance with requirements, provide electronic trap primer PPP Model MPB-500-115V with distribution unit PPP series DU for four connections or comparable product by one of the following:
 - a. J.R.Smith.
 - b. Zurn
 - c. Mifab
 - d. Or Approved Equal.
- C. Trap primer must be installed in accordance with manufacturer’s recommendations.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Refer to Division 22 Section 220500 "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.
- B. Install backflow preventers in each water supply to mechanical equipment and systems and to other equipment and water systems that may be sources of contamination. Comply requirements of NYC Department of Environmental Protection.
 1. Locate backflow preventers in same room as connected equipment or system.
 2. Install drain for backflow preventers with atmospheric-vent drain connection with air-gap fitting, fixed air-gap fitting, or equivalent positive pipe separation of at least two pipe diameters in drain piping and pipe to floor drain. Locate air-gap device attached to or under backflow preventer. Simple air breaks are not acceptable for this application.
 3. Do not install bypass piping around backflow preventers.
- C. Install water regulators with inlet and outlet shutoff valves and bypass with memory-stop balancing valve. Install pressure gages on inlet and outlet.

- D. Install balancing valves in locations where they can easily be adjusted.
- E. Install temperature-actuated water mixing valves with check stops or shutoff valves on inlets and with shutoff valve on outlet.
 - 1. Install thermometers and water regulators if specified.
 - 2. Install cabinet-type units recessed in or surface mounted on wall as specified.
- F. Install water hammer arresters in water piping according to PDI-WH 201.
- G. Install supply-type, trap-seal primer valves with outlet piping pitched down toward drain trap a minimum of 1 percent, and connect to floor-drain body, trap, or inlet fitting. Adjust valve for proper flow.
- H. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping and specialties.
- I. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each of the following:
 - 1. Intermediate atmospheric-vent backflow preventers.
 - 2. Reduced-pressure-principle backflow preventers.
 - 3. Double-check backflow-prevention assemblies.
 - 4. Water pressure-reducing valves.
 - 5. Primary, thermostatic, water mixing valves.
 - 6. Supply-type, trap-seal primer valves.
- J. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section 220553 "Identification for Plumbing Piping and Equipment."

3.3 FIELD QUALITY CONTROL

- A. Perform the following tests and prepare test reports:
 - 1. Test each reduced-pressure-principle backflow preventer and double-check backflow-prevention assembly according to NYC DEP and the device's reference standard.
- B. Remove and replace malfunctioning domestic water piping specialties and retest as specified above.

3.4 ADJUSTING

- A. Set field-adjustable pressure set points of water pressure-reducing valves.
- B. Set field-adjustable flow of balancing valves.

- C. Set field-adjustable temperature set points of temperature-actuated water mixing valves.

END OF SECTION 221119

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 22 11 23.13

DOMESTIC-WATER - PACKAGED BOOSTER PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes variable speed, duplex, packaged booster pumps for domestic water piping systems.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each packaged booster pump specified. Include certified performance curves with operating points plotted on curves; and rated capacities of selected models, furnished specialties, and accessories.
- B. Shop Drawings: For packaged booster pumps and accessories. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Wiring Diagrams: Detail power, signal, and control wiring.
- C. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, Article 100 and marked for intended use.

- C. Packaged booster pumps must be UL listed and labeled.

PART 2 - PRODUCTS

2.1 DOMESTIC WATER BOOSTER SYSTEM

- A. Provide a unitary pre-packaged domestic Water Pressure Booster Pumping System per engineering data flow, and head requirements. The entire system must be listed under UL 2011, 38LW, “Packaged Pumping System” requirements.
- B. Pumps must be end suction or vertically mounted, close coupled, centrifugal, pumps, with carbon/ceramic mechanical seals.
- C. System must fit into 40”x30” footprint.
- D. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Aurora/Pentair Pump Group
 - 2. QuantumFlo, Inc.
 - 3. ITT/Bell & Gossett, Div.
 - 4. Or Approved equal.
- E. Motors must be; 3500 RPM, High Efficiency, Class F insulated, electric motors designed for inverter duty application. The motors must be suitable for the voltage, frequency, phasing and enclosure as indicated in the pump schedule on the project plan set.
- F. Pumps and Motors: Refer to plumbing drawings for additional information.
- G. Structural Elements: The entire system must be factory skid mounted on a minimum; 304 stainless-steel structural square tube support frame, with in-shear molded rubber vibration isolators.
- H. Valves: All valves must be full port bronze ball valves, with S.S. ball and stem design for valve sizes 2 1/2" and smaller, and cast iron, epoxy coated lever operated, grooved end type butterfly valves, with stainless steel disc, and Stainless Steel shaft, for valve sizes 3" and larger. Valves must be rated for maximum pressure service for the system.
- I. Control Panel: The pumping system control panel must incorporate the following elements, and criteria:
 - 1. The pump controller must be designed for total independent redundancy and properly sized for the maximum amperage draw of each motors full load current. Each pump must have mounted and wired an individual non-fused service disconnect switch, each disconnect must have a “home run” individual feeder fed from a 3-pole circuit breaker, with ground wire.

- Conductors and ground wire must be sized per NEC recommendations. Each Pump must have its own NEMA 1 rated variable speed drive with specially designed domestic water pump software. Each drive must utilize its own 4-20mA discharge transducer and have a separate suction switch which opens upon falling pressure of 5 psi and causes the controller to shut down after 10 seconds of the low suction condition. Each pump must return to normal running condition once the low suction condition is resolved without any human intervention. Should either 4-20ma discharge transducer fail an alarm condition should be signaled and the pump which lost its transducer must read the signal from the second pump. Should both transducers fail, both drives must Alarm.
2. The controller must be assembled with the ability to go into sleep mode when the desired set-point pressure has been met for any predetermined amount of time. It must resume running when system pressure has dropped 7 psi less than the desired set point. If pump 1 runs and has reached a speed of 55 Hz, the lag pump must receive a signal through the RS485 network signal cable that the lead pump requires the assistance of the lag, and the lag pump must follow the lead pump's speed until each pump has slowed to 40 Hz. At this point the lag pump will re-enter "sleep mode". This must continue for 24 hours of run time, after which the lead will become lag and lag must become lead, or "alternate". Should both pumps be called to run for a maximum speed of 60 hz for 4 minutes without reaching their setpoint, both drives will assume a pipe has broken and shutdown, while sending an alarm signal as such.
 3. Control panels which require control circuit transformers (CCT's), Programmable Logic Controllers (PLS's) Programmable relays, non-programmable relays, timers, must not be considered equal, and have been rendered obsolete.
 - a. All components must be of standard manufacture, and not be of proprietary sole source.
 - J. Pump Sequencing: All pump sequencing must be initiated and controlled via the 4-20mA transducer. Upon pressure drop the lead pump must initiate via VFD and run to attempt to satisfy demand. The lag pump staging must be initiated by the previously called VFD when it reaches 55 Hz. In the event the pressure set point is not satisfied after a variable time delay, the lag pump must initiate to assist the lead pump in meeting demand regardless of the previously running drive call setting. After the pressure set point is reached, the pumps must continue to run for a variable off delay period to allow for motor winding "cool down", and to prevent short cycling of the pumps. After all pressures have been satisfied, and all functions have timed out, the system must revert to the stand-by mode.
 - K. Pump Thermal Relief: Provide secondary, emergency, non-electric, thermal, relief valve to prevent pumps from overheating due to dead heading condition. The protective device must relieve at 145 degrees F.
 - L. Bladder Tank: No bladder tank is recommended, or required for this type system.
 - M. Pressure Regulation: Pressure regulation is provided via the variable frequency drive controllers, with PID control. No other pressure regulators are required. In the event of any drive failure, next drive in sequence must start automatically and the failed drive must indicate a fault condition. In

the event of a loss of transducer signal, the system must maintain the last pressure setting as loaded into the VFD and maintain positive pressure on the system via the hand operator. There will be no failure of the major control components which will compromise the building pipe pressure ratings.

N. Fabrication:

1. All headers, nipples, and welded attachments to the headers must be type 304 stainless steel materials.
2. All welding must be in accordance with section IX of the ASME Boiler and Pressure Vessel code, and must be performed by welders qualified under that standard
3. The completed system must be hydrostatically tested after all appurtenances have been installed to a minimum of 1.5 times the specified system working pressure.

O. Each pump must have an individual resilient seated non-slam type check valve on each pump immediately downstream of the pump discharge.

P. All pumps must be mounted utilizing in-shear rubber vibration isolators mounted to the motor bases.

Q. All stainless-steel surfaces must be brushed or polished.

R. Start-up:

1. Initial factory start-up and instruction must be performed by a qualified factory technician. A factory certified start-up report must be provided to the Commissioner dated and signed by the factory technician.

S. Parts: A complete listing of all parts and equipment for the system must be listed using the original manufacturer's model, and serial numbers, and source information.

T. City of New York Personnel Instruction: The instruction must include, but not be limited to the following:

1. Instruction in the replacement of the motor, mechanical seals and pump impeller.
2. Safe replacement of the Control Module EEPROM chip, fuses, and pilot lamps.
3. Proper operation of the system, troubleshooting, alarm, and reset features

U. Manufacturer's Warranty: Provide 1-year warranty for package and its components. Warranty will be performed by the manufacturer or a factory representative.

PART 3 - EXECUTION

3.1 EXECUTIVE REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 CONCRETE BASES

- A. Install concrete bases of dimensions indicated for packaged booster pumps. Refer to Division 22 Section 220500 "Common Work Results for Plumbing."
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around full perimeter of base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be imbedded.
 - 4. Install anchor bolts to elevation required for proper attachment to supported equipment.
- B. Cast-in-place concrete materials and placement requirements are specified in Division 03.

3.3 BOOSTER PUMP INSTALLATION

- A. Install packaged booster pumps level on concrete bases with access for periodic maintenance including removal of pumps, motors, impellers, couplings, and accessories.
 - 1. Do not dismantle packaged booster pumps or remove individual components.
- B. Vibration Isolation: Install on spring isolators with minimum deflection of 0.75”.
- C. Support connected domestic water piping, so weight of piping is not supported by packaged booster pumps.
- D. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- E. Connect domestic water piping to packaged booster pumps. Install suction and discharge pipe equal to or greater than size of unit suction and discharge headers.
 - 1. Install shutoff valves on piping connections to each booster pump suction and discharge piping. Install ball, butterfly, or gate valves same size as suction and discharge headers. General-duty valves are specified in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping."

2. Install union or flanged connections on pump suction and discharge headers at connection to domestic water piping.
 3. Install piping adjacent to packaged booster pumps to allow service and maintenance.
- F. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems".
- G. Connect wiring according to Division 26 Section 220519 "Low-Voltage Electrical Power Conductors and Cables."
- H. Install identifying equipment markers and equipment signs on booster pumps. Labeling and identification materials are specified in Division 22 Section 220529 "Identification for Plumbing Piping and Equipment."

3.4 DEMONSTRATION

- A. Engage a factory service representative to instruct City of New York's maintenance personnel to adjust, operate, and maintain packaged booster pumps. Also refer to DDC General Conditions.

END OF SECTION 221123

SECTION 22 13 16

SANITARY WASTE AND VENT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes the following soil and waste, sanitary drainage, and vent piping inside the building:
1. Pipe, tube, and fittings.
 2. Special pipe fittings.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 "Submittal Procedures".

1.4 SUBMITTALS

- A. Field quality-control inspection and test reports.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 "Quality Requirements".
- B. Piping materials must bear label, stamp, or other markings of specified testing agency.
- C. Comply with NSF 14, "Plastics Piping Systems Components and Related Materials," for plastic piping components. Include marking with "NSF-dwv" for plastic drain, waste, and vent piping; and "NSF-drain" for plastic drain piping.

1.6 PERFORMANCE REQUIREMENTS

- A. Components and installation must be capable of withstanding the following minimum working pressure, unless otherwise indicated:

1. Soil, Waste, and Vent Piping: 10-foot head of water.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Hub-and-Spigot, Cast-Iron Pipe and Fittings: ASTM A 74, Extra Heavy Class.
 1. Gaskets: ASTM C 564, rubber.
- B. Hubless Cast-Iron Pipe and Fittings: ASTM A 888 or CISPI 301.
 1. Sovent Stack Fittings: ASME B16.45 or ASSE 1043, hubless, cast-iron aerator and deaerator drainage fittings.
 2. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
 - a. Standard, Shielded, Stainless-Steel Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve.
- C. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade A or B, Schedule 40, galvanized. Include ends matching joining method.
 1. Drainage Fittings: ASME B16.12, galvanized, threaded, cast-iron drainage pattern.
 2. Pressure Fittings:
 - a. Steel Pipe Nipples: ASTM A 733, made of ASTM A 53/A 53M or ASTM A 106, Schedule 40, galvanized, seamless steel pipe. Include ends matching joining method.
 - b. Malleable-Iron Unions: ASME B16.39; Class 150; hexagonal-stock body with ball-and-socket, metal-to-metal, bronze seating surface; and female threaded ends.
 - c. Gray-Iron, Threaded Fittings: ASME B16.4, Class 125, galvanized, standard pattern.
 - d. Cast-Iron Flanges: ASME B16.1, Class 125.
 - e. Cast-Iron, Flanged Fittings: ASME B16.1, Class 125, galvanized.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

- A. Special pipe fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.
- B. Flanges and unions may be used on aboveground pressure piping, unless otherwise indicated.
- C. Aboveground, soil, waste, and vent piping, except house drains in cellar (from bottom of risers to house trap) must be:
 - 1. Hubless cast-iron soil pipe and fittings; standard, stainless-steel couplings; and hubless-coupling joints.
- D. Underground, soil, waste and vent piping must be:
 - 1. Extra heavy class, hub-and-spigot, cast-iron soil pipe and fittings; gaskets; and compression joints
- E. Aboveground house drains in cellar (from bottom of risers to house trap) must be:
 - 1. Service weight, hub-and-spigot, cast-iron soil pipe and fittings; gaskets; and compression joints.
- F. All exposed sanitary and vent pipes must be provided with PVC Jacketing.

3.3 PIPING INSTALLATION

- A. Sanitary sewer piping outside the building is specified in Division 33 Section 334211 "Stormwater Gravity Piping".
- B. Basic piping installation requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- C. Install cleanouts at grade and extend to where building sanitary drains connect to building sanitary sewers.
- D. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- E. Install wall penetration system at each service pipe penetration through foundation wall. Make installation watertight. Wall penetration systems are specified in Division 22 Section 220500 "Common Work Results for Plumbing."

- F. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- G. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- H. Lay buried building drainage piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- I. Install soil and waste drainage and vent piping at the following minimum slopes, unless otherwise indicated:
 - 1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; 1 percent downward in direction of flow for piping NPS 4 (DN 100) and larger.
 - 2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
 - 3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.
- J. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.
- K. Do not enclose, cover, or put piping into operation until it is inspected and approved by NYC DOB.
- L. Properly restrain sanitary and vent pipes at the bottom of each riser

3.4 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- B. Cast-Iron, Soil-Piping Joints: Make joints according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
 - 1. Gasketed Joints: Make with rubber gasket matching class of pipe and fittings.
 - 2. Hubless Joints: Make with rubber gasket and sleeve or clamp.

- C. Soldered Joints: Use ASTM B 813, water-flushable, lead-free flux; ASTM B 32, lead-free-alloy solder; and ASTM B 828 procedure, unless otherwise indicated.
- D. PVC Nonpressure Piping Joints: Join piping according to ASTM D 2665.

3.5 VALVE INSTALLATION

- A. General-duty valves are specified in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping."
- B. Shutoff Valves: Install shutoff valve on each sewage pump discharge.
 - 1. Use gate or full-port ball valve for piping NPS 2 (DN 50) and smaller.
 - 2. Use gate valve for piping NPS 2-1/2 (DN 65) and larger.
- C. Check Valves: Install swing check valve, downstream from shutoff valve, on each sewage pump discharge.
- D. Backwater Valves: Install backwater valves in piping subject to sewage backflow.
 - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type, unless otherwise indicated.
 - 2. Floor Drains: Drain outlet backwater valves, unless drain has integral backwater valve.
 - 3. Install backwater valves in accessible locations.
 - 4. Backwater valves are specified in Division 22 Section 221319 "Sanitary Waste Piping Specialties."

3.6 HANGER AND SUPPORT INSTALLATION

- A. Pipe hangers and supports are specified in Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
 - 1. Vertical Piping: MSS Type 8 or Type 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs: According to the following:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, through deck steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m), if Indicated: MSS Type 49, spring cushion rolls.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Install supports according to Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."

- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
 - 3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
 - 4. NPS 6 (DN 150): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
 - 5. Spacing for 10-foot (3-m) lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).
- F. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).
- G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 1-1/4 (DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 - 3. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
 - 4. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
 - 5. NPS 3 (DN 80): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
 - 6. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
 - 7. NPS 6 (DN 150): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
- H. Install supports for vertical steel piping every 15 feet (4.5 m).
- I. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 1-1/4 (DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 - 3. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
 - 4. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
 - 5. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
- J. Install supports for vertical copper tubing every 10 feet (3 m).
- K. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.7 CONNECTIONS

- A. Connect soil and waste piping to exterior sanitary sewerage piping. Use transition fitting to join dissimilar piping materials.
- B. Connect drainage and vent piping to the following:
 - 1. Plumbing Fixtures: Connect drainage piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 22 Section 221319 "Sanitary Waste Piping Specialties."
 - 2. Plumbing Fixtures and Equipment: Connect atmospheric vent piping in sizes indicated.
 - 3. Plumbing Specialties: Connect drainage and vent piping in sizes indicated, but not smaller than required by plumbing code. Refer to Division 22 Section 221319 "Sanitary Waste Piping Specialties."
 - 4. Equipment: Connect drainage piping as indicated. Provide shutoff valve, if indicated, and union for each connection. Use flanges instead of unions for connections NPS 2-1/2 (DN 65) and larger.

3.8 FIELD QUALITY CONTROL

- A. During installation, notify Commissioner at least 24 hours before inspection must be made. Perform tests specified below in presence of Commissioner.
 - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in and before setting fixtures.
 - 2. Final Inspection: Arrange for final inspection by Commissioner to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If Commissioner finds that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by Commissioner.
- D. Test sanitary drainage and vent piping.
 - 1. Fix leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
 - 2. Prepare reports for tests and required corrective action.

3.9 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.

- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION 221316

SECTION 22 13 19

SANITARY WASTE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following sanitary drainage piping specialties:

1. Cleanouts.
2. Floor drains.
3. Trench Drain (in Locker Rooms)
4. Standpipe.
5. Roof flashing assemblies.
6. Miscellaneous sanitary drainage piping specialties.
7. Flashing materials.
8. Backwater valves.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Trench Drainage System: Provide shop drawings showing trench layout with all dimensions and components and submittals for all components.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Drainage piping specialties must bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 CLEANOUTS

A. Exposed Cast-Iron Cleanouts:

1. Manufacturers:

- a. Josam Company; Josam Div.
- b. MIFAB, Inc.
- c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
- d. Tyler Pipe; Wade Div.
- e. Watts Drainage Products Inc.
- f. Zurn Plumbing Products Group; Specification Drainage Operation.
- g. Approved Equal.

2. Standard: ASME A112.36.2M.

3. Size: Same as connected drainage piping

4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.

5. Closure: brass plug.

6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.

B. Cast-Iron Floor Cleanouts:

1. Manufacturers:

- a. Josam Company; Josam Div.
- b. Oatey.
- c. Sioux Chief Manufacturing Company, Inc.
- d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
- e. Tyler Pipe; Wade Div.
- f. Watts Drainage Products Inc.
- g. Zurn Plumbing Products Group; Light Commercial Operation.
- h. Zurn Plumbing Products Group; Specification Drainage Operation.
- i. Approved Equal.

2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.

3. Size: Same as connected branch.

4. Type: Threaded, adjustable housing.

5. Body or Ferrule: Ductile iron.

6. Clamping Device: Not required.

7. Outlet Connection: Inside calk.

8. Closure: Brass plug with tapered threads.
9. Adjustable Housing Material: Cast iron with threads.
10. Frame and Cover Material and Finish: Nickel-bronze.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Heavy duty.
13. Riser: ASTM A 74, Service class, cast-iron drainage pipe fitting and riser to cleanout.

C. Cast-Iron Wall Cleanouts:

1. Manufacturers:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
 - g. Or Approved Equal.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: drilled-and-threaded brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, flat, stainless steel cover plate with screw.

2.2 FLOOR DRAINS FD-1

A. Basis-of-Design Product: Subject to compliance with requirements, provide floor Drains FD-1 in showers, bathrooms and other finish areas, cast iron with flashing collar and adjustable strainer head, trap primer connection, J.R.Smith Model 2005-A-075 or comparable product by one of the following:

1. Commercial Enameling Co.
2. Josam Company; Josam Div.
3. MIFAB, Inc.
4. Prier Products, Inc.
5. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
6. Tyler Pipe; Wade Div.
7. Watts Drainage Products Inc.
8. Zurn Plumbing Products Group; Light Commercial Operation.
9. Zurn Plumbing Products Group; Specification Drainage Operation.
10. Or Approved Equal.

B. Description:

1. Standard: ASME A112.6.3.
2. Pattern: Floor drain.
3. Body Material: Duco cast iron.
4. Seepage Flange: Required.
5. Anchor Flange: Required.
6. Clamping Device: Required.
7. Outlet: Bottom.
8. Backwater Valve: Not required.
9. Coating on Interior and Exposed Exterior Surfaces: Not required.
10. Sediment Bucket: Not required.
11. Top or Strainer Material: Nickel bronze.
12. Top of Body and Strainer Finish: Nickel bronze.
13. Top Shape: Round.
14. Dimensions of Top or Strainer: 5”.
15. Top Loading Classification: Light Duty.
16. Funnel: Required where shown on contract drawings.
17. Inlet Fitting: Not required.
18. Trap Material: Cast iron.
19. Trap Pattern: P-trap.
20. Trap Priming: Required.

2.3 FLOOR DRAINS FD-2

- A. Basis-of-Design Product: Subject to compliance with requirements, provide medium duty cast iron with flashing clamp, adjustable cast iron tractor nickel bronze top grate, “safe-set” sediment bucket and trap primer Floor Drains FD-2 in Utility Room and other similar areas, J.R. Smith Model 2360-P075- U-NB or comparable product by one of the following:

1. Commercial Enameling Co.
2. Josam Company; Josam Div.
3. MIFAB, Inc.
4. Prier Products, Inc.
5. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
6. Tyler Pipe; Wade Div.
7. Watts Drainage Products Inc.
8. Zurn Plumbing Products Group; Light Commercial Operation.
9. Zurn Plumbing Products Group; Specification Drainage Operation.
10. Approved Equal.

B. Description:

1. Standard: ASME A112.6.3.
2. Pattern: Floor drain.
3. Body Material: Duco cast iron.
4. Seepage Flange: Required.
5. Anchor Flange: Required.

6. Clamping Device: Required.
7. Outlet: Bottom.
8. Backwater Valve: Not required.
9. Coating on Interior and Exposed Exterior Surfaces: Not required.
10. Sediment Bucket: Required.
11. Top or Strainer Material: Nickel bronze.
12. Top of Body and Strainer Finish: Nickel bronze.
13. Top Shape: Round.
14. Dimensions of Top or Strainer: 12”.
15. Top Loading Classification: Medium Duty.
16. Funnel: Required where shown on contract drawings.
17. Inlet Fitting: Not required.
18. Trap Material: Cast iron.
19. Trap Pattern: P-trap.
20. Trap Priming: Required where shown on drawings.

2.4 TRENCH DRAINS (in LOCKER ROOMS)

- A. Basis-of-Design Product: Subject to compliance with requirements, provide trench drains TD in locker rooms 316 stainless steel with vandal proof ADA compliant perforated inlay grating, flashing flange and clamp and 2” bottom outlet, J.R.Smith Model 9666-FS-316 or comparable product by one of the following:

1. Zurn
2. TDS
3. MIFAB, Inc.
4. Approved Equal.

2.5 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES

- A. Open Drains (standpipe):

1. Description: Shop or field fabricate from ASTM A 74, Service class, hub-and-spigot, cast-iron, soil-pipe fittings. Include P-trap, 18” long hub-and-spigot riser section; and where required, increaser fitting joined with ASTM C 564, rubber gaskets.
2. Size: Same as connected waste piping.

- B. Floor-Drain, Trap-Seal Primer Fittings:

1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
2. Size: Same as floor drain outlet with NPS 1/2 (DN 15) side inlet.

- C. Air-Gap Fittings:

1. Standard: ASME A112.1.2, for fitting designed to ensure fixed, positive air gap between installed inlet and outlet piping.
2. Body: Bronze or cast iron.
3. Inlet: Opening in top of body.
4. Outlet: Larger than inlet.
5. Size: Same as connected waste piping and with inlet large enough for associated indirect waste piping.

D. Funnel Drain:

1. Basis-of-Design Product: Subject to compliance with requirements, provide duco cast iron funnel drain with acid resistant coated interior and exterior with no-hub adaptor, 4” outlet, J.R.Smith Figure 3821 or comparable product by one of the following:
 - a. Zurn.
 - b. Wade.
 - c. MIFAB, Inc.
 - d. Or Approved Equal.

2.6 FLASHING MATERIALS

- A. Lead Sheet: ASTM B 749, Type L51121, copper bearing, with the following minimum weights and thicknesses, unless otherwise indicated:
 1. General Use: 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness.
 2. Vent Pipe Flashing: 3.0-lb/sq. ft. (15-kg/sq. m), 0.0469-inch (1.2-mm) thickness.
 3. Burning: 6-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness.
- B. Fasteners: Metal compatible with material and substrate being fastened.
- C. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- D. Solder: ASTM B 32, lead-free alloy.
- E. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

2.7 BACKWATER VALVE

- A. Horizontal, Cast-Iron Backwater Valves:
 1. Basis-of-Design Product: Subject to compliance with requirements, provide backwater valve Model 7012 manufactured by J.R.Smith or a comparable product by one of the following:

- a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfr. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
 - g. Approved Equal.
2. Standard: ASME A112.14.1.
 3. Size: Same as connected piping.
 4. Body: Cast iron.
 5. Cover: Cast iron with threaded access check valve.
 6. End Connections: Hub and Spigot.
 7. Type Check Valve: Removable, bronze, swing check, factory assembled or field modified to hang ¼" open for airflow unless subject to backflow condition.
 8. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Refer to Division 22 Section 220500 "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.
- B. Install backwater valves in building drain piping. For interior installation, provide cleanout deck plate flush with floor and centered over backwater valve cover, and of adequate size to remove valve cover for servicing.
- C. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
 1. Size same as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
 2. Locate at each change in direction of piping greater than 45 degrees.
 3. Locate at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
 4. Locate at base of each vertical soil and waste stack.

- D. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- E. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- F. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
 - 1. Position floor drains for easy access and maintenance.
 - 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
 - a. Radius, 30 Inches (750 mm) or Less: Equivalent to 1 percent slope, but not less than 1/4-inch (6.35-mm) total depression.
 - b. Radius, 30 to 60 Inches (750 to 1500 mm): Equivalent to 1 percent slope.
 - c. Radius, 60 Inches (1500 mm) or Larger: Equivalent to 1 percent slope, but not greater than 1-inch (25-mm) total depression.
 - 3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
 - 4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- G. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- H. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.
- I. Assemble open drain fittings and install with top of hub 2 inches (51 mm) above floor.
- J. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- K. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
 - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
 - 2. Size: Same as floor drain inlet.
- L. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- M. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- N. Install vent caps on each vent pipe passing through roof.

- O. Install grease interceptors, including trapping, venting, and flow-control fitting, with clear space for servicing.
 - 1. Above-Floor Installation: Set unit with bottom resting on floor, unless otherwise indicated.
 - 2. Flush with Floor Installation: Set unit and extension, if required, with cover flush with finished floor.
 - 3. Recessed Floor Installation: Set unit in receiver housing having bottom or cradle supports, with receiver housing cover flush with finished floor.
 - 4. Install cleanout immediately downstream from interceptors not having integral cleanout on outlet.
- P. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.
- Q. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

3.3 CONNECTIONS

- A. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.

3.4 FLASHING INSTALLATION

- A. Coordinate this article with Division 05 Section 055000 "Metal Fabrications."
- B. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
 - 1. Lead Sheets: Burn joints of lead sheets 6.0-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of lead sheets 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness or thinner.
- C. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
 - 2. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches (250 mm), and skirt or flange extending at least 8 inches (200 mm) around pipe.
 - 3. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.

4. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.
 - D. Set flashing on floors and roofs in solid coating of bituminous cement.
 - E. Secure flashing into sleeve and specialty clamping ring or device.
 - F. Retain one or both paragraphs below.
 - G. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Division 05 Section 055000 "Metal Fabrications."
 - H. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.

3.5 LABELING AND IDENTIFYING

- A. Equipment Nameplates and Signs: Install engraved plastic-laminate equipment nameplate or sign on or near each grease interceptor.
- B. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Division 22 Section 220553 "Identification for Plumbing Piping and Equipment."

3.6 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 22 13 19

SECTION 22 14 13

FACILITY STORM DRAINAGE PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following storm drainage piping inside the building.
 - 1. Pipe, tube, and fittings.
 - 2. Special pipe fittings.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Field quality-control inspection and test reports.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Piping materials must bear label, stamp, or other markings of specified testing agency.

1.6 PERFORMANCE REQUIREMENTS

- A. Components and installation must be capable of withstanding the following minimum working pressure, unless otherwise indicated:
 - 1. Storm Drainage Piping: 10-foot head of water.

PART 2 - PRODUCTS

2.1 PIPING MATERIALS

- A. Hub-and-Spigot, Cast-Iron Pipe and Fittings: ASTM A 74, Extra heavy class.
 - 1. Gaskets: ASTM C 564, rubber.
- B. Hubless Cast-Iron Pipe and Fittings: ASTM A 888 or CISPI 301.
 - 1. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
 - a. Heavy-Duty, Shielded, Stainless-Steel Couplings: With stainless-steel shield, stainless-steel bands and tightening devices, and ASTM C 564, rubber sleeve.
- C. Steel Pipe: ASTM A 53/A 53M, Type E or S, Grade A or B, Schedule 40, galvanized. Include ends matching joining method.
 - 1. Drainage Fittings: ASME B16.12, galvanized, threaded, cast-iron drainage pattern.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

- A. Special pipe fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.
- B. Underground storm drainage piping must be:
 - 1. Extra heavy, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
- C. Sump pump discharge:
 - 1. Galvanized steel pipe, Schedule 40, drainage fittings, and threaded joints.

3.3 PIPING INSTALLATION

- A. Storm sewer and drainage piping outside the building are specified in Division 33 Section 334211 "Stormwater Gravity Piping".
- B. Basic piping installation requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- C. Install cleanouts at grade and extend to where building storm drains connect to building storm sewers. Cleanouts are specified in Division 22 Section 221423 "Storm Drainage Piping Specialties."
- D. Install cast-iron sleeve with water stop and mechanical sleeve seal at each service pipe penetration through foundation wall. Select number of interlocking rubber links required to make installation watertight. Sleeves and mechanical sleeve seals are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- E. Install wall-penetration-fitting system at each service pipe penetration through foundation wall. Make installation watertight.
- F. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- G. Make changes in direction for storm piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- H. Lay buried building drain piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- I. Install storm drainage piping at the following minimum slopes, unless otherwise indicated:
 - 1. Building Storm Drain: 1 percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; 1 percent downward in direction of flow for piping NPS 4 (DN 100) and larger.
 - 2. Horizontal Storm-Drainage Piping: 2 percent downward in direction of flow.
- J. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.
- K. Do not enclose, cover, or put piping into operation until it is inspected and approved by NYC DOB.

3.4 JOINT CONSTRUCTION

- A. Basic piping joint construction requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.
- C. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

3.5 VALVE INSTALLATION

- A. Backwater Valves: Install backwater valves in piping subject to backflow.
 - 1. Horizontal Piping: Horizontal backwater valves. Use normally closed type, unless otherwise indicated.
 - 2. Install backwater valves in accessible locations.
 - 3. Backwater valve are specified in Division 22 Section 221423 "Storm Drainage Piping Specialties."

3.6 HANGER AND SUPPORT INSTALLATION

- A. Pipe hangers and supports are specified in Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
 - 1. Vertical Piping: MSS Type 8 or Type 42, clamps.
 - 2. Individual, Straight, Horizontal Piping Runs: According to the following:
 - a. 100 Feet (30 m) and Less: MSS Type 1, adjustable, steel clevis hangers.
 - b. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
 - c. Longer Than 100 Feet (30 m), if Indicated: MSS Type 49, spring cushion rolls.
 - 3. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
 - 4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Install supports according to Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment."
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.

- E. Install hangers for cast-iron soil piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 2. NPS 3 (DN 80): 60 inches (1500 mm) with 1/2-inch (13-mm) rod.
 3. NPS 4 and NPS 5 (DN 100 and DN 125): 60 inches (1500 mm) with 5/8-inch (16-mm) rod.
 4. NPS 6 (DN 150): 60 inches (1500 mm) with 3/4-inch (19-mm) rod.
 5. Spacing for 10-foot (3-m) lengths may be increased to 10 feet (3 m). Spacing for fittings is limited to 60 inches (1500 mm).
- F. Install supports for vertical cast-iron soil piping every 15 feet (4.5 m).
- G. Install hangers for steel piping with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/4 (DN 32): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 2. NPS 1-1/2 (DN 40): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 3. NPS 2 (DN 50): 10 feet (3 m) with 3/8-inch (10-mm) rod.
 4. NPS 2-1/2 (DN 65): 11 feet (3.4 m) with 1/2-inch (13-mm) rod.
 5. NPS 3 (DN 80): 12 feet (3.7 m) with 1/2-inch (13-mm) rod.
 6. NPS 4 and NPS 5 (DN 100 and DN 125): 12 feet (3.7 m) with 5/8-inch (16-mm) rod.
 7. NPS 6 (DN 150): 12 feet (3.7 m) with 3/4-inch (19-mm) rod.
- H. Install supports for vertical steel piping every 15 feet (4.5 m).
- I. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
1. NPS 1-1/4 (DN 32): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 2. NPS 1-1/2 and NPS 2 (DN 40 and DN 50): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 3. NPS 2-1/2 (DN 65): 108 inches (2700 mm) with 1/2-inch (13-mm) rod.
 4. NPS 3 to NPS 5 (DN 80 to DN 125): 10 feet (3 m) with 1/2-inch (13-mm) rod.
 5. NPS 6 (DN 150): 10 feet (3 m) with 5/8-inch (16-mm) rod.
- J. Install supports for vertical copper tubing every 10 feet (3 m).
- K. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

3.7 CONNECTIONS

- A. Connect interior storm drainage piping to exterior storm drainage piping. Use transition fitting to join dissimilar piping materials.

- B. Connect storm drainage piping to roof drains and storm drainage specialties.

3.8 FIELD QUALITY CONTROL

- A. During installation, notify Commissioner at least 24 hours before inspection must be made. Perform tests specified below in presence of Commissioner.
 - 1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
 - 2. Final Inspection: Arrange for final inspection by Commissioner to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If Commissioner finds that piping will not pass test or inspection, make required corrections, and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by the Commissioner.
- D. Test storm drainage piping according to procedures of NYC Plumbing Code, 2014.

3.9 CLEANING

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

END OF SECTION 221413

SECTION 22 14 23

STORM DRAINAGE PIPING SPECIALTIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes the following storm drainage piping specialties:

1. Cleanouts.
2. Backwater valve.
3. Trench Drain.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Storm drainage piping specialties must bear label, stamp, or other markings of specified testing agency.

PART 2 - PRODUCTS

2.1 CLEANOUTS

A. Exposed Cast-Iron Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
 - g. Approved Equal.
2. Standard: ASME A112.36.2M for cast iron.
3. Size: Same as connected drainage piping
4. Body Material: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, brass plug.
6. Closure Plug Size: Same as cleanout size.

B. Cast-Iron Floor Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. Oatey.
 - c. Sioux Chief Manufacturing Company, Inc.
 - d. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - e. Tyler Pipe; Wade Div.
 - f. Watts Drainage Products Inc.
 - g. Zurn Plumbing Products Group; Light Commercial Operation.
 - h. Zurn Plumbing Products Group; Specification Drainage Operation.
 - i. Approved Equal.
2. Standard: ASME A112.36.2M for threaded, adjustable housing cleanout.
3. Size: Same as connected branch.
4. Type: Threaded, adjustable housing.
5. Body or Ferrule: Cast iron.
6. Clamping Device: Required for membrane floors only.
7. Outlet Connection: Inside calk.
8. Closure: Brass plug with straight threads and gasket.

9. Adjustable Housing Material: nickel bronze with threads.
10. Frame and Cover Material and Finish: Nickel-bronze.
11. Frame and Cover Shape: Round.
12. Top Loading Classification: Heavy Duty.
13. Riser: ASTM A 74, Extra-Heavyclass, cast-iron drainage pipe fitting and riser to cleanout.

C. Cast-Iron Wall Cleanouts:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfg. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
 - g. Approved Equal.
2. Standard: ASME A112.36.2M. Include wall access.
3. Size: Same as connected drainage piping.
4. Body: Hubless, cast-iron soil pipe test tee as required to match connected piping.
5. Closure: Countersunk or raised-head, drilled-and-threaded brass plug.
6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
7. Wall Access: Round, flat, stainless-steel cover plate with screw.

2.2 BACKWATER VALVE

A. Horizontal, Cast-Iron Backwater Valves:

1. Basis-of-Design Product: Subject to compliance with requirements, provide backwater valve Model 7012 manufactured by J.R.Smith or a comparable product by one of the following:
 - a. Josam Company; Josam Div.
 - b. MIFAB, Inc.
 - c. Smith, Jay R. Mfr. Co.; Division of Smith Industries, Inc.
 - d. Tyler Pipe; Wade Div.
 - e. Watts Drainage Products Inc.
 - f. Zurn Plumbing Products Group; Specification Drainage Operation.
 - g. Approved Equal.
2. Standard: ASME A112.14.1.
3. Size: Same as connected piping.
4. Body: Cast iron.

5. Cover: Cast iron with threaded access check valve.
6. End Connections: Hub and Spigot.
7. Type Check Valve: Removable, bronze, swing check, factory assembled, or field modified to hang ¼” open for airflow unless subject to backflow condition.
8. Extension: ASTM A 74, Service class; full-size, cast-iron, soil-pipe extension to field-installed cleanout at floor; replaces backwater valve cover.

2.3 GARAGE TRENCH DRAINAGE SYSTEM:

- A. Basis-of-Design Product: Subject to compliance with requirements, provide drainage system J.R. SMITH ACO drain, extra heavy-duty DIN 19580 Class E, Model 9812, completed with secured longitudinal ADA compliant ductile iron gratings J.R. Smith ACO Model 9812-MADA or comparable product by one of the following:
 1. Zurn.
 2. J. R. Smith.
 3. MIFAB.
 4. Approved Equal.
- B. The trench system bodies must be manufactured from polymer concrete with minimum properties as follows:
 1. Compressive strength- 32, 000 psi
 2. Flexural strength – 24,000 psi
 3. Water absorption – 0.15%
 4. Frost Proof – yes
 5. Salt Proof – yes
 6. Dilute acid and alkali resistant – yes
- C. The normal clear opening must be 8” with overall width of 10.1”. Pre-cast units must be manufactured with invert slope of 1.05% and have a wall thickness of at least 0.67”. Each unit must feature a partial radius in the trench bottom and a male to female interconnecting end profile. Units must have horizontal cast in anchoring keys on the outside walls to ensure maximum mechanical bond to the surrounding bedding material and pavement surface. The ductile iron edge rail will be integrally cast in by the manufacturer to ensure maximum homogeneity between polymer concrete body and edge rail. Each edge rail must be at least ¼” thick.
- D. Grates must be longitudinal ductile iron. After removal of grades there must be uninterrupted access to the trench to aid maintenance.
- E. At the point of connection to the drainage system, trench must be provided with in-line catch basin and foul air trap.
- F. Trench length must be coordinated with architectural drawings.
- G. Trench System must be installed in accordance with the manufacturer’s installation instructions and recommendations.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Refer to Division 22 Section 225000 "Common Work Results for Plumbing" for piping joining materials, joint construction, and basic installation requirements.
- B. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
1. Size same as drainage piping up to NPS 4 (DN 100). Use NPS 4 (DN 100) for larger drainage piping unless larger cleanout is indicated.
 2. Locate at each change in direction of piping greater than 45 degrees.
 3. Locate at minimum intervals of 50 feet (15 m) for piping NPS 4 (DN 100) and smaller and 100 feet (30 m) for larger piping.
 4. Locate at base of each vertical soil and waste stack.
- C. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- D. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- E. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roof materials are specified in Division 07.
1. Install roof-drain flashing collar or flange so that there will be no leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
 2. Position roof drains for easy access and maintenance.
- F. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- G. Install cast-iron soil pipe downspout boots at grade with top of hub 18 inches above grade.
- H. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.
- I. Install escutcheons at wall, floor, and ceiling penetrations in exposed finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding pipe fittings.

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

3.4 FLASHING INSTALLATION

- A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
 - 1. Lead Sheets: Burn joints of lead sheets 6.0-lb/sq. ft. (30-kg/sq. m), 0.0938-inch (2.4-mm) thickness or thicker. Solder joints of lead sheets 4.0-lb/sq. ft. (20-kg/sq. m), 0.0625-inch (1.6-mm) thickness or thinner.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
 - 1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches (250 mm), and skirt or flange extending at least 8 inches (200 mm) around pipe.
 - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around sleeve.
 - 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches (200 mm) around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.

3.5 PROTECTION

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

END OF SECTION 221423

SECTION 221429

SUMP PUMPS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes submersible sump pumps and accessories, inside the building, for building storm drainage systems.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type and size of sump pump specified. Include certified performance curves with operating points plotted on curves, and rated capacities of selected models, furnished specialties, and accessories.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, Article 100, by a testing agency and marked for intended use.

PART 2 - PRODUCTS

2.1 SUBMERSIBLE SUMP PUMP SP-1:

- A. Basis-of-Design Product: Subject to compliance with requirements, provide sump pump manufactured by Stancor Model O/M SE-50 ELV or comparable product by one of the following:
1. Federal Pump
 2. Goulds Pumps; ITT Industries.
 3. Weil Pump Company, Inc.
 4. Or Approved Equal.
- B. Description: Factory-assembled and -tested, simplex, single-stage, submersible, direct-connected sump pumps complying with UL 778 and HI 1.1-1.2 and HI 1.3 for submersible sump pumps.
- C. Casing: Cast iron; with cast-iron inlet strainer, legs that elevate pump to permit flow into impeller, and vertical discharge with companion flange for piping connection.
- D. Casing and Impeller: Stainless steel casing with inlet strainer and stainless steel impeller locked firmly to the motor shaft.
- E. Pump and Motor Shaft: Stainless steel, with factory-sealed, grease-lubricated ball bearings.
- F. Motor: Hermetically sealed, capacitor-start type, with built-in overload protection; three-conductor waterproof power cable of length required, and with grounding plug and cable-sealing assembly for connection at pump. Pump Discharge Piping: Field fabricated ASTM A 53 /A 53 M, Schedule 40, galvanized-steel pipe.
- G. Pit Cover: Slotted steel with bituminous coating and strong enough to support controls.
- H. Controls: NEMA 250, Type 4 enclosure, with 8-pin twist lock receptacle, dual solid state Oil-Minder relays with variable sensitivity settings, over current relay, self-cleaning stainless steel sensor probe, warning horn with alarm silencing switch, dual floats, clearly marked terminal board and remote monitoring contact.
- I. Controls: submersible float switch for automatic control of the pump mount to pump discharge pipe, submersible float switch for HWA, oil probe cable.
- J. General Trouble Alarm must be connected to BMS or Security system.

2.2 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Anamet, Inc.
 2. Flex-Hose Co., Inc.
 3. Flexicraft Industries.
 4. Flex-Pression, Ltd.
 5. Flex-Weld, Inc.
 6. Hyspan Precision Products, Inc.
 7. Mercer Rubber.
 8. Metraflex, Inc.
 9. Proco Products, Inc.
 10. Tozen America Corporation.
 11. Or Approved Equal.
- B. Description: 125-psig (860-kPa) minimum working-pressure rating and ends matching pump connection:
1. Bronze Flexible Connectors: Corrugated, bronze inner tubing covered with bronze wire braid. Include copper-tube ends or bronze flanged ends, braze welded to tubing.
 2. Stainless-Steel Flexible Connectors: Corrugated, stainless-steel inner tubing covered with stainless-steel wire braid. Include stainless-steel nipples or flanges, welded to tubing.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SUMP PUMP INSTALLATION

- A. Excavating, trenching, and backfilling are specified in Division 312300 “Excavation and Fill”.
- B. Install sump pumps according to applicable requirements in HI 1.4.
- C. Install pumps and arrange to provide access for maintenance including removal of motors, impellers, couplings, and accessories.
- D. Set submersible sump pumps on pit floor. Make direct connections to storm drainage piping.
- E. Install sump pump basins and connect to drainage piping. Brace interior of basins according to manufacturer's written instructions to prevent distortion or collapse during concrete placement.

Set basin cover and fasten to basin top flange. Install cover so top surface is flush with finished floor.

- F. Construct sump pump pits and connect to drainage piping. Set pit curb frame recessed in and anchored to concrete. Fasten pit cover to pit curb flange. Install cover so top surface is flush with finished floor.
- G. Support piping so weight of piping is not supported by pumps.
- H. Piping installation requirements are specified in Division 22 Section 221413 "Facility Storm Drainage Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- I. Install piping adjacent to sump pumps to allow service and maintenance.
- J. Install discharge piping equal to or greater than size of pump discharge piping. Refer to Division 22 Section 221413 "Facility Storm Drainage Piping."
 - 1. Install flexible connectors adjacent to pumps in discharge piping.
 - 2. Install check and shutoff valves on discharge piping from each pump. Install unions on pumps having threaded pipe connections. Install valves same size as connected piping.
- K. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems."
- L. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- M. Refer to Division 22 Section 220523 "General-Duty Valves for Plumbing Piping" for general-duty valves for drainage piping.

END OF SECTION 221429

SECTION 221513

GENERAL-SERVICE COMPRESSED-AIR PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes piping and related specialties for general-service compressed-air systems operating at 200 psig (1380 kPa) or less.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data for the following:
 - 1. Pipes, fittings, and valves.
 - 2. Dielectric fittings.
 - 3. Flexible pipe connectors.
 - 4. Safety valves.
 - 5. Pressure regulators. Include rated capacities and operating characteristics.
 - 6. Automatic drain valves.
 - 7. Filters. Include rated capacities and operating characteristics.
 - 8. Lubricators. Include rated capacities and operating characteristics.
 - 9. Quick couplings.
 - 10. Retractable Hose Reels.
- B. Brazing and welding certificates.

- C. Qualification Data: For Installers.
- D. Field quality-control test reports.
- E. Operation and Maintenance Data: For general-service compressed-air piping specialties to include in emergency, operation, and maintenance manuals.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Installer Qualifications:
 - 1. Extruded-Tee Outlet Procedure: Qualify operators according to instruction provided by manufacturer, for making branch outlets.
 - 2. Pressure-Seal Joining Procedure for Copper Tubing: Qualify operators according to instruction provided by manufacturer.
 - 3. Pressure-Seal Joining Procedure for Steel Piping. Qualify operators according to instruction provided by manufacturer.
- C. Brazing: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX, "Welding and Brazing Qualifications," or to AWS B2.2, "Standard for Brazing Procedure and Performance Qualification."
- D. Welding: Qualify processes and operators according to ASME Boiler and Pressure Vessel Code: Section IX.
- E. ASME Compliance:
 - 1. Comply with ASME B31.1, "Power Piping," for high-pressure compressed-air piping.
 - 2. Comply with ASME B31.9, "Building Services Piping," for low-pressure compressed-air piping.

1.6 DEFINITIONS

- A. ABS: Acrylonitrile-butadiene-styrene plastic.
- B. CR: Chlorosulfonated polyethylene synthetic rubber.
- C. EPDM: Ethylene-propylene-diene terpolymer rubber.

- D. HDPE: High-density polyethylene plastic.
- E. NBR: Acrylonitrile-butadiene rubber.
- F. PE: Polyethylene plastic.
- G. PVC: Polyvinyl chloride plastic.
- H. High-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures between 150 and 200 psig (1035 and 1380 kPa).
- I. Low-Pressure Compressed-Air Piping: System of compressed-air piping and specialties operating at pressures of 150 psig (1035 kPa) or less.

1.7 PERFORMANCE REQUIREMENTS

- A. Seismic Performance: Compressed-air piping and support and installation must withstand effects of seismic events determined according to SEI/ASCE 7, "Minimum Design Loads for Buildings and Other Structures."

PART 2 - PRODUCTS

2.1 PIPES AND FITTINGS

- A. Copper Tube: ASTM B 88, Type L (ASTM B 88M, Type B) seamless, drawn-temper, water tube.
 - 1. Wrought-Copper Fittings: ASME B16.22, solder-joint pressure type or MSS SP-73, wrought copper with dimensions for brazed joints.
 - 2. Cast-Copper-Alloy Flanges: ASME B16.24, Class 150 or 300.
 - 3. Copper Unions: ASME B16.22 or MSS SP-123.
 - 4. Press-Type Fittings, NPS 2 (DN 50) and Smaller: Wrought-copper fitting with EPDM O-ring seal in each end.
- B. Transition Couplings for Metal Piping: Metal coupling or other manufactured fitting same size as, with pressure rating at least equal to and ends compatible with, piping to be joined.

2.2 JOINING MATERIALS

- A. Pipe-Flange Gasket Materials: Suitable for compressed-air piping system contents.
 - 1. ASME B16.21, nonmetallic, flat, asbestos free, 1/8-inch (3.2-mm) maximum thickness unless thickness or specific material is indicated.
 - a. Full-Face Type: For flat-face, Class 125, cast-iron and cast-bronze flanges.
 - b. Narrow-Face Type: For raised-face, Class 250, cast-iron and steel flanges.
- B. Flange Bolts and Nuts: ASME B18.2.1, carbon steel, unless otherwise indicated.
- C. Plastic Pipe-Flange Gasket, Bolts, and Nuts: Type and material recommended by piping system manufacturer, unless otherwise indicated.
- D. Solder Filler Metals: ASTM B 32, lead-free alloys. Include water-flushable flux according to ASTM B 813.
- E. Brazing Filler Metals: AWS A5.8/A5.8M, BCuP Series, copper-phosphorus alloys for general-duty brazing, unless otherwise indicated.
- F. Welding Filler Metals: Comply with AWS D10.12/D10.12M for welding materials appropriate for wall thickness and chemical analysis of steel pipe being welded.
- G. Solvent Cements for Joining Plastic Piping:
 - 1. ABS Piping: ASTM D 2235.
 - 2. PVC Piping: ASTM D 2564. Include primer complying with ASTM F 656.

2.3 VALVES

- A. Metal Ball, Butterfly, Check, Gate, and Globe Valves: Comply with requirements in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping."

2.4 DIELECTRIC FITTINGS

- A. General Requirements for Dielectric Fittings: Combination fitting of copper alloy and ferrous materials with insulating material; suitable for system fluid, pressure, and temperature. Include threaded, solder-joint, plain, or weld-neck end connections that match piping system materials.

- B. Dielectric Unions: Factory-fabricated union assembly, for 250-psig (1725-kPa) minimum working pressure at 180 deg F (82 deg C).
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. EPCO Sales, Inc.
 - d. Hart Industries International, Inc.
 - e. Watts Water Technologies, Inc.; Water Products Div.
 - f. Zurn Plumbing Products Group; Wilkins Div.
 - g. Or Approved Equal.
- C. Dielectric Flanges: Factory-fabricated companion-flange assembly, for 150- or 300-psig (1035- or 2070-kPa) minimum working pressure as required to suit system pressures.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Capitol Manufacturing Company.
 - b. Central Plastics Company.
 - c. EPCO Sales, Inc.
 - d. Watts Water Technologies, Inc.; Water Products Div.
 - e. Or Approved Equal.
- D. Dielectric-Flange Kits: Companion-flange assembly for field assembly. Include flanges, full-face- or ring-type neoprene or phenolic gasket, phenolic or polyethylene bolt sleeves, phenolic washers, and steel backing washers. Separate companion flanges and steel bolts and nuts must have 150- or 300-psig (1035- or 2070-kPa) minimum working pressure where required to suit system pressures.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Advance Products & Systems, Inc.
 - b. Calpico, Inc.
 - c. Central Plastics Company.
 - d. Pipeline Seal and Insulator, Inc.
 - e. Or Approved Equal.

2.5 FLEXIBLE PIPE CONNECTORS

- A. **Manufacturers:** Subject to compliance with requirements, provide products by one of the following:
1. Flex-Hose Co., Inc.
 2. Flexicraft Industries.
 3. Hyspan Precision Products, Inc.
 4. Mercer Rubber Co.
 5. Metraflex, Inc.
 6. Proco Products, Inc.
 7. Unaflex, Inc.
 8. Universal Metal Hose; a Hyspan Company
 9. Or Approved Equal.
- B. **Bronze-Hose Flexible Pipe Connectors:** Corrugated-bronze tubing with bronze wire-braid covering and ends brazed to inner tubing.
1. Working-Pressure Rating: 250 psig (1725 kPa) minimum.
 2. End Connections, NPS 2 (DN 50) and Smaller: Threaded copper pipe or plain-end copper tube.
 3. End Connections, NPS 2-1/2 (DN 65) and Larger: Flanged copper alloy.

2.6 SLEEVES

- A. **Galvanized-Steel Sheet:** 0.0239-inch (0.6-mm) minimum thickness; round tube closed with welded longitudinal joint.
- B. **Stack Sleeve Fittings:** Manufactured, cast-iron sleeve with integral clamping flange. Include clamping ring and bolts and nuts for membrane flashing.
1. Underdeck Clamp: Clamping ring with set screws.

2.7 ESCUTCHEONS

- A. **General Requirements:** Manufactured wall and ceiling escutcheons and floor plates, with ID to closely fit around pipe and tube and OD that completely covers opening.
- B. **One-Piece, Deep-Pattern Escutcheons:** Deep-drawn, box-shaped brass with polished chrome-plated finish.

- C. One-Piece, Cast-Brass Escutcheons: With set screw.
 - 1. Finish: Polished chrome-plated.
- D. Split-Casting, Floor-Plate Escutcheons: Cast brass with concealed hinge and set screw.

2.8 SPECIALTIES

- A. Safety Valves: ASME Boiler and Pressure Vessel Code: Section VIII, "Pressure Vessels," construction; National Board certified, labeled, and factory sealed; constructed of bronze body with poppet-type safety valve for compressed-air service.
 - 1. Pressure Settings: Higher than discharge pressure and same or lower than receiver pressure rating.
- B. Air-Main Pressure Regulators: Bronze body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 250-psig (1725-kPa) inlet pressure, unless otherwise indicated.
 - 1. Type: Pilot operated.
- C. Air-Line Pressure Regulators: Diaphragm operated, bronze body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 200-psig (1380-kPa) minimum inlet pressure, unless otherwise indicated.
- D. Air-Line Pressure Regulators: Diaphragm operated, aluminum alloy or plastic body, direct acting, spring-loaded manual pressure-setting adjustment, and rated for 200-psig (1380-kPa) minimum inlet pressure, unless otherwise indicated.
- E. Automatic Drain Valves: Stainless-steel body and internal parts, rated for 200-psig (1380-kPa) minimum working pressure, capable of automatic discharge of collected condensate.
- F. Coalescing Filters: Coalescing type with activated carbon capable of removing water and oil aerosols; with color-change dye to indicate when carbon is saturated and warning light to indicate when selected maximum pressure drop has been exceeded. Include mounting bracket for wall mounting filters.
- G. Mechanical Filters: Two-stage, mechanical-separation-type, air-line filters. Equip with deflector plates, resin-impregnated-ribbon-type filters with edge filtration, and drain cock. Include mounting bracket for wall mounting filters.

H. Air-Line Lubricators: With drip chamber and sight dome for observing oil drop entering air stream; with oil-feed adjustment screw and quick-release collar for easy bowl removal. Include mounting bracket for wall mounting lubricators.

1. Provide with automatic feed device for supplying oil to lubricator.

2.9 QUICK COUPLINGS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Aeroquip Corporation; Eaton Corp.
2. Bowes Manufacturing Inc.
3. Foster Manufacturing, Inc.
4. Milton Industries, Inc.
5. Parker Hannifin Corp.; Fluid Connectors Group; Quick Coupling Div.
6. Rectus Corp.
7. Schrader-Bridgeport; Amflo Div.
8. Schrader-Bridgeport/Standard Thomson.
9. Snap-Tite, Inc.; Quick Disconnect & Valve Division.
10. TOMCO Products Inc.
11. Tuthill Corporation; Hansen Coupling Div.
12. Or Approved Equal

B. General Requirements for Quick Couplings: Assembly with locking-mechanism feature for quick connection and disconnection of compressed-air hose.

C. Automatic-Shutoff Quick Couplings: Straight-through brass body with O-ring or gasket seal and stainless-steel or nickel-plated-steel operating parts.

1. Socket End: With one-way valve and threaded inlet for connection to piping or threaded hose fitting.
2. Plug End: Straight-through type with barbed outlet for attaching hose.

D. Valveless Quick Couplings: Straight-through brass body with stainless-steel or nickel-plated-steel operating parts.

1. Socket End: With O-ring or gasket seal, without valve, and with barbed inlet for attaching hose.
2. Plug End: With barbed outlet for attaching hose.

2.10 HOSE REEL ASSEMBLIES

- A. Description: Hose reels assemblies have to heavy duty spring retractable reels with 75 ft of ½” hose, similar to ReelCraft Model HD78075 OLP or approved equal from the following manufacturers:
1. Reelcraft
 2. Ingersoll Rand.
 3. Klutch
 4. Approved Equal

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

- A. Compressed-Air Piping between Air Compressors and Receivers: Use the following piping materials for each size range:
1. NPS 1/2 to NPS 4: Type L (Type B), copper tube; wrought-copper fittings; and brazed joints.
- B. Low-Pressure Compressed-Air Distribution Piping: Use the following piping materials for each size range:
1. NPS 1/2 to NPS 4 Type L (Type B): copper tube; wrought-copper fittings; and brazed joints.
- C. Drain Piping: Use the following piping materials:
1. NPS 2 (DN 50) and Smaller: Type L copper tube; wrought-copper fittings; and brazed or soldered joints.

3.3 VALVE APPLICATIONS

- A. General-Duty Valves: Comply with requirements in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping" for metal general-duty valves. Use metal valves, unless otherwise indicated.
 - 1. Metal General-Duty Valves: Use valve types specified in "Valve Applications" Article in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping" according to the following:
 - a. Low-Pressure Compressed Air: Valve types specified for low-pressure compressed air.
 - b. Equipment Isolation NPS 2 (DN 50) and Smaller: Safety-exhaust, copper-alloy ball valve with exhaust vent and pressure rating at least as great as piping system operating pressure.

3.4 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of compressed-air piping. Indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, air-compressor sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- B. Install piping concealed from view and protected from physical contact by building occupants, unless otherwise indicated and except in equipment rooms and service areas.
- C. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited, unless otherwise indicated.
- D. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal and to coordinate with other services occupying that space.
- E. Install piping adjacent to equipment and machines to allow service and maintenance.
- F. Install air and drain piping with 1 percent slope downward in direction of flow.
- G. Install nipples, flanges, unions, transition and special fittings, and valves with pressure ratings same as or higher than system pressure rating, unless otherwise indicated.
- H. Equipment and Specialty Flanged Connections:

1. Use steel companion flange with gasket for connection to steel pipe.
 2. Use cast-copper-alloy companion flange with gasket and brazed or soldered joint for connection to copper tube. Do not use soldered joints for connection to air compressors or to equipment or machines producing shock or vibration.
- I. Flanged joints may be used instead of specified joint for any piping or tubing system.
 - J. Extended-tee outlets with brazed branch connection may be used for copper tubing, within extruded-tee connection diameter to run tube diameter ratio for tube type, according to Extruded Tee Connections Sizes and Wall Thickness for Copper Tube (Inches) Table in ASTM F 2014.
 - K. Install eccentric reducers where compressed-air piping is reduced in direction of flow, with bottoms of both pipes and reducer fitting flush.
 - L. Install branch connections to compressed-air mains from top of main. Provide drain leg and drain trap at end of each main and branch and at low points.
 - M. Install thermometer and pressure gage on discharge piping from each air compressor and on each receiver.
 - N. Install piping to permit valve servicing.
 - O. Install piping free of sags and bends.
 - P. Install fittings for changes in direction and branch connections.
 - Q. Install seismic restraints on piping where indicated on drawings.

3.5 JOINT CONSTRUCTION

- A. Ream ends of pipes and tubes and remove burrs. Bevel plain ends of steel pipe.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Brazed Joints for Copper Tubing: Join according to AWS's "Brazing Handbook," "Pipe and Tube" Chapter.
- D. Soldered Joints: Apply ASTM B 813, water-flushable flux, unless otherwise indicated, to tube end. Join according to ASTM B 828 or CDA's "Copper Tube Handbook."

- E. Extruded-Tee Outlets for Copper Tubing: Form branches according to ASTM F 2104, with tools recommended by procedure manufacturer, and using operators qualified according to Part 1 "Quality Assurance" Article.
- F. Pressure-Sealed Joints: Join with tools recommended by fitting manufacturer, using operators qualified according to Part 1 "Quality Assurance" Article.
- G. Dissimilar Metal Piping Material Joints: Use dielectric fittings.

3.6 VALVE INSTALLATION

- A. General-Duty Valves: Comply with requirements in Division 22 Section 220523 "General-Duty Valves for Plumbing Piping."
- B. Install shutoff valves and unions or flanged joints at compressed-air piping to air compressors.
- C. Install shutoff valve at inlet to each automatic drain valve, filter, lubricator, and pressure regulator.
- D. Install check valves to maintain correct direction of compressed-air flow to and from compressed-air piping specialties and equipment.

3.7 DIELECTRIC FITTING INSTALLATION

- A. Install dielectric fittings in piping at connections of dissimilar metal piping and tubing.
- B. NPS 2 (DN 50) and Smaller: Use dielectric unions.

3.8 FLEXIBLE PIPE CONNECTOR INSTALLATION

- A. Install flexible pipe connectors in discharge piping and in inlet air piping from remote air-inlet filter of each air compressor.
- B. Install bronze-hose flexible pipe connectors in copper compressed-air tubing.
- C. Install stainless-steel-hose flexible pipe connectors in steel compressed-air piping.

3.9 SPECIALTY INSTALLATION

- A. Install safety valves on receivers in quantity and size to relieve at least the capacity of connected air compressors.
- B. Install air-main pressure regulators in compressed-air piping at or near air compressors.
- C. Install air-line pressure regulators in branch piping to equipment and tools.
- D. Install automatic drain valves on aftercoolers, receivers, and dryers. Discharge condensate onto nearest floor drain.
- E. Install coalescing filters in compressed-air piping at or near air compressors and upstream from mechanical filters. Mount on wall at locations indicated.
- F. Install mechanical filters in compressed-air piping at or near air compressors and downstream from coalescing filters. Mount on wall at locations indicated.
- G. Install air-line lubricators in branch piping to machine tools. Mount on wall at locations indicated.
- H. Install quick couplings at piping terminals for hose connections.
- I. Install hose assemblies at hose connections.

3.10 CONNECTIONS

- A. Install unions, in piping NPS 2 (DN 50) and smaller, adjacent to each valve and at final connection to each piece of equipment and machine.

3.11 SLEEVE AND ESCUTCHEON INSTALLATION

- A. Sleeves are not required for core-drilled holes.
- B. Permanent sleeves are not required for holes formed by removable PE sleeves.
- C. Install sleeves for pipes passing through concrete and masonry walls and concrete floor and roof slabs using galvanized-steel pipe.

- D. Install sleeves for pipes passing through concrete and masonry walls, gypsum board partitions, and concrete floor and roof slabs.
1. Wall Penetrations: Cut sleeves to length for mounting flush with both surfaces.
 2. Floor Penetrations: Extend sleeves installed in floors of mechanical equipment areas or other wet areas 2 inches (50 mm) above finished floor level. Extend cast-iron sleeve fittings below floor slab as required to secure clamping ring if ring is specified.
- E. Install sleeves in new walls and slabs as new walls and slabs are constructed.
- F. Install sleeves that are large enough to provide 1/4-inch (6.4-mm) annular clear space between sleeve and pipe or pipe insulation. Use the following sleeve materials:
1. Steel Pipe Sleeves: For pipes smaller than NPS 6 (DN 150).
 2. Stack Sleeve Fittings: For pipes penetrating floors with membrane waterproofing. Secure flashing between clamping flanges. Install section of cast-iron soil pipe to extend sleeve to 2 inches (50 mm) above finished floor level. Comply with requirements in Division 07 Section 076200 "Sheet Metal Flashing and Trim" for flashing.
 - a. Seal space outside of sleeve fittings with grout.
- G. Fire-Barrier Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at pipe penetrations. Seal pipe penetrations with firestop materials. Comply with requirements in Division 07 Section 078413 "Penetration Firestopping".
- H. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:
1. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep pattern.
 2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
 3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
 4. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish.
 5. Bare Piping in Equipment Rooms: One piece, cast brass with polished chrome-plated finish.
 6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.12 HANGER AND SUPPORT INSTALLATION

- A. Comply with requirements in Division 22 Section 220529 "Hangers and Supports for Plumbing Piping and Equipment" for pipe hanger and support devices.
- B. Vertical Piping: MSS Type 8 or 42, clamps.
- C. Individual, Straight, Horizontal Piping Runs:
 - 1. 100 Feet (30 m) or Less: MSS Type 1, adjustable, steel clevis hangers.
 - 2. Longer Than 100 Feet (30 m): MSS Type 43, adjustable roller hangers.
- D. Multiple, Straight, Horizontal Piping Runs 100 Feet (30 m) or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
- E. Base of Vertical Piping: MSS Type 52, spring hangers.
- F. Support horizontal piping within 12 inches (300 mm) of each fitting and coupling.
- G. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch (10-mm) minimum rods.
- H. Install hangers for copper tubing with the following maximum horizontal spacing and minimum rod diameters:
 - 1. NPS 1/4 (DN 8): 60 inches (1500 mm) with 3/8-inch (10-mm) rod.
 - 2. NPS 3/8 and NPS 1/2 (DN 10 and DN 15): 72 inches (1800 mm) with 3/8-inch (10-mm) rod.
 - 3. NPS 3/4 (DN 20): 84 inches (2100 mm) with 3/8-inch (10-mm) rod.
 - 4. NPS 1 (DN 25): 96 inches (2400 mm) with 3/8-inch (10-mm) rod.
 - 5. NPS 1-1/4 (DN 32): 108 inches (2700 mm) with 3/8-inch (10-mm) rod.
 - 6. NPS 1-1/2 (DN 40): 10 feet (3 m) with 3/8-inch (10-mm) rod.
- I. Install supports for vertical copper tubing every 10 feet (3 m).

3.13 ESCUTCHEON INSTALLATION

- A. Install escutcheons for penetrations of walls, ceilings, and floors according to the following:

1. Piping with Fitting or Sleeve Protruding from Wall: One-piece, deep pattern.
2. Bare Piping at Wall and Floor Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
3. Bare Piping at Ceiling Penetrations in Finished Spaces: One piece, cast brass with polished chrome-plated finish.
4. Bare Piping in Unfinished Service Spaces: One piece, cast brass with polished chrome-plated finish.
5. Bare Piping in Equipment Rooms: One piece, cast brass with polished chrome-plated finish.
6. Bare Piping at Floor Penetrations in Equipment Rooms: One-piece floor plate.

3.14 LABELING AND IDENTIFICATION

- A. Install identifying labels and devices for general-service compressed-air piping, valves, and specialties. Comply with requirements in Division 22 Section 220553 "Identification for Plumbing Piping and Equipment."

3.15 FIELD QUALITY CONTROL

- A. Perform field tests and inspections.
- B. Tests and Inspections:
 1. Piping Leak Tests for Metal Compressed-Air Piping: Test new and modified parts of existing piping. Cap and fill general-service compressed-air piping with oil-free dry air or gaseous nitrogen to pressure of 50 psig (345 kPa) above system operating pressure, but not less than 150 psig (1035 kPa) . Isolate test source and let stand for four hours to equalize temperature. Refill system, if required, to test pressure; hold for two hours with no drop in pressure.
 2. Repair to restore leak free system and retest until no leaks exist.
 3. Inspect filters, lubricators and pressure regulators for proper operation.
- C. Prepare test reports.

END OF SECTION 221513

SECTION 221519

GENERAL SERVICE PACKAGED AIR COMPRESSORS AND RECEIVERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes:
 - 1. Lubricated, reciprocating air compressors.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
 - 1. Wiring Diagrams: For power, signal, and control wiring.
 - 2. Air Compressor
- B. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, by a qualified testing agency, and marked for intended location and application.
- C. ASME Compliance: Fabricate and label receivers to comply with ASME Boiler and Pressure Vessel Code.

1.6 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Design compressed-air equipment mounting, including comprehensive engineering analysis by a qualified professional engineer licensed in State of New York, using performance requirements and design criteria indicated.

PART 2 - PRODUCTS

2.1 GENERAL REQUIREMENTS FOR PACKAGED AIR COMPRESSORS AND RECEIVERS

- A. General Description: Factory-assembled, -wired, -piped, and -tested; electric-motor-driven; air-cooled; continuous-duty air compressors and receivers that deliver air of quality equal to intake air.
- B. Control Panels: Automatic control station with load control and protection functions. Comply with NEMA ICS 2 and UL 508.
1. Enclosure: NEMA ICS 6, Type 12 control panel unless otherwise indicated.
 2. Motor Controllers: Full-voltage, combination magnetic type with undervoltage release feature and motor-circuit-protector-type disconnecting means and short-circuit protective device.
 3. Control Voltage: 120-V ac or less, using integral control power transformer.
 4. Motor Overload Protection: Overload relay in each phase.
 5. Starting Devices: Hand-off-automatic selector switch in cover of control panel, plus pilot device for automatic control.
 6. Automatic control switches to air compressors.
 7. Instrumentation: Include discharge-air pressure gage, air-filter maintenance indicator, hour meter, compressor discharge-air and coolant temperature gages, and control transformer.
 8. Alarm Signal Device: For connection to alarm system to indicate when backup air compressor is operating.
- C. Receivers: Steel tank constructed according to ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
1. Pressure Rating: At least as high as highest discharge pressure of connected compressors and bearing appropriate code symbols.
 2. Interior Finish: Corrosion-resistant coating.
 3. Accessories: Include safety valve, pressure gage, drain, and pressure-reducing valve.
- D. Mounting Frame: Fabricate mounting and attachment to pressure vessel with reinforcement strong enough to resist packaged equipment movement during a seismic event when base is anchored to building structure.

2.2 LUBRICATED, RECIPROCATING AIR COMPRESSORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide air compressor similar to Quincy QT Model QT-7.5 or comparable product by one of the following:
1. General Air Products, Inc.
 2. Ingersoll-Rand; Air Solutions Group.
 3. Kaeser Compressors, Inc.
 4. Powerex, Inc.
 5. Approved Equal
- B. Compressor: Lubricated, reciprocating-piston type with lubricated compression chamber and crankcase.
1. Submerged gear-type oil pump.
 2. Oil filter.
 3. Combined high discharge-air temperature and low lubrication-oil pressure switch.
 4. Belt guard totally enclosing pulleys and belts.
- C. Capacities and Characteristics:
1. Air Compressor Two stage.
 - a. Intercooler between stages of two-stage units.
 2. Actual-Air Capacity of Each Air Compressor: 22.6 ACFM delivered.
 3. Discharge-Air Pressure: 175 psi
 4. Intake-Air Temperature:
 5. Discharge-Air Temperature:
 6. Mounting: Tank mounted.
 7. Motor (Each Air Compressor):
 - a. Horsepower: 7.5 HP
 - b. Speed: 1310 rpm.
 8. Unit Electrical Characteristics:
 - a. Volts: 208
 - b. Phase(s): 3
 - c. Hertz: 60 Hz.
 9. Receiver: ASME construction steel tank.
 - a. Arrangement: Vertical.
 - b. Capacity: 80 gal. (L).
 - c. Interior Finish: Epoxy or galvanized coating.
 - d. Pressure Rating: 250 psig (1725 kPa) minimum.
 - e. Pressure Regulator Setting: 100 psig (kPa).

- f. Pressure Relief Valve Setting: 125 psi.
- g. Drain: Automatic valve.

2.3 INLET-AIR FILTERS

- A. Description: Combination inlet-air filter-silencer, suitable for remote installation, for each air compressor.
 - 1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
 - 2. Capacity: Match capacity of air compressor, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.
- B. Description: Combination inlet-air filter-silencer, suitable for remote installation, for multiple air compressors.
 - 1. Construction: Weatherproof housing for replaceable, dry-type filter element, with silencer tubes or other method of sound reduction.
 - 2. Capacity: Match total capacity of connected air compressors, with filter having collection efficiency of 99 percent retention of particles larger than 10 micrometers.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EQUIPMENT INSTALLATION

- A. Equipment Mounting: Install air compressors on vibration isolation pads. Retain first paragraph below for equipment installed on concrete bases without vibration isolation devices. This may be appropriate for rotary compressors on structural slabs-on-grade.
- B. Equipment Mounting: Install air compressors on concrete bases. Comply with requirements in Division 03 Section 033300 "Architectural Concrete."
- C. Install compressed-air equipment anchored to substrate.
- D. Install the following devices on compressed-air equipment:
 - 1. Thermometer, Pressure Gage, and Safety Valve: Install on each compressed-air receiver.
 - 2. Pressure Regulators: Install downstream from air compressors.
 - 3. Automatic Drain Valves: Install on aftercoolers, receivers, and dryers. Discharge condensate over nearest floor drain.

- E. Engage a factory-authorized service representative to perform startup service.
 - 1. Complete installation and startup checks according to manufacturer's written instructions.
 - 2. Check for lubricating oil in lubricated-type equipment.
 - 3. Check belt drives for proper tension.
 - 4. Verify that air-compressor inlet filters and piping are clear.
 - 5. Check for equipment vibration-control supports and flexible pipe connectors and verify that equipment is properly attached to substrate.
 - 6. Check safety valves for correct settings. Ensure that settings are higher than air-compressor discharge pressure but not higher than rating of system components.
 - 7. Check for proper seismic restraints.
 - 8. Drain receiver tanks.
 - 9. Operational Test: After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation.
 - 10. Test and adjust controls and safeties.

3.3 CONNECTIONS

- A. Comply with requirements for piping specified in Division 22 Section 221513 "General-Service Compressed-Air Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to machine to allow service and maintenance.

3.4 IDENTIFICATION

- A. Identify general-service air compressors and components. Comply with requirements for identification specified in Division 22 Section 220553 "Identification for Plumbing Piping and Equipment."

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's maintenance personnel to adjust, operate, and maintain air compressors.

SECTION 22 33 00

ELECTRIC DOMESTIC WATER HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. This Section includes the following:
 - 1. Commercial, storage electric water heaters.
 - 2. Water heater accessories.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type and size of water heater indicated. Include rated capacities, operating characteristics, furnished specialties, and accessories.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and maintenance data.
- D. Warranty.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, Article 100 and marked for intended use.

- C. ASME Compliance: Where ASME-code construction is indicated, fabricate and label commercial water heater storage tanks to comply with ASME Boiler and Pressure Vessel Code: Section VIII, Division 1.
- D. Comply with NSF 61, "Drinking Water System Components - Health Effects; Sections 1 through 9" for all components that will be in contact with potable water.

1.6 WARRANTY

- A. Manufacturer's Warranty: 5 years from substantial completion.

PART 2 - PRODUCTS

2.1 COMMERCIAL ELECTRIC WATER HEATERS

- A. Commercial, Storage Electric Water Heaters: Comply with UL 1453 requirements for storage-tank-type water heaters.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Electric Heater Company (The); Hubbell Heaters Division.
 - b. Smith, A. O. Water Products Company.
 - c. State Industries, Inc.
 - d. Or Approved Equal.
 - 2. Storage-Tank Construction: Non-ASME-code, steel vertical arrangement.
 - a. Tappings: Factory fabricated of materials compatible with tank and piping connections. Attach tappings to tank before testing.
 - 1) NPS 2 (DN 50) and Smaller: Threaded ends according to ASME B1.20.1.
 - b. Pressure Rating: 150 psig (1035 kPa).
 - c. Interior Finish: Comply with NSF 61 barrier materials for potable-water tank linings, including extending lining material into tappings.
 - 3. Factory-Installed Storage-Tank Appurtenances:
 - a. Anode Rod: Replaceable magnesium.
 - b. Drain Valve: Corrosion-resistant metal complying with ASSE 1005.
 - c. Insulation: Comply with ASHRAE/IESNA 90.1.
 - d. Jacket: Steel with enameled finish.
 - e. Heating Elements: Electric, screw-in or bolt-on immersion type arranged in multiples of three.

- 1) Staging: Input not exceeding 18 kW per step.
 - f. Temperature Control: Adjustable immersion thermostat with 90-140 deg F range.
 - g. Safety Controls: High-temperature-limit and low-water cutoff devices or systems.
 - h. Relief Valves: ASME rated and stamped and complying with ASME PTC 25.3, for combination temperature and pressure relief valves. Include one or more relief valves with total relieving capacity at least as great as heat input, and include pressure setting less than water heater working-pressure rating. Select one relief valve with sensing element that extends into storage tank.
4. Special Requirements: NSF 5 construction.
 5. Energy Management System Interface: Normally closed dry contacts for enabling and disabling water heater.
 6. Capacity and Characteristics WH-1
 - a. Capacity: 100 gal.
 - b. Recovery: 73.8 gph at 100 deg F (56 deg C) temperature rise.
 - c. Temperature Setting: 140 deg F.
 - d. Number of Heating Elements: Two, working simultaneously.
 - e. Electrical Characteristics:
 - 1) Power Demand: 18 kw
 - 2) Volts: 208V
 - 3) Phases: Three.
 - 4) Hertz: 60.

2.2 HOT WATER CIRCULATOR

A. Commercial Hot Water Circulators:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Bell and Gossett.
 - b. Taco
 - c. Grundfos
 - d. Or Approved Equal
2. Pump must be LEAD-free, horizontal, oil-lubricated type, rated for 125 psi.
3. The motor must be of the drip-proof, sleeve-bearing, quiet operating, rubber-mounted construction. Motors must have built-in thermal overload protectors.
4. For pump model and rating refer to schedule on contract drawings.

2.3 AQUASTATS AND TIMERS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Automatic Timer and Aquastat Combination consisting of automatic timer kit TC-1 by Bell and Gossett and AQ-1/2 aquastat by Bell and Gossett or comparable product by one of the following:
1. Taco
 2. Grundfos
 3. Or Approved Equal

2.4 EXPANSION TANK

- A. Expansion Tank must be listed for Portable Water applications with all wetted components to be FDA approved.
- B. Tank must be bladder type with steel shell designed and constructed per ASMe Section VIII, Div.1 and heavy duty butyl bladder
- C. Tank must be rated for 125 psig, 240 degree F.

2.5 WATER HEATER ACCESSORIES

- A. Water Heater Stands: Water heater manufacturer's factory-fabricated steel stand for floor mounting and capable of supporting water heater and water. Include dimension that will support bottom of water heater a minimum of 18 inches (457 mm) above the floor.
- B. Water Heater Mounting Brackets: Water heater manufacturer's factory-fabricated steel bracket for wall mounting and capable of supporting water heater and water.
- C. Drain Pans: Corrosion-resistant metal with raised edge. Include dimensions not less than base of water heater and include drain outlet not less than NPS 3/4 (DN 20).
- D. Piping-Type Heat Traps: Field-fabricated piping arrangement according to ASHRAE/IESNA 90.1 or ASHRAE 90.2.
- E. Water Regulators: ASSE 1003, water-pressure reducing valve. Set at 25-psig- (172.5-kPa-) maximum outlet pressure, unless otherwise indicated.
- F. Shock Absorbers: ASSE 1010 or PDI WH 201, Size A water hammer arrester.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 WATER HEATER INSTALLATION

- A. Install commercial water heaters on concrete bases.
 - 1. Exception: Omit concrete bases for commercial water heaters if installation on stand, bracket, suspended platform, or direct on floor is indicated.
 - 2. Concrete base construction requirements are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- B. Install water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.
- C. Install combination temperature and pressure relief valves in top portion of storage tanks. Use relief valves with sensing elements that extend into tanks. Extend commercial, water-heater, relief-valve outlet, with drain piping same as domestic water piping in continuous downward pitch, and discharge by positive air gap onto closest floor drain.
- D. Install water heater drain piping as indirect waste to spill by positive air gap into open drains or over floor drains. Install hose-end drain valves at low points in water piping for water heaters that do not have tank drains. Refer to Division 22 Section 221119 "Domestic Water Piping Specialties" for hose-end drain valves.
- E. Install thermometer on outlet piping of water heaters.
- F. Install water regulator, with integral bypass relief valve, in booster-heater inlet piping and water hammer arrester in booster-heater outlet piping.
- G. Install piping-type heat traps on inlet and outlet piping of water heater storage tanks without integral or fitting-type heat traps.
- H. Fill water heaters with water.

3.3 CONNECTIONS

- A. Install piping adjacent to water heaters to allow service and maintenance. Arrange piping for easy removal of water heaters.
- B. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems".

- C. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Engage a factory-authorized service representative to inspect field-assembled components and equipment installation, including connections.
- B. Perform the following field tests and inspections:
 - 1. Leak Test: After installation, test for leaks. Repair leaks to restore to leak free condition and retest until no leaks exist.
 - 2. Operational Test: After electrical circuitry has been energized, confirm proper operation.
 - 3. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- C. Remove and replace water heaters that do not pass tests and inspections and retest as specified above.

3.5 DEMONSTRATION

- A. Engage a factory service representative to instruct City of New York's maintenance personnel to adjust, operate, and maintain commercial electric water heaters.

END OF SECTION 223300

SECTION 22 40 00

PLUMBING FIXTURES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes the following:
1. Faucets for lavatories and sinks.
 2. Flushometers
 3. Showers
 4. Toilet seats.
 5. Protective shielding guards.
 6. Fixture supports.
 7. Water closets.
 8. Urinals.
 9. Lavatories.
 10. Pantry sinks.
 11. Mop sinks.
 12. Drinking Fountain.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 013300 “Submittal Procedures”.

1.4 SUBMITTALS

- A. Product Data: For each type of product indicated.
- B. Shop Drawings: Diagram power, signal, and control wiring.
- C. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 014000 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70-2010, Article 100 and marked for intended use.
- C. Regulatory Requirements: Comply with requirements in ICC A117.1-2009, "Accessible and Usable Buildings and Facilities"; Public Law 90-480, "Architectural Barriers Act"; and Public Law 101-336, "Americans with Disabilities Act"; for plumbing fixtures for people with disabilities.
- D. Regulatory Requirements: Comply with requirements of New York City Plumbing code Section 604 for maximum flow rates and consumption for water fixtures and WaterSense program labeling requirements.
- E. NSF Standard: Comply with NSF 61, "Drinking Water System Components--Health Effects," for fixture materials that will be in contact with potable water.
- F. Select combinations of fixtures and trim, faucets, fittings, and other components that are compatible.
- G. Comply with the following applicable standards and other requirements specified for plumbing fixtures:
 - 1. Enameled, Cast-Iron Fixtures: ASME A112.19.1M.
 - 2. Plastic Laundry Trays: ANSI Z124.6.
 - 3. Plastic Shower Enclosures: ANSI Z124.2.
 - 4. Plastic Sinks: ANSI Z124.6.
 - 5. Porcelain-Enameled, Formed-Steel Fixtures: ASME A112.19.4M.
 - 6. Slip-Resistant Bathing Surfaces: ASTM F 462.
 - 7. Solid-Surface-Material Lavatories and Sinks: ANSI/ICPA SS-1.
 - 8. Stainless-Steel Residential Sinks: ASME A112.19.3.
 - 9. Vitreous-China Fixtures: ASME A112.19.2M.
 - 10. Water-Closet, Flush Valve, Tank Trim: ASME A112.19.5.
 - 11. Water-Closet, Flushometer Tank Trim: ASSE 1037.
- H. Comply with the following applicable standards and other requirements specified for lavatory and sink faucets:
 - 1. Backflow Protection Devices for Faucets with Side Spray: ASME A112.18.3M.
 - 2. Backflow Protection Devices for Faucets with Hose-Thread Outlet: ASME A112.18.3M.
 - 3. Diverter Valves for Faucets with Hose Spray: ASSE 1025.

4. Faucets: ASME A112.18.1.
5. Hose-Connection Vacuum Breakers: ASSE 1011.
6. Hose-Coupling Threads: ASME B1.20.7.
7. Integral, Atmospheric Vacuum Breakers: ASSE 1001.
8. NSF Potable-Water Materials: NSF 61.
9. Pipe Threads: ASME B1.20.1.
10. Sensor-Actuated Faucets and Electrical Devices: UL 1951.
11. Supply Fittings: ASME A112.18.1.
12. Brass Waste Fittings: ASME A112.18.2.

J. Comply with the following applicable standards and other requirements specified for miscellaneous fittings:

1. Atmospheric Vacuum Breakers: ASSE 1001.
2. Brass and Copper Supplies: ASME A112.18.1.
3. Dishwasher Air-Gap Fittings: ASSE 1021.
4. Manual-Operation Flushometers: ASSE 1037.
5. Plastic Tubular Fittings: ASTM F 409.
6. Brass Waste Fittings: ASME A112.18.2.
7. Sensor-Operation Flushometers: ASSE 1037 and UL 1951.

K. Comply with the following applicable standards and other requirements specified for miscellaneous components:

1. Disposers: ASSE 1008 and UL 430.
2. Dishwasher Air-Gap Fittings: ASSE 1021.
3. Flexible Water Connectors: ASME A112.18.6.
4. Grab Bars: ASTM F 446.
5. Hose-Coupling Threads: ASME B1.20.7.
6. Off-Floor Fixture Supports: ASME A112.6.1M.
7. Pipe Threads: ASME B1.20.1.
8. Plastic Toilet Seats: ANSI Z124.5.
9. Supply and Drain Protective Shielding Guards: ICC A117.1-2009.

1.6 DEFINITIONS

- A. Retain abbreviations and terms that remain after this Section has been edited.
- B. ABS: Acrylonitrile-butadiene-styrene plastic.
- C. Accessible Fixture: Plumbing fixture that can be approached, entered, and used by people with disabilities.
- D. FRP: Fiberglass-reinforced plastic.

- E. PMMA: Polymethyl methacrylate (acrylic) plastic.
- F. PVC: Polyvinyl chloride plastic.
- G. Solid Surface: Nonporous, homogeneous, cast-polymer-plastic material with heat-, impact-, scratch-, and stain-resistance qualities.

PART 2 - PRODUCTS

2.1 LAVATORY FAUCETS

A. Lavatory Faucets, L:

1. Basis-of-Design Product: Subject to compliance with requirements, provide ADA compliant metering faucet Chicago Faucets Model 802-V336CP or comparable product by one of the following:
 - a. American Standard Companies, Inc.
 - b. Delta Faucet Company.
 - c. Kohler Co.
 - d. Zurn Plumbing Products Group; Commercial Brass Operation.
 - e. Or Approved Equal.
2. Description: ADA Compliant, metering:
 - a. Body Material: Commercial, solid brass.
 - b. Finish: Polished chrome plate.
 - c. Maximum Flow Rate: 0.25 gallon/ cycle.
 - d. Centers: 4".
 - e. Mounting: Deck, exposed.
 - f. Valve Handle(s): Not applicable.
 - g. Inlet(s): NPS 3/8.
 - h. Spout: Rigid type.
 - i. Drain: Chrome Plated Brass Grid Strainer Sloan ETF-460A.
 - j. Tempering Device: n/a
 - k. Variation: n/a
 - l. Transformer: n/a
 - m. Time Out Setting: 12 seconds.
 - n. Cycle: 0.25 gallon per cycle.

2.2 SINK FAUCETS

A. Sink Faucets, PS:

1. Basis-of-Design Product: Subject to compliance with requirements, provide kitchen sink Chicago Faucets Model 51-L12ABCP or a comparable product by one of the following:
 - a. Eljer.
 - b. Kohler Co.
 - c. Elkay
 - d. Or Approved Equal.

2. Description: Kitchen faucet with spray, three-hole fixture. Include hot- and cold-water indicators; coordinate faucet inlets with supplies and fixture holes; coordinate outlet with spout and fixture receptor.
 - a. Body Material: Commercial, solid brass.
 - b. Finish: Polished chrome plate.
 - c. Maximum Flow Rate: 2.2 gpm.
 - d. Mixing Valve: Two-lever handle.
 - e. Backflow Protection Device for Hose Outlet: Not required.
 - f. Backflow Protection Device for Side Spray: Not required.
 - g. Centers: 8 inches (203 mm).
 - h. Mounting: Deck, exposed.
 - i. Handle(s): Wrist blade, 4 inches (102 mm).
 - j. Inlet(s): NPS 1/2 (DN 15).
 - k. Spout Type: Field-convertible gooseneck rigid/swivel gooseneck spout.
 - l. Spout Outlet: Aerator.
 - m. Vacuum Breaker: Not required.
 - n. Operation: Compression, manual.
 - o. Drain: Grid.

B. Mop Sink Faucets, MS:

1. Basis-of-Design Product: Subject to compliance with requirements, provide service sink faucet Chicago 814-CP or a comparable product by one of the following:
 - a. Eljer.
 - b. Kohler Co.
 - c. American Standard
 - d. Or Approved Equal.

2. Description: Service Sink faucet with vacuum breaker, integral stops, adjustable wall brace, pail hook and 3/4" hose thread on spout.
 - a. Body Material: Commercial, solid brass.
 - b. Finish: Chrome plate.
 - c. Maximum Flow Rate: 2.2 gpm.
 - d. Mixing Valve: not required.
 - e. Backflow Protection Device for Hose Outlet: Not required.
 - f. Backflow Protection Device for Side Spray: Not required.
 - g. Centers: 8 inches (203 mm).
 - h. Mounting: Wall, exposed.
 - i. Handle(s): Four arm handle.
 - j. Inlet(s): NPS 1/2 (DN 15).
 - k. Spout Type: rigid spout.
 - l. Spout Outlet: Threaded
 - m. Vacuum Breaker: required.
 - n. Operation: Manual.
 - o. Drain: Grid.

2.3 FLUSHOMETERS

A. Flushometers, WC:

1. Basis-of-Design Product: Subject to compliance with requirements, provide flushometer American Standard Model 111-1.28 or a comparable product by one of the following:
 - a. Sloan.
 - b. Zurn Plumbing Products Group; Commercial Brass Operation.
 - c. Toto.
 - d. Or Approved Equal.
2. Description: Exposed, Manual Flushometer for water-closet-type fixture. Include brass body with corrosion-resistant internal components, control stop with check valve, vacuum breaker, copper or brass tubing, and polished chrome-plated finish on exposed parts.
 - a. Internal Design: piston operation.
 - b. Style: Exposed, chrome plated.
 - c. Inlet Size: NPS 1 (DN 25).
 - d. Trip Mechanism: Manual.
 - e. Consumption: 1.28 gal./flush.
 - f. Tailpiece Size: NPS 1-1/2 (DN 40).

B. Flushometers, UR:

1. Basis-of-Design Product: Subject to compliance with requirements, provide ADA compliant flushometer Sloan Royal Model 180-0.5, 3/4" spud, or a comparable product by one of the following:
 - a. Sloan Valve Company.
 - b. Zurn Plumbing Products Group; Commercial Brass Operation.
 - c. American Standard
 - d. Or Approved Equal.

2. Description: Flushometer for urinal fixture. Include brass body with corrosion-resistant internal components, control stop with check valve, vacuum breaker, copper or brass tubing, and polished chrome-plated finish on exposed parts.
 - a. Internal Design: piston operation.
 - b. Style: Exposed, chrome plated.
 - c. Inlet Size: NPS 3/4 (DN 20).
 - d. Trip Mechanism: manual.
 - e. Consumption: 0.5 gal./flush.
 - f. Tailpiece Size: NPS 1 (DN 25).

2.4 SHOWERS, SH:

A. Shower Faucets, SH:

1. Basis-of-Design Product: Provide ADA compliant, shower unit Acorn Shower-Ware Model 450 BADA with Flow Control Hand Held Shower, or a comparable product by one of the following:
 - a. American Standard Companies, Inc.
 - b. Kohler Co.
 - c. Zurn Plumbing Products Group.
 - d. Or Approved Equal.

2. Description: Single-handle thermostatic and pressure-balance valve. Include hot- and cold-water indicators; check stops; and hand-held shower. Coordinate faucet inlets with supplies and outlet with diverter valve.
 - a. Body Material: Solid brass.
 - b. Finish: Polished chrome plate.

- c. Maximum Flow Rate: 1.5 gpm, unless otherwise indicated.
 - d. Diverter Valve: Not required.
 - e. Mounting: Exposed.
 - f. Antiscald Device: Integral with mixing valve.
 - g. Check Stops: Check-valve type, integral with or attached to body; on hot- and cold-water supply connections.
 - h. Supply Connections: NPS 1/2 (DN 15) Sweat.
- B. Shower Basin: Precast terrazzo one piece receptor for wheelchair accessibility similar to FIAT Model ADAWN6036. Install per manufacturer's recommendations and in accordance to details on A-series drawings.
- C. Shower Drain in shower basin: comply with specification Section 221319 "Sanitary Waste Piping Specialties".

2.5 TOILET SEATS

A. Toilet Seats, WC:

- 1. Basis-of-Design Product: Subject to compliance with requirements, provide toilet seat Olsonite Model 95CT:
 - a. Bemis Manufacturing Company.
 - b. Church Seats.
 - c. Olsonite.
 - d. Or Approved Equal.
- 2. Description: Toilet seat for water-closet-type fixture.
 - a. Material: Molded, solid plastic with antimicrobial agent.
 - b. Configuration: Open front, without cover.
 - c. Size: Elongated.
 - d. Hinge Type: SS.
 - e. Class: Heavy-duty commercial.
 - f. Color: White.

2.6 PROTECTIVE SHIELDING GUARDS

A. Protective Shielding Pipe Covers:

1. Basis-of-Design Product: Subject to compliance with requirements, provide waste and supply piping protective covers, ADA compliant, consisting of one P-trap cover and two angle valves and supplies covers, Lav Guard Model 3102 E-Z by Truebro or equal by one of the following manufacturers:
 - a. Insul-Tect Products Co.; a Subsidiary of MVG Molded Products.
 - b. McGuire Manufacturing Co., Inc.
 - c. Zurn Plumbing Products Group.
 - d. Or Approved Equal
2. Install on all ADA lavatories.

2.7 FIXTURE SUPPORTS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Josam Company.
 2. MIFAB Manufacturing Inc.
 3. Smith, Jay R. Mfg. Co.
 4. Tyler Pipe; Wade Div.
 5. Watts Drainage Products Inc.; a div. of Watts Industries, Inc.
 6. Zurn Plumbing Products Group; Specification Drainage Operation.
 7. Or Approved Equal.
- B. Water-Closet Supports, WC:
 1. Description: Combination carrier designed for accessible and standard mounting height of wall-mounting, water-closet-type fixture. Include single or double, vertical or horizontal, hub-and-spigot or hubless waste fitting as required for piping arrangement; faceplates; couplings with gaskets; feet; and fixture bolts and hardware matching fixture. Include additional extension coupling, faceplate, and feet for installation in wide pipe space.
- C. Lavatory Supports, L:
 1. Description: Type II, lavatory carrier with coated concealed arms, tie rod and floor mounted uprights, heavy duty, for floor or wall wall-mounting, lavatory-type fixture. Include steel uprights with feet.
 2. Accessible-Fixture Support: Include rectangular steel uprights.
- D. Urinal Supports, UR:

1. Description: Urinal carrier with back plate, wall hangers and floor mounted uprights, for wall-mounting, urinal-type fixture. Include steel uprights with feet.

2.8 WATER CLOSETS

A. Water Closets, WC:

1. Basis-of-Design Product: Subject to compliance with requirements, provide ADA compliant water closet by American Standard Afwall 2257.101 or a comparable product by one of the following:
 - a. American Standard
 - b. Kohler Co.
 - c. TOTO USA, Inc.
 - d. Or Approved Equal
2. Description: Accessible, wall-mounting, vitreous-china fixture designed for flushometer valve operation.
3. Style: Flushometer valve.
 - a. Bowl Type: Elongated with siphon-jet design. Include bolt caps matching fixture.
 - b. Height: Standard and Accessible where indicated on architectural drawings.
 - c. Design Consumption: 1.28 gal./flush.
 - d. Color: White.
 - e. Spud: 1-1/2" top inlet spud.
4. Toilet Seat: WC.

2.9 URINALS

A. Urinals, UR:

1. Basis-of-Design Product: Subject to compliance with requirements, provide ADA compliant urinal American Standard "Washbrook FlowWise" Model 6590.501 or a comparable product by one of the following:
 - a. Kohler Co.
 - b. TOTO USA, Inc.
 - c. American Standards, Inc.
 - d. Or Approved Equal.

2. Description: Accessible, wall-mounting, top spud, vitreous-china fixture designed for flushometer valve operation.
 - a. Type: Washout flush action.
 - b. Strainer or Trapway: Integral cast strainer with integral trap.
 - c. Design Consumption: 0.5 gal./flush.
 - d. Color: White.
 - e. Supply Spud Size: NPS 3/4 (DN 20).
 - f. Outlet Size: NPS 2 (DN 50).
 - g. Flushometer: UR.
 - h. Fixture Support: Urinal UR chair carrier.

2.10 LAVATORIES

A. Lavatories, L:

1. Basis-of-Design Product: Subject to compliance with requirements, provide ADA compliant lavatory Kohler Model K-2867 or a comparable product by one of the following:
 - a. Zurn
 - b. TOTO USA, Inc.
 - c. American Standard, Inc.
 - d. Or Approved Equal.
2. Description: Accessible, wall-mounting, enameled cast iron.
 - a. Type: With back.
 - b. Size: 20 by 18 inches (508 by 457 mm) rectangular.
 - c. Faucet Hole Punching: 4" centers.
 - d. Faucet Hole Location: Top.
 - e. Pedestal: Not required.
 - f. Color: White.
 - g. Faucet: Lavatory L.
 - h. Supplies: NPS 3/8 (DN 10) chrome-plated copper with stops.
 - i. Drain: Grid.
 - 1) Location: Near back of bowl.
 - j. Drain Piping: NPS 1-1/4 by NPS 1-1/2 (DN 32 by DN 40) chrome-plated, cast-brass P-trap; tubular brass waste to wall and wall escutcheon.
 - k. P-trap with Trap Primer: chrome plated, p-trap with trap primer with trip priming connection and stainless steel braided hose.

- l. Fixture Support: Lavatory L.
- m. Provide protective shielding for water supplies and drain.

2.11 PANTRY SINKS

A. Pantry Sinks, PS:

1. Basis-of-Design Product: Subject to compliance with requirements, provide Elkay single bowl sink Model LR2219-1 or a comparable product by one of the following:
 - a. Kohler Co.
 - b. Eljer.
 - c. Elkay.
 - d. Or Approved Equal.
2. Description: One-bowl, undermount, stainless-steel kitchen sink.
 - a. Overall Dimensions: 22"x 19-1/2"
 - b. Metal Thickness: #18 gauge.
 - c. Bowl:
 - 1) Dimensions: 19"x16".
 - 2) Drain: 3-1/2-inch crumb cup.
 - a) Location: Near back of bowl.
 - d. Sink Faucet:PS
 - e. Supplies: NPS 1/2 (DN 15) chrome-plated copper with stops.
 - f. Drain Piping: NPS 2 (DN 40) chrome-plated, cast-brass P-trap; tubular brass waste to wall; and wall escutcheon(s).
 - g. Disposer: Not required.
 - h. Dishwasher Air-Gap Fitting: Not required.
 - i. Hot-Water Dispenser: Not required.

2.12 SERVICE SINKS

A. Mop Sinks, MS:

1. Basis-of-Design Product: Subject to compliance with requirements, provide precast terrazzo mop sink basin Fiat Model TSB 3000 with stainless steel caps on all curbs and wall guards similar to FIAT Model MSG or comparable product by one of the following:
 - a. Kohler Co.

- b. Eljer.
 - c. FIAT.
 - d. Or Approved Equal.
2. Description: Precast basin made of marble chips.
- a. Overall Dimensions: 24”x 24”x12”
 - c. Sink Faucet: MS.
 - d. Supplies: NPS 1/2 (DN 15) chrome-plated copper with stops.
 - e. Drain Piping: NPS 3 (DN 80).

2.13 DRINKING FOUNTAIN WITH BOTTLE FILLING STATION.

A. Drinking fountain, DF:

1. Basis-of-Design Product: Subject to compliance with requirements, provide drinking fountain Halsey-Taylor Model HTHB-HRFSEBP-I Contour Bi-Level wall mount fountain Barrier-Free with HydroBoost or a comparable product by one of the following:
- a. Haws
 - b. Oasis
 - c. Elkay
 - d. Or Approved Equal
2. Description: No-Lead, ADA compliant, two-level wall mounted Drinking Fountain with Bottle Filling Station.
- a. Body Material: Commercial, solid brass.
 - b. Finish: Stainless Steel gauge #18
 - c. Maximum Flow Rate: 1.5 gpm.
 - d. Bottle Filler: no-touch, sensor –activated bottle filler.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Assemble plumbing fixtures, trim, fittings, and other components according to manufacturers' written instructions.
- B. Install off-floor supports, affixed to building substrate, for wall-mounting fixtures.
 - 1. Use carrier supports with waste fitting and seal for back-outlet fixtures.
 - 2. Use carrier supports without waste fitting for fixtures with tubular waste piping.
 - 3. Use chair-type carrier supports with rectangular steel uprights for accessible fixtures.
- C. Install back-outlet, wall-mounting fixtures onto waste fitting seals and attach to supports.
- D. Install floor-mounting fixtures on closet flanges or other attachments to piping or building substrate.
- E. Install wall-mounting fixtures with tubular waste piping attached to supports.
- F. Install fixtures level and plumb according to roughing-in drawings.
- G. Install water-supply piping with stop on each supply to each fixture to be connected to water distribution piping. Attach supplies to supports or substrate within pipe spaces behind fixtures. Install stops in locations where they can be easily reached for operation.
- H. Install trap and tubular waste piping on drain outlet of each fixture to be directly connected to sanitary drainage system.
- I. Install tubular waste piping on drain outlet of each fixture to be indirectly connected to drainage system.
- J. Install flushometer valves for accessible water closets and urinals with handle mounted on wide side of compartment. Install other actuators in locations that are easy for people with disabilities to reach.
- K. Install tanks for accessible, tank-type water closets with lever handle mounted on wide side of compartment.
- L. Install toilet seats on water closets.
- M. Install faucet-spout fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.

- N. Install water-supply flow-control fittings with specified flow rates in fixture supplies at stop valves.
- O. Install faucet flow-control fittings with specified flow rates and patterns in faucet spouts if faucets are not available with required rates and patterns. Include adapters if required.
- P. Install shower flow-control fittings with specified maximum flow rates in shower arms.
- Q. Install traps on fixture outlets.
 - 1. Exception: Omit trap on fixtures with integral traps.
 - 2. Exception: Omit trap on indirect wastes, unless otherwise indicated.
- R. Install disposer in outlet of each sink indicated to have disposer. Install switch where indicated or in wall adjacent to sink if location is not indicated.
- S. Install dishwasher air-gap fitting at each sink indicated to have air-gap fitting. Install in sink deck. Connect inlet hose to dishwasher and outlet hose to disposer.
- T. Install hot-water dispensers in back top surface of sink or in countertop with spout over sink.
- U. Install escutcheons at piping wall and ceiling penetrations in exposed, finished locations and within cabinets and millwork. Use deep-pattern escutcheons if required to conceal protruding fittings. Escutcheons are specified in Division 22 Section 220500 "Common Work Results for Plumbing."
- V. Seal joints between fixtures and walls, floors, and countertops using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Sealants are specified in Division 07 Section 079200 "Joint Sealants."

3.3 CONNECTIONS

- A. Piping installation requirements are specified in other Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- C. Ground equipment according to Division 26 Section 260526 "Grounding and Bonding for Electrical Systems."
- D. Connect wiring according to Division 26 Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Verify that installed plumbing fixtures are categories and types specified for locations where installed.
- B. Check that plumbing fixtures are complete with trim, faucets, fittings, and other specified components.
- C. Inspect installed plumbing fixtures for damage. Replace damaged fixtures and components.
- D. Test installed fixtures after water systems are pressurized for proper operation. Replace malfunctioning fixtures and components, then retest. Repeat procedure until units operate properly.
- E. Install fresh batteries in sensor-operated mechanisms.

3.5 PROTECTION

- A. Provide protective covering for installed fixtures and fittings.
- B. Do not allow use of plumbing fixtures for temporary facilities unless approved in writing by Commissioner.

END OF SECTION 22 40 00

SECTION 23 05 00

COMMON WORK RESULTS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes
1. The requirements that apply to all the Work of Division 23.

1.3 SUBMITTAL

- A. Submittal Procedures: Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. General:
1. All equipment and accessories must be the product of a manufacturer regularly engaged in its manufacture.
 2. All equipment and accessories new, free from defects.
 3. Supply all equipment and accessories in compliance with the applicable standards listed in this Section and with all applicable national, state and local codes.
 4. All items of a given type must be the product of the same manufacturer.
 5. Install work by craftsmen skilled in trade involved.
- C. Requirement of regulatory agencies:
1. Nothing in the Drawings or Specifications will be construed to permit Work not conforming to applicable laws, ordinances, rules or regulations.
 2. When Drawings or Specifications exceed requirements of applicable laws, ordinances, rules or regulations, Drawings and Specifications take precedence.
 3. It is not the intent of Drawings and Specifications to repeat requirements of codes except where necessary for completeness or clarity.
 4. If any of the requirements of the above are in conflict with one another, or with the requirements of this specification, the most stringent requirements shall govern.
 5. 2014 NYC Building Code.
- D. Materials and equipment must be manufactured, installed and tested as specified in latest editions of applicable publications, standards, rulings and determinations of:
1. Local and state building, plumbing, mechanical, electrical, fire and health department codes.

2. 2014 NYC Building Code
3. 2014 NYC Mechanical Code
4. 2014 NYC Fire Code
5. 2014 NYC Fuel Gas Code
6. American Gas Association (AGA)
7. National Fire Protection Association (NFPA)
8. American Insurance Association (AIA) (formerly National Board of Fire Underwriters)
9. Occupational Safety and Health Act (OSHA)
10. Underwriter’s Laboratories (UL).
11. Factory Mutual Association (FM)
12. National Electric Code (NEC)
13. Environmental Protection Agency (EPA)
14. National Bureau of Standards (NBS)

- E. All materials and equipment must be listed by Underwriters’ Laboratories (UL), and approved by ASME, ANSI, ASTM, AGA, and NEC for intended service.

1.5 SCOPE AND COORDINATION

- A. Perform work and provide material and equipment as shown on the drawings and/or as specified and/or as indicated in this section of the specifications. Completely coordinate all work of this section with work of other trades and provide a complete and fully functional installation.
- B. Drawings and Specifications form complimentary requirements; provide work specified and not shown, and work shown and not specified as though explicitly require by both. Although work is not specifically shown or specified, provide supplementary or miscellaneous items, appurtenances, devices and materials obviously necessary for sound, secure and complete installation.

1.6 RELATED WORK

- A. Related work specified elsewhere: The following work, unless otherwise noted is not included in this section may be performed in other sections:
1. Provide factory built Variable Refrigerant Flow (VRF) heat pump recovery type air conditioning units complete with filtration kits and factory furnished controls.
 2. Provide energy recovery ventilator (ERV) providing sensible and latent heat recovery between outdoor air and exhaust air streams. Integrate control of the ERV into the VRF system controls.
 3. Provide a complete emergency vehicle exhaust capture system to source capture 100% of the exhaust emissions directly at the tail pipe of the vehicle and exhaust those emissions safely outside the building as indicated on plans and as specified.
 4. Provide stainless steel welded duct for vehicle exhaust capture system.
 5. Provide split system cooling for server room and elevator machine room temperature control.
 6. Coordinate and provide supplementary dunnage steel for rooftop condensing units and other rooftop equipment.
 7. Provide all vibration isolation and noise control.
 8. Provide all diffusers, grilles and registers as shown on drawings and as specified hereinafter.

9. Provide all volume and fire dampers, transfer ducts & air inlets and outlets as noted on plans and as specified hereinafter.
10. Provide all ducting, all access doors, all control wiring and conduits, all insulation, all duct lining, all hangers and supports and all other accessories required for the proper installation and performance of the equipment.
11. Testing, balancing, and adjusting of the new heating & cooling system as specified hereinafter.
12. Coordinate with general construction trade for all cores and other openings in exterior walls, interior partitions, slabs, roofing, etc., for ducts, piping, sleeves, conduits, and other penetrations.
13. Provide all sleeves, conduit, escutcheons, etc. in the wall/floor/roof penetrations. Coordinate with general construction trade for fire stopping and/or insulation at all penetrations around the ducts, and conduit, etc.
14. Provide all hoisting and rigging of equipment and material required to complete work of this section.
15. Provide all vibration and noise control to include vibration isolation, sound attenuators, soundproofing of installation as specified hereinafter, etc.
16. Provide testing to establish ambient noise levels and submit test report to in accordance with requirements of NYC 2014 Mechanical Code, Section MC 926 to the Commissioner prior to review and approval of new equipment.
17. Provide testing to establish ambient noise levels and submit test report to in accordance with requirements of NYC 2014 Mechanical Code, Section MC 926 to the Commissioner upon installation and testing adjusting and balancing of new equipment.

1.7 MODIFICATIONS IN LAYOUT

- A. HVAC, Plumbing, Fire Protection, and Electrical Drawings are diagrammatic. They indicate general arrangements of mechanical and electrical systems and other work. They do not show all offsets required for coordination nor do they show exact routings and locations needed to coordinate with structure and other trades to meet Architectural requirements.
- B. To obtain the Commissioner's desired aesthetics in spaces used by building occupants, in all such spaces, prior to installation of visible materials, finishes and equipment (including access panels), review Architectural Drawings for desired locations and where not definitely indicated, request information from the Commissioner.
- C. Check Contract Drawings, as well as Shop Drawings, of all trades to verify and coordinate spaces in which work of this section will be installed.
- D. Maintain maximum headroom at all locations. All piping, duct conduit, and associated components to be as tight to underside of structure as possible.
- E. Make reasonable modifications in layout and components to prevent conflict with work of other trades and to coordinate according to Paragraphs A,B,C,D above. Systems will be run in a rectilinear fashion.
- F. Where conflicts or potential conflict exists and engineering guidance is desired, submit sketch of proposed resolution to Commissioner for review and approval.

1.8 MEASUREMENTS

- A. Contractor must base all measurements, both horizontal and vertical from established benchmark. All work must agree with these established lines and levels. Verify all measurements at site; and check the correctness of same as related to the work.

1.9 MATERIALS AND WORKMANSHIP

- A. Materials must be new, meet detailed requirements of the Contract Documents and be identifiable as being specified or substitute products.
- B. Materials which do not conform to the requirements of the Contract Documents, are not equal to approved samples or are unsatisfactory or unsuited to the purpose for which they are intended, will be rejected.
- C. All work must be performed in the best and most workmanlike manner by plumbers and mechanics skilled in their respective trades and properly licensed.
- D. All equipment must be installed in accordance with the recommendation of the manufacturer.
- E. Defective work, whether the result of poor workmanship, use of defective materials, damage through carelessness, or other cause must be removed within ten (10) days after written notice is given by the Commissioner and the work must be re-executed by the contractor. The fact that the Commissioner may have previously overlooked such defective work will not constitute total or partial acceptance of it.

1.10 CHECKING AND TESTING EQUIPMENT BY MANUFACTURER'S REPRESENTATIVE

- A. All equipment must be installed in strict accordance with manufacturer's instructions. During construction request supervisory assistance from equipment manufacturer's representatives so the equipment will be correctly installed. After installation, request the Commissioner to inspect and see the equipment is in proper working order.
- B. Manufacturer's representative may review the overall system design relative to the proper application of the equipment in the system. The representative will note conduit, wiring, control, location, and other relevant relationships, and furnish appurtenances necessary for satisfactory operation.
- C. Submit to the Commissioner a signed statement certifying:
 - 1. The equipment is properly installed and ready for operation
 - 2. The City of New York's maintenance representatives have been thoroughly instructed
 - 3. Maintenance and operation manuals issued and accepted by the Commissioner.

1.11 COORDINATION DRAWINGS

- A. A single set of coordination drawings must be mutually prepared by all mechanical and electrical trades.

- B. The Sheet Metal sub-contractor must prepare a complete set of background drawings at scale not less than 3/8" equals 1'-0", showing structure and other information as needed for coordination and show sheet metal layout thereon. These will be Coordination Drawings.
- C. Each of the mechanical, electrical and other specialty trade must add its work to these background drawings with appropriate elevations and grid dimensions. Specialty trade information is required for fan rooms and mechanical rooms, horizontal exits from duct shafts, crossovers, and for spaces in and above ceilings where congestion of work may occur such as corridors, and even entire floors. Drawings must indicate horizontal and vertical dimensions, to avoid interference with structural framing, ceilings, partitions, and other services.
- D. Each specialty trade must sign and date each coordination drawing. Return drawing to the Commissioner, who must route them sequentially to all specialty trades.
- E. Where conflicts occur with placement of materials of various trades, the Contractor will be responsible to coordinate the available space to accommodate all trades. Any resulting adjustments must be initialed and dated by specialty trade. The Sheet Metal sub-contractor must then final date and sign each drawing. If the trade cannot resolve conflicts, the decision of the Contractor must be final.
- F. A Contractor who fails to promptly review and incorporate the work on the drawings must assume full responsibility of any installation conflicts affecting the work and of any schedule ramifications.
- G. Make coordination drawings in CAD format. Fabrication must not start until completed coordination drawings are received by the Commissioner and have been reviewed.
- H. Review of coordination drawings must not diminish responsibility under this section for final coordination of installation and maintenance clearances of all systems and equipment with Architectural, Structural, Mechanical, Electrical and other work.
- I. After review:
 - 1. After review of coordination drawings, the method used to resolve interferences not previously identified must be as in "MODIFICATIONS IN LAYOUT" above.
 - 2. All changes to reviewed coordination drawings must be in writing by the Commissioner prior to start of work in affected area.
- J. Distribution of Coordination Drawings:
 - 1. Digital copy in CAD format of the Coordination Drawings to each specialty trade and affected trade for their use.
- K. All firewalls and smoke partitions must be highlighted on coordination drawings for appropriate coordination.
- L. The main paths of egress and for equipment removal from main mechanical and electrical rooms must be clearly shown on coordination drawings.
- M. Coordination Drawings will include, but not limited to:
 - 1. Plumbing systems, piping and equipment.

2. HVAC piping, systems and equipment.
3. Control systems.
4. Electrical distribution, systems and equipment.
5. Lighting systems and fixtures.
6. Sheet metal work, components and accessories, costs and boxes in terminals, etc.
7. Fire protection and sprinkler system, piping and heads.
8. Structural.
9. Electrical Equipment Room layouts.
10. Environmental Rooms and associated refrigeration/heating systems.
11. Partition/room layout.
12. Ceiling tile and grid.
13. Access panels.
14. Smoke and fire dampers.
15. Roof-drain piping.
16. Major electrical conduit runs, panelboards, feeder conduit and racks of branch conduit.
17. Above ceiling miscellaneous metal.
18. Heat tracing of piping.
19. Minimum access space requirements for all equipment for both installation and maintenance.

1.12 REGULATIONS, CODES, PERMITS AND FEES

- A. Conform to all rules, regulations, standards, ordinances and laws of local, state, and Federal governments.
- B. Prior to commencement of work, notify Commissioner as required and submit all of the applicable notifications for construction, operation and demolition. Secure required permits and inspections from NYC Dept. of Buildings, Dept. of Environmental Protection, Dept. Transportation of for this work and pay for all fees required for permits, inspections and review, including special agency construction.
- C. Include all utility and local building department charges for providing temporary and permanent water, sewer, and gas services to buildings.
- D. Provide Commissioner, NYC Dept. of Building access to work at all times.
- E. Contractor will be responsible for all law violations caused by the work under this Division. Notify Commissioner in writing when a discrepancy occurs between code requirements and work shown on drawings and resolve matter before proceeding with work.
- F. When requirements cited in this specification conflict with each other or with Contract Documents, most stringent will govern work.
- G. Make corrections in the work as required by the Commissioner to pass local regulations.
- H. Deliver to the Commissioner any and all final certificates of inspections, permits, and approvals.
- I. Make all necessary submissions to the Department of Environmental Protection, Bureau of Air Resources and Management, NYC Dept. of Buildings, Fire Dept of New York Department,

NYC Dept. of Traffic and NYC Dept. of Parks and Recreation, Pay all required fees for review, registration and sign off.

1.13 OPERATING AND MAINTENENACE MANUALS

- A. General: Obtain at time of purchase of equipment, three copies of operation, lubrication and maintenance manuals for all items. Assemble literature in coordinated manuals with additional information describing combined operation of filed assembled units, including as-built wiring diagrams. Manual will contain names and addresses of manufacturers and local representatives who stock or furnish or repair parts for items or equipment. Divide manuals into three sections or books as follows:
1. Directions for and sequence of operation for each item of the Mechanical and Electrical systems; e.g., air handling units, boilers, chillers, domestic water pump, generator, etc. Sequence must list valves, switches, and other devices used to start, stop and control system. Detail procedure to be followed in case of malfunctions. Include detailed approved flow diagrams of temperature control, heating, condensate, chilled water, condenser water, etc. as appropriate for systems provided. Include approved valve directory showing each valve number, location of each valve, and equipment or fixture controlled by valve. The section must contain as a minimum, but not limited to the following items:
 - a. Startup & shutdown procedures: Provide a step-by-step write-up and video of all major equipment. When manufacturer's printed start-up, troubleshooting and shutdown procedures are available; they must be incorporated into the operating manual for reference.
 - b. Operating Instructions: Written operating instructions and instructional videos will be included for the efficient and safe operation of all equipment.
 - c. Equipment List: List of all major equipment as installed must include model number, capacities, nameplate data and manufacturer's location and purchase order information.
 - d. Service Instructions: Provide the following information for all pieces of equipment:
 - 1) Recommended spare parts, including catalog number and the name, address and telephone number of local suppliers of factory representative.
 - 2) Lubrication and maintenance instructions for all equipment including all electric motors.
 - 3) Belt sizes, types and lengths.
 - e. Detailed list of all control set points and control and wiring diagrams and software.
 - f. Testing and Commissioning Sheets detailing all set points, balance figures for air and water systems and results of noise tests.
 - g. Include in the manuals, parts catalogs for each item of equipment furnished by the Contractor with the components identified by number of for replacement ordering.
 - h. Where applicable, provide type written instructions set in a glass frame.
 - i. All as-built drawings and wiring diagrams.
 - j. Valve charts organized on a room and sequence basis, detailing room, system and valve numbers.
 - k. Manual damper charts organized on a room and system basis, detailing room system and damper number.
 - l. Typewritten detailed description of sequence of operation of each system, with charts and diagrams.

- m. Provide control diagrams, for each air and hydronic system. Diagrams must show complete equipment, controls, model numbers, etc., marked to correspond to identification on equipment.
 - n. Letters from manufacturers certifying their supervision of equipment installation and startup procedures.
 - o. Machinery vibration test reports.
 - p. Certificates of sterilization/chlorination of plumbing systems.
 - q. Test certificates.
 - r. Instruction certificates.
2. Detailed maintenance and trouble shooting manuals furnished by manufacturer for complete maintenance. Include copy of performance, tests and balancing reports.
 3. Lubrication instructions detailing type of lubricant, amount and intervals recommended by manufacturer for each item of equipment. Include additional instructions necessary for implementation of first class lubrication program. Include approved summary of lubrication instructions in chart form, where appropriate.
 - a. A lubrication chart listing each item of equipment, all points of lubrication, proper lubricant, dates lubricated, and lubrication schedule.
 4. Diagrams and Charts
 - a. One copy of each valve chart, damper chart, and lubrication chart will be mounted under glass and installed at locations to be selected by the Commissioner.
 - b. Provide control diagrams, for each air and hydronic system, suitably framed, with glass front. Diagrams must show complete equipment, controls, model numbers, etc., marked to correspond to identification on equipment. Locate as directed by Commissioner.
 - c. Air and water flow diagrams.
- B. Furnish copies of manuals to Commissioner. Deliver manuals no less than 30 days prior to acceptance of equipment to permit Commissioner's designated personnel to become familiar with equipment and operation prior to acceptance.
- C. Provide framed and glazed charts as follows:
1. Flow diagrams from first part of manual as described above.
 2. Valve directory.
 3. Lubrication, valve and damper chart from third part of manual.
- D. Operating Instructions: Upon completion of installation or when the Commissioner accepts portions of building and equipment for operational use, instruct the City of New York's operating personnel in any or all parts of all systems. Instructions must be performed by factory instructed personnel. Commissioner will determine which systems may require additional instructions. Duration of instruction must take equipment through complete cycle of operation (at least 7 days). Make adjustments under operating conditions.
- E. Protection of work:
1. Contractor is responsible for the work and equipment until finally inspected, tested, and accepted. Carefully store materials and equipment which are not immediately installed after delivery to site. Close open ends of work with temporary covers or plug during construction to prevent entry of obstructing material.

1.14 FIELD ADJUSTMENTS TO AIR HANDLING EQUIPMENT, FANS AND PUMPS

- A. Contractor is responsible for changing or adjusting belts, drives, pulleys, motors, impellers, etc., as required, by adjustment for acoustic performance, and by balancing company to achieve the desired air and water delivery by all air handling equipment and pumps.

1.15 COOPERATION BETWEEN TRADES

- A. Cooperate with all other Divisions performing work on this project as necessary to achieve a complete neatly fitted installation for each condition. Consult the Drawings and Specifications to determine nature and extent of work specified in other Divisions that adjoins or attaches to the work of this Division. Confer with other Divisions at the site to coordinate this work with theirs in view of job conditions to the end that interferences may be eliminated and that maximum head room and clearance may be obtained. In the event that interferences develop, the Commissioner's decision will be final as to which Division will relocate its work, and no additional compensation will be allowed for the moving of piping, ductwork, conduit, or equipment, to clear such interferences. Provide templates, information, and instructions to other divisions to properly locate holes and openings to be cut or provided.
- B. For Testing and Balancing of the system, ensure full co-ordination with all other Trades to achieve access to all system components, including leaving wall/ceiling sections down for access. Contractor will be responsible for pre-balancing checks and check sheet and responsibilities outlined in Section 230593.
- C. Ensure full co-ordination between trades to ensure the system is commissioned in accordance with the complete requirements of the complete contract documents.

1.16 HOIST, RIGGING, TRANSPORTATION AND SCAFFOLDING

- A. Provide all scaffolding, staging, cribbing, tackle hoist and rigging necessary for placing all materials and equipment in their proper places in the Project. All temporary work will be removed from the premises when its use is no longer required.

1.17 PRODUCT, DELIVERY, STORAGE AND HANDLING

- A. Deliver equipment in its original package to prevent damage or entrance of foreign matter. Perform all handling and shipping in accordance with manufacturer's recommendations. Provide protective coverings during construction.
- B. Identify materials and equipment delivered to Site to permit check against approved materials list, reviewed Shop Drawings.
- C. Completely cover motors and other moving machinery to protect from dirt and water during construction.
- D. Cap all openings in pipe and ductwork daily to protect against entry by foreign matter.
- E. Protect premises and Work of other Divisions from damage arising out of installation of Work of this Division.

- F. Perform Work in manner precluding unnecessary fire hazard.
- G. All ductwork must be delivered to site with all ends and openings capped with minimum of heavy gauge polyethylene sheeting taped all around to prevent ingress of moisture, dust, debris, etc.
- H. Protect from loss or damage. Replace lost or damaged materials and equipment with new at no increase in Contract Sum. Protect from damage, water, dust, etc., material, equipment and apparatus provided under this Division, both in storage and installed, until Notice of Completion has been filed. Provide temporary storage facilities for material and equipment. Material, equipment or apparatus damaged because of improper storage or protection will be rejected. Remove from Site and provide new, duplicate material, equipment or apparatus in replacement of that rejected.
- I. All stock piled conduit and piping must be placed on dunnage, and protected from weather and from entry of foreign material. All stored materials and equipment must be carefully inspected prior to installation and replaced with new material or equipment if found to be damaged, corroded, etc.

1.18 GUARANTEE AND 24-HOUR SERVICE

- A. Guarantee of the Work of this section will be for one year following the date of Substantial Completion.
- B. Replace material and equipment that require excessive service during guarantee period as defined and as directed by Commissioner.
- C. Provide 24-hour service beginning on the date of substantial completion and lasting until the termination of guarantee period. Service will be at no cost to the City of New York.
- D. At end of guarantee period, transfer manufacturer's equipment and warranties still in force to the City of New York.
- E. Provide manufacturer's engineering and technical staff at site to analyze and rectify problems that develop during guarantee period immediately. If problems cannot be rectified immediately to Commissioner's satisfaction, advise the Commissioner in writing, describe efforts to rectify situation, and provide analysis of cause of problem. Commissioner will suggest course of action.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Equipment and materials must be as described in the respective Sections of Division 23 and Division 26 and as shown.
- B. Equipment specified by manufacturer's number will include all accessories, controls, etc., listed in catalog as standard with equipment. Furnish optional or additional accessories as specified.

- C. Equipment, material damaged during transportation, installation, operation is considered as totally damaged. Replace with new. Variance from this permitted only with written acceptance.
- D. All items of materials in each category of equipment must be of one manufacturer.
- E. Material and Equipment–General Requirements:
 - 1. Material must be new.
 - 2. Testing agency labeled or with other identification wherever standards have been established.
 - 3. Comprised to render complete and operable systems; provide additional items needed to complete installation to realized design.
 - 4. Compatible with space allocated. Modifications necessary to adjust items to space limitations at Contractor's expense.
 - 5. Installed fully operating and without objectionable noise or vibration.

2.2 FLAME-SPREAD AND SMOKE-DEVELOPED PROPERTIES OF MATERIALS

- A. All materials and adhesives used throughout the mechanical systems must have a flame spread rating not over 25 without evidence of continued combustion and with a smoke-developed rating not higher than 50. Materials include but not limited to are insulation, acoustical lining, filter, ducts, flexible connections, jackets or coverings regardless of kind, etc. If such materials are to be applied with adhesives and the adhesives used must have a flame-spread rating not over 25 and a smoke developed rating not higher than 50.
- B. "Flame Spread Rating" and "Smoke Developed Rating" must be as determined by the "method of test of surface burning characteristics of building materials, NFPA no. 244, ASTM E84, Underwriters' Laboratories, Inc., Standard." Such materials are listed in the Underwriters' Laboratories, Inc., "Building Materials List" under the heading "Hazard Classification (Fire)."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SPECIAL RESPONSIBILITIES

- A. Cooperate and coordinate with work of other Sections in executing work of this Section.
 - 1. Perform work such that progress of entire project including work of other Sections will not be interfered with or delayed.
 - 2. Provide information as requested on items furnished under this Section which will be installed under other Sections.
 - 3. Obtain detailed installation information from manufacturers of equipment provided under this section.
 - 4. Obtain final roughing dimensions or other information needed for complete installation of items furnished under other Sections.
 - 5. Keep fully informed as to shape, size and position of openings required for material or equipment to be provided under this and other Sections. Give full information so that

openings required by work of this Section may be coordinated with other work and other openings and may be provided for in advance. In case of failure to provide sufficient information on proper time, provide cutting and patching or have same done, at own expense and to full satisfaction of Commissioner.

6. Provide information as requested as to sizes, number and locations of housekeeping pads necessary for floor mounted vibrating and rotating equipment provided under this Section.
7. Notify Commissioner of location and extent of existing piping, conduit, ductwork and equipment that interferes with new construction. In coordination with and with approval of Commissioner, relocate piping, ductwork and equipment to permit new work to be provided as required by Contract Documents. Remove non-functioning and abandoned piping, ductwork and equipment as directed by Commissioner. Dispose of or store items as requested by Commissioner.

B. Installation Only Items

1. Where contractor is required to install items which the Contractor does not purchase, the Contractor will coordinate delivery and be responsible for their unloading from delivery vehicles and for their safe handling and field storage up to time of installation. This Contractor will be responsible for:
 - a. Any necessary field assembly and internal connections, as well as mounting in place of the items, including the purchase and installation of all dunnage supporting members and fastenings necessary to adapt to architectural and structural conditions.
 - b. Their connection to building systems including the purchase and installation of all terminating fittings necessary to adapt and connect them to the building systems.

C. Maintenance of equipment and systems: Maintain equipment and systems until Final Acceptance. Ensure adequate protection of equipment and material during delivery, storage, installation, and shutdown and during delays pending final test of systems and equipment because of seasonal conditions.

D. Use of premises: Use of premises will be restricted as directed by Commissioner and as required below:

1. Remove and dispose of dirt and debris and keep premises clean. During progress of work, remove equipment and unused material. Put building and premises in neat and clean condition and do cleaning and washing required to provide acceptable appearance and operation of equipment, to satisfaction of Commissioner.
2. Store materials in a manner that will maintain an orderly clean appearance. If stored on-site in open or unprotected areas, all equipment and material must be kept off the ground by means of pallets or racks and covered with tarpaulins.
3. Do not interfere with function of existing sewers and water and gas mains, electrical or mechanical systems and services. Extreme care must be observed to prevent debris from entering pipe, ductwork and equipment. Confer with Commissioner as to disruption of services or other utilities due to testing, connection of new work to existing. Interruption of services must be performed at time of day or night deemed by Commissioner to provide minimal interference with normal operation. Obtain Commissioner's approval of the method proposed for minimizing service interruption.

E. Surveys and Measurements:

1. Base measurements, both horizontal and vertical, on reference points established by Contractor and be responsible for correct laying out of work.
2. In event of discrepancy between actual measurements and those indicated, notify Commissioner in writing and do not proceed with work until written instructions have been issued by Commissioner.

F. Fireproofing:

1. Clip, hangers, clamps, supports and other attachments to surfaces to be fireproofed must be installed, insofar as possible prior to start of spray fiber work.
2. Ducts, piping and other items which would interfere with proper application of fireproofing must be installed after completion of spray fiber work.
3. Patching and restoring of fireproofing due to cutting or damaging to fireproofing during course of work specified under this section must be performed by installer of fireproofing and must not constitute grounds for an extra cost to City of New York.

G. Temporary Utilities:

1. Coordinate work under this Section with progress of construction so that permanent heating system will be ready for temporary heating if permitted by Commissioner as soon as the building is closed in.
2. Provide and direct labor required for attendance, operation and final restoration of permanent heating system if used for temporary heating purposes. Continuous direct attendance must be provided whenever permanent system is in operation prior to acceptance of permanent heating system by Commissioner.

H. Air bound Systems: If, after the plant is in operation, any piping systems, coils or other apparatus are stratified or air bound (by vacuum or pressure), they will be re-piped with new approved and necessary fittings, air vents, or vacuum breakers at no extra cost. If connections are concealed in furring, floors or ceilings, this trade will bear the cost of tearing up and refinishing construction and finish, leaving same in as good condition as before it was disturbed.

I. Miscellaneous: Unload materials and equipment delivered to site. Pay cost for rigging, hoisting, lowering and moving electrical equipment on and around site, in building or on roof.

3.3 MATERIALS AND WORKMANSHIP

- A. Work will be neat and rectilinear. Ductwork, piping, conduit, etc. will run concealed except in mechanical rooms and areas where no hung ceiling exists. Install material and equipment as required by manufacturers. Installation must operate safely and without leakage, undue wear, noise, vibration, corrosion or water hammer. Work must be properly and effectively protected, and pipe and duct openings will be temporarily closed to prevent obstruction and damage before completion.
- B. Except as specified otherwise, material and equipment must be new. Provide supplies, appliances and connections necessary for complete and operational installation. Provide components required or recommended by OSHA and applicable NFPA documents.
- C. Finish of materials, components and equipment will be as approved by Commissioner and will be resistant to corrosion and weather as necessary.

3.4 CONTINUITY OF SERVICES

- A. Do not interrupt existing services without Commissioner’s approval.
- B. Schedule interruptions in advance, according to Commissioner’s instructions. Submit, in writing, with request for interruption, methods proposed to minimize length of interruption.
- C. Interruptions must be scheduled at such times of day and work so that they have minimal impact to City of New York’s operations.
- D. Contractor must coordinate any shutdowns of existing systems as follows:
 - 1. Give proper notice to Commissioner when making shutdowns; a minimum of fourteen full days are required.
 - 2. Minimize shutdowns of any system.
 - 3. Provide temporary services where required and perform shutdown and tie-ins at a time convenient to Commissioner.
 - 4. Contractor will be responsible for completing and filing Commissioner’s shutdown notice questionnaire.
 - 5. Perform required survey and inspection work required by the notice for shutdown.

3.5 WELDING

- A. Weld only by approved acetylene or electric welding process.
- B. Conduct tests to demonstrate suitability of procedures to be used in making welds which conform to specified requirements.
- C. Specification for welding procedure must meet requirements of Welding Qualifications, Section IX, ASME Boiler and Pressure Vessel Code and ANSI B31.1.
- D. Align components. No strain must be imposed on component parts during welding. No part of pipe must be offset more than 20% of thickness. Set flanges and branches properly.
- E. Welder qualification:
 - 1. Test welders to demonstrate ability to make acceptable welds. Tests conducted for qualification of welder for work under one Division or Section will not qualify welder for work under another Division or Section.
 - 2. Tests will be as prescribed for welder qualification in Section IX of the ASME Code.
 - 3. Records of such tests will be as follows: Each welder will be assigned an identifying number, letter or symbol. Identifying mark will be stamped adjacent to welds made by this welder. Identification will be at top of horizontal piping and at front of vertical piping.
 - 4. Maintain record of welders employed, showing dates and results of tests and identifying mark assigned to each welder. Certify records and make them accessible to the Commissioner. Before completion of project, one copy of records must be turned over to Commissioner.
 - 5. No qualification must be older than three years when welder commences to work on this project. If the welder has not welded in required welding process for a period of six months, the welder must be re-certified.

- F. Welding Tests
1. As designated by Commissioner, remove welds for destructive testing or for testing by non-destructive means.
 2. If, in Commissioners opinion, welds so tested do not meet requirements of Sections VIII and IX of ASME, then the contractor will pay for costs of the tests. Remove welds welded by that welder at no cost to the City of New York. Rewelding must be performed by qualified welder other than welder whose weld did not pass the test. Welders whose welds were defective must not be employed on site for remainder of the project.
 3. Welding of stanchions, brackets, anchors and other welding not performed on pipe joints must be in accordance with requirements of AWS specifications and requirements.

3.6 ACCESS AND ACCESS PANELS

- A. Access panels must be provided where indicated on drawings. Include allowance for 24x24 access panels in sheetrock ceilings for ceiling mounted equipment.
- B. Provide proper access to materials and equipment that require inspection, replacement, repair or service, and coordinate their delivery with the installing Trade. If proper access cannot be provided, confer with Commissioner as to the best method of approach for minimizing effect of reduced access which may result.
- C. Coordinate and prepare a location, size, and function schedule of access panels required to fully service equipment and deliver to a representative of installing Trade. Furnish and install distinctively colored buttons (color as selected by Commissioner) in finished ceiling to identify all access panels.
- D. Furnish access panels for installation under other Sections where fire dampers, volume dampers, controls, shut-off valves, control valves, check valves, or other items installed under this section require access and are concealed in floor, wall, furred space or above ceiling. Access panels may be by Milcor, Knapp, Nystorm, Inlanf Steel or approved equal; coordinate selection with other Section supplying similar access panels
- E. Ceilings consisting of lay-in or removable splined tiles do not require access panels and dampers, splitters, or test hole openings above ceiling must have location marked with thumb tack on finished ceiling panel. Location must be noted on record drawings.
- F. Access panels must have same fire rating classification as surface penetrated.
- G. Panels will be at least 8"x8"; access panels at equipment (valves, fire dampers).

3.7 PENETRATIONS AND SLEEVES

- A. General
1. Layout penetration and sleeve openings in advance to permit provision in work. Set sleeves and conduit in forms before concrete is poured. Provide remedial work where sleeves and conduits are omitted or improperly placed.
 2. Provide sleeves and packing materials at all penetrations of foundations, walls, slabs (except on grade), partitions and floors. Sleeves must meet NFPA 101 requirements and material requirements of these specifications.

3. Sleeves that penetrate outside walls, basement slabs, footings and beams must be waterproof.
 4. Coordinate work carefully with architectural and structural. Set sleeves in forms before concrete is poured. Provide core drilling as necessary if walls are poured, or otherwise constructed, without sleeves and a wall penetration is required. Provide core drilling as required for penetration of existing construction. Do not penetrate structural members without Commissioner's approval.
 5. Sleeves for insulated pipe and duct in no-fire rated construction must accommodate continuous insulation without compression. Sleeves and/or penetration in fire rated construction must be packed with fire rated material which must maintain the fire rating of the wall. Seal ends of penetrations to provide continuous vapor barrier where insulation is interrupted.
 6. Where pipes, etc. passing through openings are exposed in finished rooms, finishes of filling materials must match and be flush with adjoining floor, ceiling, and wall finishes.
 7. Identify unused sleeves and slots for future installation.
 8. Fill slots, sleeves and other openings in floors and walls not used. Fill spaces in openings after installation of pipe, duct, conduit or cable.
 9. Fill for floor penetration must prevent passage of water, smoke, fire, and fumes. Fill must be fire resistant in fire floors and walls, and must prevent passage of air, smoke and fumes.
 10. Sleeves through floors must be watertight and must extend 2" above floor surface.
- B. Pipe and Conduit Sleeves:
1. Annular space between pipe/conduit and sleeve must be at least ¼".
 2. Sleeves are not required for slabs-on-grade unless otherwise noted on plans.
 3. Sleeves and packing materials, through rated firewalls and smoke partitions must maintain fire rating of construction penetrated.
 4. Do not support piping risers or conduit on sleeves.
- C. Duct Sleeves and Prepared Openings:
1. Provide duct sleeves for round ducts 15" and smaller; provide prepared, framed openings for round ducts larger and for square, rectangular and flat oval ducts, except as otherwise specified otherwise. Sleeves must meet SMACNA requirements.
 2. Provide sleeves for ducts through 1-, 2- or 3- hour fire rated construction and smoke partitions, regardless of size or shape of ducts. Sleeves must maintain fire rating of construction penetrated. Sleeve and seal materials, construction and clearances must meet requirements of SMACNA Fire Damper and Heat Stop Guide for Air Handling Systems.
 3. Prepared openings must be framed to provide 1" clearance between framing and duct or duct insulation.
- D. Installations, Testing and Approvals:
1. Installation must meet manufacturer's recommendations exactly, particularly regards to safety, ventilation, removal of foreign materials and other details of installation. Dam openings as recommended. Remove flammable materials used for damming and forming seals in fire rated construction.
 2. Sleeve penetration methods must be water- and gas- tight and must meet requirements of ASTM 119 Standard Methods of Fire Tests of Building Construction and Materials.

3. Fire-stop penetration seal methods and materials must be FM-approved and UL-listed as applicable. They must have same rating as the structure penetrated. Submit manufacturer's detail sheet indicating assembly rating.
4. Inspect foamed sealants to ensure manufacturer's optimum cell structure and color ranges.

3.8 ANCHORS AND INSERTS

- A. Inserts will be iron or steel of type to receive machine bolt head or nut after installation. Insert must permit adjustment of bolt in one horizontal direction and must develop strength of bolt when installed in properly cured concrete.
- B. Provide anchors as necessary for attachment of equipment support and hangers.

3.9 ESCUTCHEONS

- A. Install escutcheons around exposed pipe passing through finished floor, floor, wall, or ceiling. Escutcheons must be heavy cast brass, chromium plated, adjustable, and of sufficient outside diameter to cover sleeve opening and must fit snugly around pipe and flush against floor or wall surface. Escutcheon plates must be provided on pipes at fixtures and must be polished chrome plated. Plated steel escutcheon plates are not acceptable. Sample escutcheon plates must be submitted to the Commissioner for approval prior to installation.

3.10 CORE DRILLING

- A. Core drilling is to be avoided.
- B. Set sleeves prior to installation of structure for passage of pipes, conduits, ducts, etc.
- C. Where core drilling is unavoidable, or required by renovation projects, locate all required openings prior to coring and submit to Commissioner for review.
- D. Coordinate openings with Contractor and all other trades.
- E. All core drilling locations will be approved by the Commissioner.
- F. Do not disturb existing systems.
- G. Thoroughly investigate existing conditions in vicinity of required opening prior to coring.

3.11 CARPENTRY, CUTTING AND PATCHING

- A. Do not cut or drill structural members without consent of Commissioner.

3.12 EXCAVATING & BACKFILLING

- A. Preparation:
 1. In accordance with the requirements of Division 31.
 2. Provide barricades, signs, lanterns, shoring, sheeting and pumping as part of Work in this Division as required to ensure safe conditions.

3. Dig trenches straight, true to line and grade with sides and bottoms smoothed of any rock points. Excavate 6 inches below grade of pipe, fill with sand properly packed. Support pipe for entire length on packed sand. Shape or pack bottom of trenches for pipe, duct fittings, hubs, couplings, etc., using templates to fit outside periphery of lower third of piping and ductwork. Provide piping outside building with 36 inch minimum cover from top of pipe to finished grade. Minimum width 26 inches.
4. Dispose of all surplus excavation material and seepage water as directed.
5. After piping has been installed, tested and approved, backfill all excavation, tamp and compact by compressed air tampers.
6. Backfill to 6 inches above crown of pipe with unwashed sand, with remainder of trench backfilled and mechanically tamped in 6-inch maximum layers of selected excavated materials, free from organic matter, rocks, etc. Provide 90 percent compaction in accordance with ASTM D 1557-58T; 95 percent compaction for trenches below building slabs.
7. In any asphalt or concrete paved areas, backfill only to subgrade level.
8. When piping is installed, and prior to backfilling, advise Commissioner. Do not backfill without acceptances of Commissioner.
9. Replace to original condition all paving, curbs, gutters, walks, etc., which become disturbed by trenching.

3.13 CUTTING AND RESTORATIONS

- A. Assume responsibility for restoration to any part of premises or Work of other Divisions, caused by leaks or breaks in piping or equipment furnished or installed under this Division during construction and guarantee period.

3.14 VIBRATION CONTROL

- A. Design criteria for all the specified in Section 23 05 48- "Vibration and Seismic Control for HVAC".

3.15 CONCRETE EQUIPMENT BASES

- A. Locate and size concrete base for all equipment located on existing floors. Base: Six inches high and extending six inches beyond edge of equipment base unless indicated otherwise. Contractor must ensure equipment elevation is suitable for gravity drainage where relevant.
- B. Coordinate concrete bases; concrete is specified in Division 3.

3.16 WATERPROOF CONSTRUCTION

- A. Maintain waterproof integrity of penetrations of materials intended to be waterproof. Provide flashing at exterior wall and roof penetrations. Caulk watertight penetrations of foundation walls and floors. Provide membrane clamps at penetrations of waterproof membranes.
- B. Provide galvanized sheet metal weather protection canopies, hoods or enclosures over all out-of-doors equipment, the operation or maintenance of which would be impaired by rainwater. This requirement applies to damper operators and bearing, damper motors, controls, and instruments. See other sections in this Division for application of this requirement to motors, drive, ducts, and fans.

3.17 RESTORATION OF DAMAGE

- A. Repair or replace, as directed by Commissioner, materials and parts of premises which become damaged as result of installation of Work of this Division. Remove replaced parts from premises.

3.18 LINTELS

- A. Where openings break into an already completed wall as a result of a failure to set sleeves or provide openings during erection of the wall, the Contractor must provide lintels as required for the support of building construction above the inserted item.
- B. Lintels must be structural steel angles, channels or tees of proper size and sections for the supported load; submit to the Commissioner with supporting calculations for approval prior to the installation.
- C. Where new openings are required in an existing wall co-ordinate opening size, location and lintel type with Commissioner.

3.19 ROOF OPENINGS AND CURBS

- A. Roof openings where required must be coordinated with all affected Trades and all flashing and patching must be as per details indicated on the Architectural plans.

3.20 TOOLS AND EQUIPMENT

- A. Furnish all tools and equipment necessary for the proper installation, protection and upkeep of the Work.

3.21 ADJUSTMENT

- A. Preliminary Operation:
 - 1. Operate any portion of installation for City of New York's convenience if so requested by Commissioner. Such operation does not constitute acceptance of Work as complete.
- B. Startup Service:
 - 1. Prior to startup, ensure that systems are ready, including checking the following: proper equipment rotation, proper wiring, auxiliary connections, lubrications, venting fan balance, controls and installed and properly set relief and safety valves.
- C. Start and operate all systems. Provide services of factory instructed technicians for startup of major equipment and systems including chillers, boilers, pumps, air handling units, etc.
- D. Adjusting:
 - 1. Adjust all equipment and system components as shown or as otherwise required to result in intended system operation.

2. Thereafter, as a result of system operation or as directed by Commissioner, make readjustments as necessary to refine performance and to effect complete system "tune-up".
3. After completion of testing and adjustment, operate the different systems and equipment under normal working conditions for 72 hours continuously and show specified performance. If, in the opinion of the Commissioner, performance of equipment or systems is not in accordance with specifications or submitted data, alter or replace equipment at no increase in Contract Sum. Contractor, at own option, may order tests from an independent approved laboratory to prove compliance. All such tests must be at no increase in Contract Sum. Repeat process as often as required.
4. At completion of Work, provide written certification that all systems are functioning properly without defects.

E. Noise:

1. Cooperate in reducing any objectionable noise or vibration caused by mechanical systems to the extent of adjustments to specified and installed equipment and appurtenances.
2. Cooperate in adjustment of mechanical systems and terminal devices, as directed by Commissioner, to obtain specified acoustic properties.
3. Completely correct noise problems caused by failure to make installation in accordance with Contract Documents, including labor and materials required as a result of such failure, at no increase in Contract Sum. Includes refinish walls, floors etc.

3.22 INSTALLATION OF EQUIPMENT

- A. Use printed descriptions, specifications and recommendations of manufacturers as a guide for installation of Work.
- B. Assemble equipment required to be field assembled under the direct supervision of the manufacturers' agent. Prior to the final acceptance submit letters from the manufacturers that this has been done.
- C. Avoid interference with structure and with work of other trades, preserving adequate headroom and clearing doors and passageways, to satisfaction of Commissioner and in accordance with code requirements. Installation must permit clearance for access to equipment for repair, servicing and replacement.
- D. Install equipment so as to properly distribute equipment loads on building structural members provided for equipment support under other Sections. Roof mounted equipment must be installed and supported on structural steel provided under other Sections.
- E. Provide suspended platforms, strap hangers, brackets, shelves, stands or legs as necessary for floor, wall or ceiling mounting of equipment as required.
- F. Provide steel supports and hardware for proper installation of hangers, anchors, guides, etc.
- G. Provide cuts, weights, and other pertinent data required for proper coordination of equipment support provisions and installations.

- H. Structural steel and hardware must conform to Standard specifications of ASTM; use of steel and hardware must conform to requirements of Section V of Code of Practice of American Institute of Steel Construction.
- I. Verify site conditions and dimensions of equipment to ensure access for proper installation of equipment without disassembly, which will void warrantee. Report in writing to Commissioner, prior to purchase or shipment of equipment involved, on conditions which may prevent proper installation.

3.23 ELECTRICAL REQUIREMENTS

- A. Electrical Work in this Division must conform to requirements of Division 26.
- B. Furnish all motors, starters, variable frequency drives, disconnects for motors and heating coils and controls for equipment unless otherwise noted.
- C. Coordinate with Division 26 to install all starters, variable frequency drives, disconnects and overload protectors and provide all necessary wire, conduit and boxes to properly connect equipment no matter how many disconnects, starters, etc are included, unless otherwise noted. Contractor must receive, unload, set and install motor starters, disconnects and other items under Division 26.
- D. Provide all necessary conduit and control wiring to pushbuttons, thermostats, pilot lights, interlocks and similar equipment for equipment under Division.
- E. Flow control switches, thermostats, controllers, relays, transformers, switches, etc and other components provided with equipment shown on the Contract Documents not to be factory wired or part of division 26 scope necessary for proper operation of mechanical systems must be furnished and installed by Contractor.
- F. Where the starter and/or safety switch is an integral part of equipment assembly, the assembly must be furnished with the wiring complete between starter, controller and motor. Make connections to unit terminals.
- G. Factory wired assemblies and panels: Pre-wired to numbered terminal strips for connection to field wiring. Provide disconnect switch for each control circuit connection to pre-wired assemblies and control panels.
- H. All motors and motor control equipment must meet the requirements of NEC, and must comply with requirements of the Public Utility Company furnishing service and NY City Electrical Code.
- I. Verify voltage at site before ordering any electrical equipment.
- J. Wiring:
 - 1. Power wiring: Except for factory wiring on mechanical equipment, power wiring is specified in Division 26.
 - 2. HVAC control wiring:
 - a. Except for factory wiring on mechanical equipment, specified in Division 26.

- b. All wiring and conduit must be according to latest edition of the NEC. All control wiring must be installed in EMT in accordance with applicable portions of NEC and requirements of Division 26.
 - c. Low voltage wiring in air plenums must be UL approved conductor for application as manufactured by Alpha, Beldon, Weico or approved equal..
 - 3. Fire protection system wiring: See Division 26.
 - 4. Provide approved wiring diagrams for work to be connected under Division 26.
- K. Provide weatherproof devices and installation for out-of-doors work.
- L. Smoke detectors: Product of combustion detectors in ductwork furnished under Division 26, installed by this Division 23, and wired by Division 26 to fire alarm system.
- M. Motors:
- 1. Provide motors for equipment specified. Separately shipped motors are to be installed by Division 23. Coordinate with Division 26.
 - 2. Separately shipped motors and variable frequency drives must be received unloaded installed by Division 23, wired by Division 26 Adjustable motor bases and all bolts and nuts required for installation of base and motor must be provided and installed by Division 23.
 - 3. Align and adjust mechanical coupling for direct-driven motorized equipment. Adjust and align drive and belt tension on belt-driven equipment.
 - 4. Field lubricate all motors prior to operation and maintain lubrication prior to acceptance of equipment by the Commissioner.
 - 5. Provide motor terminal connection diagram as prepared by motor manufacturers.
 - 6. Contractor will be responsible for proper rotation of three phase equipment.

3.24 PAINTING

- A. Equipment installed must have shop coat of non-lead gray paint. Hangers and supports must have one coat of non-lead primer. Machinery such as pumps, fans, etc., must be stenciled with equipment name. Stencil must be at least 6” high for large equipment, 2” high for small equipment. Finish painting, including painting of various piping and duct systems, will be coordinated with Section 09 90 00 - Painting and Coating.
- B. Paint all outside exposed equipment and equipment supports with two coats of weather resistant enamel.
- C. Provide heat resistant paint for hot piping, equipment and materials.
- D. Note requirement for Commissioner’s approval invoked under Article 3.3 MATERIALS AND WORKMANSHIP regarding finish of material and equipment, which are visible or subject to corrosive or atmospheric conditions.
- E. Properly prepare Work under this Division to be finish painted under Division 9.

3.25 LUBRICATION

- A. Lubricate all equipment at completion of Work. Furnish Commissioner with a written lubrication schedule for all equipment as specified in Division 23.

3.26 EXPANSION PROVISIONS

- A. Installation of piping must allow for expansion using offsets, loops, swing joints, expansion joints, etc. as necessary to prevent undue strain. Take-offs from mains to run outs must not have less than three elbow swing.
- B. Mains and risers with loops or offsets must be securely anchored to structure so as to impart expansion towards loops or offsets. Anchors must be constructed of heavy forged wrought iron, secured to pipe and to structure. Provide vibration isolation as required.
- C. Provide pipe alignment guides as required to guide expanding pipe to move freely from anchor points toward expansion joints, offsets, etc.

3.27 CLEANING

- A. Cleaning must be performed prior to commissioning.
- B. Completely cover all plumbing fixtures and all motors and other moving machinery to prevent entry of dirt and water during construction. Effectively cap all openings into ducts and pipes to keep foreign matter out during construction.
- C. Protect all finished surfaces of fixtures with heavy paper pasted thereon, or by other means, throughout the period of construction.
- D. Ductwork:
 - 1. Ducts must be thoroughly cleaned so that no dirt or dust must be discharged from diffusers, registers or grilles, when system is operated.
 - 2. Provide temporary connections for cleaning. Provide cheesecloth for openings during cleaning.
 - 3. Replace filters prior to final inspection and testing.
- E. Piping
 - 1. Furnish pipe cleaning chemicals, chemical feed equipment, materials and labor necessary to clean pipe.
 - 2. Permanently install necessary chemical injection fittings complete with stop valves.
 - 3. After all piping systems have been pressure tested and approved for tightness, clean and flush piping as specified and as required by codes.
 - 4. Maintain continuous blowdown and make-up, as required during flushing operation.
- F. Equipment
 - 1. After completion of project, clean exterior surface of all equipment, including concrete residue, dirt, paint residue, etc.
 - 2. Plumbing fixtures - clean and polish fixtures immediately prior to final inspection.

3.28 FINAL INSPECTION

- A. As the work nears completion, review the requirements of the Contract Documents, inspect the work and inform all parties involved in work to be corrected or completed before the project can be deemed substantially complete.

- B. When the Project is substantially complete, notify Commissioner in writing of this fact, listing those items of Work remaining incomplete, the reason therefore, and the anticipated date that all remaining work will be completed. Carry out own final inspection and satisfy the Work. The Commissioner will then schedule final inspection of the Project.
- C. The Commissioner reserves the right to cancel and reschedule the inspection in the event substantial amount of work remains to be completed or corrected than indicated in the written request for inspection.
- D. All items not completed or found not complying with drawings or specifications by the Commissioner will be identified in their inspection report.
- E. Correct all items on inspection report. Make the correction and initial and date each item on the report after corrections have been completed.

3.29 PROJECT CLOSE-OUT PROCEDURE

- A. Review requirements of each section of the specifications and submit for approval to Commissioner the sign-off forms which must become the project close-out checklist. The Commissioner may incorporate additional specific items to the following checklist which must become part of project requirements.

END OF SECTION 23 05 00

SECTION 23 05 13

COMMON MOTOR REQUIREMENTS FOR HVAC EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. General requirements for single-phase and polyphase, general-purpose, horizontal, small and medium, squirrel-cage induction motors for use on ac power systems up to 600 V and installed at equipment manufacturer's factory or shipped separately by equipment manufacturer for field installation.

1.3 SUBMITTALS

- A. Submittal Procedures: Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.5 COORDINATION

- A. Coordinate features of motors, installed units, and accessory devices to be compatible with the following:
 - 1. Motor controllers.
 - 2. Torque, speed, and horsepower requirements of the load.
 - 3. Ratings and characteristics of supply circuit and required control sequence.
 - 4. Ambient and environmental conditions of installation location.

PART 2 - PRODUCTS

2.1 GENERAL MOTOR REQUIREMENTS

- A. Comply with requirements in this Section except when stricter requirements are specified in HVAC equipment schedules or Sections.

- B. Comply with NEMA MG 1 unless otherwise indicated.

2.2 MOTOR CHARACTERISTICS

- A. Duty: Continuous duty at ambient temperature of 40 deg C and at altitude of 3300 feet above sea level.
- B. Capacity and Torque Characteristics: Sufficient to start, accelerate, and operate connected loads at designated speeds, at installed altitude and environment, with indicated operating sequence, and without exceeding nameplate ratings or considering service factor.

2.3 POLYPHASE MOTORS

- A. Description: NEMA MG 1, Design B, medium induction motor.
- B. Efficiency: Energy efficient, in compliance with Energy Conservation Code of NYS, latest edition.
- C. Service Factor: 1.15.
- D. Multispeed Motors: Variable torque.
 - 1. For motors with 2:1 speed ratio, consequent pole, single winding.
 - 2. For motors with other than 2:1 speed ratio, separate winding for each speed.
- E. Rotor: Random-wound, squirrel cage.
- F. Bearings: Re-greasable, shielded, antifriction ball bearings suitable for radial and thrust loading.
- G. Temperature Rise: Match insulation rating.
- H. Insulation: Class F.
- I. Code Letter Designation:
 - 1. Motors 15 HP and Larger: NEMA starting Code F or Code G.
 - 2. Motors Smaller than 15 HP: Manufacturer's standard starting characteristic.
- J. Enclosure Material: Cast iron for motor frame sizes 324T and larger; rolled steel for motor frame sizes smaller than 324T.

2.4 POLYPHASE MOTORS WITH ADDITIONAL REQUIREMENTS

- A. Motors Used with Reduced-Voltage and Multispeed Controllers: Match wiring connection requirements for controller with required motor leads. Provide terminals in motor terminal box, suited to control method.
- B. Motors Used with Variable Frequency Controllers: Ratings, characteristics, and features coordinated with and approved by controller manufacturer.

1. Windings: Copper magnet wire with moisture-resistant insulation varnish, designed and tested to resist transient spikes, high frequencies, and short time rise pulses produced by pulse-width modulated inverters.
2. Energy- and Premium-Efficient Motors: Class B temperature rise; Class F insulation.
3. Inverter-Duty Motors: Class F temperature rise; Class H insulation.
4. Thermal Protection: Comply with NEMA MG 1 requirements for thermally protected motors.

2.5 SINGLE-PHASE MOTORS

- A. Motors larger than 1/20 hp may be one of the following, to suit starting torque and requirements of specific motor application:
 1. Permanent-split capacitor.
 2. Split phase.
 3. Capacitor start, inductor run.
 4. Capacitor start, capacitor run.
- B. Multispeed Motors: Variable-torque, permanent-split-capacitor type.
- C. Bearings: Pre-lubricated, antifriction ball bearings or sleeve bearings suitable for radial and thrust loading.
- D. Motors 1/20 HP and Smaller: Shaded-pole type.
- E. Thermal Protection: Internal protection to automatically open power supply circuit to motor when winding temperature exceeds a safe value calibrated to temperature rating of motor insulation. Thermal-protection device must automatically reset when motor temperature returns to normal range.

PART 3 - EXECUTION (Not Applicable)

END OF SECTION 23 05 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 05 29

HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Fastener systems.
 - 2. Equipment supports.

1.3 PERFORMANCE REQUIREMENTS

- A. Design trapeze pipe hangers and equipment supports, including comprehensive engineering analysis by a qualified professional engineer licensed in State of NY, using performance requirements and design criteria indicated.
 - 1. Design supports for multiple pipes capable of supporting combined weight of supported systems, system contents, and test water.
 - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product Data: For each type of product indicated.
- C. Shop Drawings: Show fabrication and installation details for the following; include Product Data for components:
 - 1. Equipment supports.
- D. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Structural Steel Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Pipe Welding Qualifications: Qualify procedures and operators according to ASME Boiler and Pressure Vessel Code.

PART 2 - PRODUCTS

2.1 FASTENER SYSTEMS

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used. These fasteners may be used with prior written approval from Commissioner.
- B. Mechanical-Expansion Anchors: Insert-wedge-type, zinc-coated or stainless- steel anchors, for use in hardened Portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

2.2 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.

2.3 ROOF PIPE SUPPORTS

- A. A pipe support with "strut" used to support roof-mounted electrical conduit, condensate piping, gas pipes, and other mechanical piping. Unique design absorbs thermal expansion and contraction of pipes thus preventing damage to the roof membrane. The base is gently rounded to allow movement upon the roof to prevent gouging the roof membrane. Pipes rest on a strut system which is made of hot-dip galvanized steel. The pipe support base is made of polycarbonate resin, and all other metal parts are made of hot-dip galvanized or stainless steel. Pipe stand will accommodate up to 2 1/2" pipe (inside diameter) or up to 3" (outside diameter) pipes.
- B. Provide deck plate beneath pipe stand. The deck plate is a rigid plate which supports other mechanical devices, pedestals or pipe supports by providing a flat smooth surface upon which supporting devices may rest to protect roof-top membranes and to further distribute roof top weight to protect sub-membrane insulation and decking material. The design of the deck plate allows rooftop pipe supports, pedestals and other supporting devices to be installed without penetrating the roof membrane and further allows the daily movement of a piping system to properly carry the load being borne by the supporting devices as thermal expansion and contraction moves the roof system of pipes or devices supported by the deck plate. The deck plate must be constructed of 16, 18 or 20 gauge stainless steel plate which prevents rusting, enhances the longevity of the roof, and provides maximum operational efficiency for other rooftop pipe stands, pedestals and support devices.

2.4 MISCELLANEOUS MATERIALS

- A. Structural Steel: ASTM A 36/A 36M, carbon-steel plates, shapes, and bars; black and galvanized.
- B. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
 - 1. Properties: Nonstaining, noncorrosive, and nongaseous.
 - 2. Design Mix: 5000-psi, 28-day compressive strength.

PART 3 - EXECUTION

3.1 EXECUTION REQUIRMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 HANGER AND SUPPORT INSTALLATION

- A. Fastener System Installation:
 - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
 - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- B. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- C. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- D. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- E. Install lateral bracing with pipe hangers and supports to prevent swaying.
- F. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- G. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.

3.3 EQUIPMENT SUPPORTS

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

3.4 METAL FABRICATIONS

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1/D1.1M procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
 - 1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
 - 2. Obtain fusion without undercut or overlap.
 - 3. Remove welding flux immediately.

4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

3.5 ADJUSTING

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1 inch.

3.6 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal are specified in Division 09
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to restore and comply with ASTM A 780.

3.7 HANGER AND SUPPORT SCHEDULE

- A. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
 1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
 2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joist construction, to attach to top flange of structural shape.
 3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
 4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
 5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
 6. C-Clamps (MSS Type 23): For structural shapes.
 7. Welded-Steel Brackets: For support of pipes from below, or for suspending from above by using clip and rod. Use one of the following for indicated loads:
 - a. Light (MSS Type 31): 750 lb.
 - b. Medium (MSS Type 32): 1500 lb.
 8. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.
 9. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
- B. Use mechanical-expansion anchors instead of building attachments where required in concrete construction. Use of powder actuated anchors must be confirmed with Commissioner.

END OF SECTION 23 05 29

SECTION 23 05 48

VIBRATION AND SEISMIC CONTROLS FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Isolation pads.
 - 2. Isolated Roof Curb
 - 3. Spring and Neoprene Hangers

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: For each product indicated.
- C. Engineering Services: For vibration isolation and seismic-restraint calculations and details indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the professional engineer licensed in the State of New York responsible for their preparation.
- D. Welding certificates
- E. Field quality-control test reports.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."

PART 2 - PRODUCTS

2.1 VIBRATION ISOLATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Kinetics Noise Control.

2. Mason Industries.
 3. Vibration Eliminator Co., Inc.
 4. Vibration Mountings & Controls, Inc.
 5. Or Approved Equal
- B. Pads (MWP): Arranged in single or multiple layers of sufficient stiffness for uniform loading over pad area, molded with a nonslip pattern and galvanized-steel baseplates, and factory cut to sizes that match requirements of supported equipment.
1. Resilient Material: Oil- and water-resistant neoprene.
- C. Spring Isolators (SI): Freestanding, steel, open-spring isolators.
1. Housing: Steel with resilient vertical-limit stops to prevent spring extension due to weight being removed; factory-drilled baseplate bonded to 1/4-inch thick, neoprene or rubber isolator pad attached to baseplate underside; and adjustable equipment mounting and leveling bolt that acts as blocking during installation.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
- D. Elastomeric Hangers (NH): Double-deflection type, fitted with molded, oil-resistant elastomeric isolator elements bonded to steel housings with threaded connections for hanger rods. Color-code or otherwise identify to indicate capacity range.
1. The diameter of the clear hole in the hanger box must be at least 3/4 inch larger than the diameter of the hanger rod and permit the hanger rod to swing through a 30 degree arc. When installed, the hanger box must be allowed to rotate through a full 360 degrees without encountering any obstructions. Neoprene will be bridge-bearing quality with a maximum durometer (Shore A scale) of 50.
 2. Neoprene must be bridge-bearing quality with a maximum durometer (Shore A scale) of 50.
 3. Unless otherwise specified, the static deflection of NH hangers must be 0.25 inches with a strain not exceeding 12.5%.
- E. Spring Hangers (SPNH): Combination coil-spring and elastomeric-insert hanger with spring and insert in compression.
1. Frame: Steel, fabricated for connection to threaded hanger rods and to allow for a maximum of 30 degrees of angular hanger-rod misalignment without binding or reducing isolation efficiency.
 2. Outside Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.

6. Elastomeric Element: Molded, oil-resistant rubber or neoprene. Steel-washer-reinforced cup to support spring and bushing projecting through bottom of frame.
7. Self-centering hanger rod cap to ensure concentricity between hanger rod and support spring coil.

PART 3 - EXECUTION

3.1 EXECUTION REQUIRMENTS:

- A. Refer to DDC General Conditions for execution requirements.

3.2 VIBRATION-CONTROL DEVICE INSTALLATION

- A. Coordinate with general construction trade for installation of roof curbs, equipment supports, and roof penetrations.
- B. Attachment to Structure: If specific attachment is not indicated, anchor bracing to structure at flanges of beams, at upper truss chords of bar joists, or at concrete members.
- C. Drilled-in Anchors:
 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Locate and avoid pre-stressed tendons, electrical and telecommunications conduit, and gas lines.
 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.
 3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors must be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
 4. Set anchors to manufacturer's recommended torque, using a torque wrench.
 5. Install zinc-coated steel anchors for interior and stainless-steel anchors for exterior applications.

3.3 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 1. Obtain Commissioner's approval before transmitting test loads to structure. Provide temporary load-spreading members.
 2. Test to 90 percent of rated proof load of device.
 3. Measure isolator deflection.
 4. If a device fails test, modify all installations of same type and retest until satisfactory results are achieved.
- C. Prepare test and inspection reports.

3.4 HVAC VIBRATION-CONTROL SCHEDULE

A. As indicated below unless otherwise noted on plans:

Equipment Name & Tag	Location	Isolator Type	Base Type	Min Deflection
Rooftop AC Unit	Roof	Isolated Roof Curb	Steel Structure	2 inches static deflection minimum
Fans	Parking Garage	Spring & Neoprene Hanger, SPNH	Steel Structure	2 inches
Boiler	Mechanical Room	Metal Waffle Pad, MWP	Concrete	Deflection not exceeding 15% of thickness
Heat Pump Condensing Units	Roof	Metal Waffle Pad, MWP	Steel Structure	
Pumps P-1,2	Boiler Room	Elastomeric Hangers, NH	-	0.35 inch minimum

END OF SECTION 23 05 48

SECTION 23 05 50

NOISE CONTROL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. A.The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Sound attenuating units.
 2. Duct lining
 3. Duct and pipe lagging.
 4. Ductwork enclosure for soundproofing
 5. Soundproofing of construction.
- B. Acoustic performance of equipment systems and air distribution devices:
1. It is the intent of this specification that noise levels from HVAC equipment (air-conditioning and/or ventilating equipment, ducts, grills, diffusers, fan coil units, pumps, etc.) will not exceed the Noise Criteria Curves (NC) described in Paragraph 3 of this Section. Noise Criteria Curves establish a one number rating for evaluating the acceptability of a sound pressure spectrum according to the average person's hearing. Noise Criteria Curves and their related sound pressure equivalents for each frequency as described in the 1987 ASHRAE Handbook Systems Volume.
 2. These NC levels should be used as a guide in the event of product substitutions and shop drawing modifications. The NC levels must also serve as a gauge by which the results of workmanship and care of installation will be judged from an acoustical standpoint, since a poor installation can lead to the generation of noise.
 3. Noise Criteria for occupied spaces and in particular Training Classroom, Open Office and Robot Shop for this project must be NC 30 or better due to mechanical equipment with anticipated 10dBA room noise attenuation.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Design Criteria:
1. Provide noise control to avoid excessive noise in the building due to the operation of machinery or equipment, or due to interconnected piping, ductwork or conduit.

- C. Acoustical Testing/Quality Assurance:
 - 1. The contractor must cooperate with regard to sound tests (ARI 575, ANSI S1.13) which may be conducted by the Commissioner.
 - 2. The contractor must notify the Commissioner of any changes which will affect the acoustical performance.

1.5 WORKMANSHIP

- A. Workmanship is critical in achieving the objective of noise control and it is critical that all noise control work must be installed in good workmanship like manner.

PART 2 - PRODUCTS

2.1 SOUND ATTENUATORS

- A. Galvanized steel casing and inner faces, all internal components must be spot-welded. Seams must be lock formed, mastic filled and be airtight.
- B. Filler material must be of inorganic mineral or glass fiber under a minimum 5% compression. Filler material must also be inert, vermin and moisture proof. Flame spread classification of 10-25, fuel contributed 0-15, smoke development 0-20, in accordance with NFPA 255, UL No. 723.
- C. Acoustical performance must be established by ASTM E-477-96 procedures. Dynamic insertion loss, air generated noise and aerodynamic performance test results, both in positive and negative flow, with pressure drop ratings must be supplied that meets or exceeds requirements established later in this Specification.
- D. Manufacturers:
 - 1. Industrial Acoustics Company
 - 2. Vibro-Acoustics
 - 3. United McGill Corporation
 - 4. Or Approved Equal.

2.2 SOUND-LININGS

- A. Acoustical performance must be established by ASTM C423-90 procedures. Sound Absorption Coefficients with Type "A" mounting per ASTM E795 must be supplied that meets or exceeds requirements established later in this Specification.
- B. Duct acoustical lining must be roll form, 1-1/2inch thick roll-form fiberglass insulation with a surface acrylic EPA registered anti-microbial coating that will not support biological growth, and meets ASTM G21 and G22 specifications as called out in the drawings or specifications.
- C. Duct lining must be adhered by minimum 50% covering of a fire retardant adhesive in combination with non-ferrous mechanical fasteners.
- D. All transverse and longitudinal abutting edges of duct lining must be sealed and lapped 3" with a heavy coat of adhesive.

- E. Provide metal nosing over transversely-oriented liner edges facing the air stream.
- F. Manufacturers:
 - 1. Owens-Corning Fiberglass Company
 - 2. Johns Manville Insulation Division
 - 3. CertainTeed Corporation
 - 4. Or Approved Equal.

2.3 DUCT AND PIPE LAGGING

- A. Acoustical performance must be established by ASTM E413 and E90 procedures. Insertion loss, Transmission loss and STC data must be supplied that meets or exceeds requirements established later in this Specification.
- B. Where indicated on the drawings, duct/pipe must be wrapped with a minimum 2" thick glass or mineral fiber blanket with a minimum 3.0 lb/ft³ density, and a mass loaded vinyl sheet covered with an aluminum foil jacket. Complete system must provide a minimum STC-23 as measured in an independent accredited acoustical laboratory in accordance with ASTM E90 and E413. Insertion Loss data indicating an IL Insertion Loss value of 25 at 500 Hz. must also be submitted.
- C. Manufactures:
 - 1. Kinetics Noise Control, Inc.
 - 2. Childers Products Company
 - 3. Acoustical Duct & Pipe Lag from Sound Seal, a division of United Process, Inc.
 - 4. Or Approved Equal.

2.4 SPLIT SEALS

- A. Split Seals consist of pipe halves with minimum 3/4"(20mm) thick neoprene sponge cemented to the inner faces. The seal must be tightened around the pipe to eliminate clearance between the inner sponge face and the piping. Concrete may be packed around the seal to make it integral with the floor, wall or ceiling if the seal is not in place prior to the construction of the building member. Seals must project a minimum of 1"(25mm) past either face of the wall. Where temperatures exceed 240°F (115°C), 10 lb. density fiberglass may be used in lieu of the sponge.
- B. Manufacturers:
 - 1. Seals must be Type SWS as manufactured by Mason Industries, Inc.
 - 2. Kinetics Noise Controls, Inc.
 - 3. United McGill Corporation
 - 4. Or Approved Equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL:

- A. No electrical conduit, fixture, ceiling suspension wires or other elements of the building construction must be attached to or abutted against the duct and piping systems.
- B. Where ducts or piping penetrate walls, ceilings and floors of the occupied spaces, or ceiling void partitions or acoustically rated elements whether shown on the drawings or not, acoustically seal the penetration.
- C. Contain rough-in of piping within stud wall cavities no less than 1/4-inch from the plane of the studs and 1 inch from gypsum board or other wall sheathing.

3.3 SOUND PROOFING OF CONSTRUCTION

- A. Required for penetrations of ductwork, pipes, and conduits through walls, floors and ceilings of mechanical rooms, electrical rooms with transformers, IT rooms and, as well as those walls, floors, and ceilings indicated on the architectural drawings.
- B. The Contractor must ensure that the sound control performance of structures be maintained in accordance with the drawings and specifications. All penetrations must be installed in a manner that results in complete air tightness through structure. If a condition occurs where penetration of the structure by a duct, pipe, conduit, etc., is not shown clearly on the drawings (or described in the specifications), the Contractor must ask immediately for clarification of the method necessary to install the particular item.
- C. Penetrations of Single-Wythe Masonry and Concrete Constructions
 - 1. Ductwork:
 - a. Install a metal sleeve at the penetration. Size the sleeve to allow for 1" closed cell elastomeric lining and normal duct clearances. Line the sleeve with 1" thick elastomeric liner.
 - b. Install duct through lined sleeve and seal airtight with acoustical sealant or fire-rated acoustical sealant if partition is fire-rated.
 - c. Do not rigidly secure duct to wall with angles.
 - 2. Pipe/Conduit diameter = 1" or larger:
 - a. Install a metal sleeve at the penetration. Size the sleeve to allow for 1/2" elastomeric insulation liner and normal pipe clearances. Line the sleeve with 1/2" thick elastomeric sheet insulation. Alternately use acoustic split seals.
 - b. Install pipe/conduit through lined sleeve and seal airtight with acoustical sealant or fire-rated acoustical sealant if partition is fire-rated.
 - c. Do not rigidly secure pipe/conduit to wall with angles.
 - d. Provide flex connection on one side of seal if crossing acoustic joint.
 - 3. Pipe/Conduit diameter < 1":
 - a. Wrap pipe/conduit with 1/2" thick elastomeric pipe insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Grout tightly to the elastomeric insulation on the pipe/conduit.
 - c. Trim insulation to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant if partition is fire-rated.
- D. Penetrations of Single Stud Drywall Constructions

1. Ductwork:
 - a. Wrap with 1" thick elastomeric insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Install drywall tight to the insulation wrap.
 - c. Trim insulation to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant if partition is fire-rated.
2. Pipe diameter = 1" or larger:
 - a. Wrap with 1/2" thick elastomeric insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Install a metal pipe sleeve around the insulation wrap.
 - c. Install the drywall around the sleeve and spackle tightly to full thickness of partition.
 - d. Trim insulation and sleeve to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant if partition is fire-rated.
3. Pipe diameter < 1":
 - a. Wrap with 1/2" thick elastomeric insulation. Extend wrapping a minimum of 2" beyond the width of the partition on either side.
 - b. Install the drywall tight to the insulation wrap.
 - c. Trim insulation to the width of the partition, and seal airtight with acoustical sealant or fire-rated acoustical sealant if partition is fire-rated.
4. Multiple Duct/Pipe Penetrations
 - a. Where a series of duct, conduits or pipes are penetrating the wall/floor/ceiling, each duct/conduit/pipe must be separated by minimum 4" in all directions.
 - b. Multiple duct/pipe/conduit penetrations at one location (i.e., one large opening for a series of pipe runs) is not recommended.
5. Penetrations of Double-Wythe Masonry/Concrete and/or Double Stud Drywall and/or Combination Constructions
 - a. Use same techniques described above except do not bridge the two studs or wythes with solid members such as sleeves or stud frames. Each sleeve or frame must be separate for each individual wythe or stud.
6. Provide flex connections for duct / pipe on one side of seal if crossing acoustic joint.

3.4 DUCTWORK ENCLOSURE FOR SOUNDPROOFING

- A. Where indicated on drawings, duct must be enclosed on all four sides (or air-tight to the slab above) with a separate 2-1/2" steel stud filled with 2" thick, 3-pound density fiberglass and covered with 2 thicknesses of 5/8" thick gypsum wallboard. Wherever possible, joints between the base and face layers must be staggered by a minimum of 6 inches. All gypsum board joints on both the base and face layers must be taped. Use acoustical caulking to seal all interfaces with structure. Treatment must be applied to elbows, transitions, branch-takeoffs, etc. that are included in the applicable duct section.
- B. Where access is required, approved sheetrock covered metal access panels must be installed with perimeter gaskets.
- C. Where enclosure intersects a metal deck, ensure that the gypsum wallboard is cut to the shape of the flutes and caulked air-tight.

3.5 SOUND LININGS:

- A. Provide sound linings on all supply and return ductwork within mechanical rooms but not less than 15 ft (25ft) from each fan.
- B. Sound lined boots at return and exhaust registers.
- C. Provide sound linings minimum 10ft downstream of all terminal devices.

3.6 SERVICES PENETRATIONS

- A. Pipe and ductwork: Where pipe and ductwork penetrates acoustical partitions, provide acoustic seal around the piping and ductwork.
- B. Electrical Box Sealant: Backs of electrical boxes, light fittings etc., in acoustically rated constructions must be sealed airtight by sheet caulking.

3.7 SILENCER INSTALLATION

- A. Silencer manufacturer's basic installation requirements must not be compromised.
- B. Where silencers penetrate acoustical partitions, provide acoustic seal around the silencer.

3.8 ELECTRICAL CONNECTIONS:

- A. All isolated equipment to be connected with long lengths of flexible steel conduit from junction box, type depending on environment.

END OF SECTION 23 05 50

SECTION 23 05 53

IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Equipment labels.
 - 2. Warning signs and labels.
 - 3. Pipe labels.
 - 4. Duct labels.

1.3 SUBMITTAL

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each type of product indicated.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 EQUIPMENT LABELS

- A. Metal Labels for Equipment:
 - 1. Material and Thickness: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
 - 2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 - 3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 - 4. Fasteners: Stainless-steel rivets or self-tapping screws.
 - 5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Plastic Labels for Equipment:

1. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
 2. Letter Color: White
 3. Background Color: Black
 4. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
 5. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
 6. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
 7. Fasteners: Stainless-steel rivets or self-tapping screws.
 8. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- C. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
- D. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule must be included in operation and maintenance data.

2.2 WARNING SIGNS AND LABELS

- A. Shop Drawing: Show location and mockup of labels for font, size, layout.
- B. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- C. Letter Color: Red.
- D. Background Color: White.
- E. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- F. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- G. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- H. Fasteners: Stainless-steel rivets or self-tapping screws.
- I. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.

- J. Label Content: Include caution and warning information, plus emergency notification instructions.

2.3 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction.
- B. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.
- C. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches high.

2.4 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Refer to color schedule below.
- C. Background Color: White.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F.
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets or self-tapping screws.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
 - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions, or as separate unit on each duct label to indicate flow direction.
 - 2. Lettering Size: At least 1-1/2 inches high.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulates.

3.3 EQUIPMENT LABEL INSTALLATION

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

3.4 PIPE LABEL INSTALLATION

- A. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; maintenance spaces such as shafts and exterior exposed locations as follows:
 - 1. Near each valve and control device.
 - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
 - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
 - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
 - 5. Near major equipment items and other points of origination and termination.
 - 6. Spaced at maximum intervals of 25 feet along each run. Reduce intervals to 15 feet in areas of congested piping and equipment.
 - 7. Refrigerant piping label must also include unit identification
- B. Pipe Label Color Schedule:
 - 1. Refrigerant Piping:
 - a. Background Color: Orange
 - b. Letter Color: Black.

3.5 DUCT LABEL INSTALLATION

- A. Install plastic-laminated or self-adhesive duct labels with permanent adhesive on air ducts in the following color codes:
 - 1. Black lettering on white background.
 - 2. ASME A13.1 Colors and Designs: For hazardous material exhaust.
- B. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 25 feet in each space where ducts are exposed or concealed by removable ceiling system.

END OF SECTION 23 05 53

SECTION 23 05 93

TESTING, ADJUSTING AND BALANCING FOR HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Balancing Air Systems
 - a. Constant-volume air systems.
 - b. Modulating air systems
 - 2. Balancing Hydronic Piping Systems
 - a. Constant-flow hydronic systems.

1.3 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. NEBB: National Environmental Balancing Bureau.
- C. TAB: Testing, adjusting, and balancing.
- D. TABB: Testing, Adjusting, and Balancing Bureau.
- E. TAB Specialist: An entity engaged to perform TAB Work.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Strategies Plan: Within 30 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- C. Certified TAB reports
- D. Post balancing reports indicated in Articles 3.13 and 3.14

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. TAB subcontractor Qualifications: Engage a TAB entity certified by AABC or TABB.
 - 1. TAB Field Supervisor: Employee of the TAB subcontractor and certified by AABC or TABB.
 - 2. TAB Technician: Employee of the TAB subcontractor and who is certified by AABC or TABB as a TAB technician.
- C. Certify TAB field data reports and perform the following:
 - 1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
 - 2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.
- D. TAB Report Forms: Use standard TAB contractor's forms approved by Commissioner or Commissioning Authority.
- E. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

PART 2 - PRODUCTS (Not Applicable)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.
- B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.
- E. Examine ceiling plenums a used for supply, return, or relief air to verify that they meet the leakage class of connected ducts as specified in Division 23 Section 233113 "Metal Ducts" and are properly separated from adjacent areas. Verify that penetrations in plenum walls are sealed and fire-stopped if required.
- F. Examine equipment performance data including fan and pump curves.
 - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.

2. Calculate system-effect factors to reduce performance ratings of HVAC equipment when installed under conditions different from the conditions used to rate equipment performance. To calculate system effects for air systems, use tables and charts found in AMCA 201, "Fans and Systems," or in SMACNA's "HVAC Systems - Duct Design." Compare results with the design data and installed conditions.
 - G. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
 - H. Examine test reports specified in individual system and equipment Sections.
 - I. Examine HVAC equipment and filters and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
 - J. Examine indoor equipment such as indoor AC units, ceiling hung fans and verify that they are accessible, clearance for filter pull, local disconnect switch and their controls are connected and functioning.
 - K. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.
 - L. Examine three-way valves for proper installation for their intended function of diverting or mixing fluid flows.
 - M. Examine heat-transfer coils for correct piping connections and for clean and straight fins.
 - N. Examine system pumps to ensure absence of entrained air in the suction piping.
 - O. Examine operating safety interlocks and controls on HVAC equipment.
 - P. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.
- 3.3 PREPARATION
- A. Prepare a TAB plan that includes strategies and step-by-step procedures.
 - B. Complete system-readiness checks and prepare reports. Verify the following:
 1. Permanent electrical-power wiring is complete.
 2. Hydronic systems are filled, clean, and free of air.
 3. Automatic temperature-control systems are operational.
 4. Equipment and duct access doors are securely closed.
 5. Balance, smoke, and fire dampers are open.
 6. Isolating and balancing valves are open and control valves are operational.
 7. Ceilings are installed in critical areas where air-pattern adjustments are required and access to balancing devices is provided.
 8. Windows and doors can be closed so indicated conditions for system operations can be met.

3.4 GENERAL PROCEDURES FOR TESTING AND BALANCING

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance", ASHRAE 111, SMACNA's "HVAC Systems - Testing, Adjusting, and Balancing" and in this Section.
 - 1. Comply with requirements in ASHRAE 62.1-2004, Section 7.2.2, "Air Balancing."
- B. Cut insulation, ducts, pipes, and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
 - 1. After testing and balancing, patch probe holes in ducts with same material and thickness as used to construct ducts.
 - 2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to Division 23 Section 230700 "HVAC Insulation."
- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound units.

3.5 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- D. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- E. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- F. Verify that motor starters are equipped with properly sized thermal protection.
- G. Check dampers for proper position to achieve desired airflow path.
- H. Check for airflow blockages.
- I. Check condensate drains for proper connections and functioning.
- J. Check for proper sealing of air-handling-unit components.
- K. Verify that air duct system is sealed as specified in Division 23 Section 233113 "Metal Ducts."

3.6 PROCEDURES FOR CONSTANT-VOLUME AIR SYSTEMS

- A. Adjust fans to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
 - 1. Measure total airflow.
 - a. Where sufficient space in ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow.
 - 2. Measure fan static pressures as follows to determine actual static pressure:
 - a. Measure outlet static pressure as far downstream from the fan as practical and upstream from restrictions in ducts such as elbows and transitions.
 - b. Measure static pressure directly at the fan outlet or through the flexible connection.
 - c. Measure inlet static pressure of single-inlet fans in the inlet duct as near the fan as possible, upstream from the flexible connection, and downstream from duct restrictions.
 - d. Measure inlet static pressure of double-inlet fans through the wall of the plenum that houses the fan.
 - 3. Measure static pressure across each component that makes up an air-handling unit, rooftop unit, and other air-handling and -treating equipment.
 - a. Report the cleanliness status of filters and the time static pressures are measured.
 - 4. Measure static pressures entering and leaving other devices, such as sound traps, heat-recovery equipment, and air washers, under final balanced conditions.
 - 5. Review Record Documents to determine variations in design static pressures versus actual static pressures. Calculate actual system-effect factors. Recommend adjustments to accommodate actual conditions.
 - 6. Obtain approval from Commissioner for adjustment of fan speed higher or lower than indicated speed. Comply with requirements in Division 23 Sections 233416 and 238129 for air-handling units and fans for adjustment of fans, belts, and pulley sizes to achieve indicated air-handling-unit and fan performance.
 - 7. Do not make fan-speed adjustments that result in motor overload. Consult equipment manufacturers about fan-speed safety factors. Modulate dampers and measure fan-motor amperage to ensure that no overload will occur. Measure amperage in full-cooling, full-heating, economizer, and any other operating mode to determine the maximum required brake horsepower.
- B. Adjust volume dampers for main duct, sub-main ducts, and major branch ducts to indicated airflows within specified tolerances.
 - 1. Measure airflow of sub-main and branch ducts.
 - a. Where sufficient space in sub-main and branch ducts is unavailable for Pitot-tube traverse measurements, measure airflow at terminal outlets and inlets and calculate the total airflow for that zone.
 - 2. Measure static pressure at a point downstream from the balancing damper, and adjust volume dampers until the proper static pressure is achieved.
 - 3. Re-measure each sub-main and branch duct after all have been adjusted. Continue to adjust sub-main and branch ducts to indicated airflows within specified tolerances.
- C. Measure air outlets and inlets without making adjustments.
 - 1. Measure terminal outlets using a direct-reading hood or outlet manufacturer's written instructions and calculating factors.

- D. Adjust air outlets and inlets for each space to indicated airflows within specified tolerances of indicated values. Make adjustments using branch volume dampers rather than extractors and the dampers at air terminals.
 - 1. Adjust each outlet in same room or space to within specified tolerances of indicated quantities without generating noise levels above the limitations prescribed by the Contract Documents.
 - 2. Adjust patterns of adjustable outlets for proper distribution without drafts.

3.7 PROCEDURES FOR MODULATING AIR SYSTEMS

- A. The procedure applies to toilet, dryer and kitchen exhaust system
- B. Adjust fan and associated variable frequency drive to deliver total indicated airflows within the maximum allowable fan speed listed by fan manufacturer.
- C. Adjust pressure transducer set-point to maintain bathroom fans exhaust airflow within 10% of design flow at lowest possible pressure setting of the pressure transducers in coordination with factory trained technician.

3.8 GENERAL PROCEDURES FOR HYDRONIC SYSTEMS

- A. Prepare test reports with pertinent design data, and number in sequence starting at pump to end of system. Check the sum of branch-circuit flows against the approved pump flow rate. Correct variations that exceed plus or minus 5 percent.
- B. Prepare schematic diagrams of systems' "as-built" piping layouts.
- C. Prepare hydronic systems for testing and balancing according to the following, in addition to the general preparation procedures specified above:
 - 1. Open all manual valves for maximum flow.
 - 2. Check liquid level in expansion tank.
 - 3. Check makeup water-station pressure gage for adequate pressure for highest vent.
 - 4. Check flow-control valves for specified sequence of operation, and set at indicated flow.
 - 5. Set differential-pressure control valves at the specified differential pressure. Do not set at fully closed position when pump is positive-displacement type unless several terminal valves are kept open.
 - 6. Set system controls so automatic valves are wide open to heat exchangers.
 - 7. Check pump-motor load. If motor is overloaded, throttle main flow-balancing device so motor nameplate rating is not exceeded.
 - 8. Check air vents for a forceful liquid flow exiting from vents when manually operated.

3.9 PROCEDURES FOR CONSTANT-FLOW HYDRONIC SYSTEMS

- A. Measure water flow at pumps. Use the following procedures except for positive-displacement pumps:
 - 1. Verify impeller size by operating the pump with the discharge valve closed. Read pressure differential across the pump. Convert pressure to head and correct for differences in gage heights. Note the point on manufacturer's pump curve at zero flow and verify that the pump has the intended impeller size.

- a. If impeller sizes must be adjusted to achieve pump performance, obtain approval from Commissioner and comply with requirements.
 2. Check system resistance. With all valves open, read pressure differential across the pump and mark pump manufacturer's head-capacity curve. Adjust pump discharge valve until indicated water flow is achieved.
 - a. Monitor motor performance during procedures and do not operate motors in overload conditions.
 3. Verify pump-motor brake horsepower. Calculate the intended brake horsepower for the system based on pump manufacturer's performance data. Compare calculated brake horsepower with nameplate data on the pump motor. Report conditions where actual amperage exceeds motor nameplate amperage.
 4. Report flow rates that are not within plus or minus 10 percent of design.
- B. Measure flow at all automatic flow control valves to verify that valves are functioning as designed.
- C. Measure flow at all pressure-independent characterized control valves, with valves in fully open position, to verify that valves are functioning as designed.
- D. Set calibrated balancing valves, if installed, at calculated pre-settings.
- E. Measure flow at all stations and adjust, where necessary, to obtain first balance.
 1. System components that have Cv rating or an accurately cataloged flow-pressure-drop relationship may be used as a flow-indicating device.
- F. Measure flow at main balancing station and set main balancing device to achieve flow that is 5 percent greater than indicated flow.
- G. Adjust balancing stations to within specified tolerances of indicated flow rate as follows:
 1. Determine the balancing station with the highest percentage over indicated flow.
 2. Adjust each station in turn, beginning with the station with the highest percentage over indicated flow and proceeding to the station with the lowest percentage over indicated flow.
 3. Record settings and mark balancing devices.
- H. Measure pump flow rate and make final measurements of pump amperage, voltage, rpm, pump heads, and systems' pressures and temperatures including outdoor-air temperature.
- I. Measure the differential-pressure-control-valve settings existing at the conclusion of balancing.
- J. Check settings and operation of each safety valve. Record settings.

3.10 PROCEDURES FOR MOTORS

- A. Motors, 1/2 HP and Larger: Test at final balanced conditions and record the following data:
1. Manufacturer's name, model number, and serial number.
 2. Motor horsepower rating.
 3. Motor rpm.
 4. Efficiency rating.
 5. Nameplate and measured voltage, each phase.

6. Nameplate and measured amperage, each phase.
7. Starter thermal-protection-element rating.

B. Motors Driven by Variable-Frequency Controllers: Test for proper operation at speeds varying from minimum to maximum. Test the manual bypass of the controller to prove proper operation. Record observations including name of controller manufacturer, model number, serial number, and nameplate data.

3.11 PROCEDURES FOR BOILERS

A. Hydronic Boilers: Measure and record entering- and leaving-water temperatures and water flow rate for each boiler.

3.12 PROCEDURES FOR CABINET HEATER AND UNIT HEATER

A. Measure, adjust, and record the following data for each electric unit heater:

1. Nameplate data.
2. Airflow.
3. Entering- and leaving-air temperature at full load.
4. Voltage and amperage input of each phase at full load and at each incremental stage.
5. Calculated kilowatt at full load.
6. Fuse or circuit-breaker rating for overload protection.

3.13 TOLERANCES

A. Set HVAC system's air flow rates and water flow rates within the following tolerances:

1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 10 percent.
2. Air Outlets and Inlets: Plus or minus 10 percent.
3. Heating-Water Flow Rate: Plus 10 percent.

3.14 REPORTING

A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.

B. Status Reports: Prepare biweekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

3.15 FINAL REPORT

A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.

1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.

2. Include a list of instruments used for procedures, along with proof of calibration.
- B. Final Report Contents: In addition to certified field-report data, include the following:
1. Pump curves.
 2. Fan curves.
 3. Manufacturers' test data.
 4. Field test reports prepared by system and equipment installers.
 5. Other information relative to equipment performance; do not include Shop Drawings and product data.
- C. General Report Data: In addition to form titles and entries, include the following data:
1. Title page.
 2. Name and address of the TAB subcontractor.
 3. Project name.
 4. Project location.
 5. Commissioner name and address.
 6. Contractor's name and address.
 7. Report date.
 8. Signature of TAB supervisor who certifies the report.
 9. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
 10. Summary of contents including the following:
 - a. Indicated versus final performance.
 - b. Notable characteristics of systems.
 - c. Description of system operation sequence if it varies from the Contract Documents.
 11. Nomenclature sheets for each item of equipment.
 12. Data for terminal units, including manufacturer's name, type, size, and fittings.
 13. Notes to explain why certain final data in the body of reports vary from indicated values.
 14. Test conditions for fans and pump performance forms including the following:
 - a. Settings for outdoor-, return-, and exhaust-air dampers.
 - b. Conditions of filters.
 - c. Cooling coil, wet- and dry-bulb conditions.
 - d. Fan drive settings including settings and percentage of maximum pitch diameter.
 - e. VFD settings for variable-air-volume systems.
 - f. Settings for supply-air, static-pressure controller.
 - g. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air and hydronic distribution systems. Present each system with single-line diagram and include the following:
1. Quantities of outdoor, supply, return, and exhaust airflows.
 2. Water and steam flow rates.
 3. Duct, outlet, and inlet sizes.
 4. Pipe and valve sizes and locations.
 5. Terminal units.
 6. Balancing stations.
 7. Position of balancing devices.

3.16 ADDITIONAL TESTS

- A. Within 90 days of completing TAB, perform additional TAB to verify that balanced conditions are being maintained throughout and to correct unusual conditions.
- B. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

END OF SECTION 23 05 93

SECTION 23 07 00

HVAC INSULATION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Insulation Materials:
 - a. Cellular glass.
 - b. Flexible elastomeric.
 - c. Mineral fiber.
 - 2. Insulating cements.
 - 3. Adhesives.
 - 4. Mastics.
 - 5. Sealants.
 - 6. Factory-applied jackets.
 - 7. Field-applied fabric-reinforcing mesh.
 - 8. Field-applied jackets.
 - 9. Tapes.
 - 10. Securements.
 - 11. Corner angles.

1.3 RELATED SECTIONS:

- A. Division 23 Section 23 31 13 "Metal Ducts" for duct liners.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product Data: For each type of product indicated.
- C. Submittal: For adhesives and sealants, including printed statement of VOC content.
- D. Shop Drawings:
 - 1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.

2. Detail insulation application at pipe expansion joints for each type of insulation.
3. Detail insulation application at elbows, fittings, flanges, valves, and specialties for each type of insulation.
4. Detail removable insulation at piping specialties, equipment connections, and access panels.
5. Detail application of field-applied jackets.
6. Detail field application for each equipment type.

E. Field quality-control reports.

1.5 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

B. Fire-Test-Response Characteristics: Insulation and related materials must have fire-test-response characteristics indicated, as determined by testing identical products per ASTM E 84, by a testing and inspecting agency acceptable to NY City Dept. of Buildings. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing and inspecting agency.

1. Insulation Installed Indoors: Flame-spread index of 25 or less, and smoke-developed index of 50 or less.
2. Insulation Installed Outdoors: Flame-spread index of 75 or less, and smoke-developed index of 150 or less.

PART 2 - PRODUCTS

2.1 INSULATION MATERIALS

- A. Comply with requirements in Part 3 schedule articles for where insulating materials must be applied.
- B. Products must not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel must have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel must be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials must not use CFC or HCFC blowing agents in the manufacturing process.
- F. Cellular Glass: Inorganic, incombustible, foamed or cellulated glass with annealed, rigid, hermetically sealed cells. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Cell-U-Foam Corporation; Ultra-CUF.
 - b. Pittsburgh Corning Corporation; Foamglas Super K.
 - c. Owens Corning

- d. Or Approved Equal
 2. Block Insulation: ASTM C 552, Type I.
 3. Special-Shaped Insulation: ASTM C 552, Type III.
 4. Board Insulation: ASTM C 552, Type IV.
 5. Preformed Pipe Insulation without Jacket: Comply with ASTM C 552, Type II, Class 1.
 6. Preformed Pipe Insulation with Factory-Applied ASJ-SSL: Comply with ASTM C 552, Type II, Class 2.
 7. Factory fabricate shapes according to ASTM C 450 and ASTM C 585.
- G. Flexible Elastomeric: Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Aeroflex USA Inc.; Aerocel.
 - b. Armacell LLC; AP Armaflex.
 - c. RBX Corporation; Insul-Sheet 1800 and Insul-Tube 180.
 - d. Or Approved Equal
- H. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type I, II with factory-applied vinyl jacket and III with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. CertainTeed Corp.; SoftTouch Duct Wrap.
 - b. Johns Manville; Microlite XG
 - c. Knauf Insulation; Friendly Feel Duct Wrap.
 - d. Owens Corning; SOFTR Duct Wrap.
 - e. Or Approved Equal
- I. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied ASJ and with factory-applied FSK jacket. For equipment applications, provide insulation with factory-applied ASJ and with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Products: Subject to compliance with requirements, provide the following:
 - a. CertainTeed Corp.; CertaPro Commercial Board.
 - b. Johns Manville; 800 Series Spin-Glas.
 - c. Knauf Insulation; Insulation Board
 - d. Owens Corning; Fiberglas 700 Series.
 - e. Or Approved Equal
- J. Mineral-Fiber, Preformed Pipe Insulation:
1. Products: Subject to compliance with requirements, provide the following:
 - a. Johns Manville; Micro-Lok.
 - b. Knauf Insulation; 1000° Pipe Insulation.
 - c. Owens Corning; Fiberglas Pipe Insulation.
 - d. Or Approved Equal
 2. Type I, 850 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type I, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

3. Type II, 1200 deg F Materials: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 547, Type II, Grade A, with factory-applied ASJ-SSL. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

2.2 INSULATING CEMENTS

- A. Mineral-Fiber, Hydraulic-Setting Insulating and Finishing Cement: Comply with ASTM C 449/C 449M.
 1. Products: Subject to compliance with requirements, provide the following:
 - a. Insulco, Division of MFS, Inc.; SmoothKote.
 - b. P. K. Insulation Mfg. Co., Inc.; PK No. 127, and Quik-Cote.
 - c. Rock Wool Manufacturing Company; Delta One Shot.
 - d. Or Approved Equal

2.3 ADHESIVES

- A. Materials must be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated, unless otherwise indicated.
- B. Cellular-Glass, Phenolic, Polyisocyanurate, Adhesive: Solvent-based resin adhesive, with a service temperature range of minus 75 to plus 300 deg F.
 1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-96.
 - b. Foster Products Corporation, H. B. Fuller Company; 81-33.
 - c. RBX Corporation; Rubatex Contact Adhesive.
 - d. Or Approved Equal
 2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Flexible Elastomeric Adhesive: Comply with MIL-A-24179A, Type II, Class I.
 1. Products: Subject to compliance with requirements, provide the following:
 - a. Aeroflex USA Inc.; AeroSeal.
 - b. Armacell LCC; 520 Adhesive.
 - c. Foster Products Corporation, H. B. Fuller Company; 85-75.
 - d. RBX Corporation; Rubatex Contact Adhesive.
 - e. Or Approved Equal
 2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- D. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
 1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-82.
 - b. Foster Products Corporation, H. B. Fuller Company; 85-20.
 - c. ITW TACC, Division of Illinois Tool Works; S-90/80.
 - d. Marathon Industries, Inc.; 225.
 - e. Mon-Eco Industries, Inc.; 22-25.
 - f. Or Approved Equal
 2. For indoor applications, use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- E. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-82.
 - b. Foster Products Corporation, H. B. Fuller Company; 85-20.
 - c. ITW TACC, Division of Illinois Tool Works; S-90/80.
 - d. Marathon Industries, Inc.; 225.
 - e. Mon-Eco Industries, Inc.; 22-25.
 - f. Or Approved Equal
 - 2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- F. PVC Jacket Adhesive: Compatible with PVC jacket.
 - 1. Products: Subject to compliance with requirements, provide the following
 - a. Dow Chemical Company (The); 739, Dow Silicone.
 - b. Johns-Manville; Zeston Perma-Weld, CEEL-TITE Solvent Welding Adhesive.
 - c. P.I.C. Plastics, Inc.; Welding Adhesive.
 - d. Speedline Corporation; Speedline Vinyl Adhesive.
 - e. Or Approved Equal
 - 2. For indoor applications, use adhesive that has a VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.4 MASTICS

- A. Materials must be compatible with insulation materials, jackets, and substrates; comply with MIL-C-19565C, Type II.
 - 1. For indoor applications, use mastics that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- B. Vapor-Barrier Mastic: Water based; suitable for indoor and outdoor use on below ambient services.
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-35.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-90.
 - c. ITW TACC, Division of Illinois Tool Works; CB-50.
 - d. Marathon Industries, Inc.; 590.
 - e. Mon-Eco Industries, Inc.; 55-40.
 - f. Vimasco Corporation; 749.
 - g. Or Approved Equal
 - 2. Water-Vapor Permeance: ASTM E 96, Procedure B, 0.013 perm at 43-mil dry film thickness.
 - 3. Service Temperature Range: Minus 20 to plus 180 deg F.
 - 4. Solids Content: ASTM D 1644, 59 percent by volume and 71 percent by weight.
 - 5. Color: White.

- C. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
 - 1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-10.

- b. Foster Products Corporation, H. B. Fuller Company; 35-00.
 - c. ITW TACC, Division of Illinois Tool Works; CB-05/15.
 - d. Marathon Industries, Inc.; 550.
 - e. Mon-Eco Industries, Inc.; 55-50.
 - f. Vimasco Corporation; WC-1/WC-5.
 - g. Or Approved Equal
2. Water-Vapor Permeance: ASTM F 1249, 3 perms at 0.0625-inch dry film thickness.
 3. Service Temperature Range: Minus 20 to plus 200 deg F.
 4. Solids Content: 63 percent by volume and 73 percent by weight.
 5. Color: White.

2.5 SEALANTS

A. Joint Sealants:

1. Joint Sealants for Cellular-Glass Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; CP-76.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Pittsburgh Corning Corporation; Pittseal 444.
 - f. Vimasco Corporation; 750.
 - g. Or Approved Equal
2. Joint Sealants for Polystyrene Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-70.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45/30-46.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
 - f. Or Approved Equal.
3. Materials must be compatible with insulation materials, jackets, and substrates.
4. Permanently flexible, elastomeric sealant.
5. Service Temperature Range: Minus 100 to plus 300 deg F.
6. Color: White or gray.
7. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

B. FSK and Metal Jacket Flashing Sealants:

1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-76-8.
 - b. Foster Products Corporation, H. B. Fuller Company; 95-44.
 - c. Marathon Industries, Inc.; 405.
 - d. Mon-Eco Industries, Inc.; 44-05.
 - e. Vimasco Corporation; 750.
 - f. Or Approved Equal
2. Materials must be compatible with insulation materials, jackets, and substrates.
3. Fire- and water-resistant, flexible, elastomeric sealant.
4. Service Temperature Range: Minus 40 to plus 250 deg F.

5. Color: Aluminum.
 6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. ASJ Flashing Sealants, and PVC Jacket Flashing Sealants:
1. Products: Subject to compliance with requirements, provide the following:
 - a. Childers Products, Division of ITW; CP-76.
 - b. Foster Products Corporation, H. B. Fuller Company; 30-45.
 - c. Vimasco Corporation; 750.
 - d. Or Approved Equal
 2. Materials must be compatible with insulation materials, jackets, and substrates.
 3. Fire- and water-resistant, flexible, elastomeric sealant.
 4. Service Temperature Range: Minus 40 to plus 250 deg F.
 5. Color: White.
 6. For indoor applications, use sealants that have a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.6 FACTORY-APPLIED JACKETS

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
1. ASJ: White, kraft-paper, fiberglass-reinforced scrim with aluminum-foil backing; complying with ASTM C 1136, Type I.
 2. ASJ-SSL: ASJ with self-sealing, pressure-sensitive, acrylic-based adhesive covered by a removable protective strip; complying with ASTM C 1136, Type I.
 3. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.
 4. FSP Jacket: Aluminum-foil, fiberglass-reinforced scrim with polyethylene backing; complying with ASTM C 1136, Type II.
 5. Vinyl Jacket: White vinyl with a permeance of 1.3 perms when tested according to ASTM E 96, Procedure A, and complying with NFPA 90A and NFPA 90B.

2.7 FIELD-APPLIED FABRIC-REINFORCING MESH

- A. Woven Polyester Fabric: Approximately 1 oz./sq. yd. with a thread count of 10 strands by 10 strands/sq. inch, in a Leno weave, for duct, equipment, and pipe.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Foster Products Corporation, H. B. Fuller Company; Mast-A-Fab.
 - b. Vimasco Corporation; Elastafab 894.
 - c. P.I.C. Plastics, Inc.; FG Series.
 - d. Or Approved Equal

2.8 FIELD-APPLIED JACKETS

- A. Field-applied jackets must comply with ASTM C 921, Type I, unless otherwise indicated.
- B. FSK Jacket: Aluminum-foil-face, fiberglass-reinforced scrim with kraft-paper backing.

- C. PVC Jacket: High-impact-resistant, UV-resistant PVC complying with ASTM D 1784, Class 16354-C; thickness as scheduled; roll stock ready for shop or field cutting and forming. Thickness is indicated in field-applied jacket schedules.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Johns Manville; Zeston.
 - b. P.I.C. Plastics, Inc.; FG Series.
 - c. Proto PVC Corporation; LoSmoke.
 - d. Speedline Corporation; SmokeSafe.
 - e. Or Approved Equal
 2. Adhesive: As recommended by jacket material manufacturer.
 3. Color: White.
 4. Factory-fabricated fitting covers to match jacket if available; otherwise, field fabricate.
 - a. Shapes: 45- and 90-degree, short- and long-radius elbows, tees, valves, flanges, unions, reducers, end caps, soil-pipe hubs, traps, mechanical joints, and P-trap and supply covers for lavatories.
 5. Factory-fabricated tank heads and tank side panels.
- D. Aluminum Jacket: Comply with ASTM B 209, Alloy 3003, 3005, 3105 or 5005, Temper H-14.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products, Division of ITW; Metal Jacketing Systems.
 - b. PABCO Metals Corporation; Surefit.
 - c. RPR Products, Inc.; Insul-Mate.
 - d. Or Approved Equal
 2. Sheet and roll stock ready for shop or field sizing or factory cut and rolled to size.
 3. Finish and thickness are indicated in field-applied jacket schedules.
 4. Moisture Barrier for Indoor Applications: 3-mil- thick, heat-bonded polyethylene and kraft paper or 2.5-mil- thick Polysurlyn.
 5. Moisture Barrier for Outdoor Applications: 2.5-mil- thick Polysurlyn.
 6. Factory-Fabricated Fitting Covers:
 - a. Same material, finish, and thickness as jacket.
 - b. Preformed 2-piece or gore, 45- and 90-degree, short- and long-radius elbows.
 - c. Tee covers.
 - d. Flange and union covers.
 - e. End caps.
 - f. Beveled collars.
 - g. Valve covers.
 - h. Field fabricate fitting covers only if factory-fabricated fitting covers are not available.
- E. Self-Adhesive Outdoor Jacket: 60-mil- thick, laminated vapor barrier and waterproofing membrane for installation over insulation located aboveground outdoors; consisting of a rubberized bituminous resin on a cross-laminated polyethylene film covered with white aluminum-foil facing.
1. Products: Subject to compliance with requirements, provide the following:
 - a. Polyguard; Alumaguard 60.
 - b. FlexClad
 - c. 3M VentureClad
 - d. Or Approved Equal

2.9 TAPES

- A. ASJ Tape: White vapor-retarder tape matching factory-applied jacket with acrylic adhesive, complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0835.
 - b. Compac Corp.; 104 and 105.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 428 AWF ASJ.
 - d. Venture Tape; 1540 CW Plus, 1542 CW Plus, and 1542 CW Plus/SQ.
 - e. Or Approved Equal
 2. Width: 3 inches.
 3. Thickness: 11.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. ASJ Tape Disks and Squares: Precut disks or squares of ASJ tape.
- B. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0827.
 - b. Compac Corp.; 110 and 111.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 491 AWF FSK.
 - d. Venture Tape; 1525 CW, 1528 CW, and 1528 CW/SQ.
 - e. Or Approved Equal
 2. Width: 3 inches.
 3. Thickness: 6.5 mils.
 4. Adhesion: 90 ounces force/inch in width.
 5. Elongation: 2 percent.
 6. Tensile Strength: 40 lbf/inch in width.
 7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.
- C. Aluminum-Foil Tape: Vapor-retarder tape with acrylic adhesive.
1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Avery Dennison Corporation, Specialty Tapes Division; Fasson 0800.
 - b. Compac Corp.; 120.
 - c. Ideal Tape Co., Inc., an American Biltrite Company; 488 AWF.
 - d. Venture Tape; 3520 CW.
 - e. Or Approved Equal
 2. Width: 2 inches.
 3. Thickness: 3.7 mils.
 4. Adhesion: 100 ounces force/inch in width.
 5. Elongation: 5 percent.
 6. Tensile Strength: 34 lbf/inch in width.

2.10 SECUREMENTS

- A. Aluminum Bands: ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wing or closed seal.
 - 1. Products: Subject to compliance with requirements, provide one of the following:
 - a. Childers Products; Bands.
 - b. PABCO Metals Corporation; Bands.
 - c. RPR Products, Inc.; Bands.
 - d. Or Approved Equal

- B. Insulation Pins and Hangers:
 - 1. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, securely in position indicated when self-locking washer is in place. Comply with the following requirements:
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) GEMCO; Nylon Hangers.
 - 2) Midwest Fasteners, Inc.; Nylon Insulation Hangers.
 - 3) RPR Products, Inc.; Bands.
 - 4) Or Approved Equal
 - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
 - c. Spindle: Nylon, 0.106-inch- diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
 - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
 - 2. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch-thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
 - a. Products: Subject to compliance with requirements, provide one of the following:
 - 1) GEMCO.
 - 2) Midwest Fasteners, Inc.
 - 3) RPR Products, Inc.; Bands.
 - 4) Or Approved Equal

- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch- wide, stainless steel or Monel.

- D. Wire: 0.080-inch nickel-copper alloy or 0.062-inch soft-annealed, stainless steel.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. C & F Wire.
 - b. Childers Products.
 - c. PABCO Metals Corporation.
 - d. RPR Products, Inc.
 - e. Or Approved Equal

2.11 CORNER ANGLES

- A. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105 or 5005; Temper H-14.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.
- B. Coordinate insulation installation with the trade installing heat tracing. Comply with requirements for heat tracing that applies to insulation.
- C. Mix insulating cements with clean potable water; if insulating cements are to be in contact with stainless-steel surfaces, use demineralized water.

3.3 GENERAL INSTALLATION REQUIREMENTS

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of equipment, ducts and fittings, and piping including fittings, valves, and specialties.
- B. Install insulation materials, forms, vapor barriers or retarders, jackets, and thicknesses required for each item of equipment, duct system, and pipe system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Do not weld brackets, clips, or other attachment devices to piping, fittings, and specialties.
- G. Keep insulation materials dry during application and finishing.
- H. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- I. Install insulation with least number of joints practical.

- J. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
 - 1. Install insulation continuously through hangers and around anchor attachments.
 - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
 - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
 - 4. Cover inserts with jacket material matching adjacent pipe insulation. Install shields over jacket, arranged to protect jacket from tear or puncture by hanger, support, and shield.

- K. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.

- L. Install insulation with factory-applied jackets as follows:
 - 1. Draw jacket tight and smooth.
 - 2. Cover circumferential joints with 3-inch- wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
 - 3. Overlap jacket longitudinal seams at least 1-1/2 inches. Install insulation with longitudinal seams at bottom of pipe. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 2 inches o.c.
 - a. For below ambient services, apply vapor-barrier mastic over staples.
 - 4. Cover joints and seams with tape as recommended by insulation material manufacturer to maintain vapor seal.
 - 5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct and pipe flanges and fittings.

- M. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.

- N. Finish installation with systems at operating conditions. Restore joint separations and cracking due to thermal movement.

- O. Restore damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

- P. For above ambient services, do not install insulation to the following:
 - 1. Vibration-control devices.
 - 2. Testing agency labels and stamps.
 - 3. Nameplates and data plates.
 - 4. Manholes.
 - 5. Handholes.
 - 6. Cleanouts.

3.4 PENETRATIONS

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
 - 4. Seal jacket to roof flashing with flashing sealant.

- B. Insulation Installation at Underground Exterior Wall Penetrations: Terminate insulation flush with sleeve seal. Seal terminations with flashing sealant.

- C. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
 - 1. Seal penetrations with flashing sealant.
 - 2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
 - 3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches.
 - 4. Seal jacket to wall flashing with flashing sealant.

- D. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

- E. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Install insulation continuously through penetrations of fire-rated walls and partitions. Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
 - 1. Provide fire-stopping and fire-resistive joint sealers.

- F. Insulation Installation at Floor Penetrations:
 - 1. Duct: Install insulation continuously through floor penetrations that are not fire rated. For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
 - 2. Pipe: Install insulation continuously through floor penetrations.
 - 3. Seal penetrations through fire-rated assemblies. Provide fire-stopping and fire-resistive joint sealers.

3.5 FLEXIBLE ELASTOMERIC INSULATION INSTALLATION

- A. Seal longitudinal seams and end joints with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.
- B. Insulation Installation on Pipe Fittings and Elbows:
 - 1. Install mitered sections of pipe insulation.
 - 2. Secure insulation materials and seal seams with manufacturer's recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

3.6 MINERAL-FIBER INSULATION INSTALLATION

- A. Insulation Installation on Straight Pipes and Tubes:
 - 1. Secure each layer of preformed pipe insulation to pipe with wire or bands and tighten bands without deforming insulation materials.
 - 2. Where vapor barriers are indicated, seal longitudinal seams, end joints, and protrusions with vapor-barrier mastic and joint sealant.
 - 3. For insulation with factory-applied jackets on above ambient surfaces, secure laps with outward clinched staples at 6 inches o.c.
 - 4. For insulation with factory-applied jackets on below ambient surfaces, do not staple longitudinal tabs but secure tabs with additional adhesive as recommended by insulation material manufacturer and seal with vapor-barrier mastic and flashing sealant.
- B. Insulation Installation on Pipe Fittings and Elbows:
 - 1. Install preformed sections of same material as straight segments of pipe insulation when available.
 - 2. When preformed insulation elbows and fittings are not available, install mitered sections of pipe insulation, to a thickness equal to adjoining pipe insulation. Secure insulation materials with wire or bands.
- C. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
 - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 50 percent coverage of duct and plenum surfaces.
 - 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
 - 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Impale insulation over pins and attach speed washers.

- f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1-inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.
 - a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops must consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
 5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
 6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.
- D. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 50 percent coverage of duct and plenum surfaces.
 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
 - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
 - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
 - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
 - d. Do not overcompress insulation during installation.
 - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from 1 edge and 1 end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c.

Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

- a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
 - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops must consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to 2 times the insulation thickness but not less than 3 inches.
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
 6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch- wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

3.7 FIELD-APPLIED JACKET INSTALLATION

- A. Where FSK jackets are indicated, install as follows:
 1. Draw jacket material smooth and tight.
 2. Install lap or joint strips with same material as jacket.
 3. Secure jacket to insulation with manufacturer's recommended adhesive.
 4. Install jacket with 1-1/2-inch laps at longitudinal seams and 3-inch- wide joint strips at end joints.
 5. Seal openings, punctures, and breaks in vapor-retarder jackets and exposed insulation with vapor-barrier mastic.
- B. Where PVC jackets are indicated, install with 1-inch overlap at longitudinal seams and end joints; for horizontal applications, install with longitudinal seams along top and bottom of tanks and vessels. Seal with manufacturer's recommended adhesive.
 1. Apply two continuous beads of adhesive to seams and joints, one bead under lap and the finish bead along seam and joint edge.
- C. Where metal jackets are indicated, install with 2-inch overlap at longitudinal seams and end joints. Overlap longitudinal seams arranged to shed water. Seal end joints with weatherproof sealant recommended by insulation manufacturer. Secure jacket with stainless-steel bands 12 inches o.c. and at end joints.

3.8 FINISHES

- A. Duct, Equipment, and Pipe Insulation with ASJ or Other Paintable Jacket Material: Paint jacket with paint system identified below and as specified in Division 09 "Painting and Coating".
 1. Flat Acrylic Finish: Two finish coats over a primer that is compatible with jacket material and finish coat paint. Add fungicidal agent to render fabric mildew proof.
 - a. Finish Coat Material: Interior, flat, latex-emulsion size.
- B. Flexible Elastomeric Thermal Insulation: After adhesive has fully cured, apply two coats of insulation manufacturer's recommended protective coating.

- C. Color: Final color as selected by Commissioner. Vary first and second coats to allow visual inspection of the completed Work.
- D. Do not field paint aluminum or stainless-steel jackets.

3.9 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Tests and Inspections:
 - 1. Inspect ductwork, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection must be limited to two location(s) for each duct system defined in the "Duct Insulation Schedule, General" Article.
 - 2. Inspect field-insulated equipment, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection must be limited to two location(s) for each type of equipment. For large equipment, remove only a portion adequate to determine compliance.
 - 3. Inspect pipe, fittings, strainers, and valves, randomly selected by Commissioner, by removing field-applied jacket and insulation in layers in reverse order of their installation. Extent of inspection must be limited to three locations of straight pipe, three locations of threaded fittings, three locations of welded fittings, three locations of threaded strainers, three locations of welded strainers, three locations of threaded valves, and three locations of flanged valves for each pipe service defined in the "Piping Insulation Schedule, General" Article.
- C. All insulation applications will be considered defective Work if sample inspection reveals noncompliance with requirements.

3.10 DUCT INSULATION SCHEDULE, GENERAL

- A. Plenums and Ducts Requiring Insulation:
 - 1. Indoor, concealed supply and outdoor air.
 - 2. Indoor, concealed return or exposed located in unconditioned space.
 - 3. Indoor, exposed exhaust between isolation damper and penetration of building exterior.
- B. Items Not Insulated:
 - 1. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
 - 2. Factory-insulated flexible ducts.
 - 3. Factory-insulated plenums and casings.
 - 4. Flexible connectors.
 - 5. Vibration-control devices.
 - 6. Factory-insulated access panels and doors.

3.11 INDOOR DUCT AND PLENUM INSULATION SCHEDULE

- A. Concealed, Supply-Air Duct and Plenum Insulation: Mineral-fiber blanket, 1-1/2 inches thick and 1.50-lb/cu. ft. nominal density.
- B. Concealed, Return-Air Duct and Plenum Insulation: Mineral-fiber blanket, 1-1/2 inches thick and 1.50-lb/cu. ft. nominal density.
- C. Concealed, Outdoor-Air Duct and Plenum Insulation: Mineral-fiber blanket 1-1/2 inches thick and 1.5-lb/cu. ft., nominal density.
- D. Concealed, Exhaust-Air Duct and Plenum Insulation: Mineral-fiber blanket, 1-1/2 inches thick and 1.5-lb/cu. ft. nominal density.

3.12 PIPING INSULATION SCHEDULE, GENERAL

- A. Acceptable preformed pipe and tubular insulation materials and thicknesses are identified for each piping system and pipe size range. If more than one material is listed for a piping system, selection from materials listed is Contractor's option.
- B. Items Not Insulated: Unless otherwise indicated, do not install insulation on the following:
 - 1. Chrome-plated pipes and fittings unless there is a potential for personnel injury.

3.13 INDOOR PIPING INSULATION SCHEDULE

- A. Refrigerant Piping:
 - 1. Cellular Glass: 1-inches thick
 - 2. Mineral-Fiber, Preformed Pipe, Type I: 1-inches thick.
 - 3. Flexible Elastomeric: 1 inch thick
- B. AC Condensate:
 - 1. Cellular Glass: 1-inches thick
 - 2. Mineral-Fiber, Preformed Pipe, Type I: 1-inches thick.
 - 3. Flexible Elastomeric: 1 inch thick

END OF SECTION 23 07 00

SECTION 23 08 00 COMMISSIONING OF HVAC

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This section includes commissioning process requirements for HVAC systems, assemblies, and equipment.
- B. Related Sections:
 - 1. DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for general commissioning process requirements.
 - 2. Division 23 Heating Ventilation & Air Conditioning

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system’s installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
 - 1. Verify that applicable equipment and systems are installed according to the manufacturer’s recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by the Contractor.
 - 2. Verify and document proper performance of equipment and systems as per the written procedures.
 - 3. Verify that Operation & Maintenance documentation is complete and transferred to the City of New York.
 - 4. Verify that the City of New York’s maintenance personnel are adequately instructed.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance

checkouts.

- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner and the Contractor.
- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s role.
- B. Refer to the DDC General Conditions Section 01 33 00 “Submittal Procedures” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for specific requirements.
- C. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, pre-start, and startup activities.
 - 3. O&M manuals
 - 4. Test reports
- D. Control Drawings Submittal
 - 1. The control drawings shall have a key to all abbreviations.
 - 2. The control drawings shall contain graphic schematic depictions of the systems and each component.
 - 3. The schematics will include the system and component layout of any equipment that the control system monitors, enables or controls, even if the equipment is primarily controlled by packaged or integral controls.
 - 4. Provide a full points list with at least the following included for each point:
 - a. Controlled system
 - b. Point abbreviation
 - c. Point description
 - d. Display unit
 - e. Control point or set point (Yes / No)
 - f. Monitoring point (Yes / No)
 - g. Intermediate point (Yes / No)
 - h. Calculated point (Yes / No)

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: The Contractor will comply with test manufacturer's calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to the DDC General Conditions Section 01 91 13 "General Commissioning Requirements for MEP Systems" for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. The Contractor shall ultimately be responsible for all standard testing equipment for the HVAC&R system and controls system in Division 23. A sufficient quantity of two-way radios shall be provided by the Contractor.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. Proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA but shall not become the property of the City of New York.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Contract Documents. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to an accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems.
- B. Red-lined Drawings:
 - 1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 - 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 - 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 - 4. The Contractor will create the as-built drawings.
- C. Operation and Maintenance Data:
 - 1. The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 - 2. The CxA will review the O&M literature once for conformance to project requirements.
 - 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Instruction:
 - 1. The Contractor will provide demonstration and instruction as required by the Contract Documents.
 - 2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
 - 3. An instruction agenda for each instruction session shall be submitted to the CxA at least one (1) week prior the instruction session.
 - 4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and the Commissioner. A copy of the test record shall be provided to the CxA and the Commissioner.
 - 5. Engage a Factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.
 - 6. Instruct the City of New York's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
 - 7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. The commissioning responsibilities applicable to the Division 23 trade are as follows (all

references apply to commissioned equipment only):

1. Perform commissioning tests at the direction of the CxA.
2. Attend construction phase controls coordination meetings.
3. Attend testing, adjusting, and balancing review and coordination meetings.
4. Participate in HVAC&R systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
5. Provide information requested by the CxA for final commissioning documentation.
6. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order.
7. Prepare preliminary schedule for Mechanical system orientations and inspections, operation and maintenance manual submissions, instruction sessions, pipe and duct system testing, flushing and cleaning, equipment start-up, testing and balancing and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.
8. Update schedule as required throughout the construction period.
9. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
10. Assist the CxA in all verification and functional performance tests.
11. Provide measuring instruments and logging devices to record test data and provide data acquisition equipment to record data for the complete range of testing for the required test period.
12. Gather operation and maintenance literature on all equipment and assemble in binders as required by the Contract Documents. Submit to CxA (45) days after submittal acceptance.
13. Coordinate with the CxA to provide (72) hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
14. Notify the CxA a minimum of (2) weeks in advance of the time for start of the testing and balancing work. Attend the initial testing and balancing meeting for review of the official testing and balancing procedures.
15. Participate in, and schedule vendors and subcontractors to participate in the instruction sessions.
16. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 - a. HVAC&R equipment including all fans, air handling units, piping, ductwork, dampers, terminals, and all other equipment furnished under this Division.
 - b. Controls system used for equipment monitoring and manipulation
 - c. Fire stopping in the fire rated construction, including fire and smoke damper installation, caulking, gasketing and sealing of smoke barriers.
 - d. Fire detection and smoke detection devices furnished under other divisions of the specification.
17. The Contractor shall ensure the equipment suppliers shall document the performance of their equipment.
18. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
19. The Contractor shall direct the TAB subcontractor to:

- a. Attend initial commissioning coordination meeting scheduled by the CxA.
 - b. Submit the site specific testing and balancing plan to the CxA and Commissioner for review and acceptance.
 - c. Attend the testing and balancing review meeting scheduled by the CxA. Be prepared to discuss the procedures that shall be followed in testing, adjusting, and balancing the HVAC&R system.
 - d. Participate in verification of the testing and balancing report, which will consist of repeating measurements contained in the testing and balancing reports. Assist in diagnostic purposes when directed.
20. Provide instruction to the City of New York’s maintenance personnel using expert qualified personnel, as specified.
21. Contractor shall direct equipment suppliers to:
- a. Provide all requested submittal data, including detailed start-up procedures and specific requirements needed to keep warranties in force.
 - b. Assist in equipment testing.
 - c. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- B. Refer to the DDC General Conditions for additional Contractor responsibilities.

3.3 CxA RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that HVAC&R systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that HVAC&R instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing, adjusting, and balancing procedures have been completed and that testing, adjusting, and balancing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as

directed by the CxA.

3.5 TESTING, ADJUSTING AND BALANCING VERIFICATION

- A. Air and water testing, balancing and equipment performance verification shall be accomplished by an independent test and balance firm under direction of the Contractor. The CxA shall spot check this work to verify accuracy of results
- B. Prior to performance of Testing, Adjusting and Balancing work, provide copies of reports, sample forms, checklists, and certificates to the CxA.
- C. Notify the CxA at least ten (10) days in advance of testing and balancing work and provide access for the CxA to witness testing and balancing work.
- D. Provide technicians, instrumentation, and tools to verify testing and balancing of HVAC&R systems at the direction of the CxA.
 - 1. The CxA will notify the Contractor ten (10) days in advance of the date of field verification. Notice will not include data points to be verified.
 - 2. Use the same instruments (by model and serial number) that were used when original data were collected.
 - 3. Remedy the deficiency and notify the CxA so verification of failed portions can be performed.

3.6 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of HVAC&R testing shall include entire HVAC&R installation, from central equipment for heat generation and refrigeration through distribution systems to each conditioned space. Testing shall include measuring capacities and effectiveness of operational and control functions.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- D. The CxA along with the Contractor shall prepare detailed testing plans, procedures, and checklists for HVAC&R systems, subsystems, and equipment.
- E. Tests will be performed using design conditions whenever possible, as determined by the Commissioner.
- F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions as directed by the CxA and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- G. The CxA may direct to alter set points when simulating conditions is not practical.
- H. The CxA may direct that sensor values be altered with a signal generator when design or simulating conditions and altering set points are not practical.
- I. If tests cannot be completed because of a deficiency outside the scope of the HVAC&R system,

document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.

- J. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.7 HVAC&R SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. **Equipment Testing and Acceptance Procedures:** Testing requirements are specified in individual Division 23 sections. Provide submittals, test data, inspector record, and certifications to the CxA.
- B. **HVAC&R Instrumentation and Control System Testing:** Field testing plans and testing requirements are specified in Division 23 Sections. Assist the CxA with preparation of testing plans.
- C. **Pipe system cleaning, flushing, hydrostatic tests, and chemical treatment:** Test requirements are specified in Division 23 piping Sections. Prepare a pipe system cleaning, flushing, and hydrostatic testing plan. Provide cleaning, flushing, testing, and treating plan and final reports to the CxA. Plan shall include but not limited to the following:
 - 1. Sequence of testing and testing procedures for each section of pipe to be tested, identified by pipe zone or sector identification marker. Markers shall be keyed to Drawings for each pipe sector, showing the physical location of each designated pipe test section. Drawings keyed to pipe zones or sectors shall be formatted to allow each section of piping to be physically located and identified when referred to in pipe system cleaning, flushing, hydrostatic testing, and chemical treatment plan.
 - 2. Description of equipment for flushing operations.
 - 3. Minimum flushing water velocity.
 - 4. Tracking checklist for managing and ensuring that all pipe sections have been cleaned, flushed, hydrostatically tested, and chemically treated.
- D. **Refrigeration System Testing:** Provide technicians, instrumentation, tools, and equipment to test performance of chillers, cooling towers, refrigerant compressors and condensers, heat pumps, and other refrigeration systems. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- E. **HVAC&R Distribution System Testing:** Provide technicians, instrumentation, tools, and equipment to test performance of air, steam, and hydronic distribution systems; special exhaust; and other distribution systems, including HVAC&R terminal equipment and unitary equipment.
- F. **Vibration and Sound Tests:** Provide technicians, instrumentation, tools, and equipment to test performance of vibration isolation and seismic controls.
- G. **The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The following equipment and systems shall be evaluated:**
 - 1. BMS Sensors, Controls and Operating Sequences
 - 2. Seven (7) Heat Pumps

3. Three (3) Variable Refrigerant Flow Air Cooled Condensing Units
4. One (1) Branch Selector Box
5. One (1) Energy Recovery Ventilator
6. Eight (8) Electric Unit Heaters
7. Five (5) Exhaust Fans
8. Associated Piping, Ductwork and Specialties

3.8 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements as stated in the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems.”
- B. Refer to the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for the CxA roles in the Operation and Maintenance Manual contribution, review and approval process.
- C. An updated as-built version of the control drawings and sequences of operation shall be included in the final controls O&M manual submittal.

3.9 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

- A. Refer to the DDC General Conditions Section 01 79 00 “Demonstration and Owner’s Pre-Acceptance Orientation” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to instruction.
- B. Contractor’s instruction responsibilities pertaining to mechanical work:
 1. Provide the CxA with an instruction plan two weeks before the planned Instruction.
 2. Provide comprehensive orientation and instruction in the understanding of the systems and the operation and maintenance of each piece of HVAC equipment including, but not limited to, all HVAC equipment (ex. pumps, heat exchangers, chillers, heat rejection equipment, air conditioning units, air handling units, fans, terminal units, controls and water treatment systems, etc.) to the City of New York’s maintenance personnel.
 3. Instruction shall normally start with classroom sessions followed by hands-on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 5. The appropriate trade or manufacturer’s representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing subcontractor or manufacturer’s representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.

6. The Contractor shall direct the controls subcontractor to attend sessions other than the controls instruction, as requested, to discuss the interaction of the controls system as it relates to the equipment being discussed.
 7. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
 8. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance for all pieces of equipment.
 9. Fully explain and demonstrate the operation, function and overrides of any local packaged controls not controlled by the central control system.
 10. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.
- C. Contractor's instruction responsibilities pertaining to controls:
1. Provide the CxA and Commissioner with an instruction plan four weeks before the planned instruction.
 2. Provide the designated City of New York's maintenance personnel instruction on the control system in this facility. The intent is to clearly and completely instruct the City of New York's maintenance personnel on all the capabilities of the control system.
 3. Instruction manuals. The standard operating manual for the system and any special instruction manuals will be provided for each instructee, with three extra copies left for the O&M manuals. In addition, copies of the system technical manual will be demonstrated during instruction and three copies submitted with the O&M manuals. Manuals shall include detailed description of the subject matter for each session. The manuals will cover all control sequences and have a definitions section that fully describes all relevant words used in the manuals and in all software displays. Manuals will be approved by the CxA and Commissioner. Copies of audiovisuals shall be delivered to the Commissioner.
 4. The instructions will be tailored to the needs and skill-level of the instructee.
 5. The instructors will be knowledgeable on the system and its use in buildings. For the on-site sessions, the most qualified instructor(s) will be used. The Commissioner shall approve the instructor prior to scheduling the instruction
 6. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 7. Three (3) instruction sessions are required:
 - a. Instruction I. Control System. The first instruction shall consist of 8 hours of actual instruction. This instruction may be held on-site or in the supplier's facility. If held off-site, the instruction may occur prior to final completion of the system installation. Upon completion, each student, using appropriate documentation,

should be able to perform elementary operations and describe general hardware architecture and functionality of the system.

b. Instruction II. Building Systems. The second session shall be held on-site for a period of 8 hours of actual hands-on instruction after the completion of system commissioning. The session shall include instruction on:

- 1) Specific hardware configuration of installed systems in this building and specific instruction for operating the installed system, including HVAC systems, lighting controls and any interface with security and communication systems.
- 2) Security levels, alarms, system start-up, shut-down, power outage and restart routines, changing set points and alarms and other typical changed parameters, overrides, freeze protection, manual operation of equipment, optional control strategies that can be considered, energy savings strategies and set points that if changed will adversely affect energy consumption, energy accounting, procedures for obtaining vendor assistance, etc.
- 3) All trending and monitoring features (values, change of state, totalization, etc.), including setting up, executing, downloading, viewing both tabular and graphically and printing trends. Instructee will actually set-up trends in the presence of the instructor.
- 4) Every screen shall be completely discussed, allowing time for questions.
- 5) Use of keypad or plug-in laptop computer at the zone level.
- 6) Use of remote access to the system via phone lines or networks.
- 7) Setting up and changing an air terminal unit controller.
- 8) Graphics generation
- 9) Point database entry and modifications
- 10) Understanding Direct Digital Controls field panel operating programming (when applicable)

D. Contractor's responsibilities pertaining to Testing, Adjusting and Balancing:

1. Meet with maintenance personnel after completion of TAB and instruct them on the following:
 - a. Go over the final TAB report, explaining the layout and meanings of each data type.
 - b. Discuss any outstanding deficient items in control, ducting or design that may affect the proper delivery of air or water.
 - c. Identify and discuss any terminal units, duct runs, diffusers, coils, fans and pumps that are close to or are not meeting their design capacity.
 - d. Discuss any temporary settings and steps to finalize them for any areas that are not finished.

- e. Other salient information that may be useful for facility operations, relative to TAB.

END OF SECTION 23 08 00

SECTION 23 09 00

INSTRUMENTATION AND CONTROL FOR HVAC

PART 1 - GENERAL REQUIREMENTS

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Instrumentation for controls
 - 2. Field Devices
 - 3. Building Automatic System
 - 4. Control Sequence

1.3 GENERAL

- A. Description of Work: Provide all labor, materials, equipment and services required to furnish an automatic temperature control system that conforms to the plans and specifications and meets the requirements of the heating, ventilating and air-conditioning systems serving the building.
- B. Obtain services of an experienced subcontractor that is regularly engaged in the installation and maintenance of BMS systems. Provide all necessary information and required field supervision for a complete and operable automatic temperature control system.
- C. Provide a complete system of electronic automatic temperature controls. Provide all material, components, devices, thermostats, safety devices, control panels, control dampers, controllers, transformers, actuators, sensing devices, time clocks, relays, control wiring diagrams (line and low voltage), interlocking wiring, smoke detectors, labor, etc. indicated, required or specified.
- D. The temperature control system must be electronic and include electronic sensors and electric actuators unless noted otherwise. Include all work required for a complete operational system as defined in the entire set of drawings and specifications, including but not limited to associated specifications for mechanical and electrical work, and all contract drawings.
- E. Provide all line voltage and low voltage wiring, conduit, panels, and accessories for a complete operational control system. The contractor is responsible for all electrical work associated with the automatic temperature control system, any interface to any other systems including but not limited to HVAC and plumbing systems, and as shown in the contract documents. All line and low voltage must be in accordance with Division 26 requirements. All final electrical connections to each stand-alone controller is the responsibility of contractor.

F. Furnish all wells for water monitoring devices, flow switches, and alarms to be installed.

1.4 WORK INCLUDED

A. The scope encompasses the following systems:

1. Variable Refrigerant Volume System with manufacture furnished controls into the BMS system for monitoring and control via BACnet gateway
2. Energy Recovery Unit with manufacturer furnished with BACnet controller
3. Garage Heating
4. Garage Summer Ventilation System
5. Vehicle Exhaust Capture System
6. IT Closet
7. Elevator Machine Room
8. Outdoor Air Airflow Monitoring

B. Furnish a totally native BACnet-based system, including a browser-based operator interface that can be accessed using standard web browsers. The operator interface, all building controllers, application controllers, and all input/output devices must communicate using the protocols and network standards as defined by ANSI/ASHRAE Standard 135–2001, BACnet. In other words, all controllers, including unitary controllers, must be native BACnet devices. No gateways must be used for communication to controllers installed under this section. Gateways may be used for communication to systems installed under other sections.

C. Provide all necessary BACnet-compliant hardware and software to meet the system’s functional specifications. Provide Protocol Implementation Conformance Statement (PICS) for Windows-based control software and every controller in system, including unitary controllers.

D. Prepare individual hardware layouts, interconnection drawings, and software configuration from project design data.

E. Implement the detailed design for all analog and binary objects, system databases, graphic displays, logs, and management reports based on control descriptions, logic drawings, configuration data, and bid documents.

F. Design, provide, and install all equipment cabinets, panels, data communication network cables needed, and all associated hardware.

G. Provide and install all interconnecting cables between supplied cabinets, application controllers, and input/output devices.

H. Provide and install all interconnecting cables between all operator’s terminals and peripheral devices (such as printers, etc.) supplied under this section.

I. Provide all power wiring to all control panels and control devices requiring power.

J. Provide complete manufacturer’s specifications for all items that are supplied. Include vendor name of every item supplied.

- K. Provide supervisory specialists and technicians at the job site to assist in all phases of system installation, startup, and commissioning.
- L. Provide a comprehensive operator and technician instructions as described herein.
- M. Provide as-built documentation, operator's terminal software, diagrams, and all other associated project operational documentation (such as technical manuals) on approved media, the sum total of which accurately represents the final system.
- N. Provide new sensors, dampers, valves, and install only new electronic actuators. No used components must be used as any part or piece of installed system.

1.5 SYSTEM DESCRIPTION

- A. A distributed logic control system complete with all software and hardware functions must be provided and installed. System must be completely based on ANSI/ASHRAE Standard 135-2001, BACnet. This system is to control all mechanical equipment, including all unitary equipment and all air handlers, boilers, chillers, and any other listed equipment using native BACnet-compliant components. Non-BACnet-compliant or proprietary equipment or systems (including gateways) must not be acceptable and are specifically prohibited.
- B. The Building Management System (BMS) application program must be written to communicate specifically utilizing BACnet protocols. Software functions delivered on this project must include password protection, scheduling (including optimum start), alarming, logging of historical data, full graphics including animation, full suite of field engineering tools including graphical programming and applications. Systems using operating systems other than that described above are strictly prohibited. All software required to program application specific controllers and all field level devices and controllers will be left with the City of New York.
- C. Building controllers must include complete energy management software, including scheduling building control strategies with optimum start and logging routines. All energy management software and firmware must be resident in field hardware and must not be dependent on the operator's terminal. Operator's terminal software is to be used for access to field-based energy management functions only. Provide zone-by-zone direct digital logic control of space temperature, scheduling, runtime accumulation, equipment alarm reporting, and override timers for after-hours usage.
- D. All application controllers for every terminal unit, air handler, all central plant equipment, and any other piece of controlled equipment must be fully programmable. Application controllers must be mounted next to controlled equipment and communicate with building controller via BACnet LAN.
- E. Room sensors must be provided with digital readout that allows the user to view room temperature, adjust the room setpoint within preset limits and index override period. Include all necessary wiring and firmware such that room sensor includes field service mode. Field service mode must allow technician to balance VAV zones and access any parameter in zone controller.
- F. All control equipment used to perform any or all of the specified smoke control sequences must be UL-864 UUKL listed. This includes all field controllers and global control devices. Non UUKL

rated equipment must not be networked to any devices on the network performing smoke control sequences unless isolated by a UUKL rated device. See drawings for actual sequence of operations.

1.6 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each control device indicated.
 - 1. Drawings
 - a. The system supplier must submit engineered drawings, control sequence, and bill of materials for approval.
 - b. Drawings must be submitted in the following standard sizes: 11” x 17” (ANSI B).
 - c. Drawings must be in PDF format.
 - 2. System Documentation
 - a. Include the following in submittal package:
 - b. System configuration diagrams in simplified block format.
 - c. All input/output object listings and an alarm point summary listing.
 - d. Electrical drawings that show all system internal and external connection points, terminal block layouts, and terminal identification.
 - e. Complete bill of materials, valve schedule and damper schedule.
 - f. Manufacturer's instructions and drawings for installation, maintenance, and operation of all purchased items.
 - g. Overall system operation and maintenance instructions—including preventive maintenance and troubleshooting instructions.
 - h. For all system elements—operator’s workstation(s), building controller(s), application controllers, routers, and repeaters,—provide BACnet Protocol Implementation Conformance Statements (PICS) as per ANSI/ASHRAE Standard 135-2001.
 - i. Provide complete description and documentation of any proprietary (non-BACnet) services and/or objects used in the system.
 - j. A list of all functions available and a sample of function block programming that must be part of delivered system.
 - 3. Project Management
 - a. Provide a detailed system design and installation schedule with time markings and details for hardware items and software development phases. Schedule must show all the target dates for transmission of project information and documents and must indicate timing and dates for system installation, debugging, and commissioning.
 - 4. BACnet Device Object Naming Conventions
 - a. The manufacturer’s representative must submit a BACnet Device Object Naming Convention Plan (DONCP) to the Commissioner during the submittal process. The plan must be approved by the Commissioner. It is the responsibility of the contractor to coordinate the DONCP with the Commissioner.

- b. The DONCP must be designed to eliminate any confusion between individual points in a facility/campus wide BMS system. It will also be designed to allow for future expansion and consistency. Each device on a BACnet internetwork (including other manufacturer's devices) must have a unique device instance. This is a major consideration when adding to an existing system or interconnecting networks. Thorough and accessible site documentation is critical.
 - c. A consistent object (point) naming convention must be used to facilitate familiarity and operational ease across an eventual large campus or inventory of facilities. The following section is designed as recommendations only. It is the responsibility of the contractor to coordinate the DONCP with the Commissioner
 - d. BACnet requires that all devices have a Device object name that is unique throughout the entire work. To comply with this requirement all BACnet devices should be configured with a Device Object Name that is based on the naming conventions described in this section. This includes all physical devices as well as any logical BACnet devices that are represented by gateways. The vendor must coordinate with the City of New York's staff to ensure that the correct names are used. Device Object Name properties must support strings of at least 50 characters in length.
 - e. Every system device has addresses by which any other BACnet device can identify it and route information to and from it. Although there are a number of addresses to consider, the scheme is fairly straightforward. It can become complicated, however, if addresses have not been documented adequately or there is no logical addressing scheme.
 - f. Addressing scheme is of the utmost importance. Adopt a hierarchical and uniform addressing scheme for device instances to help quickly identify the function and location of different devices when troubleshooting. Additionally, it's very important to document every element of addressing scheme and update the site documentation with any changes.
5. This section first covers the important addressing issues with respect to BACnet LANs and it gives a practical application you can use to check your understanding. BACnet addressing - Three types of addresses are important in any BACnet system: network numbers, media access control (MAC) addresses, and device instances. Each BACnet device has these addresses associated with it. Though all three can be thought of as addresses, they are all very different both in how they function and how they are assigned.
- a. Network numbers - Identifies the network to which a BACnet device belongs. Every network on a BACnet LAN has a unique numerical identifier—a network number. This network number is used by BACnet devices only; it does not rely on nor does it affect any other network protocols. LANs connected by a router must have different network numbers. No interconnected BACnet networks can have the same network number. Network number range is 1–65534, for a maximum of 65534 interconnected BACnet networks.
 - b. MAC addresses - Hardware-oriented. The MAC address uniquely identifies a device on its particular network. Each network type—Ethernet and MS/TP—has its own MAC addressing scheme. A device that exists on two or more networks will have a

MAC address for each one. Devices can have the same MAC addresses as long as they are on networks with different network numbers.

- c. Ethernet devices - For Ethernet LANs, the IEEE assigns a certain range of MAC addresses to manufacturers of Ethernet products. Manufacturer then assigns a unique MAC address to each of its Ethernet devices.
- d. MS/TP devices - For devices on an MS/TP LAN, you assign the MAC address for each controller. For BACtalk VLCs, these are assigned with DIP switches. Devices on an MS/TP LAN are designated as either masters or slaves, which affects how they can be addressed. This is a requirement of the BACnet specification. All BACtalk MS/TP devices are masters.
- e. Device instances - Software-oriented. The device instance identifies the device to the BACnet software and is the address most often encountered. The device instance is a shortcut to having to specify a MAC address and network number each time an operation is performed. Device instances range from 0–4194302.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Materials and equipment must be the catalogued products of manufacturers regularly engaged in production and installation of automatic temperature control systems and must be manufacturer's latest standard design that complies with the specification requirements.
- C. Subcontractor must have single source responsibility for the complete installation and documented verification for proper operation of the control system that must include as a minimum, point to point checkout, sensor calibration, verification of programmed sequences. Supplier must have an in-place support facility within proximity of the site with technical staff, spare parts inventory, all necessary test and diagnostic equipment and a maintained service organization consisting of competent servicemen, for a period of not less than three years.

1.8 USER MANUALS

- A. Submit two (2) draft copies of User Manual for review. After review by Commissioner, incorporate review comments and submit four (4) interim final copies. Upon completion of project, acceptance of project by the Commissioner, submit in digital format "as built" manual. The User Manual must include the same information that was furnished with the manuals turned over for the base building.

1.9 WORK PERFORMANCE SCHEDULE

- A. A time-phased schedule for delivery, installation, and acceptance of components for the complete system must be prepared. Submit updates and changes to this schedule promptly to the Commissioner.

1.10 GUARANTEE

- A. The Contractor must guarantee the BMS system to be free from defects in workmanship and material for a period of one (1) year from the date of acceptance by the Commissioner. During the guarantee

period, the Contractor must furnish all labor to repair or replace all items or components that fail due to defects in workmanship or material.

1.11 INSTRUCTION

- A. The Contractor must provide competent instructors to give full instruction to designated personnel in the adjustment, operation and maintenance of the system installed rather than a general instruction course. Instructors must be thoroughly familiar with all aspects of the subject matter they are to teach. All instruction sessions must be held during normal work hours of 8:00 a.m. to 4:30 p.m. weekdays. Provide at least 4-hour session.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS/INSTALLERS

- A. The building management system and all components must be Honeywell , Siemens, Johnson, Allerton, or approved equal.

2.2 NETWORK ARCHITECTURE

A. Building's Intra Network

- 1. Install primary and secondary LAN's required to support the complete BMS system. The Operator Workstation for the building must be located in Mechanical Room 235 or as advised by the Commissioner.

B. BACnet Primary LAN

- 1. Primary LAN for the building automation system must consist of a high speed network utilizing BACnet over Ethernet or BACnet/IP. The Primary LAN must be used for communications between BACnet B-BC devices, B-AAC devices, B-ASC devices, and the Operator Workstation.

C. BACnet Secondary LAN

- 1. A secondary LAN, separate from the Primary LAN must be used for communications between B-ASC devices and the B-BC or B-AAC that provides BACnet router services for the device. The Secondary LAN must utilize BACnet MS/TP for communications. The intent of the separate Primary LAN and Secondary LAN is to isolate traffic between B-BC's or B-AAC's and their associated B-ASC devices from the primary LAN.

2.3 OPERATOR INTERFACE

A. Browser Based BMS Operator Interface

- 1. The system must be capable of supporting an unlimited number of clients using standard Web browser. Systems requiring additional software (to enable a standard Web browser) to be resident on the client machine, or manufacture-specific browsers must not be acceptable.

2. The Web browser software must run on any operating system and system configuration that is supported by the Web browser. Systems that require specific machine requirements in terms of processor speed, memory, etc., in order to allow the Web browser to function with the Building Automation System (BMS), must not be acceptable.
3. The Web browser client must support at a minimum, the following functions:
 - a. User log-on identification and password must be required. If an unauthorized user attempts access, notice of access failure must be displayed. Security using authentication and encryption techniques to prevent unauthorized access must be implemented.
 - b. HTML programming must not be required to display system graphics or data on a Web page. HTML editing of the Web page must be allowed if the user desires a specific look or format.
 - c. Storage of the graphical screens must be in the Network Area Controller (NAC), without requiring any graphics to be stored on the client machine. Systems that require graphics storage on each client are not acceptable.
 - d. Real-time values displayed on a Web page must update automatically without requiring a manual “refresh” of the Web page.
 - e. Users must have administrator-defined access privileges. Depending on the access privileges assigned, the user must be able to perform the following:
 - 1) Modify common application objects, such as schedules and setpoints in a graphical manner.
 - 2) Commands binary objects to start and stop.
 - 3) View logs and charts.
 - 4) View alarms.
 - f. Graphic screens on the Web Browser client must support hypertext links to other locations on the Internet or on Intranet sites, by specifying the Uniform Resource Locator (URL) for the desired link.
4. Alarms
 - a. Alarm feature must allow user configuration of criteria to create, route, and manage alarms and events. It must be possible for specific alarms from specific points to be routed to specific alarm recipients. The alarm management portion of the user interface must, at the minimum, provide the following functions:
 - 1) Allow configuration to generate alarms on any numeric, binary, or data point in the system.
 - 2) Generate alarm records that contain a minimum of a timestamp, original state, acknowledged state, alarm class and priority.
 - 3) Allow the establishment of alarm classes that provide the routing of alarms with similar characteristics to common recipients.
 - 4) Allow a user, with the appropriate security level, to manage alarms - including sorting, acknowledging, and tagging alarms.
5. Reports and Summaries
 - a. Reports and Summaries must be generated and directed to the user interface displays, with subsequent assignment to printers, or disk. As a minimum, the system must provide the following reports:

- 1) All points in the BMS
 - 2) All points in each BMS application
 - 3) All points in a specific controller
 - 4) All points in a user-defined group of points
 - 5) All points currently in alarm
 - 6) All BMS schedules
 - 7) All user defined and adjustable variables, schedules, interlocks and the like.
- b. Reports must be exportable to .pdf, .txt, or .csv formats.
 - c. The system must allow for the creation of custom reports and queries.
6. Schedules
- a. A graphical display for time-of-day scheduling and override scheduling of building operations must be provided. At a minimum, the following functions must be provided:
 - 1) Regular schedules
 - 2) Repeating schedules
 - 3) Exception Schedules
 - b. Weekly schedules must be provided for each group of equipment with a specific time use schedule.
 - c. It must be possible to define one or more exception schedules for each schedule including references to calendars
 - d. Monthly calendars must be provided that allow for simplified scheduling of holidays and special days. Holidays and special days must be user-selected with the pointing device or keyboard.
7. Password
- a. Multiple-level password access protection must be provided to allow the user/manager to user interface control, display, and database manipulation capabilities deemed appropriate for each user, based on an assigned password.
 - b. Each user must have the following: a user name, a password, and access levels.
 - c. The system must provide the capability to require a password of minimum length and require a combination of characters and numerical or special characters.
 - d. When entering or editing passwords, the system must not echo the actual characters for display on the monitor.
 - e. The system must provide unlimited flexibility with access rights. A minimum of four levels of access must be provided along with the ability to customize the system to provide additional levels.
 - f. A minimum of 100 unique passwords must be supported.
 - g. Operators must be able to perform only those commands available for their respective passwords. Display of menu selections must be limited to only those items defined for the access level of the password used to log-on.
 - h. The system must automatically generate a report of log-on/log-off and system activity for each user.
 - i. All log data must be available in .pdf, .txt, and .csv formats.

8. Dynamic Color Graphics
 - a. The graphics application program must be supplied as an integral part of the User Interface.
 - b. The graphics applications must include a create/edit function and a runtime function. The system architecture must support an unlimited number of graphics documents (graphic definition files) to be generated and executed.
 - c. The graphics must be able to display real-time data that is acquired, derived, or entered.
 - d. Graphics runtime functions –Each graphic application must be capable of the following functions:
 - 1) All graphics must be fully scalable
 - 2) The graphics must support a maintained aspect ratio.
 - 3) Multiple fonts must be supported.
 - 4) Unique background must be assignable on a per graphic basis.
 - e. Operation from graphics – It must be possible to change values (setpoints) and states in systems controlled equipment within the Web browser interface.
 - f. Graphic editing tool – A graphic editing tool must be provided that allows for the creation and editing of graphic files. The graphic editor must be capable of performing/defining all runtime binding.
9. Historical Data Collection
 - a. All numeric, binary or data points in the system database must allow their values to be logged over time (trend log). Each historical record must include the point's name, a time stamp including time zone, and the point's value.
 - b. The configuration of the historical data collection must allow for recording data BMSed on change of value or on a user-defined time interval.
 - c. The configuration of the historical data collection must allow for the collection process to stop or rollover when capacity has been reached.
 - d. A historical data viewing utility must be provided with access to all history records. This utility must allow historical data to be viewed in a table or chart format.
 - e. The history data table view must allow the user to hide/show columns and to filter data BMSed on time and date. The history data table must allow exporting to .txt, .csv, or .pdf file formats.
 - f. The historical data chart view must allow different point histories to be displayed simultaneously, and also provide panning and zooming capabilities.
10. Audit Log
 - a. For each log entry, provide the following data;
 - b. Time and date
 - c. User ID
 - d. Change or activity: i.e., Change setpoint, add or delete objects, commands, etc.
 - e. Database Backup and Storage
 - f. The user must have the ability to backup the System Controller databases.

11. Touch Screen Operators Workstation
 - a. Provide one panel mounted touch screen operators workstation to be installed on the face of the Network Area Control Panel.
 - b. Touch screen operator's workstation must be provided for command entry, information management, network alarm annunciation/management and database management functions. All real-time control functions must be resident in the DDC controllers to facilitate greater fault tolerance and reliability.
 - c. The touch screen operator's workstation must consist of the following as a minimum.
 - 1) Touch panel computer with minimum processor of 1.6 GHz 1 MB cache, 17" SXGA TFT color LCD screen, I/O ports - (4) serial, (1) parallel, (1) VGA, (2) USB, (3) audio, (1) PS-2, Type II PCMIA, Type II Compact flash slot, PC/104 Plus X 1 expansion slot.
12. Touch Screen Operators Workstation Software
 - a. A 32-bit, multi-tasking Microsoft windows NT or windows 2000 environment that allows the user to run several applications simultaneously. Other windows applications must run simultaneously with the building management system software including but not limited to word, excel, access, etc.
 - b. Provide a user interface that must minimize the use of a typewriter style keyboard through the use of a mouse or similar pointing device and "point and click" approach to menu selection.
 - c. Operator specific password access protection must allow the user to limit workstation control, display and data base manipulation capabilities for each object in the system. An object must be defined as any input or output point, set point, system program, etc.
 - d. Provide a graphical spreadsheet-type format for simplification of time-of-day scheduling and overrides of building operations. Provide schedules for 365 days in advance.
 - e. The display panel must be provided with color graphics. All workstation(s) software must include a graphical viewing and control environment and definition and construction of dynamic color graphic displays.
 - f. Provide system color graphics for each HVAC system and for each electrical, plumbing and/or piping system that is monitored and/or controlled by the BMS. Provide scaled floor plans indicating equipment location, service, and system data as required.

2.4 BUILDING CONTROLLER

A. General

1. All controllers furnished for this project must be powered from an emergency power source and must have a standalone UPS. The UPS must include external batteries, line conditioner, and all other accessories for a complete system. The UPS must be sized to provide the BMS equipment with un-interrupted power for a minimum of 15 minutes. UPS's must be as manufactured by Liebert, Exide, APC USA or approved equal.

B. Network Area Controller (NAC)

1. The NAC must provide the following hardware features as a minimum:
 - a. Communications
 - 1) One 10/100 Mb Ethernet Port – RJ-45 connection
 - 2) One RS-232 port
 - 3) One RS-485 port (up to 57,600 baud)
 - 4) Optional internal auto-dial/auto-answer 56K modem.
 - 5) All required protocol drivers are included.
 - b. Inputs/Outputs
 - 1) Modular expansion modules for adding hardwired analog and digital inputs and outputs directly to the NAC panel.
 - c. Battery Backup
 - 1) Battery backup provided for all on board functions including I/O
 - 2) Battery is monitored and trickle charged
 - 3) Battery maintains processor operation through power failures for a pre-determined interval, and then writes all data to flash memory, shuts the processor down, and maintains the clock for five years.
 - d. Environment
 - 1) Must be capable of operation over a temperature range of 0°C to 55°C.
 - 2) Must be capable of withstanding storage temperatures of between 0°C and 70°C.
 - 3) Must be capable of operation over a humidity range of 5% to 95% RH, non-condensing
 - e. Performance
 - 1) Supports up to 100 devices.
 2. Automation network – The Network Area Controller (NAC) must reside on the automation network. Each NAC must support one or more sub-networks of controllers.
 3. User Interface – Each Network Area Controller (NAC) must have the ability to deliver a web based user interface as previously described. All computers connected physically or virtually to the automation network must have access to the web based UI.
 4. Power Failure – In the event of the loss of normal power, The Network Area Controller (NAC) must continue to operate for a define period after which there must be an orderly shutdown of all programs to prevent the loss of database or operating system software. Flash memory must be incorporated for all critical controller configuration data.
 - a. During a loss of normal power, the control sequences must go to the normal system shutdown conditions.
 - b. Upon restoration of normal power and after a minimum off-time delay, the controller must automatically resume full operation without manual intervention through a normal soft-start sequence.
 - c. Certification – All controllers must be listed by Underwriters Laboratories (UL).
- C. Advanced Application Controller
1. Control of AO's and BO's and monitoring of AI's and BI's are permitted on devices that conform to the requirements for the BACnet Advanced Application Controller (B-AAC) as

identified in ASHRAE Standard 135. B-ASC's must be provided with all supporting BACnet services as a local function. The device must not depend upon any other devices for the functionality of schedule or alarm activities. Alternatively, the B-ASC's or B-BC's that the device is dependent upon must utilize an Uninterruptible Power Supply (UPS). A single piece of equipment must utilize a single controller. Control functions for a single piece of equipment may not be divided among controllers.

D. Application Specific Controllers

1. Control of AO's and BO's and monitoring of AI's and BI's are permitted on devices that conform to the requirements for the BACnet Application Specific Controller (B-ASC) as identified in ASHRAE Standard 135. Where B-ASC's are utilized, any supporting B-BC or B-ASC must be provided with an Uninterruptible Power Supply (UPS) to avoid any unintentional loss in the support of BACnet services due to a power outage for the B-BC while the B-ASC is functional.

E. Gateways

1. Gateways between BACnet and any other protocols must not be allowed for this project.

F. Smart Sensor/Actuator

1. BACnet Smart sensors (B-SS) and actuators (B-SA) must not be permitted for use on this project. All system I/O must be connected directly to a B-AAC or B-ASC device.

2.5 AUTOMATIC CONTROLS

- A. Furnish and install as herein specified a complete automatic temperature control system of the direct digital control electronic type. All temperature control under this contract is to be fully modulating type, except where noted otherwise. The system must be complete in all respects including sensors, valves, dampers, relays, etc. to provide the functions as hereinafter described, regardless of whether or not said sensors, relay etc., are specifically mentioned hereinafter. The system must be installed complete in all respects by competent mechanics, properly trained by the manufacturer.

2.6 FIELD DEVICES

A. General

1. Provide field devices for input and output of digital (binary), and analog, signals into BACnet devices. Provide signal conditioning and/or filtering for all field devices as recommended by field device manufacturers, and as required for proper operation of the system.
2. It the responsibility of the contractor to provide equipment as identified in this specification section and ensure that all field devices are compatible with the controllers to be used on the project.
3. Transmitters specified herein are generally 4-20 mA "two-wired" type transmitters, with power for the device expected to be supplied from the transformer powering the controller.

4. For field devices specified hereinafter that require signal conditioners, signal boosters, signal repeaters, or other devices for proper interface to controllers, the contractor must furnish and install proper device. Such devices must have accuracy equal to, or better than, the accuracy listed for respective field devices.
5. Accuracy, as stated in this section, must include combined effects of non-linearity, non-repeatability and hysteresis.

B. Temperature Sensors

1. All temperature sensors must use RTD with sensor accuracy of +/- .5 deg F. Provide Minco, Vaisala, Mamac or Approved Equal.
2. Single Point Duct Temperature Sensor
 - a. These must consist of a sensing element, junction box for wiring connections, and a gasket to prevent air leakage or vibration noise. The temperature range as required for resolution is indicated above. The sensor probe must be stainless steel.
 - b. Sensing element - RTD or thermistor +/- 0.5 deg F accuracy at calibration point.
3. Averaging Duct Temperature Sensor
 - a. These must consist of an averaging element, junction box for wiring connections and gasket to prevent air leakage. Provide sensor lengths and quantities to result in one foot of sensing element for each, two square feet of coil/duct face area. Temperature range must be as required for resolution as indicated above.
 - b. Sensing element - RTD or thermistor +/- 0.5 deg F accuracy at calibration point.
4. OA Sensors
 - a. These must consist of a sensor, sun shield, utility box, and watertight gasket to prevent water seepage. The temperature range must be as required for the resolution indicated above;
 - b. Sensing element - RTD, thermistor, or integrated circuit, +/- 0.4 deg F accuracy at calibration point;
 - c. On major/critical systems, one must be provided for each;
 - d. Sensors must be located on a north wall of the building and installed with stand-offs. On 100% OA systems and lab buildings, locate sensor in outside air plenum.
 - e. Provide one sensor per mechanical room or building-level controller.

C. Pressure Sensors

1. Air Differential Pressure Transmitters:
 - a. Applications: Duct static pressure, air flow VP, filter DP, Fan DP, etc.;
 - b. Provide the smallest range feasible for the application. Provide zero and span adjustments;

- c. Accuracy: Plus or minus 1% of full scale for static and 0.25% for air velocity.
- d. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Vaisala
 - 2) Mamac,
 - 3) Setra
 - 4) Or Approved Equal

D. Air Flow Station

- 1. Provide for the indicated HVAC systems, solid state electronic airflow processing centers capable of performing the dedicated airflow control functions as outlined in the "Sequence of Operations" in Part 4 and indicated on the control schematics.
- 2. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Paragon Controls Inc.; Airflow Processing Centers
 - b. Air Monitor
 - c. Sensacon
 - d. Or Approved Equal
- 3. Each airflow processing center must be capable of operating on 24VAC power.
- 4. The airflow processing centers must be complete with three mode (P-I-1/D) analog controllers as required; all mounted within the processing center. Each functional center will contain the necessary manual span, zero and setpoint adjustments conveniently located inside the center.
- 5. Each controller must be provided with test terminals to permit the temporary installation of electronic meters to facilitate signal readouts during start-up and for routine servicing. All adjustments and test points are to be clearly identified.
- 6. The airflow processing center must perform the following functions as required for their respective duties:
 - a. Constant pressure control of the Supply duct system.
 - b. Volumetric synchronization of the Return airflow based on the Supply airflow.
 - c. Dial reset of control point with integral LED to indicate which setpoint is in operation
 - d. Continuous monitoring of Supply and Return air volumes. Indicating meters must be independent of all other control devices and must provide direct readout of air volume (CFM) (LPS) and velocity (FPM) (MPS). These meters must be diaphragm actuated, differential pressure type and are to be flush mounted on the door of the control center. Each meter must be calibrated to an accuracy of $\pm 2\%$ of span.
 - e. Continuous monitoring of the Supply system static pressure. Indicating meters must be independent of all other control devices and must provide direct readout of system static pressure (In. W.C.) (KPa). These meters must be diaphragm actuated, differential pressure type and are to be flush mounted on the door of the control center. Each meter must be calibrated to an accuracy of $\pm 2\%$ of span.

- f. Continuous indication of controller output.
 - g. Provide for Soft Start of the system with an integral LED to indicate when the system is in the de-energized mode of operation. This interlock is to be activated by Start/Stop dry contacts provided by the Subcontractor.
 - h. Multiple system static sensing with low select to include the required indicating meters, transmitters and low select circuitry.
 - i. Summing of multiple airflow rates. Where multiple fans serve a common system, provide all necessary electronic control devices to produce an electronic control signal equal to the total air volume.
 - j. Provide High and Low duct pressure override with dry contacts for remote alarm, local light alarm, and manual reset.
 - k. Provide electronic analog output signals linear to air volume and system static pressure for remote use by the building automation system or central computer.
7. All control instruments, relays, etc. must be contained within a NEMA 13 enclosure. The enclosure(s) must be suitable for wall mounting and have a textured polyester finish.
 8. All control modules, instruments, relays, etc. must be located within the enclosure for easy servicing from the front of the cabinet with the door open. It must be the responsibility of the installer to assure that proper clearances be available to allow full opening of the control center door.
 9. All wiring connections to control instruments, relays, etc. must be made inside the enclosure. External bulkhead connections must be provided at the top or side of the control center cabinet for the connection or entry of control wiring. Bulkhead connections are to be clearly identified. All electrical connection must be terminated inside the control center at securely mounted terminal blocks. All terminal blocks are to be clearly identified.
 10. Power and logic wiring will conform to the latest National Electric Code (NEC) and recommended practices of ISA.

E. Current Switches (CS)

1. For Constant Speed Motors:
 - a. CS must be provided for status indication of constant speed motors;
 - b. Switch must indicate loss of status when current falls below an adjustable trip point;
 - c. CS must include LED indication of status;
 - d. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Veris Industries
 - 2) Hawkeye
 - 3) Kele
 - 4) Or Approved Equal
2. For Variable Speed Motors/ VFD:
 - a. Typically, status indication that indicates VSD or bypass operation must be derived from contacts on the VSD. The VSD must be specified to include this option;

- b. Otherwise, a current switch must be provided for status indication. The switch must be microprocessor based and suitable for use on a VSD;
- c. Self-adjusting trip setpoint;
- d. Factory programmed to detect belt loss undercurrent conditions;
- e. CS must include LED indication of status;
- f. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Veris Industries
 - 2) Hawkeye
 - 3) Kele
 - 4) Or Approved Equal

F. Static Pressure Transmitter

- 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Setra
 - b. Vaisala
 - c. Kele
 - d. Or Approved Equal

G. Binary Sensors

- 1. Water differential pressure switches suited for application.
- 2. Air differential pressure switches must be diaphragm type, die-cast aluminum housing, adjustable setpoint, with a SPDT switch. Rating must be a minimum of 5 amps at 120 VAC. Switch pressure range must be suited for the application.
- 3. Low temperature detector (Ltd) must be automatic reset, DPDT type. Ltd must be installed in a serpentine fashion across the coil in the air stream in accordance with the manufacturer's recommendations. Element must be arranged to lock out the associated fan should the temperature at any point along the sensing element fall below 35 °f for an adjustable time period.
- 4. Current sensing relays must be split core, two wire, loop powered and sized for expected amperage. Unit must be UL listed. Provide status LED's for current sensed below setpoint, current sensed above setpoint and loop power failure. The unit must automatically range itself and have solid state outputs.

H. Single Point Leak Detector

- 1. The alarm module must indicate that water has contacted the sensors by actuating two output relays. The relays must remain activated until the module is reset.

I. Control Dampers

- 1. Dampers must be applicable for the rated pressure and velocity service. Damper structural rating must exceed extreme anticipated conditions like fan deadhead.

2. Modulating dampers must be carefully selected to control in a smooth and stable fashion across the range of anticipated conditions. Except where size dictates a single blade, dampers must always be opposed blade. When a large section of damper is to be connected to a single jackshaft, size limitations must be followed. This will prevent excessive damper area or, more importantly, length from being connected to a single jackshaft. Typically, the manufacturer's recommendation must be sufficient for specifying a limit to the size of a damper bank that may have field fabricated jackshaft connections.
3. Whenever possible, dampers must have external crankshafts to allow the connection of the damper actuator outside of the air stream. This will allow for easier access to the actuators for maintenance.
4. OA control dampers must be low leakage dampers with damper seals.
5. Output to modulating control dampers must be analog.
6. Manufacturers: Ruskin, Nailor, Greenheck, approved equal.

J. Damper Actuators

1. General: Size actuators and linkages to operate their appropriate dampers or valves with sufficient reserve torque or force to provide smooth modulating action or two-position action and adequate close off rating as required.
2. Damper actuators must be electronic type, 24 VAC with spring return. Size actuator for torque requirements of damper. Provide limit switches to protect motor against burnout. Damper motor must be Belimo, Johnson Controls, Honeywell or approved equal.
3. For duct mounted dampers:
 - a. All Actuators must be electronic.
 - b. Electronic Actuators: Must be designed for a minimum of 60,000 full cycles at full torque and be UL 873 listed. Provide stroke indicator. Actuators must have a positive positioning circuit and selectable inputs. Full stroke must be within 90 seconds. Where fail positions are required, provide spring return on the actuator with adequate close off force.
 - c. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Belimo
 - 2) Honeywell
 - 3) Johnson Controls
 - 4) Or approved Equal
4. For terminal unit dampers:
 - a. Electronic Actuators: Must be designed for a minimum of 60,000 full cycles at full torque. Provide stroke indicator. Output to modulating damper actuators may be analog or floating.

K. Electric Thermostats

1. Furnish and install 24 volts thermostats for unit heaters. Thermostat contacts must be rated for maximum heater amperage and must be snap acting, SPDT.

2. Thermostat must have a concealed setpoint adjustment.
3. Thermostat must have concealed thermometer temperature indication.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

A. Installation Criteria

1. Space mounted devices are to be identical in appearance. All devices must be mounted under the same style cover.
2. Room sensors and thermostats must not be located on outside walls.
3. Provide all relays, switches, sources of electricity and all other auxiliaries, accessories and connections necessary to make a complete operable system in accordance with the sequences specified.
4. Install controls so that adjustments and calibrations can be readily made. Controls are to be installed by the control equipment manufacturer.
5. Mount surface-mounted control devices, tubing and raceways on brackets to clear the final finished surface on insulation.
6. Conceal control conduit and wiring in all spaces except in the Mechanical Equipment Rooms and in unfinished spaces. Install in parallel banks with all changes in directions made at 90 degree angles.
7. Install control valves horizontally with the power unit up. Installation of control valves will be by the Contractor.
8. Unless otherwise noted, install wall-mounted sensors, thermostats and humidistats to meet ADA requirements. Submit device samples, locations, mounting heights and details for approval for all devices.
9. All relays, electrical wiring, panels, outputs, etc. to make a complete operational system, must be provided and installed by this section. See sequences of operation for details.

B. Design Criteria

1. The Automatic Temperature Control (BMS) must be programmed to start and stop the HVAC equipment based on occupancy schedules. The BMS must also provide equipment interlocks as required.
2. Fire Alarm Interface for Fans
 - a. The Fire Alarm System (FAS) must provide outputs to notify the BMS of fire alarms.
 - b. All fan systems must be stopped from the FAS. When the fan system stops, all associated dampers must close.

3.3 ELECTRICAL INSTALLATION WIRING AND MATERIALS

- A. Provide all electrical control work associated with the BMS, HVAC and plumbing systems, which is not specified as work of other trades.
1. Perform all wiring in accordance with all local and national codes including the NEC.
 2. Install all line voltage wiring, concealed or exposed, in conduit in accordance with the Division 26 specifications, NEC and 2014 NYC Building Code. Utilize #14 A.W.G. THWN conductors minimum throughout for power wiring (120 VAC or greater) except in conjunction with a manual starter.
 3. All low voltage electrical control wiring may be run in plenum rated cable above accessible hung ceilings. Plenum cable must be run parallel to building lines and supported from the building structure (not from duct, pipe or associated hangers) with bridle rings.
 4. Provide extension of 120 volt, 20 amp circuits and circuit breakers from emergency power panels for entire system, as required.
 5. Provide all miscellaneous field device mounting and interconnecting control wiring for all mechanical systems.
 6. All control and power wiring associated with the control of all automatic, fire/smoke or smoke dampers must be installed in conduit, regardless of voltage. All control and power wiring for relays associated with the control of any automatic, fire/smoke or smoke damper must be installed in conduit, regardless of voltage.
 7. Provide electrical wall box and conduit sleeve for all wall mounted devices.
 8. Fire stopping must be provided for all penetrations of conduit, etc. through fire rated walls and floors and other fire rated separations.
 9. Where conduit is required, it must be steel electric metallic tubing (EMT), except that it must be galvanized intermediate steel conduit where located within 8'-0" of the floor in mechanical spaces (or is otherwise exposed to mechanical damage), or is intended for embedment in concrete.
 10. Wires and cables must have characteristics - in compliance with Articles 725 and/or 800 (as applicable) of the National Electrical Code - as described elsewhere in the specifications or drawings for this project, and must be UL listed in accordance therewith.

3.4 SMOKE CONTROL FAN (EF-1)

- A. Smoke control fan EF-1 must start upon activation from the fire alarm system.

3.5 ACCEPTANCE TESTING

- A. Submit for approval, a detailed acceptance test procedure designed to demonstrate compliance with contractual requirements.
- B. Demonstrate system performance to Commissioner for final system acceptance.

PART 4 - SEQUENCE OF OPERATION

4.1 VARIABLE REFRIGERANT VOLUME (VRV) SYSTEMS

- A. Refer to Section 238129 “Variable Refrigerant Flow HVAC System” for the factory furnished control and associated sequences. The factory furnished controls will incorporate BACnet gateway with MS/TP communication. Provide all required field wiring of controls that cannot be factory installed for proper AC unit operation. Connect the direct digital controls (DDC) controller to the NAC network for point monitoring and control from the operator interface.
- B. The unit must run according to a user definable schedule. The fan must have a user definable minimum runtime.
- C. Direct Digital Control Points (Each Indoor Unit)
 - 1. Unit Status
 - 2. Schedule
 - 3. Room Temperature
 - 4. Supply Temperature
 - 5. Return Temperature
 - 6. Drain Pan Leak Detector
- D. Direct Digital Control Points (Each Outdoor Unit)
 - 1. Unit Status
 - 2. Compressor Status

4.2 AIR-TO-AIR ENERGY RECOVERY EQUIPMENT (ERV)

- A. Refer to Section 237200 “Air-to-Air Energy Recovery Equipment” for the factory furnished control and associated sequences. The factory furnished controls must be provided with BACnet MS/TP communication. Provide all required field wiring of controls that cannot be factory installed for proper AC unit operation. Connect the Direct Digital Control controller to the NAC network for point monitoring and control from the operator interface.
- B. The unit run schedule must be interlocked with VRV system occupied schedule. The fan must have a user definable minimum runtime.
- C. The outdoor air supply from ERV must be equipped with airflow monitoring station.
- D. Direct Digital Control Points
 - 1. Unit Status
 - 2. Schedule
 - 3. Outdoor Air Temperature
 - 4. Supply Temperature
 - 5. Return Temperature
 - 6. Filter Status
 - 7. Outdoor Air Flow Rate Monitoring.

4.3 GARAGE HEATING

- A. The garage heaters (total of six) must be enabled based on winter schedule (adj). Coordinate schedule with Commissioner. The space heater thermostat must cycle heaters to maintain setpoint temperature (adj).
- B. Direct Digital Control Points
 - 1. Garage Space Temperature
 - 2. Low Temperature Alarm
 - 3. Heater failure

4.4 GARAGE SUMMER VENTILATION AND CO EXHAUST SYSTEM

- A. The garage ventilation exhaust fans VF-1 must be enabled any time the indoor temperature exceeds 85 deg F (adj.)
- B. Activate garage ventilation exhaust fans when CO/N2O concentration reaches first alarm set point. The fan must continue to run until the concentration level reaches below setpoint condition. Refer to specification section 284200 “Gas Detection and Alarm System”
- C. Make-up air louver damper MD-1 must open upon activation of garage ventilation fan VF-1 or vehicle exhaust fans (GF-1, GF-2). Damper MD-1 must be closed when neither set of fans are active.
- D. Direct Digital Control Points
 - 1. Garage Space Temperature
 - 2. CO Level-A alarm setpoint
 - 3. N2O Level-A alarm setpoint
 - 4. CO Level ppm
 - 5. N2O Level ppm
 - 6. Fan (VF-1) Status
 - 7. Intake Louver Damper (MD-1) status
 - 8. Exhaust Louver Damper (MD-2) status

4.5 VEHICLE EXHAUST CAPTURE SYSTEM

- A. Direct Digital Control Points
 - 1. Fan (GF-1,2) Status
 - 2. Exhaust System Common Alarm

4.6 IT CLOSET VENTILATION

- A. Direct Digital Control Points
 - 1. Fan (EF-2) Status
 - 2. High Temperature Alarm

4.7 ELEVATOR MACHINE ROOM

- A. Direct Digital Control Points
 - 1. High Temperature Alarm

4.8 MISCELLANEOUS ALARM POINTS

- A. Direct Digital Control Points
 - 1. Leak Detector – Auxiliary drain pan under each ceiling hung and floor mount AC units, five locations
 - 2. Heat Trace Common Fault
 - 3. High Level Alarm Sanitary Holding Tank (Tank is located underground outside building Refer to Site Civil Plans)

END OF SECTION 23 09 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 23 00

REFRIGERANT PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Removal of existing refrigerant containing equipment,
 2. Refrigerant recovery
 3. Refrigerant piping used for air-conditioning applications.

1.3 PERFORMANCE REQUIREMENTS

- A. Line Test Pressure for Refrigerant R-410 A:
1. Suction Lines for Heat-Pump Applications: 325 psig
 2. Hot-Gas and Liquid Lines: 325 psig
- B. All work must be performed in compliance with provisions of section 608 of 1990 US Clean Air Act and Title CFR 40, Part 82, Subpart F. and in accordance with 2014 New York City Fire Code and all other applicable NY state and Federal regulation.

1.4 BEST MANAGEMENT PRACTICES

- A. The following BMPs are recommended for management and recycle of refrigerant/CFCs:
1. Use only EPA approved refrigerant handling machines when recharging or removing refrigerants.
 2. Sell refrigerant to certified technicians or to certified reclamation facilities that will reclaim the refrigerant to its original purity specifications.
 3. Dispose of filters from CFC recapture as hazardous waste.
 4. Keep accurate records for at least 3 years.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Materials must conform to the latest edition of reference specifications and industry standards specified herein and applicable, and to pertinent codes and requirements NYC Dept. of Buildings.

1. Certify brazing procedures, brazers, and operators in accordance with ASME Boiler and Pressure Vessel Code, Section IX, for shop and jobsite brazing of piping work.
 - C. Comply with ASHRAE 15, "Safety Code for Refrigeration Systems."
 - D. Comply with ASME B31.5, "Refrigeration Piping and Heat Transfer Components."
- 1.6 SUBMITTAL PROCEDURES:
- A. Refer to DDC General Conditions section 01 33 00 "Submittal Procedures".
- 1.7 SUBMITTALS
- A. Product Data: For each type of valve and refrigerant piping specialty indicated. Include pressure drop based on manufacturer's test data.
 - B. Shop Drawings: Show layout of refrigerant piping and specialties, including pipe, tube, and fitting sizes, flow capacities, valve arrangements and locations, slopes of horizontal runs, oil traps, double risers, wall and floor penetrations, and equipment connection details. Show interface and spatial relationships between piping and equipment.
 - C. Technician Certification: Submit qualification for refrigerant technician in accordance with requirements of Title 40 CFR. Part 82, Subpart F, Article 82.161. The technician must have current Universal certification for servicing all types of equipment.
 - D. Equipment Certification: Submit certification for refrigerant recovery equipment in accordance with requirements of Title 40 CFR. Part 82, Subpart F, Article 82.162.
 - E. Field quality-control test reports.
 - F. Operation and maintenance data.
- 1.8 PRODUCT STORAGE AND HANDLING
- A. Provide factory-applied plastic end caps on each length of pipe and tube. Maintain end caps through shipping, storage and handling as required to prevent pipe-end damage and eliminate dirt and moisture from inside of pipe and tube.
 - B. Store piping in a clean and protected area with end caps in place to ensure that piping interior and exterior are clean when installed.

PART 2 - PRODUCTS

2.1 COPPER TUBE AND FITTINGS

- A. Copper Tube: ASTM B 280, Type ACR.
- B. Wrought-Copper Fittings: ASME B16.22.
- C. Wrought-Copper Unions: ASME B16.22.

- D. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.
- E. Brazing Filler Metals: AWS A5.8.
- F. Flexible Connectors:
 - 1. Body: Tin-bronze bellows with woven, flexible, tinned-bronze-wire-reinforced protective jacket.
 - 2. End Connections: Socket ends.
 - 3. Offset Performance: Capable of minimum 3/4-inch misalignment in minimum 7-inch-long assembly.
 - 4. Pressure Rating: Factory test at minimum 500 psig
 - 5. Maximum Operating Temperature: 250 deg F

2.2 REFRIGERANTS

- A. Refrigerant: 410A
- B. Manufacturers: Subject to compliance requirements, provide products by one of the following:
 - 1. Daikin
 - 2. DuPont
 - 3. Honeywell
 - 4. Or Approved Equal

2.3 INSULATION

- A. Manufacturer:
 - 1. Armacell
 - 2. AeroFlex USA Inc
 - 3. AeroFoam USA Inc.
 - 4. Or Approved Equal.
- B. Insulation must be a flexible, closed-cell elastomeric pipe insulation. Adhesive and UV protective coating must be supplied from same as insulation manufacturer. The insulation must conform to ASTM C534 Grade 1, Type I.
- C. Insulation materials must have a closed cell structure to prevent moisture from wicking which makes it an efficient insulation.
- D. Insulation materials must be manufactured without the use of CFC's, HFC's or HCFC's. It is also formaldehyde free, low VOCs, fiber free, dust free and resists mold and mildew.
- E. Insulation materials must have a flame-spread index of less than 25 and a smoke-developed index of less than 50 as tested in accordance with ASTM E 84. In addition, the products, when tested, must not melt or drip flaming particles, and the flame must not be progressive.
- F. Insulation materials must have a maximum thermal conductivity of 0.27 Btu-in./h-ft²-°F at a 75°F mean temperature as tested in accordance with ASTM C 177 or ASTM C 518.
- G. Insulation materials must have a maximum water vapor transmission of 0.08 perm-inches when tested in accordance with ASTM E 96, Procedure A.

- H. All low temperature lines (+10°F and below) must be insulated with a minimum of 1-1/2" wall thickness minimum in compliance with NYCECC 2016.

2.4 LINE SET COVERS

- A. Provide line set covers complete with fittings and fasteners.
- B. Line set covers must be constructed for superior corrosion & scratch resistance. The duct and fittings must be triple hot dip protected with layers of zinc, aluminum and magnesium for much greater protection than ordinary galvanized steel.
- C. All fasteners must be stainless steel
- D. Basis of Design Product: Subject to compliance with requirements, provide products by Inaba Denko America, RD Series or comparable product by one of the following:
 - 1. Rectorseal
 - 2. Diversitech
 - 3. Approved Equal.

2.5 PROTECTIVE COATINGS

- A. Provide water based latex pliant enamel coating for all outdoor exposed refrigerant insulation for durable weather resistance to ultraviolet and ozone deterioration.
- B. Coating must be heavy bodied, easy brush application suitable for application above 50 deg F , non-flammable with VOC content less than 10 grams/liter
- C. Protective coating must be from same manufacturer as insulation.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PIPING APPLICATIONS

- A. Hot-Gas and Liquid Lines, and Suction Lines for Heat-Pump Applications: Copper, Type ACR, annealed-temper tubing and wrought-copper fittings with brazed joints.

3.3 PIPING INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems; indicated locations and arrangements were used to size pipe and calculate friction loss, expansion, pump sizing, and other design considerations. Install piping as indicated unless deviations to layout are approved on Shop Drawings.
- B. Install refrigerant piping and system components according to latest edition of ASHRAE 15 and Chapter 11 of 2014 NYC Mechanical code including but not limited to the following requirements:

1. All piping that crosses open space that affords passageways must be installed minimum 7 feet 3 inches above finished floor or tight ceiling slab of open passageways.
 2. All piping installed below 7 feet 3 inches must be protected from mechanical damage.
 3. Refrigerant piping in public corridor must be brazed joints of manufacturer provided pre-charged tubing systems with no joints.
 4. Refrigerant piping and fittings must be concealed or otherwise protected from mechanical damage.
 5. Refrigerant piping must not be installed in enclosed public stairway, stair landing or exit.
 6. All refrigerant piping must be insulated to avoid condensation and meet requirements of thermal insulation for compliance with energy code.
- C. Install piping in concealed locations unless otherwise indicated and except in equipment rooms and service areas.
- D. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- E. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- F. Install piping adjacent to machines to allow service and maintenance.
- G. Install piping free of sags and bends.
- H. Install fittings for changes in direction and branch connections.
- I. Select system components with pressure rating equal to or greater than system operating pressure.
- J. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.
- K. Arrange piping to allow inspection and service of refrigeration equipment. Install valves and specialties in accessible locations to allow for service and inspection. Install access doors or panels as specified in Division 08 Section "Access Doors and Frames" if valves or equipment requiring maintenance is concealed behind finished surfaces.
- L. Install refrigerant piping in protective conduit where installed belowground.
- M. Install refrigerant piping in rigid or flexible conduit in locations where exposed to mechanical injury.
- N. Slope refrigerant piping as follows:
1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
 2. Install horizontal suction lines with a uniform slope downward to compressor.
 3. Install traps and double risers to entrain oil in vertical runs.
 4. Liquid lines may be installed level.
- O. When brazing or soldering, remove solenoid-valve coils and sight glasses; also remove valve stems, seats, and packing, and accessible internal parts of refrigerant specialties. Do not apply heat near expansion-valve bulb.

- P. Install pipe sleeves at penetrations in exterior walls and floor assemblies.
- Q. Seal penetrations through fire and smoke barriers according to Division 07 Section "Penetration Firestopping."
- R. Install piping with adequate clearance between pipe and adjacent walls and hangers or between pipes for insulation installation.
- S. Install sleeves through floors, walls, or ceilings, sized to permit installation of full-thickness insulation.
- T. Seal pipe penetrations through exterior walls according to Division 07 Section "Joint Sealants" for materials and methods.

3.4 PIPE JOINT CONSTRUCTION

- A. Brazed Joints: Construct joints according to AWS's "Brazing Handbook," Chapter "Pipe and Tube."
 - 1. Use Type BcuP, copper-phosphorus alloy for joining copper socket fittings with copper pipe.

3.5 PIPING INSULATION INSTALLATION

- A. Refrigerant Installation
 - 1. All refrigerant copper lines must be free of extraneous chemicals such as corrosive cleaners or building materials' dust prior to the installation of the insulation. The insulation must be clean and dry prior to installation.
 - 2. Refrigerant pipe must be sealed while slipping on insulation to prevent foreign matter from entering the tube.
 - 3. Insulation is to be slid onto pipe; longitudinal slitting of the insulation is not allowed except on mitered sections. Insulation must be pushed onto pipe, not pulled.
 - 4. Insulation must be mitered, pre-adhered and longitudinally slit inside throat to fit over all P-traps, tees and elbows or bends over 90°.
 - 5. All butt joints and mitered seams must be adhered with full coverage of adhesive on both surfaces. Insulation must not be stretched when adhering.
 - 6. Insulation must be installed in an adequately ventilated area. It may be necessary to increase insulation thickness if adequate ventilation is not present, Do not crowd the insulation, allow for adequate air movement.
 - 7. At the beginning, at every 12 to 18 feet, and at the ends of piping runs, the insulation must be adhered directly to the copper using a 2" strip of adhesive. Insulation should not be adhered to the pipe at the extreme low points in any piping run.

8. Saddles must be installed under all insulated lines at unistrut clamps, clevis hangers, or locations where insulation may be compressed.
 - a. Insulation pipe hangers can be installed at the compression locations and the seams must be sealed with contact adhesive.
 - b. To minimize the movement of it is recommended that a pair of non-skid pads be adhered to the clamps. In addition, to prevent loosening of the clamps, use of an anti-vibratory fastener, such as a nylon-locking nut, is also recommended.
 - c. Wood dowels or blocks, of a thickness equal to the insulation, can be inserted and must be completely sealed into the insulation at the saddle locations. All seams must be sealed with contact adhesive.
 - d. Hangers clamped directly to the pipe must be insulated over the hanger; insulation must be fully adhered to the hanger. In addition, hangers with double rods must be insulated between the rods. All seams of the insulation must be sealed with adhesive.
 - e. All insulation exposed to sunlight or installed outdoors must be protected with UV protective coating.

3.6 HANGERS AND SUPPORTS

- A. Hanger, support, and anchor products are specified in Division 23 Section "Hangers and Supports for HVAC Piping and Equipment."
- B. Install the following pipe attachments:
 1. Copper-clad hangers and supports for hangers and supports in direct contact with copper pipe.
- C. Install hangers for copper tubing with the following maximum spacing and minimum rod sizes:
 1. NPS 5/8: Maximum span, 60 inches; minimum rod size, 1/4 inch .
 2. NPS 1: Maximum span, 72 inches minimum rod size, 1/4 inch.

3.7 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
- B. Tests and Inspections:
 1. Comply with ASME B31.5, Chapter VI.
 2. Test refrigerant piping and specialties. Isolate compressor, condenser, evaporator, and safety devices from test pressure if they are not rated above the test pressure.
 3. Test high- and low-pressure side piping of each system separately at not less than the pressures indicated in Part 1 "Performance Requirements" Article.
 - a. Fill system with nitrogen to the required test pressure.
 - b. System must maintain test pressure at the manifold gage throughout duration of test.
 - c. Test joints and fittings with electronic leak detector or by brushing a small amount of soap and glycerin solution over joints.
 - d. Remake leaking joints using new materials and retest until satisfactory results are achieved.

3.8 SYSTEM CHARGING

- A. Charge system using the following procedures:
1. Install core in filter dryers after leak test but before evacuation.
 2. Evacuate entire refrigerant system with a vacuum pump to 500 microns Hg. If vacuum holds for 12 hours at ambient temperatures of 60°F, system is ready for charging.
 3. Break vacuum with refrigerant gas, allowing pressure to build up to 2 psig.
 4. Charge system with a new filter-dryer core in charging line.

3.9 REFRIGERANT HANDLING

- A. Contractor must follow provisions outlined in section 608 of the 1990 US Clean Air Act and Title 40 CFR, Part 82, Subpart F for safe handling and disposal of Class I and Class II refrigerants to include but not limited to:
1. Refrigerant technician certification
 2. Refrigerant recovery equipment certification
 3. Appliance or equipment evacuation vacuum levels
 4. Hazardous materials manifest reporting and record keeping.
 5. Safe disposal of refrigerants
- B. In event of accidental release of refrigerant, the contractor must follow the procedures for reporting release of hazardous materials in accordance with NYC Fire Code, section 606.13, other applicable NY State and Federal Regulations.

3.10 ADJUSTING

- A. Perform the following adjustments before operating the refrigeration system, according to manufacturer's written instructions:
1. Verify that compressor oil level is correct.
 2. Open compressor suction and discharge valves.
 3. Open refrigerant valves except bypass valves that are used for other purposes.

3.11 REPORTING

- A. Contractor must prepare a Certificate of Test in accordance with 2014 NYC Building Code, Section 1108.4
- B. Submit final report to the Commissioner

END OF SECTION 23 23 00

SECTION 23 31 13

METAL DUCTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. Rectangular ducts and fittings.
2. Round and oval ducts and fittings.
3. Sheet metal materials.
4. Duct liner.
5. Sealants and gaskets.
6. Hangers and supports.

B. Related Sections:

1. Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC"
2. Section 23 33 00 "Air Duct Accessories"

1.3 PERFORMANCE REQUIREMENTS

- A. Duct construction, including sheet metal thicknesses, seam and joint construction, reinforcements, and hangers and supports, must comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" and performance requirements and design criteria indicated in "Duct Schedule" Article.
- B. Structural Performance: Duct hangers and supports must withstand the effects of gravity loads and stresses within limits and under conditions described in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"
- C. Airstream Surfaces: Surfaces in contact with the airstream must comply with requirements in ASHRAE 62.1-2004.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each type of product indicated.
- C. Submittals:
 - 1. Documentation indicating that duct systems comply with ASHRAE 62.1-2007, Section 5 - "Systems and Equipment."
 - 2. Documentation indicating that duct systems comply with ASHRAE/IESNA 90.1-2007, Section 6.4.4 - "HVAC System Construction and Insulation."
 - 3. Documentation of work performed for compliance with ASHRAE 62.1-2007, Section 7.2.4 - "Ventilation System Start-Up."
 - 4. For adhesives and sealants, including printed statement of VOC content.
- D. Shop Drawings:
 - 1. Fabrication, assembly, and installation, including plans, elevations, sections, components, and attachments to other work.
 - 2. Factory- and shop-fabricated ducts and fittings.
 - 3. Duct layout indicating sizes, configuration, liner material, and static-pressure classes.
 - 4. Elevation of top of ducts.
 - 5. Dimensions of main duct runs from building grid lines.
 - 6. Fittings.
 - 7. Reinforcement and spacing.
 - 8. Seam and joint construction.
 - 9. Penetrations through fire-rated and other partitions.
 - 10. Equipment installation based on equipment being used on Project.
 - 11. Locations for duct accessories, including dampers, turning vanes, and access doors and panels.
 - 12. Hangers and supports, including methods for duct and building attachment and vibration isolation.
- E. Coordination Drawings: Plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:
 - 1. Duct installation in congested spaces, indicating coordination with general construction, building components, and other building services. Indicate proposed changes to duct layout.
 - 2. Suspended ceiling components.
 - 3. Structural members to which duct will be attached.

4. Size and location of initial access modules for acoustical tile.
5. Penetrations of smoke barriers and fire-rated construction.
6. Items penetrating finished ceiling including the following:
 - a. Lighting fixtures.
 - b. Air outlets and inlets.
 - c. Speakers.
 - d. Sprinklers.
 - e. Access panels.
 - f. Perimeter moldings.

F. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Welding Qualifications: Qualify procedures and personnel according to the following:
 1. AWS D1.1/D1.1M, "Structural Welding Code - Steel," for hangers and supports.
 2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum," for aluminum supports.
 3. AWS D9.1M/D9.1, "Sheet Metal Welding Code," for duct joint and seam welding.
- C. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2007, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up"
- D. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2007, Section 6.4.4 - "HVAC System Construction and Insulation"

PART 2 - PRODUCTS

2.1 RECTANGULAR DUCTS AND FITTINGS

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- B. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-4, "Transverse (Girth) Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- C. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 1-5, "Longitudinal Seams - Rectangular Ducts," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- D. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 2, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

2.2 ROUND AND FLAT-OVAL DUCTS AND FITTINGS

- A. All round and /or flat oval ducts must be factory fabricated spiral duct and fittings. All spiral duct and fittings must be manufactured by same company who has been in business for at least 3 years. Duct construction must comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Lindab Inc.
 - b. McGill AirFlow LLC.
 - c. SEMCO Incorporated.
 - d. Spiral Manufacturing Co., Inc.
 - e. Or Approved Equal
- B. Branch connections must be made with 90° conical and 45° straight taps as shown on the drawings. All branch connections must be made as a separate fitting. Factory or field installation of taps into spiral duct must not be allowed without written approval of the Commissioner. Manufacturer's published individual fitting performances must be included in the submittal.
- C. All elbows must be fabricated with a centerline radius of 1.5 times the diameter. 90° and 45° elbows in diameters 3" round through 12" round must be stamped or pleated elbows. All other elbows must be of the gored type, fabricated in accordance with the following: 2 gores less than 36°, 3 gores for 37° thru 71°F and 5 gores for 72° thru 90°.
- D. Circumferential and longitudinal seams of all fittings must be a continuous weld or spot welded and sealed with mastic. All welds must be painted to prevent corrosion.
- E. All field joints for round ducts up to and including 36" diameter and oval ducts up to and including 41" major axis must be made with a 2" slip-fit or slip coupling. Diameters 38" round and larger must be provided with flanged connections. Flanged connections may also be used in lieu of slip connections on smaller sizes. Access doors must be supplied by the duct manufacturer at all fire and/or smoke dampers. All flanges and access doors must be factory installed. Shipments of loose flanges, access doors, or taps for field installation into spiral duct will not be allowed.
- F. All flat oval duct must be reinforced with trapeze type reinforcement, as recommended by the manufacturer, to limit wall deflection to 3/4" and reinforcement deflection to 1/4".
- G. Metal gauges for single wall round and flat oval duct must be as follows:

1. Spiral Duct for positive pressure & negative pressure

Diameter	Galvanized Sheet Steel Metal Gauges			
	+ 4 in wg	+10" wg	- 4 in wg	-10" wg
3" thru 16"	26	26	24	22

2. Solid spiral seam inner must be 24 for duct sizes up to 20 inches and 20 gauge for larger ducts.

2.3 SHEET METAL MATERIALS

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials must be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 1. Galvanized Coating Designation: G90
 2. Ducts to be painted must have mill phosphatized coating. Refer to architectural drawings and specifications to coordinate sections to be painted.
- C. Carbon-Steel Sheets: Comply with ASTM A 1008/A 1008M, with oiled, matte finish for exposed ducts.
- D. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304 or 316, as indicated in the "Duct Schedule" Article; cold rolled, annealed, sheet. Exposed surface finish must be No. 2B, No. 2D, No. 3, or No. 4 as indicated in the "Duct Schedule" Article.
- E. Aluminum Sheets: Comply with ASTM B 209 (ASTM B 209M) Alloy 3003, H14 temper; with mill finish for concealed ducts, and standard, one-side bright finish for duct surfaces exposed to view.
- F. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- G. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches

2.4 VEHICLE EXHAUST SYSTEM DUCTWORK

- A. Type 316L Stainless Steel
- B. Duct Construction

1. Round ducts and fittings: Longitudinal seam 316L 16 gauge stainless steel for all sizes with welded seams and fitting joints.
2. Rectangular ducts and fittings: 316L 16 gauge stainless steel for all sizes conforming to medium pressure duct reinforcing requirements. Form duct with only one longitudinal welded seam.
3. All stainless steel joint construction to be continuously butt welded (use appropriate filler rod) using Surface Tension Power (STT) system with 10 percent CO2 shielding gas. Welding must be done by a welder certified to butt weld 16 gauge 316L or 304 stainless steel. Welding and welding certification must be in accordance with AWS 1964. Exterior welds on exposed ducts to be ground smooth. Identify field welds on shop drawings and provide access for field inspection of same.
4. Provide specified flanged joints with gaskets and mastic where there is no room for welding and/or where shown on Drawings, only where approved in advance by the Commissioner. There may be no more than 5 percent flanged joints out of joints, including shop and field welded joints.
5. Provide welded-in stainless steel threaded nipples where required for pipe connections such as for drains, storage cabinet vents, etc.
6. Finished stainless steel items must have edges, joints and welds ground smooth and have a mill finish. There are to be no visible weld marks, discoloration, or scratches.

2.5 DUCT LINER

- A. Liner must be limited to ductwork indicated on plans.
- B. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. CertainTeed Corporation; Insulation Group.
 - b. Johns Manville.
 - c. Knauf Insulation.
 - d. Owens Corning.
 - e. Or Approved Equal
 2. Maximum Thermal Conductivity:
 - a. Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F (24 deg C) mean temperature.
 - b. Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F (24 deg C) mean temperature.
 3. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound must be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.

4. Water-Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
 - a. Use adhesive that has a VOC content of 80 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Insulation Pins and Washers:
 1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch- diameter shank, length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
 2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch- thick stainless steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- D. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-19, "Flexible Duct Liner Installation."
 1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
 2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
 3. Butt transverse joints without gaps, and coat joint with adhesive.
 4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
 5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
 6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm (12.7 m/s).
 7. Secure liner with mechanical fasteners 4 inches (100 mm) from corners and at intervals not exceeding 12 inches (300 mm) transversely; at 3 inches (75 mm) from transverse joints and at intervals not exceeding 18 inches (450 mm) longitudinally.
 8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
 - a. Fan discharges.
 - b. Intervals of lined duct preceding unlined duct.
 - c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm or where indicated.
 9. Secure insulation between perforated sheet metal inner duct of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.

- a. Sheet Metal Inner Duct Perforations: 3/32-inch diameter, with an overall open area of 23 percent.
10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

2.6 SEALANT AND GASKETS

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets must be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
 1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
 2. Tape Width: 4 inches
 3. Sealant: Modified styrene acrylic.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. Maximum Static-Pressure Class: 10-inch wg, positive and negative.
 7. Service: Indoor and outdoor.
 8. Service Temperature: Minus 40 to plus 200 deg F
 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
 10. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Water-Based Joint and Seam Sealant:
 1. Application Method: Brush on.
 2. Solids Content: Minimum 65 percent.
 3. Shore A Hardness: Minimum 20.
 4. Water resistant.
 5. Mold and mildew resistant.
 6. VOC: Maximum 75 g/L (less water).
 7. Maximum Static-Pressure Class: 10-inch wg (2500 Pa), positive and negative.
 8. Service: Indoor or outdoor.

9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.

D. Flanged Joint Sealant: Comply with ASTM C 920.

1. General: Single-component, acid-curing, silicone, elastomeric.
2. Type: S.
3. Grade: NS.
4. Class: 25.
5. Use: O.
6. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.

F. Round Duct Joint O-Ring Seals:

1. Seal must provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch wg (0.14 L/s per sq. m at 250 Pa) and must be rated for 10-inch wg (2500-Pa) static-pressure class, positive or negative.
2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

2.7 HANGERS AND SUPPORTS

A. Hanger Rods for Non-corrosive Environments: Electro galvanized steel rods and nuts.

B. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1 (Table 4-1M), "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct."

C. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.

D. Steel Cables for Stainless-Steel and Aluminum Ducts: Stainless steel complying with ASTM A 492.

E. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.

F. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.

G. Trapeze and Riser Supports:

1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.

2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
3. Supports for Aluminum Ducts: Aluminum or stainless steel

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 DUCT INSTALLATION

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- C. Install round/oval ducts in maximum practical lengths.
- D. Install ducts with fewest possible joints.
- E. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- F. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- G. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- H. Install ducts with a clearance of 1 inch (25 mm), plus allowance for insulation thickness.
- I. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- J. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches (38 mm).
- K. Where ducts pass through fire-rated interior partitions and exterior walls, install fire dampers. Comply with requirements in Division 23 Section "Air Duct Accessories" for fire and smoke dampers.
- L. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "Duct Cleanliness for New Construction Guidelines."

3.3 INSTALLATION OF EXPOSED DUCTWORK

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Restore or replace damaged sections and finished work that does not comply with these requirements.

3.4 DUCT SEALING

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified in "Duct Schedule" Article according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
 - 1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
 - 2. Outdoor, Supply-Air Ducts: Seal Class A.
 - 3. Outdoor, Exhaust Ducts: Seal Class C.
 - 4. Outdoor, Return-Air Ducts: Seal Class C.
 - 5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg (500 Pa) and Lower: Seal Class B.
 - 6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg (500 Pa): Seal Class A.
 - 7. Unconditioned Space, Exhaust Ducts: Seal Class C.
 - 8. Unconditioned Space, Return-Air Ducts: Seal Class B.
 - 9. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class C.
 - 10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class B.
 - 11. Conditioned Space, Exhaust Ducts: Seal Class B.
 - 12. Conditioned Space, Return-Air Ducts: Seal Class C.

3.5 HANGER AND SUPPORT INSTALLATION

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."
- B. Building Attachments: Concrete inserts, powder-actuated fasteners, or structural-steel fasteners appropriate for construction materials to which hangers are being attached.
 - 1. Where practical, install concrete inserts before placing concrete.
 - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
 - 3. Use powder-actuated concrete fasteners for standard-weight aggregate concretes or for slabs more than 4 inches thick.
 - 4. Do not use powder-actuated concrete fasteners for lightweight-aggregate concretes or for slabs less than 4 inches thick.
 - 5. Do not use powder-actuated concrete fasteners for seismic restraints.
- C. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1 "Rectangular Duct Hangers Minimum Size," and Table 4-2, "Minimum Hanger Sizes for Round Duct," for maximum hanger spacing; install hangers and supports within 24 inches of each elbow and within 48 inches of each branch intersection.
- D. Hangers Exposed to View: Threaded rod and angle or channel supports.
- E. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet.
- F. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

3.6 CONNECTIONS

- A. Make connections to equipment with flexible connectors complying with Division 23 Section "Air Duct Accessories."
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

3.7 DUCT CLEANINESS

- A. All ductwork openings must be taped closed with polyethylene when delivered to site. All installed hung ducts openings must be protected from construction dust. All open end return duct opening must be protected until ready for use.
- B. Clean the following components by removing surface contaminants and deposits:
 - 1. Air outlets and inlets (registers, grilles, and diffusers).

2. Supply, return, and exhaust fans including fan housings, plenums (except ceiling supply and return plenums), scrolls, blades or vanes, shafts, baffles, dampers, and drive assemblies.
 3. Air-handling unit internal surfaces and components including mixing box, coil section, air wash systems, spray eliminators, condensate drain pans, humidifiers and dehumidifiers, filters and filter sections, and condensate collectors and drains.
 4. Coils and related components.
 5. Return-air ducts, dampers, actuators, and turning vanes except in ceiling plenums and mechanical equipment rooms.
 6. Supply-air ducts, dampers, actuators, and turning vanes.
 7. Dedicated exhaust and ventilation components and makeup air systems.
- C. Provide temporary MERV 11 construction filters and run continuously for 48 hours to clean system of construction debris or dust.

3.8 GALVANIZING RESTORATION

- A. Restore galvanizing damaged by welding, scratches, etc., cold galvanizing compound.

3.9 DUCT AND PLENUM LEAK TESTING (VEHICLE EXHAUST CAPTURE SYSTEM)

- A. Leak test 100% of ducts and plenums: Use extreme care in the fabrication and installation of the ductwork and plenums to ensure that it will be airtight. Test ductwork and plenums for leaks in sections as the work progresses before insulating. Fire dampers, smoke/fire dampers, access panels and appropriate branch ducts must be in place during the testing. Seal off open ends and then test by the following.
1. Duct Leak Test for Medium Pressure ductwork: The equipment required for this testing comprises a high pressure blower, orifice test pipe assembly and manometer with necessary valves and tubing. The ductwork section must be placed under an air pressure of 6 inches of water with the blower, while leakage flow through the orifice is measured on the manometer. The manometer readings must be converted to CFM from a calibrated test curve. The leakage must not exceed 6 CFM/100 s.f. for rectangular seal class "A" ductwork and 3 CFM/100 sf for round seal class "A" ductwork. No less than 50 square feet of duct must be tested at one time. Provide test conditions, including the total square feet of ductwork under test. Fire dampers and access panels must be installed. Testing of complete sections of the ductwork must be made before installation of the finished ceiling or before the ductwork is furred in inaccessible space, and must be witnessed by the Commissioner. Leaks found must be fixed, or joints remade and the section retested until tight. Leaks that cause objectionable noise must be fixed, regardless of the amount of the leakage. Maintain a set of Drawings for recording and sign off of each tested section. After completion of testing, turn drawings over to the Commissioner.
 2. Duct leak test for welded ducts: The duct section under test must be pressurized to 7 inches (177 mm) w.g. and the air "locked-in" to the duct. The pressure will be allowed to fall to 5 (125 mm) of water for an average of 6 inches (150 mm) of water. The time in seconds must be measured for this drop in duct pressure. Leakage must not exceed 0.1 cubic feet per minute per 100 square feet of surface area. The time, in seconds, that is

equivalent to this leakage rate is found by the formula $t = \text{duct I.D.} \times 6.23$. The duct inside diameter must be in inches. Test entire duct run. Test from the fume hood collar to the fume exhaust plenum of fan inlet flexible connection.

3. Leak Test for Fume Exhaust Plenums: Same as for medium pressure ductwork, except leakage rate must not exceed 0.1 CFM/100 square feet of plenum surface area.

3.10 START UP

- A. Air Balance: Comply with requirements in Division 23 Section "Testing, Adjusting, and Balancing for HVAC."

3.11 DUCT SCHEDULE

- A. Supply, Return or Exhaust Ducts:

1. Ducts Connected to Air-Conditioning Units, Return Fans and Exhaust Fans
 - a. Material: Galvanized Steel
 - b. Pressure Class: Positive or negative 2-inch wg.
 - c. Minimum SMACNA Seal Class: A
 - d. SMACNA Leakage Class for Rectangular: 6
 - e. SMACNA Leakage Class for Round and Flat Oval: 6

- B. Intermediate Reinforcement:

1. Galvanized-Steel Ducts: Galvanized steel or carbon steel coated with zinc-chromate primer.
2. Aluminum Ducts: Aluminum.

- C. Liner:

1. Supply and Return: Fibrous glass, Type I, thickness minimum 1 inch unless otherwise noted on plans.
2. Supply and Return Serving Venue Hall: Fibrous glass, Type I, thickness minimum 2 inch unless otherwise noted on plans.
3. Transfer Ducts: Fibrous glass, Type I, thickness minimum 1-1/2 inch unless otherwise noted on plans.

- D. Elbow Configuration:

1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular Elbows."
 - a. Radius Type RE 1 with minimum 1.5 radius-to-diameter ratio.
 - b. Radius Type RE 3 with minimum 1.0 radius-to-diameter ratio and two vanes.

- c. Mitered Type RE 2 with vanes complying with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-3, "Vanes and Vane Runners," and Figure 2-4, "Vane Support in Elbows."
 2. Round Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-3, "Round Duct Elbows."
 - a. Minimum Radius-to-Diameter Ratio and Elbow Segments: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 3-1, "Mitered Elbows." Elbows with less than 90-degree change of direction have proportionately fewer segments.
 - 1) Radius-to Diameter Ratio: 1.5
 - b. Round Elbows, 12 Inches and Smaller in Diameter: Stamped or pleated.
- E. Branch Configuration:
 1. Rectangular Duct: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-6, "Branch Connections."
 - a. Rectangular Main to Rectangular Branch: 45-degree entry.
 - b. Rectangular Main to Round Branch: Spin in.
 2. Round: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-4, "90 Degree Tees and Laterals," and Figure 3-5, "Conical Tees." Saddle taps are not permitted.
 - a. Velocity 1500 fpm or Lower: Conical tap.
 - b. Velocity 1500 fpm or Higher: 45-degree lateral.

END OF SECTION 23 31 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 33 00

AIR DUCT ACCESSORIES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Backdraft and pressure relief dampers.
 2. Manual volume dampers.
 3. Control dampers.
 4. Fire dampers.
 5. Flange connectors.
 6. Turning vanes.
 7. Duct-mounted access doors.
 8. Flexible connectors.
 9. High temperature flexible connectors
 10. Duct accessory hardware.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each type of product indicated.
- C. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
 - a. Special fittings.
 - b. Manual volume damper installations.
 - c. Control damper installations.
 - d. Fire-damper and smoke-damper installations, including sleeves; and duct-mounted access doors.
 - e. Wiring Diagrams: For power, signal, and control wiring.
- D. Operation and maintenance data.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."
- C. Comply with AMCA 500-D testing for damper rating.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials must be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M.
 - 1. Galvanized Coating Designation: G90
 - 2. Exposed-Surface Finish: Mill phosphatized.
- C. Stainless-Steel Sheets: Comply with ASTM A 480/A 480M, Type 304, and having a No. 2 finish for concealed ducts and for exposed ducts.
- D. Aluminum Sheets: Comply with ASTM B 209, Alloy 3003, Temper H14; with mill finish for concealed ducts and standard, 1-side bright finish for exposed ducts.
- E. Extruded Aluminum: Comply with ASTM B 221, Alloy 6063, Temper T6.
- F. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- G. Tie Rods: Galvanized steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

2.2 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Air Balance Inc.; a division of Mestek, Inc.
 - 2. American Warming and Ventilating; a division of Mestek, Inc.
 - 3. Duro Dyne Inc.
 - 4. Greenheck Fan Corporation.
 - 5. Nailor Industries Inc.
 - 6. Ruskin Company.
 - 7. Or Approved Equal

- B. Description: Gravity balanced.
- C. Maximum Air Velocity: 2000 fpm
- D. Maximum System Pressure: 2-inch wg
- E. Frame: 0.052-inch- (1.3-mm-) thick, galvanized sheet steel, with welded corners and mounting flange.
- F. Blades: Multiple single-piece blades, center-pivoted, maximum 6-inch width, 0.025-inch-thick, roll-formed aluminum noncombustible, tear-resistant, neoprene-coated fiberglass with sealed edges.
- G. Blade Action: Parallel.
- H. Blade Seals: Neoprene, mechanically locked.
- I. Blade Axles:
 - 1. Material: Aluminum.
 - 2. Diameter: 0.20 inch
- J. Tie Bars and Brackets: Aluminum
- K. Return Spring: Adjustable tension.
- L. Bearings: Steel ball.
- M. Accessories:
 - 1. Adjustment device to permit setting for varying differential static pressure.
 - 2. Counterweights and spring-assist kits for vertical airflow installations.
 - 3. Electric actuators.
 - 4. Chain pulls.
 - 5. Screen Mounting: Front mounted in sleeve.
 - a. Sleeve Thickness: 20-gage minimum.
 - b. Sleeve Length: 6 inches minimum.
 - 6. Screen Mounting: Rear mounted.
 - 7. Screen Material: Aluminum.
 - 8. Screen Type: Bird
 - 9. 90-degree stops.

2.3 MANUAL VOLUME DAMPERS

- A. Standard, Steel, Manual Volume Dampers:
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a division of Mestek, Inc.
 - b. American Warming and Ventilating; a division of Mestek, Inc.
 - c. Nailor Industries Inc.
 - d. Pottorff; a division of PCI Industries, Inc.

- e. Ruskin Company.
 - f. Or Approved Equal
 2. Standard leakage rating, with linkage outside airstream.
 3. Suitable for horizontal or vertical applications.
 4. Frames:
 - a. Hat-shaped, galvanized-steel channels, 0.064-inch (1.62-mm) minimum thickness.
 - b. Mitered and welded corners.
 - c. Flanges for attaching to walls and flangeless frames for installing in ducts.
 5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Galvanized steel, 0.064 inch (1.62 mm) thick.
 6. Blade Axles: Galvanized steel.
 7. Bearings:
 - a. Molded synthetic
 - b. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less must have axles full length of damper blades and bearings at both ends of operating shaft.
 8. Tie Bars and Brackets: Galvanized steel.
- B. Standard, Aluminum, Manual Volume Dampers:
 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Air Balance Inc.; a division of Mestek, Inc.
 - b. American Warming and Ventilating; a division of Mestek, Inc.
 - c. Nailor Industries Inc.
 - d. Pottorff; a division of PCI Industries, Inc.
 - e. Ruskin Company.
 - f. Or Approved Equal
 2. Standard leakage rating, with linkage outside airstream.
 3. Suitable for horizontal or vertical applications.
 4. Frames: Hat-shaped, 0.10-inch- (2.5-mm-) thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
 5. Blades:
 - a. Multiple or single blade.
 - b. Parallel- or opposed-blade design.
 - c. Stiffen damper blades for stability.
 - d. Roll-Formed Aluminum Blades: 0.10-inch- (2.5-mm-) thick aluminum sheet.
 - e. Extruded-Aluminum Blades: 0.050-inch- (1.2-mm-) thick extruded aluminum.
 6. Blade Axles: Galvanized steel
 7. Bearings:
 - a. Molded synthetic
 - b. Dampers in ducts with pressure classes of 3-inch wg (750 Pa) or less must have axles full length of damper blades and bearings at both ends of operating shaft.
 8. Tie Bars and Brackets: Aluminum.
- C. Jackshaft:
 1. Size: 1-inch (25-mm) diameter.

2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

D. Damper Hardware:

1. Zinc-plated, die-cast core with dial and handle made of 3/32-inch- (2.4-mm-) thick zinc-plated steel, and a 3/4-inch (19-mm) hexagon locking nut.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform for insulated duct mounting.

2.4 FIRE DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Air Balance Inc.; a division of Mestek, Inc.
2. Greenheck Fan Corporation.
3. Nailor Industries Inc.
4. Ruskin Company.
5. Or Approved Equal

B. Type: Static and dynamic; rated and labeled according to UL 555 by an NRTL.

C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 4000-fpm velocity.

D. Fire Rating: 1-1/2 hours.

E. Frame: Curtain type with blades outside airstream; fabricated with roll-formed, 0.034-inch- (0.85-mm-) thick galvanized steel; with mitered and interlocking corners.

F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.

1. Minimum Thickness: 0.052 thick, as indicated, and of length to suit application.
2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.

G. Mounting Orientation: Vertical or horizontal as indicated.

H. Blades: Roll-formed, interlocking, 0.034-inch thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch thick, galvanized-steel blade connectors.

I. Horizontal Dampers: Include blade lock and stainless-steel closure spring.

J. Heat-Responsive Device: Replaceable, 165 deg F rated, fusible links.

K. Heat-Responsive Device: Electric resettable link and switch package, factory installed, 165 deg F rated where noted on plans

2.5 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Ductmate Industries, Inc.
 - 2. Nexus PDQ; Division of Shilco Holdings Inc.
 - 3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
 - 4. Or Approved Equal
- B. Description: Roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.
- C. Material: Galvanized steel.
- D. Gage and Shape: Match connecting ductwork.

2.6 TURNING VANES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Ductmate Industries, Inc.
 - 2. Duro Dyne Inc.
 - 3. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
 - 4. Or Approved Equal
- B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
 - 1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-3, "Vanes and Vane Runners," and 2-4, "Vane Support in Elbows."
- D. Vane Construction: Single wall.

2.7 DUCT-MOUNTED ACCESS DOORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. American Warming and Ventilating; a division of Mestek, Inc.
 - 2. Ductmate Industries, Inc.
 - 3. Greenheck Fan Corporation.
 - 4. Nailor Industries Inc.
 - 5. Pottorff; a division of PCI Industries, Inc.
 - 6. Or Approved Equal
- B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 2-10, "Duct Access Doors and Panels," and 2-11, "Access Panels - Round Duct."

1. Door:
 - a. Double wall, rectangular.
 - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
 - c. Vision panel, where noted on plans.
 - d. Hinges and Latches: 1-by-1-inch (25-by-25-mm) butt or piano hinge and cam latches.
 - e. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
3. Number of Hinges and Locks:
 - a. Access Doors Less Than 12 Inches (300 mm) Square: No hinges and two sash locks.
 - b. Access Doors up to 18 Inches (460 mm) Square: Two hinges and two sash locks.
 - c. Access Doors Larger Than 24 by 48 Inches (600 by 1200 mm): Four hinges and two compression latches with outside and inside handles.

2.8 DUCT ACCESS PANEL ASSEMBLIES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ductmate Industries, Inc.
 2. Flame Gard, Inc.
 3. 3M.
 4. Or Approved Equal
- B. Labeled according to UL 1978 by an NRTL.
- C. Panel and Frame: Minimum thickness 0.0528-inch carbon steel.
- D. Fasteners: Carbon steel. Panel fasteners must not penetrate duct wall.
- E. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F (1093 deg C).
- F. Minimum Pressure Rating: 10-inch wg (2500 Pa), positive or negative.

2.9 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Ductmate Industries, Inc.
 2. Duro Dyne Inc.
 3. Ventfabrics, Inc.
 4. Ward Industries, Inc.; a division of Hart & Cooley, Inc.
 5. Or Approved Equal
- B. Materials: Flame-retardant or noncombustible fabrics.
- C. Coatings and Adhesives: Comply with UL 181, Class 1.

- D. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches wide attached to 2 strips of 2-3/4-inch- (70-mm-) wide, 0.028-inch- (0.7-mm-) thick, galvanized sheet steel or 0.032-inch- (0.8-mm-) thick aluminum sheets. Provide metal compatible with connected ducts.
- E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
 - 1. Minimum Weight: 26 oz./sq. yd. (880 g/sq. m).
 - 2. Tensile Strength: 480 lbf/inch (84 N/mm) in the warp and 360 lbf/inch (63 N/mm) in the filling.
 - 3. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).
- F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
 - 1. Minimum Weight: 24 oz./sq. yd. (810 g/sq. m).
 - 2. Minimum Tensile Strength: 500 lbf/inch (88 N/mm) in the warp and 440 lbf/inch (77 N/mm) in the filling.
 - 3. Service Temperature: Minus 50 to plus 250 deg F (Minus 45 to plus 121 deg C).
- G. High Temperature Flexible Fabric Connector: Teflon coated Fiberglass/ Satin Weave
 - 1. Minimum Weight: 17 oz./sq. yd. (810 g/sq. m).
 - 2. Minimum Tensile Strength: 400 grab pounds per Federal Standard 191 Method #5100.
 - 3. Pressures: Suitable for pressure of -10 in wc to +15 inch wc.
 - 4. Service Temperature: Minus 150 to plus 500 deg F.
- H. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.
 - 1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
 - 2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
 - 3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
 - 4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
 - 5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
 - 6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
 - 7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch (6-mm) movement at start and stop.

2.10 DUCT ACCESSORY HARDWARE

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- C. Install backdraft dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
 - 1. Install steel volume dampers in steel ducts.
 - 2. Install aluminum volume dampers in aluminum ducts.
- E. Set dampers to fully open position before testing, adjusting, and balancing.
- F. Install test holes at fan inlets and outlets and elsewhere as indicated.
- G. Install fire dampers according to UL listing.
- H. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
 - 1. On both sides of duct coils.
 - 2. Upstream and downstream from duct filters.
 - 3. At outdoor-air intakes and mixed-air plenums.
 - 4. At drain pans and seals.
 - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
 - 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links must be pressure relief access doors; and must be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
 - 7. At each change in direction and at maximum 50-foot (15-m) spacing.
 - 8. Upstream and downstream from turning vanes.
 - 9. Control devices requiring inspection.
 - 10. Elsewhere as indicated.
- I. Install access doors with swing against duct static pressure.

- J. Access Door Sizes:
 - 1. One-Hand or Inspection Access: 8 by 5 inches.
 - 2. Two-Hand Access: 12 by 6 inches.
- K. Label access doors according to Division 23 Section "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
- L. Install flexible connectors to connect ducts to equipment.
- M. For fans developing static pressures of 4-inch wg (1250 Pa) and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
- N. Connect terminal units to supply duct directly or with maximum 8-inch lengths of flexible duct. Do not use flexible ducts to change directions.
- O. Connect diffusers or light troffer boots to ducts directly or with maximum 24-inch lengths of flexible duct clamped or strapped in place.
- P. Connect flexible ducts to metal ducts with draw bands
- Q. Install duct test holes where required for testing and balancing purposes.
- R. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch (6-mm) movement during start and stop of fans.

3.3 FIELD QUALITY CONTROL

- A. Tests and Inspections:
 - 1. Operate dampers to verify full range of movement.
 - 2. Inspect locations of access doors and verify that purpose of access door can be performed.
 - 3. Operate fire and smoke dampers to verify full range of movement and verify that proper heat-response device is installed.
 - 4. Inspect turning vanes for proper and secure installation.

END OF SECTION 23 33 00

SECTION 23 34 16

HVAC FANS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. This Section includes the following:
1. Ceiling Mounting Ventilators
 2. Upblast Centrifugal Exhaust Fans
 3. Inline fans

1.3 PERFORMANCE REQUIREMENTS

- A. Project Altitude: Base fan performance ratings on actual Project site elevations above sea level.
- B. Operating Limits: Classify according to AMCA 99.

1.4 REFERENCES:

- A. AMCA 99, "Standards Handbook"
- B. ANSI/AMCA Standard 204-96, "Balance Quality and Vibration Levels for Fans"
- C. ANSI/AMCA Standard 210-99, "Laboratory Methods of Testing Fans for Aerodynamic Performance Rating"
- D. AMCA Publication 211-05, "Certified Ratings Program - Product Rating Manual for Fan Air Performance"
- E. AMCA Standard 300-96, "Reverberant Room Method for Sound Testing of Fans"
- F. AMCA Publication 311-05, "Certified Ratings Program - Product Rating Manual For Fan Sound Performance"
- G. AMBA - Method of Evaluating Load Ratings of Bearings ANSI-11 (r1999).
- H. OSHA guideline 1910.212 - General requirements for Machine Guarding. (www.osha.gov)

- I. OSHA guideline 1926.300 - General requirements for safe operation and maintenance of hand and power tools. (www.osha.gov)
- J. OSHA guideline 1910.219 - General requirements for guarding safe use of mechanical power transmission apparatus. (www.osha.gov)
- K. UL Standard 705, "Power Ventilators"

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product Data: Include rated capacities, furnished specialties, and accessories for each type of product indicated and include the following:
 - 1. Certified fan performance curves with system operating conditions indicated.
 - 2. Certified fan sound-power ratings.
 - 3. Motor ratings and electrical characteristics, plus motor and electrical accessories.
 - 4. Material thickness and finishes, including color charts.
 - 5. Dampers, including housings, linkages, and operators.
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
 - 1. Wiring Diagrams: Power, signal, and control wiring.
- D. Coordination Drawings: Show fan room layout and relationships between components and adjacent structural and mechanical elements. Show support locations, type of support, and weight on each support. Indicate and certify field measurements.
- E. Field quality-control test reports.
- F. Operation and Maintenance Data: For centrifugal fans to include in emergency, operation, and maintenance manuals.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100 and marked for intended use.
- C. AMCA Compliance: Products must comply with performance requirements and must be licensed to use the AMCA-Certified Ratings Seal.
- D. NEMA Compliance: Motors and electrical accessories must comply with NEMA 1.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Deliver fans as factory-assembled units, to the extent allowable by shipping limitations, with protective crating and covering.
- B. Disassemble and reassemble units, as required for moving to the final location, according to manufacturer's written instructions.
- C. Lift and support units with manufacturer's designated lifting or supporting points.

1.8 COORDINATION

- A. Coordinate size and location of structural-steel support members.
- B. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Division 03.
- C. Coordinate installation of roof curbs, equipment supports, and roof penetrations. These items are specified in Section 07 71 00 "Roof Specialties."

PART 2 - PRODUCTS

2.1 CEILING-MOUNTING VENTILATORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Panasonic
 - 2. Greenheck
 - 3. Loren Cook Company.
 - 4. Or Approved Equal
- B. Description: Centrifugal fans designed for installing in ceiling or wall or for concealed in-line applications.
- C. Housing: Steel, lined with acoustical insulation.
- D. Fan Wheel: Centrifugal wheels directly mounted on motor shaft. Fan shrouds, motor, and fan wheel must be removable for service.
- E. Grille: Manufacturer's standard painted aluminum or plastic louvered grille with flange on intake and thumbscrew attachment to fan housing.
- F. Electrical Requirements: Junction box for electrical connection on housing and receptacle for motor plug-in.
- G. Accessories:
 - 1. Variable-Speed Controller: Solid-state control to reduce speed from 100 to less than 50 percent.

2. Non-fusible type, with thermal-overload protection mounted inside fan housing, factory wired through an internal aluminum conduit.
3. Isolation: Rubber-in-shear vibration isolators.
4. Manufacturer's standard roof jack or wall cap, and transition fittings.

2.2 SIDEWALL FAN

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Greenheck
 2. Loren Cook Company
 3. Chicago Blower Corporation
 4. Or Approved Equal
- B. General Description
 1. Fan arrangement must be either supply or exhaust, as noted on plans
 2. Sidewall mounted applications
 3. Maximum continuous operating temperature 130 Fahrenheit
 4. Each fan must bear a permanently affixed manufacture's engraved metal nameplate containing the model number and individual serial number
- C. Wheel:
 1. Propeller must be aluminum blade riveted to steel hub
 2. A standard square key and set screw or tapered bushing must lock the propeller to the motor shaft
 3. Statically and dynamically balanced in accordance with AMCA Standard 204-05
 4. The propeller and fan inlet will be matched and must have precise running tolerances for maximum performance and operating efficiency
- D. Motors
 1. Motor must be electronically commutated motor.
- E. Drive Frame
 1. Drive frame assemblies and fan panels must be galvanized steel
 2. Drive frame must have welded wire or formed channels and fan panels must have pre-punched mounting holes, formed flanges and a deep formed one piece inlet venture
- F. Disconnect Switches:
 1. Factory Mounted and Shipped loose for field mounting, National Electrical Manufacturers Association (NEMA):
 2. NEMA 1: indoor application no water.
- G. Accessories
 1. Damper:

- a. Type: Gravity
 - b. Prevents outside air from entering back into the building when fan is off
 - c. Balanced for minimal resistance to flow
 - d. Galvanized frames with pre-punched mounting holes
2. Damper Guards
 - a. Guard material: Aluminum
 - b. Must completely enclose the damper or wall opening on the discharge side of the fan
 3. Wall Housing
 - a. Mounting arrangement: Flush Exterior
 - b. Constructed of galvanized steel with heavy gauge mounting flanges and pre-punched mounting holes
 - c. Housing must include OSHA approved motor guard
 - d. Reduces installation time and provides maximum installation flexibility
 4. Finishes: Electrostatically applied thermosetting polyester urethane. Minimum dry film thickness to be 2 mils.

2.3 INLINE FAN

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Greenheck
 2. Loren Cook Company
 3. Chigo Blower Corporation
 4. Or Approved Equal
- B. Inline fans must be of the tube axial type with cast aluminum airfoil propellers. The housing must be constructed of welded construction and include integral punched inlet and outlet flanges to prevent air leakage.
- C. Fan must be class B spark resistant construction.
- D. The housing and motor mount must be constructed to prevent vibration.
- E. All inline fans must be capable of field transitions from horizontal to vertical for either base mounted or ceiling hung configurations.
- F. Propellers must be cast aluminum airfoil design. A tapered bushing must lock the propeller to the motor shaft. Propellers to be dynamically balanced. Hubs must be two-piece aluminum castings that securely lock the blades in place.
- G. Steel housings and structural components to be coated with an electrostatically applied thermosetting polyester urethane. Minimum dry film thickness to be 2 mils.
- H. Fan performance must be based on tests conducted in accordance with AMCA Standard 210. All fans must be licensed to bear the AMCA Certified Ratings Seal for Air Performance.

- I. Motors must be totally enclosed fan cooled, matched to the fan load and furnished at the specified voltage, phase and enclosure and efficiency. Motors must be readily accessible for maintenance.
- J. Motor must be NEMA premium efficiency.
- K. Provide spring and neoprene type vibration isolators.
- L. Provide unfused starter disconnect switch.

2.4 SOURCE QUALITY CONTROL

- A. Sound-Power Level Ratings: Comply with AMCA 301, "Methods for Calculating Fan Sound Ratings from Laboratory Test Data." Factory test fans according to AMCA 300, "Reverberant Room Method for Sound Testing of Fans." Label fans with the AMCA-Certified Ratings Seal.
- B. Fan Performance Ratings: Establish flow rate, pressure, power, air density, speed of rotation, and efficiency by factory tests and ratings according to AMCA 210, "Laboratory Methods of Testing Fans for Rating."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install fans level and plumb.
- B. Support floor-mounting units using spring isolators having a static deflection of 1 inch. Vibration-control devices are specified in Section 23 05 48 "Vibration and Seismic Control for HVAC."
 - 1. Secure vibration controls to support steel.
- C. Support suspended units from structure using threaded steel rods and spring hangers having a static deflection of 1 inch. Vibration-control devices are specified in Section 23 05 48 "Vibration and Seismic Controls for HVAC".
- D. Install units with clearances for service and maintenance.
- E. Label fans according to requirements specified in Section 23 05 53 "Identification for HVAC Piping and Equipment."

3.3 CONNECTIONS

- A. Duct installation and connection requirements are specified in other Division 23 Sections. Drawings indicate general arrangement of ducts and duct accessories. Make final duct

connections with flexible connectors. Flexible connectors are specified in Division 23 Section "Air Duct Accessories."

- B. Install ducts adjacent to fans to allow service and maintenance.
- C. Install line-sized piping from scroll drain connection, with trap with seal equal to 1.5 times specified static pressure, to nearest floor drain.
- D. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- E. Connect wiring according to specification Section 26 0519 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform the following field tests and inspections and prepare test reports:
 - 1. Verify that shipping, blocking, and bracing are removed.
 - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
 - 3. Verify that cleaning and adjusting are complete.
 - 4. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
 - 5. Adjust belt tension.
 - 6. Verify lubrication for bearings and other moving parts.
 - 7. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
 - 8. Refer to Section 23 05 93 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
 - 9. Remove and replace malfunctioning units and retest as specified above.
- B. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 23 35 16

ENGINE EXHAUST SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Vehicle Exhaust Capture System

1.3 SYSTEM DESCRIPTION

- A. Complete exhaust system including the exhaust fan, control box, ductwork, and extraction unit must be proven, and field tested for a minimum of three years. All system components must be labeled with manufacturer identification.
- B. The scope includes all engineering specifications, installation, operating instruction, and warranty for an Emergency Vehicle Exhaust Extraction System. Any deviations from this specification must be noted.
- C. The function of the vehicle exhaust removal system will be to source capture 100% of the exhaust emissions directly at the tail pipe of the vehicle and exhaust those emissions to a specified area safely outside the building.
- D. The exhaust system must not interfere with access to the vehicle, nor impede doorways/walkways/or exits that would endanger the welfare of personnel. Drooping loops of hose or the hose assembly touching the floor will not be permitted.
- E. As safety to personnel is of the utmost importance, the system must be so designed as not to whip or fly back into quarters upon disconnection. Vehicles must be capable of exiting quarters at normal speed without causing damage to the system or taking any portion of the hose or nozzle assembly along with the exiting vehicle.
- F. The fan must automatically start prior to vehicle ignition.
- G. The exhaust system must move with the vehicle in a forward or reverse direction of travel and have an automatic release design without any positive locking device or air bladder that clamps or binds to the tail pipe. No system that uses the vehicles tailpipe, as a pulling force will be considered.
- H. The exhaust system must utilize a minimum 5" or 6" diameter hose in order to ensure that the exhaust system can accommodate vehicle apparatus checks; and not limited to just emergency

departures. Any smaller hose does not offer the required cross-sectional area considered adequate for the volume of hot exhaust fumes discharged during extended run times required during routine vehicle check procedures.

- I. Submittal must be accompanied by a set of detailed specifications, which describe the proposed System and equipment in the same sequence as this specification for ease of comparison.
- J. The exhaust system must attach directly to tailpipe. A general room ventilation method of ceiling and air cleaner must not be accepted. Only a source capture system protects the users from harmful diesel fumes.

1.4 SYSTEM OPERATION

- A. The auto-disconnect exhaust system must be a 24-volt electromagnetic release type that captures 100% of the exhaust emissions directly from the tail pipe and discharges those emissions to a specific location by means of an exhaust fan. Upon emergency dispatch of the vehicle, the exhaust fan must automatically start prior to the engine being energized. The exhaust fan must remain in the “on” position for as long as any engine is running. Upon vehicle exit, the hose assembly remains connected to the tail pipe and automatically disconnects at a specified distance outside the door by de-energizing the electromagnet. The nozzle and hose assembly must smoothly separate from the vehicle and safely retract to the stored position ready to connect to the vehicle upon reentry. Upon disconnection, the hose assembly must not be permitted to swing wide or touch the floor, possibly endangering personnel or apparatus. The hose must remain at the door, ready for reconnection. Once the apparatus has left the building, the fan will automatically shut down after a preset time interval.
- B. Upon return, the fan is automatically activated prior to vehicle entry and the nozzle is connected to the tail pipe in a standing position. Bending over to connect the exhaust system and expose the operator to harmful exhaust fumes is not permitted. No positive locking device or moving parts must be permitted to be connected to the tail pipe. After the vehicle has been turned off, the fan can continue to operate for a preset time interval, normally two minutes.

1.5 SCOPE OF WORK

- A. Contractor must furnish and install a Source Capture Emergency Vehicle Exhaust Extraction System as designed and specified for the station(s).
- B. The Contractor must provide and install a centrifugal exhaust fan with capacity for all connected vehicles and sized for expansion if specified.
- C. The Contractor must provide and install an automatic fan start control console. The control console and all internal components must be UL listed and manufactured in accordance with UL standard 508A and bear the UL label.
- D. The Contractor must provide and install all ductwork.
- E. The Contractor must be responsible for the delivery, safe storage, and handling of the products and protect them from weather elements.

1.6 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. The following submittals and code compliance must be required.
 - 1. Record building dimensions, note vehicle type and prepare shop drawings that include: equipment position, dimensions, sizes, weights, performance data, and also location and size of field connections.
 - 2. Product Data: Provide manufacturer's literature and data sheets indicating rating capacities, dimensions, weights, accessories, and electrical requirements, wiring diagrams, location and size of field connections.
 - 3. Provide fan curves with specified operating point clearly plotted.
 - 4. Submit fan sound level data for fan specified.
 - 5. Manufacturer's Installation, Operation and Maintenance Manual, which outlines the procedures required for system installation, start up, operation and shut down. The instructions must include the manufacturer's name, telephone number, model number, service manual number, parts list, and brief description of all equipment and the basic operating features. The maintenance instructions must list routine maintenance procedures and troubleshooting guide.
- C. Certifications: International Quality System Standard ISO 9001 and ISO 14001 Certified. UL Certification: UL listing, 508A Industrial Control Panel bulletin. Compliance with: NFPA 1500, Chapter 7-1.6, 2000 International Mechanical Code 502.13, NIOSH CIB #50, OSHA, 1996 American Conference of Governmental Industrial Hygienists (ACGIH) Proposed Regulations for Benzene and Diesel Exhaust Fumes. Federal Communications Commission approvals.
- D. Compliance with all 2014 NYC Building Code American Society of Manufacturing Engineers (ASME), National Electric Code (NEC), Uniform Building Code (UBC), American Institute of Steel Construction (AISC), Sheet Metal and Air Conditioning Contractors National Association (SMACNA), American Society of Testing Materials (ASTM).
- E. Compliance must be with 2014 NY City Building Code, Fire Department of New York Standards, ASME, NEC, ASI and SMACNA.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions 01 40 00 Quality Requirements.
- B. All workmanship, manufacturing procedures, airflow design, and materials must be tested and performance guaranteed.

1.8 EQUIPMENT WARRANTY

- A. Manufacturer’s warranty shall be minimum of three years against defects.
- B. The Contractor must guarantee all materials, equipment and workmanship for a period of one year from date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Basis of Design Product: Subject to compliance with requirements, provide product of Nederman, Incorporated or comparable product by one of the following:
1. Plymovent
 2. Fume-A-Vent
 3. Approved Equal.

2.2 SYSTEM DESCRIPTION

- A. The exhaust system must be designed to vent 100 % of exhaust gases and particulate safely to the outside of the building. The exhaust system must be designed and installed by factory authorized personnel, which have been certified by the manufacturer of the exhaust system.
- B. The suction rail system is designed to be installed within 18 inches of the side of the vehicle and not take up more than 20 inches of space from the side of the vehicle and nearest obstacle. The value of this trim line approach keeps the ceiling clear of obstructions so that other items like lights and heaters can be properly located. Any suction rail system that uses more than 20 inches of space may not be accepted based on the configuration of the space.
- C. The system must be able to also be used for common maintenance inside the vehicle garage. The minimum requirement of pump checking must be for 5 minutes @ 1300 RPM. The idle time for the system must be continuous for undetermined period of time. This requirement allows the user to use the system for maintaining the vehicle pump and engine without creating unnecessary performance criteria.
- D. Suction Rail system must be used for the sole purpose of drive through or tandem bays. This type of suction rail system is for vehicle tailpipe depths over 40 ft or drive through type bays. The purpose of this type of exhaust system is to eliminate the need a long flexible hoses to carry the hot exhaust fumes, since the flexible hose is the highest wear item in the exhaust system. The rail design must be capable of handling up to 3 vehicles parked in tandem.
- E. Exhaust system must be designed to eliminate vehicle exhaust gases by a continuance of negative pressure from vehicle tailpipe to the outside of vehicle garage. This exhaust system must pull hot exhaust gases into the connection nozzle by inducing ambient air without the need of an airtight seal at vehicle tailpipe. The system must be designed entirely for a negative pressure vacuum method of exhaust extraction at no point in exhaust system will ducting be under positive pressure created by output of vehicle engine. Systems that allow for positive pressure generated by vehicle engine must not be accepted.
- F. Exhaust system hose drops must be sized to maintain a larger cross sectional diameter than vehicle tailpipe. Exhaust systems, which do not size hose drops in accord with the vehicle engine capacity as well as vehicle tailpipe diameter, will not be accepted. The purpose of this portion of the specification is to ensure that the exhaust system is designed to cool down hot exhaust gases as they are conveyed to the outside of vehicle garage. This type of exhaust extraction keeps exhaust temperatures within a safe limit to keep exhaust system hoses within their designed temperature tolerances. Exhaust systems that size exhaust drops without dilution

ventilation and also down size the exhaust connection hose unnecessarily put vehicle engine warranty at risk.

2.3 STRUCTURAL SUPPORT SYSTEM

- A. The exhaust system must be suspended from the building structure by means of plated or painted steel strut designed to eliminate sway of overall exhaust system. The forces that are calculated must correspond with the release method of the exhaust system. Systems which use a pull back or yanking of exhaust hose will require a higher level of system support structure. Overall look of suspension system must match the station quarters in a way that will benefit the appearance of the facility. Contractor shall coordinate method of supporting the exhaust system with manufacturer's representative which includes maneuvering around bay doors.

2.4 SUCTION RAIL ASSEMBLY

- A. The exhaust system must be equipped with a lightweight suction rail system to convey the exhaust hose from door threshold to vehicle park position. The suction rail must weigh no more than 50 lbs. per 20-foot section. This suction rail must be designed for the specific use of vehicle garage exhaust ventilation and engineered to carry the specific weight of all exhaust system components attached to the suction rail. The pull forces placed upon rail system when vehicle is disconnected from system must be structurally supported to eliminate sway of rail.
- B. Suction rail must be supported a minimum of every 14 ft and no more than 4 ft of rail must be cantilevered from the end of the first and last support. A minimum of 3 supports must be required in case of damage to one of the supports. The end of suction rail must not be mounted over 3-feet from the bay door. The suction rail support must allow for mounting from the top of the rail rather than the side of suction rail for a simple leveling procedure.
- C. The suction rail must be sealed with high temperature rubber seals that incorporate a means of conveying energy to system nozzle. The temperature rating on the rubber seals must be a minimum of 340 degrees and be no more than 1/8" thick. The purpose of the certain thickness of the rubber seal is to keep the seal tight to the exhaust trolley, which keeps air clearance losses at less than 2 %.

2.5 EXTRACTION TROLLEY ASSEMBLY

- A. The design of the exhaust trolley must make the suction rail system have air losses of no more than 2 %. Exhaust trolley must be constructed from cast aluminum to keep the overall trolley weight at a minimum and provides longer life. The length of the trolley must be 28" minimum and incorporate a Teflon edge to make the travel of the trolley as frictionless as possible. The front and back exhaust trolley must have a rubber bumper and receiving plate incorporated into the outer frame of trolley.
- B. The trolley must have a total of eight wheels, four of these wheels run on a vertical edge inside the rail in vertical fashion. The remaining four wheels attach to the system trolley horizontally and keep the trolley from rolling in square fashion to the bay door. The vertically mounted wheels must be made from high resistance urethane and be sized to hold the trolley level inside the rail as it rolls to the door.
- C. Any system that uses the trolley leading edge to disconnect the hose system from the vehicle as it exits the station house must not be accepted.

2.6 BALANCER

- A. The balancer is reducing torque style and uses a total amount of 27 feet of cable. The hose balancer cable must be capable of stretching to a minimum of 4 ft from outside of threshold of bay door for an outside connection to the special purpose vehicle provided that the suction rail system is terminated within 2 feet of exiting door. This system attachment performed outside the station house bay door will ensure that no vehicle exhaust gases will enter the apparatus bay. The outside attachment of exhaust system must be accomplished for several safety reasons:
1. The driver can clearly see the system operator (person who attaches hose system to special purpose vehicle) in side-view mirrors.
 2. The system operator can signal the driver very clearly being outside the door threshold, not hidden behind the bay door divider.
 3. The vehicle can be stopped at the correct attachment point in a much simpler fashion than trying guess when vehicle tailpipe is inside door threshold the correct distance for operator to hook up system.
 4. Avoids guesswork in the connection of the system because driver of vehicle can see if hose is connected to the emergency vehicle.
- B. When balancer and lower hoses are in the full stretched out position the balancer must decrease pull tension. This function normally referred to as reducing torque retraction and is accomplished by means of centrifugal brake and is designed to keep hose from snapping back into station. The balancer cord must extend all the way to connection point of the system to ensure that hoses are not pulled apart upon the release of system. The internal linkage of balancer cord must be shrouded in high temperature plastic material with a temperature rating of 375 degrees to protect cord from abrasive exhaust fumes. The fastening linkage must be corrosion resistant and must be designed for easy disconnection from attachment point.
1. The system balancer must be designed to with the capability of replacing cable without having to change out complete balancer unit

2.7 RAIL SYSTEM END STOP

- A. The suction rail system end stop must be an able to catch and keep the hose assembly at the exiting end of the rail. The catch plate must be designed to hold the entire trolley and hose assembly at the door without rolling back away from the door. This feature enables the reconnection of exhaust hose a easy and simple connection without the need of waling back into the station house.
1. If necessary, the trolley balancer unit must be able to be reeled back to the back door of the station house to make the connection of the hose assembly a simple procedure.

2.8 THE DISCONNECT SWITCH

- A. The trolley must be equipped with a means to automatically disconnect the hose assembly based on the speed of the vehicle in the designated bay.

2.9 VERTICAL HOSE

- A. The system hose is designed withstand temperatures up to 370 degrees intermittent and 340 degrees for operation over 5 minutes. The hose is fabricated using a mechanical clinch and is designed to wear a minimum of 1 year no matter how many runs the vehicle makes in the bay.

- B. The vertical hose must not be used as the structural member of the exhaust system, but rather, hang from the track without having to carry the weight of the entire vertical and lower hose system. This feature ensures that the exhaust hose is not stretched and pulled apart if system doesn't release from vehicle. Vertical hose is designed to stretch outside the bay door for a safe connection to the vehicle outside the station. The hose will also have an external sleeve that holds the stored hose in a safe fashion.
- C. Sealed systems that are engineered with flexible hoses that are laminated and are sized smaller than the vehicle tailpipe must not be accepted. (Exhaust hoses that are laminated neoprene-coated polypropylene fabric with wire helix structure must not be accepted. This type of manufactured exhaust hose is not necessarily designed for certain demands placed on the material and workmanship in the application of special purpose vehicle exhaust ventilation. These hoses are commonly used in this application and have not been able to hold up to their designed integrity for heavy-duty applications like vehicle garage exhaust extraction.)
- D. The manufacturer of the flexible hose must validate the temperature rating of the flexible hose on company letterhead. The performance of the flexible must be documented and supported with full knowledge of the parameters of the application of emergency vehicle exhaust ventilation. Testing must be approved an independent laboratory that has privately tested the flexible hose for high temperature threshold as well low temperature threshold ratings.
- E. The flexible hose must be designed to expand and retract along the track height without any portion of the flexible horizontal hose hanging down more than 12 inches from bottom of track profile. This method of carrying the horizontal hose must incorporate a sliding device that attaches to the top of horizontal hose every 12 inches. Multiple attachments to the horizontal hose must be required to keep all the horizontal hose up and out of the way of station aisle way. No hoses must be acceptable that are glued together neoprene-coated polypropylene fabric with wire helix structure.
- F. The hose must not be used as the support and conveying mechanism in the venting and releasing of exhaust gases as the vehicle accelerates out of the vehicle garage.
- G. The Upper Vertical Suction Hose must be 6" in diameter, and of suitable flexibility to have a compression ratio of 6:1. The hose material must be fabric covered with Chloro-sulfonated polyethylene. The hose must be fire resistant according to DIN 4102 B 1. The hose must be capable of withstanding temperatures of 340 degrees Fahrenheit continuously, up to 370 degrees Fahrenheit on an intermittent usage basis. (NOTE: If a 'closed type sealed system' is being used, the temperature ratings must be 680°F and 740°F respectively.) The helix must be external and made of galvanized steel or aluminum. The helix must have high flexibility and be able to withstand oil, chemical, ozone and weather resistance.

2.10 THE ERGONOMIC HANDLE

- A. The exhaust system must have a handle incorporated into the overall design of the hose system, which has been specifically designed to eliminate bending or stooping over when system is attached to the vehicle. The connection must be so simple that the operator can use the system correctly upon commissioning of system. The system handle must be made from a soft foam material incapable of scrapping the side of special purpose vehicle. Handle must be permanently attached to hose system in such a way so that the connection requires no twisting or turning of operator wrists and arms to make a correct attachment to the vehicle.

- B. The attachment method must be a one-step method. No twisting of forearms and wrists to grab, also no leaning forward pull the system to the door threshold must be accepted. The disconnection of the ergonomic handle from vehicle must be accomplished in an easy fashion by pressing a small toggle by right thumb of operator. A plastic shield to avoid accidental malfunction protects release toggle on handle.

2.11 NOZZLE

- A. The nozzle must have high temperature rubber gasket that attaches to the outer edge of nozzle to protect prevent the nozzle from scrapping the side of the vehicle. The face of the nozzle must incorporate three 10 gage anodized steel bars that act as a combination debris screen and backer surface to hold nozzle against outside edge of exhaust pipe. The purpose of the steel bars is to keep the nozzle from sliding underneath the vehicle and avoids the possibility of getting caught in the vehicle rear wheels.
- B. Exhaust pipe modifications must be accepted, and they must be clearly outlined in the submittal. Department may use several different exhaust pipe modifications so the exhaust system must be flexible in meeting the demands of this requirement.
- C. The nozzle must be a minimum of 8” diameter to enable ambient air to pass through the nozzle as the vehicle is in operation. This nozzle functions as a vent to keep temperatures inside exhaust hose at a minimum. This feature also eliminates the need for explosion proof motors.

2.12 NOZZLE ATTACHMENT AND RELEASE

- A. The exhaust system must be attached to the vehicle before they enter the garage. The system must be designed so that attachment to exhaust hose is accomplished by the operator standing completely erect and with one simple motion connect system to vehicle. The system attachment must be a one step process to the operator and no bending must be required to avoid unnecessary strain on the lower back of operator. At no time must the exhaust nozzle fit underneath the emergency apparatus so to ensure that system nozzle will be free from snagging the underside of vehicle chassis.
- B. The system must not use the pull-off type release but rather a fall-away style of system disconnects. Systems that stretch the exhaust hose to its limit point in order to disconnect the hose from the special purpose vehicle. This type of release will eventually stretch and cause premature fatigue to the flexible hose. The disconnection of the hose is a fall away type release. Any auto-release requiring the exhaust nozzle to sleeve over the tailpipe, which causes the hose itself to pull the system off of the vehicle tailpipe, must not be accepted.
- C. The exhaust system located on the vehicle’s chassis must not be used as the primary pulling support point when vehicle exits the vehicle garage. The purpose of this statement is obvious, the vehicle exhaust pipe is not designed for this type of pulling or tugging action that an exhaust system requires to work over a long period of time.

2.13 THE LOWER HOSE

- A. The exhaust hose must be designed to withstand 400 degrees of continuous operation of engine while inside vehicle garage. The inside of the hose is made of high temperature reflective material and the outside is made from thick abrasion resistant material.

- B. The lower hose must be made of high temperature materials that are designed to eliminate the need of short cycle replacement due to excessive heat or pulsing stresses that occur upon system release. The lower hose must not be a glued hose but rather a stitched hose so that the hose does not pull apart due to excessive heat and pull tension applied to the exhaust system lower hose.

2.14 ANCHOR PLATE

- A. A two-point connection with its primary pulling point at the side of the vehicle. Any system that uses the tailpipe suspension for its primary pulling point must not be accepted.

2.15 THE EXHAUST FAN

- A. Each exhaust fan is designed specifically for each station with several factors being addressed: The size and total number of vehicles being attached to exhaust fan, the constraints of the vehicle garage, the existing electrical phase, and the type of community that the building is located in.
- B. The exhaust fan must be sized for a minimum of 600 CFM per extraction unit unless larger or smaller vehicles are being attached to exhaust system. Total exhaust fan CFM requirement is required and must be validated by certified air balancer because of ambient air induction method of exhaust extraction which creates a longer lasting system. This type of ambient air induction must ensure that the exhaust fan will sense less than 150 degrees at the fan motor, this will ensure the longevity of the exhaust fan motor and bearings.
- C. The standard system uses six-inch diameter (6") exhaust hose we can be assured that larger vehicle will still be within design range for the standard exhaust extraction system. Exhaust fan system must provide negative pressure from the vehicle tailpipe all the way to exhaust fan inlet.
- D. The fan must be spark resistant class A construction, totally enclosed motor.

2.16 DUCTWORK

- A. Exhaust ducting on suction side of fan must be spiral G-90 galvanized pipe and must be a minimum of 14 gage. The seals on the connection must be with 400-degree silicone. Brazing and welding at joints are not required because duct system is designed for 4" of negative pressure and at these pressures the silicone sealant is sufficient to seal the system. The lateral fittings must be brazed or welded and must be designed with a minimum 45-degree branch taps for a smooth convergence of a two or more air streams.
- B. Exhaust ducting on discharge side fan must be sheet steel and must be a minimum of 14 gage. Suitable for welding. The duct system must be suitable for 10" of positive pressure and additional mechanical seals must be required for the sole purpose that ductwork is used as an extension of the exhaust pipe and at times is placed under positive pressure. The lateral fittings must be brazed or welded and must be designed with a minimum 45-degree branch taps for a smooth convergence of a two or more air streams.

2.17 AUTO-START CONTROL SYSTEM

- A. The Electronic control must incorporate a transmitter in the vehicle to ensure that the exhaust fan energizes before vehicle engine starts up. Control unit must be FCC-approved and must not interfere with radio communications in the vehicle garage. The transmitter must be mounted on

the dash in a nonpermanent fashion so that minor changes in orientation can be made without making permanent changes to the vehicle dashboard.

- B. The main purpose of this type of control must be to create a direct link between the engine operation and the exhaust fan operation no matter how long apparatus is running inside vehicle garage. This feature ensures that none of the toxic exhaust gases will leech into station quarters. Pressure start controllers must be accepted provided they do not time out exhaust fan operation while vehicle is in operation inside vehicle garage. Any control method that is initiated by the door operation must not be accepted because door operation is not directly linked to the engine operation inside the vehicle garage

2.18 STACK HEAD

- A. The exhaust discharge stack head will be a no loss type as recommended by American Conference of Governmental Industrial Hygienists (ACGIH) or as otherwise specified. The stack head design will protect against weather elements or introduction of debris.

2.19 DUCT TEST HOLES

- A. Test holes with covers must be provided where indicated or directed, in the duct and plenum to insert Pitot tubes to take air measurements for balancing the air moving system.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXHAUST SYSTEM

- A. The exhaust removal system must be installed as indicated and recommended by the manufacturer. Welding and brazing must conform to ASME-17. Slip joints must be sealed. Riser duct must be supported to the structure as indicated on the drawings. Main duct must be attached to building structural members.

3.3 AIR TESTING OF EXHAUST SYSTEM

- A. The overall design must include individual systems for each apparatus that are specifically designed for the output CFM of the apparatus engine. The design CFM for each vehicle unless otherwise specified must be a minimum of 600 CFM. The designed CFM stated has been selected to ensure that exhaust system will not restrict airflow of exhaust gases as they are ducted to the outside of the station. Testing will be accomplished two ways:
 1. At conclusion of installation of exhaust system all vehicles in facility will be operated for a period of 15 minutes to ensure that extraction hose, ducting, and fan have been sufficiently sized for all the vehicles operating in vehicle garage.
 2. Air balancing must be performed to ensure that the designed CFM requirements are met for each bay.

3.4 BUILDING SURFACE PENETRATIONS

- A. All penetrations must be sealed. Sleeves or framed openings must be utilized where duct penetrates building surfaces. The space between the sleeve or framed opening and the duct must be packed with mineral wool or approved material. Closure collars must be installed around the duct on both sides of the penetrated surface. Collars must fit tight against the building surfaces and snug around the duct.

3.5 GUIDE TRACK

- A. Installation height of Guide Track must be between 10' to 16' range or as otherwise indicated on the drawings. The Guide Track must be installed approximately 14" from the side of the vehicle and ~ 12" away from the side edge of the exit door. The Guide Track for the exhaust system must include corrosion resistant brackets for ease of mounting to structural channel, trusses, or angle iron. Brackets must be a minimum of 0.125" thickness. Mounting bolts to be no less than 0.375" diameter (structural grade 8) for connection to steel frame. Bolts required for masonry installation must be 0.5" x 3.5" expansion bolts, or 0.375" x 4" sleeve anchors for wall mount masonry connection.
- B. Recommendation: Unistrut 1 5/8", or Angle Iron 2"x2"x3/8" or 2"x2"x5/16" tube.

3.6 TESTS

- A. Each exhaust system and inlet must be balanced to produce the indicated air quantities within 10 percent at the conditions shown. Any fans with bearings must be lubricated, and the speed, direction and rotation of each fan must be checked and verified as running correctly. The running current of each motor must be checked and verified as correct. Upon completion and prior acceptance of the installation, the exhaust system must be tested at the operating conditions to demonstrate satisfactory functional and operating efficiency. The Contractor must provide all instruments, facilities, and labor required to properly conduct the tests.

3.7 INSTRUCTION

- A. Factory trained authorized approved personnel, must provide instruction to City of New York staff maintenance personnel in the daily use of and maintenance of the vehicle exhaust removal system installed and specified herein.
- B. Provide instruction video for reference and future use.

END OF SECTION 23 56 12

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 23 37 13

DIFFUSERS, REGISTERS, AND GRILLES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Ceiling Diffusers
 - 2. Supply Grilles
 - 3. Return/Exhaust Grilles
 - 4. Spiral Duct Grilles
- B. Related Sections:
 - 1. Section 23 33 00 "Air Duct Accessories" for fire and smoke dampers and volume-control dampers not integral to diffusers, registers, and grilles.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product Data: For each type of product indicated, include the following:
 - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static pressure drop, and noise ratings.
 - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- C. Samples: For each exposed product and for each color and texture specified.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 CEILING DIFFUSER (CG-1)

- A. Manufacturers:
 - 1. Titus
 - 2. Price Industries
 - 3. Anemostat

4. Or Approved Equal

- B. Architectural round panel ceiling diffusers must be the steel diffuser of the sizes and mounting types shown on the plans and outlet schedule. The diffuser must have a 22-gauge steel face panel that captures a secondary 22-gauge panel. The face panel is removable by means of four hanger brackets. The exposed surface of the face panel must be smooth, flat, and free of visible fasteners.
- C. The face panel must project ¼ inch below the outside border of the diffuser backpan. Panels projecting more than ¼ inch below the outside border are not acceptable. The back of the face panel must have an aerodynamically shaped, rolled edge to ensure a tight horizontal discharge pattern. A single metal thickness on the edges of the face panel will not be accepted. Ceiling diffusers with a 24 x 24-inch full face must have no less than an 18 x 18-inch face panel size. Ceiling diffusers with a 12 x 12-inch full face must have no less than a 9 x 9-inch face panel size.
- D. The back pan must be one piece precision die-stamped and must include an integrally drawn inlet (welded-in inlets and corner joints are not acceptable). The diffuser back pan must be constructed of 22-gauge steel. The diffuser neck must have a minimum of 1¼-inch depth available for duct connection.
- E. The finish must be #26 white. The finish must be an anodic acrylic paint, baked at 315°F for 30 minutes. The pencil hardness must be HB to H.
- F. The paint must pass a 100-hour ASTM B117 Corrosive Environments Salt Spray Test without creepage, blistering or deterioration of film. The paint must pass a 250-hour ASTM D870 Water Immersion Test. The paint must also pass the ASTM D2794 Reverse Impact Cracking Test with a 50-inch pound force applied.
- G. Round damper must be constructed of heavy gauge steel. Damper must be operable from the face of the diffuser. Optional Directional Blow clips must be available to restrict the discharge air in certain directions.
- H. The manufacturer must provide published performance data for the square panel diffuser. The diffuser must be tested in accordance with ANSI/ASHRAE Standard 70-1991.

2.2 SUPPLY/RETURN/EXHAUST GRILLE (SG-1,2, RG-1, EG-1)

- A. Manufacturers:
 - 1. Titus
 - 2. Price Industries
 - 3. Anemostat
 - 4. Or Approved Equal
- B. Steel grilles must be (double deflection) of the sizes and mounting types shown on the plans and outlet schedule. The deflection blades must be available parallel to the short dimension of the grille. Construction must be of steel with a 1¼-inch wide border on all sides. Screw holes must be countersunk for a neat appearance. Corners must be welded with full penetration resistance welds.

- C. Deflection blades must be contoured to a specifically designed and tested cross-section to meet published test performance data. Blades must be spaced on $\frac{3}{4}$ -inch centers. Blades must have steel friction pivots on both ends to allow individual blade adjustment without loosening or rattling. Plastic blade pivots are not acceptable.
- D. Optional opposed-blade volume damper must be constructed of heavy gauge steel. Damper must be operable from the face of the grille.
- E. The grille finish must be #26 white. The finish must be an anodic acrylic paint, baked at 315°F for 30 minutes. The pencil hardness must be HB to H. The paint must pass a 100-hour ASTM B117 Corrosive Environments Salt Spray Test without creepage, blistering or deterioration of film. The paint must pass a 250-hour ASTM D870 Water Immersion Test. The paint must also pass the ASTM D2794 Reverse Impact Cracking Test with a 50-inch pound force applied.
- F. The manufacturer must provide published performance data for the grille. The grille must be tested in accordance with ANSI/ASHRAE Standard 70-1991.

2.3 SPIRAL DUCT GRILLE (SDG-1)

- A. Manufacturers:
 - 1. Titus
 - 2. Price Industries
 - 3. Anemostat
 - 4. Or Approved Equal
- B. Aluminum supply grilles must be direct spiral duct-mounted supply grilles model double deflection or perforated face for the sizes and mounting types as shown on the plans and outlet schedule. The deflection blades must be available parallel to the long or short dimension of the grille. All supply grilles must be constructed with radius end caps and foam gaskets for a tight seal to the duct diameter. All supply grilles must be constructed with a 1 $\frac{3}{8}$ -inch wide border.
- C. Blades must be constructed of heavy duty extruded aluminum and must be spaced $\frac{3}{4}$ -inch apart. Blades must extend completely through the side frame on each side to ensure stability throughout the complete cfm operating range of the grille. Blades must be individually adjustable without loosening or rattling and must be securely held in place with tension wire.
- D. Air scoop damper/extractor (option ASD) must be constructed of heavy duty aluminum. The ASD must be operable from the face with a screwdriver.
- E. The grille finish must be #26 white. The finish must be an anodic acrylic paint, baked at 315°F for 30 minutes. The pencil hardness must be HB to H. The paint must pass a 100-hour ASTM B117 Corrosive Environments Salt Spray Test without creepage, blistering or deterioration of film. The paint must pass a 250-hour ASTM D870 Water Immersion Test. The paint must also pass the ASTM D2794 Reverse Impact Cracking Test with a 50-inch pound force applied.
- F. The manufacturer must provide published performance data for the grille. The grille must be tested in accordance with ANSI/ASHRAE Standard 70-1991.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Commissioner for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

3.3 ADJUSTING

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13

SECTION 23 72 00

AIR -TO-AIR ENERGY RECOVERY EQUIPMENT

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Energy Recovery Ventilator (ERV) must be a packaged unit and must transfer both sensible and latent energy using static plate core technology.

1.3 RELATED SECTIONS

- A. Section 230153 – Common Motor Requirements for HVAC
- B. Section 230548 –Vibration and Seismic Control for HVAC
- C. Section 230700 – HVAC Insulation
- D. Section 233113 – Metal Ducts
- E. Section 230593 – Testing, Adjusting and Balancing for HVAC

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Shop Drawings:
1. Mfg. And Model No.
 2. Accessories Provided
 3. Dimensioned Drawing
 4. Motor Data
 5. CFM, total static pressure, ext. static pressure
 6. Energy wheel performance data for summer and winter design efficiency, exhaust air transfer ratio.
 7. Fan Classification Curves, Operating Data
 8. Wiring Diagrams
 9. Estimated gross weight of each installed unit.
- C. Operating Instructions:

1. All information provided under shop drawings plus following:
 - a. Installation Instructions
 - b. Operating and Maintenance Instructions
 - c. Recommended Spare Parts
 - d. Dimensional Drawing

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Manufacturer must be able to provide evidence of independent testing of the core by Underwriters Laboratory (UL), verifying a maximum flame spread index (FSI) of 25 and a maximum smoke developed index (SDI) of 50 thereby meeting NFPA 90A and NFPA 90B requirements for materials in a compartment handling air intended for circulation through a duct system. The method of test must be UL Standard 723.
- C. All wiring must be in accordance with the National Electric Code (NEC).
- D. The energy recovery cores used in these products must be third party Certified by AHRI under its Standard 1060 for Energy Recovery Ventilators. AHRI published certifications must confirm manufacturer’s published performance for airflow, static pressure, temperature and total effectiveness, purge air (OACF) and exhaust air leakage (EATR). Products that are not currently AHRI Certified will not be accepted.
- E. Unit must be Listed under UL 1812 Standard for Ducted Air to Air Heat Exchangers. Some exceptions to UL Listing may apply.
- F. System efficiency must meet or exceed 65% thermal efficiency and 40% enthalpy recovery efficiency.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Unit must be stored and handled according to the manufacturer’s recommendations.

1.7 LIMITED WARRANTY

- A. Manufacturer must warrant the product to free from defects in material or workmanship. This warranty applies to parts only for one (1) year from substantial completion.

1.8 EXTENDED WARRANTY

- A. Six-year extended warranty for heat exchanger core and two- year for compressor and compressor parts only from the date substantial completion.

1.9 DELIVERY, STORAGE, AND HANDLING

- A. Protect motors, shafts, and bearings from weather and construction dust.

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Greenheck Fan Corporation
- B. RenewAire
- C. Mitsubishi
- D. Approved Equal

2.2 PRODUCT DESCRIPTION

- A. Performance
 - 1. The energy recovery ventilator unit must meet the performance parameters as indicated on the mechanical equipment schedule sheet.
- B. Operating Range
 - 1. The equipment operating range must be 5°F DB ~ 122°F DB and 80%RH or less. The ERV core must perform without condensing or frosting under normal operating conditions (defined as outside temperatures above -10°F and inside relative humidity below 40%). Occasional more extreme conditions must not affect the usual function, performance or durability of the core. No condensate drains will be allowed.
 - 2. Unit must have the capacity to operate continuously without the need for bypass, recirculation, pre-heaters or defrost cycles under normal operating conditions.
- C. Cabinet
 - 1. Materials: Formed single wall insulated metal cabinet, fabricated to permit access to internal components for maintenance.
 - a. Outside casing: 18 gauge, galvanized (G90) steel meeting ASTM A653 for components that do not receive a painted finish.
 - b. Internal assemblies: 18 gauge, galvanized (G90) steel except for motor supports which must be minimum 14 gauge galvanized (G90) steel.
 - 2. Access doors must be hinged.
 - 3. Must have factory-installed duct flanges on all duct openings.
 - 4. Cabinet Insulation: Comply with NFPA 90A and NFPA 90B and erosion requirements of UL 181.
 - a. Materials: Fiberglass insulation. If insulation other than fiberglass is used, it must also meet the Fire Hazard Classification shown below.
 - 1) Thickness: 1 inch (25 mm)
 - 2) Fire Hazard Classification: Maximum flame spread of 25 and smoke developed of 50, when tested in accordance with ASTM C 411.
 - 3) Location and application: Full coverage of entire cabinet exterior to include walls, roof and floor of unit. Insulation must be of semi-rigid type and installed between inner and outer shells of all cabinet exterior components.

D. Energy Wheel

1. Energy wheel must be of total enthalpy, rotary air-to-air type and must be an element of a removable energy wheel cassette. The cassette must consist of a galvanized steel framework (designed to produce laminar air flow through the wheel), an energy wheel as specified and a motor and drive assembly. The cassette must incorporate a pre-tensioned urethane drive belt with a five year warranty. The wheel media must be a polymer film matrix in a stainless steel framework and be comprised of individual segments that are removable for servicing. Non-segmented energy wheels are not acceptable. Silica gel desiccant must be permanently bonded to the polymer film and must be designed and constructed to permit cleaning and servicing. The energy wheel is to have a five year warranty. Performance criteria are to be as specified in AHRI Standard 1060, complying with the Combined Efficiency data in the submittal.
2. Supply and Exhaust Air blower Assemblies: Blower assemblies consist of an electric motor and a belt driven blower. Assembly must be mounted on heavy gauge galvanized rails and further mounted on 1.125 inch thick neoprene vibration isolators.
3. Control panel / connections: Energy Recovery Ventilator must have an electrical control center where all high and low voltage connections are made. Control center must be constructed to permit single-point high voltage power supply connections.
4. Frost control: Timed exhaust.
5. Timed exhaust must be provided for frost control of the energy wheel. Control system must include an outdoor air thermostat and pressure sensor on the wheel assembly to initiate frost control sequence.
6. Motorized Dampers: Provide exhaust air and intake Air motorized dampers of low leakage type.

E. Blower

1. Blower section construction, Supply Air and Exhaust Air: Direct drive motor and blower.
2. Blower assemblies: Must be statically and dynamically balanced and designed for continuous operation at maximum rated fan speed and horsepower.
3. Centrifugal blower housing: Formed and reinforced steel panels to make curved scroll housing with shaped cutoff.
4. Forward curved blower (fan) wheels: Galvanized or aluminum construction with inlet flange and mustow blades curved forward in direction of airflow. Mechanically attached to shaft with set screws.
5. Blower performance must be factory tested for flow rate, pressure, power, air density, rotation speed and efficiency. Ratings are to be established in accordance with AMCA 210, "Laboratory Methods of Testing Fans for Rating".

F. Motors

1. General: Blower motors greater than 3/4 horsepower must be "NEMA Premium" unless otherwise indicated. Minimum compliance with EPart minimum energy-efficiency standards for single speed ODP and TEFC enclosures is not acceptable. Motors must be heavy-duty, permanently lubricated type to match the fan load and furnished at the

specified voltage, phase and enclosure. Drives must be sized for a minimum of 150% of driven horsepower and pulleys must be fully machined cast-type, keyed and fully secured to the fan wheel and motor shafts. Electric motors of ten horsepower or less must be supplied with an adjustable drive pulley. Comply with requirements in Division 23 05 13, matched with fan load.

2. Fan motors must be 60 cycle, 1 phase 208 volts.

G. Filters

1. Unit must have permanent metal filters located in the outdoor air intake and must be accessible from the exterior of the unit. MERV 13 disposable pleated filters must be provided in the intake air stream and MERV 8 filters in the exhaust air stream.

H. Control:

1. The unit must be constructed so that it can be controlled by a factory-supplied microprocessor-based controller or it can be monitored and controlled by a Building Management System (BMS).
2. The unit must be capable of the following modes of operation:
 - a. Energy recovery
 - b. Auto Mode – The unit must be capable of automatically determining the need for performing energy recovery based on the current fan coil operation mode and the current indoor and outdoor temperatures.
3. The following points must be at a minimum available for monitoring at the BMS
 - a. Outside temperature
 - b. Outside relative humidity
 - c. Supply temperature
 - d. Exhaust temperature
 - e. Supply duct static pressure
 - f. Wheel pressure drop
 - g. Filter pressure drop
 - h. Intake Air damper status
 - i. Exhaust Air Damper status
 - j. Supply fan status
 - k. Exhaust fan Status
 - l. Space CO2
 - m. Alarms
4. The following points must be at a minimum available for setpoint adjustment and control via BMS
 - a. Scheduling
 - b. Supply fan speed
 - c. Exhaust fan speed
 - d. Economizer setpoint
 - e. Space CO2 setpoint
 - f. Filter Change setpoints

- I. Options
 1. Provide unit and duct connection orientation as indicated on plans.
 2. Provide motor horsepower as specified in project schedule.
 3. Provide factory installed un-fused, NEMA-1 for indoor and NEA 3R for outdoor rated combination magnetic starter disconnect.
 4. Provide factory installed filter monitors for each airstream.
 5. Provide MERV-13 filters for final installation after construction phase.
 6. Provide ECM controlled motors allowing either two preset speeds or variable speed operation with a 0-10 volt DC control signal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 UNIT LOCATION AND PLACEMENT

- A. Locate and orient unit to provide the shortest and most straight duct connections as noted on plans. Provide service clearances as indicated on the plans.
- B. Use proper rigging, including spreader bars, for safe lifting and placement.
- C. Provide flexible duct connections at unit duct flanges.
- D. Provide spring and neoprene type isolators appropriately sized for unit weight.

3.3 DUCT DESIGN

- A. All ductwork must be designed, constructed, supported and sealed in accordance with SMACNA HVAC Duct Construction Standards and pressure classifications.
- B. Both the return and the supply ducts must be thermally insulated indicated on plans and at minimum in compliance with NYCECC. A continuous vapor barrier must also be provided on surface of the insulation.

3.4 TEST AND BALANCING

- A. Test and Balancing may not begin until 100% of the installation is complete and fully functional.
- B. Follow National Comfort Institute (NCI) air test and balance procedures specific to Heat Recovery Ventilator Balancing Procedure including standard reports to the Commissioner.

3.5 INSTALLATION

- A. Do not operate fans for any purpose until ductwork is clean, filters are in place and fan has been test run under observation.

3.6 STARTUP SERVICE

- A. Factory authorized service representative to inspect field assembled components and equipment installation, to include electrical and piping connections. Report results to Commissioner in writing. Inspection must include a complete startup checklist to include (as a minimum) completed Start-Up Checklists as found in manufacturer's IOM.
- B. Factory authorized service representative to perform startup service. Clean entire unit, comb coil fins as necessary, and install clean filters. Measure and record electrical values for voltage and amperage.

3.7 DEMONSTRATION AND INSTRUCTION

- A. Engage a factory authorized service representative to instruct City of New York's maintenance personnel to adjust, operate and maintain the entire unit. Refer to DDC General Conditions for closeout procedures and demonstration and instructions.

SECTION 23 81 29

VARIABLE REFRIGERANT FLOW HVAC SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Variable capacity, multi-split heat pump system

1.3 SYSTEM DESCRIPTION

- A. The variable capacity, heat pump air conditioning system must be a Variable Refrigerant Volume Series (heat or cool model) split system as specified. The system must consist of multiple evaporators, manufacturer's specialty Y – piping joints and headers, a two-pipe refrigeration distribution system using PID control and VRV condensing unit. The condenser must be a direct expansion (DX), air-cooled heat pump, multi-zone air-conditioning system with variable speed inverter driven compressors using R-410A refrigerant. The condensing unit may connect an indoor evaporator capacity up to 200% of the condensing unit capacity. All zones are each capable of operating separately with individual temperature control.
- B. The condensing unit must be interconnected to indoor unit models must range in capacity from 7,500 Btu/h to 96,000 Btu/h in accordance with manufacturer's engineering data book detailing each available indoor unit. The indoor units must be connected to the condensing unit utilizing manufacturer's specialty Y – piping joints and headers to ensure correct refrigerant flow and balancing. T style joints are not acceptable.
- C. Operation of the system must permit either individual cooling or heating of each indoor unit simultaneously or all of the indoor units associated with each branch of the cool/heat selector box. Each indoor unit or group of indoor units must be able to provide set temperature independently via a local remote controller

1.4 VRV FEATURES

- A. Voltage Platform – Heat pump condensing units must be available with a 208-230V/3/60 power supply.
- B. Advanced Zoning – A single system will be capable to provide for up to 62 zones.
- C. Auto Charging – Each system must have a refrigerant auto-charging function.
- D. Oil Return Heating – Each system must maintain continuous heating during oil return operation. Reverse cycle (cooling mode) oil return during heating operation must not be permitted due to the potential reduction in space temperature.

- E. Independent Control – Each indoor unit must use a dedicated electronic expansion valve for independent control.
 - F. VFD Inverter Control – Each condensing unit must use a high efficiency, variable speed “inverter” compressor coupled with inverter fan motors for superior part load performance.
 - G. Compressor capacity must be modulated automatically to maintain constant suction and condensing pressures while varying the refrigerant volume for the needs of the cooling or heating loads.
 - H. Indoor units must use PID to control superheat to deliver a comfortable room temperature condition and optimize efficiency.
 - I. Flexible Design –
 - 1. Systems must be capable of up to 540ft (640ft equivalent) of linear piping between the condensing unit and furthest located indoor unit.
 - 2. Systems must be capable of up to 3,280ft total “one-way” piping in the piping network.
 - 3. Systems must have a vertical (height) separation of up to 295ft between the condensing unit and the indoor units.
 - 4. Systems must be capable of up to 295ft from the first manufacturer’s specialty fitting / branch point.
 - 5. The condensing unit must have the ability to connect an indoor unit evaporator capacity of up to 200% of the condensing unit capacity.
 - 6. Systems must be capable of 49 feet between indoor units.
 - 7. Condensing units must be supported with a fan motor ESP up to 0.32” WG as standard to allow connection of discharge ductwork and to prevent discharge air short circuiting.
 - J. Simple Wiring – Systems may use 16/18 AWG, 2 wire, multi-stranded, non-shielded and non-polarized daisy chain control wiring.
 - K. Energy Efficiency – System must have equivalent or better performance than high efficiency air cooled or water cooled chiller systems.
 - L. Outside Air – Systems must provide outside air capability.
 - M. Advanced Diagnostics – Systems must include a self-diagnostic, auto-check function to detect a malfunction and display the type and location.
 - N. Each condensing unit must incorporate contacts for electrical demand shedding.
 - O. Advanced Controls – Each system must have at least one remote controller capable of controlling up to 16 indoor units.
 - P. Each system must be capable of integrating with open protocol BACnet building management systems.
- 1.5 SUBMITTALS
- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

- B. The equipment supplier must submit as part of the equipment data package condensing unit data sheets. Data sheets to include the following:
1. Capacities at project design conditions: Cooling (Btu/h)
 2. Cooling Input Power – ducted, ductless and mixed (kW)
 3. Part Load IEER – ducted, ductless and mixed
 4. Full Load EER – ducted, ductless and mixed
 5. Capacities at project design conditions: Heating (Btu/h)
 6. Heating Input Power – ducted, ductless and mixed (kW)
 7. Full Load COP@47F – ducted, ductless and mixed
 8. Full Load COP@17F – ducted, ductless and mixed
- C. The submitted capacity and efficiency performance must meet or exceed the listed performance on the schedule at the designed space conditions including de-rate factors for defrost if applicable and refrigerant piping losses.
1. Operating Temperature Range:
 - a. Cooling
 - b. Heating
 2. Power Supply:
 - a. Maximum Circuit Amps (MCA)
 - b. Maximum Overcurrent Protection Amps (MOP)
 - c. Maximum Starting Current (MSC)
 - d. Condenser Fan Motor
 3. Refrigerant:
 - a. Refrigerant Type/Charge
 - b. Control
 4. Unit Data:
 - a. Max. Number of Indoor Units
 - b. Octave Band Sound Power Level. (dBA)
 - c. Weight (lbs)
 - d. Dimensions
- D. The equipment supplier must submit, indoor unit data sheets. Data sheets to include the following:
1. Capacities:
 - a. Cooling (Btu/h)
 - b. Heating (Btu/h)
 2. Air Flow (CFM)
 3. External Static Pressure (ESP)
 4. Octave Band Sound Power Data
 5. Electrical Data (MCA, MOP, MSC)
 6. Weight (lbs):
 7. Dimensions:
- E. The equipment supplier must guarantee the performance of their system and all published data submitted. Performance must be based on the design criteria below.

1. Room Temperature (Cooling): 72°F
2. Room Temperature (Heating): 75°F
3. Ambient Temperature (Summer): 92°F DB / 74°F WB
4. Ambient Temperature (Winter): 5°F

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. The units must be tested by a Nationally Recognized Testing Laboratory (NRTL), in accordance with ANSI/UL 1995 – Heating and Cooling Equipment and bear the Listed Mark.
- C. All wiring must be in accordance with the National Electric Code (NEC).
- D. Mechanical equipment for wind-born debris regions must be designed in accordance with ASCE 7-2010 and installed to resist the wind pressures on the equipment and the supports.
- E. The condensing unit will be factory charged with R410A.

1.7 DELIVERY, STORAGE AND HANDLING

- A. Unit must be stored and handled according to the manufacturer’s recommendations.

1.8 LIMITED WARRANTY

- A. The manufacturer warrants to City of New York the AC products specified above that under normal use and maintenance for comfort cooling and conditioning applications such products will be free from defects in material or workmanship. This warranty applies to parts only and is 18 months from date of substantial completion.

1.9 EXTENDED WARRANTY

- A. For its compressors only, manufacturer must provide the above warranty (which is applicable to parts only) for a six (6) year period. This extended warranty for compressors is limited in duration to six (6) years date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER’S:

- A. Basis of Design Product: Subject to compliance with requirements, provide products by Daikin or comparable product by one of the following:
 1. Mitsubishi Electric
 2. LG Air Conditioning Technologies
 3. Or Approved Equal

2.2 PERFORMANCE

- A. Performance Conditions:
 1. Cooling: indoor temp. of 80°F DB, 67°F WB and outdoor temp. of 95°F DB.
 2. Heating: indoor temp. of 70°F DB and outdoor temp. of 47°F DB, 43°F WB.
 3. Equivalent piping length: 25ft

4. The system IEER, EER and COP values for systems sized 300MBH and smaller are certified to AHRI Std. 1230.

B. Operating Range:

1. The operating range in cooling will be 23°F DB ~ 122°F DB.
2. The operating range in heating will be 0°F DB – 77°F DB / -4°F WB – 60°F WB.
3. Cooling mode indoor room temperature range will be 57°F-77°F WB.
4. Heating mode indoor room temperature range will be 59°F-80°F DB.

2.3 REFRIGERANT PIPING

- A. The system must be capable of refrigerant piping up to 540 actual feet or 620 equivalent feet from the condensing unit to the furthest indoor unit, a total combined liquid line length of 3,280 feet of piping between the condensing and indoor units with 295 feet maximum vertical difference, without any oil traps.
- B. Specialty fittings and piping joints and headers must be used to ensure proper refrigerant balance and flow for optimum system capacity and performance. T style joints must not be acceptable as this will negatively impact proper refrigerant balance and flow for optimum system capacity and performance.

2.4 CONDENSING UNIT

- A. General: The condensing unit is designed specifically for use with VRV components.
 1. The condensing unit must be factory assembled and pre-wired with all necessary electronic and refrigerant controls. The refrigeration circuit of the condensing unit must consist of scroll compressors, motors, fans, condenser coil, electronic expansion valves, solenoid valves, 4-way valve, distribution headers, capillaries, filters, shut off valves, oil separators, service ports and refrigerant regulator.
 2. Liquid and suction lines must be individually insulated between the condensing and indoor units.
 3. The condensing unit can be wired and piped with access from the left, right, rear or bottom.
 4. The connection ratio of indoor units to condensing unit must be permitted up to 200%.
 5. Each condensing system must be able to support the connection of up to 59 indoor units dependent on the model of the condensing unit.
 6. The sound pressure level standard must be that value as listed in the engineering manual for the specified models at 3 feet from the front of the unit. The condensing unit must be capable of operating automatically at further reduced noise during night time.
 7. The system will automatically restart operation after a power failure and will not cause any settings to be lost, thus eliminating the need for reprogramming.
 8. The unit must incorporate an auto-charging feature.
 9. The condensing unit must be modular in design and should allow for side-by-side installation with minimum spacing.
 10. The following safety devices must be included on the condensing unit; high pressure sensor and switch, low pressure switch, control circuit fuses, crankcase heaters, fusible plug, overload relay, inverter overload protector, thermal protectors for compressor and fan motors, over current protection for the inverter and anti-recycling timers.
 11. To ensure the liquid refrigerant does not flash when supplying to the various indoor units, the circuit must be provided with a sub-cooling feature.
 12. Oil recovery cycle must be automatic occurring 2 hours after start of operation and then every 8 hours of operation. Each system must maintain continuous heating during oil

- return operation. Reverse cycle (cooling mode) oil return during heating operation must not be permitted due to the potential reduction in space temperature.
13. The condensing unit must be capable of heating operation at 0°F dry bulb ambient temperature without additional low ambient controls or an auxiliary heat source.
- B. Unit Cabinet:
1. The condensing unit must be completely weatherproof and corrosion resistant. The unit must be constructed from rust-proofed mild steel panels coated with a baked enamel finish.
- C. Fan:
1. The condensing unit must consist of one or more propeller type, direct-drive 350 or 750 W fan motors that have multiple speed operation via a DC (digitally commutating) inverter.
 2. The condensing unit fan motor must have multiple speed operation of the DC (digitally commutating) inverter type, and be of high external static pressure and must be factory set as standard at 0.12 in. WG. A field setting switch to a maximum 0.32 in. WG pressure is available to accommodate field applied duct for indoor mounting of condensing units.
 3. The fan must be a vertical discharge configuration with a nominal airflow maximum range of 6,350 CFM to 24,690 CFM dependent on model specified.
 4. Nominal sound pressure levels must not exceed 60 dBA at 3.3 feet from the unit.
 5. The fan motor must have inherent protection and permanently lubricated bearings and be mounted.
 6. The fan motor must be provided with a fan guard to prevent contact with moving parts.
 7. Night setback control of the fan motor for low noise operation by way of automatically limiting the maximum speed must be a standard feature. Operation sound level must be selectable from 3 steps of sound pressure levels at 55 dBA, 50 dBA and 45 dBA.
- D. Condenser Coil:
1. The condenser coil must be manufactured from copper tubes expanded into aluminum fins to form a mechanical bond.
 2. The heat exchanger coil must be of a waffle louver fin and rifled bore tube design to ensure high efficiency performance.
 3. The heat exchanger on the condensing units must be manufactured from seamless copper tube with N-shape internal grooves mechanically bonded on to aluminum fins to an e-Pass Design.
 4. The fins are to be covered with an anti-corrosion acrylic resin and hydrophilic film type E1.
 5. The pipe plates must be treated with powdered polyester resin for corrosion prevention. The thickness of the coating must be between 2.0 to 3.0 microns.
- E. Compressor:
1. The inverter scroll compressors must be variable speed (PVM inverter) controlled which is capable of changing the speed to follow the variations in total cooling and heating load as determined by the suction gas pressure as measured in the condensing unit. In addition, samplings of evaporator and condenser temperatures must be made so that the high/low pressures detected are read every 20 seconds and calculated. With each reading, the compressor capacity (INV frequency or STD ON/OFF) must be controlled to eliminate deviation from target value.

2. The inverter driven compressor in each condensing unit must be of highly efficient reluctance DC (digitally commutating), hermetically sealed scroll “G2-type” with a maximum speed of 7,980 rpm.
3. Neodymium magnets must be adopted in the rotor construction to yield a higher torque and efficiency in the compressor instead of the normal ferrite magnet type. At complete stop of the compressor, the neodymium magnets will position the rotor into the optimum position for a low torque start.
4. The capacity control range must be as low as 4% to 100%.
5. Each non-inverter compressor must also be of the hermetically sealed scroll type.
6. Each compressor must be equipped with a crankcase heater, high pressure safety switch, and internal thermal overload protector.
7. Oil separators must be standard with the equipment together with an intelligent oil management system.
8. The compressor must be spring mounted to avoid the transmission of vibration.
9. Unit’s sized 6 tons must contain a minimum of 1 inverter compressor. 8-12 ton units must contain a minimum of 1 inverter and 1 fixed compressors. In the event of compressor failure the remaining compressors must continue to operate and provide heating or cooling as required at a proportionally reduced capacity. The microprocessor and associated controls must be designed to specifically address this condition.
10. In the case of multiple condenser modules, conjoined operation hours of the compressors must be balanced by means of the Duty Cycling Function, ensuring sequential starting of each module at each start/stop cycle, completion of oil return, completion of defrost or every 8 hours.

F. Electrical:

1. The power supply to the condensing unit must be 208-230 volts, operating voltage range of 187V~253 V, 3 phase, 60 hertz +/- 10%.
2. The control voltage between the indoor and condensing unit must be 16VDC non-shielded, stranded 2 conductor cable.
3. The control wiring must be a two-wire multiplex transmission system, making it possible to connect multiple indoor units to one condensing unit with one 2-cable wire, thus simplifying the wiring installation.
4. The control wiring lengths must be as shown below.

	Condenser to Indoor Unit	Condenser to Central Controller	Indoor Unit to Remote Control
Control Wiring Length	6,665 ft	3,330 ft	1,665 ft
Wire Type	16/18 AWG, 2 wire, non-polarity, non-shielded, stranded		

2.5 BRANCH SELECTOR BOX

A. General:

1. The selector boxes must be factory assembled, wired, and piped.
2. The branch controllers must be run tested at the factory.
3. The selector boxes must be mounted indoors.
4. When simultaneously heating and cooling, the units in heating mode must energize their subcooling electronic expansion valve.

- B. Unit Cabinet:
 - 1. The units must have a galvanized steel plate casing.
 - 2. Each cabinet must house 3 electronic expansion valves for refrigerant control per branch.
 - 3. The cabinet must contain one subcooling heat exchanger per branch.
 - 4. The unit must have sound absorption thermal insulation material made of flame and heat resistant foamed polyethylene.

- C. Refrigerant Valves:
 - 1. The unit must be furnished with 3 electronic expansion valves per branch to control the direction of refrigerant flow. The use of solenoid valves for changeover and pressure equalization must not be acceptable due to refrigerant noise.
 - 2. The refrigerant connections must be of the braze type.
 - 3. In multi-port units, each port must have its own electronic expansion valves. If common expansion/solenoid valves are used, redundancy must be provided.
 - 4. Each circuit must have at least one branch selector box.
 - 5. Multiple indoor units may be connected to a branch selector box with the use of a splitter joint provided they are within the capacity range of the branch selector.

- D. Condensate Removal:
 - 1. The unit must not require provisions for condensate removal. A safety device or secondary drain pan must be installed by the mechanical contractor to comply with the applicable mechanical code, if an alternate manufacturer is selected.

- E. Electrical:
 - 1. The unit electrical power must be 208/230 volts, 1 phase, 60 hertz.
 - 2. The unit must be capable of operation within the limits of 187 volts to 255 volts.
 - 3. The minimum circuit amps (MCA) must be 0.1 and the maximum overcurrent protection amps (MOP) must be 15.
 - 4. The control voltage between the indoor and condensing unit must be 16VDC non-shielded 2 conductor cable.

2.6 CONCEALED CEILING DUCTED UNIT

- A. General: indoor unit must be a built-in ceiling concealed fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, for installation into the ceiling cavity. It is constructed of a galvanized steel casing. It must be available in capacities from 7,000 Btu/h to 96,000 Btu/h. to be connected to outdoor unit heat recovery model. It must be a horizontal discharge air with horizontal return air configuration. All models feature a low height cabinet making them applicable to ceiling pockets that tend to be shallow. Computerized PID control must be used to control superheat to deliver a comfortable room temperature condition. The unit must be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature when used with remote control. The indoor units sound pressure must be 48 dB(A) at low speed measured 5 feet below the ducted unit.

- B. Performance: Each unit's performance is based on nominal operating conditions as scheduled on plans

- C. Indoor Unit:
 - 1. The indoor unit must be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan

- motor thermal protector, flare connections, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch. The unit must have an adjustable external static pressure switch.
2. Indoor unit and refrigerant pipes will be charged with dehydrated air prior to shipment from the factory.
 3. Both refrigerant lines must be insulated from the outdoor unit.
 4. The indoor units must be equipped with a return air thermistor.
 5. The indoor unit will be separately powered with 208~230V/1-phase/60Hz.
 6. The voltage range will be 253 volts maximum and 187 volts minimum.
- D. Unit Cabinet:
1. The cabinet must be located into the ceiling and ducted to the supply and return openings.
 2. The cabinet must be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
- E. Fan:
1. The fan must be direct-drive Sirocco type fan, statically and dynamically balanced impeller with high and low fan speeds available.
 2. The fan motor must operate on 208/230 volts, 1 phase, 60 hertz, with a motor output of 0.51 HP.
 3. The airflow rate must be available in high and low settings.
 4. The fan motor must be thermally protected.
 5. The fan motor must be equipped as standard with adjustable external static pressure (ESP) settings.
 6. Fan motor external static pressure for nominal airflow as scheduled on plans:
- F. Coil:
1. Coils must be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
 2. The coil must be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
 3. The coil must be a 3 row cross fin copper evaporator coil with 13 fpi design completely factory tested.
 4. The refrigerant connections must be flare connections and the condensate will be 1-5/16 inch outside diameter PVC.
 5. A thermistor will be located on the liquid and gas line.
- G. Electrical:
1. A separate power supply will be required of 208/230 volts, 1 phase, 60 hertz. The acceptable voltage range must be 187 to 253 volts.
 2. Transmission (control) wiring between the indoor and outdoor unit must be a maximum of 3,280 feet (total 6,560 feet).
 3. Transmission (control) wiring between the indoor unit and remote controller must be a maximum distance of 1,640 feet.
- H. Control:
1. The unit must have controls provided by to perform input functions necessary to operate the system.
 2. The unit must be compatible with interfacing with a BMS system via optional BACnet gateways.
 3. Provide low profile thermistor button sensor to connect to indoor AC unit local controller. Refer to paragraph 2.10 of this specification.

4. The unit must be compatible with a intelligent Touch advanced multi-zone controller. Consult with manufacturer's representative prior to applying controls.
- I. Accessories must include:
 1. A high efficiency disposable MERV 13 air filter kit including filters
 2. One set of spare filters
- 2.7 WALL MOUNTED UNIT
- A. General: Indoor unit must be a wall mounted fan coil unit, operable with refrigerant R-410A, equipped with an electronic expansion valve, for installation onto a wall within a conditioned space. This compact design with finished white casing must be available in capacities from 7,500 Btu/h to 24,000 Btu/h. Computerized PID control must be used to control superheat to deliver a comfortable room temperature condition. The unit must be equipped with a programmed drying mechanism that dehumidifies while limiting changes in room temperature when used with Daikin remote control. A mildew-proof, polystyrene condensate drain pan and resin net mold resistant filter must be included as standard equipment. The indoor units sound pressure must range from 31 dB(A) to 40 dB(A) at low speed measured at 3.3 feet below and from the unit.
 - B. Indoor Unit:
 1. The indoor unit must be completely factory assembled and tested. Included in the unit is factory wiring, piping, electronic proportional expansion valve, control circuit board, fan motor thermal protector, flare connections, condensate drain pan, self-diagnostics, auto-restart function, 3-minute fused time delay, and test run switch. The unit must have an auto-swing louver which ensures efficient air distribution, which closes automatically when the unit stops. The remote controller must be able to set five (5) steps of discharge angle. The front grille must be easily removed for washing. The discharge angle must automatically set at the same angle as the previous operation upon restart. The drain pipe can be fitted to from either left or right sides.
 2. Indoor unit and refrigerant pipes will be charged with dehydrated air prior to shipment from the factory.
 3. Both refrigerant lines must be insulated from the outdoor unit.
 4. Return air must be through a resin net mold resistant filter.
 5. The indoor units must be equipped with a condensate pan.
 6. The indoor units must be equipped with a return air thermistor.
 7. The indoor unit will be separately powered with 208~230V/1-phase/60Hz.
 8. The voltage range will be 253 volts maximum and 187 volts minimum.
 - C. Unit Cabinet:
 1. The cabinet must be affixed to a factory supplied wall mounting template and located in the conditioned space.
 2. The cabinet must be constructed with sound absorbing foamed polystyrene and polyethylene insulation.
 - D. Fan:
 1. The fan must be a direct-drive cross-flow fan, statically and dynamically balanced impeller with high and low fan speeds available.
 2. The fan motor must operate on 208/230 volts, 1 phase, 60 hertz with a motor output range 0.054 to 0.058 HP.
 3. The airflow rate must be available in high and low settings.
 4. The fan motor must be thermally protected.
 - E. Coil:

1. Coils must be of the direct expansion type constructed from copper tubes expanded into aluminum fins to form a mechanical bond.
 2. The coil must be of a waffle louver fin and high heat exchange, rifled bore tube design to ensure highly efficient performance.
 3. The coil must be a 2-row cross fin copper evaporator coil with 14 fpi design completely factory tested.
 4. The refrigerant connections must be flare connections and the condensate will be 11/16 inch outside diameter PVC.
 5. A thermistor will be located on the liquid and gas line.
 6. A condensate pan must be located in the unit.
- F. Electrical:
1. A separate power supply will be required of 208/230 volts, 1 phase, 60 hertz. The acceptable voltage range must be 187 to 253 volts.
 2. Transmission (control) wiring between the indoor and outdoor unit must be a maximum of 3,280 feet (total 6,560 feet).
 3. Transmission (control) wiring between the indoor unit and remote controller must be a maximum distance of 1,640 feet.
- G. Control:
1. The unit must have controls provided by manufacturer to perform input functions necessary to operate the system.
 2. The unit must be compatible with interfacing with a BMS system via BACnet gateways.
- H. Accessories:
1. Remote sensor kit.
 2. In pan condensate pump.

2.8 LOW PROFILE BUTTON SENSOR

- A. Provide low button profile sensor. Small flush sensor mounting for accurate direct air measurement and paintable with Latex or Oil Base.
- B. Sensor Passive
1. Thermistor NTC, 2 wire
- C. Thermistor
- D. Thermal resistor
1. Temp. Output Resistance
 2. Accuracy (Std) $\pm 0.36^{\circ}\text{F}$, ($\pm 0.2^{\circ}\text{C}$)
 3. Accuracy (High) $\pm 0.18^{\circ}\text{F}$, ($\pm 0.1^{\circ}\text{C}$),
 4. Stability $< 0.036^{\circ}\text{F}/\text{Year}$, ($< 0.02^{\circ}\text{C}/\text{Year}$)
 5. Heat dissipation $2.7 \text{ mW}/^{\circ}\text{C}$
 6. Temp. Drift $< 0.02^{\circ}\text{C}$ per year
 7. Probe range -40° to 221°F (-40° to 105°C)
- E. Sensitivity
1. Thermistor Non-linear
 2. RTD (PT) $3.85\Omega/^{\circ}\text{C}$ for $1\text{K}\Omega$ RTD
 3. $3.75\Omega/^{\circ}\text{C}$ for $1\text{K}\Omega$ RTD
 4. $0.385\Omega/^{\circ}\text{C}$ for 100Ω RTD
 5. Nickel (Ni) $2.95\Omega/^{\circ}\text{F}$ for the JCI RTD

- F. Lead wire: 2 or 3 conductor, 22 AWG stranded wire
 - 1. Wire Insulation: Etched Teflon, Plenum rated
 - 2. Wiring: Two 22 AWG wires (non-polar)
 - G. Mounting: 3/8" hole, push in plastic sheath with peel off tape strip.
 - H. Dimensions: Plastic Sheath
 - 1. Insertion 1.0" depth, into a 0.375" hole
 - 2. Sleeve 0.375" Diameter
 - 3. Bezel 0.875" Diameter
 - I. Enclosure Type: Round Flush Sensor Sheath
 - J. Enclosure ratings: NEMA 1
 - K. Encl.Material: White Delrin, UL94V-HB
 - L. Ambient (Encl.)
 - 1. 0 to 100% RH, Non-condensing
 - 2. -40°F to 185°F, (-40° to 85°C)
 - M. Agency
 - 1. RoHS, CE* (Thermistor's <10KΩ)
 - 2. PT= DIN43760, IEC Pub 751-1983,
 - 3. JIS C1604-1989
- 2.9 NAVIGATION REMOTE CONTROLLER
- A. The NAV Remote Controller can provide control for all VRV indoor units. The remote controller wiring consist of a non-polar two-wire connection to the indoor unit at terminals P1/P2. The NAV Remote Controller is wall mounted and can be adjusted to maintain the optimal operation of the connected indoor unit(s). The NAV Remote Controller does not require addressing.
 - B. Mounting: The NAV Remote Controller must be mounted into a standard 2" x 4" junction box.
 - C. Display Features:
 - 1. The NAV Remote Controller must be approximately 4.75" x 4.75" in size with a backlit 2.75" x 1.75" LCD display.
 - 2. Display information must be selectable from English, French, or Spanish.
 - 3. Feature Backlit LCD Display with contrast adjustment and auto off after 30 seconds.
 - 4. The controller must display Operation Mode, Setpoint, and Fan Speed.
 - 5. System Status icons in large font.
 - a. The controller must display temperature setpoint in one degree increments with a range of 60-90°F (0-32°C)
 - 6. Detailed display will reflect room temperature (0-176oF/-17-80oC range in one degree increment).
 - a. Display of temperature information must be configurable for Fahrenheit or Celsius
 - 7. On/Off status must be displayed with an LED.

8. Error codes will be displayed in the event of system abnormality/error with a two digit code.
 - a. A blinking LED will also signal system abnormality/error
 9. The following system temperatures can be displayed to assist service personnel in troubleshooting:
 - a. Return Air Temperature
 - b. Liquid Line Temperature
 - c. Gas Line Temperature
 - d. Discharge Air Temperature (depending on unit),
 - e. Remote Controller Sensor Temperature
 - f. Temperature used for Indoor Unit Control
- D. Basic Operation:
1. Capable of controlling a group of up to 16 indoor units.
 2. Controller must control the following group operations:
 - a. On/Off, Operation Mode (Cool, Heat, Fan, Dry and Auto* (*with VRV Heat Recovery & Heat Pump Systems))
 - b. Independent Cooling and Heating setpoints in the occupied mode
 - c. Independent Cooling Setup and Heating Setback setpoints in the unoccupied mode
 - d. Fan Speed
 - e. Airflow direction (dependent on indoor unit type).
 - f. The controller must be able to limit the user adjustable setpoint ranges individually for cooling and heating in the occupied period
 - g. Lock out key settings
 - h. Indoor unit group assignment
- E. Programmability:
1. Controller must support schedule settings with selectable weekly pattern options.
 - a. 7-day
 - b. Weekday + Weekend
 - c. Weekday + Saturday + Sunday
 - d. The schedule must support unit On/Off
 - e. Independently settable Cooling and/or Heating setpoints when unit is on (occupied)
 - f. Setup (Cooling) and Setback (Heating) setpoints when unit is off (unoccupied)
 - g. A maximum of 5 operations can be schedulable per day
 - h. Time setting in 1-minute increments
 2. The Controller must support auto-changeover mode for both heat pump and heat recovery systems allowing the optimal room temperature to be maintained by automatically switching the indoor unit's mode between Cool and Heat according to the room temperature and temperature setpoint.
 - a. Changeover to cooling mode must occur at cooling setpoint + 1°F (0.5°C)
 - b. Changeover to heating mode must occur at heating setpoint - 1°F (0.5°C)
 3. The Controller must support an Auto Off Timer for temporarily enabling indoor unit operation during the unoccupied period.
 - a. When the Off Timer is enabled and when the unit is manually turned on at the remote controller
 - b. The controller must shut off the unit after a set time period
 - c. The time period must be configurable in the controller menu with a range of 30-180 minutes in 10 minute increments

4. The room temperature must be capable of being sensed at either the NAV Remote Controller, the Indoor Unit return air temperature sensor (default), or Remote Temperature Sensor configured through the NAV Remote Controller field settings.

2.10 INTERFACE FOR USE IN BACNET

- A. The Interface for use in BACnet must provide the ability for a Building Management System (BMS) to control all VRV indoor units. It must be capable of controlling a maximum of 64 indoor unit groups (128 indoor units) connected to a maximum of 10 outdoor units.
- B. The Interface for use in BACnet must support operations superseding that of the centralized controller, local remote controller, system configuration, daily/weekly scheduling, monitoring of operation status, and malfunction monitoring.
- C. The Interface for use in BACnet uses a standard open protocol based on ANSI/ASHREA Standard 135. The BACnet Interface has been certified by the BACnet Testing Laboratories (BTL). The BACnet Interface is compatible with BACnet IP (ISO16484-5).
- D. The interface wiring must consist of a non-polar two-wire connection to the terminals F1F2 (out-out) of the outdoor unit. The Interface for use in BACnet is wall mounted and is used as a translator between the BACnet Building Management System (BMS) and the VRV unit communication bus to maintain the optimal operation of the connected indoor unit(s).
- E. The Interface for use in BACnet can be used in conjunction with the Navigation Remote Controller. The remote controller must require daisy chain wiring for grouping multiple indoor units (up to 16) together. Manual addressing is required of each indoor unit group associated with the Intelligent Touch Controller and the Interfaces for use in BACnet.
- F. The Interface for use in BACnet must be equipped with one RJ-45 Ethernet port to support interconnection with a network PC via the Internet or Local Area Network (LAN). The Ethernet connection must be capable of transmission on 10Base-T and/or 100Base-TX connection at 100 Mbps.
- G. The Interface for use in BACnet must be capable of being configured as a foreign device. It must be capable of communicating across BACnet Broadcast Management Devices (BBMD) in different subnet networks.
- H. The Interface for use in BACnet must be capable of supporting Change of Value (COV) notification for all available objects.
- I. The BACnet Setup Tool must be available so that certified commissioning personnel/facility staff can securely log into each Interface for use in BACnet via a PC to support the configuration and testing of the Interface for use in BACnet.
 1. Mounting: The Interface for use in BACnet must be mounted on the wall or in an enclosure.
 2. Display Features:
 - a. The Interface for use in BACnet must be approximately 10.81" x 10.34" in size.
 - b. LED display provides the interface's operational status and alarm.
 - c. The Interface for use in BACnet must be capable of displaying indoor unit objects on the BACnet building management system.

- d. The Interface for use in BACnet must provide the BACnet building management system the capability to command the setpoint temperature in 1^oF (0.1^oC) increments with a range of 60^oF - 90^oF (16^oC - 32^oC).
 - 1) Display of temperature setpoint information must be configurable for Fahrenheit or Celsius
 - e. The Interface for use in BACnet must provide the BACnet building management system the capability to display the room temperature in 0.1^oF (0.1^oC) increments with a range of -120^oF - 180^oF (-84^oC - 82^oC).
 - 1) Display of room temperature information must be configurable for Fahrenheit or Celsius
 - f. Error codes generated by the indoor units, outdoor units, branch selector boxes, and remote controllers must be displayed on the BACnet building management system in the event of system abnormality/error with a two digit error code.
 - 1) Communication errors between the Interface for use in BACnet and the BACnet building management system must be displayed with a red flashing LED on the Interface for use in BACnet
3. Basic Operation:
- a. The Interface for use in BACnet will provide up to 28 objects that can be monitored/controlled via the BACnet building management system.
 - b. The Building Management System must control the following group operations:
 - 1) On/Off
 - 2) Operation Mode (Cool, Heat, Fan, Auto, and Dry)
 - 3) Single setpoint setting for Cooling and Heating in the occupied mode.
 - 4) Fan status
 - 5) Fan Speed: Up to 3 speeds (dependent upon indoor unit type)
 - 6) Vane direction - 5 fixed positions or swing position (dependent upon indoor unit type)
 - 7) Remote controller permit/prohibit of On/Off, Mode, and Setpoint
 - 8) Filter sign reset for indoor units
 - 9) Disable the Intelligent Touch Controller
 - 10) Forced off of indoor units
 - 11) Forced Thermo-off of indoor units
 - 12) Energy saving offset of indoor unit setpoint
 - 13) Compressor status
 - 14) Thermo-on status
 - 15) Heater status
 - c. Capable of providing battery backup power for up to 3 years in total time for the clock.
 - 1) Settings stored in non-volatile memory
4. Programmability:
- 1) The BACnet building management system must support weekly schedule settings through its programming.
 - 2) The schedule must support the indoor unit:
 - a) On/Off
 - b) Each scheduled event must specify time and target group
 - c) Each scheduled event must include On/Off, Operation Mode, Occupied Cooling Setpoint, Occupied Heating Setpoint, Setup (Cooling) setback setpoint, Setback (Heating) setback setpoint, Remote Controller On/Off Permit/Prohibit, Remote Controller Mode

- Permit/Prohibit, Remote Controller Setpoint Permit/Prohibit, and Timed Override Enable
- d) Setup (Cooling) and Setback (Heating) setpoints when unit is Off (unoccupied) by Group
 - e) An override must be provided for use enabling indoor unit operation during the unoccupied period by the BACnet building management system programming.
- b. The BACnet building management system must support auto-changeover through its programming.
- 1) Auto-change must provide changeover for both Heat Pump and Heat Recovery systems based upon the group configurations. This will allow for the optimal room temperature to be maintained by automatically switching the indoor unit's mode between Cool and Heat in accordance with the room temperature and setpoint temperature.
 - 2) Changeover must change the operation mode of the indoor unit that is set as the Changeover Master. The Changeover Master indoor unit must then change the operation mode of all indoor unit groups daisy chained on the unit communication bus to the same outdoor unit in the Heat Pump system or the same branch selector box in the Heat Recovery system.
 - 3) Changeover to cooling mode must occur when the room temperature is great than or equal to the cooling setpoint
 - a) Differential to be determined by BACnet building management system programming
 - 4) Changeover to heating mode must occur when room temperature is less than or equal to the heating setpoint.
 - a) Differential to be determined by BACnet building management system programming
 - 5) Guard timer
 - a) Upon changeover, guard timer will prevent another changeover during this period.
 - b) Guard timer should be ignored by a change of setpoint manually from the BMS, Intelligent Touch Controller, Remote Controller, or by schedule.
 - c) Guard timer to be configured by BACnet building management system programming (30 minute minimum recommended)
- c. The Interface for use in BACnet must support force shutdown of associated indoor unit groups.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION REQUIREMENTS

- A. The system must be installed by installers instructed by factory technicians. The contractor must submit installer's certification of attending factory instruction classes.
- B. Install indoor evaporator-fan components using manufacturer's standard mounting devices securely fastened to building structure. Provide neoprene hanger for isolation. Refer to specification section 230548 "Vibration and Seismic Control for HVAC".

- C. Install outdoor compressor-condenser components on restrained, spring isolators secured to steel dunnage. Refer to specification section 230548 "Vibration and Seismic Control for HVAC".

3.3 CONNECTIONS

- A. Connect pre-charged refrigerant tubing to component's quick-connect fittings. Install tubing to allow access to unit.
- B. Connect drain piping and route to nearest indirect drain.

3.4 FIELD QUALITY CONTROL

- A. **Manufacturer's Field Service:** Engage a factory-authorized service representative to inspect, test, and adjust field-assembled components and equipment installation, including connections, and to assist in field testing. Report results in writing.
- B. **Leak Test:** After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
- C. **Operational Test:** After electrical circuitry has been energized, start units to confirm proper motor rotation and unit operation. Remove malfunctioning units, replace with new components, and retest.
- D. **Test and adjust controls and safeties.** Replace damaged and malfunctioning controls and equipment.

END OF SECTION 23 81 29

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 23 82 39

UNIT HEATERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Unit Heaters
 - 2. Ceiling Vertical Heater

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions 01 40 00 "Quality Requirements."
- B. Material and installation must comply with the latest edition of application codes, recommended practices, and standards of NEC, NEMA and U.L.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Submittal Data
 - 1. Product Data
 - a. Submit copies of manufacturer's latest published literature for materials specified herein for approval, and obtain approval before materials are delivered to the site.
 - b. Data must include manufacturer's specifications for terminal units showing dimensions, capacities, ratings, performance characteristics, gauges and finishes of materials, and installation instructions.
 - 2. Shop Drawings: Shop drawings for work specified herein must be submitted for approval. Shop drawings must show assembly-type drawings showing unit dimensions, construction details, and field connection details.
 - 3. Wiring Diagrams: Submit manufacturer's electrical requirements for power supply wiring to terminal units. Submit manufacturer's ladder-type wiring

diagrams for interlock and control wiring. Clearly differentiate between portions of factory-installed and field-installed wiring.

4. Samples: Submit 3 samples for each type of cabinet finish furnished.
5. Maintenance Data: Submit maintenance instructions, including lubrication instructions, filter replacement, motor and drive replacement, and spare parts lists. Include this data, product data, and shop drawings in maintenance manuals in accordance with General Conditions requirements as applicable.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials and handle as to prevent the inclusion of foreign materials and the damage of breaking, denting and scoring. Do not install damaged terminal units or components; replace with new.
- B. Store materials and equipment where designated. Protect from weather, dirt, fumes, water, construction debris, and physical damage. Contractor must assume responsibility and security for materials and equipment. Take precautions for protection from detrimental conditions.
- C. Comply with Manufacturer's rigging and installation instructions for unloading terminal units, and moving them to final location.

1.7 WARRANTY

- A. Manufacture must warrant the product to free from defects in material or workmanship. This warranty applies to parts only for one year from substantial completion.
- B. The heating elements must be warranted for five years.

PART 2 - PRODUCTS

2.1 UNIT HEATERS

- A. Furnish and install where indicated on plans, electric unit heaters suitable for small and large areas and UL and cUL listed for wall or ceiling mounting.
- B. The cabinet must be made of 18 gauge cold rolled steel, welded, and phosphate coated to resist corrosion. Side, front, and back panels must be removable without dismantling the heater by removing four screws from inside the control compartment, thus permitting full access to the elements and fan motor areas. Individual adjustable louvers with 30 degree downward stops must be furnished to provide desired control of discharge air. The control compartment must be located at the bottom of the cabinet and provided with a swing down hinged cover to permit full access for cleaning and servicing without dismantling the heater. All heater and

control wiring must terminate inside the control compartment. The heater must be provided with combination wall/ceiling bracket for 5.0 KW and 7.5 KW units and must have capability of full horizontal and vertical positions. The cabinet must be finished in a neutral grey epoxy paint.

- C. The heating elements must be of the non-glowing design consisting of 80/20 nickel-chromium resistance wire, embedded in magnesium oxide and enclosed in a metal sheath to which metal plated fins are copper brazed. The elements must be painted with aluminized paint for corrosion resistance and cover the entire discharge area for uniform heating.
- D. The fan motor must be totally enclosed, permanently lubricated, impedance protected, and of unit bearing design suitable for horizontal or vertical operation with high starting and running torques. (5.0 & 7.5 KW units) The fan motor must be totally enclosed, permanently lubricated, thermal protected, and of double bearing design with high starting and running torques. (10 - 30 KW units) The fan blade must be aluminum and directly connected to the fan motor, designed specifically for unit heater application. The fan control must be of the bimetallic snap-action type and must activate fan motor after heating elements reach operating temperature and continue to operate the fan motor after thermostat is satisfied and until the heating elements cool.
- E. A thermal cutout must be built into the system to automatically shut off the heater in the event of overheating and reactivate when temperature returns to normal.
- F. The heater must be provided with a factory installed, heavy duty, 3-pole contactor providing quiet, efficient operation, making external contacts and additional wiring unnecessary.
 - 1. Controls and Accessories:
 - 2. Remote Thermostat Kit
 - 3. Three pole built-in disconnect switch (30 amp rated)
 - 4. Summer/Winter built-in fan switch
 - 5. Combination wall/ceiling bracket
- G. Heaters must be as manufactured by QMark, Berko, Air Therm, or approved equal.

2.2 VERTICAL CEILING HEATERS

- A. Units must be UL listed for safe operation, construction and performance. Units must be listed for commercial and industrial installations.
- B. Heater must be a vertical air delivery electric unit heater of the size, capacity, and voltage as listed in the equipment schedule.
- C. Unit must have a steel casing that is treated for corrosion resistance and painted with an electrostatically applied, baked on, gray-green polyester powdercoat paint finish.

- D. Unit must consist of two circular steel covers bolted together with the heating element supports. The bottom cover must have a die-formed fan venture. The top cover must include an inner cone for motor mounting and to provide a heat shield from radiant and convective heat from the heating elements.
- E. Elements must consist of a nickel-chromium resistance wire surrounded with magnesium oxide and sheathed in steel spiral-finned tubes. Elements must have kilowatt rating as listed in the equipment schedule.
- F. Each unit must have a single 208 V/60hz/1ph motor. The motor must be totally enclosed, continuous-duty, with automatic resetting, thermal-overload protection. Propeller fan must be directly connected to the motor shaft and be statically balanced. The motor must be mounted to the unit with rubber vibration absorbing material.
- G. All units must have built-in contactors and control circuit transformers (where required) to provide single-source power connection.
- H. Fuse blocks and factory-supplied fuses must be installed. A wiring diagram and grounding lug must be included in each control compartment.
- I. Electrical control components must be safely enclosed in a separate junction box. A wiring diagram and a grounding lug must be included in each power junction box.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine conditions at the job site where work of this section is to be performed to ensure proper arrangement and fit of the work. Start of work implies acceptance of job site conditions.

3.3 PREPARATION

- A. Examine the Contract Drawings and specifications in order to ensure the completeness of the work required under this Section.
- B. Verify measurements and dimensions at the job site and cooperate in the coordination and scheduling of the work of this Section with the work of related trades, so as not to delay job progress.

3.4 INSTALLATION

- A. Installation of Electric Heaters
 - 1. Install heaters as indicated, and in accordance with manufacturer's installation instructions.
 - 2. Locate heaters as indicated, coordinate location with Commissioner and with other trades. Ensure that required clearance are maintained to combustible construction.
 - 3. Install wiring as indicated.
- B. Electrical Wiring
 - 1. Install electrical devices furnished by manufacturer but not specified to be factory-mounted. Furnish copy of manufacturer's wiring diagram submittal to electrical trade.
 - 2. Verify that electrical wiring installation is in accordance with manufacturer's submittal and installation requirements of Division 26 sections. Do not proceed with equipment startup until wiring installation is acceptable to equipment manufacturer.

3.5 ADJUSTING AND CLEANING

- A. After construction is completed, including painting, clean unit exposed surfaces, vacuum clean coils and inside of cabinets. Retouch any marred or scratched surfaces of factory-finished cabinets, using finish materials furnished by manufacturer.

END OF SECTION 23 82 39

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 26 05 00

COMMON WORK RESULTS FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Sleeves for raceways and cables.
 2. Sleeve seals.
 3. Grout.
 4. Common electrical installation requirements.
 5. Submittals.
 6. Coordination drawings.
 7. Record documents.
 8. Maintenance manuals.
 9. Rough ins.
 10. Electrical installations.
 11. Cutting and patching.
 12. Codes, Permits and Inspections.
 13. Separation of Work Between Trades.
 14. Definitions and Interpretations.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Product Data: For sleeve seals.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

1.5 COORDINATION DRAWINGS

- A. Prepare coordination drawings in accordance with DDC General Conditions to a scale of 1/4"=1'-0" (1:50) or larger; detailing major elements, components, and systems of electrical

equipment and materials in relationship with other systems, installations, and building components in spaces such as the main electrical room. Indicate locations where space is limited for installation and access and where sequencing and coordination of installations are of importance to the efficient flow of the Work, including (but not necessarily limited to) the following:

1. Indicate the proposed locations of major raceway systems, equipment, and materials. Include the following:
 - a. Clearances for servicing equipment, including space for equipment disassembly required for periodic maintenance.
 - b. Exterior wall and foundation penetrations.
 - c. Fire-rated wall and floor penetrations.
 - d. Equipment connections and support details.

B. Project Coordination Drawings

2. This Trade must add to coordination drawings prepared by the other trades showing all of the electrical work (equipment, conduit, etc.) to be installed as part of the work of this section of the specifications; and adjust and resolve any real or apparent interferences or conflicts in coordination with the work of the other trades.

1.6 RECORD DOCUMENTS

- A. Prepare record documents in accordance with the requirements in DDC General Conditions. In addition to the requirements specified in DDC General Conditions, comply with the following:
 1. A complete set of "as-built" or record electric drawings is made up and delivered to the Commissioner.
 2. The drawings show:
 - a. All electric work installed exactly in accordance with the original design.
 - b. All electric work installed as a modification or addition to the original design.
 - c. The dimensional information necessary to delineate the exact location of all circuitry and wiring runs (other than lighting and appliance branch circuitry and small control, signal and communications runs) which are so buried or concealed as to be untraceable by inspection through the regular means of access established for inspection and maintenance.
 - d. The numbering information necessary to correlate all electrical energy consuming items (or outlets for same) to the panel circuits from which they are supplied.
 3. The drawings are produced using AutoCAD MEP 2013 software. The design drawing files will be made available should it be determined that such files would serve as suitable backgrounds for the "as-built" drawings. These documents remain the property of Plus Group CE, PLLC and may be used for no other purpose without expressed, written consent. The contractor assumes all liabilities resulting from unauthorized use or modifications to the drawings.
 4. "As-built" information is submitted as follows:
 - a. Bind CAD drawing files on Thumb Disk in AutoCAD MEP 2013 format.
 - b. One (1) set of reproducible drawings.

- c. One set of flattened PDF format
5. The quantity of design drawings which are made available is in no way interpreted as setting a limit to the number of drawings necessary to show the required "as-built" information.
6. Progress prints of record drawings are submitted monthly during the construction period for Commissioner's approval.

1.7 MAINTENANCE MANUALS

- A. Prepare maintenance manuals in accordance with DDC General Conditions. In addition to the requirements specified in DDC General Conditions, include the following information for major equipment items such as alarm system(s), panelboards, lighting fixtures, and other items as specified elsewhere.
 1. Description of function, normal operating characteristics and limitations, performance curves, engineering data and tests, and complete nomenclature and commercial numbers of replacement parts.
 2. Manufacturer's printed operating procedures include start-up, break-in, and routine and normal operating instructions; regulation, control, stopping, shutdown, and emergency instructions.
 3. Maintenance procedures for routine preventative maintenance and troubleshooting; disassembly, restore, and reassembly; aligning and adjusting instructions.
 4. Servicing instructions.

1.8 CODES, PERMITS AND INSPECTIONS

- A. All work meets or exceeds the latest requirements of all latest edition of NYC Electrical Code.
- B. All required permits and inspection certificates are obtained, paid for, and made available at the completion of the work.
- C. Equipment, material, layout and installation provided as part of the electrical work conforms to the requirements of the NYC Advisory Board of the Bureau of Electrical Control (Department of Buildings), the Mechanical Equipment Acceptance Division of the Building Department (MEA), the Board of Standards and Appeals (BSA), and latest edition of NYC Electrical Code. Include as part of the electrical work all required filings and submissions for approval. Equipment furnished separate from - but installed as part of - the electrical work, which does not have all necessary approvals, is not installed until approvals are obtained by the parties furnishing the equipment.
- D. Installation procedures, methods and conditions comply with the latest requirements of the Federal Occupational Safety and Health Administration (OSHA).

1.9 SEPARATION OF WORK BETWEEN TRADES

- A. Include in the electrical work all necessary supervision and the issuing of all coordination information to any other trades who are supplying work to accommodate the electrical installations.

- B. For items of equipment which are installed but not purchased as part of the electrical work, the electrical work includes:
 - 1. The coordination of their delivery.
 - 2. Their unloading from delivery trucks driven in to any point on the property line at grade level.
 - 3. Their safe handling and field storage up to the time of permanent placement in the project.
 - 4. The correction of any damage, defacement or corrosion to which they may have been subjected.
- C. Items of equipment which are installed but not purchased as part of the electrical work are carefully examined upon delivery to the project.

1.10 DEFINITIONS AND INTERPRETATIONS

- A. As used in the drawings and specifications for electrical work, certain non-technical words are understood to have specific meanings as follows:
 - 1. "Circuitry" -- Any electric work (not limited to light and power distribution) which consists of wires, cables, raceways, and/or specialty wiring method assemblies taken all together complete with associated junction boxes, pull boxes, outlet boxes, joints, couplings, splices and connections except where limited to a lesser meaning by specific description.
 - 2. "Wiring" -- Same as Circuitry.
 - 3. "Circuit" -- Any specific run of circuitry.
 - 4. "Branch Circuit" -- Any light and power distribution system circuit which, at its load end, is directly connected to one or more electrical energy consuming items with no overcurrent protection devices interposed, other than (where required) those protecting the energy consuming items from overloading or overheating.
 - 5. "Appliance Panel" -- Any panel, used in a light and power distribution system, containing single pole and/or multipole branches rated in various sizes.
 - 6. "Panelette" -- A panel (Load Center) which meets the specifications for a lighting appliance panel except for smaller maximum permissible dimensions and other minor differences as specified.
 - 7. "Lighting and Appliance Branch Circuitry" -- All or any portion of branch circuits outgoing from a lighting or appliance panel or panelette.
 - 8. "Feeder" -- Any item of light and power circuitry used in a distribution system which is not lighting and appliance branch circuitry.
 - 9. "Main Feeder" -- Any feeder which, at its supply end, is connected through its own overcurrent protection (and switching) device, and none other, directly to a main service or a main service overcurrent protection (and switching) device.
 - 10. "Branch Feeder" -- A feeder, other than a main feeder, which complies with the definition of a branch circuit.
 - 11. "Submain Feeder" -- Any feeder which is neither a main feeder nor a branch feeder.
 - 12. "Distribution Panel" -- Any panel, used in a light and power distribution system, containing only multi-pole branches and with all (or the majority) of its branches used for feeders supplying other panels.

13. "Power Panel" -- Same as distribution panel, except with all (or the majority) of its branches used for feeders which do not supply other panels.
 14. "Motor Power Circuit" -- Any circuit which operates nominally at 100 volts or more, and which carries electrical input energy to a motor.
 15. "Motor Control Circuit" (used in conjunction with a motor for which a magnetic starter is supplied) -- Any circuit (other than a motor power circuit), which operates nominally at 100 volts or more, and which carries current intended for directing or indicating the performance of a motor starter.
 16. "Motor Control Circuit" (used in conjunction with a motor for which a manual starter is supplied) -- Any circuit containing an extension of power circuit wires, other than those constituting the direct connection between source of supply, starter and motor.
 17. "Motor Control Actuating Device" -- Any device which performs a switching function in a motor control circuit (pushbuttons, automatic contacting devices, etc.).
 18. "Motor Control Actuated Device" -- Any device which functions in response to voltage received from a motor control circuit (pilot lights, solenoids, etc.)
 19. "Package Unit" -- An item of equipment having one or more motors or other electric energy consuming elements integrally factory mounted on a single base, complete with all associated control devices and interconnecting wiring.
 20. "Grade Slab" -- A building floor slab which is in contact with or directly over grade (earth).
 21. "Underground" -- Subsurface and exterior to building foundations.
 22. "Standard" (as applied to wiring devices) -- Not of a separately designated individual type.
 23. "Raceway" -- Any pipe, duct, extended enclosure, or conduit (as specified for a particular system) which is used to contain wires, and which is of such nature as to require that the wires be installed by a "pulling in" procedure.
 24. "Concealed" (as applied to circuitry) -- Covered completely by building materials, except for penetrations (by boxes and fittings) to a level flush with the surface as necessitated by functional or specified accessibility requirements.
 25. "Exposed" (as applied to circuitry) -- Not covered in any way by building materials.
 26. "Subject to Mechanical Damage" -- Exposed within seven feet of the floor in mechanical rooms, or other spaces where heavy items (over 100 pounds) are moved around or rigged as a common practice or as required for replacement purposes.
 27. "Primary" (as applied to light and power distribution) -- Under 600 volts.
 28. "Assembly" -- A defined set of elements of electric work.
- B. Where the word "conduit" is used without specific reference to type, it is understood to mean "raceway".
- C. Except where modified by a specific notation to the contrary, it is understood that the indication and/or description of any electrical item in the drawings and specifications for electrical work carries with it the instruction to furnish, install and connect the item as part of the electrical work regardless of whether or not this instruction is explicitly stated.
- D. No exclusion from or limitation in, the symbolism used on the drawings for electrical work or the language used in the specifications for electrical work is interpreted as a reason for omitting the appurtenances or accessories necessary to complete any required system or item of equipment.

- E. The drawings for electrical work utilize symbols and schematic diagrams which have no dimensional significance. The work is, therefore, installed to fulfill the diagrammatic intent expressed on the electrical drawings, but in conformity with the dimensions indicated on the final working drawings, field layouts and shop drawings of all trades.
- F. Certain details appear on the drawings for electrical work which are specific with regard to the dimensioning and positioning of the work. These are intended only for general information purposes. They do not obviate field coordination for individual items of the indicated work.
- G. Information as to general construction and architectural general construction and architectural features and finishes is derived from structural and architectural drawings and specifications only.
- H. Ratings of devices, materials and equipment specified without reference to specific performance criteria are understood to be nominal or nameplate ratings established by means of industry standard procedures.
- I. The restriction of conductors in wires to copper, as specified elsewhere, is understood to also apply to all conductors (wire, cable or bus as applicable), including those provided as part of factory assembled components such as panelboards, panelettes, overcurrent protection and switching devices. This restriction applies equally to all such equipment regardless indications (or lack thereof) elsewhere to the contrary. Aluminum will not be acceptable.

PART 2 - PRODUCTS

2.1 SLEEVES FOR RACEWAYS AND CABLES

- A. Steel Pipe Sleeves: ASTM A 53/A 53M, Type E, Grade B, Schedule 40, galvanized steel, plain ends.
- B. Cast-Iron Pipe Sleeves: Cast or fabricated "wall pipe," equivalent to ductile-iron pressure pipe, with plain ends and integral waterstop, unless otherwise indicated.

2.2 SLEEVE SEALS

- A. Description: Modular sealing device, designed for field assembly, to fill annular space between sleeve and raceway or cable.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1) Advance Products & Systems, Inc.
 - 2) Calpico, Inc.
 - 3) Metraflex Co.
 - 4) Pipeline Seal and Insulator, Inc.
 - 5) Or Approved Equal

2. Sealing Elements: EPDM interlocking links shaped to fit surface of cable or conduit. Include type and number required for material and size of raceway or cable.

2.3 GROUT

- A. Nonmetallic, Shrinkage-Resistant Grout: ASTM C 1107, factory-packaged, nonmetallic aggregate grout, noncorrosive, non-staining, mixed with water to consistency suitable for application and a 30-minute working time.

2.4 TOUCH UP PAINT

- A. For Equipment: Equipment manufacturer's paint selected to match installed equipment finish.
- B. Galvanized Surfaces: Zinc rich paint recommended by item manufacturer.

2.5 ACCESS DOOR IN FINISHED CONSTRUCTION

- A. Access doors as required for operation and maintenance of concealed equipment, valves, controls, etc. will be provided by another trade.
 1. This Trade is responsible for access door location, size and its accessibility to the outlet box, junction box, or equipment being served.
 2. Coordinate and prepare a location, size, and function schedule of access doors required and deliver to a representative of the installing trade.
 3. Access doors are of ample size, minimum of 16 inches x 16 inches (40 cm. x 40 cm.).

PART 3- EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 COMMON REQUIREMENTS FOR ELECTRICAL INSTALLATION

- A. Comply with NECA 1.
- B. Measure indicated mounting heights to bottom of unit for suspended items and to center of unit for wall-mounting items.
- C. Headroom Maintenance: If mounting heights or other location criteria are not indicated, arrange and install components and equipment to provide maximum possible headroom consistent with these requirements.
- D. Equipment: Install to facilitate service, maintenance, and repair or replacement of components of both electrical equipment and other nearby installations. Connect in such a way as to facilitate future disconnecting with minimum interference with other items in the vicinity.

- E. Right of Way: Give to piping systems installed at a required slope.

3.3 ROUGH-IN

- A. Verify final locations for rough ins with field measurements and with the requirements of the actual equipment to be connected.

3.4 SLEEVE INSTALLATION FOR ELECTRICAL PENETRATIONS

- A. Electrical penetrations occur when raceways, cables, wireways, cable trays, or busways penetrate concrete slabs, concrete or masonry walls, or fire-rated floor and wall assemblies.
- B. Concrete Slabs and Walls: Install sleeves for penetrations unless core-drilled holes or formed openings are used. Install sleeves during erection of slabs and walls.
- C. Use pipe sleeves unless penetration arrangement requires rectangular sleeved opening.
- D. Fire-Rated Assemblies: Install sleeves for penetrations of fire-rated floor and wall assemblies unless openings compatible with firestop system used are fabricated during construction of floor or wall.
- E. Cut sleeves to length for mounting flush with both surfaces of walls.
- F. Extend sleeves installed in floors 2 inches (50 mm) above finished floor level.
- G. Size pipe sleeves to provide 1/4-inch (6.4-mm) annular clear space between sleeve and raceway or cable, unless indicated otherwise.
- H. Seal space outside of sleeves with grout for penetrations of concrete and masonry
- I. Promptly pack grout solidly between sleeve and wall so no voids remain. Tool exposed surfaces smooth; protect grout while curing.
- J. Interior Penetrations of Non-Fire-Rated Walls and Floors: Seal annular space between sleeve and raceway or cable, using joint sealant appropriate for size, depth, and location of joint. Comply with requirements in Division 07 Section "Joint Sealants".
- K. Fire-Rated-Assembly Penetrations: Maintain indicated fire rating of walls, partitions, ceilings, and floors at raceway and cable penetrations. Install sleeves and seal raceway and cable penetration sleeves with firestop materials. Comply with requirements in Division 07 Section "Penetration Firestopping".
- L. Roof-Penetration Sleeves: Seal penetration of individual raceways and cables with flexible boot-type flashing units applied in coordination with roofing work.

3.5 SLEEVE-SEAL INSTALLATION

- A. Install to seal exterior wall penetrations.

- B. Use type and number of sealing elements recommended by manufacturer for raceway or cable material and size. Position raceway or cable in center of sleeve. Assemble mechanical sleeve seals and install in annular space between raceway or cable and sleeve. Tighten bolts against pressure plates that cause sealing elements to expand and make watertight seal.

3.6 FIRESTOPPING

- A. Apply firestopping to penetrations of fire-rated floor and wall assemblies for electrical installations to restore original fire-resistance rating of assembly. Firestopping materials and installation requirements are specified in Division 07 Section "Penetration Firestopping."

3.7 FOUNDATIONS

A. General

- 1. All equipment, including but not limited to Switchgear, and Switchboards, are provided with foundations.
- 2. Each piece of equipment is set on a concrete base minimum 4 inches (10 cm.) high and extending 3 inches (8 cm.) beyond the equipment in all directions. Bases are integrally keyed to structural slab.

3.8 REFINISHING AND TOUCH UP PAINTING

- A. Clean damaged and disturbed areas and apply primer, intermediate, and finish coats to suit the degree of damage at each location.
- B. Follow paint manufacturer's written instructions for surface preparation and for timing and application of successive coats.
- C. Restore damage to galvanized finishes with zinc rich paint recommended by manufacturer.

3.9 FIELD QUALITY CONTROL

- A. Inspect installed components for damage and faulty work, including the following:
 - 1. Touch up painting.

3.10 CLEANING AND PROTECTION

- A. On completion of installation, including outlets, fittings, and devices, inspect exposed finish. Remove burrs, dirt, paint spots, and construction debris.
- B. Protect equipment and installations and maintain conditions to ensure that coatings, finishes, and cabinets are without damage or deterioration at time of Substantial Completion.

END OF SECTION 26 05 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 05

SELECTIVE DEMOLITION FOR ELECTRICAL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes: Selective Demolition for Electrical

1.3 GENERAL REQUIREMENTS

- A. Work of this section must be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this Section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.4 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 26 05 00 "Common Work Results for Electrical".

1.5 SYSTEM INTERRUPTIONS

- A. The existing Bomb Squad Compound will be occupied and in operation during the performance of the Work.
 - 1. When necessary to temporarily disconnect any existing feeder or branch circuit supplying occupied facilities, confer with the Commissioner and schedule a mutually agreeable period of interruption.
 - 2. Where replacement, relocation or modification of existing equipment is indicated, provide and maintain temporary feeders, connections, circuit protection, and any other materials and appurtenances required to maintain services to occupied areas.
- B. No work must be left incomplete, nor any hazardous situation created, which will affect the life or safety of the public and/or building occupants. At no time must the work interfere with or cut off any of the existing services without the Commissioner's prior written permission. Do not tamper with fire protection devices including covering smoke detectors or turning off sprinkler valves. Work that may cause a trouble or alarm condition on the fire alarm system or sprinkler system (dust, sprinkler flow, heat, electrical work, etc.) must be performed only after temporarily shutting down the respective life safety system. Shut downs must be arranged and scheduled at least 24 hours in advance and coordinated with the Commissioner.

- C. The City of New York reserves the right to operate existing electrical and mechanical equipment not included in this work, and to perform required servicing and repairs to same, at all times.
- D. The work indicated and/or specified must be carried out with a minimum of interference to the established operations of the compound.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Sections 01 40 00 "Quality Requirements"

PART 2 - PRODUCTS

2.1 GENERAL

- A. Products and materials furnished for the work of this section must comply with Division 26 Specifications.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXISTING ELECTRIC WORK AND REMOVALS

- A. It is the intent of these specifications to remove existing wiring in the existing building and grounds and replace with new. Existing conduit must be reused in place only where indicated on the drawings or with specific approval of the Commissioner.
- B. Remove, reroute or relocate any conduit, wiring, lighting fixtures, outlets, and other electrical items that are laid bare in the course of, or interfere with, the alterations. Remove exposed outlets, conduit and branch circuit work which interfere with the alterations.
- C. Compare the plans with the existing conditions to determine the amount of work affected. Remove unused exposed circuit work, outlets, fixtures and the like not required by the alterations.
- D. Materials to be removed and not reinstalled under this Division of the Work, unless otherwise indicated, must become the property of the Contractor and must be removed from the site.
- E. Feeders and branch circuits to be removed: conductors and cables must be completely removed back to their source. Exposed or accessible conduits must be removed completely; conduits embedded in concrete or masonry must be cut off flush and the surface patched smooth and level.

- F. Existing low voltage wiring, telecommunications and/or data systems wiring, fire alarm wiring, and security system wiring not scheduled to be reused must be removed in its entirety as required by NEC Articles 640, 645, 725, 760, 770, 800, 820, and 830. Wiring must not be abandoned and left in place.

3.3 DISPOSAL OF REMOVED MATERIALS

- A. Removed materials must be disposed of using licensed carting service.
- B. Hazardous materials including polychlorinated biphenyl (PCB) substances as found in transformers, switchgear, lighting ballasts, mercury contaminated materials as found in fluorescent lamps, and the like must be disposed of by an EPA approved, licensed disposal service. Contractor must obtain and have on file, waste disposal manifest and receipts stating how and where the waste was disposed of or converted as follows:
 - 1. Fluorescent light ballasts must be collected and disposed of as hazardous waste containing PCB's unless expressly labeled "No PCB's".
 - 2. Fluorescent lamps must be collected and disposed of as hazardous waste containing mercury.
 - 3. Electrical transformers are located within the project. If work involves draining of the oil from the transformer(s), the oil must be assumed to be PCB contaminated until testing proves otherwise.
 - 4. Room temperature controlling thermostats that contain mercury switches must be collected and disposed of as hazardous waste containing mercury.
- C. The work specified under this section specifically excludes the removal, sealing and/or patching of hazardous materials. This includes but is not limited to asbestos, PCBs and/or any other material having been designated by the Environmental Protection Agency as a hazardous material. If this contractor finds anything which is suspected of being a hazardous material, it should be immediately brought to the Commissioner's attention.

END OF SECTION 26 05 05

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 05 10

ELECTRICAL TESTING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Electrical Testing Requirements

1.3 DESCRIPTION

- A. General - The Contractor must completely test and inspect all systems in accordance with the specifications and drawings. The Contractor must certify that all systems are in complete working order prior to turning over to the City of New York.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

1.6 GENERAL TESTING

- A. It will be the responsibility of this Contractor to furnish all testing equipment and labor necessary to perform the following tests.
1. After wires or cables are in place, but before being connected to devices and equipment, the system must be tested for shorts, opens, intentional and unintentional grounds by means of wires in conduit that are shorted or unintentionally grounded must be replaced.
 2. A voltage test must be made on the last outlet of each branch circuit and the potential drop must not exceed 2.5%. Voltage drops for panel and large feeders must not exceed 2.5%, hence the total voltage drop for a feeder and any branch circuit must not exceed 5% of the service voltage. The test must be made under design load or its equal.
 3. Any wiring device, or electrical apparatus in this contract, if grounded or shorted on an integral "line" part, must be removed and the problem rectified.
 4. When required, complete test and inspection records must be made and incorporated into a report for each piece of equipment tested. All readings taken must be recorded. Four (4) copies must be submitted to the Commissioner for approval.

5. All tests must be conducted in the presence of Commissioner.

1.7 ELECTRICAL INSPECTION

- A. The Contractor must conspicuously attach a "Safety Tag" to the disconnection device of each circuit, receptacle, machine tool, plant equipment or utility channel prior to electrical connection.
- B. Upon completion of the work, the Contractor must certify, by checking the inspection column of the Safety tag and signing, that the work was inspected and completed in accordance with these Specifications and is safe to energize. All testing and troubleshooting of the construction work must be done by the Contractor prior to completing the safety tag.
- C. Indicate in the "comment" section of the Safety Tag, all abnormal installations or items that require further attention by maintenance or another trade.
- D. Prior to City of New York accepting an installation as complete, all items on the Safety Tag must be satisfied and accepted by signature of Commissioner.
- E. The New York City Building Department must inspect work. Furnish the original Certificate of inspection to the Commissioner.
 - 1. Temporary inspection of electrical work for temporary construction power for the job site and Contractor's trailers requiring power.
 - 2. Temporary inspection of building primary and secondary power systems, before energizing building permanent power.
 - 3. Final inspection of the complete electrical system, submitting the final payment requisition at end of project.
- F. The Contractor must assist the Commissioner during the walk-through. Furnish a satisfactorily completed Pre-Occupancy Safety Checklist to the Commissioner.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT AND MATERIALS

- A. The Contractor must provide all testing instruments, equipment and all materials, connections etc. required to perform tests in accordance with these specifications.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 WIRING TEST

- A. The wiring and cable tests must be made before any circuits, main switches, motors, transformers, or feeders are energized.
- B. Tests must be made for continuity, identification and absence of shorts and grounds for each

conductor. Both ends of a given conductor must be identified alike. Before circuit terminal connections are made, continuity and identification of wiring must be checked by means of a DC test device using a bell, light, meter, or buzzer.

C. Insulation Resistance (IR) tests must be made using Meggers at the following values:

1. 208Y/120 Volt Wiring at 500 Volts DC

3.3 LIGHTING TEST

A. Check all lighting fixtures for proper operation. All Contractor supplied fixtures to be 100% operable at no additional cost to the City of New York.

3.4 MOTOR TEST

- A. Division 23 trade to perform tests in coordination with Electrical trade.
- B. All 208/120V motors must be "spot tested" with 500V DC in a similar manner. The minimum resistance to ground must be 2000 meg-ohm (corrected to 20 degrees C).

3.5 PANELBOARD TESTS

A. Test all equipment to be operated on the 208/120V system at 500V DC prior to connecting feeders. A minimum insulation resistance of 2000 meg-ohms must be obtained between all phases and between phase and neutral, and phase and ground.

3.6 SPOT TEST

A. "Spot Test" mentioned in this section must be interpreted as the specific test method of obtaining insulation resistance by applying indicated test voltage for 60 seconds to the equipment or wiring being tested.

3.7 CONTROL WIRING/OUTLET TEST

- A. Control wiring must perform the function as noted in operation methods and/or included schematics and single line diagrams. Proper operation will be verified by Commissioner.
- B. All 120-volt outlets must be tested with a Daniel Woodhead Cat. No. 1750 and 1760 tester under the supervision of the Project Coordinator. Minimum acceptable tension is 4 oz. for NEMA 5-15R, and 5-20R, 6-15R, 6-20R, 7-15R, 7-20R, 14-15R, 14-20R, 15-15R and 15-20R receptacles.

3.8 CERTIFICATION

- A. Assist the Commissioner during the Pre-Occupancy Checklist walk-through.
- B. Test all systems for proper operation, code compliance, and standards compliance. (Note: Lighting fixtures, devices, and panels must be tested in a manner that does not affect the equipment', components', or accessories' performance.)
- C. The Contractor must co-sign a certified letter attesting to the completing of testing and submit two (2) copies of said signed and certified letter each to the Commissioner.

- D. The Contractor and Manufacturer's Representative must co-sign a certified letter attesting to the completion of testing of special systems, such as dimming systems, emergency power systems and fire alarm systems. Submit two (2) copies of said signed and certified letter each the Commissioner.
- E. Perform testing at a time convenient to Convenient to the Commissioner. The Contractor must pay costs associated with the scheduling, performance, and completion of the testing.

END OF SECTION 26 05 10

SECTION 26 05 13

MEDIUM-VOLTAGE CABLE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes: Medium-Voltage Cable.

1.3 GENERAL REQUIREMENTS

- A. Work of this section must be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.4 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 26 05 00 "Common Work Results for Electrical".
- B. See other Division 26 sections for requirements of medium voltage equipment and systems not included herein.

1.5 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components must conform to state and local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Commissioner's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided must be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.6 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Submit manufacturers' technical product data for the following:

1. Cable construction specs and data.
2. Warranty.
3. Installation instructions and recommendations.
4. Splicing equipment and kits.
5. Terminating equipment and kits.
6. Manufacturer's factory test data.
7. Recommended field test procedures.

- C. After installation and field acceptance testing, submit certified field test reports.
- D. Submit sample length of cable for review to include complete jacket labeling and not less than 16-inches long.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Condition 01 40 00 "Quality Requirements"
- B. Installer: Engage a cable splicer, trained and certified by splice material manufacturer, to install, splice, and terminate medium-voltage cable.
- C. Testing Agency Qualifications: An independent agency, with the experience and capability to conduct the testing indicated, that is a member company of the International Electrical Testing Association or is a nationally recognized testing laboratory (NRTL) as defined by OSHA in 29 CFR 1910.7, and that is acceptable to the utility company and electrical inspector.
- D. Testing Agency's Field Supervisor: Person currently certified by the International Electrical Testing Association or the National Institute for Certification in Engineering Technologies to supervise on-site testing specified in Part 3.
- E. Source Limitations: Obtain cables and accessories through one source from a single manufacturer.
- F. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, and marked for intended use.
- G. Comply with IEEE C2 and NFPA 70.

1.8 WARRANTY

- A. The manufacturer must warrant that the cable to be furnished is of first class material and workmanship throughout, and that cable is free from defects in design, material or workmanship, for a period of 40 years when installed, terminated and operated within acceptable industry practices. The manufacturer must agree to replace any defective section of cable free of charge, and extend the same warranty on the replacement cable.

PART 2 - PRODUCTS

2.1 MEDIUM VOLTAGE CABLE (15 kV)

- A. This specification covers single conductor shielded power cable, suitable for installations in underground ducts, conduits, and direct burial in wet locations.

B. Industry Standards

1. ICEA S-93-639
2. NEMA WC 74
3. AEIC CS-8
4. UL-1072 (For Type MV-105 Cables)
5. ASTM, B-496 – Compact Strand
6. IEEE 383

C. Conductor

1. Uncoated copper, Type MV-105, Class B compact round, concentric lay, minimum 98% conductivity at 20°C.

D. Conductor Screen

1. Extruded layer of semiconducting ethylene-propylene rubber thermosetting compound, or high-dielectric stress control layer.

E. Insulation

1. Thermosetting compound of ethylene-propylene rubber (EPR), extruded over conductor screen.
2. Discharge, ozone, and heat-resistant, rated 105°C for normal operation.
3. Thickness: 133% thickness.

F. Insulation Screen

1. Layer of semi-conducting ethylene-propylene rubber thermosetting compound extruded over the insulation.

G. Shielding: Copper tape or solid corrugated copper wires, helically applied over semiconducting insulation shield.

H. Concentric Neutral

1. The concentric neutral must consist of bare copper wires, meeting the requirements of ASTM B-3, spirally wound over the insulation shielding with uniform spacing between wires, 1/3 of phase capacity for single phase and full capacity for three phase.

I. Overall Jacket

1. Provide low smoke, zero halogen (LSZH) thermosetting jacket complying with ICEA T-33-655 and ASTM E662. The jacket must be free stripping from the insulation screen and must be printed with the following legends:

- a. Manufacturer's Name and Cable Type (Trade Name)
- b. Conductor Size
- c. CU (Conductor Material)
- d. Voltage
- e. 133%
- f. Insulation Thickness
- g. Sequential Footage Number (as applicable)
- h. Year of Manufacture

J. Production Tests

1. Conductor electrical resistance requirements, insulation resistance, and high voltage tests must be in accordance with standards.
2. Voltage withstand, tested for 5 minutes minimum, must be 47 kV AC and 94 kV DC, minimum.

K. Shipping

1. Cable reels must be shipped in an upright position supported by both outside flanges.
2. Water tight seals must be applied to cable ends to prevent the entrance of moisture during transit, storage and installation.

L. Manufacturer:

1. Kerite
2. Okonite
3. General Cable
4. Or approved equal

2.2 SPLICING EQUIPMENT AND KITS

- A. Comply with IEEE 404; provide type as recommended by cable or splicing kit manufacturer for the application.
- B. Splice kits must be pre-molded cold shrink EPDM rubber, waterproof, capable of passing ANSI C119.1-1986 water immersion tests, heat-shrink type or approved equal, compatible with the cable construction, dimensions, and materials. Taped splices are not acceptable.
- C. Manufacturers: 3M Electrical Products Division, RTE Cooper Power Systems or Thomas & Betts Corporation Elastimold or approved equal.

2.3 TERMINATIONS

- A. Type recommended by cable manufacturer to type of cable and installation conditions, including orientation.
- B. Class 1 (outdoors) or Class 2 (indoors) per IEEE 48. Class 3 is not acceptable.

- C. Manufacturers: 3M Electrical Products Division, RTE Cooper Power Systems or Thomas & Betts Corporation Elastimold or approved equal.

2.4 SEPARABLE INSULATED CONNECTORS

- A. Description: Modular system, complying with IEEE 386, with disconnecting, single pole cable terminators and with matching, stationary, plug-in, dead-front terminals designed for cable voltage and for sealing against moisture.
- B. Load-Break Cable Terminators: Elbow-type units with 200 ampere load make/break and continuous current rating; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body; capacitance coupled.
- C. Dead-Break Cable Terminators: Elbow-type units with 600 ampere continuous current rating; designed for de-energized disconnecting and connecting; coordinated with insulation diameter, conductor size, and material of cable being terminated. Include test point on terminator body; capacitance coupled.
- D. Dead-Front Terminal Junctions: Modular bracket-mounted groups of dead-front stationary terminals that mate and match with above cable terminators. Two-, three-, or four-terminal units as indicated, with fully rated, insulated, watertight conductor connection between terminals and complete with grounding lug, manufacturer's standard accessory stands, stainless-steel mounting brackets, and attaching hardware.
 - 1. Protective Cap: Insulating, electrostatic-shielding, water-sealing cap with drain wire.
 - 2. Portable Feed-Through Accessory: Two-terminal, dead-front junction arranged for removable mounting on accessory stand of stationary terminal junction.
 - 3. Grounding Kit: Jumpered elbows, portable feed-through accessory units, protective caps, test rods suitable for concurrently grounding three phases of feeders, and carrying case.
 - 4. Standoff Insulator: Portable, single dead-front terminal for removable mounting on accessory stand of stationary terminal junction. Insulators suitable for fully insulated isolation of energized cable-elbow terminator.
- E. Test-Point Fault Indicators: Applicable current-trip ratings and arranged for installation in test points of load-break separable connectors, and complete with self-resetting indicators capable of being installed with shotgun hot stick and tested with test tool.
- F. Tool Set: Shotgun hot stick with energized terminal indicator, fault-indicator test tool, and carrying case.

2.5 FAULT INDICATORS

- A. Indicators: Automatically resetting time delay, current type fault indicator with inrush restraint feature, arranged to clamp to cable sheath and provide a display after a fault has occurred in cable. Instrument must not be affected by heat, moisture, and corrosive conditions and must be recommended by manufacturer for installation conditions.

- B. Manufacturer: as per ConEd standards.

2.6 ARC-PROOFING MATERIALS

- A. Tape for First Course on Metal Objects: 10-mil- (250-micrometer-) thick, corrosion-protective, moisture-resistant, PVC pipe-wrapping tape.
- B. Arc-Proofing Tape: Fireproof tape, flexible, conformable, intumescent to 0.3 inch (8 mm) thick, compatible with cable jacket.
- C. Glass-Cloth Tape: Pressure-sensitive adhesive type, 1/2 inch (13 mm) wide.
- D. Manufacturer: 3M Scotch 77 Fire Retardant Arc Proofing Tape with banding of Scotch 69 Glass Cloth Electrical Tape; Plymouth-Bishop 53 Plyarc Arc and Fire Proofing Tape; Industrial Energy Products “Hot-Stop” XLN Tape; A&M Tape Products, or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF MV CABLES AND ACCESSORIES

- A. Install cables according to IEEE 576.
- B. Pull Conductors: Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
 - 1. Where necessary, use manufacturer-approved pulling compound or lubricant that will not deteriorate conductor or insulation.
 - 2. Use pulling means, including fish tape, cable, rope, and basket-weave cable grips that will not damage cables and raceways. Do not use rope hitches for pulling attachment to cable.
- C. Install exposed cables parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.
- D. Support cables according to Division 26 Section 26 05 00 “Common Work Results for Electrical”
- E. In manholes, handholes, pull boxes, junction boxes, and cable vaults, train cables around walls by the longest route from entry to exit and support cables at intervals adequate to prevent sag.
- F. Install cable splices at pull points and elsewhere as indicated; use standard kits.
- G. Install terminations at ends of conductors and seal multiconductor cable ends with standard kits.
- H. Install separable insulated-connector components as follows:

1. Protective Cap: At each terminal junction, with one on each terminal to which no feeder is indicated to be connected.
 2. Portable Feed-Through Accessory: Three.
 3. Standoff Insulator: Three.
- I. Arc Proofing: Unless otherwise indicated, arc proof medium-voltage cable at locations not protected by conduit, cable tray, direct burial, or termination materials. In addition to arc-proofing tape manufacturer's written instructions, apply arc proofing as follows:
1. Clean cable sheath.
 2. Wrap metallic cable components with 10-mil (250-micrometer) pipe-wrapping tape.
 3. Smooth surface contours with electrical insulation putty.
 4. Apply arc-proofing tape in one half-lapped layer with coated side toward cable.
 5. Band arc-proofing tape with 1-inch- (25-mm-) wide bands of half-lapped, adhesive, glass-cloth tape 2 inches (50 mm) o.c.
- J. Install fault indicators on each phase where indicated.
- K. Ground shields of shielded cable at terminations, splices, and separable insulated connectors. Ground metal bodies of terminators, splices, cable and separable insulated-connector fittings, and hardware.
- L. Install cables of less than 500 foot length without intermediate splices unless otherwise indicated.
- M. Install #4/0 XHHW insulated copper ground conductor with each circuit.
- N. Prior to application of termination and splice kits, verify that sufficient space is available in the box, enclosure, or manhole enclosing each such termination or splice.
- O. Label covers of pullboxes and junction boxes for systems operating over 600 volts with readily visible lettering at least ½-inch high warning "DANGER HIGH VOLTAGE KEEP OUT."
- P. Tag cables where they terminate, splice, tap, enter, and leave manholes, handholes, vaults, switchgear, substations or boxes. Tags must be brass and approximately 1-1/4" square and 3/32" thick. The marking must identify the number and size of the conductors in the cable, date, manufacturer, circuit number, voltage, and phase. Minimum ¼ inch indented lettering and fastened with non-ferrous metal bands approximately 3/8" wide.

3.3 FIELD QUALITY CONTROL

- A. Testing: Engage a qualified testing and inspecting agency to perform the following field tests and inspections and prepare test reports:
1. Perform each visual and mechanical inspection and electrical test stated in InterNational

Electrical Testing Association (NETA) Acceptance Testing Specifications (ATS). Certify compliance with test parameters.

2. After installing medium-voltage cables and before electrical circuitry has been energized, test for compliance with requirements.
 3. Remove and replace malfunctioning units and retest as specified above.
- B. During or immediately after installation of cables and prior to energizing, conduct acceptance insulation testing using high voltage DC methods. Measure leakage current and insulation resistance applying a 15 minute test duration.
- C. Infrared Scanning: After Substantial Completion, but not more than two months after Final Acceptance, perform an infrared scan of terminations, splices, and modular connections. Make connections accessible to a portable scanner and perform scanning during a period of normal working load as advised by the Commissioner.
1. Follow-up Infrared Scanning: Perform one additional follow-up infrared scan at same locations as before, 11 months after date of Substantial Completion.
 2. Instrument: Use an infrared scanning device designed to measure temperature or detect significant deviations from normal values. Provide calibration record for scanning device used for electrical distribution equipment.
 3. Record of Infrared Scanning: Prepare a certified report identifying all connections checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

END OF SECTION 26 05 13

SECTION 26 05 19

LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. This Section includes building wires and cables and associated splices, connectors, and terminations for wiring systems rated 600 volts and less.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: for each type of product indicated.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Listing and Labeling: Provide products specified in this Section that are Underwriters Laboratories listed and labeled.
 - 1. The Terms "Listed and Labeled": As defined in the "National Electrical Code," Article 100.
- C. Comply with NFPA 70, as amended by state and local codes.

1.5 WARRANTY

- A. The power conductors shall be warranted for 10 years from substantial completion.

PART 2 - PRODUCTS

2.1 CONDUCTORS AND CABLES

- A. Manufacturers:
 - 1. American Insulated Wire Corp.; a Leviton Company.
 - 2. General Cable Corporation.

3. Senator Wire & Cable Company.
 4. Southwire Company.
 5. Belden, Division Cooper Industries.
 6. Cable & Wire Division, AT&T.
 7. Pyrotenax.
 8. Or Approved Equal
- B. Refer to Article 3.2 "Wire and Insulation Applications" for insulation type, cable construction, and ratings.
1. Conductor Material: Copper complying with NEMA WC 5 or 7; solid conductor for No. 10 AWG and smaller, stranded for No. 8 AWG and larger.
 2. Conductor Insulation Types: Type THHN, THWN, XHHW complying with NEMA WC 5 or 7.
- C. Where required by code, or where indicated on the drawings, feeders and circuitry are 2- hour rated cable or cable system, except where enclosed within 2-hour rated construction indicated on the architectural drawings.

2.2 CONNECTORS AND SPLICES

- A. Manufacturers:
1. AFC Cable Systems, Inc.
 2. AMP Incorporated/Tyco International.
 3. Hubbell/Anderson.
 4. O-Z/Gedney; EGS Electrical Group LLC.
 5. 3M Company; Electrical Products Division.
 6. Or Approved Equal
- B. Description: Factory-fabricated connectors and splices of size, ampacity rating, material, type, and class for application and service indicated.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 WIRE AND INSULATION APPLICATIONS

- A. Utilize copper conductors with THWN, THHN or XHHW insulation, except provide THHW-2, THWN-2 or XHHW-2 insulation for conductors 1/0 and larger in "wet" locations. Conductors utilized in underground installations are UL Listed for use in wet locations. Conductors are run in raceways as described in Section 26 05 33 "Raceways and Boxes for Electrical Systems". Type THHW and THHW-2 are not utilized where excluded by conduit sizing. Type THWN are not utilized for connection to 100% rated overcurrent devices.
- B. In general, cable ampacities are based on a 60 degree C rating for cables #1 AWG and smaller and on a 75 degree C rating for larger cables.
- C. Low voltage circuits intended for the distribution of voice or data utilize communications cables (complying with requirements of Article 800 of the National Electrical Code) having characteristics as follows:
 - 1. Cables are of a fluoropolymer type having adequate fire-resistant and low-smoke producing characteristics and are U.L. listed for plenum use (Type CMP), except that where run in conduit, they may be U.L. type CM.
 - 2. Refer to Section 28 46 00 "Fire Detection and Alarm" for firealarm system wiring.

3.3 INSTALLATION

- A. Conceal cables in finished walls, ceilings and floors unless otherwise indicated.
- B. Use manufacturer-approved pulling compound or lubricant where necessary; compound used must not deteriorate conductor or insulation. Do not exceed manufacturer's recommended maximum pulling tensions and sidewall pressure values.
- C. Use pulling means including fish tape, cable, rope, and basket-weave wire/cable grips, that will not damage cables or raceway.
- D. Install exposed cables, parallel and perpendicular to surfaces of exposed structural members and follow surface contours where possible.
- E. Support cables according to Section 26 05 00 "Common Work results for Electrical".
- F. Seal with firestopping around cables penetrating fire-rated elements.
- G. Identify wires and cables according to Section 26 05 53 " Identification for Electrical Work " and Section 26 05 29 "Hangers and Supports for Electrical Systems".

3.4 CONNECTIONS

- A. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.
- B. Make splices and taps that are compatible with conductor material and that possess equivalent or better mechanical strength and insulation ratings than unspliced conductors.
- C. Maintain all splices and joints in removable cover boxes or cabinets where they may be easily inspected.
- D. Locate each completed conductor splice or joint in the outlet box, junction box, or pull box containing it, so that it is accessible from the removal cover side of the box.
- E. Join solid conductors #8 AWG and smaller by securely twisting them together and soldering, or by using insulated coiled steel spring "wire nut" type connectors. Exclude "wire nuts" employing non-expandable springs. Terminate conductors #8 AWG and smaller by means of a neat and fast holding application of the conductors directly to the binding screws or terminals of the equipment or devices to be connected. Terminals and connectors are U.L. approved specifically for the application.
- F. Join, tap and terminate stranded conductors #6 AWG and larger by means of solder sleeves, taps and lugs with applied solder or by means of pressure indent type connectors, or mechanical connectors utilizing ball tipped set screws. Apply pressure indent type connectors, utilizing tools manufactured specifically for the purpose and having features preventing their release until the full pressure has been exerted on the lug or connector. Factory installed equipment or device terminals are of types UL approved specifically for the application.
- G. Except where wire nuts are used, build up insulation over conductor joints to a value equal both in thickness and dielectric strength to that of the factory applied conductor insulation. Insulation of conductor taps and joints are by means of half-lapped layers of rubber tape, with an outer layer of friction tape; by means of half-lapped layers of approved plastic electric insulating tape; or by means of split insulating casings manufactured specifically to insulate the particular connector and conductor, and fastened with stainless steel or non-metallic snaps or clips.
- H. Exclude splicing procedures for neutral conductors in lighting and appliance branch circuitry which utilize device terminals as the splicing points.
- I. Exclude joints or terminations utilizing solder in any conductors used for grounding or bonding purposes.
- J. Exclude all but solder or pressure indent type joints in conductors used for signaling or communications purposes.

3.5 INSTALLATION OF CIRCUITRY FOR MISCELLANEOUS LOW VOLTAGE SYSTEMS

A. Comply with requirements described in applicable subsections of this Section.
Note the following circuitry requirements for low voltage systems:

1. Wiring for miscellaneous low voltage systems may be run without conduit - subject to the approval by Commissioner - except where prohibited by other sections of these specifications or by indications on the drawings.
2. Where conduit is required, it is steel electric metallic tubing (EMT), except that it is galvanized intermediate steel conduit where located within 8 feet (2.4 m) of the floor in mechanical spaces (or is otherwise exposed to mechanical damage).
3. Wires and cables have characteristics - in compliance with Articles 725 and/or 800 (as applicable) of the National Electrical Code - as described elsewhere in the specifications or drawings for this project, and are U.L. listed in accordance therewith.
4. Where wires and cables are permitted to be run without conduit, they are independently supported from the building structure or ceiling suspension systems at intervals not exceeding four feet on center, utilizing cable supports specifically approved for the purpose. Wires and cables do not rest on or depend on support from suspended ceiling media (tiles, lath, plaster, as well as splines, runners or bars in the plane of the ceiling), nor are they supported from pipes, ducts or conduits. Where cables are bundled together, separate bundles are provided separately for each type of cabling and separately for each independent system. Bundling and/or supporting ties are of a type suitable for use in a ceiling air handling plenum regardless of whether or not installed in a plenum.
5. Cables are tagged or labeled at each termination point and in each intermediate junction box, pull box or cabinet through which they pass.
6. Comply with applicable requirements for locating and routing circuitry, for installing circuitry, and for fire-stopping as described in other sub-section of this Section.

3.6 FIELD QUALITY CONTROL

A. Testing: Perform the following field quality-control testing:

1. After installing conductors and cables and before electrical circuitry has been energized, test for compliance with requirements.
2. Perform each electrical test and visual and mechanical inspection stated in NETA ATS, Section 7.3.1. Certify compliance with test parameters.

B. Test Reports: Prepare a written report to record the following:

1. Test procedures used.
2. Test results that comply with requirements.
3. Test results that do not comply with requirements and corrective action taken to achieve compliance with requirements.

END OF SECTION 26 05 19

SECTION 26 05 26

GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. This Section includes grounding of electrical systems and equipment. Grounding requirements specified in this Section may be supplemented in other sections of these Specifications.

1.3 RELATED SECTIONS

- A. Division 26 05 13 Section "Medium Voltage Cables."
- B. Division 26 05 19 Section "Low-Voltage Electrical Power Conductors."
- C. Division 26 05 33 Section "Raceways and Boxes for Electrical Systems."

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product Data: For each type of product indicated.
- C. Field Test Reports: Written reports specified in Part 3.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by Underwriters Laboratories, Inc.
 - 1. Comply with UL 467.
- C. Comply with NFPA 70, as amended by New York City Electrical Code.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
 - 1. Thomas & Betts, Electrical
 - 2. Erico Products, Inc.
 - 3. Ideal Industries, Inc.
 - 4. O-Z/Gedney Co.
 - 5. Or Approved Equal.

2.2 GROUNDING CONDUCTORS

- A. For insulated conductors, comply with Section 26 05 19 "Low-Voltage Electrical Power Conductors"
- B. Material: Copper.
- C. Equipment Grounding Conductors: Insulated with green-colored insulation.
- D. Grounding Electrode Conductors: Stranded cable.
- E. Underground Conductors: Bare, tinned, stranded, unless otherwise indicated.
- F. Bare Copper Conductors: Comply with the following:
 - 1. Solid Conductors: ASTM B 3.
 - 2. Assembly of Stranded Conductors: ASTM B 8.
 - 3. Tinned Conductors: ASTM B 33.
- G. Copper Bonding Conductors: As follows (except where otherwise indicated):
 - 1. Bonding Cable: 28 kcmil, 14 strands of No. 17 AWG copper conductor, 0.25-inch (6.4 mm) in diameter.
 - 2. Bonding Conductor: No. 4 or No. 6 AWG, stranded copper conductor.
 - 3. Bonding Jumper: Bare copper tape, braided bare copper No. 3/0 AWG conductors, terminated with copper ferrules; 1.625 inch (42 mm) wide and 1/16 inch (1.5 mm) thick.
 - 4. Tinned Bonding Jumper: Tinned-copper tape, braided copper No. 30 AWG conductors, terminated with copper ferrules; 1-5/8 inches (42 mm) wide and 1/26 inch (1.5 mm) thick.
- H. Grounding Bus: Bare, annealed copper bars of rectangular cross section, with insulators.

2.3 CONNECTOR PRODUCTS

- A. Comply with IEEE 837 and UL 467; listed for use for specific types, sizes, and combinations of conductors and connected items.

- B. Connectors: Bolted-pressure-type connectors, or compression type.
- C. Bolted Clamps: Heavy-duty type.
- D. Pressure Connectors: High-conductivity-plated units.
- E. Welded Connections: Exothermic-welded types, in kit form, and selected per manufacturer's written instructions for the specific types, sizes, and combinations of conductors and other items to be connected.

2.4 GROUNDING ELECTRODES

- A. Metal Underground Water Pipe: Metal, underground water pipe in direct contact with earth for at least 10-feet (3-meters) and electrically continuous from the points of connection of the electrode conductor and the bonding conductors. Interior metal water pipes located more than 5-feet from the building must not be used.
- B. Metal Frame of Building or Structure: Any of the following methods are deemed an acceptable means of making an earth connection through the metal frame of the building structure:
 - 1. At least 10-feet of a single structural metal member in direct contact with earth or encased in concrete which is in direct contact with earth.
 - 2. Structural metal frame is bonded to at least one of the grounding electrodes defined above.
 - 3. Other approved means of establishing a connection to earth.
- C. Electrodes Not Permitted for Grounding:
 - 1. Gas piping systems which are metal and underground.
 - 2. Aluminum electrodes.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 APPLICATION

- A. Equipment Grounding Conductor Application: Comply with New York City Electrical Code NEC Article 250 for sizes and quantities of equipment grounding conductors, except where specific types, larger sizes or more conductors are indicated.
 - 1. Use raceway as the equipment ground conductor where feasible and permitted by Code for the following:
 - a. Feeders and branch circuits except as otherwise indicated or as described elsewhere in this Section.
 - b. Feeders.

- c. Lighting circuits.
 - d. Receptacle circuits.
 - e. Single-phase motor or appliance branch circuits.
 - f. Three-phase motor or appliance branch circuits.
- B. Signal and Communications: For telephone, alarm, voice and data and other communication systems, provide a #4 AWG minimum green insulated copper conductor in raceway from the grounding electrode system to each service location, antenna terminal cabinet, wiring closet and central equipment location.
- C. The ground bus of switchboards switchgear must be connected to the main grounding electrode by means of insulated grounding electrode conductors run in intermediate metallic conduit and sized as per Code.
- D. The main grounding electrode must be an accessible point on the nearest metallic main water service pipe. Connection must be made on the street side of the main valve utilizing a ground clamp of a type specifically manufactured for the purpose. Bonding jumpers must be provided around the water meters (if provided) and around insulating joints and/or sections, utilizing conductors sized as per Code and run in IMC. Bond the structural steel to the grounding electrode system.
- E. The water pipe ground must be supplemented by an additional "made" electrode consisting of buried ground rods copper plates laid on 3 inch (75 mm) charcoal bed, and provided in sufficient quantity so as to have a measured resistance to ground of not more than 25 ohms. Establish a bonding connection from the "made" electrode consisting of green insulated conductors run in IMC and sized as per Code.
- F. Bond metallic conduits containing grounding electrode conductors and main bonding conductors to the ground bus service enclosure and/or grounding electrode at both ends of each run utilizing grounding bushings and jumpers. Bonding jumpers must be sized equal to the grounding electrode conductors.
- G. Provide grounding bonds for all metallic conduits of the light and power system which terminate at (or in pits below) distribution equipment for which a ground bus is specified. Accomplish this by equipping the conduits with bushings of the grounding type connected individually to the ground bus.
- H. Provide supplementary ground bonding to maintain continuity of the equipment and raceway grounding system as follows:
- 1. Bonding jumpers applied where wiring devices (receptacles and switches) are not equipped with approved self-grounding features. Include any necessary field modifications for termination of the bonding jumpers so as to ensure grounding continuity.
 - 2. Bonding jumpers applied to ensure that grounding continuity does not depend solely on the supporting screws fastening metallic enclosures together.

3. Include any necessary field modifications for termination of the bonding jumpers to ensure grounding continuity.
- I. Bond the reinforcing bars in concrete to the nearest grounding electrode.
 - J. The neutral of secondary winding of each low voltage (i.e., less than 600 volts) transformer must be grounded to the grounding electrode as specified hereinafter by means of an insulated grounding conductor sized as per Code and run in IMC. The neutral of each transformer must be bonded to the transformer enclosure by means of an insulated conductor sized as per code. If not, factory installed the jumper must be field installed within the transformer enclosure.
 - K. Where specifically noted on the drawings, or described hereinbefore in this Section, include insulated equipment and raceway grounding conductors run within the raceways. Where insulated equipment grounding conductors required for feeders have not been included in the quantities of conductors indicated on the drawings, incorporate such conductors in accordance with the following table. Adjust conduit sizing if required.

OCD AMPS	GROUNDING CONDUCTOR (CU)
15,20	#12
25-60	#10
70-100	#8
110-200	#4
225-400	*#2
500-600	*2 x #1
700-800	*2 x 1/0
1000	*3 X 2/0
1200	*4 X 3/0
1600	*5 X 4/0
2000	*6 X 250 KCMIL
2500	*7 X 350 KCMIL
* Adjust quantity (if needed) to match number of conduits in run.	

3.3 INSTALLATION

- A. General: Ground electrical systems and equipment according to NFPA 70, as amended by New York City Electrical Code requirements, except where Drawings or Specifications exceed such requirements.
- B. Grounding Conductors: Route along the shortest and straightest paths possible, except as otherwise indicated. Avoid obstructing access or placing conductors where they may be subjected to strain, impact, or damage.
- C. Metal Water Service Pipe: Provide insulated copper grounding conductors, sized as indicated, in conduit, from building's main service equipment, or grounding bus, to main metal water service entrances to building. Connect grounding conductors to main metal water service pipes by grounding-clamp connectors. Where a dielectric main water fitting is installed, connect grounding conductor to street side of fitting. Do not install a grounding jumper across dielectric fittings. Bond grounding-conductor conduit to conductor at each end.
- D. Water Meter Piping: Use braided-type bonding jumpers to electrically bypass water meters. Connect to pipe with grounding-clamp connectors.

3.4 CONNECTIONS

- A. General: Make connections so possibility of galvanic action or electrolysis is minimized. Select connectors, connection hardware, conductors, and connection methods so metals in direct contact will be galvanically compatible.
 - 1. Use electroplated or hot-tin-coated materials to assure high conductivity and to make contact points closer in order of galvanic series.
 - 2. Make connections with clean, bare metal at points of contact.
- B. Exothermic-Welded Connections: Use for connections to structural steel and for underground connections, except those at test wells. Comply with manufacturer's written instructions. Welds that are puffed up or that show convex surfaces indicating improper cleaning are not acceptable.
- C. Equipment Grounding-Wire Terminations: For No. 8 AWG and larger, use pressure-type grounding lugs. No. 10 AWG and smaller grounding conductors may be terminated with winged pressure-type connectors.
- D. Noncontact Metal Raceway Terminations: Where metallic raceways terminate at metal housings without mechanical and electrical connection to housing, terminate each conduit with a grounding bushing. Connect grounding bushings with a bare grounding conductor to grounding bus or terminal in housing. Bond electrically noncontinuous conduits at both entrances and exits with grounding bushings and bare grounding conductors, except as otherwise indicated.
- E. Tighten screws and bolts for grounding and bonding connectors and terminals according to manufacturer's published torque-tightening values. Where these requirements are not available, use those specified in UL 486A and UL 486B.

- F. Compression-Type Connections: Use hydraulic compression tools to provide correct circumferential pressure for compression connectors. Use tools and dies recommended by manufacturer of connectors. Provide embossing die code or other standard method to make a visible indication that a connector has been adequately compressed on grounding conductor.
- G. Moisture Protection: Where insulated grounding conductors are connected to grounding rods or grounding buses, insulate entire area of connection and seal against moisture penetration of insulation and cable.

3.5 FIELD QUALITY CONTROL

- A. Testing Agency: Engage an electrical testing organization to perform tests described below.
- B. Tests: Subject the completed grounding system to a Megger test at each location where a maximum ground-resistance level is specified, at service disconnect enclosure grounding terminal. Measure ground resistance not less than 2 full days after the last trace of precipitation, and without the soil being moistened by any means other than natural drainage or seepage and without chemical treatment or other artificial means of reducing natural ground resistance. Perform tests by the fall-of-potential method according to IEEE 81.
- C. Maximum grounding resistance must be 25 ohms.
- D. Excessive Ground Resistance: Where resistance to ground exceeds specified values, provide additional grounding to achieve required results.
- E. Report: Prepare test reports, certified by the testing organization, of ground resistance at each test location. Include observations of weather and other phenomena that may affect test results.
- F. Field Test Reports: Submit written test reports to include the following:
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

SECTION 26 05 29

HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section includes:
 - 1. Hangers and supports for electrical equipment and systems.
 - 2. Construction requirements for concrete bases.

1.3 PERFORMANCE REQUIREMENTS

- A. Engineering Services: Design supports for multiple raceways, including comprehensive engineering analysis by professional engineer licensed in the State of New York, using performance requirements and design criteria indicated.
- B. Design supports for multiple raceways capable of supporting combined weight of supported systems and its contents.
- C. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
- D. Rated Strength: Adequate in tension, shear, and pullout force to resist maximum loads calculated or imposed for this Project, with a minimum structural safety factor of five times the applied force.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For steel slotted support systems.
- C. Shop Drawings: Show fabrication and installation details and include calculations for the following:
 - 1. Trapeze hangers. Include Product Data for components.
 - 2. Steel slotted channel systems. Include Product Data for components.
 - 3. Equipment supports.
 - D. Welding certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 SUPPORT, ANCHORAGE, AND ATTACHMENT COMPONENTS

- A. Steel Slotted Support Systems: Comply with MFMA-4, factory-fabricated components for field assembly.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Allied Tube & Conduit.
 - b. Cooper B-Line, Inc.; a division of Cooper Industries.
 - c. ERICO International Corporation.
 - d. GS Metals Corp.
 - e. Thomas & Betts Corporation.
 - f. Unistrut; Tyco International, Ltd.
 - g. Or Approved Equal
- B. Raceway and Cable Supports: As described in NECA 1 and NECA 101.
- C. Conduit and Cable Support Devices: Steel hangers, clamps, and associated fittings, designed for types and sizes of raceway or cable to be supported.
- D. Support for Conductors in Vertical Conduit: Factory-fabricated assembly consisting of threaded body and insulating wedging plug or plugs for non-armored electrical conductors or cables in riser conduits. Plugs must have number, size, and shape of conductor gripping pieces as required to suit individual conductors or cables supported. Body must be malleable iron.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 APPLICATION

- A. Comply with NECA 1 and NECA 101 for application of hangers and supports for electrical equipment and systems except if requirements in this Section are stricter.
- B. Maximum Support Spacing and Minimum Hanger Rod Size for Raceway: Space supports for EMT, IMC, and RMC as required by NECA 1. Minimum rod size must be 1/4 inch in diameter.

3.3 SUPPORT INSTALLATION

- A. Comply with NECA 1 and NECA 101 for installation requirements except as specified in this Article.

- B. Raceway Support Methods: In addition to methods described in NECA 1, EMT, IMC, and RMC may be supported by openings through structure members, as permitted in NFPA 70.
- C. Strength of Support Assemblies: Where not indicated, select sizes of components so strength will be adequate to carry present and future static loads within specified loading limits. Minimum static design load used for strength determination must be weight of supported components plus 200 lb.
- D. Mounting and Anchorage of Surface-Mounted Equipment and Components: Anchor and fasten electrical items and their supports to building structural elements by the following methods unless otherwise indicated by code:
 - 1. To Wood: Fasten with lag screws or through bolts.
 - 2. To New Concrete: Bolt to concrete inserts.
 - 3. To Masonry: Approved toggle-type bolts on hollow masonry units and expansion anchor fasteners on solid masonry units.
 - 4. To Existing Concrete: Expansion anchor fasteners.
 - 5. Instead of expansion anchors, powder-actuated driven threaded studs provided with lock washers and nuts may be used in existing standard-weight concrete 4 inches thick or greater. Do not use for anchorage to lightweight-aggregate concrete or for slabs less than 4 inches thick.
 - 6. To Steel: Beam clamps (MSS Type 19, 21, 23, 25, or 27) complying with MSS SP-69
 - 7. To Light Steel: Sheet metal screws.
 - 8. Items Mounted on Hollow Walls and Nonstructural Building Surfaces: Mount cabinets, panelboards, disconnect switches, control enclosures, pull and junction boxes, transformers, and other devices on slotted-channel racks attached to substrate.

3.4 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
 - 1. Apply paint by brush or spray to provide minimum dry film thickness of 2.0 mils.
- B. Touchup: Comply with requirements in Division 09 for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing- paint to restore and comply with ASTM A 780.

SECTION 26 05 33

RACEWAYS AND BOXES FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. This Section includes raceways, fittings, boxes, enclosures, and cabinets for electrical wiring.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For surface raceways, wireways and fittings, floor boxes, hinged-cover enclosures, and cabinets.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Electrical Components, Devices and Accessories: Listed and labeled as defined in NFPA 70, Article 100 and marked for intended use.
- C. Comply with NFPA 70, as amended by state and local codes.

1.5 RELATED SECTIONS:

- A. Section 26 05 29 “Hangers and Supports for Electrical Systems” for raceway and box supports.
- B. Section 26 05 33 “Raceways and Boxes for Electrical Systems” for devices installed in boxes and for floor- box service fittings.

1.6 DEFINITIONS

- A. Rigid Steel Conduit: ANSI C80.1.
- B. EMT: Electrical metallic tubing.

- C. ENT: Electrical non-metallic tubing.
- D. FMC: Flexible metal conduit.
- E. IMC: Intermediate metal conduit.
- F. LFMC: Liquidtight flexible metallic conduit.
- G. RNC: Rigid nonmetallic conduit.

1.7 COORDINATION

- A. Coordinate layout and installation of raceways, boxes, enclosures, cabinets and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system and partition assemblies.

PART 2 - PRODUCTS

2.1 METAL CONDUIT AND TUBING

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Alflex Corp
 - 2. Grinnell Co./Tyco International; Allied Tube and Conduit Div.
 - 3. LTV Steel Tubular Products Company.
 - 4. Wheatland Tube Co.
 - 5. Triangle PWC, Inc.
 - 6. Or approved equal.
- B. Rigid Steel Conduit: ANSI C80.1
- C. IMC: ANSI C80.6.
- D. EMT and Fittings: ANSI C80.3.
 - 1. Fittings: Set-screw or compression.
- E. FMC: Zinc coated steel.
- F. LFMC: Flexible steel conduit with PVC jacket.
- G. Fittings: NEMA FB1; compatible with conduit and tubing materials.

H. RNC: NEMA TC 2, Schedule 40 and Schedule 80 PVC.

2.2 METAL WIREWAYS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Hoffman.
2. Square D
3. The Wiremold Company
4. Approved equal.

B. Material and Construction: Sheet metal sized and shaped as indicated.

1. Dry locations: NEMA 250, Type1.
2. Damp or Wet locations: NEMA 250, Type 3R.

C. Fittings and Accessories: Include couplings, offsets, elbows, expansion joints, adapters, hold-down straps, end caps, and other fittings to match and mate with wireways as required for a complete system.

D. Select features, unless otherwise indicated, as required to complete wiring system and to comply with NFPA 70.

E. Wireway Covers: Screw-cover type.

F. Finish: Manufacturer's standard enamel finish.

2.3 SURFACE RACEWAYS

A. Surface Metal Raceway: Galvanized steel with snap-on covers. Finish with manufacturer's standard prime coating.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Thomas & Betts Corporation.
 - b. Walker Systems, Inc; Wiremold Company (The)
 - c. The Wiremold Co., Electrical Sales Division.
 - d. Approved equal.

B. Types, sizes and channels as indicated and required for each application, with fittings that match and mate with raceways.

2.4 OPTICAL FIBER/COMMUNICATIONS CABLE RACEWAY AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Arnco Corporation.
 - 2. Endot Industries Inc.
 - 3. IPEX Inc.
 - 4. Lamson & Sessions; Carlon Electrical Products.
 - 5. Or Approved Equal
- B. Description: Comply with UL 2024; flexible type, approved for general-use installation.

2.5 BOXES, ENCLOSURES AND CABINETS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Cooper Crouse-Hinds; Div. Of Cooper Industries, Inc.
 - 2. Emerson/General Signal; Appleton Electric Company.
 - 3. Erickson Electrical Equipment Co.
 - 4. Hoffman.
 - 5. Hubbell, Inc.; Killark Electric Manufacturing Co.
 - 6. O-Z/Gedney; Unit of General Signal.
 - 7. RACO; Division of Hubbell, Inc.
 - 8. Spring City Electrical Manufacturing Co.
 - 9. Thomas & Betts Corporation.
 - 10. Walker Systems Inc.; Wiremold Company (The).
 - 11. Approved Equal
- B. Sheet Metal Outlet and Device Boxes: NEMA OS 1.
- C. Cast Metal Outlet and Device Boxes: NEMA FB 1, Type FD, with gasketed cover.
- D. Nonmetallic Outlet and Device Boxes: NEMA OS 2.
- E. Small Sheet Metal Pull and Junction Boxes: NEMA OS 1. Boxes must be sized to in accordance with the New York City Electrical Code.
- F. Cast Metal Pull and Junction Boxes: NEMA FP 1 cast aluminum with gasketed cover. Boxes must be sized to in accordance with the New York City Electrical Code.

- G. Cabinets: NEMA 250, Type 1, galvanized steel box with removable interior panel and removable front, finished inside and out with manufacturer's standard enamel. Hinged door in front cover with flush latch and associated hinge. Key latch to match panelboards. Include metal barriers to separate wiring of different systems and voltage and include accessory feet where required for freestanding equipment.
- H. Pull boxes for Telephone and Signal System Raceways: ANSI/EIA/TIA-569A

2.6 FACTORY FINISHES

- A. Finish: For raceway, enclosure, or cabinet components, provide manufacturer's standard prime-coat finish ready for field painting.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 RACEWAY APPLICATION

- A. Outdoors: Use the following wiring methods, except as specifically noted otherwise.
 - 1. Exposed: Rigid steel (RGS)
 - 2. Concealed: Rigid steel or IMC.
 - 3. Connection to Vibrating Equipment (including transformers and hydraulic, pneumatic, electric solenoid, or motor driven equipment): LFMC.
 - 4. Boxes and Enclosures: NEMA 250, Type 3R or 4.
 - 5. Underground Conduit: RNC, Sch 80-PVC or RGS encased in concrete.
 - 6. Underground Conduit for Fire Pump: RGS encased in concrete
- B. Indoors: Use the following wiring methods:
 - 1. IMC for all purposes and in all applications except where specifically excluded, or where alternate methods are specified below.
 - 2. Normal feeders to fire pump: Rigid steel conduit. Normal feeder conduit encased in 2 inches (5cm) of concrete (or other approved equivalent) where conduits are not physically routed outside the building. Exclude concrete for jockey pumps and/or auxiliary pumps.
 - 3. Utilize EMT for:
 - a. Main and submain feeders.

- b. Branch feeders.
 - c. Lighting and appliance branch circuitry.
 4. Exposed lighting and appliance branch circuitry runs in: Surface metal raceway.
 5. Refer to appropriate Sections of Division 26 for additional requirements relating to wiring methods for control/signal transmission, fire alarm systems, telecommunications, and other communication and alarm system distribution.
 6. Wiring methods listed above must be restricted as follows:
 - a. Exclude EMT from concrete embedment, from locations where subject to mechanical damage and from exposed locations in finished spaces.
 - b. Exclude surface metal raceway from concealed installations, from locations where subject to mechanical damage and from wet or damp locations.
 - c. Exclude armored cable from exposed locations and from runs opening into wet or damp locations.
 - d. Exclude armored cable (Type AC) from areas of public assembly and all spaces (including voids of walls and ceilings) not separated therefrom by fire rated construction adequate for the purpose.
 - e. Utilize only intermediate or rigid steel conduit from runs in (or opening into) hazardous areas. Comply with electric code requirements regarding sealing fittings, boxes, enclosures as appropriate for the conditions of atmospheric contamination.
 7. The following must be treated as damp or wet locations within building confines, regardless of whether a high ambient moisture level is found to exist:
 - a. Spaces where any designations indicating weatherproof (WP) or vaporproof (VP) appear on the drawings.
 - b. Outside of waterproofing in foundation walls in contact with grade.
 - C. Minimum Raceway Size: 3/4 inch trade size.
 - D. Indicated Raceway Size: Raceway sizes indicated are based on non-flexible conduit. Where flexible type raceways are specified, increase raceway size as required to maintain code mandated maximum conduit fill.
 - E. Raceway Fittings: Compatible with raceways and suitable for use and location.
 1. Intermediate Steel Conduit: Use threaded rigid steel conduit fittings, unless otherwise indicated.

3.3 INSTALLATION

- A. Keep raceways at least 6 inches (150 mm) away from parallel runs of flues and steam or hot water pipes. Install horizontal raceway runs above water and steam piping.
- B. Complete raceway installation before starting conductor installation.
- C. Support raceway as specified in Section 26 05 29 "Hangers and Supports for Electrical Systems."
- D. Install temporary closures to prevent foreign matter from entering raceway.
- E. Protect stub-ups from damage where conduits rise through floor slabs. Arrange so curved portion of bends is not visible above the finished slab.
- F. Make bends and offsets so the inside diameter is not reduced. Unless otherwise indicated, keep the legs of a bend in the same plane and the straight legs of offsets parallel.
- G. Conceal conduit and EMT within finished walls, ceilings, and floors, unless otherwise indicated.
 - 1. Install concealed raceways with a minimum of bends in the shortest practical distance, considering type of building construction and obstructions, unless otherwise indicated.
- H. Install exposed raceways parallel to or at right angles to nearby surfaces or structural members, and follow the surface contours as much possible.
 - 1. Run parallel or banked raceways together on common supports.
 - 2. Make parallel bends in parallel or banked runs. Use factory elbows only where elbows can be installed parallel; otherwise, provide field bends for parallel raceways.
- I. Join raceways with fittings designed and approved for the purpose and make joints tight.
 - 1. Use insulating bushings to protect conductors.
- J. Tighten set screws of threadless fittings with suitable tool.
- K. Equip all raceways which cross building expansion or control joints, with expansion fittings having flexible grounding bonds bypassing sliding parts.
- L. Terminations:
 - 1. Where raceways are terminated with locknuts and bushings, align the raceway to enter squarely, and install the locknuts with dished part against the box. Use two locknuts, one inside and one outside box.
 - 2. Where terminating in threaded hubs, screw the raceway or fitting tight into the hub so the end bears against the wire protection shoulder. Where chase nipples

are used, align the raceway so the coupling is square to the box, and tighten the chase nipple so no threads are exposed.

- M. Install pull wires in empty raceways. Use No. 14 AWG zinc-coated steel or monofilament plastic line having not less than 200-lb (90 kg) tensile strength. Leave not less than 12 inches (300 mm) of slack at each end of the pull wire.
- N. Telephone and Signal System Raceways 2-Inch Trade Size (DN 53) and Smaller: In addition to the above requirements, install in maximum lengths of 100 feet (30 m) and with a maximum of two 90-degree bends or equivalent. Install pull or junction boxes where necessary to comply with these requirements. Pull or junction boxes must be sized in accordance with ANSI/EIA/TIA-569A guidelines.
- O. Install raceway sealing fittings according to the manufacturer's written instructions. Locate fittings at suitable, approved, accessible locations and fill them with UL-listed sealing compound. For concealed raceways, install each fitting in a flush steel box with a blank cover plate having a finish similar to that of adjacent plates or surfaces. Install raceway sealing fittings at the following points and elsewhere as indicated:
 - 1. Where conduits pass from warm locations to cold locations, such as the boundaries of refrigerated spaces and air-conditioned spaces.
 - 2. Where otherwise required by the NFPA70.
- P. Stub-up Connections: Extend conduits through concrete floor for connection to freestanding equipment. Install with an adjustable top or coupling threaded inside for plugs set flush with finished floor. Extend conductors to equipment with rigid steel conduit; FMC may be used 6 inches (150 mm) above the floor. Install screwdriver-operated, threaded plugs flush with floor for future equipment connections.
- Q. Flexible Connections: Use maximum of 6 feet (1.8 m) of FMC for recessed and semi-recessed lighting fixtures; for equipment subject to vibration, noise transmission, or movement; and for all motors. Use LFMC in wet or damp locations. Install separate ground conductor across flexible connections.
- R. Install hinged cover enclosures and cabinets plumb. Support at each corner.

3.4 LOCATING AND ROUTING CIRCUITRY

- A. All circuitry must be run concealed except that if must be run exposed:
 - 1. Horizontally at the ceiling of permanently unfinished spaces which are not assigned to mechanical or electrical equipment.
 - 2. Horizontally and vertically in mechanical equipment spaces.
 - 3. Horizontally and vertically in electric equipment rooms.
- B. Concealed circuitry must be so located that building construction materials can be applied over its thickest elements without being subject to spalling or cracking.

3.5 INSTALLING JUNCTION, PULL AND OUTLET BOXES

- A. Apply junction and pull boxes in accordance with the following:
1. Include pull boxes in long straight runs of raceway to assure that cables are not damaged when they are pulled in.
 2. Include junction and pull boxes to assure a neat and workmanlike installation of raceways.
 3. Include junction and pull boxes to fulfill requirements pertaining to the limitations to the number of bends permitted in raceway between cable access points, the accessibility of cable joints and splices, and the application of cable supports.
 4. Where the wires and cables following the same routing are indicated as running through separate pull boxes, it must be understood that a segregation of the wires and cables is required. Separately indicated pull boxes may be incorporated into single boxes on condition that segregation is maintained by barriers of the type hereinafter specified.
 5. Include all required junction and pull boxes regardless of indications on the drawings (which, due to symbolic methods of notation, may omit to show some of them).
- B. Apply outlet boxes in accordance with the following:
1. Unless noted below or otherwise specifically indicated, include a separate outlet box for each individual wiring device, lighting fixture and signal or communication system outlet component. Outlet boxes supplied attached to lighting fixtures must not be used as replacements for the boxes specified herein unless they are specifically rated to accept "through circuit" building wires.
 2. A continuous row of fixtures of the end-to-end channel type, designed for "through wiring," and wired in accordance with the specifications hereinafter pertaining to circuitry through a series of lighting fixtures, may be supplied through a single outlet box.
 3. Multiple local switches indicated at a single location must be gang mounted in a single outlet box.
 4. Include all required outlet boxes regardless of indications on the drawings (which due to symbolic methods of notation, may omit to show some of them).
 5. Regardless of any indications on the drawings, flush wall mounted outlet boxes must not be set back-to-back in fire rated walls or partitions, even if they are displaced vertically. Such outlets must be offset horizontally by 24 inches (610mm) or as otherwise required to maintain the fire rating.

6. Flush wall mounted outlet boxes in non-fire rated construction must not be set back-to-back, but must be offset at least 12 inches (30 cm) horizontally regardless of any indication on the drawings.
- C. Install junction boxes, pull boxes and outlet boxes in accordance with the following:
1. Exclude surface mounted outlet boxes in conjunction with concealed circuitry.
 2. Exclude unused circuitry openings in junction and pull boxes. In larger boxes each such opening must be closed with a galvanized sheet steel plate fastened with a continuous weld all around. In small outlet type boxes, utilize plugs as specified for such boxes.
 3. Close up all unused circuitry openings in outlet boxes. Unused openings in cast boxes must be closed with approved cast metal threaded plugs. Unused openings in sheet metal boxes must be closed with sheet metal knock-out plugs.
 4. Pack "through the wall" collar type outlet boxes with a sound deadening, non-hardening, non-hygroscopic, non-combustible, high dielectric stuffing material manufactured specifically for the purpose.
 5. Outlet boxes for switches must be located at the strike side of doors. Indicated door swings are subject to field change. Outlet boxes must be located on the basis of final door swing arrangements.
 6. Boxes and plaster covers for duplex receptacles must be arranged for vertical mounting of the receptacle.
 7. Equip outlet boxes used for devices which are connected to wires of systems supplied by more than one set of voltage characteristics with barriers to separate the different systems.
- D. Barriers in junction and pull boxes of outlet size must be of the same metal as the box.
- E. Barriers in junction and pull boxes which are larger than outlet size must be of polyester resin fiberglass of adequate thickness for mechanical strength but in no case less than 1/4 inch (6.5mm). Each barrier must be mounted, without fastenings, between angle iron guides so that they may be readily removed.

3.6 MOUNTING HEIGHTS

- A. Heights of all wall mounted outlets and equipment must be in accordance with the following list. (Dimensions are above finished floor unless noted.)
1. Receptacle or telephone outlet in field constructed wall, partition or column unless otherwise specified below -- 18 inches (45 cm) to centerline.
 2. Receptacle or telephone outlet in factory fabricated wall or partition, unless otherwise specified below -- Dimension determined by wall or partition construction.

3. Receptacle or telephone outlet in mechanical spaces, electric switchboard rooms, electric closets -- 60 inches (150 cm) to centerline.
 4. Toggle switch outlet in field constructed wall partition or column -- 46 inches (117 cm) to centerline.
 5. Toggle switch outlet in factory fabricated wall or partition -- Dimension determined by wall or partition construction.
 6. Bracket lighting outlets, except for "over door" -- 90 inches (228 cm) to centerline.
 7. Bracket lighting outlet over door -- as required to center outlet between top surface of door lintel and underside of ceiling.
 8. Wall exit sign except for over door -- 90 inches (228 cm) to centerline.
 9. Exit sign over door -- As required to center sign between top surface of door lintel and underside of ceiling.
 10. Outlet for any signal system device other than fire alarm station requiring manual operation – 46 inches (117 cm) to centerline.
 11. Manual fire alarm station -- 46 inches (117 cm) to centerline.
 12. Outlet for any signal system visual or sounding device other than fire alarm visual device or visual/sounding device -- As required for device to clear underside of ceiling by 1 inch (25 mm).
 13. Outlet for fire alarm visual device -- Visual device 80 inches (203 cm) AFF, except as otherwise noted.
 14. Clock outlet -- As required for clock to clear underside of ceiling by 1 inch (25 mm).
- B. Architectural drawings and field instructions issued by the Commissioner take precedence over the above list and must be adhered to.

3.7 PROTECTION

- A. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and Installer, to ensure that coatings, finishes, and cabinets are without damage or deterioration at Substantial Completion.
1. Restore damage to galvanized finishes with zinc-rich paint recommended by manufacturer.
 2. Restore damage to PVC or paint finishes with matching touch-up coating recommended by the manufacturer.

3.8 CLEANING

- A. After completing installation of exposed, factory-finished raceways and boxes, inspect exposed finishes and restore damaged finishes.

END OF SECTION 26 05 33

SECTION 26 05 43

UNDERGROUND DUCTS AND RACEWAYS FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes: Underground Ducts and Raceways for Electrical Systems.

1.3 GENERAL REQUIREMENTS

- A. Work of this Section must be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this Section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.4 REFERENCES

- A. Perform the work of this Section in accordance with the requirements of Section 26 05 00 “Common Work Results for Electrical”.

1.5 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components must conform to state and local codes and laws. Refer to specification 26 05 00 “Common Work Results for Electrical” section 1.8 for the list of local codes and laws.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Commissioner's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products provided must be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.6 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit manufacturer's product data and shop drawings for the following:

1. Manholes and Handholes Plans, Details, Sections and Elevations.
2. Installation Instructions and Recommendations for Manholes and Handholes.
3. Concrete and Rebar Design Data.
4. Cable Supports and Accessories.
5. Covers and Frames.

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Provide conduits, ducts, manholes, handholes, and accessories as indicated and specified, and as required for a complete underground raceway system.
- B. Provide materials and equipment listed by UL when such equipment is available.
- C. Conduit must be rigid hot-dipped galvanized steel for sweeps and risers and plastic for runs, and as specified on drawings and conforming to the following:
 1. Rigid Steel: Rigid galvanized steel conduit and fittings must conform to the requirements of UL 6, ANSI C80-1 and NEC Article 346. Fittings and couplings must be threaded.
 2. Plastic duct for concrete encasement must be Schedule 40 PVC and must conform to NEMA TC2. Fittings must conform to NEMA TC9.
 3. Plastic duct for direct burial must be Schedule 40 PVC and must conform to NEMA TC2 and NEC Article 347.
- D. Pull rope must be synthetic and having a minimum tensile strength of 500 pounds.
- E. Provide a fiberglass ladder for each manhole entry.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. See Section 26 05 00 “Common Work Results for Electrical”.

3.3 UNDERGROUND INSTALLATION

- A. Underground installation must conform to National Electrical Code and National Electrical Safety Code.
- B. Underground duct with concrete encasement must be constructed of individual conduits encased in concrete. The concrete encasement surrounding the bank must be rectangular in cross-section and must provide at least 3 inches of concrete cover around ducts. Separate conduits by a minimum concrete thickness of 2 inches, except electric conduits must be separated from low voltage or signal system conduits by a minimum concrete thickness of 6 inches if combined in the same envelope.
1. The top of the concrete envelope must have a minimum burial depth no less than that permitted by NEC Article 300, Section 300.50, and must have a maximum depth to the top of the ductbank of 30 inches below grade.
 2. Duct banks must have a continuous slope downward toward manholes and handholes and away from building foundations with a minimum pitch of 3 inches in 100 feet. Except at conduit risers, changes in direction of runs exceeding a total of 10 degrees, either vertical or horizontal, must be accomplished by long sweep bends having a minimum radius of curvature of 25 feet; sweep bends may be composed of one or more curved or straight sections or combinations thereof. Manufactured bends must have a minimum radius of 18 inches for use with conduits of less than 3 inches in diameter, and a minimum radius of 36 inches for ducts of 3 inches in diameter and larger.
 3. Terminate conduits in end-bells where ducts enter manholes and handholes. Stagger the joints of the conduits by rows and layers to strengthen the duct bank. Provide plastic duct spacers that interlock vertically and horizontally. Spacer assembly must consist of base spacers, intermediate spacers, and top spacers to provide a completely enclosed and locked-in duct bank. Install spacers per manufacturer's instructions. Before pouring concrete, anchor duct bank assemblies to prevent the assemblies from floating during concrete pouring.
 4. Connect to existing concrete encasement, foundations and concrete structures using dowels. Connect to manhole and handhole walls using dowels.
 5. Prior to installing cables in underground duct banks, and plugs and pullropes in empty ducts, ensure that each duct is clear after rodding with a mandrel and left clean and dry.
 6. Conduit indicated as being unused or empty must be provided with plugs on each end. Plugs must contain a weep hole or screen to allow water drainage. Provide a pullrope having 3 feet of slack at each end of unused or empty conduits.
 7. Where it is necessary to cut the tapered end on a piece of conduit at the site, the cut and/or taper must be made with a special tool or a lathe, so that the new taper matches the taper of the particular conduit being used.
- C. Grounding
1. Manholes and Handholes: Install a driven grounding rod close to wall and set rod depth so 4 inches (100 mm) will extend above finished floor. Where necessary, install grounding rod before manhole is placed and provide a No. 1/0 AWG bare, tinned-copper conductor from grounding rod into manhole through a

waterproof sleeve in manhole wall. Protect grounding rods passing through concrete floor with a double wrapping of pressure-sensitive tape or heat-shrunk insulating sleeve from 2 inches (50 mm) above to 6 inches (150 mm) below concrete. Seal floor opening with waterproof, nonshrink grout.

2. Connections to Manhole Components: Connect exposed metal parts, such as inserts, cable racks, pulling irons, ladders, and cable shields within each manhole or handhole, to grounding rod or grounding conductor. Make connections with minimum No. 4 AWG stranded, hard-drawn copper wire. Train conductors plumb or level around corners and fasten to manhole walls. Connect to cable armor and cable shields as recommended by manufacturer of splicing and termination kits.
 3. Grounding System: Ground pad-mounted equipment and noncurrent-carrying metal items by connecting them to underground cable and grounding electrodes.
- D. Concrete for electrical work must conform to the requirements of Division 3.
- E. Underground duct without concrete encasement must be constructed of individual conduits and must be direct buried in the earth upon a 6 inch deep sand or granular bed and cover. Direct-buried conduits must have a minimum burial depth no less than that permitted by NEC Article 300, Section 300.50, and must have a maximum depth to the top of the conduits of 36 inches below grade.
- B. Provide detectable tape manufactured specifically for warning and identification of buried cable and conduit. See Specification Section 26 05 00 “Common Work Results for Electrical” for details. Bury tape with the printed side up at a depth of 12 inches below the top surface of earth or the top surface of the subgrade under pavements.
- F. Excavating, backfilling, and compacting must be as specified in Division 31.
- G. Set handholes and in-ground cast boxes on a bed of minimum 6 inch deep compacted granular fill. Set manholes on a bed of minimum 24 inch deep compacted granular fill. Installation and assembly must be per manufacturer's instructions.
- H. Set handhole access covers flush with finished grade.
- I. Install grout, caulk, and/or sealant as required at construction joints and duct entries to make watertight.
- J. Separately rack and train conductors of different systems to provide maximum separation. For example, rack and train normal and emergency conductors or different voltage conductors on opposite walls of manholes and handholes.

END OF SECTION 26 05 43

SECTION 26 05 53

IDENTIFICATION FOR ELECTRICAL SYSTEMS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Electrical identification materials and devices required to comply with ANSI C2, NFPA 70, NYC Electrical Code, OSHA standards.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Product Data: For each electrical identification product indicated.
- C. Schedule of Nomenclature: An index of electrical equipment and system components used in identification signs and labels.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Comply with NFPA 70 NYC Electrical Code.
- C. Comply with ANSI A13.1 and NFPA 70 for color-coding.
- D. Comply with ANSI Z535-4 and NFPA 70E.

PART 2 - PRODUCTS

2.1 RACEWAY AND CABLE LABELS

- A. Comply with ANSI A13.1, Table 3, for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.
 - 1. Color: Black letters on orange field.
 - 2. Legend: Indicates voltage and service.
- B. Adhesive Labels: Preprinted, flexible, self-adhesive vinyl with legend over laminated

with a clear, weather- and chemical-resistant coating.

- C. Pretensioned, Wraparound Plastic Sleeves: Flexible, preprinted, color-coded, acrylic band sized to suit the diameter of the line it identifies and arranged to stay in place by pretensioned gripping action when placed in position.
- D. Colored Adhesive Tape: Self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide ((0.08 mm thick by 25 to 51 mm wide)).
- E. Tape Markers: Vinyl or vinyl-cloth, self-adhesive, wraparound type with preprinted numbers and letters.
- F. Aluminum, Wraparound Marker Bands: Bands cut from 0.014-inch- ((0.4-mm-)) hick aluminum sheet, with stamped or embossed legend, and fitted with slots or ears for permanently securing around wire or cable jacket or around groups of conductors.
- G. Plasticized Card-Stock Tags: Vinyl cloth with preprinted and field-printed legends. Orange background, unless otherwise indicated, with eyelet for fastener.
- H. Aluminum-Faced, Card-Stock Tags: Weather-resistant, 18-point minimum card stock faced on both sides with embossable aluminum sheet, 0.002 inch ((0.05 mm)) thick, laminated with moisture-resistant acrylic adhesive, punched for fasteners, and preprinted with legends to suit each application.
- I. Brass or Aluminum Tags: 2 by 2 by 0.05-inch ((51 by 51 by 1.3-mm)) metal tags with stamped legend, punched for fastener.

2.2 NAMEPLATES AND SIGNS

- A. Safety Signs: Comply with 29 CFR, Chapter XVII, Part 1910.145.
- B. Engraved Plastic Nameplates and Signs: Engraving stock, melamine plastic laminate, minimum 1/16 inch ((1.6 mm)) thick for signs up to 20 sq. in. ((129 sq. cm)) and 1/8 inch ((3.2 mm)) thick for larger sizes.
 - 1. Engraved legend with black letters on white face.
 - 2. Punched or drilled for mechanical fasteners.
- C. Baked-Enamel Signs for Interior Use: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for the application. 1/4-inch ((6.4-mm)) grommets in corners for mounting.
- D. Exterior, Metal-Backed, Butyrate Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch ((1-mm)) galvanized-steel backing; and with colors, legend, and size required for the application. 1/4-inch ((6.4-mm)) grommets in corners for mounting.
- E. Fasteners for Nameplates and Signs: Self-tapping, stainless-steel screws or No. 10/32,

stainless-steel machine screws with nuts and flat and lock washers.

2.3 MISCELLANEOUS IDENTIFICATION PRODUCTS

A. Cable Ties: Fungus-inert, self-extinguishing, one-piece, self-locking, Type 6/6 nylon cable ties.

1. Minimum Width: 3/16 inch ((5 mm)).
2. Tensile Strength: 50 lb ((22.3 kg)) minimum.
3. Temperature Range: Minus 40 to plus 185 deg F ((Minus 40 to plus 85 deg C)).
4. Color: According to color-coding.

B. Paint: Formulated for the type of surface and intended use.

1. Primer for Galvanized Metal: Single-component acrylic vehicle formulated for galvanized surfaces.
2. Primer for Concrete Masonry Units: Heavy-duty-resin block filler.
3. Primer for Concrete: Clear, alkali-resistant, binder-type sealer.
4. Enamel: Silicone-alkyd or alkyd urethane as recommended by primer manufacturer.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Identification Materials and Devices: Install at locations for most convenient viewing without interference with operation and maintenance of equipment.
- B. Lettering, Colors, and Graphics: Coordinate names, abbreviations, colors, and other designations with corresponding designations in the Contract Documents or with those required by codes and standards. Use consistent designations throughout Project.
- C. Sequence of Work: If identification is applied to surfaces that require finish, install identification after completing finish work.
- D. Self-Adhesive Identification Products: Clean surfaces before applying.
- E. Install painted identification according to manufacturer's written instructions and as

follows:

1. Clean surfaces of dust, loose material, and oily films before painting.
 2. Prime surfaces using type of primer specified for surface.
- F. Color Banding Raceways and Exposed Cables: Band exposed and accessible raceways of the systems listed below:
1. Bands: Pretensioned, wraparound plastic sleeves; colored adhesive tape; or a combination of both. Make each color band 2 inches ((51 mm)) wide, completely encircling conduit.
 2. Band Locations: At changes in direction, at penetrations of walls and floors, at 50-foot ((15-m)) maximum intervals in straight runs, and at 25-foot ((7.6-m)) maximum intervals in congested areas.
 3. Apply the following colors to the systems listed below:
 - a. Fire Alarm System: Red.
- G. Caution Labels for Indoor Boxes and Enclosures for Power and Lighting: Install pressure-sensitive, self-adhesive labels identifying system voltage with black letters on orange background. Install on exterior of door or cover.
- H. Secondary Service, Feeder, and Branch-Circuit Conductors: Color-code throughout the secondary electrical system.
1. Color-code 208/120-V system as follows:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 - d. Neutral: White.
 - e. Ground: Green.
 2. Factory apply color the entire length of conductors, except the following field-applied, color-coding methods may be used instead of factory-coded wire for sizes larger than No. 10 AWG:
 - a. Colored, pressure-sensitive plastic tape in half-lapped turns for a distance of 6 inches (150 mm) from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Use 1-inch-(25-mm-) wide tape in colors specified. Adjust tape bands to avoid obscuring cable identifi-

cation markings.

- b. Colored cable ties applied in groups of three ties of specified color to each wire at each terminal or splice point starting 3 inches (76 mm) from the terminal and spaced 3 inches (76 mm) apart. Apply with a special tool or pliers, tighten to a snug fit, and cut off excess length.
- I. Medium Voltage Service Conductors: Color-code throughout the medium voltage system. This will be read in conjunction with Specification 260513 Medium Voltage Cables.
 1. Color-code 4160V system as follows:
 - a. Phase A: Black.
 - b. Phase B: Red.
 - c. Phase C: Blue.
 - d. Neutral: White.
 - e. Ground: Green.
- J. Power Circuit Identification: Separately identify each power circuit, cable or feeder at each termination, and at each pull box, junction box, vault and manhole through which it passes.
 1. Non-ferrous metallic tags or wrap-around bands for outdoor or underground use.
 2. Plasticized card stock tags or wrap-around labels for indoor use.
 3. Stamped or embossed letters (1/4" high) identifying feeder or circuit by number and origin.
- K. Apply warning, caution, and instruction signs as follows:
 1. Warnings, Cautions, and Instructions: Install to ensure safe operation and maintenance of electrical systems and of items to which they connect. Include as a minimum warnings of Arc-Flash hazards and identification of series-rated devices. Install engraved plastic-laminated instruction signs with approved legend where instructions are needed for system or equipment operation. Install metal-backed butyrate signs for outdoor items.
- L. Equipment Identification Labels: Engraved plastic laminate. Install on each unit of equipment, including central or master unit of each system. This includes power, lighting, communication, signal, and alarm systems, unless units are specified with their own self-explanatory identification. Unless otherwise indicated, provide a single line of text with 1/2-inch- (13-mm-) high lettering on 1-1/2-inch- (38-mm-) high label;

where two lines of text are required, use labels 2 inches (50 mm) high. Use white lettering on black field. Apply labels for each unit of the following categories of equipment using mechanical fasteners:

1. Panelboards, electrical cabinets, and enclosures.
2. Access doors and panels for concealed electrical items.
3. Switchboards.
4. Electrical substations.
5. Emergency system boxes and enclosures.
6. Disconnect switches.
7. Motor starters.
8. Transfer switches.
9. Contactors
10. Dimmers.
11. Control devices.
12. Fire alarm master station or control panel.
13. Device wall plates
14. Lighting Control Panels
15. Fire Alarm Pull Boxes
16. Fire Alarm Remote Smoke Detectors
17. All other Fire Alarm Devices
18. Lamps
19. Luminaires

END OF SECTION 26 05 53

SECTION 26 05 85

PROVISIONS FOR ELEVATORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. This section includes power, lighting, communications, and alarm provisions for elevators.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Comply with NYC Electrical Code for devices and installation.
- C. Listing and Labeling: Provide products that are Underwriter’s Laboratories listed and labeled for their applications and installation conditions and for the environments in which installed.
 - 1. The Terms "Listed" and "Labeled": As defined in the National Electrical Code, Article 100.

PART 2 – PRODUCTS (Not Used)

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 APPLICATION

- A. In addition to the power feeder and disconnect switch at the entry to the room for the elevator, as shown on the drawings, further electrical work is required as described

hereinafter.

3.3 INSTALLATION

- A. Provide disconnect switch “in sight” of the hoist motor. This switch must be interposed in the feeder to the elevator controller at a suitable location approved as “in sight” by Commissioner.
- B. The disconnects switches located at the entry to the room must be of the switch and fuse type. Fuses must be sized to 175% of the nameplate rating, elevator motor, full load amps or as recommended by elevator supplier and / or manufacturer.
- C. Unless exceeded by requirements shown on the drawings, or elsewhere in the specifications, provide equipment, circuitry and/or roughing for elevator appurtenances as follows:
 - 1. Provide a single circuit 20 amps, 120-volt supply including a fused padlock-able disconnect switch located in the elevator machine room or machine space, from an emergency lighting panel to the elevator controller.
 - 2. Provide a single circuit 20 amp, 120 volt supply for a “top of shaft trail cable outlet box”.
 - 3. Provide a vapor-tight switch, GFCI duplex receptacle and 100 watt lighting fixture with globe and guard. Devices must be mounted in elevator pit at location as directed in field. Provide circuitry as required.
 - 4. Provide a “run/by” switch, receptacle and light of type described above. Provide circuitry as required.
 - 5. Provide secondary (sheave) level switch light and receptacle, complete with circuitry, as described hereinbefore.
 - 6. Provide a single 20 amp, 120 volt circuit to the elevator intercom panel (or to the group controller if there is not separate intercom panel).
 - 7. Provide a fused disconnect switch, adjacent to the controller for each connection to a controller.
 - 8. Provide 1 -inch empty conduit (intended for elevator communication, signaling and alarm) to the elevator dispatcher’s panel.
 - 9. Provide a 2" empty conduit (intended for closed circuit TV cables) run to the concierges desk security office or elsewhere as directed by the Commissioner. Conduit must terminate in CCTV junction box at both ends of run.
 - 10. Provide ceiling smoke detector giving total coverage for the elevator machine room. Provide similar smoke detector at the top of elevator shaft. Connect the detectors together and into the fire alarm system. If any of the smoke detectors goes into alarm mode, after a short, adjustable time delay, a signal must be transmitted to shut down the power to the elevator served and then utilized

integral back-up batteries to initiate Phase I elevator recall and recall elevator cab to the predetermined evacuation floor. Elevator power must be able to be re-energized from the fire command station. Provide appropriate electrically operated devices required for the elevator shut-down.

11. The hoistway and machine room smoke detector must also energize hoistway and elevator machine room smoke vent hatch actuator from the fire alarm system. The hatchways must be manually closed.

SECTION 26 08 00
COMMISSIONING OF ELECTRICAL

PART 1 - GENERAL

GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This section includes commissioning process requirements for Electrical systems, assemblies, and equipment.
- B. Related Sections:
1. DDC General Conditions – Section 01 91 13 “General Commissioning Requirements for MEP Systems.”

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system’s installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
1. Verify that applicable equipment and systems are installed according to the manufacturer’s recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by the Contractor.
 2. Verify and document proper performance of equipment and systems.
 3. Verify that Operation & Maintenance documentation is complete and transferred to the City of New York.
 4. Verify that the City of New York’s maintenance personnel are adequately instructed.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.
- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner and Contractor.
- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract

Documents.

1.4 DEFINITIONS

- A. Refer to the DDC General Conditions for definitions.

1.5 SUBMITTALS

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s role.
- B. Refer to the DDC General Conditions Section 01 33 00 “Submittal Procedures” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for specific requirements.
- C. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports

1.6 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: The Contractor will comply with test equipment manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.7 COORDINATION

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. The Contractor shall provide all standard testing equipment for the electrical systems and controls systems in Division 26. The Contractor shall ensure a sufficient quantity of two-way radios are provided.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. The Contractor shall ensure that proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but

shall not become the property of the City of New York.

- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Contract Documents. If not otherwise noted, the following minimum requirements apply: Temperature sensors and digital thermometers shall have a certified calibration within the past year to accuracy of 0.5°F and a resolution of + or - 0.1°F. Pressure sensors shall have an accuracy of + or - 2.0% of the value range being measured (not full range of meter) and have been calibrated within the last year.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
1. The Contractor will verify all equipment, systems, instrumentation, wiring and components are shown correctly on red-lined drawings.
 2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 4. The Contractor will create the as-built drawings.
- C. Operation and Maintenance Data:
1. The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 2. The CxA will review the O&M literature once for conformance to project requirements.
 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Instruction:
1. The Contractor will provide demonstration and instruction as required by the Contract Documents.
 2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
 3. An instruction agenda for each instruction session must be submitted to the CxA one (1) week prior the instruction session.
 4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and the Commissioner. A copy of the test record shall be provided to the CxA and the Commissioner.
 5. Engage a Factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.

6. Instruct the City of New York's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests as per the written procedure and at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Participate in Electrical systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
- F. Prepare preliminary schedule for Electrical system orientations and inspections, operation and maintenance manual submissions, instruction sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.
- G. Update schedule as required throughout the construction period.
- H. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- I. Perform all verification and functional performance tests in the presence of the CxA as required.
- J. Provide measuring instruments and logging devices to record test data and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- K. Gather operation and maintenance literature on all equipment and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- L. Coordinate with the CxA to provide 72-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- M. Notify the CxA a minimum of two weeks in advance for start of the testing work.
- N. Participate in, and schedule vendors and subcontractors to participate in the instruction sessions.
- O. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
 1. Electrical equipment including switchgear, panel boards, motor control centers, lighting, receptacles, and all other equipment furnished under this Division.
 2. Fire alarm system
 3. Lighting System
- P. The Contractor shall ensure that the equipment suppliers shall document the performance of the equipment.

- Q. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- R. Provide instruction to the City of New York’s maintenance personnel using expert qualified personnel, as specified.
- S. Contractor shall direct equipment suppliers to:
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific requirements needed to keep warranties in force.
 - 2. Assist in equipment testing.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- T. Refer to the DDC General Conditions for additional Contractor responsibilities.

3.3 CxA'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that Electrical systems, subsystems, and equipment have been installed, meggerred, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Electrical instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract Documents, and that pretest set points have been recorded.
- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Check safety cutouts, alarms, and interlocks with smoke control and life-safety systems during each mode of operation.
- G. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Scope of Electrical testing shall include the entire Electrical installation, from the incoming power equipment throughout the distribution system. Testing shall include measuring, but not limited to resistance, voltage, and amperage of system(s) and devices.
- C. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency

- conditions, and verify proper response of building automation system controllers and sensors.
- D. Prepare detailed testing plans, procedures, and checklists for Electrical systems, subsystems, and equipment with guidance from CxA.
 - E. Tests will be performed using design conditions whenever possible, as determined by the Commissioner.
 - F. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
 - G. The CxA may direct that set points be altered when simulating conditions is not practical.
 - H. If tests cannot be completed because of a deficiency outside the scope of the Electrical system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
 - I. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 ELECTRICAL SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 26 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CxA.
- B. Electrical Instrumentation and Control System Testing: Field testing plans and testing requirements are specified in Division 26. Assist the CxA with preparation of testing plans.
- C. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested.
- D. Electrical Distribution System Testing: Provide technicians, load banks, infrared cameras, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item and pipe section to be tested
- E. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The scope of commissioning work shall include but not limited to the following equipment and systems:
 - 1. Lighting Control System (20% Sampling)
 - 2. Main Distribution Panel
 - 3. Sub Panels
 - 4. 150 kVA Transformer
 - 5. Automatic & Manual Transfer Switches
 - 6. Generator Docking Station
 - 7. PV Arrays

8. Six (6) Inverters
9. Associated Electrical Work

3.7 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.
- B. Refer to the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for the Commissioner and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.8 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

- A. Refer to the DDC General Conditions Section 01 79 00 “Demonstration and Owner’s Pre-Acceptance Orientation” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to instruction.
- B. Contractor’s instruction responsibilities pertaining to Electrical work:
 1. Provide the CxA with an instruction plan four weeks before the planned instruction.
 2. Provide comprehensive instruction in the understanding of the systems and the operation and maintenance of each major piece of commissioned electrical equipment or system to city of New York’s maintenance personnel.
 3. Instruction shall be recorded by the CxA and start with classroom sessions, if necessary, followed by hands on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing subcontractor or manufacturer’s representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.
 6. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
 7. Instruction shall include:
 - a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare

parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.

- c. Discuss relevant health and safety issues and concerns.
- d. Discuss warranties and guarantees.
- e. Cover common troubleshooting problems and solutions.
- f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
- g. Discuss any peculiarities of equipment installation or operation.
 - i. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.
 - ii. Fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
 - iii. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 26 08 00

SECTION 26 09 23

LIGHTING CONTROL DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section includes a networked lighting control system comprised of the following components:
1. System Software Interfaces
 - a. Management Interface
 - b. Visualization Interface
 2. System Backbone and Integration Equipment
 - a. System Controller
 - b. Digital Time Clock
 3. Wired Networked Devices
 - a. Wall Stations
 - b. Graphic Wall Stations
 - c. Digital Key Switches
 - d. Auxiliary Input/Output Devices
 - e. Occupancy and Photocell Sensors
 - f. Wall Switch Sensors
 - g. Embedded Sensors
 - h. Power Packs and Secondary Packs
 - i. Networked Luminaires
 - j. Relay and Dimming Panel
 - k. Bluetooth Low Energy Programming Device
 - l. Communication Bridge
- B. The networked lighting control system must meet all the characteristics and performance requirements specified herein.
- C. The contractor must provide, install and verify proper operation of all equipment necessary for proper operation of the system as specified herein and as shown on applicable drawings.

1.3 RELATED DOCUMENTS

- A. Section 26 27 26 Wiring Devices

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"

- B. Submittal must be provided including the following items.
 - 1. Bill of Materials necessary to install the networked lighting control system.
 - 2. Product Specification Sheets indicating general device descriptions, dimensions, electrical specifications, wiring details, and nomenclature.
 - 3. Riser Diagrams showing device wiring connections of system backbone and typical per room/area type.
 - 4. Information Technology (IT) connection information pertaining to interconnection with facility IT networking equipment and third-party systems.
 - 5. Other Diagrams and Operational Descriptions – as needed to indicate system operation or interaction with other system(s).
 - 6. Contractor Startup/Testing Worksheet must be completed prior to factory start-up.
 - 7. Hardware and Software Operation Manuals.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Product Qualifications
 - 1. System electrical components must be listed or recognized by a nationally recognized testing laboratory (e.g., UL, ETL, or CSA) and must be labeled with required markings as applicable.
 - 2. System luminaires and controls are certified by manufacturer to have been designed, manufactured and tested for interoperability.
 - 3. All components must be subjected to 100% end of line testing prior to shipment to the project site to ensure proper device operation.
 - 4. All components and the manufacturing facility where product is manufactured must be RoHS compliant.
- C. Installation and Startup Qualifications
 - 1. System startup must be performed by qualified personnel properly trained by the manufacturer.

1.6 PROJECT CONDITIONS

- A. Only install indoor equipment after the following site conditions are maintained:
 - 1. Ambient Temperature: 14 to 105 degrees F (-10 to 40 degrees C)
 - 2. Relative Humidity: less than 90% non-condensing
- B. Equipment must not be subjected to dust, debris, moisture, or temperature and humidity conditions exceeding the requirements indicated above or as marked on the product, at any point prior to installation.
- C. Only properly rated equipment and enclosures, installed per the manufacturer’s instructions, may be subjected to dust and moisture following installation.

1.7 WARRANTY

- A. The manufacturer must provide a minimum one-year warranty on all hardware devices supplied and installed. Warranty coverage must begin from date of substantial completion.
- B. The hardware warranty must cover restoration of any defective products within the warranty period.
- C. The manufacturer must make available new parts, upgrades, and/or replacements available for a minimum of 5 years following substantial completion.

PART 2 - EQUIPMENT

2.1 MANUFACTURERS

- A. Manufacturers
 - 1. Acuity Brands Lighting, Inc.
 - 2. Lutron
 - 3. Watt Stopper
 - 4. Approved equal

2.2 SYSTEM COMPLIANCE

- A. System components must comply with UL 916 and UL 924 standards where applicable.
- B. System components must comply with CFR Title 47, Part 15 standards where applicable.
- C. System components must comply with ISED Canada RSS-247 standards where applicable.
- D. All equipment must be installed and connected in compliance with NFPA 70.

2.3 SYSTEM PERFORMANCE REQUIREMENTS

- A. System Architecture
 - 1. System must have an architecture that is based upon three main concepts:
 - a. Networkable intelligent lighting control devices,
 - b. Standalone lighting control zones using distributed intelligence,
 - c. Optional system backbone for remote, time based and global operation.
 - 2. Intelligent lighting control devices must have individually addressable network communication capability and consist of one or more basic lighting control components: occupancy sensor, photocell sensor, relay, dimming output, contact closure input, analog 0-10V input, and manual wall station capable of indicating switching, dimming, and/or scene control. Combining one or more of these components into a single device enclosure must be permissible so as to minimize overall device count of system.
 - 3. System must be capable of interfacing directly with networked luminaires such that either low voltage network cabling or wireless RF communication is used to interconnect networked luminaires with control components such as sensors, switches and system

- backbone (see “Control Zone Characteristics” sections for each type of network connection, wired or wireless).
4. Networked luminaires and intelligent lighting control devices must support unique configuration of device settings and properties, with such configuration residing within the networked luminaires and intelligent control devices.
 5. Lighting control zones consisting of one or more networked luminaires and intelligent lighting control devices and must be capable of providing automatic control from sensors (occupancy and/or photocell) and manual control from local wall stations without requiring connection to a higher-level system backbone; this capability is referred to as “distributed intelligence.”
 - a. Lighting control zones (of at least 128 devices per zone must be supported.
 6. Networked luminaires and intelligent lighting control devices must have distributed intelligence programming stored in non-volatile memory, such that following any loss of power the lighting control zones must operate according to their defined default settings and sequence of operations.
 7. Lighting control zones must be capable of being networked with a higher-level system backbone to provide time based control, remote control from inputs and/or systems external to the control zone, and remote configuration and monitoring through a software interface.
 8. The system may include one or more system controllers that provide time-based control. The system controller also provides a means of connecting the lighting control system to a system software interface and building management systems via BACnet/IP or BACnet MS/TP protocol.
 9. All system devices must support firmware update, either remotely or from within the applications space, for purposes of upgrading functionality at a later date.
- B. Wired Networked Control Zone Characteristics
1. Connections to devices within a wired networked lighting control zone and to backbone components must be with a single type of low voltage network cable, which must be compliant with CAT5e specifications or higher. To prevent wiring errors and provide cost savings, the use of mixed types of low voltage network cables must not be permitted.
 2. Devices in an area must be connected via a “daisy-chain” topology; requiring all individual networked devices to be connected back to a central component in a “hub-and-spoke” topology must not be permitted, so as to reduce the total amount of network cable required for each control zone.
 3. System must provide the option of having pre-terminated plenum rated low voltage network cabling supplied with hardware so as to reduce the opportunity for improper wiring and communication errors during system installation.
 4. Following proper installation and provision of power, all networked devices connected together with low voltage network cable must automatically form a functional lighting control zone without requiring any type of programming, regardless of the programming mechanism (e.g. software application, handheld remote, pushbutton). The “out of box” default sequence of operation is intended to provide typical sequence of operation so as to minimize the system startup and programming requirements and to also have functional lighting control operation prior to system startup and programming.
 5. Once software is installed, system must be able to automatically discover all connected devices without requiring any provisioning of system or zone addresses.

6. All networked devices must have the ability to detect improper communication wiring and blink its LED in a specific cadence as to alert installation/startup personnel.
7. Networked control devices intended for control of egress and/or emergency light sources must not require the use of additional, externally mounted UL924 shunting and/or 0-10V disconnect devices, so as to provide a compliant sequence of operation while reducing the overall installation and wiring costs of the system. The following types of wired networked control devices must be provided for egress and/or emergency light fixtures:
 - a. Low-Voltage power sensing: These devices must automatically provide 100% light level upon detection of loss of power sensed via the low voltage network cable connection.
 - b. UL924 Listed Line-Voltage power sensing: These devices must be listed as emergency relays under the UL924 standard, and must automatically close the load control relay and provide 100% light output upon detection of loss of power sensed via line voltage connection to normal power.
8. Networked luminaires and intelligent lighting control devices located in different areas must be able to transmit and track information within at least 128 system-wide control zones to support required sequences of operation that may span across multiple areas. Occupancy and photocell commands must be available across a single controller, and switch commands must be available across single or multiple controllers. These must also be referred to as global control zones.
9. Wired networked Wall stations must provide the follow Scene Control Capabilities:
 - a. Preset Scenes that can activate a specific combination of light levels across multiple local and global channels, as required.
 - b. Profile Scenes that can modify the sequence of operation for the devices in the area (group) in response to a button press. This capability is defined as supporting “Local Profiles” and is used to dynamically optimize the occupant experience and lighting energy usage. Wall stations must be able to manually start and stop Local Profiles, or the local profile must be capable of ending after a specific duration of time between 5 minutes and 12 hours. Parameters that must be configurable and assigned to a Local Profile must include, but not be limited to, fixture light level, occupancy time delay, response to occupancy sensors (including enabling/disabling response), response to daylight sensors (including enabling/disabling response), and enabling/disabling of wall stations.
 - c. 3-way / multi-way control: multiple wall stations must be capable of controlling the same local and global control zones, so as to support “multi-way” preset scene and profile scene control.

C. System Integration Capabilities

1. The system must interface with third party building management systems (BMS) to support two-way communication using the industry standard BACnet/IP or BACnet MS/TP protocols. The following system integration capabilities must be available via BACnet/IP and BACnet MS/TP protocols:
 - a. The system must support control of individual devices, including, but not limited to, control of relay and dimming output.
 - b. The system must support reading of individual device status information. The available status will depend on the individual device type and capabilities, which

may include but not be limited to, relay state, dimming output, power measurement, occupancy sensor status, and photocell sensor states or readings. All system devices must be available for polling for devices status.

- c. The system must support activation of pre-defined system as outlined in the para 2.3 D “Supported Sequence of Operations”

D. Supported Sequence of Operations

1. Control Zones

- a. Networked luminaires and intelligent lighting control devices installed in an area (also referred to as a group of devices) must be capable of transmitting and tracking occupancy sensor, photocell sensor, and manual switch information within at least 48 unique control zones to support different and reconfigurable sequences of operation within the area. These must also be referred to as local control zones.

2. Wall station Capabilities

- a. Wall stations must be provided to support the following capabilities:
 - 1) On/Off of a local control zone.
 - 2) Continuous dimming control of light level of a local control zone.
- b. 3-way / multi-way control: multiple wall stations must be capable of controlling the same local control zones, so as to support “multi-way” switching and/or dimming control.

3. Occupancy Sensing Capabilities

- a. Occupancy sensors must be configurable to control a local zone.
- b. Multiple occupancy sensors must be capable of controlling the same local zones. This capability combines occupancy sensing coverage from multiple sensors without consuming multiple control zones.
- c. System must support the following types of occupancy sensing sequence of operations:
 - 1) On/Off Occupancy Sensing
 - 2) Partial-On Occupancy Sensing
 - 3) Partial-Off Occupancy Sensing
 - 4) Vacancy Sensing (Manual-On / Automatic-Off)
- d. On/Off, Partial-On, and Partial-Off Occupancy Sensing modes must function according to the following sequence of operation:
 - 1) Occupancy sensors must automatically turn lights on to a designated level when occupancy is detected. To support fine tuning of Partial-On sequences the designated occupied light level must support at least 100 dimming levels.
 - 2) Occupancy sensors must automatically turn lights off or to a dimmed state (Partial-Off) when vacancy occurs or if sufficient daylight is detected. To support fine tuning of Partial-Off sequences the designated unoccupied dim level must support at least 100 dimming levels.
 - 3) To provide additional energy savings the system must also be capable of combining Partial-Off and Full-Off operation by dimming the lights to a designated level when vacant and then turning the lights off completely after an additional amount of time.
 - 4) Photocell readings, if enabled in the Occupancy Sensing control zone, must be capable of automatically adjusting the light level during occupied or unoccupied conditions as necessary to further reduce energy usage.

- Additional requirements and details for photocell sensing capabilities are indicated under “Photocell Sensing Capabilities.”
- 5) The use of a wall station must change the dimming level or turn lights off as selected by the occupant. The lights must optionally remain in this manually-specified light level until the zone becomes vacant; upon vacancy the normal sequence of operation, as defined above, must proceed.
- e. Vacancy Sensing mode (also referred to as Manual-On / Automatic-Off) must function according to the following sequence of operation:
- 1) The use of a wall station is required turn lights on. The system must be capable of programming the zone to turn on to either to a designated light level or the previous user light level. Initially occupying the space without using a wall station must not result in lights turning on.
 - 2) Occupancy sensors must automatically turn lights off or to a dimmed state (Partial-Off) when vacancy occurs or if sufficient daylight is detected. To support fine tuning of Partial-Off sequences the designated unoccupied dim level must support at least 100 dimming levels.
 - 3) To provide additional energy savings and an enhanced occupant experience, the system must also be capable of dimming the lights when vacant and then turning the lights off completely after an additional amount of time.
 - 4) To minimize occupant impact in case the area or zone is still physically occupied following dimming or shutoff of the lights due to detection of vacancy, the system must support an “automatic grace period” immediately following detection of vacancy, during which time any detected occupancy must result in the lights reverting to the previous level. After the grace period has expired, the use of a wall station is required to turn lights on.
 - 5) Photocell readings, if enabled in the Occupancy Sensing control zone, must be capable of automatically adjusting the light level during occupied or unoccupied conditions as necessary to further reduce energy usage. Additional requirements and details for photocell sensing capabilities are indicated under “Photocell Sensing Capabilities”.
 - 6) At any time, the use of a wall station must change the dimming level or turn lights off as selected by the occupant. The lights must optionally remain in this manually-specified light level until the zone becomes vacant; upon vacancy the normal sequence of operation, as defined above, must proceed.
- f. To accommodate diverse types of environments, occupancy time delays before dimming or shutting off lights must be specifiable for control zones between 15 seconds to 2 hours.
4. Photocell Sensing Capabilities (Automatic Daylight Sensing)
- a. Photocell sensing devices must be configurable to control a local zone.
 - b. The system must support the following type of photocell-based control:
 - 1) Continuous Dimming: The control zone automatically adjusts its dimming output in response to photocell readings, such that a minimum light level consisting of both electric light and daylight sources is maintained at the task. The photocell response must be configurable to adjust the photocell setpoint and dimming rates.
5. Schedule Capabilities
- a. System must support the creation of time schedules for time-of-day override of devices including offsets from dusk and dawn.

- b. System must support blink warning and timed extension capabilities. At the end of a scheduled period, the system must be capable of providing a visible “blink warning” 5 minutes prior to the end of the schedule. Wall stations may be programmed to provide timed overrides that turn the lights on for an additional period of time. Timed override duration must be programmable for each individual device, zone of devices, or customized group of devices, ranging from 5 minutes to 12 hours.
- 6. Global Profile Capabilities
 - a. The system must be capable of automatically modifying the sequence of operation for selected devices in response to any of the following: a time-of-day schedule, contact closure input state, manually triggered wired wall station input, RS-232/RS-485 command to wired input device, and BACnet input command. This capability is defined as supporting “Global Profiles” and is used to dynamically optimize the occupant experience and lighting energy usage.
 - b. Global profiles may be scheduled with the following capabilities:
 - 1) Global Profiles must be stored within and executed from the system controller (via internal timeclock) such that a dedicated software host or server is not required to be online to support automatic scheduling and/or operation of Global Profiles.
 - 2) Global Profile time-of-day schedules must be capable of being given the following recurrence settings: daily, specific days of week, every “n” number of days, weekly, monthly, and yearly. Lighting control profile schedules must support definition of start date, end date, end after “n” recurrences, or never ending. Daylight savings time adjustments must be capable of being performed automatically, if desired.
 - 3) Global Profile Holiday Schedules should follow recurrent settings for specific US holiday dates regardless if they always occur on a specific date or are determined by the day/week of the month.
 - 4) Global Profiles must be capable of being scheduled to run according to timed offsets relative to sunrise or sunset. Sunrise/sunset times must be automatically derived from location information using an astronomical clock.
 - 5) Software management interface must be capable of displaying a graphic calendar view of profile schedules for each control zone.
 - c. System Global Profiles must have the following additional capabilities:
 - 1) Global Profiles must be capable of being manually activated directly from the system controller, specially programmed wired input devices, scene capable wired wall stations, and the software management interface.
 - 2) Global Profiles must be selectable to apply to a single device, zone of devices, or customized group of devices.
 - 3) Parameters that must be configurable and assigned to a Global Profile must include, but not be limited to, fixture light level, occupancy time delay, response to occupancy sensors (including enabling/disabling response), response to daylight sensors (including enabling/disabling response), and enabling/disabling of wall stations.
 - d. A backup of Local and Global Profiles must be stored on the software’s host server such that the Profile backup can be applied to a replacement system controller or wired wall station.
- 7. System must support automated demand response capabilities with automatic reduction of light level to at least three levels of demand response.

2.4 SYSTEM SOFTWARE INTERFACES

A. Management Interface

1. System must provide a web-based management interface that provides remote system control, live status monitoring, and configuration capabilities of lighting control settings and schedules.
2. Management interface must be compatible with industry-standard web browser clients, including, but not limited to, Microsoft Internet Explorer, Apple Safari, Google Chrome, Mozilla Firefox.
3. Management interface must require all users to login with a User Name and Password, and must support creation of at least 100 unique user accounts.
4. Management interface must support at least three permission levels for users: read-only, read & change settings, and full administrative system access.
5. Management interface must be capable of restricting access for user accounts to specific devices within the system.
6. All system devices must be capable of being given user-defined names.
7. The following device identification information must be displayed in the Management interface: model number, model description, serial number or network ID, manufacturing date code, custom label(s), and parent network device.
8. Management interface must be able to read the live status of a networked luminaire or intelligent control device and must be capable of displaying luminaire on/off status, dim level, power measurement, device temperature, PIR occupancy sensor status, microphonic occupancy sensor status, remaining occupancy time delay, photocell reading, and active Profiles.
9. Management interface must be able to read the current active settings of a networked luminaire or intelligent control device and must be capable of displaying dimming trim levels, occupancy sensor and photocell enable/disable, occupancy sensor time delay and light level settings, occupancy sensor response (normal or vacancy), and photocell setpoints and transition time delays.
10. Management interface must be able to change the current active settings and default settings for an individual networked luminaire or intelligent control device.
11. Management interface must be capable of applying settings changes for a zone of devices or a group of selected devices using a single “save” action that does not require the user to save settings changes for each individual device.
12. A printable network inventory report must be available via the management interface.
13. printable report detailing all system profiles must be available via the management interface.
14. All sensitive information stored by the software must be encrypted.
15. All system software updates must be available for automatic download and installation via the internet.

B. Visualization and Programming Interfaces

1. System must provide an optional web-based visualization interface that displays graphical floorplan.
2. Graphical floorplan must offer the following types of system visualization:

- a. Full Device Option - A master graphic of the entire building, by floor, showing each control device installed in the project with zones outlined. This must include, but not be limited to, the following:
 - 1) Controls embedded light fixtures
 - 2) Controls devices not embedded in light fixtures
 - 3) Daylight Sensors
 - 4) Occupancy Sensors
 - 5) Wall Switches and Dimmers
 - 6) Scene Controllers
 - 7) Networked Relays
 - 8) Wired Bridges
 - 9) System Controllers
 - 10) Wired Relay Panels
 - 11) Group outlines
- b. Group Only Option - A master graphic of the entire building, by floor, showing only control groups outlined.
- c. Allow for pan and zoom commands so smaller areas can be displayed on a larger scale simply by panning and zooming each floor's master graphic.
- d. A mouse click on any control device must display the following information (as applicable):
 - 1) The device catalog number.
 - 2) The device name and custom label.
 - 3) Device diagnostic information.
 - 4) Information about the device status or current configuration is available with an additional mouse click.

2.5 SYSTEM BACKBONE AND SYSTEM INTEGRATION EQUIPMENT

A. System Controller

1. System Controller must be multi-tasking, real-time digital control processor consisting of modular hardware with plug-in enclosed processors, communication controllers, and power supplies.
2. System Controller must have 32-bit microprocessor operating at a minimum of 1 GHz.
3. System Controller must have minimum of 512MB memory, with a minimum of 4GB non-volatile flash, to support its own operating system and databases.
4. System Controller must perform the following functions:
 - a. Time-based control of downstream wired and wireless network devices.
 - b. Linking into an Ethernet network.
 - c. Integration with Building Management Systems (BMS) and Heating, Ventilation and Air Conditioning (HVAC) equipment.
 - d. Connection to various software interfaces, including management interface, historical database and analytics interface, and visualization interface.
5. System Controller must have an integral web server to support configuration, diagnostics and hosting of software interfaces.
6. Device must have option for a graphical touch screen to support configuration and diagnostics.
7. Device must have three RJ-45 networked lighting control ports for connection to any of the following:

- a. The graphical touch screen
 - b. Wired communication bridges
 - c. Direct connection to networked wired luminaires and intelligent lighting control devices (up to 128 total devices per port)
8. Device must automatically detect all networked devices connected to it.
 9. Device must have an internal time clock used for astronomical and standard schedules.
 10. Device must have 2 switched RJ-45 10/100 BaseT Ethernet ports for local area network (LAN) connection.
 - a. Ethernet connection must support daisy chain wiring to other lighting control system LAN devices.
 - b. Ethernet connection must support IPv4 and must be capable of using a dedicated static or DHCP assigned IP address.
 11. Device must have 2 x USB 2.0 Expansion ports for 802.11 Wi-Fi Adapter enabling wireless connectivity including:
 - a. Hot Spot
 - b. Access Point
 - c. Client
 12. Each System Controller must be capable of managing and operating at least 750 networked devices.
 - a. Multiple System Controllers may be networked together via LAN connection to scale the system up to 20,000 networked devices.
 13. System Controller must support BACnet/IP and BACnet MS/TP protocols to directly interface with BMS and HVAC equipment without the need for additional protocol translation gateways.
 - a. BACnet MS/TP must support 9600 to 115200 baud rate.
 - b. System Controller must be BACnet Testing Laboratory (BTL listed) using Device Profile BACnet Building Controller (B-BC) with outlined enhanced features.
 14. System controller must contain a “FIPS 140-2 Level 1 Inside” cryptographic module.
 15. System controller must support RESTful API control of BACnet objects, user management, date and time, and file management.
 16. System controller must be available within a NEMA 1 enclosure with Class 1 and Class 2 separation
 - a. Enclosure must support power input power of 120-277VAC, or optional 347.
- B. Digital Electronic Time Clock (DTC)**
1. DTC must control and program a linear bus of lighting devices and supply all time functions without connection to a system controller.
 - a. Programming of the linear bus of lighting devices must not require additional hardware, including computers, specialized dongles, or other connection devices.
 2. Programming of the linear bus must be exclusively done through the touch screen interface.
 - a. DTC must be capable of up to 32 schedules. Each schedule must consist of one set of On and Off times per day for each day of the week and for each of two holiday lists. The schedules must apply to any individual relay or group of relays.
 - b. DTC must be run from non-volatile memory so that all system programming is retained indefinitely.

- c. DTC must be optionally mounted inside of a relay panel. Installation inside of the relay panel must eliminate the necessity of any additional enclosures for complete installation.
- d. DTC must have a capacitive 3.5” full color touch screen.

2.6 WIRED NETWORKED DEVICES

A. Wired Networked Wall Switches, Dimmers, Scene Controllers

1. Devices must recess into single-gang switch box and fit a standard GFI opening.
2. Communication and low voltage power must be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
3. All switches must have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
4. Devices with mechanical push-buttons must provide tactile and LED user feedback.
5. Devices with mechanical push-buttons must be made available with custom button labeling.
6. Wall switches & dimmers must support the following device options:
 - a. Number of control zones: 1, 2 or 4
 - b. Control Types Supported:
 - 1) On/Off
 - 2) On/Off/Dimming
 - 3) On/Off/Dimming/Correlated Color Temperature Control for specific luminaire types
 - c. Colors: Ivory, White, Light Almond, Gray, Black, Red
7. Scene controllers must support the following device options:
 - a. Number of scenes: 1, 2 or 4
 - b. Control Types Supported:
 - 1) On/Off
 - 2) On/Off/Dimming
 - 3) Preset Level Scene Type
 - 4) On/Off/Dimming/Preset Level for Correlated Color Temperature
 - 5) Reprogramming of other devices within daisy-chained zone so as to implement user selected lighting scene. This must support manual start/stop from the scene controller, or optionally programmed to automatically end after a user selectable duration between 5 minutes and 12 hours.
 - 6) Selecting a lighting profile to be run by the system’s upstream controller so as to implement a selected lighting profile across multiple zones. This must support manual start/stop from the scene controller, or optionally programmed to automatically end after a user selectable duration between 5 minutes and 12 hours.
 - c. Colors: Ivory, White, Light Almond, Gray, Black, Red

B. Wired Networked Graphic Wall Stations

1. Device must surface mount to single-gang switch box.
2. Device must have a 3.5”, capacitive full color touch screen.
3. Device must be powered with Class 2 low voltage supplied locally via a directly wired power supply.

4. Device must have a micro-USB style connector for local computer connectivity.
5. Device must enable mobile application control of control zones and scenes. Communication must be over standard low voltage network cabling with RJ-45 connectors.
6. Device must enable user supplied screen saver image to be uploaded within one of the following formats: jpg, png, gif, bmp, tif.
7. Device must enable configuration of all switches, dimmers, control zones, and lighting preset scenes via password protected setup screens.
8. Graphic wall stations must support the following device options:
 - a. Number of control zones: Up to 16
 - b. Number of scenes: Up to 16
 - c. Profile type scene duration: User configurable from 5 minutes to 12 hours
 - d. Colors: White, Black

C. Wired Networked Digital Key Switches

1. Devices must recess into single-gang switch box and fit a standard GFI opening.
2. Communication and low voltage power must be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
3. All switches must have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
4. Devices must have LED user feedback to provide indication of on/off status of the programmed lights or scene, as well as indication of device power.
5. Digital key switches must support the following device options:
 - a. Control Types Supported:
 - 1) On/Off
 - 2) On/Off/Dimming
 - 3) Preset Level Scene Type
 - 4) Reprogramming of other devices within daisy-chained zone so as to implement user selected lighting scene. This must support manual start/stop from the scene controller, or optionally programmed to automatically end after a user selectable duration between 5 minutes and 12 hours.
 - 5) Selecting a lighting profile to be run by the system's upstream controller so as to implement a selected lighting profile across multiple zones. This must support manual start/stop from the scene controller, or optionally programmed to automatically end after a user selectable duration between 5 minutes and 12 hours.
 - b. Colors: Ivory, White, Light Almond, Stainless Steel

D. Wired Networked Auxiliary Input / Output (I/O) Devices

1. Devices must be plenum rated and be inline wired, screw mountable, or have an extended chase nipple for mounting to a ½" knockout.
2. Communication and low voltage power must be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
3. Auxiliary Input/Output Devices must be specified as an input or output device with the following options:
 - a. Contact closure or Pull High input

- 1) Input must be programmable to support maintained or momentary inputs that can activate local or global scenes and profiles, activate lights at a preconfigured level, ramp light level up or down, or toggle lights on/off.
 - b. 0-10V analog input
 - 1) Input must be programmable to function as a daylight sensor.
 - c. RS-232/RS-485 digital input
 - 1) Input supports activation of up to 4 local or global scenes and profiles, and on/off/dimming control of up to 16 local control zones.
 - d. 0-10V dimming control output, capable of sinking up to 20mA of current
 - 1) Output must be programmable to support all standard sequence of operations supported by system.
 - e. Digital control output via LED code communication
 - 1) Output must be programmable to support light intensity control, as well as optional correlated color temperature (CCT) control, of the connected luminaire.
- E. Wired Networked Occupancy and Photosensors
1. Occupancy sensors must sense the presence of human activity within the desired space and fully control the on/off function of the lights.
 2. Sensors must utilize passive infrared (PIR) technology, which detects occupant motion, to initially turn lights on from an off state, thus preventing false on conditions. Ultrasonic or Microwave based sensing technologies must not be accepted.
 3. For applications where a second method of sensing is necessary to adequately detect maintained occupancy (such as in rooms with obstructions), a sensor with an additional “dual” technology must be used.
 4. Dual technology sensors must have one of its two technologies not require motion to detect occupancy. Acceptable dual technology includes PIR/Microphonics (also known as Passive Dual Technology or PDT) which both looks for occupant motion and listens for sounds indicating occupants. Sensors where both technologies detect motion (PIR/Ultrasonic) must not be acceptable.
 5. All sensing technologies must be acoustically passive, meaning they do not transmit sounds waves of any frequency (for example in the Ultrasonic range), as these technologies have the potential for interference with other electronic devices within the space (such as electronic white board readers). Acceptable detection technologies include Passive Infrared (PIR), and/or Microphonics technology. Ultrasonic or Microwave based sensing technologies must not be accepted.
 6. System must have ceiling, fixture, recessed & corner mounted sensors available, with multiple lens options available customized for specific applications.
 7. Communication and low voltage power must be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
 8. All sensors must have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
 9. Sensor programming parameter must be available and configurable remotely from the software and locally via the device push-button.
 10. Ceiling mount occupancy sensors must be available with zero or one integrated dry contact switching relays, capable of switching 1 amp at 24 VAC/VDC (resistive only).

11. Sensors must be available with one or two occupancy “poles”, each of which provides a programmable time delay.
 12. Sensors must have optional features for photosensor/daylight override, automatic dimming control, and low temperature/high humidity operation.
 13. Photosensor must provide for an on/off set-point, and a dead band to prevent the artificial light from cycling. Delay must be incorporated into the photocell to prevent rapid response to passing clouds.
 14. Photosensor and dimming sensor’s set-point and dead band must be automatically calibrated through the sensor’s microprocessor by initiating an “Automatic Set-point Programming” procedure. Min and max dim settings as well as set-point may be manually entered.
 15. Dead band setting must be verified and modified by the sensor automatically every time the lights cycle to accommodate physical changes in the space (i.e., furniture layouts, lamp depreciation, or lamp outages).
 16. A dual zone option must be available for On/Off Photocell, Automatic Dimming Control Photocell, or Combination units. The secondary daylight zone must be capable of being controlled as an “offset” from the primary zone.
- F. Wired Networked Wall Switch Sensors
1. Product Series: nWSX LV
 2. Devices must recess into single-gang switch box and fit a standard GFI opening.
 3. Communication and low voltage power must be delivered to each device via standard low voltage network cabling with RJ-45 connectors.
 4. All wall switch sensors must have the ability to detect when it is not receiving valid communication and blink its LED in a pattern to visually indicate a potential wiring issue.
 5. Devices with mechanical push-buttons must provide tactile user feedback.
 6. Wall switches sensors must support the following device options:
 - a. User Input Control Types Supported: On/Off or On/Off/Dimming
 - b. Occupancy Sensing Technology: PIR only or Dual Tech acoustic
 - c. Daylight Sensing Option: Inhibit Photosensor
 - d. Colors: Ivory, White, Light Almond, Gray, Black, Red
- G. Wired Networked Embedded Sensors
1. Network system must have embedded sensors consisting of occupancy sensors and/or dimming photocells that can be embedded into luminaire such that only the lens shows on luminaire face.
 2. Occupancy sensor detection pattern must be suitable for 7.5’ to 20’ mounting heights.
 3. Embedded sensors must support the following device options:
 - a. Occupancy Sensing technology: PIR only or Dual Tech acoustic
 - b. Daylight Sensing Option: Occupancy only, Daylight only, or combination Occupancy/Daylight sensor
- H. Wired Networked Power Packs and Secondary Packs
1. Power Packs must incorporate one optional Class 1 relay, optional 0-10 VDC dimming output, and contribute low voltage Class 2 power to the rest of the system.

2. Power Packs must accept 120 or 277 VAC (or optionally 347 VAC) and carry a plenum rating.
3. Secondary Packs must incorporate the relay and 0-10 VDC or line voltage dimming output, but must not be required to contribute system power.
4. Power Supplies must provide system power only, but are not required to switch line voltage circuit.
5. Auxiliary Relay Packs must switch low voltage circuits only, capable of switching 1 amp at 40 VAC/VDC (resistive only).
6. Communication must be delivered to each device via standard low voltage network cabling with RJ-45 connectors. Secondary packs must receive low voltage power via standard low voltage network cable.
7. Power Pack programming parameters must be available and configurable remotely from the software and locally via the device push-button.
8. Power Pack must securely mount through a threaded ½ inch chase nipple or be capable of being secured within a luminaire ballast/driver channel. Plastic clips into junction box must not be accepted. All Class 1 wiring must pass through chase nipple into adjacent junction box without any exposure of wire leads. Note: UL Listing under Energy Management or Industrial Control Equipment automatically meets this requirement, whereas Appliance Control Listing does not meet this safety requirement.
9. Power Pack must install inside standard electrical enclosure and provide UL recognized support to junction box. All Class 1 wiring is to pass through chase nipple into adjacent junction box without any exposure of wire leads.
10. Power/Secondary Packs must be available with the following options:
 - a. Power Pack capable of full 16-Amp switching of all normal power lighting load types, with optional 0-10V dimming output capable of up to 100mA of sink current.
 - b. Secondary Pack with UL924 listing for switching of full 16-Amp Emergency Power circuits, with optional 0-10V dimming output capable of up to 100mA of sink current.
 - c. Power and Secondary Packs capable of full 20-Amp switching of general purpose receptacle (plug-load) control.
 - d. Secondary Pack capable of full 16-Amp switching of all normal power lighting load types.
 - e. Secondary Pack capable of 5-Amps switching and dimming 120 VAC incandescent lighting loads or 120/277 VAC line voltage dimmable fluorescent ballasts (2-wire and 3-wire versions).
 - f. Secondary Pack capable of 5-Amps switching and dimming of 120/277 VAC magnetic low voltage transformers.
 - g. Secondary Pack capable of 4-Amps switching and dimming of 120 VAC electronic low voltage transformers.
 - h. Secondary Pack capable of louver/damper motor control for skylights.
 - i. Secondary Pack capable of providing a pulse on/pulse off signal for purposes of controlling shade systems via relay inputs.
 - j. Secondary Pack capable of switching 1 amp at 40 VAC/VDC (resistive only) with the intent to provide relay signal to auxiliary system (e.g. BMS).
 - k. Power Supply capable of providing auxiliary bus power (no switched or dimmed load).

I. Wired Networked Luminaires

1. Product Series: Networked Luminaires must be factory enabled with embedded networking capability:
 - a. Networked luminaire must have a mechanically integrated control device.
2. Networked LED luminaire must have two RJ-45 ports available (via control device directly or incorporated RJ-45 splitter).
3. Networked LED luminaire must be able to digitally network directly to other network control devices (sensors, photocells, switches, dimmers).
4. Networked LED luminaire must provide low voltage power to other networked control devices (excluding EMG and CCT capable versions).
5. System must be able to turn on/off specific LED luminaires without using a relay, if LED driver supports "sleep mode."
6. System must be able to maintain constant lumen output over the specified life of the LED luminaire (also called lumen compensation) by automatically varying the dimming control signal to account for lumen depreciation.
 - a. System must indicate (via a blink warning) when the LED luminaire is no longer able to compensate for lumen depreciation.
7. System must be able to provide control of network luminaire intensity, in addition to correlated color temperature of specific LED luminaires.
8. System must be able to provide control of network luminaire intensity, in addition to dynamic features, such as grayscale and color accent of specific LED luminaires.

J. Wired Networked Relay and Dimming Panel

1. Relay and dimming panel must be available with 4, 8, 12, 16, 24, 32, 40 or 48 individual relays per panel, with an equal number of individual 0-10V dimming outputs.
2. Optional Field Configurable Relays (FCR) used must have the following required properties:
 - a. Configurable in the field to operate with single-, double-, or triple-pole relay groupings.
 - b. Configurable in the field to operate with normally closed or normally open behavior.
 - c. Provides visual status of current state and manual override control of each relay.
 - d. Listed for the following minimum ratings:
 - 1) 40A @ 120-480VAC Ballast
 - 2) 16A @ 120-277VAC Electronic
 - 3) 20A @ 120-277VAC Tungsten
 - 4) 20A @ 48VDC Resistive
 - 5) 2HP @ 120VAC
 - 6) 3HP @ 240-277VAC
 - 7) 65kA SCCR @ 480VAC
3. 0-10 dimming outputs must support a minimum of 100mA sink current per output.
4. Relay and dimming outputs must be individually programmable to support all standard sequence of operations as defined in this specification.
5. Panel must be UL924 listed for control of emergency lighting circuits.
6. Panel must power itself from an integrated 120-277 VAC or optional 347VAC supply.
7. Panel must provide a configurable low-voltage sensor input with the following properties:

- a. Configurable to support any of the following input types:
 - 1) Indoor Photocell
 - 2) Outdoor Photocell
 - 3) Occupancy Sensor
 - 4) Contact Closure
 - b. Low voltage sensor input must provide +24VDC power for the sensor so that additional auxiliary power supplies are not required.
 - c. Sensor input supports all standard sequence of operations as defined in this specification.
8. Panel must provide a contact closure input for each group of 8-relays that acts as a panel override to activate the normally configured state of all relays (i.e., normally open or normally closed) in the panel. This input is intended to provide an interface to alarm systems, fire panels, or BMS system to override the panel.
 9. Panel must supply current limited low voltage power to other networked devices connected via low voltage network cable.
 10. Panel must be available with NEMA 1 rated enclosure with the following mounting and cover options:
 - a. Surface-mounted for all panel sizes
 - b. Flush-mounted for up to 16 relay panel sizes
 - c. Screw-fastened for up to 16 relay panel sizes
 - d. Hinged cover with keyed lock for all panel sizes
 11. Surface-mounted screw cover options for 8 and 16 relay panel sizes must be plenum rated
 12. Panel must be rated from 0-50C for 8 and 16 enclosure sizes, and 0-45C for 32 and 48 enclosure sizes.
- K. Wired Networked Bluetooth Low Energy Programming Device
1. Device must be plenum rated and be inline wired, screw mountable.
 2. Communication and low voltage power must be delivered to device via standard low voltage network cabling with RJ-45 connectors.
 3. Bluetooth Low Energy connection must allow connection from smartphone application for programming device settings within the local daisy-chain zone
 - a. Device must provide visual indication of remote Bluetooth connection via LED integrated into device enclosure such that it is visible from all angles while the zone is being programmed.
- L. Wired Networked Communication Bridge
1. Device must surface mount to a standard 4" x 4" square junction box.
 2. Device must have 8 RJ-45 ports for connection to lighting control zones (up to 128 devices per port), additional network bridges, and System Controller.
 3. Device must be capable of aggregating communication from multiple lighting control zones for purposes of minimizing backbone wiring requirements back to System Controller.
 4. Device must be powered with Class 2 low voltage supplied locally via a directly wired power supply, or powered via low voltage network connections from powered lighting control devices (e.g. power packs).

5. Wired Bridge must be capable of redistributing power from its local supply and connected lighting control zones with excess power to lighting control zones with insufficient local power. This architecture also enables loss of power to a particular area to be less impactful on network lighting control system.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION REQUIREMENTS

- A. Installation Procedures and Verification
 1. Review all required installation and pre-startup procedures with the manufacturer's representative through pre-construction meetings.
 2. Install and connect the networked lighting control system components according to the manufacturer's installation instructions, wiring diagrams, the project submittals and plans specifications.
 3. Contractor is responsible for testing of all low voltage network cable. Contractor is responsible for verification of the following minimum parameters:
 - a. Wire Map (continuity, pin termination, shorts and open connections, etc.)
 - b. Length
 - c. Insertion Loss
- B. Coordination with City of New York's IT Network Infrastructure
 1. Coordinate with the commissioner to secure all required network connections to the City of New York's IT network infrastructure.
 - a. Provide to the commissioner all network infrastructure requirements of the networked lighting control system.
 - b. Provide to the manufacturer's representative all necessary contacts pertaining to the City of New York's IT infrastructure, to ensure that the system is properly connected and started up.
- C. Documentation and Deliverables
 1. Contractor is responsible for documenting installed location of all networked devices, including networked luminaires. This includes responsibility to provide as-built plan drawing showing device address barcodes corresponding to locations of installed equipment.
 2. Contractor is also responsible for the following additional documentation to the manufacturer's representative.
 - a. As-Built floor plan drawings showing device address locations required above. All documentation must remain legible when reproducing/scanning drawing files for electronic submission.
 - b. As-Built electrical lighting drawings (reflected ceiling plan) in PDF and CAD format. Architectural floor plans must be based on as-built conditions.

- 1) CAD files must have layers already turned on/off as desired to be shown in the graphical floorplan background images. The following CAD elements are recommended to be hidden to produce an ideal background graphical image:
 - Titleblock
 - Text- Inclusive of room names and numbers, fixture tags and drawings notes
 - Fixture wiring and homeruns
 - Control devices
 - Hatching or poché of light fixtures or architectural elements
- 2) CAD files must be of AutoCAD 2013 or earlier. Revit file overall floor plan views must be exported to AutoCAD 2013.

3.3 SYSTEM STARTUP

- A. Upon completion of installation by the installer, including completion of all required verification and documentation required by the manufacturer, the system must be started up and programmed.
 1. For CAT5 wired devices, low voltage network cable testing must be performed prior to system startup.
- B. System start-up and programming must include:
 1. Verifying operational communication to all system devices.
 2. Programming the network devices into functional control zones to meet the required sequence of operation.
 3. Programming and verifying all sequence of operations.
- C. Initial start-up and programming is to occur on-site.

3.4 PROJECT TURNOVER

- A. System Documentation
 1. Submit software database file with desired device labels and notes completed. Changes to this file will not be made by the factory.
 2. Grant access to the commissioner for the programming database, if requested.
- B. City of New York Instruction
 1. Provisions for onsite instruction for the City of New York's designated attendees to be included in submittal package.

END OF SECTION 26 09 23

SECTION 26 12 00

MEDIUM-VOLTAGE TRANSFORMERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes: distribution and power transformers with medium-voltage primaries.
- B. Related Sections include the following:
1. Division 26 Section 26 05 13 "Medium-Voltage Cables" for cable terminations at transformers.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Include data on features, components, ratings, and performance for each type of transformer specified. Include dimensioned plans, sections, and elevation views. Show minimum clearances and installed devices and features.
- C. Wiring Diagrams: Detail wiring and identify terminals for tap changing and connecting field-installed wiring.
- D. Product Certificates: Signed by manufacturers of transformers certifying that the products furnished comply with requirements.
- E. Qualification Data: For firms and persons specified in "Quality Assurance" Article.
- F. Factory Test Reports: Certified copies of manufacturer's design and routine factory tests required by referenced standards.
- G. Sound-Level Test Reports: Certified copies of manufacturer's sound-level tests applicable to equipment for this Project.
- H. Field Test Reports: Indicate and interpret test results for tests specified in Part 3.
- I. Maintenance Data: For transformers to include in the maintenance manuals specified in DDC General Conditions.
- J. Submit short circuit, arc flash and overcurrent protection coordination study as described in

Section 26 05 00 “Common Work Results for Electrical”. Study must accompany equipment submittals. Failure to include the study with the equipment submittals will cause the equipment submittals to be rejected.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Testing Agency Qualifications: In addition to requirements specified in DDC General Conditions Section "Quality Control," an independent testing agency must meet OSHA criteria for accreditation of testing laboratories, Title 29, Part 1907; or must be a full-member company of the InterNational Electrical Testing Association.
 - 1. Testing Agency's Field Supervisor: Person currently certified by the InterNational Electrical Testing Association or the National Institute for Certification in Engineering Technologies, to supervise on-site testing specified in Part 3.
- C. Listing and Labeling: Provide transformers specified in this Section that are listed and labeled.
 - 1. The Terms "Listed" and "Labeled": As defined in NFPA 70, Article 100.
 - 2. Listing and Labeling Agency Qualifications: A "Nationally Recognized Testing Laboratory" as defined in OSHA Regulation 1910.7.
- D. Comply with IEEE C2.
- E. Comply with NFPA 70.

1.5 DELIVERY, STORAGE, AND HANDLING

- A. Temporary Heating: For indoor, dry-type transformers, apply temporary heat according to manufacturer's written instructions within the enclosure of each ventilated-type unit throughout periods during which equipment is not energized and is not in a space that is continuously under normal control of temperature and humidity.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. ABB Power T & D Co., Inc.
 - 2. Acme Electric Corp.; Transformer Division.
 - 3. Cooper Industries; Cooper Power Systems Division.
 - 4. Federal Pacific Co.; Line Power Mfg. Corp. Subsidiary.
 - 5. GEC Alsthom T&D Balteau.
 - 6. GE Electrical Distribution & Control.

7. Hammond Co.; Matra Electric, Inc.
8. MagneTek Inc.
9. Magnetic Windings Hi-Tek, Inc.
10. Neeltran, Inc.
11. Pauwels Transformers, Inc.
12. Siemens Industry Inc.
13. Sola/Hevi-Duty Electric.
14. Square D; Groupe Schneider.
15. Uptegraff: R.E. Uptegraff Mfg. Co.
16. Virginia Transformer Corp.
17. Or approved equal.

2.2 TRANSFORMERS, GENERAL

- A. Description: 2-winding type, designed for operation with high-voltage windings connected to a 3-phase, 3-wire, 60-Hz, grounded-neutral distribution system.
- B. Low-Sound-Level Units: Minimum of 3 dB less than NEMA TR 1 standard sound levels for transformer type and rating.
- C. Unusual Service Conditions: Provide transformers designed for the following conditions:
- D. Forced-Air Cooling Provisions: Cooling fans, temperature-sensing devices, and controls; complete with housings, mounting devices, conduit, and wiring.
 1. Cooling-Fan Operation: Automatically and sequentially controlled by temperature-sensing devices.
 2. Manually Operable Switch: Connected in parallel with automatic-control contacts.
 3. Enclosure for Controls: Cabinets mounted on side of transformer at a height not more than 60 inches (1500 mm) above base.
 4. Cooling Fans: Propeller type, with aluminum blades and direct-drive, totally enclosed, fan-cooled motors.
 5. Motor Circuits: Individually fused or thermally protected.
 6. Fans: OSHA blade guards.
 7. Fan Control: Thermally operated, windings' temperature-sensing devices.
- E. Future Forced-Air Cooling Control: Include the following:
 1. Top-Liquid Temperature Sensing on Liquid-Filled Transformers: Thermally operated temperature-control device with a thermal element mounted in a well; and provisions for mounting the control cabinet, conduit, and fans.
 2. Windings' Temperature Sensing on Liquid-Filled Transformers: Thermally operated

windings' temperature-control device with a thermal element mounted in a well; heating coil; and provisions for mounting the control cabinet, conduit, and fans.

3. Windings' Temperature Sensing on Dry-Type Transformers: Insulated wells in all 3 coils for future installation of sensors directly in air ducts of each coil to monitor coil temperature; and provisions for mounting control cabinet, conduit, and fans.

2.3 DRY-TYPE TRANSFORMERS

- A. Comply with NEMA ST 20, IEEE C.57.12.01, and IEEE C57.94, and list and label as complying with UL 1562.
- B. Enclosure: Outdoor, ventilated, raintight, NEMA 250, Type 3R.
- C. Cooling System: Comply with IEEE C57.12.01 class indication in the Medium-Voltage Transformer Schedule.
- D. Windings: Copper.
- E. Insulation Class: 220 deg C.
 1. Rated Temperature Rise: 115 deg C maximum rise above 40 deg C.
 2. BIL: Standard value for nominal primary equipment voltage per applicable IEEE standard.
- F. Full-Capacity Voltage Taps: Four 2.5-percent taps; 2 above and 2 below rated high voltage.
- G. Impedance: Value indicated in schedule or, if none indicated, manufacturer's standard.
- H. Include the following accessories:
 1. High-Voltage Surge Arresters: Distribution class, low-flashover, metal-oxide-varistor type complying with NEMA LA 1; factory installed and connected to high-voltage terminals.
 2. Low-Voltage Surge Arresters: Metal-oxide-varistor type complying with NEMA LA 1; factory installed and connected to low-voltage terminals.
 3. High-Voltage Terminal Compartment: Steel compartment with height to match transformer.
 4. Low-Voltage Terminal Compartment: Steel compartment with height to match transformer.
 5. High-Temperature Alarm: A sensor at the transformer with local audible and visual alarm and contacts for remote alarm.

2.4 LIQUID-FILLED/PAD-MOUNTED TRANSFORMERS

- A. Description: Comply with IEEE C57.12.22 and ANSI C57.12.28.

- B. Insulating Liquid: Silicone, listed as less-flammable type. Liquid can extinguish small arcing and has a minimum fire point of 330 deg C, a minimum thermal conductivity of 0.00036 Cal/(Sec x sq. cm x deg C) at 25 deg C, and a minimum dielectric strength of 33 kV, when tested per ASTM D 877.
 - 1. Rated Temperature Rise: 65 deg C maximum rise above 40 deg C.
 - 2. BIL: Standard value for nominal primary equipment voltage per applicable IEEE standard.
- C. Full-Capacity Voltage Taps: Four 2.5-percent taps; 2 above and 2 below rated high voltage; with externally operable tap changer for de-energized use and with a position indicator and padlock hasp.
- D. High-Voltage Switching: Arranged for loop feed with 3-phase, 4-position, gang-operated load-break switch that is oil immersed in transformer tank with hook-stick operating handle in primary compartment.
- E. Primary Fuse: Current-limiting type in dry-fuse holder wells, mechanically interlocked with a liquid-immersed switch in the transformer tank to prevent disconnect under load.
- F. Surge Arresters: Distribution class, one for each primary phase. Comply with NEMA LA 1. Support from tank wall within high-voltage compartment.
- G. High-Voltage Terminations and Equipment: Dead front with universal-type bushing wells for dead-front bushing-well inserts. Include the following:
 - 1. Bushing-Well Inserts: One for each high-voltage bushing well.
 - 2. Surge Arresters: Dead-front, elbow-type, metal-oxide-varistor units.
 - 3. Parking Stands: One for each high-voltage bushing well.
 - 4. Portable Insulated Bushings: Arranged for parking insulated, high-voltage, load-break cable terminators; one for each primary feeder conductor terminating at transformer.
- H. Include the following accessories:
 - 1. Drain Valve: 1 inch (25 mm), with sampling device.
 - 2. Dial-type thermometer.
 - 3. Liquid-level gage.
 - 4. Pressure-vacuum gage.
 - 5. Pressure-Relief Device: Self-sealing with an indicator.
 - 6. Mounting provisions for low-voltage current transformers.
 - 7. Mounting provisions for low-voltage potential transformers.

8. Busway terminal connection at low-voltage compartment.
9. Alarm contacts for above gages and thermometer.

2.5 FINISHES

- A. Enclosure Coating System for Outdoor Units: Comply with ANSI C57.12.28 regardless of transformer type.

2.6 SOURCE QUALITY CONTROL

- A. Factory Tests: Design and routine tests comply with referenced standards.
- B. Factory Sound-Level Tests: Conduct sound-level tests on equipment for this Project if specified sound levels are below standard ratings.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Comply with IEEE C2.
- B. Identify transformers and install warning signs according to Division 26 Section 26 05 53 "Identification for Electrical Work."
- C. Tighten electrical connectors and terminals according to manufacturer's published torque-tightening values. If manufacturer's torque values are not indicated, use those specified in UL 486A and UL 486B.

3.3 GROUNDING

- A. Separately Derived Systems: Make grounding connections to grounding electrodes and bonding connections to metallic piping as indicated to comply with NFPA 70.
- B. Comply with Division 26 Section 26 05 26 "Grounding and Bonding for Electrical Systems" for materials and installation requirements.

3.4 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to supervise the field assembly and connection of components, and the testing and adjusting of transformer components and accessories.
- B. Independent Testing Agency: Engage an independent electrical testing agency to test medium-voltage transformer installations as specified below.

- C. Test Objectives: To ensure transformer is operational within industry and manufacturer's tolerances, is installed according to the Contract Documents, and is suitable for energizing.
- D. Test Labeling: On satisfactory completion of tests for each transformer, attach a dated and signed "Satisfactory Test" label to tested component.
- E. Schedule tests and provide notification at least 7 days in advance of test commencement.
- F. Report: Submit a written report of observations and tests. Report defective materials and installation.
- G. Tests: Include the following minimum inspections and tests according to manufacturer's written instructions. Comply with IEEE C57.12.90 for test methods and data correction factors for liquid-filled units and with IEEE C57.12.91 for dry-type units.
 - 1. Inspect accessible components for cleanliness, mechanical and electrical integrity, and damage or deterioration. Verify that temporary shipping bracing has been removed. Include internal inspection through access panels and covers for dry-type transformers.
 - 2. Inspect bolted electrical connections for tightness according to manufacturer's published torque values or, if not available, those specified in UL 486A and UL 486B.
 - 3. Insulation Resistance: Perform megohmmeter tests of primary and secondary winding to winding and winding to ground.
 - a. For Windings' Ratings from 0 to 600 V: 1000-V, dc minimum test voltage; and 500 megohms for dry-type and 100 megohms for liquid-filled transformers.
 - b. For Windings' Ratings from 601 to 5000 V: 2500-V, dc minimum test voltage; and 5000 megohms for dry-type and 1000 megohms for liquid-filled transformers.
 - c. For Windings' Ratings from 5000 to 35,000 V: 5000-V, dc minimum test voltage; and 25,000 megohms for dry-type and 5000 megohms for liquid-filled transformers.
 - 4. Duration of Each Test: 10 minutes.
 - 5. Temperature Correction: Correct results for test temperature deviation from 20 deg C standard.
 - 6. Turns Ratio: Measure between windings at each tap setting. Measured ratios deviating more than 0.5 percent from calculated or measured ratio for an adjacent coil are not acceptable.
 - 7. Winding Resistance: Measure for windings at nominal tap setting. Measured resistance deviating more than 1 percent from that of adjacent windings is not acceptable.
 - 8. Overpotential Tests: Apply between high and low voltage and ground at not more than 85 percent of factory-test value for 1 minute.

9. Liquid-Filled Transformer, Insulation Power-Factor Test: Determine overall dielectric loss and power factor for windings' insulation. Limit test voltage to line-to-ground voltage of windings being tested. Measured values exceeding the following are not acceptable:
 - a. Oil-Filled Units: 1 percent.
 - b. Silicone-Filled Units: 0.5 percent.
 - c. High-Fire-Point, Hydrocarbon-Filled Units: 1 percent.
- H. Test Failures: Compare test results with specified performance or manufacturer's data. Correct deficiencies identified by tests and retest. Verify that transformers meet specified requirements.
- I. Infrared Scanning: After Substantial Completion, but not more than two months after Final Acceptance, perform an infrared scan of switchboard assembly. Make bus joints and connections accessible to a portable scanner and perform scanning during a period of normal working load as advised by the Commissioner.
 1. Follow-up Infrared Scanning: Perform one additional follow-up infrared scan at same locations as before, 11 months after date of Substantial Completion.
 2. Instrument: Use an infrared scanning device designed to measure temperature or detect significant deviations from normal values. Provide calibration record for scanning device used for electrical distribution equipment.
 3. Record of Infrared Scanning: Prepare a certified report identifying all connections checked and describing results of scanning. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 CLEANING

- A. On completion of installation, inspect components. Remove paint splatters and other spots, dirt, and debris. Restore scratches and marks on finish to match original finish. Clean components internally using methods and materials recommended by manufacturer.

3.6 ADJUSTING

- A. After installing and cleaning, touch up scratches and mars on finish to match original finish.
- B. Adjust transformer taps to provide optimum voltage conditions at utilization equipment throughout normal operating cycle of facility. Record primary and secondary voltages and tap settings and submit with test results.
- C. Occupancy Adjustment: When requested within 12 months of date of Substantial Completion, provide on-site assistance in readjusting transformer tap settings to suit actual occupied conditions. Provide up to 2 visits to Project Site for this purpose without additional cost.
 1. Voltage Recordings: Contractor performed. Provide up to 48 hours of recording on the low-voltage system of each medium-voltage transformer.

2. Point of Measurement: Make voltage recordings at load outlets selected by the Commissioner.

3.7 DEMONSTRATION

- A. Engage a factory-authorized service representative to explain transformers and accessories and to instruct The City of New York maintenance personnel. Include a minimum of 8 hours of instruction in operation and maintenance. Provide both classroom instructing and hands-on equipment operation covering the following:
 1. Safety precautions.
 2. Features and construction of project transformers and accessories.
 3. Routine inspection, test, and maintenance procedures.
 4. Routine cleaning.
 5. Features, operation, and maintenance of integral disconnect switches and protective devices.
 6. Interpretation of readings of indicating and alarm devices.
 7. Fuse selection.
 8. Protective-relay setting considerations.
 9. Features, operation, and maintenance of separable, insulated, connector system.
 10. Tap-changing procedures.
 11. Schedule instructing with the City of New York's staff with at least 7 days' advance notice.

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 26 24 16

PANELBOARDS

PART 1- GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Lighting and appliance branch circuit panelboards.
 2. Power and distribution panelboards.

1.3 DEFINITIONS

- A. Panelette (Load Center): A panelboard with thermal magnetic molded case circuit-breaker branches, primarily of the plug-in type, designed for residential and light commercial projects, operating at 240 Volts and below, available in both single and 3-phase versions, and equipped with flush mounting trim.
- B. Overcurrent Protective Device (OCD) (OCPD): A device operative on excessive current that causes and maintains the interruption of power in the circuit it protects.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each type of panelboard, accessory, and component indicated. Include dimensions and manufacturers' technical data on features, performance, electrical characteristics, ratings, and finishes.
- C. Shop Drawings: For each panelboard and related equipment.
1. Dimensioned plans, elevations, sections, and details. Show tabulations of installed devices, equipment features, and ratings. Include the following:
 - a. Enclosure types and details for types other than NEMA 250, Type 1.
 - b. Bus configuration, current, and voltage ratings.
 - c. Short-circuit current rating of panelboards and overcurrent protective

devices.

- d. UL listing for series rating of installed devices.
- e. Features, characteristics, ratings, and factory settings of individual overcurrent protective devices and auxiliary components.

D. Field Test Reports: Submit written test reports and include the following:

- 1. Test procedures used.
- 2. Test results that comply with requirements.
- 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.

E. Panelboard Schedules: For installation in panelboards. Submit final versions after load balancing. Panelboard schedules must indicate room names/locations where the electrical devices being served are located.

F. Operation and Maintenance Data: For panelboards and components to include in maintenance manuals specified in DDC General Conditions. In addition include the following:

- 1. Manufacturer's written instructions for testing and adjusting overcurrent protective devices.
- 2. Time-current curves, including selectable ranges for each type of overcurrent protective device.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source Limitations: Obtain panelboards, OCD's, components and accessories through one source from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by Underwriters Laboratories Inc.
- D. Comply with NEMA PB 1.
- E. Comply with 2014 New York City Electrical Code.

1.6 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions, unless otherwise indicated:

1. Ambient Temperature: Not exceeding 104 degrees F (40 degrees C).
 2. Altitude: Not exceeding 6600 feet (2000 m).
- B. Service Condition: NEMA PB 1, usual service conditions, as follows:
1. Ambient temperature within limits specified.
 2. Altitude not exceeding 6600 feet (2000 m).

1.7 COORDINATION

- A. Coordinate layout and installation of panelboards and components with other construction that penetrates walls or is supported by them, including electrical and other types of equipment, raceways, piping, and encumbrances to workspace clearance requirements.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide product by one of the following:
1. Panelboards and Accessories:
 - a. Siemens Energy & Automation, Inc.
 - b. General Electric Co.; Electrical Distribution & Control Div.
 - c. Eaton Corp.; Cutler-Hammer Products.
 - d. Square D Co.
 - e. Or Approved Equal

2.2 MANUFACTURED UNITS

- A. Factory tests: Dielectric test, phase to phase and phase to ground, at twice the rated voltage plus 1,000 volts (1,500 volts minimum) for one minute. Date of test and the name and title of the individual certifying the test must be indicated on a label affixed to the equipment.
- B. Enclosures: Flush- and surface mounted cabinets. NEMA PB 1, Type 1, to meet environmental conditions at installed location.
1. Outdoor Locations: NEMA 250, Type 3R.

2. Other Wet or Damp Indoor Locations: NEMA 250, Type 4.
 - C. Front: Secured to box with concealed trim clamps. For surface-mounted fronts, match box dimensions; for flush-mounted fronts, overlap box.
 - D. Finish: Manufacturer's standard enamel finish over corrosion-resistant treatment or primer coat.
 - E. Directory Card: With transparent protective cover, mounted inside metal frame, inside panelboard door.
 - F. Bus: Hard-drawn copper, 98 percent conductivity.
 - G. Equipment Ground Bus: Adequate for feeder and branch-circuit equipment ground conductors; bonded to box.
 - H. Main and Neutral Lugs: Type suitable for use with conductor material.
 - I. Feed-through Lugs: Type suitable for use with conductor material. Locate at opposite end of bus from incoming lugs or main device.
 - J. Service Equipment Label: UL labeled for use as service equipment for panelboards with main service disconnect switches.
 - K. Future Devices: Mounting brackets, bus connections, and necessary appurtenances required for future installation of devices.
 - L. Where wires or cables are used within panelboards to make up internal connections (factory installed or otherwise) such wire or cable must have copper conductors only.
 - M. Where indicated or as required to assure ready accessibility of top switching and overcurrent device, they must be arranged as multiple adjacent sections. A single overall cabinet must be supplied for the multiple adjacent sections which constitute one panel. 1/4 inch (7 mm) minimum thickness plastic barriers having adequate angle iron framing support all around must be included between sections. The entire assembly must be such as to include wiring gutter space for each section as if it were an individual panelboard. Common bussing must be arranged for adjacent sections unless there is indication that the individual sections are to be separately supplied. Sub-feed lugs with full capacity cable taps to adjacent panel sections will be accepted as the bussing method.

2.3 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

- A. Branch Overcurrent Protective Devices: Bolt-on circuit breakers, replaceable without disturbing adjacent units.
- B. Doors: Concealed hinges, secured with flush latch with tumbler lock.

- C. Product Description: NEMA PB1, circuit breaker type, lighting and appliance branch circuit panelboard.
- D. Panelboard Bus: Copper, current carrying components, ratings as indicated on Drawings. Furnish copper ground bus in each panelboard; furnish insulated ground bus as indicated on Drawings.
- E. Minimum Integrated Short Circuit Rating: 22,000 amperes rms symmetrical for 208 volt panelboards. The final short circuit rating must be as required due to available short circuit.
- F. Molded Case Circuit Breakers: NEMA AB 1, bolt-on type thermal magnetic trip circuit breakers, with common trip handle for all poles, listed as Type SWD for lighting circuits, Type HACR for air conditioning equipment circuits, Class A ground fault interrupter circuit breakers as indicated on Drawings. Do not use tandem circuit breakers.
- G. Enclosure: NEMA PB 1, Type 1
- H. Cabinet Front: Flush or Surface (as indicated on drawings) cabinet front with concealed trim clamps, concealed hinge, metal directory frame, and flush lock keyed alike. Finish in manufacturer's standard gray enamel.

2.4 OVERCURRENT PROTECTIVE DEVICES

- A. As described in Section 26 08 00 "Low Voltage Circuit Protective Devices".

2.5 ACCESSORY COMPONENTS AND FEATURES

- A. Accessory Set: Include tools and miscellaneous items as required for overcurrent protective device test, inspection, maintenance, and operation.
- B. Switch and fuse units incorporated as part of panelboards must be equipped with factory installed rejection clips to restrict fuses to types specified in Section 26 08 13 "Fuses". Modify or replace in field any incorrect fuse clips.
- C. Provide "lock-on" clips for the toggle handles of 5 percent of the branches in all lighting and appliance panels. Apply these clips to circuits supplying emergency battery units, night lights and others as directed in the field.
- D. Furnish handle padlock attachments for 5 percent of the branches in lighting and appliance panels, and padlocks (with key) for 10 percent of these padlock attachments, but not less than 10 locks. Apply the padlock attachments to circuits (as directed in the field) for which the branch circuit device must be lockable in the "off" position in order to provide code-approved disconnect means.

2.6 PANELBOARD SHORT CIRCUIT RATINGS

- A. Panelboards must bear U.L. labels attesting to the adequacy of the equipment to withstand, and interrupt short-circuit currents not less than those available at their incoming terminals. Panels must either be fully rated or must be series rated in conjunction with integral or remote upstream devices in compliance with Section 26 08 00 "Low Voltage Circuit Protective Devices". U.L. labels must include size and type of allowable upstream and branch circuit devices and series connected ratings.
 - 1. 120/208 volt power or distribution panels must be fully rated for not less than 22,000 amps.
 - 2. 120/208 volt lighting or appliance panels must be "fully rated" for 10,000 amps except that panels supplied from transformers 225 KVA and larger must be "fully rated" or "series connected" rated for not less than 22,000 amps.
- B. Panelboard short circuit ratings must comply with the following:
 - 1. Distribution and power panels must be "fully rated" for 100,000 amps when used in conjunction with appropriate current limiting fuses as specified.
 - 2. Lighting and appliance panels must be series rated for not less than 100,000, 65,000, 42,000 22,000 amps when used in conjunction with appropriate main or upstream current limiting or high interrupting capacity circuit breakers.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install panelboards and accessories according to NEMA PB 1.1.
- B. Comply with mounting and anchoring requirements specified in section 26 05 29 "Hangers and Supports for Electrical Systems."
- C. Mount top of trim 74 inches above finished floor, unless otherwise indicated.
- D. Mount plumb and rigid without distortion of box. Mount recessed panelboards with fronts uniformly flush with wall finish.
- E. Install overcurrent protective devices and controllers.
 - 1. Set field-adjustable switches and circuit-breaker trip ranges.
- F. Install filler plates in unused spaces.

- G. Stub four 1-inch (DN 25) empty conduits from panelboard into accessible ceiling space or space designated to be ceiling space in the future. Stub four 1-inch (DN 25) empty conduits into raised floor space or below slab not on grade.
- H. Arrange conductors in gutters into groups and bundle and wrap with wire ties.

3.3 IDENTIFICATION

- A. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs as specified in Section 26 05 53 "Identification of Electrical Work."
- B. Create a directory to indicate installed circuit loads. Obtain approval before installing. Use a computer or typewriter to create directory; handwritten directories are not acceptable.
- C. Panelboard Nameplates: Label each panelboard with engraved metal or laminated-plastic nameplate mounted with corrosion-resistant screws.

3.4 CONNECTIONS

- A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 26 05 19 "Low Voltage Power Conductors".

3.5 FIELD QUALITY CONTROL

- A. Prepare for acceptance tests as follows:
 - 1. Test insulation resistance for each panelboard bus, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- B. Perform the following field tests and inspections and prepare test reports:
 - 1. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
- C. Load Balancing: After Substantial Completion, but not more than 60 days after Final Acceptance, measure load balancing and make circuit changes.
 - 1. Measure as directed during period of normal system loading.
 - 2. Perform load-balancing circuit changes outside normal occupancy/working schedule of the facility and at time directed. Avoid disrupting critical 24-hour

services such as fax machines and on-line data processing, computing, transmitting, and receiving equipment.

3. After circuit changes, recheck loads during normal load period. Record all load readings before and after changes and submit test records.
 4. Tolerance: Difference exceeding 20 percent between phase loads, within a panelboard, is not acceptable. Rebalance and recheck as necessary to meet this minimum requirement.
- D. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scanning of each panelboard. Remove panel fronts so joints and connections are accessible to portable scanner.
1. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 2. Record of Infrared Scanning: Prepare a certified report that identifies panelboards checked and describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 CLEANING

- A. In completion of installation, inspect interior and exterior of panelboards. Remove paint splatters and other spots. Vacuum dirt and debris; do not use compressed air to assist in cleaning. Restore exposed surfaces to match original finish.

END OF SECTION 26 24 16

SECTION 26 24 20

FEEDERS AND BRANCH CIRCUITRY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Basic requirements for the installation of light and power feeders and circuitry run at less than 600 volts.

1.3 RELATED SECTIONS

- A. Division 26, Section 26 05 19 "Low Voltage Electrical Power Conductor and Cables."
- B. Division 26, Section 26 05 33 "Raceways and Boxes for Electrical Systems."
- C. Division 26, Section 26 24 16 "Panelboards."

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Circuited up "as-built" drawings and panel directories as called for in the Division 26 related sections.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Comply with NFPA 70, as amended by 2014 New York City Electrical Code.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Products must be as specified in the Division 26 related sections.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION OF FEEDERS

- A. Feeder connections must be in the phase rotation which establishes proper operation for all equipment supplied.
- B. Feeders consisting of multiple cables and raceways must be arranged such that each raceway of the feeder contains one cable for each phase leg (and one neutral cable if any).
- C. Each individual tap off a feeder which consists of multiple cables per phase (and neutral if any) must be arranged so that all of the cables of a phase leg (and neutral if any) of the feeder are connected to the corresponding phase leg (and neutral if any) of the individual tap.
- D. Indications of conductor sizing for three phase and three phase/four wire feeders must, unless otherwise noted on the drawings, be understood as follows:
 - 1. (3) equally sized conductors represent a three phase feeder.
 - 2. (4) equally sized conductors represent a three phase/4 wire feeder with 100% neutral.
- E. Feeders from Electric room equipment (meter centers, distribution wiring trough) in the cellar must be in rigid conduits. Refer to power riser diagram for ratings.

3.3 INSTALLATION OF LIGHTING AND APPLIANCE BRANCH CIRCUITRY

- A. Circuitry indicated without sizing must be understood to be lighting and appliance branch circuitry protected at 20 amps or less.
- B. Conform all lighting and appliance branch circuitry (regardless of whether protected above or below 20 amps) to the following:
 - 1. Except as noted below, circuitry must be multi-wire utilizing common neutrals arranged so that no neutral conductor acts as a common wire for more than one circuit conductor connected to the same phase leg of the supply system.
 - 2. Common neutrals must not be utilized for circuitry runs containing more than (6) 120 volt receptacle circuits within a single raceway (conduit).
 - 3. Branch circuitry supplying relay controlled lighting fixtures must be understood to include all necessary interconnections between the control panels containing the relays and the associated lighting or appliance panels.
 - 4. Under no condition must any local switch break a neutral conductor.

5. At any location where lighting and appliance branch circuitry is extended from a flush mounted panelboard to a suspended ceiling immediately above, at least four 1-inch empty conduits must be included (in addition to those required for active circuitry) to permit future wiring escape from the panelboard. The empty conduits must extend up from the panel and must terminate in a threaded conduit cap immediately after turning out into the hung ceiling space.
 6. Raceway sizes must conform to standard maximum permissible occupancy requirements except where these are exceeded by other requirements specified elsewhere.
 7. Two and three pole branches in panels must be used respectively for individual single phase load items connected line to line and individual three phase load items. Where circuitry indications require the use of 2-pole and/or 3-pole branch breakers which have not been scheduled, provide in the panelboards the required multi-pole breakers in lieu of the equivalent number of single pole branch breakers. Required quantities of single, two and three pole branch breakers must be confirmed prior to ordering panels.
- C. Conform lighting and appliance branch circuitry, indicated as being protected at 20 amps or less, to the following:
1. 120 volt circuitry must be supplied from 20 amp panel branches except as indicated, and as noted below:
 2. Except as specified below, minimum conductor size must be #12 AWG.
 3. Common neutrals must not be utilized for circuitry runs containing more than (6) 120 volt receptacle circuits within a single raceway (conduit, cellular deck underfloor duct) except as noted below.
 4. Conductors for 120 volt circuitry extending in excess of 75 feet, from the point of supply, to the first outlet must be #10 AWG (minimum) copper to the first outlet. Increase beyond #10 AWG if required for compliance with code-mandated voltage drop restrictions.
 5. Conductors used in runs consisting of more than six wires (exclusive of grounding conductors) in a single raceway must be #10 AWG copper minimum. Increase beyond #10 AWG as required to comply with code-mandated derating factors, and as specified hereinbefore.
 6. Circuits supplying receptacles which are not of the ground fault circuit interrupting type, and are located as noted below, must be connected to panel branches that are equipped with ground fault interrupting features:
 - (a) Receptacles located in bathrooms. Bathrooms must be defined as spaces containing a basin plus a toilet, tub or shower.

- (b) Receptacles located within 6 feet of any sink and intended to serve counter top surfaces.
 - (c) All receptacles mounted on building exterior surfaces including those on balconies.
 - (d) All receptacles mounted in garages, unfinished basements and crawl spaces of private homes.
 - (e) All receptacles mounted in elevator machine rooms, machinery spaces and pits.
7. Circuits supplying pipe tracing cable, snow melting cable, gutter melting cable and HWAT cable must be connected to panel branches equipped with 30 ma interrupting features for equipment protection.

D. Where circuitry has not been delineated for lighting fixtures, receptacles, switches and miscellaneous items intended for protection at 20 amps, such items must be provided with circuitry conforming to the requirements listed below. Prior to installation of circuitry, submit for review floor plans showing circuit numbers, home runs, and interconnecting circuitry for all such items.

1. When circuiting up recessed ceiling lighting fixtures, connect fixtures on the basis of more than one fixture to a single outlet box, in an approved manner, as required to ensure that circuits will not be unnecessarily lightly loaded due to mandated, restrictions on the maximum number of outlets per circuit. Except with special permission, unnecessarily light loading must be understood to mean, less than 1000 volt amps (VA) on a 120 volt circuit and less than 3200 VA on a 277 volt circuit.
2. The total load on a circuit must be computed by ascribing volt-amps to individual items on the basis of the following:

<u>ITEM</u>	<u>VOLT-AMPS (VA)</u>
Any lighting fixture.	Input volt-amps as per lighting fixture schedule.
Any outlet with no specific wattage or circuiting instruction indicated.	180 volt amperes
Any outlet (other than for resistance heating) with wattage indicated.	1.15 x Indicated wattage
Any resistance heating outlet with wattage indicated.	1.0 x Indicated wattage

Any outlet with amps indicated.	120 x Indicated amps
---------------------------------	----------------------

3. Not more than 1300 total VA must be applied to any 15 amp, 120 volt panel branch circuit nor more than 1450 VA to any 20 amp, 120 volt branch circuit.
4. A separate 20 amp panel branch circuit supplying no other outlets must be used for each outlet indicated as an "individual appliance circuit" "heavy duty" outlet.
5. Lighting fixture must be connected to 20 amp panel branch circuits. Solidly connected equipment less than 1300 VA must be connected to 15 amp panel branch circuits except as indicated or noted herein.
6. Lighting fixtures and receptacles must not be connected to the same branch circuit except within apartments except within guest rooms.
7. Any installed lighting and appliance branch circuitry, found (as a result of unnecessarily light loading of conductors) to make excessive use of panel branches, must be rearranged.
8. Circuits must be balanced on phases at their supply point as evenly as possible.
9. The final arrangement of lighting and appliance branch circuitry must be fully delineated on the record, or "as-built" drawings called for elsewhere.

SECTION 26 27 00

ELECTRIC SERVICE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS:

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes: Electric Service requirements.

1.3 GENERAL REQUIREMENTS

- A. Work of this section must be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver and install work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.

1.4 REFERENCES

- A. Perform the work of this section in accordance with the requirements of Section 26 05 00 "Common Work Results for Electrical".
- B. See other Division 26 sections for requirements of electric service distribution equipment not included herein.
- C. Refer to Appendix A for Con Ed standards of medium voltage design and installation requirements. Their standards must be followed as part of the contract.

1.5 MATERIALS, EQUIPMENT AND SYSTEMS

- A. Factory wiring of components must conform to National Electrical Code with NYC amendments and UL.
- B. The criteria of design and performance to produce the required operation is based on equipment of the named manufacturers. Equipment of other manufacturers will be considered, subject to acceptability in the Commissioner's judgment and opinion. The equipment must conform to the dimensions established by the drawings for mechanical spaces and other clearances.
- C. Materials and products must be suitable for, and where applicable UL listed and labeled for, the intended use or application.

1.6 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit manufacturers' catalog data for the following service equipment:
 - 1. Meter sockets.
- C. Submit shop drawings for the following fabricated service equipment:
 - 1. CT/PT cabinets, and service end box, including bus work and mounting hardware.

1.7 UTILITY FEES

- A. Provide work, materials, and fees required and/or charged by the Electric Utility Company Con Ed relating to the establishment of electric service for the project.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”

PART 2 - PRODUCTS

2.1 METER SOCKETS

- A. Provide meter sockets, which comply with requirements of the Electric Utility Company Con Ed.

2.2 CT/PT CABINETS & SERVICE END BOXES

- A. Provide CT/PT cabinets, service end boxes and mounting hardware, which comply with requirements of the Electric Utility Company Con Ed. Unless otherwise indicated, CT's and PT's for revenue metering will be furnished by the Electric Utility Company Con Ed.
- B. Where so indicated, CT/PT cabinets must be an integral component of the electric service distribution equipment.
- C. Provide main circuit breaker and current transformer service entrance equipment as indicated on the drawings. Include hot or cold sequence metering, top or bottom feed, indoor or outdoor construction as shown. Manufacturers: Square D CTC Metering Equipment, Siemens BCT Service Cubicle, Eaton Cutler-Hammer, or approved equal.

2.3 MISCELLANEOUS MATERIALS

- A. Provide painted plywood backboard, conduit, wire, and any other miscellaneous materials and hardware required by the Electric Utility Company Con Ed.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. See Section 26 05 00 "Common Work Results for Electrical".

3.3 COORDINATION WITH ELECTRIC UTILITY COMPANY CON ED

- A. Consult with Electric Utility Company Con Ed for verification of scope of work to be performed. Perform work pertaining to the electric service in strict accordance with utility company standards and requirements. Verify service voltage, phasing, and connections. In event of conflict between design and/or scope of service, notify Commissioner in writing. Consult with Electrical Utility Company Con Ed prior to submitting electrical service requirement for approval.

3.4 INSTALLATION OF SERVICE-ENTRANCE EQUIPMENT

- A. Where applicable, receive Electric Utility Company Con Ed equipment at the property line, transport to indicated installation location, install and connect per Electric Utility Company Con Ed instructions.
- B. Identify service disconnecting means per NEC 230-70(b) and 230-77.
- C. Bond and ground service entrance equipment in accordance with NEC code with NYC amendment, Electric Utility Company Con Ed requirements, as indicated, and as specified in another Division 26 section.

3.5 FINAL INSPECTION

- A. Upon completion of installation and testing of service-entrance equipment and electrical circuitry, arrange for final inspection by the Electric Utility Company Con Ed and Electrical Inspector, energize circuitry, and demonstrate capability and compliance with requirements. Where possible, correct malfunctioning units at site, then retest to demonstrate compliance; otherwise, remove and replace with new units, and retest.

END OF SECTION 26 27 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 27 13

ELECTRICITY METERING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section includes:
 - 1. Provisions for the accommodation of utility company metering equipment.

1.3 RELATED SECTIONS

- A. Division 26, Section 26 05 19 "Low Voltage Power Conductor and Cables."
- B. Division 26, Section 26 05 33 "Raceways and Boxes for Electrical Systems."

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Product data for each product and component specified.
- C. Shop drawings of utility company metering provisions with indication of approval by utility company.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Listing and Labeling: Provide components that are Underwriters Laboratories listed and labeled.
 - 1. The terms "listed" and "labeled": As defined in the National Electrical Code, Article 100.
- C. Electrical Component Standard: Components and installation must comply with "2014 NYC Electrical Code", NFPA 70.

1.6 GENERAL

- A. All electricity delivered to the project will be utility company metered through various metering installations as follows:
 - 1. Electricity consumed in the interest of the New York City will be measured through a separate "house" metering installation located in the building electric room.
- B. Provide meter pan and/or backboards and current transformers cabinet and switchboard compartments as applicable for "house" metering within the building electric room.
- C. Provide "house" meter totalizing impulse wiring systems.
- D. Install current transformers furnished by the utility company.
- E. Meters will be furnished and installed by the utility company.
- F. All work for the metering installation must be provided in accordance with the utility company Con Edison's blue book "A Customer Guide to Electrical Service Installation".

PART 2 - PRODUCTS

2.1 GENERAL

- A. Furnish in accordance with the applicable requirements of Division 26 Sections 26 05 19 "Low Voltage Power Conductors and Cables" and Section 26 05 33 "Raceways, Boxes for Electrical Systems."

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 26 27 13

SECTION 26 27 26

WIRING DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SECTION INCLUDES

- 1. Wall switches.
- 2. Wall dimmers.
- 3. Receptacles.
- 4. Device plates and decorative box covers.
- 5. Floor box service fittings.
- 6. Access floor boxes.

1.3 REFERENCES

- A. NEMA WD 1 - General Purpose Wiring Devices.
- B. NEMA WD 2 - Semiconductor Dimmers for Incandescent Lamps.
- C. NEMA WD 6 - Wiring Device Configurations.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: Provide manufacturer's catalog information showing dimensions, colors, and configurations.
- C. Samples: Submit one sample of each type device and cover plate.
- D. Manufacturer's Instructions:
 - 1. Indicate application conditions and limitations of use stipulated by product testing agency specified under regulatory requirements.
 - 2. Include instructions for storage, handling, protection, examination, preparation, operation and installation of product.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

1.6 QUALIFICATIONS

- A. Manufacturer: Company specializing in manufacturing products specified in this Section with minimum three years documented experience.

PART 2 - PRODUCTS

2.1 WALL SWITCHES

- A. Description:
1. Toggle Switches: Nema WD 1, heavy-duty, AC only general-use, quiet type snap switch with fast make-slow break, silver-cadmium oxide alloy contacts, side and back wired.
 2. Rocker Switches: Nema WD 1, AC general use only, extra quiet type rocker switch with fast make, slow break contacts , side and back wired.
- B. Device Body: White plastic with white plates, black plastic with stainless steel plates with matching switch handle.
- C. Illuminated Handle Type Switch: To match device body.
- D. Pilot Light: lighted handle type switch, red polycarbonate handle.
- E. Voltage Rating: 120-277 volts, A.C.
- F. Current Rating: 20 amperes.
- G. Manufacturers:
1. Single-pole switch: Subject to compliance with requirements, provide Lutron Nova-T NT-1PS-SN or comparable product by
 - a. Leviton or
 - b. Hubbel.
 - c. Or approved equal.
 2. Double-pole switch: Subject to compliance with requirements, provide Lutron Nova-T multi gang or comparable product by one of the following:
 - a. Leviton or
 - b. Hubbell.
 - c. Or approved equal.
 3. Three-way switch: Subject to compliance with requirements, provide Lutron Nova-T model NT-3PS-SN or comparable product by one of the following:
 - a. Leviton
 - b. Hubbell.
 - c. Or approved equal.
 4. Four-way switch: Subject to compliance with requirements, provide Lutron Nova-T model NT-4PS-SN or comparable product by one of the following:

- a. Leviton
- b. Hubbell.
- c. Or approved equal.

2.2 RECEPTACLES

- A. Description: NEMA WD1, specification grade general-use receptacle.
- B. Device Body: White plastic with white plates, black plastic with stainless steel plates.
- C. Configuration: NEMA WD6, type as specified and indicated.
- D. Convenience Receptacle: Type 5-20R.
- E. Construction:
 1. Nylon housing.
 2. Brass contacts.
 3. Solid Center rivet.
 4. Back and side wiring type.
- F. Manufacturers and Model Number:
 1. Duplex convenience receptacle: Subject to compliance with requirements, provide Lutron Nova-T model NTR-20-ST or comparable product by one of the following:
 - a. Leviton
 - b. Hubbell.
 - c. Or approved equal.
 2. GFCI receptacle: Subject to compliance with requirements, provide Lutron Nova-T model NTR-20-GFCI-ST or comparable product by one of the following:
 - a. Leviton
 - b. Hubbell.
 - c. Or approved equal
 3. Special Receptacle: Subject to compliance with requirements, type as identified by NEMA standard number on drawings, provide products by one of the following:
 - a. Lutron
 - b. Leviton
 - c. Hubbell.
 - d. Or approved equal

2.3 WALL PLATES

- A. Decorative Cover Plate: Screwless white and stainless steel (at locations as shown on the architectural drawings).
 1. Manufacturer: Subject to compliance with requirements, provide Lutron Nova-T or or comparable product by one of the following:
 - a. Leviton
 - b. Hubbell,
 - c. or approved equal.

- B. Weatherproof Cover Plate: Gasketed cast metal with hinged gasket device cover.
 - 1. Manufacturer: Subject to compliance with requirements, products by one of the following:
 - a. Hubbell
 - b. Leviton
 - c. Arrow-Hart/Cooper
 - d. Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Verify outlet boxes are installed at proper height.
- B. Verify wall openings are neatly cut and will be completely covered by wall plates.
- C. Verify floor boxes are adjusted properly.
- D. Verify branch circuit wiring installation is completed, tested, and ready for connection to wiring device.
- E. Verify openings in access floor are in proper locations.

3.3 PREPARATION

- A. Provide extension rings to bring outlet boxes flush with finished surfaces.
- B. Clean debris from outlet boxes.

3.4 INSTALLATION

- A. Install products in accordance with manufacturer's instructions.
- B. Install devices plumb and level.
- C. Install switches with OFF position down.
- D. Install wall dimmers to achieve full rating specified and indicated after derating for ganging as instructed by manufacturer.
- E. Do not share neutral conductor on load side of dimmers.
- F. Install receptacles with grounding pole on bottom or right-hand side.
- G. Connect wiring device grounding terminal to branch circuit equipment grounding conductor.

- H. Install decorative plates on switch, receptacle, and blank outlets in finished areas.
- I. Connect wiring devices by wrapping conductor around screw terminal.
- J. Use jumbo size plates for outlets installed in masonry walls.
- K. Install galvanized steel plates on outlet boxes and junction boxes in unfurnished areas, above accessible ceilings, and on surface mounted outlets.
- L. Install identifying nameplate on all receptacles (including receptacles in equipment furnished by others) as per Section 26 0553.

3.5 INTERFACE WITH OTHER PRODUCTS

- A. Coordinate locations of outlet boxes provided under Section 26 0533 to obtain mounting heights specified or as indicated on Drawings.
- B. Install wall switch 48 inches above finished floor.
- C. Install convenience receptacle 24 inches above finished floor.
- D. Install convenience receptacle 6 inches above counter.
- E. Install dimmer 48 inches above finished floor.
- F. Install telephone jack 24 inches above finished floor.
- G. Install telephone jack for wall telephone 48 inches above finished floor.

3.6 FIELD QUALITY CONTROL

- A. Inspect each wiring device for defects.
- B. Operate each wall switch with circuit energized and verify proper operation.
- C. Verify that each receptacle device is energized.
- D. Test each receptacle device for proper polarity.
- E. Test each GFCI receptacle device for proper operation.

3.7 ADJUSTING

- A. Adjust devices and wall plates to be flush and level.

END OF SECTION 26 27 26

SECTION 26 28 00

LOW VOLTAGE CIRCUIT PROTECTIVE DEVICES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Overcurrent protective devices (OCPD's) (OCD's) required for the project. It defines the type of OCPD required for each individually mounted device, panelboard, switchboard and miscellaneous device required.

1.3 RELATED SECTIONS:

- A. Division 26, Section 26 28 13 "Fuses."
- B. Division 26, Section 26 24 16 "Panelboards."

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures"
- B. Descriptive data defining how the required short circuit ratings are met by the equipment furnished under the Related Sections described above. Include UL approval data from manufacturers for "series rated" combinations.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Comply with NFPA 70, as amended by state and local codes.
- C. Listing and Labeling: Products - as described with the Related Sections above are Underwriters Laboratories listed and labeled as defined in NFPA 70 Article 100. Where "series ratings" have been specified, listings attesting to these ratings is provided from UL or other nationally recognized testing laboratory.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Refer to Related Sections listed hereinbefore for general product requirements.

- B. Short circuit current ratings, and the manufacturer's labels attesting to these ratings (based on U.L. listings), are required for overcurrent protection devices, where they are individually mounted (as fused switches or as fused switch bus duct plug-in devices), and for the equipment assemblies when they are incorporated in panels, switchboards, etc. Such ratings are in accordance with the following:
 - 1. In order to ensure that they are at least equal to the available fault current, minimum ratings have been specified herein for the individual overcurrent device types, and in the pertinent sections for panelboards, switchboards and other assemblies or devices. Where "series connected ratings" have been specified for circuit breaker type panelboards (see appropriate specification section), these minimum ratings are in general based on the use of upstream fuses which have been specifically tested with the circuit breakers and have been U.L. listed accordingly.
- C. In advance of, or in conjunction with, the submission of shop drawings for approval, provide data defining in detail how the required short circuit current ratings specified elsewhere in these specifications are achieved with the equipment being furnished under the listed Related Sections. The data will, in narrative or graphic fashion, fully define how the various devices, individually, or in combination, comply with the "fully rated" or "series connected" short circuit current requirements. Include certifications from the manufacturer as to the U.L. approvals for these ratings for all proposed equipment.

2.2 APPLICATION

- A. Overcurrent protective devices is provided in accordance with the schedule below. Abbreviations are understood to have the following meanings:

ABBREVIATION	DESCRIPTION
SW-BP	Bolted pressure switch
SW-QMQB	Quick-make, quick-break switch / Fusible (as part of switch abbreviation)
CB-SMC	Standard molded case circuit breaker.
CLCB-MC	Current limiting circuit breaker - molded case
CB-CMC	Compact molded case circuit breaker

- B. Select overcurrent protection devices as follows:

CATEGORY OF APPLICATION	DEVICE TYPE
Main or branch unit in 120/208 volt panel	CB-SMC
Main or branch unit in distribution panel or power panel	SW-QMQB/CF, except CLCB if needed for "series rating" for downstream lighting or appliance panel

CATEGORY OF APPLICATION	DEVICE TYPE
Main unit in lighting or appliance panel	CB-SMC except CLCB-MC if needed for "series rating" of panel
Branch unit in lighting or appliance panel	CB-SMC
Main unit in metering assembly	QM QB/CF
Main unit in apartment panel	CB-SMC
Tenant main unit in metering assembly	CB-SMC
Branch unit in apartment panel	CB-CMC

2.3 STANDARD MOLDED CASE CIRCUIT BREAKERS

A. Select standard, molded case type circuit breakers in accordance with the following:-

1. Their tripping units are of the "thermal magnetic" type having bimetallic elements for time delay overload protection, and magnetic elements for short circuit protection.
2. Where no frame sizes are indicated, their interrupting capacities (in RMS symmetrical amperes) are not less than the following:

3. Where Installed	Interrupting Capacity
120/208V lighting or appliance panel	22,000A

4. Where frame sizes are indicated, the interrupting capacities are no less than the following:

INDICATED FRAME SIZE	MINIMUM ACCEPTABLE SYMMETRICAL AMPERES INTERRUPTING RATING IN RMS AMPERES
100	22,000
225	22,000
400	42,000
600	65,000
800	65,000

5. The minimum interrupting capacity in symmetrical RMS amperes of the circuit breakers intended for use in panelboards are as noted above.

6. They are of the "bolted-in" type.
7. They are equipped with 5 milliamp sensitivity ground fault interrupting features where so indicated, and/or where they supply standard convenience receptacles in bathrooms, kitchens and other such code mandated locations and with 30 milliamps sensitivity G.F.I. features where they supply piping tracing cables.
8. They are equipped with arc-fault interrupting features where so indicated, and/or where they supply 120 volt, single phase, 15- and 20-ampere outlets in dwelling unit bedrooms (and sleeping areas of studio apartments).
9. Where single pole in trip sizes 20 amps or less, they are rated for switching duty.

2.4 FUSES

- A. Refer to Division 26, Section 26 28 13 "Fuses" for additional requirements.
- B. Select fuses in accordance with the following:
 1. Regardless of the actual available fault current they are, at full recovery voltage, be capable of safely interrupting fault currents of 200,000 amperes RMS symmetrical deliverable at the line side of the fuse.
 2. They are suitable for application to fuse gaps which reject other types of fusing. Coordinate with supplier(s) of all fusible switch units (in panels, switchboards, etc.) for the project to ensure that fuse gaps match the specified fuse types.
 3. Except as noted hereinafter, in sizes up to 600 amps, they are of the Class "J" time delay type, capable of carrying 500 percent of rated current for not less than 10 seconds and U.L. listed as a "Class J" fuse. Fuses are Shawmutt Type "AJT", Bussmann Type "LPJ", or other approved. Approval is contingent on certified test data demonstrating full compliance with the following requirements:
 - a. Fuse carries 500 percent of rating for at least 10 seconds.
 - b. Fuse suitable for motor feeders when applied at 150 percent of motor full load current.
 - c. Fuse selectivity with downstream fuses is:
 - 1) 2:1 with "J" time delay
 - 2) 3:1 with "RK-5" time delay
 - 3) 2:1 with "RK-1" time delay
 4. Except as noted hereinafter, in sizes over 600 amps, they are of the current limiting type, U.L. listed as "Class L".
 5. Fuses to be used in current limiting circuit breakers, regardless of actual available fault current, at full recovery voltage, are capable of safely interrupting fault currents in the order of 200,000 amperes RMS symmetrical of 280,000 amperes RMS asymmetrical. The current limiting fuses coordinate with and back up the circuit breakers they are associated with so that all fault overload currents occurring within the safe capability of the breakers cause the breakers to open, and all currents occurring beyond the safe capability of the breakers cause the fuses to open; the opening of fuses being such as to prevent damage to any circuit breaker component parts. Where directed, fuses are reduced in size so as to provide backup protection for downstream overcurrent devices.

2.5 COMPACT MOLDED CASE CIRCUIT BREAKERS (FOR APARTMENT PANELS)

- A. Select compact molded case breakers in accordance with the following:-
1. They consist of manually operated quick-make, quick-break mechanically trip free operating mechanisms for simultaneous operating of all poles, with contacts, and trip elements for each pole, all enclosed in molded phenolic plastic cases. Trip units for these breakers are of the "thermalmagnetic" type having bimetallic elements for time delay overload protection and magnetic elements for short circuit protection.
 2. They have an interrupting rating of at least 10,000 amperes RMS asymmetrical, unless otherwise indicated on panel schedules.
 3. They are of a type capable of being used with main devices incorporated in the panelette, or upstream devices, to establish the required series rated short circuit capability indicated elsewhere.
 4. They may be of the plug in type but are arranged for tamper resistant mounting to prevent the interchange of breakers having trip sizes outside of prescribed ranges.
 5. They are equipped with 5 milliamp ground fault interrupting features where so indicated or where required by code.
 6. They are equipped with arc-fault interrupting features where so indicated, and/or where they supply 120 volt, single phase, 15- and 20-ampere outlets in dwelling unit bedrooms (and sleeping areas of studio apartments).

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 26 28 00

Design and
Construction**

FMS No. - SANDBOMB
Issue Date - 06/17/2022

THIS PAGE LEFT INTENTIONALLY BLANK

SECTION 26 28 13

FUSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. This Section includes cartridge fuses, rated 600 V and less, for use in switches, switchboards, controllers and spare fuse cabinets.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: Include dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings for each fuse type indicated.
- C. Product Data: Include the following for each fuse type indicated:
 - 1. Dimensions and manufacturer's technical data on features, performance, electrical characteristics, and ratings.
 - 2. Let-through current curves for fuses with current-limiting characteristics.
 - 3. Time-current curves, coordination charts and tables, and related data.
 - 4. Fuse size for elevator feeders and elevator disconnect switches.
- D. Maintenance Data: For fuses to include in emergency operation and maintenance manuals.
 - 1. In addition to terms specified in DDC General Conditions Section “Operation and Maintenance Data”, include the following:
 - a. Let-through current curves fuses with current-limiting characteristics.
 - b. Time-Current curve, coordination charts and tables, and related data.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Source Limitations: Provide fuses from a single manufacturer.
- C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100 and marked for intended use.

- D. Comply with NEMA FU 1.
- E. Comply with NYC Electrical Code.

1.5 PROJECT CONDITIONS

- A. Where ambient temperature to which fuses are directly exposed is less than 40 deg F ((4.4 deg C)) or more than 100 deg F ((38 deg C)), apply manufacturer's ambient temperature adjustment factors to fuse ratings.

1.6 COORDINATION

- A. Coordinate fuse ratings with HVAC and refrigeration equipment nameplate limitations of maximum fuse size.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements provide products by one of the following:
 - 1. Cooper Bussman, Inc.
 - 2. Eagle Electric Mfg. Co., Inc.; Cooper Industries, Inc.
 - 3. Ferraz Shawmut.
 - 4. Or Approved Equal

2.2 CARTRIDGE FUSES

- A. Characteristics: NEMA FU 1, nonrenewable cartridge fuse; class and current rating indicated; voltage rating consistent with circuit voltage.

2.3 SPARE FUSE CABINET

- A. Cabinet: Wall-mounted, 0.05-inch- (1.27-mm-) thick steel unit with full-length, recessed piano-hinged door and key-coded cam lock and pull.
 - 1. Size: Adequate for storage of spare fuses specified with 15 percent spare capacity minimum.
 - 2. Finish: Gray, baked enamel
 - 3. Identification: "SPARE FUSES" in 1-1/2-inch ((40-mm)) high letters on exterior of door.
 - 4. Fuse Pullers: For each size fuse.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine utilization equipment nameplates and installation instructions. Install fuses of sizes and with characteristics appropriate for each piece of equipment.
- B. Evaluate ambient temperatures to determine if fuse rating adjustment factors must be applied to fuse ratings.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 FUSE APPLICATIONS

- A. Refer to Division 26, Section 26 28 00 “Low Voltage Circuit Protective Devices” for determination of fuse types for installation throughout the distribution system.

3.4 INSTALLATION

- A. Install fuses in fusible devices. Arrange fuses so rating information is readable without removing fuse.
- B. Install spare fuse cabinets.

3.5 IDENTIFICATION

- A. Install labels indicating fuse replacement information on inside door of each fused switch.

SECTION 26 28 16.13

ENCLOSED CIRCUIT BREAKERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes: Molded-case circuit breakers (MCCBs).

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For circuit breakers, accessory, and component indicated. Include dimensioned elevations, sections, weights, and manufacturers' technical data on features, performance, electrical characteristics, ratings, accessories, and finishes.
 - 1. Current and voltage ratings.
 - 2. Short-circuit current ratings (interrupting and withstand, as appropriate).
 - 3. Detail features, characteristics, ratings, and factory settings of individual overcurrent protective devices, accessories, and auxiliary components.
 - 4. Include time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.
- C. Shop Drawings: For circuit breakers. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Wiring Diagrams: For power wiring.
- D. Qualification Data: For qualified testing agency.
- E. Field quality-control reports.
 - 1. Test procedures used.
 - 2. Test results that comply with requirements.
 - 3. Results of failed tests and corrective action taken to achieve test results that comply with requirements.
- F. Manufacturer's field service report.
- G. Operation and Maintenance Data: For circuit breakers to include in operation and maintenance manuals. In addition include the following:
 - 1. Manufacturer's written instructions for testing and adjusting circuit breakers.

2. Time-current coordination curves (average melt) for each type and rating of overcurrent protective device; include selectable ranges for each type of overcurrent protective device.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Testing Agency Qualifications: Member company of NETA or an NRTL.
- C. Testing Agency's Field Supervisor: Currently certified by NETA to supervise on-site testing.
- D. Source Limitations: Obtain circuit breakers, components, and accessories, within same product category, from single source from single manufacturer.
- E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- F. Comply with NFPA 70.

1.5 PROJECT CONDITIONS

- A. Environmental Limitations: Rate equipment for continuous operation under the following conditions unless otherwise indicated:
 1. Ambient Temperature: Not less than minus 22 deg F and not exceeding 104 deg F

1.6 COORDINATION

- A. Coordinate layout and installation of circuit breakers, and components with equipment served and adjacent surfaces. Maintain required workspace clearances and required clearances for equipment access doors and panels.

PART 2 - PRODUCTS

2.1 MOLDED-CASE CIRCUIT BREAKERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Square D; a brand of Schneider Electric.
 4. Or Approved Equal.
- B. General Requirements: Comply with UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents.

- C. Thermal-Magnetic Circuit Breakers: Inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
- D. Current-Limiting Circuit Breakers: Frame sizes 200 A and smaller, and let-through ratings less than NEMA FU 1, RK-5.
- E. Features and Accessories:
 - 1. Standard frame sizes, trip ratings, and number of poles.
 - 2. Lugs: Mechanical type, suitable for number, size, trip ratings, and conductor material.
 - 3. Application Listing: Appropriate for application; Type SWD for switching fluorescent lighting loads; Type HID for feeding fluorescent and high-intensity discharge lighting circuits.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine elements and surfaces to receive circuit breakers for compliance with installation tolerances and other conditions affecting performance of the Work.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

- A. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- B. Comply with NECA 1.

3.4 IDENTIFICATION

- A. Comply with requirements in Division 26 Section "Identification for Electrical Systems".
- B. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
- C. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.5 FIELD QUALITY CONTROL

- A. **Manufacturer's Field Service:** Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections.
- B. **Acceptance Testing Preparation:**
 - 1. Test insulation resistance for each main circuit breaker, component, connecting supply, and feeder.
 - 2. Test continuity of each circuit.
- C. **Tests and Inspections:**
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Circuit breakers will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies circuit breakers. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

- A. Adjust moving parts and operable components to function smoothly and lubricate as recommended by manufacturer.

END OF SECTION 26 28 16.13

SECTION 26 28 16. 16

ENCLOSED SWITCHES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Fusible switches.
 - 2. Non-fusible switches.
 - 3. Receptacle switches.
 - 4. Shunt trip switches.
 - 5. Enclosures.

1.3 DEFINITIONS

- A. NC: Normally closed.
- B. NO: Normally open.
- C. SPDT: Single pole, double throw.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each type of enclosed switch, circuit breaker, accessory, and component indicated.
- C. Shop Drawings: For enclosed switches and circuit breakers. Include plans, elevations, sections, details, and attachments to other work.
 - 1. Wiring Diagrams: For power, signal, and control wiring.
- D. Field quality-control reports.
- E. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 FUSIBLE SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - 3. Siemens Energy & Automation, Inc.
 - 4. Square D; a brand of Schneider Electric.
 - 5. Or Approved Equal
- B. Type HD, Heavy Duty, Single Throw, 240-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- C. Type HD, Heavy Duty, Six Pole, Single Throw, 240-V ac, 200 A and Smaller: 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- D. Type HD, Heavy Duty, Double Throw, 240-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, with clips or bolt pads to accommodate specified fuses, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- E. Accessories:
 - 1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
 - 2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
 - 3. Class R Fuse Kit: Provides rejection of other fuse types when Class R fuses are specified.
 - 4. Lugs: Suitable for number, size, and conductor material.
 - 5. Service-Rated Switches: Labeled for use as service equipment.

2.2 NONFUSIBLE SWITCHES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 2. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 3. Siemens Energy & Automation, Inc.
 4. Square D; a brand of Schneider Electric.
 5. Or Approved Equal
- B. Type HD, Heavy Duty, Single Throw, 240-V ac, 1200 A and Smaller: UL 98 and NEMA KS 1, horsepower rated, lockable handle with capability to accept three padlocks, and interlocked with cover in closed position.
- C. Accessories:
1. Equipment Ground Kit: Internally mounted and labeled for copper and aluminum ground conductors.
 2. Neutral Kit: Internally mounted; insulated, capable of being grounded and bonded; labeled for copper and aluminum neutral conductors.
 3. Lugs: Suitable for number, size, and conductor material.

2.3 ENCLOSURES

- A. Enclosed Switches: NEMA AB 1, NEMA KS 1, NEMA 250, and UL 50, to comply with environmental conditions at installed location.
1. Indoor, Dry and Clean Locations: NEMA 250, Type 1
 2. Outdoor Locations: NEMA 250, Type 3R

2.4 FUSES

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Bussman
 2. Gould-Shawmut
 3. Littlefuse
 4. Or as approved equal
- B. Fuses:
1. Fuses 600A and less: ANSI/UL 198E, class RK 5, sized as indicated on drawings, dual element, current limiting, time delay one-time fuse, 600-volt.
 2. Interrupting rating: 200,000A RMS.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Install individual wall-mounted switches and circuit breakers with tops at uniform height unless otherwise indicated.
- B. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- C. Install fuses in fusible devices.
- D. Comply with NECA 1 – Standard for Good Workmanship in Electrical Construction.

3.3 IDENTIFICATION

- A. Comply with requirements in Division 26 Section "Identification for Electrical Systems."
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label each enclosure with engraved metal or laminated-plastic nameplate.

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each enclosed switch and circuit breaker, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- C. Tests and Inspections:
 - 1. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 2. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 3. See DDC General Conditions "Quality Requirements" for retesting and reinspecting requirements and DDC General Conditions "Execution" for requirements for correcting the Work.
- D. Enclosed switches and circuit breakers will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports, including a certified report that identifies enclosed switches and circuit breakers and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

END OF SECTION 26 28 16.16

SECTION 26 29 13

ENCLOSED CONTROLLERS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section includes the following enclosed controllers rated 600 V and less:
 - 1. Full-voltage manual.
 - 2. Full-voltage magnetic.
 - 3. Multispeed.

1.3 DEFINITIONS

- A. CPT: Control power transformer.
- B. MCCB: Molded-case circuit breaker.
- C. MCP: Motor circuit protector.
- D. N.C.: Normally closed.
- E. N.O.: Normally open.
- F. OCPD: Overcurrent protective device.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: For each type of enclosed controller.
- C. Shop Drawings: For each enclosed controller. Include dimensioned plans, elevations, sections, details, and required clearances and service spaces around controller enclosures.
 - 1. Wiring Diagrams: For power, signal, and control wiring.

- D. Field quality-control reports.
- E. Operation and maintenance data.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.
- C. Comply with NFPA 70.

PART 2 - PRODUCTS

2.1 FULL-VOLTAGE CONTROLLERS

- A. General Requirements for Full-Voltage Controllers: Comply with NEMA ICS 2, general purpose, Class A.
- B. Motor-Starting Switches: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off or on.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. Or Approved Equal
 - 2. Configuration: Non-reversing
 - 3. Surface mounting.
 - 4. Pilot light.
- C. Fractional Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
 - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. Or Approved Equal

2. Configuration: Non-reversing
 3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters matched to nameplate full-load current of actual protected motor; external reset push button; bimetallic type or ; melting alloy type.
 4. Surface mounting.
 5. Pilot light.
- D. Integral Horsepower Manual Controllers: "Quick-make, quick-break" toggle or push-button action; marked to show whether unit is off, on, or tripped.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. Or Approved Equal
 2. Configuration: Non-reversing
 3. Overload Relays: Inverse-time-current characteristics; NEMA ICS 2, Class 10 tripping characteristics; heaters and sensors in each phase, matched to nameplate full-load current of actual protected motor and having appropriate adjustment for duty cycle; external reset push button; bimetallic type or melting alloy type.
 4. Surface mounting.
 5. Pilot light.
- E. Magnetic Controllers: Full voltage, across the line, electrically held.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. Or Approved Equal
 2. Configuration: Nonreversing.
 3. Contactor Coils: Pressure-encapsulated type.
 - a. Operating Voltage: Depending on contactor NEMA size and line-voltage rating, manufacturer's standard matching control power or line voltage.
 4. Power Contacts: Totally enclosed, double-break, silver-cadmium oxide; assembled to allow inspection and replacement without disturbing line or load wiring.
 5. Control Circuits: 24 V ac; obtained from integral CPT, with primary and secondary fuses, of sufficient capacity to operate integral devices and remotely located pilot, indicating, and control devices.

6. Melting Alloy Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. Class 20 tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 7. Bimetallic Overload Relays:
 - a. Inverse-time-current characteristic.
 - b. Class 20 tripping characteristic.
 - c. Heaters in each phase matched to nameplate full-load current of actual protected motor and with appropriate adjustment for duty cycle.
 8. Solid-State Overload Relay:
 - a. Switch or dial selectable for motor running overload protection.
 - b. Sensors in each phase.
 - c. Class 10/20 selectable tripping characteristic selected to protect motor against voltage and current unbalance and single phasing.
 9. External overload reset push button.
- F. Combination Magnetic Controller: Factory-assembled combination of magnetic controller, OCPD, and disconnecting means.
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - a. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - b. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - c. Rockwell Automation, Inc.; Allen-Bradley brand.
 - d. Siemens Energy & Automation, Inc.
 - e. Square D; a brand of Schneider Electric.
 - f. Or Approved Equal
 2. Fusible Disconnecting Means:
 - a. NEMA KS 1, heavy-duty, horsepower-rated, fusible switch with clips or bolt pads to accommodate Class R fuses.
 - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
 - c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.
 3. Nonfusible Disconnecting Means:
 - a. NEMA KS 1, heavy-duty, horsepower-rated, nonfusible switch.
 - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
 - c. Auxiliary Contacts: N.O./N.C., arranged to activate before switch blades open.
 4. MCP Disconnecting Means:
 - a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents, instantaneous-only circuit breaker with front-mounted, field-adjustable, short-circuit trip coordinated with motor locked-rotor amperes.
 - b. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.

- c. Auxiliary contacts "a" and "b" arranged to activate with MCP handle.
- 5. MCCB Disconnecting Means:
 - a. UL 489, NEMA AB 1, and NEMA AB 3, with interrupting capacity to comply with available fault currents; thermal-magnetic MCCB, with inverse time-current element for low-level overloads and instantaneous magnetic trip element for short circuits.
 - b. Front-mounted, adjustable magnetic trip setting for circuit-breaker frame sizes 250 A and larger.
 - c. Lockable Handle: Accepts three padlocks and interlocks with cover in closed position.
 - d. Auxiliary contacts "a" and "b" arranged to activate with MCCB handle.

2.2 ENCLOSURES

- A. Enclosed Controllers: NEMA ICS 6, to comply with environmental conditions at installed location.
 - 1. Dry and Clean Indoor Locations: Type 1.
 - 2. Outdoor Locations: Type 3R
 - 3. Wash-Down Areas: Type 4X, stainless steel
 - 4. Other Wet or Damp Indoor Locations: Type 4
 - 5. Indoor Locations Subject to Dust, Falling Dirt, and Dripping Noncorrosive Liquids: Type 12.

2.3 ACCESSORIES

- A. Push Buttons, Pilot Lights, and Selector Switches: NEMA ICS 5; heavy-duty type; factory installed in controller enclosure cover unless otherwise indicated.
- B. Control Relays: Auxiliary and adjustable time-delay relays.
- C. Phase-Failure, Phase-Reversal, and Undervoltage and Overvoltage Relays: Solid-state sensing circuit with isolated output contacts for hard-wired connections. Provide adjustable undervoltage, overvoltage, and time-delay settings.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Wall-Mounted Controllers: Install enclosed controllers on walls with tops at uniform height, and with disconnect operating handles not higher than 79 inches above finished floor, unless otherwise indicated, and by bolting units to wall or mounting on lightweight

structural-steel channels bolted to wall. For controllers not at walls, provide freestanding racks complying with Division 26 Section "Hangers and Supports for Electrical Systems."

- B. Floor-Mounted Controllers: Install enclosed controllers on 4-inch nominal-thickness concrete base. Comply with requirements for concrete base specified in Division 03 Section "Cast-in-Place Concrete".
 - 1. Install dowel rods to connect concrete base to concrete floor. Unless otherwise indicated, install dowel rods on 18-inch (450-mm) centers around the full perimeter of concrete base.
 - 2. For supported equipment, install epoxy-coated anchor bolts that extend through concrete base and anchor into structural concrete floor.
 - 3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
 - 4. Install anchor bolts to elevations required for proper attachment to supported equipment.
- C. Temporary Lifting Provisions: Remove temporary lifting eyes, channels, and brackets and temporary blocking of moving parts from enclosures and components.
- D. Install fuses in each fusible-switch enclosed controller.
- E. Install fuses in control circuits if not factory installed. Comply with requirements in Division 26 Section "Fuses."
- F. Install heaters in thermal overload relays. Select heaters based on actual nameplate full-load amperes after motors have been installed.
- G. Comply with NECA 1.

3.3 IDENTIFICATION

- A. Identify enclosed controllers, components, and control wiring. Comply with requirements for identification specified in Division 26 Section "Identification for Electrical Systems."
 - 1. Identify field-installed conductors, interconnecting wiring, and components; provide warning signs.
 - 2. Label each enclosure with engraved nameplate.
 - 3. Label each enclosure-mounted control and pilot device.

3.4 CONTROL WIRING INSTALLATION

- A. Install wiring between enclosed controllers and remote devices comply with requirements in Section 26 05 19 "Low Voltage Power Conductors and Cables."
- B. Bundle, train, and support wiring in enclosures.

- C. Connect selector switches and other automatic-control selection devices where applicable.
 - 1. Connect selector switches to bypass only those manual- and automatic-control devices that have no safety functions when switch is in manual-control position.
 - 2. Connect selector switches with enclosed-controller circuit in both manual and automatic positions for safety-type control devices such as low- and high-pressure cutouts, high-temperature cutouts, and motor overload protectors.

3.5 FIELD QUALITY CONTROL

- A. Perform tests and inspections.
- B. Acceptance Testing Preparation:
 - 1. Test insulation resistance for each enclosed controller, component, connecting supply, feeder, and control circuit.
 - 2. Test continuity of each circuit.
- C. Tests and Inspections:
 - 1. Inspect controllers, wiring, components, connections, and equipment installation.
 - 2. Test insulation resistance for each enclosed-controller element, component, connecting motor supply, feeder, and control circuits.
 - 3. Test continuity of each circuit.
 - 4. Verify that voltages at controller locations are within plus or minus 10 percent of motor nameplate rated voltages. If outside this range for any motor, notify Commissioner before starting the motor(s).
 - 5. Test each motor for proper phase rotation.
 - 6. Perform each electrical test and visual and mechanical inspection stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 7. Correct malfunctioning units on-site, where possible, and retest to demonstrate compliance; otherwise, replace with new units and retest.
 - 8. Test and adjust controls, remote monitoring, and safeties. Replace damaged and malfunctioning controls and equipment.
- D. Enclosed controllers will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.6 ADJUSTING

- A. Set field-adjustable switches and overload-relay pickup and trip ranges.

- B. Adjust the trip settings of MCPs and thermal-magnetic circuit breakers with adjustable instantaneous trip elements. Initially adjust to six times the motor nameplate full-load ampere ratings and attempt to start motors several times, allowing for motor cooldown between starts. If tripping occurs on motor inrush, adjust settings in increments until motors start without tripping. Do not exceed eight times the motor full-load amperes (or 11 times for NEMA Premium Efficient motors if required). Where these maximum settings do not allow starting of a motor, notify Commissioner before increasing settings.

3.7 DEMONSTRATION

- A. Instruct City of New York's staff to adjust, operate, and maintain enclosed controllers.

END OF SECTION 26 29 13

SECTION 26 31 00

PHOTOVOLTAIC COLLECTORS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (the City of New York Standard Construction Contract)

1.2 SUMMARY

- A. Section includes grid connected photovoltaic power system without storage as which includes some inactive PV panels within the building's skylight system.

1.3 RELATED SECTIONS

- A. Section 26 31 01 – “Data Acquisition for Photovoltaic System”

1.4 DEFINITIONS

- A. ETFE: Ethylene tetrafluoroethylene.
- B. FEP: Fluorinated ethylene propylene.
- C. IP Code: Required ingress protection to comply with IEC 60529.
- D. MPPT: Maximum power point tracking.
- E. PTC: PVUSA Test Condition. Commonly regarded as a "real-world" measure of PV output. See below for definition of "PVUSA."
- F. PV: Photovoltaic.
- G. PVUSA: Photovoltaics for Utility Systems Applications.
- H. STC: Standard Test Conditions defined in IEC 61215.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Product Data: For the following:
 - 1. PV Module
 - 2. Combiner Box
 - 3. DC Disconnect
 - 4. Inverter
 - 5. AC Disconnect

6. AC Panelboard
 7. Data Acquisition System (DAS)
- C. Shop Drawings: Detail equipment assemblies and indicate dimensions, weights, components, and location and identification of each field connection. Show access, workspace, and clearance requirements; details of control panels; and data acquisition system (DAS) arrangement.
1. Wiring Diagrams: Detail DC and AC interconnecting wiring; and power, signal, and control wiring.
 2. Elevation and details of control and indication displays.
- D. Qualification Data: For testing agency.
- E. Source quality-control test reports.
- F. Field quality- control test reports.
- G. Operation and Maintenance Data: For photovoltaic system equipment to include in emergency, operation, and maintenance manuals
- H. Warranty: Special warranty specified in this Section.
- 1.6 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
 - B. Testing Agency Qualifications: Member company of the InterNational Electrical Testing Association or is an NRTL.
 - C. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100 and marked for intended use.
 - D. Photovoltaic System: IEC 1215 Certification, IEEE 1262 Certification, UL listing with Class C or better fire rating.
 - E. DC-AC Inverter must meet UL1741 standards.
 - F. Interconnection must meet standards required by Con Edison.
 - G. Comply with the New York City amended NFPA 70 (specifically Article 690) and NFPA 101
 - H. Comply with all 2014 New York City Building Codes.
 - I. Installation to be coordinated with skylight manufacturer.
 - J. Installer must be a licensed electrical installer.

1.7 WORKMANSHIP

- A. Work must be performed in accordance with the installation and operation instructions provided by equipment manufacturers and in accordance with this specification.
- B. All work must be conducted in a professional manner with appropriate courtesy toward and coordination with other workers on site.
- C. All work must be conducted in a safe manner in accordance with all appropriate safety guidelines and regulations.
- D. Work areas must be kept clean and orderly. Any waste, excess material or packaging must be promptly removed and disposed of properly.

1.8 SCOPE OF WORK

- A. Provide the materials, parts, labor, tools and equipment necessary to install and warrant the Grid-Interactive Photovoltaic Power System (PV System) described in this specification. The PV System must include a Data Acquisition System (DAS).
- B. Installer will be responsible for obtaining all applicable approvals, permits, and inspections associated with the PV System, its installation, and its interconnection to the utility grid.
- C. Installer must carry out all pertinent inspections, be responsible for correcting any identified deficiencies, and host any needed re-inspections.
- D. Coordinate with City of New York the application for utility interconnection approval from local utility.
- E. Installer will be responsible for installing the PV System and associated materials and equipment in accordance with all appropriate electrical, building, and occupational safety codes.
- F. Materials must include, but not be limited to, the primary components of the PV System, the Data Acquisition System (DAS), and all necessary balance of system (BOS) materials.
- G. The primary components of the PV System must include a PV Array, DC-AC inverter (NEMA 3R), electrical room disconnects and combiner, and isolation transformer as specified in Part 2 of this section.
- H. The DAS must include (as described in Part 2 of this section) rooftop environmental sensors, sensors in the main electrical room to measure power parameters, a data-logger and meter in the electrical room, PC software for electronically communicating and sharing data in an educational format, and an interactive lobby kiosk.
- I. BOS materials must include but not be limited to: conduit, wire, over-current protection devices, junction boxes, pull boxes, enclosures, hardware, fasteners, surge suppression devices and any other accessories or materials needed to properly install the PV System and the DAS.
- J. Installation must be done in accordance with this specification and must include:
 - 1. Installing and wiring the module in all locations indicated on drawings.

2. Installing source circuit combiners, sub-array disconnects, and DAS sensors at the rooftop location.
 3. Conduit and wiring within the rooftop PV array.
 4. Wiring from the rooftop PV array and DAS to the DC-AC inverter, AC Disconnect and to panel PVP in Electrical Room.
 5. Installation of disconnects, combiner, DC-AC inverter, conduit, wire, BOS, and DAS to PV fused disconnect in Electrical Room 214.
 6. Wiring from the PV system AC disconnect (along roof line), through the AC utility disconnect, to the point of utility interconnection in a load center within electrical room.
 7. Interconnection of PV System with utility grid
 8. Labeling, placards and laminated riser diagram to meet code and utility requirements.
 9. Labeling to identify system components,
 10. Labeling of wires for polarity, circuit, phase,
 11. Installation of DAS software on PC
 12. Verification/inspection/testing of installation work,
 13. Hosting of all pertinent inspections.
 14. System commissioning.
- K. Installer will be responsible for system operation testing, system commissioning, and providing operating instructions.

1.9 WORK BY OTHER TRADES

- A. Provide the materials, parts, labor, tools and equipment necessary to install and warrant the Grid-Interactive Photovoltaic Power System (PV System) described in this specification. The PV System must include a Data Acquisition System (DAS).
- B. Conduit from the AC Disconnect along roof to the electrical room (C04) will be coordinated with other trades. Rooftop locations of conduits for power wires and for signal wires are shown will be indicated on shop drawing.
- C. Panelboard and Circuit Breakers at point of interconnection in electrical room C04 must be provided and installed by the electrical contractor in accordance with NEC 690.64 (B). All circuit breakers must be capable of two-way flow of power.
- D. Provide PC computer to be used as the DAS server and its connection to the facilities computer network. This DAS server must be a dedicated device. Its connection to the facilities computer network is to allow sharing of PV system information with other user computers.

1.10 DELIVERY, STORAGE, AND HANDLING

- A. Deliver equipment in fully enclosed vehicles.
- B. Store equipment in spaces having environments controlled within manufacturers' written instructions for ambient temperature and humidity conditions for non-operating equipment.

- C. All materials must be stored and handled on site in a manner that does not damage or have the potential to damage the facility (for instance: roof membrane must be protected, and roof structure must not be overloaded).
- D. All material must be stored, delivered, and handled in a manner that does not endanger personnel at the site.
- E. All materials must be handled with adequate and appropriate equipment.

1.11 GUARANTEE/ WARRANTY

- A. Contractor must guarantee complete system to be free from defects in materials or workmanship for a period of one year following the date of the substantial completion.
 - 1. This guarantee will include service at the site to replace or restore to full function components documented to be defective during that one-year period.
 - 2. Utilize manufacturer's warranties to obtain replacements for defective materials and components but provide troubleshooting services to document failures; must obtain appropriate service/support from manufacturer; and labor, transportation, and disposal costs involved in removing defective materials and components and installing replacements during that one-year period.
- B. PV modules must have a 20-year (minimum) warranty that power output at Standard Test Conditions (STC) must remain at 80% or greater of power rating at STC. STC is defined as irradiance of 1000 Watts per square meter, ambient temperature of 25 degrees C, and spectral distribution of AM 1.5.
- C. Inverter and transformer must have a 5-year (minimum) warranty.
- D. Support system must have a 20-year (minimum) warranty.

1.12 OPERATION AND MAINTENANCE MANUAL

- A. Provide a comprehensive Operation and Maintenance Manual for the PV System.
- B. Manual must include specification sheets and manufacturers' Operation and Maintenance Manuals for all primary components as well as a description and guidance for overall system operation.

PART 2 - GENERAL

2.1 PHOTOVOLTAIC MODULE

- A. Subject to compliance with requirements, photovoltaic solar panels compliant with New York State Department of Public Service Certified Interconnection Equipment documentation by one of the following:
 - 1. Solar Electric Supply, Inc (www.solarelectricsupply.com).
 - 2. Terra Solar (www.terrasolar.com).
 - 3. LG (www.lg.com).
 - 4. Cooper Electric Energy Solutions (www.cooper-electric.com).

5. Trina Solar (www.trinasolar.com).
6. Sun Power (www.us.sunpower.com).
7. Or Approved Equal.

- B. The PV array must incorporate panels resulting in the footprint not exceeding the area shown on the Contract Documents. Provide 8 spare modules for the City of New York. Panels must be ¼” thick and capable of withstanding all loading requirements.
- C. Individual PV modules must have a rated power (at STC) of 200 Watts or more to keep the number of wiring connections in the system to a reasonable number.

2.2 WIRE AND CONDUIT

- A. Exterior and interior conduit associated with the PV system must be EMT of appropriate inside diameter for the number and size of wires to be run.
- B. Exposed PV module wiring must be kept to a minimum, must be properly rated for sunlight resistance, must be properly rated for the hot temperatures associated with the PV array (90 degrees C insulation) and must be properly secured to avoid physical damage from wind, snow, or other environmental factors. Means of securing exposed wiring must be sunlight resistant and able to withstand expected rooftop environmental factors over the life of the system.
- C. DC wiring must be Underground Service Entrance cable (USE-2) .
- D. DAS signal wire must meet all the DAS manufacturer’s guidelines and must not be run in the same conduit as electrical power wiring.
- E. Conduit from the rooftop to the main electrical room (including a separate one for DAS signal wire) must be provided by other trades.
- F. All wire must be UL listed, new, stranded copper and continuous for each wiring run. Fine stranded wiring is not acceptable.
- G. Insulation must be rated for 600V.
- H. All conductor terminations must be rated for 600V, be UL listed and meet the instructions furnished with each component. Any terminal block used must be listed as suitable for use with field installed wiring.
- I. Power wire must be sized for a voltage drop of 2% or less between PV modules and inverter.

2.3 DC to AC POWER INVERTER

- A. Subject to compliance with requirements, provide a 3-phase, 60Hz, 208VAC inverter output capability of the system and meet the requirements below by one of the following:
 1. SMA America, Inc (www.sma-america.com).
 2. Cooper Electric Energy Solutions (www.cooper-electric.com).
 3. Sun Power (www.us.sunpower.com).
 4. Fronius Symo (www.fronius-usa.com).
 5. Or Approved Equal.

- B. Each inverter must have a capacity to receive at least 3 series strings of Photovoltaic modules otherwise provide DC Circuit Combiners.
- C. Each inverter must come with integral DC disconnect otherwise provide DC disconnect to each inverter.
- D. The inverter must be a grid-interactive, non-battery-based model with firmware 8.94 (or other firmware version accepted by New York State Department of Public Service Certified Interconnection Equipment list).
- E. The inverter must be designed to accept the PV array output and must be listed to UL1741 standards and must be acceptable to the local utility and the New York State Department of Public Service Certified Interconnection equipment documentation. The inverter must start, synchronize, operate, and disconnect automatically without the need for user action or intervention. The inverter must be capable of operating in parallel with other grid interactive inverters.
- F. The inverter must have the following protective functions: AC over/under voltage, AC under/over frequency, over temperature, AC and DC over current, DC over voltage.

2.4 UTILITY INTERCONNECTION

- A. An AC utility disconnect must be installed in accordance with the utility requirements (ConEd's Blue Book, "A Customer Guide to Electrical Service Installation") between the AC Combiner and the point of utility interconnection. Coordinate with Con Ed to locate this disconnect where it must meet accessibility requirements, minimize vandalism risk, and maximize user safety.
- B. The AC Combiner and the 3-phase, 208VAC 200A fused disconnect in the main electrical room, which must serve as the PV System's point of interconnection to the utility power system, must be provided by others in accordance with NEC690.64 (B). The AC Combiner must be a 200A 120/208V 3P4W 30-pole panelboard, NEMA 3R.

2.5 INTERTIE PROTECTION RELAY

- A. Subject to compliance with requirements, provide AC Intertie Protection Relay by one of the following:
 - 1. Beckwith Electric Co., Inc. (www.beckwithelectric.com).
 - 2. Cooper Electric Energy Solutions (www.cooper-electric.com).
 - 3. Sun Power (www.us.sunpower.com).
 - 4. Schweitzer Engineering Laboratories (www.selinc.com).
 - 5. Or Approved Equal.

2.6 DATA ACQUISITION SYSTEM

- A. Refer to specification section 26 31 01 – "Data Acquisition for Photovoltaic System".

2.7 PHOTOVOLTAIC PANEL SUPPORT SYSTEM

- A. The panels must be supported by non-penetrating support system with ballast.

- B. The support system must provide the require direction and tilt angles for the panels as indicated on drawing E-103.

2.8 ENCLOSURES

- A. NEMA 250, Type 3R steel cabinets with access to components through hinged doors with flush tumbler lock and latch for all outdoor applications.
- B. Finish: Manufacturer's standard baked-enamel finish over corrosion-resistant prime treatment.

2.9 SOURCE QUALITY CONTROL

- A. Factory test complete inverter system before shipment.
- B. Observation of Test: Give 14 days' advance notice of tests and provide access for Commissioner to observe tests at Commissioner's option.
- C. Report test results. Include the following data:
 - 1. Description of input source and output loads used. Describe actions required to simulate source load variation and various operating conditions and malfunctions.
 - 2. List of indications, parameter values, and system responses considered satisfactory for each test action. Include tabulation of actual observations during test.
 - 3. List of instruments and equipment used in factory tests.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SAFETY PRECAUTIONS

- A. Installer must ensure that all work under Installer's control is conducted in accordance with all applicable safety codes and requirements and practices including but not limited to OSHA requirements, 2014 NYC Electrical Code and specific job requirements.
- B. Installer must participate in site safety meetings and must communicate all appropriate safety information to employees and subcontractors in a timely manner.
- C. Installer is responsible for knowing how to safely install a high voltage PV power system and how to ensure that circuits are de-energized prior to conducting work on them. PV power systems involve special safety challenges because PV modules generate electricity whenever they are exposed to sunlight. In high voltage PV systems there is the potential for shock and arc capable of causing serious injury or death.
- D. Installer is be responsible for ensuring that other workers on site are not exposed to undue hazards associated with the PV installation.

- E. Installer is responsible for conducting a safe operation and for ensuring that appropriate protective equipment is utilized by personnel under Installer's direction.
- F. Installer is responsible for ensuring that all employees and subcontractors under Installer's direction have the appropriate experience and training to safely accomplish the tasks being assigned to them.
- G. Installer must report all accidents at the jobsite involving employees and/or subcontractors.
- H. Installer must identify safety hazards and risks and communicate them to appropriate personnel prior to the commencement of work.
- I. Installer must ensure that there will always be a minimum of two people working together.

3.3 INSTALLATION

- A. All components must be installed in accordance with manufacturers' manuals, guidelines, and instructions.
- B. All work must be done in accordance with applicable codes and in accordance with 2014 NYC Building Code and latest edition of NYC Electrical Code.
- C. Installer must arrange a pre-installation conference with all appropriate parties to communicate procedures, safety information, schedules, and responsibilities and to coordinate with other work efforts.
- D. All DC wiring and components must be labeled for polarity and circuit. All AC wiring and components must be labeled for phase.
- E. All DAS wiring must be labeled.
- F. All connections must be torqued to manufacturers' specifications.
- G. All metal components including module frames must be grounded in accordance with 2014 NYC Electrical Code.
- H. Installer is responsible for removing and properly disposing of any excess or waste material generated in association with the delivery and installation of the PV System.
- I. Work area and system components must be clean and orderly during installation and at the completion of the project.
- J. All components must be properly labeled. Labels must conform to the requirements of all 2014 NYC electrical Code, 2011 National Electrical Code and UL. Exterior labels must be rated for outdoor use. Location of PV System disconnects must be described in the form of a laminated approved shop drawing riser diagram at the Service Entrance.
- K. All fuses must be removed, and all circuit breakers and switches must be left in the open position between system installation and system testing.
- L. All junction boxes and other locations of module wiring connections must be made accessible

3.4 FIELD TESTING OF PV MODULES

- A. All individual PV modules must be field tested at the project site during the installation process to verify performance.
- B. Open Circuit Voltage (Voc) and Short Circuit Current (Isc) must be measured and recorded along with the module serial number, ambient temperature, and plane-of array solar irradiance. Testing must occur under reasonably clear weather conditions and during mid-day hours. Testing records must be submitted to the Commissioner.
- C. Measurements must be compared to values provided by module manufacturer to determine whether each module is operating properly. Solar Contractor must return defective modules to the module manufacturer for warranty replacement.

3.5 CONNECTIONS

- A. Connections: Interconnect system components. Make connections to supply and load circuits according to manufacturer's wiring diagrams, unless otherwise indicated.
- B. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
 - 1. Separately Derived Systems: Make grounding connections to grounding electrodes and bonding connections to metallic piping systems as indicated; comply with NFPA 70.
 - 2. All exposed metal surfaces of the PV system must have an equipment grounding conductor in accordance with NEC 2005 Articles 690.45 and 250.122.
- C. Connect wiring according to Section 26 05 19 "Low-Voltage Power Conductors and Cables."

3.6 IDENTIFICATION

- A. Identify equipment and components according to Section 26 05 53 "Identification of Electrical Work".

3.7 FIELD QUALITY CONTROL

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect, test, and adjust components, assemblies, and equipment installations, including connections. Report results in writing.
- B. Tests and Inspections:
 - 1. Inspect interiors of enclosures for integrity of mechanical and electrical connections, component type and labeling verification, and ratings of installed components.
 - 2. Test manual and automatic operational features and system protective and alarm functions.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specifications. Certify compliance with test parameters.
 - 4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

5. Remove and replace malfunctioning units and retest as specified above.

3.8 INSTALLATION INSPECTION

- A. After the system has been installed but before it is energized, conduct an inspection to verify that:
 1. All components are installed in a neat, workmanlike manner.
 2. All components and materials are in new condition and installed in accordance with manufacturers' manuals and guidelines.
 3. Appropriate torque has been used in tightening wire connections and fasteners (random checks).
 4. Appropriate fasteners have been used throughout the system.
 5. All outdoor components and materials are rated for such use and expected to last for the life of the system.
 6. All wiring is new, continuous, copper, 600V rated, with proper insulation for its location, and properly secured and protected for the life of the system.
 7. All non-current carrying metal materials are properly grounded.
 8. PV negative conductors are not switched.
 9. All conductors are labeled as to proper circuit and proper polarity.
 10. Surge suppressors are installed and correctly wired.
 11. DAS has been properly installed and wired.
- B. Arrange for and host electrical inspection of the PV system.

3.9 PRE-COMMISSIONING TESTING

- A. With all disconnects open, all fuses removed and all circuit breakers off use a digital multi-meter to confirm that conductor polarities are correct and connected to the correct terminals.
- B. Carefully test the outputs of individual series strings (Voc and Isc), and sub-arrays (Voc) to identify and correct any inconsistencies. Testing must occur under reasonably clear weather conditions and during mid-day hours and test results must be recorded and submitted to Commissioner.
- C. Testing should proceed from series strings to sub-arrays on the roof and then to the electrical room DC disconnects and circuit combiner. Polarities must be checked at every step. Fuses must be installed and switches closed only after polarities and wiring have been checked thoroughly.
- D. Pre-commissioning testing must stop at the inverter DC disconnects. This disconnect must remain in the open position.

3.10 COMMISSIONING AND PERFORMANCE TESTING

- A. Ensure that commissioning and performance testing involve the inverter manufacturer or the inverter manufacturer's designated representative.
- B. Inverter start-up and commissioning must occur only after all AC and DC connections to the inverter and transformer and point of interconnection load center have been checked for polarity, phase, labeling, and torque.

- C. Inverter start-up must be accomplished via the manufacturer's procedures and checklists.
- D. Testing of the inverter's output performance must be conducted during reasonably clear weather conditions and during mid-day hours. System AC output in kW must be measured along with ambient temperature (at the array and in the electrical room) and plane-of-array solar irradiance. AC inverter output must be measured for the whole system and also for each individual subarray (with all other sub-arrays disconnected). Measurements must be recorded and submitted to the Commissioner.
- E. Verify that the system performs properly over the course of a solar day including: automatic morning start-up, full power daytime operation, and automatic nighttime shut down.
- F. Proper operation of the DAS must be verified during performance testing.
- G. Any anomalous or unsatisfactory performance must be corrected and the system retested.
- H. Arrange for and host the utility inspection and must coordinate with the utility to address any issues brought forward by the utility.

3.11 ACCEPTANCE

- A. Once the inverter and the system have successfully undergone electrical inspection, commissioning and performance testing, and utility inspection, present the system Operation and Maintenance Manual to City of New York's staff and conduct a 3-hour session to familiarize appropriate facility representatives with system start-up, operation, and shut down and with the Data Acquisition System.
- B. Manual must include as-built electrical and mechanical drawings, product cut sheets, manufacturers' operation and maintenance manuals, maintenance schedules and procedures, troubleshooting procedures, warranty information, and contact information.
- C. The City of New York's staff must be instructed on the operation of the DAS, its measurement capabilities, the use of its software, and its educational opportunities.

3.12 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's staff to adjust, operate, and maintain photovoltaic system.

END OF SECTION 26 31 00

SECTION 26 31 01

DATA ACQUISITION FOR PHOTOVOLTAIC SYSTEM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section includes web- based photovoltaic system data acquisition system (DAS)

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

1.5 INTRODUCTION

- A. This specification covers the meter/data logger, communications/data transfer requirements, and monitoring/administration requirements for a solar photovoltaic (PV) data acquisition system (“DAS”). The objective of the DAS is to provide real-time information on solar PV systems’ production for City of New York. The DAS will enable tracking and reporting on solar PV system performance metrics (i.e. energy production, cost savings, emissions reductions) and monitor system performance for the purposes of operation and maintenance (i.e. equipment failures).
- B. Web-based DAS must be provided to enable real-time performance monitoring of solar PV system components.
- C. Data Acquisition System(s) will include the following hardware components integrated into one or more metal NEMA 4 enclosures.

1.6 COORDINATION

- A. Coordinate Work of this Section with installation, placement and needs of power and data connection at all equipment locations

- B. Coordinate Work of this Section with DAS installer and City of New York’s IT administrator for local network provisioning and port access as necessary.

1.7 WARRANTY

- A. Minimum 5-year manufacturer’s warranty of service, support, and replacement, from date of substantial completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

- A. Solar PV Monitoring Hardware.
 - 1. Non-proprietary open-source data loggers.
 - 2. Manufacturer: Subject to compliance requirements, provide products by one of the following:
 - a. Obvius
 - b. Campbell Scientific
 - c. Data Logger Inc.
 - d. Or approved equal.
 - 3. Revenue grade energy meters.
 - 4. Environmental sensors including all of the following: Plane of array irradiance, Ambient temperature, Module temperature, Wind speed, and Wind direction.
 - 5. Establish data connections between all solar PV system components to enable a minimum of inverter(s) performance/status monitoring.
- B. Solar PV Monitoring Software
 - 1. Web-based software application for the purpose of solar PV system performance monitoring.
 - 2. Manufacturer: Subject to compliance requirements, provide products by one of the following:
 - a. Tangent AMP,
 - b. Also Energy Inc.,
 - c. BlueNRGY LLC,
 - d. Or approved equal.
 - 3. Offers customizable feature set enabling display of performance data to the general public

4. Application Program Interface (“API”) access enabling custom interface to Solar PV Monitoring System for the purpose of data exchange or configuration.

2.2 MANUFACTURERS

- A. Subject to compliance with requirements, provide products to meet the specification below by one of the following:
 1. SMA America, Inc (www.sma-america.com)
 2. Cooper Electric Energy Solutions (www.cooper-electric.com)
 3. Sun Power (www.us.sunpower.com)
 4. Fronius Symo (www.fronius-usa.com)
 5. Heliotronics (www.heliotronics.com)
 6. Or Approved Equal

2.3 GENERAL DESCRIPTION

- A. The DAS must be designed for use with 208 VAC 3 phase power and 600VDC power.
- B. The rooftop sensors must measure Ambient Temperature, Module Temperature, Wind Speed, and Plane-of-Array Irradiance for both array angles.
- C. Electrical room sensors must measure current, voltage, and power in kilowatts (kW) and energy in kilowatt-hours (kWh) on both the AC side and the DC side.
- D. Electrical room sensors must accommodate the large wiring associated with a 12 kW PV system.
- E. There must be a kWh meter installed in the main electrical room to display total AC kWh output. This meter must meet MTC specifications:
 1. The PV system must have dedicated meter that records only the AC output from the inverter of the PV system. This meter is separate from the utility billing meter and should not interfere with utility billing or net-metering. The PV system meter must be a standard utility revenue quality meter that conforms with applicable American National Standards Institute (ANSI) C-12 standards with a visible display for cumulative energy (kWh) produced by the PV system. All system components, including meters, must comply with all applicable codes& standards. The meter should be installed on the AC output side of the inverter, and must be available for periodic testing and/or recalibration, if necessary.
- F. The DAS and associated software must be PC-based.
- G. The DAS must sample required parameters at least 30 times per minute and log 15-minute averages. Logged kWh data must not be lost as a result of a power outage.

- H. DAS PC software must be designed to capture data from the data logger and display it in an informative and educational format.
- I. The DAS software must capture data (15-minute averages) for the life of the system in a common recording format (Comma Separated Values or Access Compatible Database) thereby allowing manipulation, plotting, and upload of the data.

2.4 FUNCTIONAL DESCRIPTION OF SOLAR PV MONITORING SYSTEM HARDWARE

- A. DAS data logger to include the following features:
 - 1. Operating conditions:
 - a. Operating temperature range -30 degrees C to 70 degrees C.
 - b. Operating humidity range from 0% to 95%, non-condensing.
 - 2. Inputs:
 - a. Modbus RS232/RS485 or similar standard communication protocol.
 - 3. Two-way site communication through supported protocols:
 - a. TCP/IP over Ethernet for HTTP data transmission via PROXY.
 - b. File Transfer Protocol (FTP).
 - 4. Memory and storage requirements:
 - a. Non-volatile storage capacity for 1 month of 15-minute interval data from a single device when remote server connection is unavailable.
 - b. First in, first out file storage management.
 - c. Support for expandable USB memory device with the ability to disable USB operations if required.
 - 5. Listed or recognized for intended usage by an NRTL.
 - 6. Capable of being set to a Static IP Address with a primary and secondary DNS server
 - 7. Capable of recording data at a minimum 1-minute interval.
 - 8. Capable of remote configuration via web portal.
 - 9. Support for power by 24VDC.
 - 10. UL, CSA, FCC, Agency Approvals
- B. Revenue grade energy meter to include the following features:
 - 1. Operating conditions:
 - a. Operating temperature range -30 degrees C to 70 degrees C.
 - b. Operating humidity range from 0% to 95%, non-condensing.
 - 2. Inputs:

- a. Voltage, mA or 5A current type current transformers
 - b. Direct voltage inputs up to 600V
 3. Optional integrated I-Block
 4. Communications via Modbus RTU
 5. Minimum accuracy of 0.5%
 6. Preconfigured for use with supplied CTs
 7. Measured quantities per phase:
 - a. Power (kW)
 - b. Accumulated energy imported (kWh)
 - c. Accumulated energy generated (kWh)
 - d. Accumulated net energy generated (kWh)
 - e. Voltage (V)
 - f. Current (A)
 - g. Frequency (Hz)
 - h. Reactive power (kVAR)
 - i. Apparent power (kVA)
 - j. Power factor
 8. Measured quantities averaged across phases:
 - a. Voltage (V)
 - b. Current (A)
 - c. Power factor
 9. Total of all phases
 - a. Power (kW)
 - b. Accumulated energy imported (kWh)
 - c. Accumulated energy generated (kWh)
 - d. Accumulated net energy generated (kWh)
 - e. Current (A)
 - f. Reactive power (kVAR)
 - g. Apparent power (kVA)
- C. Environmental sensors to include the following features:
 1. Sensors to measure the following data points:
 - a. Plane of array irradiance (W/m²)

- b. Ambient temperature (°C or °F)
 - c. Module temperature (°C or °F)
 - d. Wind speed (mph)
 - e. Wind Direction
 2. Suitable analog to digital converter capable of transmitting data using Modbus RTU protocol.
 3. Operating conditions appropriate for installation setting.
 - a. Irradiance sensor capable of low thermal drift over operational temperature range.
 - b. Irradiance sensor to be UV resistant.
 - c. Ambient temperature sensor to be shielded from direct solar radiation.
 - d. Module temperature sensor operating range -30C to 80C.
 - D. Assembly:
 1. Enclosure UL Listed NEMA 4.
 2. ETL Listed, Conforms to U.L. Standard 61010 and CSA 22.2.
 3. Power Supplies conform to UL 60950-1, EN60950-1, EN6100-4, CE.
 4. 120VAC/277VAC or 480VAC three phase delta power supplies.
- 2.5 FUNCTIONAL DESCRIPTION OF SOLAR PV MONITORING SYSTEM SOFTWARE
- A. Web Based Software: Internet Explorer, Firefox, Chrome or equivalent.
 - B. Host and maintain software application on software manufacturer's data servers enabling application to be accessed on the web.
 - C. Provide integration to monitoring hardware which enables live data from DAS to be displayed on web interface.
 - D. Fifteen-minute data to be stored for contract term, extendable at customer's request.
 - E. Solar PV monitoring software features:
 1. Views to include the following features:
 - a. Unique, publicly accessible URL address.
 - b. Real-time system data depicted in graphically in gauges or charts.
 - 1) Current system power output.
 - 2) Accumulated energy production.
 - c. Historical system data.

- 1) Displays expected photovoltaic performance, actual photovoltaic performance, cost savings, and environmental sensor data points through interactive graphs.
 - a) Daily
 - b) Weekly
 - c) Monthly
 - d) Yearly
- d. Calculated Energy Savings (\$).
- e. Environmental equivalency information.
- f. Graphical displays indicating energy produced in terms of CO2 offset.
- g. Customization options to include:
 - 1) Logo.
 - 2) Color scheme.
 - 3) Photographs.
 - 4) System details.
- h. Live weather data from environmental sensors or local National Oceanic and Atmospheric Administration station feed.
- i. Administration level site to include the following features:
 - 1) Secure, password protected accounts.
 - 2) Interactive, real-time display of all collected data.
- j. Advanced graphical suite including:
 - 1) User selected data fields.
 - 2) User selected timeframes.
- k. Complete download access to:
 - 1) Raw data directly from meters and environmental sensors in .csv formatted files.
 - 2) User created tables and datasets.
 - 3) Prepared and totaled data over any timeframe in the following intervals: Yearly, Monthly, Daily, Hourly, 15-minute.
- l. Detailed system statistics including:
 - 1) Representations and comparisons to historical performance.
 - 2) Peak performance trends.
 - 3) Capacity factor data.
- m. User configurable alarms.

- 1) Automatic email notifications when specified thresholds are met, such as equipment failures and suboptimal solar PV system performance/energy production, including but not limited to:
 - a) Inverter Failures.
 - b) Decreased Energy Production.
 2. Portfolio site to include the following features:
 - a. Secure, password protected access.
 - b. Aggregate system performance graphs and data.
 - c. Aggregate system statistics.
 - d. Geographic display of systems.
 - e. Direct creation and management of additional accounts.
 - f. User groups with custom feature sets and access levels.
 - g. User configurable reports.
- F. Data must be stored in a “cloud hosted” environment with the highest standards of redundancy and disaster recovery.
- G. DAS software provider must be qualified to submit production and other data to Utilities, Regulatory agencies, and State or Federal entities if required.
- H. Data must be easily downloadable via an API.
- I. Complete data history can be downloaded at one time.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 COORDINATION

- A. Coordinate with electrician to install communications and power wiring.
1. Communication wire must be appropriate for protocol.
 2. Shielded twisted pair with dedicated reference for Modbus.
 3. Communication wire should be installed in dedicated conduit where necessary.
 4. DC power wiring to be sized to minimize voltage drop.
- B. Coordinate with photovoltaic system installer to install environmental sensors during PV panel installation.

- C. Coordinate with photovoltaic system installer for integration.
- D. Coordinate with IT department for network provisioning.

3.3 INSTALLATION

- A. The equipment must be factory wired ready for field connections for power and data.
- B. Provide phone support during the installation of solar PV monitoring system hardware. Follow Manufacturer's installation recommendations and requirements during installation.
- C. Provide full software deployment within 2 business days of site commissioning.
 - 1. Initial set up of five users – Two Administrators and three users
 - 2. Site set up of all devices..
 - 3. Basic Alert set-up of Communication Faults and Device Faults.
- D. Provide Single Line Drawings and schematics as part of deliverables.

3.4 FIELD QUALITY CONTROL

- A. Inspect hardware for defects and physical damage, labeling of Nationally Recognized Testing Laboratories (NRTL) and nameplate compliance with the Contract Documents.
- B. Confirm energy meter power readings with reference to photovoltaic inverter display.

SECTION 26 32 14

GENERATOR TAP BOX

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Generator Tap Box.

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Generator tap boxes must be UL listed and labeled under the UL 1008 standard with a minimum 42KA withstand rating.
- C. Generator tap box manufacturer must provide a complete factory assembled and tested generator tap box.
- D. Generator tap box installation must meet all applicable NEC standards.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Contractor must submit manufacturer’s drawings and data of generator tap boxes for Commissioner’s approval prior to start of fabrication. Drawings and data must include, as a minimum, dimensioned general arrangement drawings, UL listing information including UL control or file number, component data, mounting provisions, conduit entry locations and installation instructions.

1.5 WARRANTY

- A. Generator tap boxes must be covered by manufacturer’s warranty for a minimum period of (1) one year after substantial completion.

PART 2 - PRODUCTS

2.1 GENERAL

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
 - 1. Powertron
 - 2. ESL Power Systems, Inc
 - 3. Power Temp Systems, Inc
 - 4. Eaton Electrical Inc.; Cutler-Hammer Business Unit.
 - 5. General Electric Company; GE Consumer & Industrial - Electrical Distribution.
 - 6. Siemens Energy & Automation, Inc.
 - 7. Or Approved Equal
- B. All equipment must be new.
- C. Generator tap box manufacturer must have produced and sold UL 1008 Listed generator tap boxes as a standard product for a minimum of (2) years.
- D. Contractor will be responsible for the equipment until it has been installed and is finally inspected, tested and accepted in accordance with the requirements of this Specification.

2.2 GENERATOR TAP BOX

- A. Generator tap box must consist of cam-style male connectors and grounding terminals, all housed within a pad lockable enclosure.
- B. Generator tap box enclosure must be NEMA Type 3R, constructed of continuous seam welded, powder coated galvaneal steel. The main access must be through a hinged door that extends the full height of the enclosure. Access for portable generator cables with female cam-style plugs must be via a) drawn flange cable entry openings in the bottom of the enclosure for wall mount units, or b) hinged lower door for pad mount units. A hinged flap door must be provided to cover the cable openings when cables are not connected; the hinged flap door must allow cable entry only after the main access door has been opened.
- C. Enclosure must be Stainless Steel after fabrication.
- D. Cam-style male connectors (inlets) must be UL Listed single-pole separable type and rated 400 amps at 600VAC. Cam-style male connectors must be color coded. Cam style male connectors must be provided for each phase and for ground and must also be provided for neutral if required. The ground cam-style male connectors must be bonded to the enclosure, and a ground lug must be provided for connection of the facility ground conductor. None of the cam-style male connectors must be accessible unless the main access door is open.

- E. Provide receptacles for generator battery charger and block heater.
 - 1. One 20A, grounded, weatherproof, NEMA 5-20R.
 - 2. One 30A, grounded, weatherproof, NEMA 6-30R.

PART 3 - PRODUCTS

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Prior to installation of generator tap boxes, Contractor must examine the areas and conditions under which the generator tap box is to be installed and notify the Commissioner in writing if unsatisfactory conditions exist.
- B. Generator tap box must be installed as shown on the drawings and per the manufacturer's written instructions. In addition, the installation must meet the requirements of local codes, the National Electrical Code and National Electrical Contractors Association's "Standard of Installation"
- C. Conduit entry into the manual transfer switch must be by Contractor; Contractor must furnish and install listed watertight conduit hubs for each conduit entry on the generator tap box. The hub size must match the conduit size for conductors and ground as shown on the drawings. Hubs must be properly installed and tightened to maintain Type 3R integrity of the generator tap box.
- D. Contractor must terminate conductors and ground per the manufacturer's instructions. All field wiring terminations in the generator tap box must be torqued as required per the instructions on the generator tap box.

3.3 FIELD TESTING

- A. Prior to energizing generator tap box, the Contractor must perform the following checks and tests as a minimum:
 - 1. Verify mounting and connections are complete and secure.
 - 2. Verify internal components and wiring are secure.
 - 3. Perform continuity check of all circuits.
 - 4. Perform 1,000 VDC megger test on phase and ground cables.
 - 5. Verify dead front is secure.
 - 6. Confirm operation of the generator tap box ground receptacle by attaching a plug to the generator tap box ground receptacle and then verify that the plug is grounded to the facility ground.

END OF SECTION 26 32 14

SECTION 26 36 00

TRANSFER SWITCHES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. This Section includes manual transfer switches rated 600 V and less.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Product Data: Include rated capacities, weights, operating characteristics, furnished specialties, and accessories.
- C. Shop Drawings: Dimensioned plans, elevations, sections, and details showing minimum clearances, conductor entry provisions, gutter space, installed features and devices, and material lists for each switch specified.
- D. Field quality-control test reports.
- E. Operation and maintenance data.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100 and marked for intended use.
- C. Comply with NEMA ICS 1.
- D. Comply with NFPA 70.
- E. Comply with NFPA 99.
- F. Comply with NFPA 110.

- G. Comply with UL 1008 unless requirements of these Specifications are stricter.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
1. Contactor Transfer Switches:
 - a. Kohler Power Systems; Generator Division.
 - b. Emerson; ASCO Power Technologies, LP.
 - c. Caterpillar; Engine Div.
 - d. GE Zenith Controls.
 - e. Or Approved Equal
 2. Transfer Switches Using Molded-Case Switches or Circuit Breakers:
 - a. AC Data Systems, Inc.
 - b. Eaton Electrical Inc.; Cutler-Hammer.
 - c. GE Zenith Controls.
 - d. Hubbell Industrial Controls, Inc.
 - e. Or Approved Equal

2.2 GENERAL TRANSFER-SWITCH PRODUCT REQUIREMENTS

- A. Indicated Current Ratings: Apply as defined in UL 1008 for continuous loading and total system transfer, including tungsten filament lamp loads not exceeding 30 percent of switch ampere rating, unless otherwise indicated.
- B. Tested Fault-Current Closing and Withstand Ratings: Adequate for duty imposed by protective devices at installation locations in Project under the fault conditions indicated, based on testing according to UL 1008.
1. Where transfer switch includes internal fault-current protection, rating of switch and trip unit combination must exceed indicated fault-current value at installation location.
- C. Solid-State Controls: Repetitive accuracy of all settings must be plus or minus 2 percent or better over an operating temperature range of minus 20 to plus 70 deg C.
- D. Resistance to Damage by Voltage Transients: Components must meet or exceed voltage-surge withstand capability requirements when tested according to IEEE C62.41. Components must meet or exceed voltage-impulse withstand test of NEMA ICS 1.
- E. Electrical Operation: Accomplish by a nonfused, momentarily energized solenoid or electric-motor-operated mechanism, mechanically and electrically interlocked in both directions.

- F. Switch Characteristics: Designed for continuous-duty repetitive transfer of full-rated current between active power sources.
 - 1. Limitation: Switches using molded-case switches or circuit breakers or insulated-case circuit-breaker components are not acceptable.
 - 2. Switch Action: Double throw; mechanically held in both directions.
 - 3. Contacts: Silver composition or silver alloy for load-current switching. Conventional automatic transfer-switch units, rated 225 A and higher, must have separate arcing contacts.
- G. Neutral Switching. Where four-pole switches are indicated, provide overlapping neutral contacts.
- H. Neutral Terminal: Solid and fully rated, unless otherwise indicated.
- I. Oversize Neutral: Ampacity and switch rating of neutral path through units indicated for oversize neutral must be double the nominal rating of circuit in which switch is installed.
- J. Enclosures: General-purpose NEMA 250, Type 3R, complying with NEMA ICS 6 and UL 508, unless otherwise indicated.

2.3 SOURCE QUALITY CONTROL

- A. Factory test and inspect components, assembled switches, and associated equipment. Ensure proper operation. Check transfer time and voltage, frequency, and time-delay settings for compliance with specified requirements. Perform dielectric strength test complying with NEMA ICS 1.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Provide each fastener and support to carry unit load.
- B. Floor-Mounting Switch: Anchor to floor by bolting.
 - 1. Concrete Bases: 4 inches high, reinforced, with chamfered edges. Extend base no more than 4 inches in all directions beyond the maximum dimensions of switch, unless otherwise indicated or unless required for seismic support. Construct concrete bases according to Section 26 05 29 "Hangers and Supports for Electrical Systems."
- C. Identify components according to Section 26 05 53 "Identification for Electrical Work."

- D. Set field-adjustable intervals and delays, relays, and engine exerciser clock.

3.3 CONNECTIONS

- A. Ground equipment according to Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- B. Connect wiring according to Section 26 05 19 "Low-Voltage Electrical Power Conductors and Cables."

3.4 FIELD QUALITY CONTROL

- A. Perform tests and inspections and prepare test reports.
 - 1. **Manufacturer's Field Service:** Engage a factory-authorized service representative to inspect components, assemblies, and equipment installation, including connections, and to assist in testing.
 - 2. After installing equipment and after electrical circuitry has been energized, test for compliance with requirements.
 - 3. Perform each visual and mechanical inspection and electrical test stated in NETA Acceptance Testing Specification. Certify compliance with test parameters.
 - 4. Measure insulation resistance phase-to-phase and phase-to-ground with insulation-resistance tester. Use test voltages and procedure recommended by manufacturer. Comply with manufacturer's specified minimum resistance.
 - a. Check for electrical continuity of circuits and for short circuits.
 - b. Inspect for physical damage, proper installation and connection, and integrity of barriers, covers, and safety features.
 - c. Verify that manual transfer warnings are properly placed.
 - d. Perform manual transfer operation.
 - 5. After energizing circuits, demonstrate interlocking sequence and operational function for each switch at least three times.
 - a. Simulate power failures of normal source to automatic transfer switches and of emergency source with normal source available.
 - b. Simulate loss of phase-to-ground voltage for each phase of normal source.
 - c. Verify time-delay settings.
 - d. Verify pickup and dropout voltages by data readout or inspection of control settings.
 - e. Perform contact-resistance test across main contacts and correct values exceeding 500 microhms and values for 1 pole deviating by more than 50 percent from other poles.
 - f. Verify proper sequence and correct timing of automatic engine starting, transfer time delay, retransfer time delay on restoration of normal power, and engine cool-down and shutdown.

6. Ground-Fault Tests: Coordinate with testing of ground-fault protective devices for power delivery from both sources.
 - a. Verify grounding connections and locations and ratings of sensors.
- B. Coordinate tests with tests of generator and run them concurrently.
- C. Report results of tests and inspections in writing. Record adjustable relay settings and measured insulation and contact resistances and time delays. Attach a label or tag to each tested component indicating satisfactory completion of tests.
- D. Remove and replace malfunctioning units and retest as specified above.
- E. Infrared Scanning: After Substantial Completion, but not more than 60 days after Final Acceptance, perform an infrared scan of each switch. Remove all access panels so joints and connections are accessible to portable scanner.
 1. Follow-up Infrared Scanning: Perform an additional follow-up infrared scan of each switch 11 months after date of Substantial Completion.
 2. Instrument: Use an infrared scanning device designed to measure temperature or to detect significant deviations from normal values. Provide calibration record for device.
 3. Record of Infrared Scanning: Prepare a certified report that identifies switches checked and that describes scanning results. Include notation of deficiencies detected, remedial action taken, and observations after remedial action.

3.5 DEMONSTRATION

- A. Engage a factory-authorized service representative to instruct City of New York's staff to adjust, operate, and maintain transfer switches and related equipment as specified below.
- B. Coordinate this instruction with that for generator equipment.

END OF SECTION 26 36 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 26 50 00

LIGHTING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL REQUIREMENTS

- A. Work of this section shall be governed by the Contract Documents. Provide materials, labor, equipment, and services necessary to furnish, deliver, and install all work of this section as shown on the drawings, as specified herein, and/or as required by job conditions.
- B. The work shall include but not be limited to the following:
1. Complete shop fabrication
 2. Delivery to job site
 3. Installation at designated locations, and controls as noted
 4. Lamping and lamps
 5. Lamp focusing
 6. Cleaning and protection

1.3 DESCRIPTION OF WORK

- A. Furnish and install a lighting fixture of the type indicated by letter at each location shown on the drawings.
- B. All materials, accessories, and any other equipment necessary for the complete and proper installation of all lighting fixtures included in this Section shall be furnished by the Contractor.
- C. Conformance: Fixtures shall be manufactured in strict accordance with the Contract Drawings and Specifications.
- D. U.L. Listing: All fixtures shall be manufactured in strict accordance with the appropriate and current requirements of the Underwriters' Laboratories, Inc. "Standards for Safety," and others as they may be applicable. A UL listing shall be provided for each fixture type, and the

appropriate label or labels shall be affixed to each fixture in a position concealing it from normal view.

1.4 REFERENCE STANDARDS

- A. ANSI/NFPA 70 – National Electrical Code
- B. 2014 New York City Electrical Code
- C. 2014 New York City Building Code (and Reference Standards)
- D. Underwriters Laboratory (UL)
- E. National Electrical Manufacturers Association (NEMA)
- F. Uniform Building Code, 1988 Edition for Seismic Design Requirements
 - 1. Lighting fixtures: Section 47.1813 requires fixtures weighting less than 56 pounds to have two (2) number 12 hangers from the housing to the structure above; more than 56 pounds requires "approved" hanger pendant fixtures to be hung directly from the structure above.
- G. Aluminum Association (AA)
- H. American Iron and Steel Institute (AISI)

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Shop Drawings shall clearly indicate the contract drawing number of fixture details used as reference in the development of the shop drawings, and the names of the job, and Commissioner.
- C. The Contractor shall coordinate all the lighting fixture drawings with the drawings and details of the Architectural, Structural, Electrical, Mechanical, and other related trades to assure a perfect and efficient installation.
- D. No variation from the general arrangement and details indicated on the drawing shall be made on the shop drawings unless required to suit the actual conditions on the premises, and then only with the written approval of the Commissioner.
- E. Catalogue cuts lacking sufficient detail to indicate compliance with contract documents will not be acceptable.
- F. Timely submission: Shop drawings for all lighting fixtures shall be received no later than sixty days after award of Contract.
- G. Review of shop drawings or samples does not waive contract requirements.

- H. Photometric Data: Where indicated on the fixture schedule and contract drawings, supply complete photometric data for the fixture including optical performance rendered by independent testing laboratory, developed according to methods of U.S.A. Illuminating Engineering Society. For down and semi-down lights used for general illumination:
 - 1. Coefficients of utilization.
 - 2. Visual Comfort Probability data (fluorescent only for 100 foot-candles), rooms with reflectances of 80 percent (ceiling), 50 percent (walls), and 20 percent (floor), including a (20 ft. by 20 ft.) room with 10 ft. ceiling and luminaires lengthwise.
 - 3. Candlepower data, presented graphically and numerically, in 5 degree increments (5 degree, 10 degree, 15 degree, etc.). Data developed for up and down quadrants normal, parallel, and at 22-1/2°, 45°, 167-1/2° to lamps if light output is asymmetric.
 - 4. Zonal lumens stated numerically in 10 degree increments (5 degree, 15 degree, etc.) as above.
- I. For area and roadway luminaires isocandela charts, coefficients of utilization, and IES roadway distribution classification.
- J. Supply photometric data for any fixture offered in substitution for a specified fixture.

1.6 SHOP DRAWINGS

- A. Submit shop drawings to the Commissioner for review in accordance with the requirements of the Contract Documents.
- B. Shop drawings shall include details and cuts of each fixture type scheduled herein, and shall include for each type the following information.
 - 1. Type, lamping, size, material exterior and exterior, ballast type (where applicable), lenses, baffles, finishes, and means and methods of attachment.
 - 2. Include photometric data for each fixture.
 - 3. Submit thermal test data for ballasts regarding the tripping class P units based on the specified criteria.
- C. Submit reflected ceiling plans, sections and details so as to locate and define each fixture type and its location.
- D. Clearly indicate work to be provided by other trade subcontractors and coordinate accordingly.
- E. Indicate wiring and control circuits.
- F. To accommodate the seismic requirements, indicate supplementary spring type supports from the buildings structure for all fixtures 2 foot square in area and above.

1.7 SAMPLES

- A. After shop drawing approval, and prior to release for manufacturing, the Contractor shall furnish one sample of each fixture on the fixture schedule and contract drawings.
- B. Shipping: The samples shall be complete with specified lamp(s) ready for handing, energizing, and examining, and shall be shipped, to the Commissioner, or as otherwise advised.
- C. Sufficient time shall be allowed for thorough examination of the samples by the Commissioner.
- D. Samples are not returnable, nor included in quantities listed for a project.
- E. Samples must be actual working unit of materials to be supplied.

1.8 DELIVERY, STORAGE AND HANDLING

- A. Deliver materials to the site ready for use in the manufacturer's original and unopened containers and packaging, bearing labels as to type of material, brand new, and manufacturer's name. Delivered material shall be identical to the reviewed submittals.
- B. Store materials under cover in a dry and clean location, off the ground. Remove materials which are damaged, or otherwise not suitable for installation from the job site and replace with acceptable materials.
- C. The fixtures shall be delivered to the job site fully fabricated and assembled and ready for installation. Lamps shall be shipped separately.
- D. For luminaires incorporating Alzak cones or reflector/cones for protection pending completion of the installation: these components shall be supplied bulk packed in cartons separate from the luminaires. Unit packaging of cones or reflector/cones with luminaires is not acceptable.

1.9 WARRANTY

- A. Installation checkout: Upon completion of initial system installation and fixture cleaning, the Contractor shall notify the Commissioner that the system has been completed. At this time, the Contractor shall verify that the installation has been done in full accordance with the Contract Documents and is in full and complete working order.
- B. The Manufacturer shall warranty all lighting fixtures and major components, except lamps, for a period of two (2) years after Substantial Completion of the project. The guarantee shall be in acceptable form and shall be signed and notarized by a person or persons authorized to execute such a document on behalf of the company.
- C. Ballast shall carry three-year warranty.

1.10 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 20 00 "Quality Requirements".

PART 2 PRODUCTS

2.1 LUMINAIRES

A. Type A1

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 2' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide Available Manufacturers: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-2FT-LTG1- 3000K-120-SM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 16.5 watts LED, color temperature to be 3000K, 2815 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

B. Type A2

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt

4. Nominal Dimensions: Nominal fixture dimensions 4' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide Available Manufacturers: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-4FT-LTG1- 3000K-120-SM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 33 watts LED, color temperature to be 3000K, 2815 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

C. Type A2-EM

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver and integral battery pack. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 4' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide Available Manufacturers: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-4FT-LTG1- 3000K-120-SM-EM or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting

- c. Or approved equal.
6. Lamps: 33 watts LED, color temperature to be 3000K, 2815 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

D. Type A3

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 8' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide Available Manufacturers: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-8FT-LTG1- 3000K-120-SM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 66 watts LED, color temperature to be 3000K, 5630 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

E. Type A4

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 12' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide Available Manufacturers: Subject to compliance with requirements, provide Coronet LS2 Series - LS2-LED-12FT-LTG1-3000K-120-SM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 99 watts LED, color temperature to be 3000K, 8445 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

F. Type A4-EM

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver and battery pack. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt

4. Nominal Dimensions: Nominal fixture dimensions 12' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide Available Manufacturers: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-12FT-LTG1- 3000K-120-SM-EM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 99 watts LED, color temperature to be 3000K, 8445 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

G. Type A5-EM

1. Fixture: Surface mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver and battery pack. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 6' length x 2-1/2" width x 2-11/16" depth. Basis-of-Design Product: Subject to compliance with requirements provide
5. Basis-of-Design Product: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-12FT-LTG1- 3000K-120-SM-EM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting

c. Or approved equal.

6. Lamps: 99 watts LED, color temperature to be 3000K, 8445 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

H. Type B2-EM

1. Fixture: Aircraft cable mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver and integral battery pack. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 4' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-4FT-LTG1-3000K-120-AC-EM, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 33 watts LED, color temperature to be 3000K, 2815 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.

9. Listing and Labeling: Fixture must be UL listed.

I. Type B3

1. Fixture: Aircraft cable mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 8' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-8FT-LTG1-3000K-120-AC, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 66 watts LED, color temperature to be 3000K, 5630 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

J. Type B3-EM

1. Fixture: Aircraft cable mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver and battery pack. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.

3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 8' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-8FT-LTG1-3000K-120-AC-EM or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 66 watts LED, color temperature to be 3000K, 5630 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

K. Type B4

1. Fixture: Aircraft cable mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 12' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-12FT-LTG1-3000K-120-AC, or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting

c. Or approved equal.

6. Lamps: 99 watts LED, color temperature to be 3000K, 8445 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

L. Type B4-EM

1. Fixture: Aircraft cable mounted direct distribution LED luminaire.
2. Construction: Powder-coated white extruded aluminum housing with snap-in frosted lens. Integral LED driver and battery pack. The aircraft suspension kit shall have a white 1/16" cable mounting with a cable gripper for adjustment. The canopy cover plate shall be white powder-coated, aluminum and round (Ø 5") to cover the junction box.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 12' length x 2-1/2" width x 2-11/16" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Coronet LS2 Series – LS2-LED-12FT-LTG1-3000K-120-AC-EM or comparable product by one of the following:
 - a. Zumtobel
 - b. Cooper Lighting
 - c. Or approved equal.
6. Lamps: 99 watts LED, color temperature to be 3000K, 8445 lumens.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.

9. Listing and Labeling: Fixture must be UL listed.

M. Type C1

1. Fixture: Ceiling recessed circular LED wet location luminaire.
2. Construction: Fully diffuse clear reflector, white flange.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 4” diam aperture, housing 13” length x 11” width x 7-3/8” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Edison Price Lighting – SHW-FTD3-4DL-L11-120-30K-ECOL-WF or comparable product by one of the following:
 - a. Erco
 - b. Kurt Versen
 - c. Or approved equal.
6. Lamps: 13 watts LED, color temperature to be 3000K, 1100 lumens, CRI 80, min. 50,000 hours rated life.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for wet locations.

N. Type C2

1. Fixture: Ceiling recessed circular LED luminaire.
2. Construction: Fully diffuse clear reflector, white flange.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 5” diam aperture, housing 14-1/2” length x 10” width x 7” depth.

5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Edison Price Lighting – AP-CLW-5-L30-30K-120-ECOL-WF or comparable product by one of the following:
 - a. Erco
 - b. Kurt Versen
 - c. Or approved equal.
6. Lamps: 40 watts LED, color temperature to be 3000K, 3000 lumens, CRI 90, min. 50,000 hours rated life.
7. Driver: Integral LED driver.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

O. Type D1

1. Fixture: Surface mounted circular LED luminaire, suitable for wet locations.
2. Construction: Powder-coated dark grey aluminum housing with opal diffuser. Integral LED driver.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 11.5” diam x 4.75” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Starus – C-GL40-3000K or comparable product by one of the following:
 - a. Philips
 - b. Metalux
 - c. Or approved equal.
6. Lamps: 40 watts LED, color temperature to be 3000K, 3320 lumens, CRI 75 min., min. 50,000 hours rated life.
7. Driver: Integral LED driver.

8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for wet locations.

P. Type F1

1. Fixture: Recessed undercabinet circular LED luminaire.
2. Construction: Die-cast aluminum fixture, stamped steel housing for surface mount. Glass beam spread lens.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 1-1/2” diam aperture, housing 2-1/4” diam x 7/8” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide WAC lighting - HR-LED87-30-BK or comparable product by one of the following:
 - a. Erco
 - b. Kurt Versen
 - c. Or approved equal.
6. Lamps: 4.8watts LED, color temperature to be 3000K, 180 lumens, CRI 85, 70,000 hours rated life.
7. Driver: Integral LED driver, dimmable. Dimming driver specifications to be verified with electrical trade.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

Q. Type H1

1. Fixture: Wall recessed square LED exterior location luminaire.

2. Construction: Die-cast marine grade aluminum housing with integral wiring compartment, shielded safety glass, reflector made of pure anodized aluminum. Silver (SLV) polyester powder coat to be 3mil thickness.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 9-7/8” width x 9-7/8” height x 5-3/8” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Bega – 22254 -SLV or comparable product by one of the following:
 - a. Erco
 - b. Kurt Versen
 - c. Or approved equal.
6. Lamps: 30 watts LED, color temperature to be 3000K, 460 lumens, CRI 85, min. 50,000 hours rated life.
7. Driver: Integral LED driver.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for exterior/wet locations.

R. Type J1

1. Fixture: Drive-over in-grade LED exterior location adjustable floodlight luminaire for installation with high pressure loads.
2. Construction: High tensile cast strength stainless steel. Heavy gauge trim ring. Tempered ½” thick clear safety glass. Weather tight operation achieved through use of molded high temperature silicone gasket. Flush top surface. Machined #4 stainless steel finish.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 13” diam. x 10” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Bega – 77852 or comparable product by one of the following:

- a. Erco
- b. Kurt Versen
- c. Or approved equal.

6. Lamps: 29 watts LED, color temperature to be 3000K, 1348 lumens, CRI 80, min. 50,000 hours rated life.
7. Driver: Integral LED driver.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for exterior/wet locations.

S. Type K1

1. Fixture: Wall mounted LED luminaire with cutoff optics.
2. Construction: One-piece die-cast aluminum designed for attachment to wall over a standard 3-1/2” or 4” octagonal junction box. Die castings are marine grade, copper free (\leq 0.3% copper content) A360.0 aluminum alloy. Tempered, matte glass diffuser. One-piece, die-cast aluminum, louvered face plate. Reflector made of pure anodized aluminum. Fully gasketed for weather tight operation using silicone gasket. Standard finishes are polyester powder coat with minimum 3 mil thickness.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 16” length x 5” width x 3” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Bega – 22175-BLK or comparable product by one of the following:
 - a. Erco
 - b. Kurt Versen
 - c. Or approved equal.
6. Lamps: 6 watts LED, color temperature to be 3000K, 536 lumens, CRI 85, 50000 hours rated life.

7. Driver: Integral LED driver.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for exterior/wet locations.
10. Emergency Inverter: One inverter for a combination of three K1 and K2 fixtures, verify and confirm location of wiring connection prior to procurement: Surelite INV125SI or approved equal. Verify with electrical specifications.

T. Type K2

1. Fixture: Wall mounted LED luminaire with cutoff optics.
2. Construction: One-piece die-cast aluminum designed for attachment to wall over a standard 3-1/2" or 4" octagonal junction box. Die castings are marine grade, copper free (\leq 0.3% copper content) A360.0 aluminum alloy. Tempered, matte glass diffuser. One-piece, die-cast aluminum, louvered face plate. Reflector made of pure anodized aluminum. Fully gasketed for weather tight operation using silicone gasket. Standard finishes are polyester powder coat with minimum 3 mil thickness.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 16" length x 5" width x 3" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Bega – 22175-SLV or comparable product by one of the following:
 - a. Erco
 - b. Kurt Versen
 - c. Or approved equal.
6. Lamps: 6 watts LED, color temperature to be 3000K, 536 lumens, CRI 85, 50000 hours rated life.
7. Driver: Integral LED driver.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for exterior/wet locations.

10. Emergency Inverter: One inverter for a combination of three K1 and K2 fixtures, verify and confirm location of wiring connection: Subject to compliance with requirements, provide Surelite INV125SI, or a comparable product from:
 - a. Cooper Lighting
 - b. AtLite
 - c. Or approved equal.

U. Type L1-EM

1. Fixture: Ceiling mounted emergency luminaire.
2. Construction: High-impact, mar-resistant, injection-molded thermoplastic covering, two directional PAR18 incandescent gimbal-Type lighting heads, with maintenance-free lead calcium battery. AC line-latching, brown circuit and low battery voltage circuit.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 12-1/4" length x 5" width x 2-1/2" depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Atlite PC1-10-BLK or comparable product by one of the following:
 - a. McPhilben
 - b. Lithonia
 - c. Or approved equal.
6. Lamps: PAR18 incandescent.
7. Charger: Solid-state charger with emergency output short circuit protection.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for wet locations.

V. Type M1

1. Fixture: Wall surface mounted jelly jar LED luminaire, suitable for wet locations.

2. Construction: Cast-aluminum housing with corrosion resistant paint in industrial grey finish. Sealed gaskets to protect against moisture and dust.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 4-1/2” diam x 10-5/8” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Lithonia Lighting – OLVTWM or comparable product by one of the following:
 - a. Starus
 - b. Philips
 - c. Metalux
 - d. Or approved equal.
6. Lamps: 15 watts LED, color temperature to be 4000K, 600 lumens, CRI 74 min., 39 lumen per Watt, min. 50,000 hours rated life.
7. Driver: Integral LED driver.
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed for wet locations. Tested in accordance with IESNA LM-79 and LM-80 standards. 4Kv surge protection standard.

W. Type N1

1. Fixture: Suspension mounted circular high bay LED luminaire, suitable for wet locations.
2. Construction: Diecast aluminum housing and heatsink. White polyester powder coat finish painted after fabrication. With wire guard accessory. Mounted with 1/2” threaded hub and accessory hook as required.
3. Voltage: 120 Volt
4. Nominal Dimensions: Nominal fixture dimensions 14” diam x 8.65” depth.
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Metalux – UHB-24-UNV-L840-CD-U + UHB-ALR14or comparable product by one of the following:

- a. Philips
 - b. Starus
 - c. Or approved equal.
-
6. Lamps: 197 watts LED, color temperature to be 4000K, 24000 lumens, CRI 80 min., min. 60,000 hours rated life.
 7. Driver: Integral LED driver.
 8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
 9. Listing and Labeling: Fixture must be UL listed for wet locations, IP65 rated. Tested in accordance with IESNA LM-79 and LM-80 standards.

X. Type P1

1. Exterior LED indirect pole light fixture & 25'-0" pole
2. Fixture Pole Top Luminaire shall include remote electronic driver located at fixture, Die cast aluminum housing, corrosion resistant polyester, meets 1000-hour salt water spray certified, 450watts, photocell, surge protection, with 2-3/8" tenon with minimum 4.72 tenon length. Pole shall be 25' long minimum 6" diameter round straight marine grade extruded aluminum tubing, with 2-3/8" round tenon luminaire mounting as per above, pole access handhole shall be 6' above grade with internal fixture branch wiring supports. Round cast aluminum anchor base and steel anchor bolts, provide proper foundation see drawings for details. Provide internal (1) GFCI receptacle for security camera at 18' AFF and (1) convenience GFCI receptacle at 6'-6" AFF integral to pole with in-use covers. Provide mounting bracket for security camera.
3. White LEDs Color temperature 4000K, CRI80+

Y. Type ELV-4

1. Fixture – Wall mounted utility luminaire.
2. Construction: Cast-aluminum housing with corrosion resistant paint in an industrial grey finish, and a gasket seal to protect against moisture and dust.
3. Voltage: 120 volt
4. Nominal Dimensions: Nominal fixture dimensions 4-1/2" diam x 7-7/16" depth x 11-5/16" height.

5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Lithonia OLVTWM or comparable product by one of the following:
 - a. McPhilben
 - b. Lithonia
 - c. Or approved equal.
6. Lamps: 15 watts LED, color temperature to be 4000K, 50000 hours rated life.
7. Ballast: N/A
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

Z. Type EX-1

1. Fixture – Optical Operation: Commissioner-approved, wall mounted one-sided exit sign.
2. Construction: Die-cast aluminum housing and face plate. Stencil to be aluminum finish, with 8" red letters for Commissioner's approval. Battery and electronics to be contained within the housing for multi-mount function.
3. Voltage: 120 volt
4. Nominal Dimensions: Nominal height of the housing is 11", nominal width is 16¼", and nominal depth is 2¼". Total height with mounting kit is 12", and a total depth of 4½".
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Atlite XLA2-8-D-R-1 or comparable product by one of the following:
 - a. McPhilben
 - b. Lithonia
 - c. Or approved equal.
6. Lamps: LED illumination strip.
7. Ballast: N/A

8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

AA. Type EX-2

1. Fixture – Optical Operation: Commissioner-approved, ceiling mounted one-sided exit sign.
2. Construction: Die-cast aluminum housing and face plate, with a black, low-profile mounting canopy kit. Stencil to be aluminum finish, with 8" red letters for Commissioner's approval. Battery and electronics to be contained within the housing for multi-mount function.
3. Voltage: 120 volt
4. Nominal Dimensions: Nominal height of the housing is 11", nominal width is 16¼", and nominal depth is 2¼". Total height with mounting kit is 12", and a total depth of 4½".
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Atlite XLA2-8-D-R-1C-DCB or comparable product by one of the following:
 - a. McPhilben
 - b. Lithonia
 - c. Or approved equal.
6. Lamps: LED illumination strip.
7. Ballast: N/A
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

BB. Type EX-3

1. Fixture – Optical Operation: Commissioner approved, ceiling mounted double-sided exit sign.

2. Construction: Die-cast aluminum housing and face plate, with a black, low-profile mounting canopy kit. Stencil to be aluminum finish, with 8" red letters for Commissioner's approval. Battery and electronics to be contained within the housing for multi-mount function.
3. Voltage: 120 volt
4. Nominal Dimensions: Nominal height of the housing is 11", nominal width is 16¼", and nominal depth is 2¼". Total height with mounting kit is 12", and a total depth of 4½".
5. Basis-of-Design Product: Subject to compliance with requirements provide: Subject to compliance with requirements, provide Atlite XLA2-8-D-R-2C-DCB or comparable product by one of the following:
 - a. McPhilben
 - b. Lithonia
 - c. Or approved equal.
6. Lamps: LED illumination strip.
7. Ballast: N/A
8. Samples: Samples may be required for submitted fixtures prior to approval. Contractor is responsible for providing any requested samples.
9. Listing and Labeling: Fixture must be UL listed.

2.2 FIXTURE CONSTRUCTION (GENERAL)

- A. All materials, accessories, and other related fixture parts shall be new and free from defects which in any manner may impair their character, appearance, strength, durability and function, and be effectively protected from any damage or injury from the time of fabrication to the time of delivery and until final acceptance of the work.
- B. Enclosures: Fabricate fixture enclosures with a minimum of #20 gauge (0.0359 inch) thick cold rolled sheet steel. Enclosures may be constructed of other metals, provided they are equivalent in mechanical strength and acceptable for the purpose. Fabricate lighting fixtures to be finished in vitreous porcelain enamel from a minimum of #20 gauge enameling steel.
- C. Sheet Metal Work: All sheet metal work shall be free from tool marks and dents and shall have accurate angles bent as sharp as compatible with the gauges of the required metal. All intersections and joints shall be formed true of adequate strength and structural rigidity to prevent any distortion after assembly.

- D. Housings shall be so constructed that all electrical components are easily accessible and replaceable without removing fixtures from their mountings, or disassembly of adjacent construction.
- E. Castings: All castings shall be exact replicas of the approved patterns and shall be free of sand pits, blemishes, scales and rust, and shall be smoothly finished. Tolerance shall be provided for any shrinkage of the metal castings in order that the finished castings will accurately fit in their designated locations.
- F. All lamp sockets in lighting fixtures shall be suitable for the indicated lamps and shall be set so that lamps are positioned in optically correct relation to all lighting fixture components. If adjustable socket positions are provided, socket should be preset in factory for lamp specified. If different socket positions are specified for same fixture, sockets shall be preset for each Type, and cartons marked accordingly.
- G. All fixtures shall be completely wired at the factory.
- H. Mounting Frames and Rings: If ceiling system requires, each recessed and semi-recessed fixture shall be furnished with a mounting frame or ring compatible with the ceiling in which they are to be installed. The frames and rings shall be one piece or constructed with electrically-welded butt joints, and of sufficient size and strength to sustain the weight of the fixture.
- I. Light leaks between ceiling trims of recessed lighting equipment and the ceilings will not be tolerated. If fixture is used in partially transparent ceiling, light leaks above the ceiling line will not be tolerated.
- J. Yokes, brackets and supplementary supporting members needed to mount lighting fixtures to carrier channels or other suitable ceiling members shall be furnished and installed by the Contractor.
- K. Outdoor Fixtures: Fixtures for use outdoors or in areas designated as damp locations shall be suitably gasketed to prevent the entrance of moisture. Provide approved wire mesh screens for ventilations openings.
- L. Hardware: For steel and aluminum fixtures, all screws, bolts, nuts and other fastenings and latching hardware shall be cadmium or equivalent plated. For stainless steel fixtures, all hardware shall be stainless steel. For bronze fixtures, all hardware shall be stainless steel or bronze.
- M. Temperature: All fixtures and ballasts must operate within the temperature limits of their design and as specified by Underwriters' Laboratories, Inc. in the applications and mounting conditions herein specified.
- N. Adjustable Angle Fixtures: Each lighting fixture which has a beam angle adjustment shall have reliable angle locking devices.

- O. Oval Beam Fixtures: Each lighting fixture which has a lamp with an oval shape beam pattern shall contain lamp orientation locking devices to ensure that beam orientation is not distributed during future lamp replacement or cleaning.

2.3 REFLECTORS & TRIMS

- A. Installation: Reflectors, reflector cones and visible trim of all lighting fixtures shall not be installed until completion of plastering, ceiling tile work, painting and general clean-up. They shall be carefully handled to avoid scratching or finger-printing and shall be, at the time of acceptance by the City of New York, completely clean.
- B. All Alzak parabolic cones shall be guaranteed against discoloration for a minimum of ten years, and, in the event of premature discoloration, shall be replaced by the Manufacturer, including materials and the cost of labor. Reflectors for fluorescent fixtures using triphosphor lamp technology shall not produce a visible "rainbow" of light.
- C. Aluminum reflectors shall be finished specular, semi-specular, or diffuse as required and shall meet or exceed Alzak specifications. Minimum requirements of reflector finishes for interior and exterior service shall be as follows:

Minimum weight of coating per description of service.	Minimum reflectance percent square inch.	Specular	Diffuse
Normal interior commercial service	5.0	83.0	75.0
General interior industrial and exterior work reflector protected by glass covering.	7.5	82.0	73.0
Exterior industrial and commercial reflector not protected.	10.0	78.0	75.0
Exterior marine service reflector not protected.	13.0	78.0	65.0

2.4 LENSES

- A. Plastic for lenses and diffusers shall be formed of colorless 100% virgin acrylic. The quality of the raw material must exceed IES, SPI, and NEMA Specifications by at least 100% which, as a minimum standard, shall not exceed a yellowness factor of 3 after 2,000 hours of exposure in the Fade-meter or as tested by an independent test laboratory. Acrylic plastic lenses and diffusers shall be properly cast, molded or extruded as specified, and shall remain free of any

dimensional instability, discoloration, embrittlement, or loss of light transmittance for at least 15 years.

- B. Glass used for lenses, refractors, and diffusers in incandescent lighting fixtures shall be tempered for high impact and heat resistance. The glass shall be crystal clear in quality with a transmittance of not less than 88%. For exterior fixtures use tempered Borosilicate glass tempered Corning #7740 or as acceptable. For fixtures directly exposed to the elements and aimed above the horizontal with a radiant energy of 4.16 watts per square inch or greater, use Vycor glass.
- C. Where optical lenses are used, they shall be free from spherical and chromatic aberrations and other imperfections which may hinder the functional performance of the lenses.
- D. Mechanical: All lenses, louvers, or other light diffusing elements shall be removable, but positively held so that hinging or other normal motion will not cause them to drop out.
- E. Cleaning: All lenses shall be turned over to the City of New York clean and free of dust.

2.5 LAMP HOLDERS

- A. Incandescent: Body: porcelain; Screw Shall: nickel-plated brass, prelubricated with silicone compound.
- B. Fluorescent: Body: white urea plastic; Contacts: silver-plated phosphor bronze.

2.6 FINISHES

- A. Painted Surfaces: Synthetic enamel, with acrylic, alkyd, epoxy, polyester, or polyurethane base, light stabilized, baked on at 350° Fahrenheit minimum, catalytically or photochemically polymerized after application.
- B. White finishes: minimum of 85 percent reflectance.
- C. Ceiling opening frames shall either be manufactured of non-ferrous metal, or be suitably rustproofed after fabrication.
- D. Selection: Unless otherwise noted, finishes shall be as selected by the Commissioner.
- E. Undercoat: Except for stainless steel give ferrous metal surfaces a five stage phosphate treatment or other acceptable base bonding treatment before final painting and after fabrication.
- F. Unpainted non-reflecting surfaces shall be satin finished and coated with a baked-on clear lacquer to preserve the surface. Where aluminum surfaces are treated with an anodic process, the clear lacquer coating may be omitted.
- G. Unpainted Aluminum Surfaces: Finish interior aluminum trims with an anodized coating of not less than 7 mg. per square inch, of a color and surface finish as selected by the Commissioner.

Finish exterior aluminum and aluminum trims with an anodized coating of not less than 35 mg. per square inch, of a color and surface finish as selected by the Commissioner.

- H. Porcelain Enamel Surfaces: Apply porcelain finishes smoothly. Finish shall be not less than 7.5 mils thick of non-yellowing, white, vitreous porcelain enamel with a reflectance of not less than 85%.

2.7 LAMPS

- A. Manufacturer: Lamps shall be manufactured by General Electric, Philips, or Osram/Sylvania. Unless otherwise noted, all lamps of a given fixture designation and lamp type shall be supplied by the same manufacturer.
- B. Provide lamps for all lighting fixtures (furnished as part of the electric work).
- C. Incandescent and tungsten halogen lamps shall not be operated, other than for initial testing, prior to final inspection, lighting control programming and/or turnover of finished space to the City of New York. If incandescent or tungsten halogen lamps are operated by the contractor during construction, all lamps must be replaced by the contractor prior to the turnover to the City of New York.
- D. Compact fluorescent, linear fluorescent, metal halide and LED lamps shall not be operated, during construction for a period of more than four (4) months prior to turn over of the finished space to the City of New York. If lamps are operated longer than four (4) months prior to turnover to the City of New York, all lamps must be replaced by the contractor.

2.8 FLUORESCENT LIGHTING FIXTURES

- A. General Construction and Materials: Housing end plates, socket bridges, reflectors, wiring channels and ballast covers shall be die formed of not less than #20 gauge (0.0359 inch thick) cold rolled steel unless specified otherwise.
- B. Lampholders shall be heavy white with definite locking-in feature and silver-plated contacts for proper lamp operation and life. Outdoor lampholders shall be neoprene gasketed and compression type. Sockets with open-circuit voltage over 300 volts: safety type and designed to open supply circuit on lamp removal.
- C. Mount lamps on rapid-start circuits within one inch of grounded metal, minimum one inch wide, as long as lamp.
- D. Construct fixtures so that ballast may be serviced or replaced without removal of fixture housing.

2.9 FLUORESCENT BALLASTS

- A. Standard Magnetic: Where called for in the Lighting Fixture Schedule, provide two lamp and/or single lamp standard magnetic ballasts in any one fluorescent fixture. Fluorescent lighting fixture

magnetic ballasts (except single reactor type) shall be equipped with an internal, automatic resetting thermal protector adjacent to the coils, and on-time non-resetting thermal device to protect the capacitor. Ballasts shall be acceptable and listed by Underwriters' Laboratories Inc., as Class "P". Ballasts must have the manufacturer's best sound rating, and the sound rating indicated on the ballast. Ballasts shall be high power factor type, and shall be designed and constructed to maintain a case temperature not greater than 90°C when operated at a room ambient of 50°C when tested in accordance with UL and CBM standards. Ballasts shall be designated for single frequency operation 60 Hz. Nominal, and shall operate at the nominal voltages indicated on label, 120 volt and/or 277 volt as required.

- B. Electronic: Where called for in the Lighting Fixture Schedule, provide electronic ballasts for fluorescent light fixtures. Contractor is responsible for coordination of ballast compatibility with specified lamps. Electronic ballasts shall be acceptable and listed by Underwriters' Laboratories Inc., and Class "P" thermally protected. Ballasts shall have a power factor greater than 0.90, ballast factor equal to 0.93, total harmonic distortion less than 10%, and lamp current crest factor less than or equal to 1.6. Ballasts shall have a minimum starting temperature of 10° Celsius. Ballasts shall be free of Polychlorinated biphenyls (PCB's). Ballasts shall be designated for frequency of operation greater than 25 KHz nominal, and shall operate at the nominal voltages indicated on label, 120 volt and/or 277 volt as required.
1. It shall be possible to operate ballasts for different length lamps on a single circuit.
 2. It shall be possible to operate multiple lamp ballasts on a single circuit with no perceptible difference in lamp light output.
 3. Fixture and ballast combination shall be inaudible in a 27 db room ambient.
 4. Ballast shall comply with all applicable state and federal efficiency standards.
 5. Ballasts shall comply with FCC and NEMA limits governing electromagnetic and radio frequency interference and shall not interfere with operation of other normal electrical equipment.
 6. Ballasts shall meet all applicable ANSI and IEEE standards regarding harmonic distortion and surge protection.
 7. Ballasts shall not be affected by lamp failure and shall yield normal lamp life.
 8. Ballasts shall operate at an input frequency of 60 Hz and an input voltage of 108 to 132 (120V models) or 249 to 305 (277V models).
 9. Ballasts that operate as a parallel circuit shall allow remaining lamp(s) to maintain full output if companion lamp(s) fail.

2.10 INCANDESCENT AND HALOGEN LIGHTING FIXTURES

- A. General Construction and Materials: Incandescent lighting fixtures shall be listed and labeled by Underwriters' Laboratories, Inc., for installation in fireproof or non-fireproof construction, damp or wet locations, as required.
- B. Aluminum reflectors shall be Alzak (finish as selected) or as authorized, and not less than 0.057 inch thick unless specified otherwise.
- C. Lampholders shall be UL listed, and be heavy duty type constructed of high grade porcelain. Provide medium base sockets for lamps to and including 250 watts and mogul based sockets from 300 watts up to 1500 watts (rated for 1500 watts, 600 volt service) unless specified otherwise.
- D. Tungsten Halogen: Incandescent lighting fixtures utilizing tungsten halogen sources shall be designed and constructed so that lamp seal temperatures do not exceed 350°C at an ambient of 25°C when tested in accordance with UL Standard #57 and shall maintain an operating bulb wall temperature of approximately 600°C and not less than 250°C.
- E. Lead wires for fixtures utilizing tungsten halogen sources shall be rated for not less than 200°C operation but shall be rated for 250°C if temperature warrants.
- F. Temperature on reflectors shall not exceed 205°C at any point.
- G. Junction Boxes: All fixtures supplied for recessing in suspended ceiling shall be supplied with prewired junction boxes.

PART 3 EXECUTION

3.1 INSTALLATION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements

3.2 INSTALLATION

- A. Installation: Do not scale electrical drawings for exact location of the lighting fixtures. In general, the architectural reflected ceiling plans indicate the proper locations of lighting fixtures.
- B. Appurtenances: Install each fixture properly and safely. Furnish and erect hangers, rods, mounting brackets, supports, frames, and other equipment requirement.
- C. Coordination: Furnish lighting fixtures complete with appurtenances required for the proper, safe and distortion-free installation in the various surfaces in which they appear. Determine surface types from the Architectural drawings.
- D. Instructions: Each lighting fixture shall be packaged with complete instructions and illustrations showing how to install. Install lighting fixtures in strict conformance with manufacturer's recommendations and instructions.

- E. Rigidly align continuous rows of lighting fixtures for true in-line appearance.
- F. Pendant Fixtures: Install pendant lighting fixtures plumb and at a height from the floor as specified on the drawings. In cases where conditions make this impractical, refer to the Commissioner for a decision. Use ball aligners and canopies on pendant fixtures unless noted otherwise.
- G. Do not install fixtures and/or parts such as finishing plates and trims for recessed fixtures until all plastering and painting that may mar fixtures' finish has been completed.
- H. Mechanical Rooms: Lighting fixture locations in mechanical and electrical equipment rooms are approximate. Coordinate mounting height and location of lighting fixtures to clear mechanical, electrical and plumbing equipment and to illuminate adequately meters, gauges and equipment.
- I. Support all lighting fixtures independently of duct work or piping.
- J. Concealment: Whenever a fixture or its hanger canopy is applied to a surface mounted outlet box, a finishing ring shall be utilized to conceal the outlet box.
- K. Splices in internal wiring shall be made with approved insulated "wire nut" type mechanical connectors, suitable for the temperature and voltage conditions to which they are subjected.
- L. All wire utilized for connections to or between individual lamp sockets and lamp auxiliaries (i.e., wires which do not constitute "through circuit" wiring) shall be suitable for temperature, current, and voltage conditions to which it is subjected.
- M. Install reflector cones, baffles, aperture plates, light controlling element for air handling fixtures, and decorative elements after completion of ceiling tiles, painting and general cleanup.
- N. Replace blemished damaged or unsatisfactory fixtures as directed.

3.3 AIMING AND ADJUSTMENT

- A. All adjustable lighting units shall be aimed, focused, locked, etc., by the Contractor under the supervision of the Commissioner. The Commissioner shall indicate the number of crews (foreman and apprentice) required. All aiming and adjusting shall be carried out after the entire installation is complete. All ladders, scaffolds, etc. required shall be furnished by the Contractor at the direction of the Commissioner. As aiming and adjusting is completed, locking set-screws and bolts and nuts shall be tightened securely.
- B. Night Work: Where possible, unit shall be focused during the normal working day. However, where daylight interferes with seeing, aiming shall be accomplished at night.

3.4 CLEANUP

- A. At the time of final acceptance by the City of New York, all lighting fixtures shall have been thoroughly cleaned with materials and methods recommended by the manufacturers, all broken

parts shall have been recommended by the manufacturers, all broken parts shall have been replaced, and all lamps shall be operative.

3.5 MAINTENANCE MANUALS

- A. The Contractor shall be responsible for obtaining from the supplying lighting manufacturers, for each type of lighting fixture, a recommended maintenance manual including:
 - 1. Tools required.
 - 2. Types of cleaners to be used.
 - 3. Replacement parts identification lists.
 - 4. Final, as-built shop drawings.
- B. Six (6) bound copies of this material shall be forwarded to the City of New York.

END OF SECTION 26 50 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 27 10 00 - STRUCTURED CABLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Quality Assurance.
 - 2. Project Record Documents.
 - 3. Pathways.
 - 4. Cable Trays..
 - 5. Telephone Terminal Backboards.
 - 6. 110-Style Wiring Blocks
 - 7. Copper Patch Panels, Category 6A.
 - 8. Fiber Optic Systems
 - 9. Category 6A/Fiber/Coax Cabling.
 - 10. Work Station Outlets.
 - 11. Uninterruptible Power Supply.
 - 12. Examination.
 - 13. Installation.
 - 14. Instruction Manuals.
 - 15. Guarantee.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. All work must be done by a qualified Category 6A Installer authorized by cabling solution manufacturer. Any defects or malfunctions in the system resulting from improper installation must be corrected at no additional cost to the City of New York. Questions must be directed to the Commissioner.

1.5 PROJECT RECORD DOCUMENTS

- A. Accurately record location of service entrance conduit and termination backboards and cabinets.
- B. Label each cable at both ends.

1.6 WARRANTY

- A. Provide a manufacturer’s 25-year end-to-end warranty on the structured cabling system.
- B. Warranty period is to commence from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PATHWAYS

- A. General Requirements: Comply with TIA/EIA-569-C:
 - 1. Cable Support: NRTL labeled for support of Category 6A cabling, designed to prevent degradation of cable performance and pinch points that could damage cable.
 - 2. Support brackets with cable tie slots for fastening cable ties to brackets.
 - 3. Lacing bars, spools, J-hooks, and D-rings.
 - 4. Straps and other devices.

2.2 CABLE TRAYS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide cable trays by CPI Chatsworth Products Inc. or comparable product by one of the following:
 - 1. Cablofil by Legrand North America, LLC.
 - 2. Panduit Corp.
 - 3. Or approved equal.

- B. Used in the Main cross connect (MC), equipment rooms (ER), horizontal cross connect (HC) and related distributors to support the incoming Horizontal Cabling and other cables within the rooms
- C. Provide and install all straight sections, vertical and horizontal, 90° bends. T- and cross sections, and all accessories as shown on the Contract Documents. Additionally, provide and install all necessary hardware to allow a seamless transition between the outside and the inside of the MDF and IDFs:
 - 1. Aluminum construction
 - 2. Color: Black
 - 3. Width: 24" as shown in the Contract Documents. Rung Spacing: 9"
- D. Provide and install 12" threaded rod covers for each piece of threaded rod that supports the tray and racks.
- E. Provide and install 6" cable retaining post for the cable tray:
 - 1. Height 6"
 - 2. Color: Black
 - 3. Use a 2' intervals
- F. Conduit and Boxes: Comply with requirements in Division 26 Section "Raceways and Boxes for Electrical Systems."
 - 1. Outlet boxes must be Double gang standard electrical back box.

2.3 TELEPHONE TERMINAL BACKBOARDS

- A. The following equipment is required in the Telephone Room and each Telephone Closet:
 - 1. Two (2) Plywood panels, 3/4" x 4' x 6' fire rated affixed to 2" x 4" studs spaced 2' on center.

2.4 110-STYLE WIRING BLOCKS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide 110-style wiring blocks by Leviton or comparable product by one of the following:
 - 1. Ortronics
 - 2. Belden
 - 3. Or approved equal

- B. Note that all cabling must be from a single-source solution with no mixing of manufacturers.
- C. Category 6 110 blocks complete with C4 clips are to be used for all Cat 6 voice backbone cable terminations. All pairs must be terminated and tested for Category 6 compliance.
- D. Category 6A 110 blocks complete with C4 clips are to be used for all Cat 6A voice horizontal cable terminations. All pairs must be terminated and tested for Category 6A compliance.
- E. Horizontal 110 cross connect wire managers are to be installed above and below 110 blocks.

2.5 COPPER PATCH PANELS, CATEGORY 6A

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Copper Patch Panels by Leviton or comparable product by one of the following:
 - 1. Ortronics
 - 2. Belden
 - 3. Or approved equal
- B. Note that all cabling must be from a single-source solution with no mixing of manufacturers.
- C. Copper patch panels must be used for termination of all Category 6A horizontal cable run.
 - 1. Number of Cat 6A Patch Panels is determined by station count, plus 25%
- D. Racks and Cable Channels for patch panels must be open type, floor mounted 23.75" wide x 84" high, constructed of sturdy lightweight aluminum.
- E. Provide 3' Blue Data Patch Cords for data closet connection, quantity to match the number of data ports required. (Deliver Patch Cords to the Commissioner upon acceptance of installation.)

2.6 FIBER OPTIC SYSTEMS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide fiber optic system by Leviton or comparable product by one of the following:
 - 1. Ortronics
 - 2. Belden

3. Or approved equal
- B. Note that all cabling must be from a single-source solution with no mixing of manufacturers.
- C. Optical Patch Panel must be 19" rack mountable suitable for supporting termination of OM3 fiber optic cables and LC duplex connectors.
 1. Fiber strands must terminate with LC pre polished OM3 connectors.
 2. Include one, 12 strand multimode LC adapter plate for each 12 strand cable termination, Aqua color for Laser optimized channels.
- D. Provide duplex 1 meter LC-LC OM3 fiber optic patch cords for backbone data connections. Quantity to match the number of data ports required.

2.7 CATEGORY 6A/FIBER/COAX CABLING

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Category 6A/Fiber/Coax cabling by Leviton or comparable product by one of the following:
 1. Ortronics
 2. Belden
 3. Or approved equal
- B. Note that all cabling must be from a single-source solution with no mixing of manufacturers.
- C. Provide, (1) 4 pair (8 conductor), 23 AWG, Category 6A, unshielded twisted copper pair 100 Ohm, (GREEN) plenum rated, station wire runs for voice application, from telephone room/closets to station locations designated on floor plans.
- D. Provide, (1) 4 pair (8 conductor), 23 AWG, Category 6A, unshielded twisted copper pair 100 Ohm, (VIOLET) plenum rated, station wire runs for data, from telephone room/closets to station locations designated on floor plans.
- E. The color of the station wire run jackets should be different for each application i.e., "VIOLET" cable for Data, "GREEN" cables for Voice.
- F. Riser cables for voice are to be Category 6 compliant, Unshielded sized to provide for 25% spare pairs.
- G. Coax, RG6 Quad shield plenum rated (only to specific locations as indicated in drawings) Run will consist of work station to telephone room/closet. No riser is needed. No patch panel is required.

- H. Riser cable for data is to be fiber optic, Laser Optimized OM3 12 strand 50micron multimode, plenum rated, armored premise style (type OFCP).

2.8 WORK STATION OUTLETS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide work station outlets by Leviton or comparable product by one of the following:
 - 1. Ortronics
 - 2. Belden
 - 3. Or approved equal
- B. Note that all cabling must be from a single-source solution with no mixing of manufacturers.
- C. Category 6A, 8 conductor, 8 position, RJ-45 will be used for both data and voice station jacks for locations designated on floor. Upper jack position will be used on duplex wallplate/faceplate for voice. Provide two data jacks and one voice jack per workstation location.
 - 1. Provide 15' Blue Data Patch Cords for data station connection, quantity to match the number of data receptacles in the facility. (Deliver Patch Cords to the Commissioner upon acceptance of installation.)
 - 2. Provide 15' Green Voice Patch Cords for voice station connection, quantity to match the number of data receptacles in the facility. (Deliver Patch Cords to the Commissioner Unit upon acceptance of installation.)
- D. Station Wire Runs:
 - 1. Category 6A data lines will be terminated on, patch panels in the telephone room/closet.
 - 2. Voice lines will terminate on 110 blocks located on the wall in the telephone room/closet.
 - 3. Fiber lines will terminate on patch panels in the telephone room/closet.
 - 4. Coax lines will terminate in the telephone room/closet with 20' (feet) of spare cable provided.
- E. All jacks are to be addressed (voice and data, separately) using the manufacturers faceplate window. Address nomenclature will be as directed by The Commissioner during shop drawing submission.

2.9 UNINTERRUPTIBLE POWER SUPPLY

- A. Basis-of-Design Product: Subject to compliance with requirements, provide uninterruptible power supplies by APC or comparable product by one of the following:
 - 1. Eaton
 - 2. Tripplite
 - 3. Or approved equal
- B. Provide one UPS in the Telephone Room.
- C. Provide one extended-run battery pack in the Telephone Room.

PART 3 - EXECUTION

3.1 EXECUTION REQUIRMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Verify that surfaces are ready to receive work.
- B. Verify that field measurements are as shown on Drawings.
- C. Beginning of installation means installer accepts existing conditions.

3.3 INSTALLATION

- A. Provide labor and material to conform with accepted TIA/EIA category 6/6A specifications and telephone installation practices to wire and terminate station wire runs to appropriate station cross-connect blocks, patch panels and modular voice/data station jacks.
- B. This will include the installation of plywood backboards, wire spools, D-rings, tie wraps and cross connect wire as required.
- C. All station cross connect blocks, patch panels, station wire runs and modular voice/data station jacks must be appropriately marked, tagged and designated in the telephone room and at station locations.
- D. All station wire runs (all pairs) to be tested for continuity, polarity and category 6/6A compliance from the telephone room to each telephone closet and from each closet to each work station location.

3.4 INSTRUCTION MANUALS

- A. The Contractor must compile and provide five (5) copies complete manuals on the finished system to include: operating and maintenance instructions, manufacturer's catalog pages of all equipment and components, all as-built wiring and conduit diagrams (both floor plan and riser types) and a manufacturer's suggested spare parts list for to be distributed as directed by the Commissioner.

3.5 INSTRUCTION

- A. In addition to the above manuals, the Contractor must provide the services of a trained manufacturer's representative for a period of four (4) hours, during normal business hours, to instruct designated personnel on the operation and maintenance of the entire system.

END OF SECTION 27 10 00

SECTION 28 00 00 - ELECTRONIC SAFETY AND SECURITY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL CONDITIONS

- A. The work to be done under this section of the Specifications must include the furnishing of labor, material, equipment, and tools required for the complete installation of the work indicated on the Drawings, as specified herein, or as noted in other sections of Division 28 – Electronic Safety and Security.
- B. All materials, obviously a part of the electronic security infrastructure and necessary to its proper operation, but not specifically mentioned or shown on the Drawings, must be furnished and installed without additional charge.
- C. The Drawings and Specifications are complementary to each other and what is called for by one must be as binding as if called for by both. If a discrepancy exists between the Drawings and Specifications, the higher cost and/or higher level of functionality must be included to meet the design intent.
- D. The Work must include installation and commissioning of the following:
 - 1. Integrated Security Management system consisting of:
 - a. Video Surveillance System
 - b. Intercom System
 - 2. Wire and cable to install all equipment as specified herein
 - 3. Miscellaneous conduit and back boxes (not shown on the Documents as provided, but required for a complete installation).

1.3 RELATED SECTIONS

- A. 28 00 00 Electronic Safety and Security
- B. 28 05 00 Common Work Results for Electronic Safety and Security

- C. 28 14 00 Access Control System Hardware
- D. 28 20 00 Video Surveillance
- E. 28 21 00 Surveillance Cameras

1.4 REFERENCES

- A. All work must be in accordance with, but not limited to, the following:
 - 1. The National Electrical Code
 - 2. American National Standards Institute (ANSI)
 - 3. National Electrical Manufacturers Association (NEMA)
 - 4. Telecommunications Industries Association (TIA)
 - 5. Electronic Industries Association (EIA)
 - 6. Institute of Electrical & Electronics Consultants (IEEE)
 - 7. Underwriters Laboratories (UL)
 - 8. American Standards Association (ASA)
 - 9. Federal Communications Commission (FCC)
 - 10. Occupational Safety and Health Administration (OSHA)
 - 11. American Society of Testing Material (ASTM)
 - 12. Americans with Disabilities Act (ADA)
- B. In the event of conflicts, the more stringent provisions must apply.

1.5 DEFINITIONS

- A. Regardless of their usage in codes or other industry standards, certain words or phrases as used in the Documents for the Work, must be understood to have the specific meanings as ascribed to them in the following list:
 - 1. “Circuit” – Any specific run of circuitry
 - 2. “Circuitry” – Any Work which consists of wires, cables, raceways, and/or specialty wiring method assemblies complete with associated junction boxes, pull boxes, outlet boxes, joints, couplings, splices, and connections except where limited to a lesser meaning by specific description.

3. “Concealed” (as applied to circuitry) – Covered completely by building materials, except for penetrations (by boxes and fittings) to a level flush with the surface as necessitated by functional or specified accessibility requirements.
4. “Exposed” (as applied to circuitry) – Not covered in any way by building materials.
5. “Patch Panel” – A system of terminal blocks, patch cords, and backboards that facilitate administration of cross-connecting cables.
6. “Raceway” – Any pipe, duct, extended enclosure, or conduit (as specified for a particular system) which is used to contain wires and which is of such nature as to require that the wires be installed by a pulling in procedure. Where the word “conduit” is used without specific reference to type, it must be understood to mean “raceway”.
7. “Relocate existing” – Remove existing item from present location. Reinstall, reconnect, and test existing item and make ready for use at new location as indicated.
8. “Remove existing” – Remove existing item and return item to City of New York.
9. “Replace” – Remove existing item and return item to City of New York. Provide new item as indicated.
10. “Riser” – Must refer to the portion of the installation that transmits between building floors or between security system rooms; also referred to as “Backbone Cabling”.
11. “Security Closet” – The enclosed area or room specifically designated for the routing, termination, and/or cross connecting of security system cable to other security system cable and/or equipment.
12. “Security system Wiring” – see “Circuitry”.
13. “Security system Work” – See “Work”.
14. “Standard” (as applied to wiring devices) – Not of a separately designated individual type.
15. “Wiring” – See “Circuitry”.

1.6 GUARANTEE SERVICE

- A. Provide a one year guarantee for the Work. The guarantee must cover all Work, systems, and subsystems against defects in materials and workmanship. The Work as specified herein, including all materials and labor, but excepting any existing devices and equipment which are incorporated in the completed Work, must be warranted to be free from defects in design, workmanship, and materials. Further, the Installer must warrant that the completed systems, including all components (except those, which are existing or provided by other trades), are of sufficient size and capacity to fulfill the requirements of the Specifications.

- B. The guarantee must be valid for a period of one year following the date of substantial completion.
- C. Guarantee Service:
 - 1. In the event that defects in the materials and/or workmanship are identified during the guarantee period, the Installer must provide all labor and materials as may be required for prompt correction of the defect.
 - 2. During the guarantee period, the Installer must, upon receipt of a request for service from the Commissioner, deploy service personnel to the City of New York's premises within four hours to initiate corrective action.
 - 3. All guarantee service and restoration work must be performed by personnel, who have been instructed, certified and is experienced in the operation and service of the installed system(s).
 - 4. Unless otherwise requested by the Commissioner, guarantee service must be performed during normal business hours, exclusive of Holidays.
 - 5. Guarantee service must include the replacement of all parts and/or components as required to restore normal system operation. In the event that system parts or components must be removed for correction, it must be the responsibility of the Installer to furnish and install temporary parts and/or components as required to restore normal system operation until the corrected parts or components can be corrected and re-installed.
 - 6. It must be the responsibility of the Installer to maintain an inventory of spare parts or to arrange for manufacturer parts support as required ensuring correction of all critical component failures or malfunctions within 48 hours of the Commissioner's request for service. Critical parts must be defined as those, which govern or affect the normal operation of more than one field device.
 - 7. The Installer's guarantee obligation must include correction of any software/firmware defects, which may be identified during the guarantee period. Any failure of the software/firmware to perform as specified by the software/firmware manufacturer at the time of final acceptance must be defined as a software/firmware error.
 - 8. Immediately following the completion of a guarantee restore or service call, the Installer's service personnel must submit a written report to the City of New York which details the service work performed, the cause of the trouble, and any outstanding work which is required to restore complete and normal operation.
- D. The Installer must perform preventative service during the guarantee period as part of the guarantee service. The Installer must submit a list of items to be included in the preventative service program and the service to be performed.

- E. Include a manufacturer’s software service agreement as part of the Guarantee. This agreement must include all software updates, revisions, telephone service assistance, and instruction for any changes in operation.
- F. Provide written notice to the City of New York documenting any Work performed during the guarantee period, including any preventative service Work performed.
- G. Provide loaner equipment that is fully compatible with the SMS for any equipment not field correctable.
- H. Loaner equipment for components that must be shipped to/from the manufacturer or distributor must be on site and operational within 48 hours of the component failure. Furnish lists of equipment that will require shipment from the manufacturer or distributor and lead times associated with that equipment.
- I. Restore or Replacement Service:
 - 1. Restore or replacement service during the guarantee period must be performed in accordance with the following schedule:
 - a. Schedule A: 7 days, 24 hours per day with a four (4) hour response time
 - b. Schedule B: Normal business hours, excluding holidays, with a four (4) hour response time.
 - 2. Schedule A must apply for major system components including, but not limited to, the file servers, system workstations, control panels, intercom exchange and master stations, and any other components that would create security vulnerabilities if non-functional.
 - 3. Schedule B must apply for all other components and devices.
- J. Failure to Perform Service:
 - 1. Schedule A Components: The Installer must provide 14 days of additional total system guarantee (at no additional cost to the City of New York) for every two (2) consecutive days of system or device failure.
 - 2. Schedule B Components: The Installer must provide seven (7) days of additional total system guarantee (at no additional cost to the City of New York) for every two (2) consecutive days of system or device failure.
- K. Provide on-line software service and support during the guarantee period including all software and hardware.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.8 SUBMITTALS

- A. Submit for approval, details of all materials, equipment, and systems to be furnished. Work must not proceed without approval of the submitted items.
- B. General Description and Requirements:
1. Submit pre-fabrication submittals in accordance with the construction schedule.
 2. Pre-fabrication submittals must consist of product data, Shop Drawings, samples, and a detailed completion schedule. Partial submittals will not be accepted without prior written approval.
 3. No portion of the Work must commence nor must any equipment be procured until approval of the pre-fabrication submittals has been given in writing.
 4. A letter of transmittal identifying the name of the Project, Installer’s name, and date submitted for review must accompany pre-fabrication submittals along with a list of items transmitted.
- C. Product data required as part of the pre-fabrication submittal must include the following:
1. Equipment schedules listing all system components, manufacturer, model number and the quantity of each
 2. General functional descriptions for each system
 3. Manufacturer’s data specification sheets for all system components, including any guarantee information (sheets containing more than one device or component model number must be clearly marked to delineate items included in the Work)
 4. A complete list of cable and wiring types, sizes, manufacturer, and model number
 5. A complete list of finishes and sample graphics, including custom art work and custom graphics (if applicable)
 6. List of parts inventory to provide manufacturer recommended service and service of the Work.
- D. Shop Drawings must include the following:
1. Floor plan drawings indicating device locations with device legends
 2. System riser diagram with all devices, wire runs, and wire designations

3. Schematic block diagrams for each system showing all equipment, interconnects, data flow, etc.
 4. Wiring diagrams for each subsystem defining the interconnection of all inputs and outputs for all equipment
 5. Wiring diagram for fail-safe release of electric locking mechanical
 6. Fabrication Shop Drawings for all custom equipment (if applicable)
 7. Plans and elevations of the security console(s) and equipment racks quantifying all equipment to be mounted therein
 8. Elevations of security closet layouts showing panel locations, power supply locations, conduit, wire ways, wire molds, and all other equipment
 9. Submit samples of any equipment components upon request.
 10. Samples submitted must be the latest version of equipment.
 11. It is the responsibility of the Installer to confirm all dimensions, quantities, and the coordination of materials and products supplied by the Installer with other trades. Approval of Shop Drawings containing errors does not relieve the Installer from making corrections at their expense.
 12. Submittals for individual systems and equipment assemblies that consist of more than one item or component must be made for the system or assembly as a whole. Partial submittals will not be considered, reviewed, or stored and such submittals will not be approved.
 13. Shop Drawings must include equipment racks, patch panels, termination blocks, connection details, rack mounting details, and any other details not included in the Construction Drawings.
- E. Any materials and equipment listed that are not in accordance with Specifications requirements may be rejected.
- F. The approval of material, equipment, systems, and Shop Drawings is a general approval subject to the Drawings, Specifications, and verification of all measurements at the job. Approval does not relieve the responsibility of shop drawing errors. Carefully check and correct all Shop Drawings prior to submission for approval.

PART 2 PRODUCTS

2.1 MATERIALS

- A. All materials used in this work must be new and must bear the inspection label of Underwriters Laboratories Inc. or certification by other recognized laboratory as required.

- B. The published standards and requirements of the Telecommunications Industries Association (TIA), National Electrical Manufacturers Association (NEMA), the American National Standard Institute (ANSI), the Institute of Electrical and Electronic Consultants (IEEE), and the American Society of Testing Materials (ASTM), are made a part of these Specifications and must apply wherever applicable.
- C. Materials and equipment furnished must be of current production by manufacturers regularly engaged in the manufacture of such items, for which replacement parts are available.
- D. When more than one unit of the same class of equipment or material is required, such units must be the products of a single manufacturer or partner manufacturers that offer a certified solution.
- E. Components of an assembled unit need not be products of the same manufacturer, but must offer a certified end-to-end solution.
- F. Manufacturers of equipment assemblies, which include components made by others, must assume complete responsibility for the final assembled unit.
- G. Components must be compatible with each other and with the total assembly for the intended service.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 LANGUAGE USAGE

- A. English language must be used throughout the security system, signage, labels, voice messages, instructions, manuals, software, and graphic displays.

3.3 EXAMINATION OF CONDITIONS

- A. Prior to the start of work, carefully inspect the installed work of other trades and verify that such work is complete to the point where installation may properly commence. Start of work indicates acceptance of conditions.
- B. Install equipment in accordance with applicable codes and regulations, the original design intent, and the referenced standards.
- C. In the event of a discrepancy, immediately provide notification notify the Commissioner.
- D. Do not proceed with installation until unsatisfactory conditions and discrepancies have been fully resolved.

3.4 PROTECTION OF SYSTEMS AND EQUIPMENT

- A. Protect materials and equipment from damage during storage at the site and throughout the construction period. Equipment and materials must be protected during shipment and storage against physical damage, dirt, theft, moisture, extreme temperature, and rain.
- B. Damage from rain, dirt, sun, and ground water must be prevented by storing the equipment on elevated supports and covering the sides with securely fastened protective rigid or flexible waterproof coverings.
- C. During installation, equipment must be protected against entry of foreign matter on the inside and be cleaned both inside and outside before testing, operating, or painting.
- D. As determined by the Commissioner, damaged equipment must be fully corrected or must be removed and replaced with new equipment to fully comply with requirements of the contract documents. The decision of the Commissioner must be final.
- E. Damaged paint on equipment and materials must be repainted with painting equipment and finished with the same quality of paint and workmanship as used by the manufacturer.

3.5 ACCESS TO EQUIPMENT

- A. Equipment must be installed in location and manner that will allow convenient access for service and inspection.
- B. Working spaces must be not less than specified in the National Electrical Code (NEC) for voltages specified.
- C. Where the Commissioner determines that the installed equipment is not conveniently accessible for operation and service, equipment must be removed and reinstalled, one time only, as directed by the Commissioner, at no additional cost. “Conveniently accessible” is defined as being capable of being reached without the use of ladders or without climbing or crawling under or over obstacles such as motors, pumps, belt guards, transformers, piping, and duct work, except where required by design or intent.

3.6 INSTALLATION

- A. The Installer must carefully follow the instructions in the manufacturers’ Installation Manual to ensure all steps have been taken to provide a reliable, easy to operate system.
- B. The Administrator Terminal must be connected to the remote terminals before connecting to any card reader processors.
- C. Perform all Work as indicated in the Drawings and Specifications.
- D. The Installer must install the appropriate cable from the CPU to readers, door contacts, request-to-exit devices, and electric locks at each door and/or gate.
- E. All communications cables must be kept away from power circuits.

- F. The Installer must install the power supply(s) for electric locks in locations where they won't interfere with other operations.
- G. The Installer must also execute adequate testing of the system to ensure proper operation.
- H. The Installer must provide adequate instruction of the system users to ensure adequate understanding to prevent operating errors.

3.7 WORKMANSHIP

- A. Comply with highest industry standards, except when specified requirements indicate more rigid standards or more precise workmanship.
- B. Perform Work with persons experienced and qualified to produce workmanship specified.
- C. Maintain quality control over suppliers and Subcontractors.
- D. Quality of workmanship is considered important. Commissioner will have the authority to reject Work which does not conform to the Drawings and Specifications.

3.8 EQUIPMENT PRE-TEST

- A. All equipment must be bench tested as per manufacturer's instructions prior to delivery to job site and prior to installation.

3.9 WIRE AND CABLE

- A. Design, layout, size, and plan new wire and cable runs as required.
- B. All wire and cable from the processors to all devices at each door must be "home-run" unless otherwise specified.
- C. All wire and cable, including any wire and cable that is existing and will be reused in the Work, must be installed in conduit or surface metal raceway, except as follows:
 - 1. Wire or cable, in lengths of less than ten (10) feet, that is "fished" within walls, ceilings, and doorframes.
- D. All wire and cable passing thru metalwork must be sleeved by an approved grommet or bushing.
- E. Avoid splicing conductors. All splices must be made in junction boxes (except at equipment). Splices must be made with an approved crimp connection. Wire nuts must not be used on any low-voltage wiring. Where necessary, provide heat-shrink to insulate all wire splices and connections. The use of electrical tape for splices and connections must not be acceptable.

- F. Identify all wire and cable at terminations and at every junction box. Identification must be made with an approved permanent label, or equal.
- G. Furnish and install all SMS wire and cable with the exception of traveling cable for elevator control and monitoring.
- H. Coordinate the protection and routing of wire and cable requiring isolation from power, radio frequency (RF), electromagnetic interference (EMI), telephone, etc. with the Commissioner.
- I. Run all wire and cable continuous from device location to the final point of termination. No mid-run cable splices must be allowed.
- J. Wire and cable within ICs, power distribution cabinets and other security enclosures must be neatly installed, completely terminated, pulled tight with slack removed and routed in such a way as to allow direct, unimpeded access to the equipment within the enclosure. All wire and cable must be bundled and tied.
- K. Provide heat-shrink to insulate all wire splices and connections. The use of electrical tape for splices and connections must not be acceptable.
- L. Visually inspect all wire and cable for faulty insulation prior to installation.
- M. Provide grommets and sinstruct relief material where necessary to avoid abrasion of wire and excess tension on Wire and Cable.
- N. Make connections with solder-less devices, mechanically and electrically secured in accordance with the manufacturers' recommendations. Wire nuts must not be an acceptable means of connecting wire and cable.
- O. Neatly bundle and wrap all horizontally run (above accessible ceilings and not within conduit) wire and cable at three-meter intervals. Provide supports as required. All supports must be UL listed for the application.
 - 1. All System wiring within vertical riser shafts (as required) must be bundled, wrapped and tied to the structure at three-meter intervals in order to isolate it from other wire and cable within the shaft. Additionally, all wire and cable within the shaft must be supported at least every two floors. Provide all personnel and equipment necessary to install and support the cable. All equipment must be UL listed for the application.

3.10 CONDUIT AND RACEWAY INSTALLATION

- A. Design, lay-out, size and plan new conduit and raceway systems as required.
- B. Cabling must be installed in conduit under any of the following conditions:
 - 1. Where required by code
 - 2. Where cabling traverses unsecure, public space

3. Where cabling would otherwise be exposed to tampering or vandalism.
- C. No exposed conduit must be installed within public areas unless approved by Commissioner.
- D. Indoor Requirements:
1. Route exposed conduit and raceway parallel and perpendicular to walls and adjacent piping.
 2. Group conduit in parallel runs where practical and use conduit rack constructed of steel channel with conduit straps or clamps.
 3. Use conduit bodies to make sharp changes in direction, as around beams. Fasten conduits and raceways to structural steel using approved spring clips or clamps.
 4. Where conduit penetrates fire-rated walls and floors, seal opening with UL listed fire rated sealer.
 5. No exposed conduit, raceway, or junction box must be installed within any office area.
 6. Install all boxes straight and plumb.
 7. Do not support conduit from mechanical, plumbing, or fire sprinkler systems.
 8. Drill or core drill all holes in walls, ceilings, or floors where required for new conduits. Do not cause damage to any structural steel or other structural support member by drilling or cutting.
 9. Do not use flexible conduit in lengths longer than six (6) feet.
- E. Outdoor Requirements:
1. In locations where conduit penetrates exterior walls, seal opening around conduit in an approved manner to make watertight.
 2. Use galvanized straps and fasteners on all exterior conduit.
 3. All exterior boxes will only be used to aid in pulling the cable between points.

3.11 PENETRATIONS

- A. Do not penetrate any roof, flashing, exterior wall, or parapet without prior approval from the Commissioner.
- B. When penetrating a fire wall for passage of cables and/or conduit, always provide a fire-stop system.

3.12 FIRE RATED DOORS AND FRAMES

- A. Do nothing to modify a UL-rated door or frame that would void the UL-label or fire rating.

3.13 GROUNDING

- A. Provide earth-grounding of equipment as required by equipment manufacturer. Earth ground must be connected to ground rod or approved cold water pipe. Electrical or telephone ground connections must not be used as earth grounds. Connections to mounting posts or building structural steel must not be used as earth grounds.

3.14 POWER TO SECURITY EQUIPMENT

- A. Power all equipment from circuits dedicated for security use, except as noted. Mark all panel circuit breakers with labels worded “Security Equipment - Do Not Operate”, or equivalent.
- B. All plug-in transformers must be located at the security control panels. Secure all low-voltage plug-in transformers to outlet with screw or strap. Clearly label all transformers to identify purpose and use.
- C. AC power dedicated to security and on generator backup must be provided for the Security System as indicated on the Documents. Coordinate with the Commissioner to establish locations of dedicated AC circuits.
- D. Connect to the AC power and provide UL listed power supplies and transformers to distribute low voltage power to the System components as required.
- E. Provide hinged cover terminal cabinets with tamper switches for all power supplies, transformers, and power distribution terminal strips. Provide all conduit and wiring from the AC power facilities to the terminal cabinets.
- F. Surge Protection:
 - 1. Provide protection against spikes, surges, noise, and other line problems for all System equipment and components.
 - a. Protect all exterior video, control, power, signal cables, and conductors against power surges. Video surge protectors must not attenuate or reduce video and sync signals under normal conditions. Each surge protector must be UL Listed.

3.15 CUTTING AND PATCHING

- A. The Installer must be responsible for all cutting, fitting, or patching that may be required to complete the Work.

3.16 PAINTING

- A. All surface raceway systems must be painted to match the surfaces they are attached to:

3.17 PLYWOOD BACKING

- A. Install the processor(s), power supplies, and all other related equipment on a plywood backboard for testing in the shop. The mounted assembly will then be transported “as is” to the job site for mounting in the Communication Room.
- B. Fasten the plywood backing to the wall using a hanger bolt at the four corners which align with pre-drilled holes in the plywood. Secure with flat washers and a nut.

3.18 CLEANING

- A. During construction, and prior to acceptance of the building, remove from the premises and dispose of packing material and debris caused by electronic security work.
- B. Remove dust and debris from interiors and exteriors of electrical equipment. Clean accessible current carrying elements prior to being energized.

3.19 MANUFACTURER PROFESSIONAL SERVICES

- A. Installer must coordinate with the manufacturer to provide the manufacturer’s professional services team to assist in coordinating the interfaces between the security management system and other on-site systems as necessary.
- B. Professional Services personnel must be employed by the manufacturer of the security management system and must be thoroughly knowledgeable of the security management system applications.
- C. Professional Services personnel must be on-site and available to meet for a period of not less than two consecutive days.

3.20 SYSTEM START-UP

- A. The Work must be complete and ready to operate prior to final acceptance.
- B. Load the entire initial user database into all programmable systems up to the day of beneficial use of the system. Coordinate with the Commissioner to establish procedural guidelines and in defining terminology and conditions unique to the City of New York’s operation.

3.21 SYSTEM ACCEPTANCE

- A. Final acceptance testing of the Work will be conducted by the Commissioner.
- B. Prior to any final acceptance testing, the Installer must submit two (2) sets of preliminary Record Drawings to the Commissioner. The preliminary Record Drawings are to be used by the Commissioner to conduct the system final test.

- C. Conduct a complete test of the entire system and provide the Commissioner with a written report on the results of that test. During the course of this test, place the integrated system in service and calibrate and test all equipment.
- D. Fully complete a Security Systems Readiness Checklist prior to the test of the system. The checklist must accompany the written certification to the Commissioner that the installed complete system has been calibrated, tested, and is fully functional as specified herein.
- E. Following completion of the initial testing and correction of any noted deficiencies, conduct a five (5) day burn-in test. The intent of the burn-in test must be to prove the system by placing it in near real operating conditions. During this period the system must be fully functional and programmed such that all points, interfaces, controls, reports, messages, prompts, etc. can be exercised and validated. Record and correct any system anomaly, deficiency, or failure noted during this period. Scheduling of the final acceptance test must be based on a review of the results of this burn-in test.
- F. Deliver a report describing the results of functional tests, burn-in tests, diagnostics, calibrations, corrections, and corrects including written certification to the Commissioner that the installed complete system has been calibrated, tested, and are fully functional as specified herein.
- G. Prior to the final acceptance test, coordinate with the Commissioner for security related construction clean-up requirements. Security equipment closets and similar areas should be free of accumulation of waste materials or rubbish caused by operations under the Contract. At completion of the Work, remove all waste materials, rubbish, the Installer's and it's subcontractors' tools, construction equipment, machinery, and all surplus materials.
- H. Upon written notification from the Installer that the system is completely installed, integrated, and operational, and the burn-in testing completed, the Commissioner will conduct a final acceptance test of the entire system.
- I. During the final acceptance test by the Commissioner, the Installer must be responsible for demonstrating that, without exception, the completed and integrated system complies with the contract requirements. All physical and functional requirements of the project must be demonstrated and shown. This demonstration will begin by comparing "as built" conditions of the system to requirements outlined in the Specification, item by item. Following the Specification compliance review, all system head-end equipment will be evaluated.
- J. In order to sufficiently demonstrate the system's functionality, the console operator on duty and the operator superior may be requested to perform certain daily operations inherent to the system.
 - 1. As all of these operations depend heavily on the instruction outlined within the Specification, the Installer must have completed all of the required instruction prior to initiation of the final acceptance test.

- K. The functionality of all interfaces between systems will be tested.
- L. Following the system head-end equipment and console review, the installation of all field devices will be inspected. Areas examined will include general neatness and quality of installations, complete functionality of each individual device, and mounting, back box and conduit requirements compliance.
- M. All equipment must be fully operational during testing procedures. The Installer must provide all personnel, equipment, and supplies necessary to perform all site testing. A minimum of two (2) employee's familiar with the system for the final acceptance test must be present during the testing. One employee must be responsible for monitoring and verifying alarms while the other will be required to demonstrate the function of each device. Supply at least two (2) two-way radios for use during the test. A manufacturer's representative may be present on site to answer any questions that may be beyond the technical capability of the Installer's employees, if the Installer so elects or by specific request of the Commissioner at no charge to the City of New York.
- N. Upon successful completion of the final acceptance test (or subsequent punch list retest) the Commissioner will issue a letter of final acceptance.
- O. The Commissioner retains the right to suspend and/or terminate testing at any time when the system fails to perform as specified. In the event it becomes necessary to suspend the test, the Installer must work diligently to complete/correct all outstanding items to the condition specified in Documents. The Installer must supply the Commissioner with a detailed completion schedule outlining phase-by-phase completion dates and a tentative date for a subsequent punch list retest. During the final acceptance test, no adjustments, corrections or modifications to the system will be conducted without the permission of the Commissioner.

3.22 INSTRUCTION

- A. Installer must provide complete operator instruction on the security system. Hands-on instruction must include the opportunity for each person to operate the system, and to practice each operation that an operator would be expected to perform.
- B. Instruction must cover all operating features of the system for access control, video surveillance and enrolling user credentials.
- C. Provide a minimum of 16 hours of VSS System operator instruction either on or off site on a complete and fully operational System parallel and equal to the System being provided, to the City of New York staff.
- D. Operator instruction must include, but not be limited to the following:
 - 1. All system operation procedures.
 - 2. System configuration
 - 3. Manual and automatic camera call-up procedures

4. Video digital matrix functionality
 5. Recording retention days and FPS changes.
- E. Administrative instruction must include, but not be limited to the following:
1. System operation and configuration variables
 2. Manual and automatic camera call-up procedures
 3. Video matrix set up, configuration variables, and functionality

SECTION 28 05 00

COMMON WORK RESULTS FOR ELECTRONIC SAFETY AND SECURITY

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL REQUIREMENTS

- A. The work to be done under this section of the Specifications must include the furnishing of labor, material, equipment, and tools required for the complete installation of the work indicated on the Drawings, as specified herein, or as noted in other sections of Division 28 – Electronic Safety and Security.
- B. All materials, obviously a part of the electronic security infrastructure and necessary to its proper operation, but not specifically mentioned or shown on the Drawings, must be furnished and installed without additional charge.
- C. The Drawings and Specifications are complementary to each other and what is called for by one must be as binding as if called for by both. If a discrepancy exists between the Drawings and Specifications, the higher cost and/or higher level of functionality must be included to meet the design intent.

1.3 RELATED SECTIONS

- A. 28 00 00 Electronic Safety and Security
- B. 28 14 00 Access Control System Hardware
- C. 28 20 00 Video Surveillance
- D. 28 21 00 Surveillance Cameras

1.4 WORK INCLUDED

- A. The scope of work for this project must include systems and infrastructure for the security systems, which must include cabling, back boxes, conduit and equipment. Refer to electrical specifications for installation of the security system infrastructure (conduit & power). The Integrated Security Management System must consist of:

1. Intercom System.
2. Video Surveillance System.
3. Wire and cable to install all equipment as specified herein
4. Miscellaneous conduit and back boxes (not shown on the Documents as provided, but required for a complete installation)

PART 2 PRODUCTS

2.1 GENERAL

- A. All products not provided by the City of New York must be new and unused, and must be of manufacturers' current and standard production.
- B. Where two or more equipment items of the same kind are provided, all must be identical and provided by the same manufacturer.
- C. Drawings and Specifications indicate major system components, and may not show every component, connector, module, or accessory that may be required to support the operation specified. Contractor must provide all components needed for complete and satisfactory and intended operation.
- D. Product Availability
 1. Contractor, must determine product availability and delivery time, and must include such considerations into the proposed Contract Time.
 2. Certain products specified may only be available through factory authorized dealers and distributors. Contractor must verify ability to procure the products specified prior to submitting a proposal.
- E. Wire and Cable
 1. General: Provide all wire and cable required to install systems as indicated. Wire and cable must be sized to provide minimum voltage drop and minimum resistance to the devices being supplied.
 2. All cables must be specifically designed for their intended use (direct burial, aerial, etc.).
 3. Comply with equipment manufacturers recommendations for wire and cable size and type.
 4. Comply with all applicable codes and ordinances.

F. Conduit and Raceway Systems

1. General: The placing of surface mounted conduit on the exterior of any building must be approved by Commissioner prior to its installation.
2. Interior Conduit:
 - a. Electrical Metallic Tubing (EMT)
 - b. Flexible Metal Conduit
 - c. Provide fittings and connectors as required for installation of EMT or flexible conduit.
3. Surface Raceways: Sheet metal channel with fitted cover, suitable for use as surface metal raceway, WIREMOLD, Legrand, Connect Track, or approved equal.
 - a. Provide fittings, elbows, and connectors designed for use with raceway system.
4. Exterior Conduit: (any of the following as determined by local code requirements):
 - a. Rigid Steel Conduit
 - b. Rigid Aluminum Conduit
 - c. Rigid Nonmetallic Conduit (only if buried 18" below ground surface).
 - d. Intermediate Metal Conduit
 - e. Provide rain-tight fittings and connectors as required for installation of exterior conduit.
5. Exterior Flexible Conduit:
 - a. Liquid-tight Flexible Conduit: Flexible metal conduit with PVC jacket.
 - b. Provide rain-tight fittings and connectors as required for installation of Liquid-tight Flexible Conduit.

G. Junction and Pull Boxes

1. Interior Boxes: Sheet Metal Outlet Boxes: Sizes to be determined in accordance with code requirements for conductor fill. Provide box covers as required.
2. Exterior Boxes: All exterior boxes must NEMA 4 or NEMA 3R, water-tight and dust-tight

3. All interior and exterior boxes must have their covers fastened using security screws.

H. Lightning Protection

1. The Contractor must provide suitable lightning protection for all processors/controllers.
2. All lightning protection equipment must be UL listed.

2.2 WIRE AND CABLE

A. General Requirements:

1. Provide wire and cable as required to install the Security System as indicated on the Drawings and specified herein.
2. All wire and cable must be Underwriter's Laboratories (UL) listed, and must meet all national, state, and local code requirements for its application.
3. All wire and cable must meet individual system or subsystem manufacturer Specifications.
4. All wire and cable must be Plenum type cable and must conform to the minimum requirements of Insulated Cable Engineers Association (ICEA) Standards.
5. Wire and cable must comply with the applicable requirements of the National Electrical Code (NEC), latest edition, in regards to cable construction and usage.
6. The conductors of wires must be copper, and have conductivity in accordance with the standardization rules of the Institute of Electrical and Electronics Engineers, Inc. (IEEE). The conductor and each strand must be round and free of kinks and defects.
7. All cable carrying data or voice transmissions must be shielded. All other cable must be shielded where necessary for interference-free signals.
8. Insulation must be rated for a minimum of 300V.
9. Color-coding must be accomplished by using solidly colored insulation. Grounding conductors, where insulated, must be colored solid green or identified with green color as required by the National Electric Code (NEC).

B. Wire Types and Sizes

1. Signal Cable (Non-Power): Wire size must be a minimum of 20 AWG, twisted, shielded, stranded, insulated, and jacketed.

2. Signal Cable (Low Voltage Power): Wire size must be a minimum of 18 AWG, stranded, insulated, and jacketed.
 - a. Wire size must be a minimum of 18 AWG, twisted, stranded, insulated and jacketed and must be used for cable runs less than 500 feet.
 - b. Wire size must be a minimum of 16 AWG, twisted, stranded, insulated and jacketed and must be used for cable runs in excess of 500 feet, but less than 750 feet.
 - c. Wire size must be a minimum of 14 AWG, twisted, stranded, insulated and jacketed and must be used for cable runs in excess of 750 feet, but less than 1,250 feet.
3. Composite Access Control Cable Jacketed:
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide products by Belden or comparable product by one of the following:
 - 1- Westpenn
 - 2- Southwire
 - 3- or Approved Equal
 - b. Wire size must have the minimum of
 - c. Lock Power: 4C 18 AWG, shielded
 - d. Card Reader: 3TP 22 AWG, OAS
 - e. Door Contact: 2C 22 AWG, Shielded
 - f. Rex/Spare: 4C 22 AWG, Shielded
4. Magnetic Contact Cable:
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide products by Belden or comparable product by one of the following:
 - 1- Westpenn
 - 2- Southwire
 - 3- or Approved Equal
 - b. Wire size must have the minimum of
 - c. Door Contact: 2C 22 AWG, Shielded (Single Door MC-1)

- d. Door Contact: 4C 22 AWG, Shielded (Single Door MC-2)
- 5. Security IP Network Cabling
 - a. Must be provided by the Telecommunications trade under Division 27.
 - b. Must consist of (4) twisted pairs, 24 AWG or greater.
 - c. Must be Category 6 Augmented cabling (CAT 6A).
 - d. Refer to Div-27 Communications Specifications.
- 6. IP Network Patch Cables for Security Equipment
 - a. Provide patch cables for network connectivity within Security Equipment Rooms and where necessary in order to complete the Security System Work.
 - b. Must consist of (4) twisted pairs, 24 AWG or greater.
 - c. Must be Category 6 Augmented cabling (CAT 6A).
 - d. Refer to Div-27 Communications Specifications.
- 7. Fiber Optic Cable – Exterior Pole Cameras
 - a. Basis-of-Design Product: Subject to compliance with requirements, provide products by Belden or comparable product by one of the following:
 - 1- Westpenn
 - 2- Southwire
 - 3- or Approved Equal
 - b. Provide patch cables for network connectivity from the IT room to each Pole Mounted camera.
 - c. Must be single mode.
 - d. Must be outdoor rated.
 - e. Connectors must be compatible with FO media convertor.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Provide necessary work as detailed on Section 28 00 00.

3.3 EQUIPMENT

- A. Provide equipment as indicated on the Documents and specified herein. Additional specific installation requirements are as follows:
 - 1. Security Equipment Room and IC Locations
 - a. Configure security equipment as indicated in the Documents.
 - b. Wire all power supply power fail alarm contacts in each equipment room as a single alarm input to the SMS.
 - c. Wire each power supply low battery alarm contact as individual alarm inputs to the SMS.
 - 2. Electric Locking Mechanisms
 - a. Interface with electric locking mechanisms provided by the door hardware supplier.
 - b. Wire electric locking mechanisms as indicated on the Documents.
 - c. Wire fail-safe electric locking mechanisms in accordance with local codes.
 - d. Wire fail-secure electric locking mechanisms and power supplies such that a fire alarm condition or building power failure must not affect operation of the lock.
 - 3. Fire Alarm Interface
 - a. Connect (hard wire) fail-safe electric and time delay locking mechanical to the building fire alarm System for fail-safe release upon any fire alarm.

- b. Interface with a single low voltage/low current normally closed dry contact from the fire alarm System provided by the fire alarm contractor in the Fire Command Center. The contact must open on any fire alarm condition.
- c. Provide all additional UL listed fail-safe relays and power supplies necessary to interface to this contact and unlock all fail-safe doors.
- d. Connect fail-safe relays and power supplies to standard building power. Connection of fail-safe devices to emergency or UPS power must not be acceptable.

END OF SECTION 28 05 00

SECTION 28 08 00 COMMISSIONING OF ELECTRONIC SAFETY AND SECURITY

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This section includes commissioning process requirements for Electronic Safety and Security systems, assemblies, and equipment.
- B. Related Sections:
1. DDC General Conditions – Section 01 91 13 “General Commissioning Requirements for MEP Systems.”

1.3 DESCRIPTION

- A. Commissioning: Commissioning is a systematic process of ensuring that all building systems, including the mechanical and electrical systems, have been installed in the prescribed manner, are functionally checked and capable of being operated and maintained to perform with the design intent and have documentation to support proper installation and operation. The Commissioning Agent (CxA) shall provide the City of New York with an unbiased, objective view of the system’s installation, operation and performance. This process does not eliminate or reduce the responsibility of the Contractor to provide a finished product. Commissioning is intended to enhance the quality of each system installation, startup and transfer to beneficial use by the City of New York.
- B. Commissioning during the construction phase is intended to achieve the following specific objectives, according to the Contract Documents:
1. Verify that applicable equipment and systems are installed according to the manufacturer’s recommendations and to industry accepted minimum standards and that they receive adequate operational checkout by the Contractor.
 2. Verify and document proper performance of equipment and systems.
 3. Verify that Operation & Maintenance documentation is complete and transferred to the City of New York.
 4. Verify that the City of New York’s maintenance personnel are adequately instructed.
- C. The Commissioning process shall be a team effort and encompass, as well as coordinate, the traditionally separate functions of system documentation, system installation, equipment startup, control system calibration, testing, balancing and verification and performance checkouts.
- D. The CxA will work closely with the construction team, cooperating on and coordinating all Cx activities with the Commissioner and Contractor.
- E. The Cx process shall not reduce the responsibility of the Contractor to comply with the Contract Documents.

1.4 SUBMITTAL PROCEDURES

- A. Refer to the DDC General Conditions Section 01 33 00 “Submittal Procedures.”
- B. In addition, provide the following:
 - 1. Certificates of readiness
 - 2. Certificates of completion of installation, prestart, and startup activities.
 - 3. O&M manuals
 - 4. Test reports

1.5 QUALITY ASSURANCE

- A. Test Equipment Calibration Requirements: The Contractor will comply with test equipment manufacturer’s calibration procedures and intervals. Recalibrate test instruments immediately after instruments have been repaired resulting from being dropped or damaged. Affix calibration tags to test instruments. Furnish calibration records to CxA upon request.

1.6 COORDINATION

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to coordination during the commissioning process.

PART 2 - PRODUCTS

2.1 TEST EQUIPMENT

- A. All standard testing equipment required to perform startup, initial checkout and functional performance testing shall be provided by the Contractor for the equipment being tested. The Contractor shall provide all standard testing equipment for the electrical systems and controls systems in Division 28. The Contractor shall ensure a sufficient quantity of two-way radios are provided.
- B. Special equipment, tools and instruments (specific to a piece of equipment and only available from vendor) required for testing shall be included in the base bid price to the City of New York and left on site, except for stand-alone data logging equipment that may be used by the CxA.
- C. The Contractor shall ensure that proprietary test equipment and software required by any equipment manufacturer for programming and/or start-up, whether specified or not, shall be provided by the manufacturer of the equipment. Manufacturer shall provide the test equipment, demonstrate its use, and assist in the commissioning process as needed. Proprietary test equipment (and software) shall become the property of the City of New York upon completion of the commissioning process.
- D. Data logging equipment and software required to test equipment will be provided by the CxA, but shall not become the property of the City of New York.
- E. All testing equipment shall be of sufficient quality and accuracy to test and/or measure system performance with the tolerances specified in the Contract Documents.

PART 3 - EXECUTION

3.1 GENERAL DOCUMENTATION REQUIREMENTS

- A. With assistance from the Contractor, the CxA will prepare Pre-Functional Checklists for all commissioned components, equipment, and systems
- B. Red-lined Drawings:
 - 1. The Contractor will verify all equipment, systems, instrumentation, wiring and

components are shown correctly on red-lined drawings.

2. Preliminary red-lined drawings must be made available to the Commissioning Team for use prior to the start of Functional Performance Testing.
 3. Changes, as a result of Functional Testing, must be incorporated into the final as-built drawings, which will be created from the red-lined drawings.
 4. The Contractor will create the as-built drawings.
- C. Operation and Maintenance Data:
1. The Contractor will provide a copy of O&M literature within 45 days of each submittal acceptance for use during the commissioning process for all commissioned equipment and systems.
 2. The CxA will review the O&M literature once for conformance to project requirements.
 3. The CxA will receive a copy of the final approved O&M literature once corrections have been made by the Contractor.
- D. Demonstration and Instruction:
1. The Contractor will provide demonstration and instruction as required by the Contract Documents.
 2. A complete instruction plan and schedule must be submitted by the Contractor to the CxA four weeks (4) prior to any instruction.
 3. An instruction agenda for each instruction session must be submitted to the CxA one (1) week prior the instruction session.
 4. The CxA shall be notified at least 72 hours in advance of scheduled tests so that testing may be observed by the CxA and the Commissioner. A copy of the test record shall be provided to the CxA and the Commissioner.
 5. Engage a Factory-authorized service representative to instruct the City of New York's maintenance personnel to adjust, operate, and maintain specific equipment.
 6. Instruct the City of New York's maintenance personnel on procedures and schedules for starting and stopping, trouble shooting, servicing, and maintaining equipment.
 7. Review data in O&M Manuals.

3.2 CONTRACTOR'S RESPONSIBILITIES

- A. Perform commissioning tests as per the written procedure and at the direction of the CxA.
- B. Attend construction phase controls coordination meetings.
- C. Participate in Electronic Safety and Security systems, assemblies, equipment, and component maintenance orientation and inspection as directed by the CxA.
- D. Provide information requested by the CxA for final commissioning documentation.
- E. Include requirements for submittal data, operation and maintenance data, and instruction in each purchase order or sub-contract written.
- F. Prepare preliminary schedule for Electronic Safety and Security system orientations and inspections, operation and maintenance manual submissions, instruction sessions, equipment start-up and task completion for the City of New York. Distribute preliminary schedule to commissioning team members.

- G. Update schedule as required throughout the construction period.
- H. During the startup and initial checkout process, execute the related portions of the prefunctional checklists for all commissioned equipment.
- I. Perform all verification and functional performance tests in the presence of the CxA as required.
- J. Provide measuring instruments and logging devices to record test data and provide data acquisition equipment to record data for the complete range of testing for the required test period.
- K. Gather operation and maintenance literature on all equipment and assemble in binders as required by the specifications. Submit to CxA 45 days after submittal acceptance.
- L. Coordinate with the CxA to provide 72-hour advance notice so that the witnessing of equipment and system start-up and testing can begin.
- M. Notify the CxA a minimum of two weeks in advance for start of the testing work.
- N. Participate in, and schedule vendors and subcontractors to participate in the instruction sessions.
- O. Provide written notification to the Commissioner and CxA that the following work has been completed in accordance with the Contract Documents, and that the equipment, systems, and sub-system are operating as required.
- P. The Contractor shall ensure that the equipment suppliers shall document the performance of the equipment.
- Q. Provide a complete set of red-lined drawings to the CxA prior to the start of Functional Performance Testing.
- R. Provide instruction to the City of New York’s maintenance personnel using expert qualified personnel, as specified.
- S. Contractor shall direct equipment suppliers to:
 - 1. Provide all requested submittal data, including detailed start-up procedures and specific requirements needed to keep warranties in force.
 - 2. Assist in equipment testing.
 - 3. Provide information requested by CxA regarding equipment sequence of operation and testing procedures.
- T. Refer to the DDC General Conditions Sections “General Commissioning Requirements for MEP Systems” for additional Contractor responsibilities.

3.3 CxA'S RESPONSIBILITIES

- A. Refer to the DDC General Conditions Section 01 91 13 “General Commissioning Requirements for MEP Systems” for CxA’s responsibilities.

3.4 TESTING PREPARATION

- A. Certify in writing to the CxA that Electronic Safety and Security systems, subsystems, and equipment have been installed, calibrated, and started and are operating according to the Contract Documents.
- B. Certify in writing to the CxA that Electronic Safety and Security instrumentation and control systems have been completed and calibrated, that they are operating according to the Contract

Documents, and that pretest set points have been recorded.

- C. Certify in writing that testing procedures have been completed and that testing reports have been submitted, discrepancies corrected, and corrective work approved.
- D. Place systems, subsystems, and equipment into operating mode to be tested (e.g., normal shutdown, normal auto position, normal manual position, unoccupied cycle, emergency power, and alarm conditions).
- E. Inspect and verify the position of each device and interlock identified on checklists.
- F. Testing Instrumentation: Install measuring instruments and logging devices to record test data as directed by the CxA.

3.5 GENERAL TESTING REQUIREMENTS

- A. Provide technicians, instrumentation, and tools to perform commissioning test at the direction of the CxA.
- B. Test all operating modes, interlocks, control responses, and responses to abnormal or emergency conditions, and verify proper response of building automation system controllers and sensors.
- C. Prepare detailed testing plans, procedures, and checklists for Electronic Safety and Security systems, subsystems, and equipment with guidance from CxA.
- D. Tests will be performed using design conditions whenever possible, as determined by the Commissioner.
- E. Simulated conditions may need to be imposed using an artificial load when it is not practical to test under design conditions. Before simulating conditions, calibrate testing instruments. Provide equipment to simulate loads. Set simulated conditions and document simulated conditions and methods of simulation. After tests, return settings to normal operating conditions.
- F. The CxA may direct that set points be altered when simulating conditions is not practical.
- G. If tests cannot be completed because of a deficiency outside the scope of the Electronic Safety and Security system, document the deficiency and report it to the Commissioner. After deficiencies are resolved, reschedule tests.
- H. If the testing plan indicates specific seasonal testing, complete appropriate initial performance tests and documentation and schedule seasonal tests.

3.6 ELECTRONIC SAFETY AND SECURITY SYSTEMS, SUBSYSTEMS, AND EQUIPMENT TESTING PROCEDURES

- A. Equipment Testing and Acceptance Procedures: Testing requirements are specified in individual Division 28 sections. Provide submittals, test data, inspector record, infrared camera and certifications to the CxA.
- B. Fire Detection and Alarm System Testing: Provide technicians, instrumentation, tools and equipment to test performance of designated systems and devices at the direction of the CxA. The CxA shall determine the sequence of testing and testing procedures for each equipment item, device and panel section to be tested.
- C. The work included in the commissioning process involves a complete and thorough evaluation of the operation and performance of all components, systems and sub-systems. The scope of commissioning work shall include but not limited to the following equipment and systems:

1. Fire Alarm System
2. Fire Alarm Control Panel
3. Fire Alarm Annunciation Panel
4. Smoke Detectors
5. Heat Detectors
6. Horns
7. Strobes Smoke Detectors
8. Manual Pull Stations
9. Elevator, Elevator Smoke Detectors and Recall Sequence
10. Fifteen (15) Security Cameras
11. Door Access Locks and Release upon fire detection

3.7 OPERATION AND MAINTENANCE MANUALS

- A. The Operation and Maintenance Manuals shall conform to Contract Documents requirements.
- B. Refer to the DDC General Conditions Section 01 78 39 “Contract Record Documents” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for the Commissioner and CxA roles in the Operation and Maintenance Manual contribution, review and approval process.

3.8 INSTRUCTION OF CITY OF NEW YORK PERSONNEL

- A. Refer to the DDC General Conditions Section 01 79 00 “Demonstration and Owner’s Pre-Acceptance Orientation” and Section 01 91 13 “General Commissioning Requirements for MEP Systems” for requirements pertaining to instruction.
- B. Contractor’s instruction responsibilities pertaining to Electronic Safety and Security work:
 1. Provide the CxA with an instruction plan four weeks before the planned instruction.
 2. Provide comprehensive instruction in the understanding of the systems and the operation and maintenance of each major piece of commissioned electronic safety and security equipment or system to City of New York’s maintenance personnel.
 3. Instruction shall be recorded by the CxA and start with classroom sessions, if necessary, followed by hands on instruction on each piece of equipment, which shall illustrate the various modes of operation, including startup, shutdown, fire/smoke alarm, power failure, etc.
 4. During any demonstration, should the system fail to perform in accordance with the requirements of the O&M manual or sequence of operations, the system will be repaired or adjusted as necessary and the demonstration repeated.
 5. The appropriate trade or manufacturer's representative shall provide the instructions on each major piece of equipment. This person may be the start-up technician for the piece of equipment, the installing subcontractor or manufacturer’s representative. Practical building operating expertise as well as in-depth knowledge of all modes of operation of the specific piece of equipment is required. More than one party may be required to execute the instruction.

6. The instruction sessions shall follow the outline in the Table of Contents of the operation and maintenance manual and illustrate whenever possible the use of the O&M manuals for reference.
7. Instruction shall include:
 - a. Use the printed installation, operation and maintenance instruction material included in the O&M manuals.
 - b. Include a review of the written O&M instructions emphasizing safe and proper operating requirements, preventative maintenance, special tools needed and spare parts inventory suggestions. The instruction shall include start-up, operation in all modes possible, shut-down, seasonal changeover and any emergency procedures.
 - c. Discuss relevant health and safety issues and concerns.
 - d. Discuss warranties and guarantees.
 - e. Cover common troubleshooting problems and solutions.
 - f. Explain information included in the O&M manuals and the location of all plans and manuals in the facility.
 - g. Discuss any peculiarities of equipment installation or operation.
 - i. Hands-on instruction shall include start-up, operation in all modes possible, including manual, shut-down and any emergency procedures and preventative maintenance of all pieces of equipment.
 - ii. Fully explain and demonstrate the operation, function and overrides of any local packaged controls, not controlled by the central control system.
 - iii. Instruction shall occur after functional testing is complete, unless approved otherwise by the Commissioner.

END OF SECTION 28 08 00

This Page Intentionally Left Blank

SECTION 28 14 00 - ACCESS CONTROL SYSTEM HARDWARE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL REQUIREMENTS

- A. The work to be done under this section of the Specifications must include the furnishing of labor, material, equipment, and tools required for the complete installation of the work indicated on the Drawings, as specified herein, or as noted in other sections of Division 28 – Electronic Safety and Security.
- B. All materials, obviously, a part of the electronic security infrastructure and necessary to its proper operation, but not specifically mentioned or shown on the Drawings, must be furnished and installed without additional charge.
- C. The Drawings and Specifications are complementary to each other and what is called for by one must be as binding as if called for by both. If a discrepancy exists between the Drawings and Specifications, the higher cost and/or higher level of functionality must be included to meet the design intent.

1.3 RELATED SECTIONS

- A. 28 00 00 Electronic Safety and Security
- B. 28 05 00 Common Work Results for Electronic Safety and Security
- C. 28 20 00 Video Surveillance
- D. 28 21 00 Surveillance Cameras

1.4 WORK INCLUDED

- A. The Work must include installation and commissioning of the following:
 - 1. Security Equipment & Enclosures
 - 2. Wire and cable to install all equipment as specified herein
 - 3. Miscellaneous conduit and back boxes (not shown on the Documents as provided, but required for a complete installation).

1.5 SYSTEM DESCRIPTION

- A. The scope of work to be included in this contract does not necessarily include every item of work. The Contractor must supply and install items that meet the specified requirements of the construction documents. The Security Management System (SMS) Servers and Workstations must be furnished complete, installed, tested, and operational. The SMS is designed to secure the facility with the capability of expansion to and connection to the client network.
- B. Components:
 - 1. The Contractor must provide access control equipment as specified herein including but not limited to the following:
 - a. Power supplies
 - b. Enclosures

PART 2 PRODUCTS

2.1 ELECTRIFIED LOCKING MECHANISMS

- A. Electrified locking mechanisms must be provided by the door hardware trade in division 08 as indicated on the documents.
- B. The security system must interface with electrified locking mechanisms as indicated on the Documents.
- C. Provide fail-safe operation of electrified locking mechanisms as indicated by the door hardware trade in division 08 documents.
- D. Fail-secure locks must remain operational during a fire alarm condition or power failure.

2.2 LOCAL ALARM

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Dortronics 7281-EA or comparable product by one of the following:
 - 1. SDC EA
 - 2. Kouba Systems
 - 3. or Approved Equal
- B. Provide LA for local monitoring of the secure status of doors as indicated on the security device drawings.
- C. The horn of the LA must provide for a local audible alarm activated whenever an unauthorized user opens a monitored door.
- D. The on-board timer use will be determined by the Commissioner.

- E. The LA must be conned to the door position switch.

2.3 MAGNETIC CONTACTS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Nascom N1178C/STHS7281-EA or comparable product by one of the following:
 - 1. Sentrol
 - 2. Magnasphere
 - 3. or Approved Equal
- B. Provide magnetic door position switches to monitor the open/closed status of doors as specified herein and as indicated on the Documents.
- C. Concealed Door Position Switch:
 - 1. Minimum Specifications:
 - a. Gap: 1” (25mm)
 - b. Switch Type: SPST
 - c. Mounting: 1” (25mm) diameter hole in door and frame

2.4 ELECTRIFIED LOCKING MECHANISM POWER SUPPLY

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Altronix or comparable product by one of the following:
 - 1. Life Safety Power
 - 2. MG Electronics
 - 3. or Approved Equal
- B. Provide power supplies for all electric locking mechanisms as specified with the exception of those noted as having time-delay functions as defined by NFPA 101.
- C. Provide power supplies for all electric locking mechanisms (with the exception of fire stair doors). Fail-safe locking devices must unlock automatically under the following conditions:
 - 1. Any building fire alarm
 - 2. Loss of building power
 - 3. Failure of the power supply
- D. Provide battery chargers and batteries sufficient for four (4) hours of backup power for the connected load for all power supplies except those for fail-safe locks.

- E. Monitor low battery and power fail alarms for each power supply.
- F. Minimum Specifications:
 - 1. Type: UL Listed Class II power limited
 - 2. Input Voltage: 120VAC 60 Hz
 - 3. Output Voltage: 24 VDC
 - 4. Output Connections: Individually fused outputs to each lock
 - 5. Output Rating: 150% of actual connected load
 - 6. Battery: Sealed gel type
 - 7. Alarm Outputs: Low battery and power fail
 - 8. Enclosure: Steel enclosure with integral lock and tamper switch.

2.5 INTERCOMM

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Aiphone JP series or comparable product by one of the following:
 - 1. Commend
 - 2. Axis 2N
 - 3. or Approved Equal
- B. Provide (1) Video Master Stations / (3) Video Sub-Stations / (1) Audio Sub-Stations as indicated in the documents.
- C. Cable must be per manufacturer's recommendation.
- D. Provide power supplies per manufacturer's requirements.
- E. Device symbol designations: VI-M – Video Master Station, VI-7 – Video Sub-station, IC-6 – Audio Sub-station

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements

3.2 GENERAL

- A. Provide necessary work as detailed on Section 28 00 00.

END OF SECTION 28 14 00

SECTION 28 20 00 - VIDEO SURVEILLANCE

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL REQUIREMENTS

- A. The work to be done under this section of the Specifications must include the furnishing of labor, material, equipment, and tools required for the complete installation of the work indicated on the Drawings, as specified herein, or as noted in other sections of Division 28 – Electronic Safety and Security.
- B. All materials, obviously a part of the electronic security infrastructure and necessary to its proper operation, but not specifically mentioned or shown on the Drawings, must be furnished, and installed without additional charge.
- C. The Drawings and Specifications are complementary to each other and what is called for by one must be as binding as if called for by both. If a discrepancy exists between the Drawings and Specifications, the higher cost and/or higher level of functionality must be included to meet the design intent.

1.3 RELATED SECTIONS

- A. 28 00 00 Electronic Safety and Security
- B. 28 05 00 Common Work Results for Electronic Safety and Security
- C. 28 14 00 Access Control System Hardware
- D. 28 21 00 Surveillance Cameras

1.4 WORK INCLUDED

- A. This Section describes the facility video surveillance system, including installation of all, cameras, camera controllers, power supplies, wiring, conduit systems, and all other required appurtenances for a complete working system:
 - 1. The system as described must be installed, tested, and delivered in first class working condition. The system will include all required hardware, software, programming and wiring to accomplish the requirements of the specification and contract drawings.
 - 2. All materials furnished will be new and of the latest design available from a manufacturer who is engaged in the manufacture and sale of digital video surveillance systems. The manufacturer must have an installed base of similar systems as a reference.

3. While the contract documents identify the location and quantities of equipment for estimating purposes, the installation of all wiring (power, network, video, and control), field devices, and equipment will be based on the complete vendor's/manufacturer's wiring diagrams and equipment layouts as approved for this project. The Contractor, prior to installation, must submit the design documents for approval.
- B. The Contractor must provide a complete system design based on the requirements as set forth in the contract documents. Provide option for integration with the card access and security system.
- C. The IP-based system must leverage the facility IT network infrastructure for system communications in as much as possible.

1.5 SCOPE OF WORK

- A. The scope of work to be included in this section does not necessarily include every item; the contractor must provide required information prior to installation.
- B. The VSS must be live view only, video recording not required.
- C. The Security Video System must be an IP network based fully distributed digital video system.
- D. The system will utilize Local Area Networks as a transmission medium for video, configuration, as well as storage of all data. The system must provide full video control at the master control station, with additional full selection capability at any point within the network.
 1. Verification that proposed equipment and devices furnished are adequate and well suited for the intended purpose.
 2. Perform a layout check to ensure that adequate access is available for construction, installation, and maintenance of equipment and devices furnished; however, the Contractor is not responsible for furniture.
 3. Perform acceptance tests to show system is properly installed.
 4. VSS system administration will be by the City of New York. The System Administrator must be responsible to configure and maintain the system after Camera Installation. System utilities must be provided for the System Administrator to use.

PART 2 PRODUCTS

2.1 VIDEO SURVEILLANCE SYSTEM

- A. Software Manufacture: Genetec Omnicast, no exceptions
- B. Recording requirements must be confirmed with City of New York for days of retention and FPS recording. The contractor must assume to size the storage requirements based on 30days at 15FPS.

2.2 WORKSTATION

- A. Workstation Manufacture: Genetec SV-32 V2 Appliance (workstation and server), No Exceptions.
- B. Provide security workstation at designated location on the design drawings. This workstation will be for monitoring and or managing the video surveillance operations. Provide Keyboard and mouse.

2.3 WORKSTATION MONTIORS

- A. Basis-of-Design Product: Subject to compliance with requirements, provide Dell 22” P2222H or comparable product by one of the following:
 - 1. Samsung
 - 2. LG
 - 3. or Approved Equal
- B. Provide security displays at designated location on the Contract Documents. This workstation will be for monitoring and or managing the video surveillance operations.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Provide necessary work as detailed on Section 280000.

3.3 SYSTEM PROGRAMMING AND DATA ENTRY

- A. Provide all initial System programming and setup of the VSS including, but not limited to the following:
 - 1. Coordinate automatic camera selection, real-time record initialization, and recording status alarm annunciation requirements with the Commissioner prior to programming.
 - 2. Graphical Maps and Icons: Coordinate with the Commissioner to obtain AutoCAD architectural backgrounds for implementation as graphical maps. Import all AutoCAD background information and produce a complete set of graphical maps depicting all VSS points.
 - 3. On-screen alphanumeric identification of each camera. Coordinate descriptors with the Commissioner prior to programming.
 - 4. Automatic switching of recording from standby or reduced frame rate mode to real increased frame rate recording when an alarm occurs as defined herein.

- B. Enter all data needed to make the Security System operational. Deliver the data to the Commissioner on data entry forms, utilizing data from the Documents, Contractor's field surveys and all other pertinent information in the Contractor's possession required for complete installation of the database. Identify and request from the Commissioner any additional data needed to make the Security System fully operational and integrated. The completed forms must be delivered to the Commissioner for review and approval at least 90 days prior to the Contractor's scheduled date.

END OF SECTION 28 20 00

SECTION 28 21 00 - SURVEILLANCE CAMERAS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 GENERAL REQUIREMENTS

- A. The work to be done under this section of the Specifications must include the furnishing of labor, material, equipment, and tools required for the complete installation of the work indicated on the Drawings, as specified herein, or as noted in other sections of Division 28 – Electronic Safety and Security.
- B. All materials, obviously, a part of the electronic security infrastructure and necessary to its proper operation, but not specifically mentioned or shown on the Drawings, must be furnished, and installed without additional charge.
- C. The Drawings and Specifications are complementary to each other and what is called for by one must be as binding as if called for by both. If a discrepancy exists between the Drawings and Specifications, the higher cost and/or higher level of functionality must be included to meet the design intent.

1.3 RELATED SECTIONS

- A. 28 00 00 Electronic Safety and Security
- B. 28 05 00 Common Work Results for Electronic Safety and Security
- C. 28 14 00 Access Control System Hardware
- D. 28 20 00 Video Surveillance

PART 2 PRODUCTS

2.1 CAMERAS

- A. Type C-2/C4 Indoor (surface) Fixed IP Dome Color Camera Minimum Specifications:
- B. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS M3066-V or comparable product by one of the following:
 - 1. Hanwha
 - 2. Bosch

3. or Approved Equal

1. The camera must integrate a camera and lens package into a small indoor enclosure that can be mounted directly to, or recessed into, a ceiling or wall.
2. The camera must offer a high resolution (HD) color camera, which features auto iris, simple day/night functions, and varifocal lens.
3. The indoor dome camera must be IP POE.
4. The camera must have manual 3-axis (pan/tilt/rotation) positioning to allow adjustment for optimum camera rotation and placement.
5. The camera housings must be black for cameras on the first floor and white for cameras on the second floor. Submit sample to Commissioner for final approval.

C. Type C-22/C-7A Outdoor (Exterior) Fixed IP Dome Color Camera Minimum Specifications:

1. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Q3515-LVE or comparable product by one of the following:
 1. Hanwha
 2. Bosch
 3. or Approved Equal
2. The camera must integrate a camera and lens package into a small indoor enclosure that can be mounted directly to, or recessed into, a ceiling or wall.
3. The camera must offer a high resolution (HD) color camera, which features auto iris, simple day/night functions, and varifocal lens.
4. The indoor dome camera must be IP POE.
5. The camera must have manual 3-axis (pan/tilt/rotation) positioning to allow adjustment for optimum camera rotation and placement.
6. The camera housing must be grey or silver. Submit sample to Commissioner for final approval.

D. Type C-LP Light Pole Mounted (Exterior) PTZ IP Dome Color Camera Minimum Specifications:

1. Basis-of-Design Product: Subject to compliance with requirements, provide PTZ Camera AXIS Q6155-E or comparable product by one of the following:
 1. Hanwha
 2. Bosch

3. or Approved Equal
2. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Cabinet T98A18-VE or comparable product by one of the following:
 1. Hanwha
 2. Bosch
 3. or Approved Equal
3. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Safety Kit or comparable product by one of the following:
 1. Hanwha
 2. Bosch
 3. or Approved Equal
4. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Power Supply DIN CP-D 24/4.2 or comparable product by one of the following:
 1. Hanwha
 2. Bosch
 3. or Approved Equal
5. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Pole Adapter T91B57 or comparable product by one of the following:
 1. Hanwha
 2. Bosch
 3. or Approved Equal
6. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Pole Adapter T91B57 or comparable product by one of the following:
 1. Hanwha
 2. Bosch
 3. or Approved Equal

7. Basis-of-Design Product: Subject to compliance with requirements, provide AXIS Media Converter T8607 or comparable product by one of the following:
 1. Hanwha
 2. Veracity
 3. or Approved Equal
8. The camera must integrate a camera and lens package into a exterior rated enclosure that can be mounted directly to a light pole using the necessary manufacture accessories.
9. The camera must offer a high resolution (HD) color camera, which features auto iris, simple day/night functions, and varifocal lens.
10. The indoor dome camera must be IP POE.
11. The camera must have manual 3-axis (pan/tilt/rotation) positioning to allow adjustment for optimum camera rotation and placement.
12. The camera housing must be grey or silver. Submit sample to Commissioner for final approval.

2.2 CAMERA ENCLOSURE

- A. Provide CCTV camera housings and mounts as indicated on the Documents and as specified for camera types herein.
- B. Wiring to all cameras must pass from the back box through the mount and into the housing. Exposed wiring of any kind must not be acceptable.
- C. Provide sun shields for camera housings in outdoor locations exposed directly to sunlight.
- D. Provide weather and dust proof camera housings with thermostatically controlled heaters and blowers in outdoor locations.

2.3 NETWORK EQUIPMENT-to be furnished by City of New York.

- A. The network switch is to be located in IT Room (112).

2.4 NETWORK DISTRIBUTION

- A. Cable runs, and any IP transmission must be ANSI/TIA Category with matching RJ-Cable for cameras must ANSI/TIA Category UTP.
- B. 45 crimp type connectors, and must be installed with a control crimp tool, specified by the connectors' manufacturer.

- C. All video signals from cameras in the system must be home run to the closest respective IP Security Video System encoder secured in a telecommunications room in a separate secured rack and connected to the IP Network. All camera cabling must be pulled and terminated in coordination with the Telecom Cabling Trade in Div. 27 within 4' of the intended camera location. The cabling from the Camera to the termination jack shall be provided as part of this section.

2.5 WORKSTATION AND MONITORS

- A. Refer to other Division 28 Specifications.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL

- A. Provide necessary work as detailed on Section 28 00 00.

3.3 SITE INSPECTIONS

END OF SECTION 28 21 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 28 42 00

GAS DETECTION AND ALARM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Gas detection and Alarm System

1.3 SCOPE OF WORK

- A. Provide all labor, materials, products, equipment and service to supply and install Carbon Monoxide and Nitrous Oxide detection and control system indicated on the drawing and specified in this section.
- B. Reference standards: Units must be UL listed.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

1.6 WARRANTY

- A. Warranty: One year from date of substantial completion.
- B. Sensor Warranty: 3 years (CO) / 1 year (NO2) from date of substantial completion

PART 2 - PRODUCTS

2.1 MANUFACTURER

- A. Basis of Design Product: Subject to compliance with requirements, provide products by Kele, GDN series Network Compatible Gas detector or comparable product by one of the following:
 - 1. Mine Safety Appliances
 - 2. Armstrong Monitoring

3. Or Approved Equal.

2.2 PRODUCT DESCRIPTION

- A. Provide network compatible gas detector for continuous monitoring of toxic gases with MS/TP protocol support for seamless integration into building management system.
- B. The monitoring unit design must be flexible to accept pre-calibrated plug-in sensors.
- C. The unit must feature a minimum two-line LCD for local indication, self-test diagnostics and a built in 85 dBA buzzer.
- D. The system specifications must be as follows:
 1. Supply Voltage:17-27 VAC @ 8.4 VA, 50/60 Hz or 24-38 VDC @ 350 mA
 2. Accuracy:±3%
 3. Communication:RS485 Modbus, Bacnet MS/TP
 4. Measurement Range:
 5. CO:0-250 ppm
 6. N2O:0-10 ppm
 7. Sensor Types: Electrochemical CO and NO2
 8. Visual Indication:
 - a. Green LED: power
 - b. Amber LED 1: Alarm/fault :
 - c. Amber LED 2: Alarm/fault:
 9. Response Time:50 seconds or less
 10. Display:8 character, two-line LCD
 11. Relay Output: (1) DPDT pilot duty, 150 VA max inductive, 5A @ 30 VDC, 250 VAC
 12. Alarm Auditory Levels Db:85 dBA @ 10 ft
 13. Operating Temperature:
 - a. CO:-4° to 122°F (-20° to 50°C)
 - b. NO2:-40° to 122°F (-40° to 50°C)
 14. Operating Humidity:15 to 90% non-condensing
 15. Enclosure: ASA 61 gray enameled 16 gauge steel
 16. Supply Voltage: 120 VAC, 60 Hz
 17. Relay Contacts: Two DPDT 10A @ 250 VAC Res.
 18. max relays, for two thresholds
 19. Calibration: 0-100 ppm CO / 0-10 ppm NO2
 20. Alarm Points: 25 & 100 ppm CO, 1 & 3 ppm NO2
 21. Dimensions: (8.1” Hx 5.9 W” x 2.7D”)
 22. Weight: 41.84 lb
 23. Typical Sensor Life: 6 years (CO) / 2 years (NO2)
 24. Coverage: 3,000 sq.ft.
 25. Mounting Height: 4-5 ft above finished floor.
 26. Approvals: ETL

2.3 OPERATION

- A. Sensor alarm levels to activate ventilation fan to be installed to the following parameters:

TOXIC GASES	FIRST ALARM SETPOINT – LEVEL A (TLV-TWA)	SECOND ALARM SETPOINT – LEVEL B (TLV-STEL)	SENSOR LOCATION	RADIUS OF COVERAGE
Carbon Monoxide (CO)	25 ppm	100 ppm	4-5 ft above the floor	50 feet
Nitrous Oxide	1 ppm	3 ppm		

2.4 CALIBRATION KIT

- A. Provide calibration kit with carrying case, cylinder of 100 ppm CO and zero air test gas.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SEQUENCE OF OPERATION

- A. The proposed ventilation exhaust fan is a variable speed fan and must be energized via relays in the monitoring panel.
- B. Activate garage ventilation exhaust fan when concentration reaches first alarm set point (Level A, see table above). The fan must continue to run until the concentration level remains at or above concentration Level A and continue to run and come to stop after an adjustable delay of five (5) minutes after the concentration level falls below Level A. Fans must be activated through relays on the controller.
- C. Install per manufacturer’s instruction. Provide all wiring in conduits.
- D. Provide wiring and interface programming with building management system (BMS).
- E. Set up the following operation mode:
 1. Activate audible and visual alarms integral to the controller when concentration reaches 75% LEL/Alarm Level B as indicated in the above table.
 2. Provide startup , operating and maintenance instructions

SECTION 28 46 00

FIRE DETECTION AND ALARM

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section includes fire detection and alarm system.

1.3 SCOPE

- A. The work covered by this Section of the Specification must include all labor, equipment, materials and services to furnish and install a Fire Alarm Control Panel. It must be complete with all necessary hardware, software and memory specifically tailored for this installation. It must be possible to permanently modify the software on site by using a plug-in programmer. The system must consist of, but not be limited to, the following:

1. Fire alarm control panel.
2. Addressable smoke detectors.
3. Addressable heat detectors.
4. Addressable analog duct smoke detectors for supply fans over 2,000cfm (Air handling systems shutdown control).
5. Addressable analog sprinkler waterflow alarm switches.
6. Addressable analog sprinkler tamper switch supervision.
7. Addressable analog horn and strobe annunciation devices (in combination and individual units as required and indicated).
8. Central station alarm connection control.
9. Addressable manual pull stations.
10. Emergency battery packs.

1.4 APPLICABLE CODES AND STANDARDS

- A. All equipment must be UL listed for its intended use.

- B. NFPA Standards 72 – National Fire Alarm Code
- C. NFPA Standards 13 - Installation of sprinkler systems
- D. The 2008 National Electric Code with NYC Amendments.
- E. 2014 NYC Building Code.
- F. All Equipment must be MEA/BSA Approved or OTCR Tested.

1.5 APPROVALS

- A. Secure permits and approvals prior to installation.
- B. Submit letter of approval for installation before requesting acceptance of system.

1.6 RELATED WORK

- A. The Contractor must coordinate work in this Section with all related trades. Work and/or equipment provided in other Sections and related to the fire alarm system must include, but not be limited to:
 - 1. Sprinkler waterflow and supervisory switches to be coordinated with plumbing trade.
 - 2. Duct smoke detectors to be coordinated with HVAC trade.
 - 3. Fire Pump supervision contact to be coordinated by the fire pump control equipment trade.
- B. Selection of a central station agency, its equipment, its fees and fees for leased telephone lines will be coordinated the Commissioner.

1.7 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”
- B. Provide list of all types of equipment and components provided.
- C. Provide description of operation of the system, similar to that provided in Part 2 of this Section of the Specifications, to include any and all exceptions, variances or substitutions. Acceptance of exceptions and variations will be subject to review and approval by Commissioner.
- D. Provide manufacturer's printed product data, catalog cuts and description of any special installation procedures.
- E. Provide samples of various items when requested.
- F. Provide shop drawings as follows:

1. Drawing of the Fire Alarm Control Panel.
2. Single line riser diagram showing all equipment and type, number and size of all conductors.

1.8 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

1.9 WARRANTY

- A. Manufacturer must warrant the system equipment for a period of one (1) year from date of substantial completion.
- B. The contractor must guarantee all wiring and raceways to be free from inherent mechanical or electrical defects for one (1) year from date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

- A. Basis of Design Product: Subject to compliance with requirements, provide products by Edwards System Technologies or comparable product by one of the following:
 1. Kidde, A UTC fire and security Co.
 2. Wheelock Inc., by Cooper
 3. Notifier, by Honeywell
 4. Simplex-Grinnell, by Tyco
 5. Or Approved Equal

2.2 CIRCUITING GUIDELINES

- A. Where it is necessary to interface Waterflow and Tamper switches , provide intelligent input modules to supervise Class B zone wiring.
- B. For conventional zone annunciation at the control panel zones must be as shown on the zoning schedule, but will be typically as follows:
 1. Sprinkler Waterflow Switches: Provide one (1) alarm zone for each waterflow switch or floor.
 2. Duct Smoke Detectors at Floor Return Ducts: Provide one (1) alarm zone for each floor.
 3. Duct Smoke Detectors at HVAC Air Handling Units: Provide one (1) alarm zone for each air handling unit.
- C. Each of the following types of devices or equipment must be provided with supervised circuits as shown on the drawings but will be typically as follows:

1. Sprinkler Valve Supervisory Switches: Provide one (1) supervisory module circuit for each sprinkler valve supervisory switch or floor.

2.3 FIRE ALARM CONTROL PANEL SEQUENCE OF OPERATION

- A. Refer to fire alarm drawing, FA-301, Fire Alarm Riser Diagram for the sequence of operation.

2.4 SUPPORT FOR INSTALLER AND MAINTENANCE

- A. Provide internal system diagnostics and maintenance user interface controls to display/report the power, communication, and general status of specific panel components, detectors, and modules.
- B. Provide loop controller diagnostics to identify common alarm, trouble, ground fault, and map faults. Map faults include wire changes, device type changes by location, device additions/deletions and conventional open, short, and ground conditions. Ground faults on the circuit wiring of remote module must be identified by device address.
- C. Allow the user to report history for alarm, supervisory, monitor, trouble, smoke verification, watchdog, and restore activity. Include Facility Name, Licensee, Project Program Compilation date, Compiler Version, Project Revision Number, and the time and date of the History Report.
- D. Allow the user to disable/enable devices, zones, actions, timers and sequences. Protect the disable function with a password.
- E. Allow the service user to enter time and date, reconfigure an external port for download programming, initiate auto programming and change passwords. Protect these functions with a password.
- F. City of New York will retain complete rights and ownership to all software running in the system at all times. The fire alarm equipment vendor must provide useable hard and soft copies of the software database to the City of New York at the time of final system acceptance. The database provided must be useable by any authorized and certified distributor of the product line and must include all applicable passwords necessary for total and unrestricted use and modification of the database. The extent of hardcopy database documentation to be provided must be defined by the Commissioner prior to final system acceptance.

2.5 EQUIPMENT

- A. Fire Alarm Control Panel
 1. The fire alarm control panel must incorporate all control electronics, relays, and necessary modules and components in a surface mounted cabinet. All under one label "UL listed and approved" for the use of fire alarm systems in this area of the United States of America. The operating controls and microphones must be located behind a locked door with viewing window. All control modules must be labeled, and all zone locations must be identified. The cabinet must be steel, with a gray finish. The assembly must contain

- a base panel, system power supply and battery charger with optional modules suitable to meet the requirements of these specifications.
2. System circuits must be configured as follows: Addressable analog loops Class B wiring.
 3. The system must be supervised, site programmable, and of modular design with expansion modules to serve up to 96 detectors and 94 remote addressable modules.
 4. The system must store all basic system functionality and job specific data in non-volatile memory. The system must survive a complete power failure intact.
 5. The system must have built-in automatic system programming to automatically address and map all system devices and provide a minimum default single stage alarm system operation with support reset common controls.
 6. The system must allow down loading of a job specific custom program created by system application software. It must support programming of any input point to any output point. The system must support the use of Bar Code readers to assist custom programming functions. It must allow authorized customization of fundamental system operations using initiating events to start actions, timers, sequences and logical algorithms.
 7. The system must support distributed processor intelligent detectors with the following operational attributes; integral multiple differential sensors, automatic device mapping, electronic addressing, environmental compensation, pre-alarm, dirty detector identification, automatic day/night sensitivity adjustment, dual normal/alarm LEDs, relay bases, and isolator bases.
 8. The system must use full digital communications to supervise all addressable loop devices for placement, correct location, and operation. It must allow swapping of "same type" devices without the need of addressing and impose the "location" parameters on replacement device. It must initiate and maintain a trouble if a device is added to a loop and clear the trouble when the new device is mapped and defined into the system.
 9. The system must have a UL Listed Detector Sensitivity test feature, which will be a function of the smoke detectors and performed automatically every 4 hours.
 10. The system must support 100% of all remote devices in alarm and provide support for a 100% compliment of detector isolator bases.
 11. All panel modules must be supervised for placement and return trouble if damaged or removed.
 12. The system must have a CPU watchdog circuit to initiate trouble should the CPU fail.
 13. The system program must meet the requirements of this project, current 2014 NYC Building Code and NYC Fire Code and NFPA Standards, and satisfy the New York City Fire Department.
 14. Passwords must protect any changes to system operations.
 15. The power supply must be a high efficiency switch mode type with line monitoring to automatically switch to batteries for power failure or brown out conditions. The automatic battery charger must have low battery discharge protection. The power supply must provide

internal power and 24 Vdc at 4A continuous. Auxiliary power must be 24 Vdc at 500 mA. All outputs must be power limited. The battery must be sized to support the system for 24 of supervisory and trouble signal current plus general alarm for 15 minutes.

16. The LCD Display Module must be of membrane style construction with a 4 line by 20 character Liquid Crystal Display. The LCD must use supertwist technology and backlighting for high contrast visual clarity. In the normal mode display the time, the total number of active events and the total number of disable points. In the alarm mode display the total number of events and the type of event on display. Reserve 40 characters of display space for user custom messages. The module must have visual indicators for the following common control functions; AC Power, alarm, supervisory, monitor, trouble, disable, ground fault, CPU fail, and test. There must be common control keys and visual indicators for; reset, alarm silence, trouble silence, drill, and one custom programmable key/indicator. Provide four pairs of display control keys for selection of event display by type (alarm, supervisory, monitor and trouble) and forward / backward scrolling through event listings. The operation of these keys must be integrated with the related common control indicators to flash the indicators when undisplayed events are available for display and turn on steady when all events have been displayed. Allow the first event of the highest priority to capture the LCD for display so that arriving fire fighters can view the first alarm event "hands free". Provide system function keys; status, reports, enable, disable, activate, restore, program, and test. The module must have a numeric keypad, zero through nine with delete and enter keys.
17. The Main Control Module must control and monitor all local or remote peripherals. It must support the LCD Display Module, power supply, remote LCD and zone display annunciators, printers, and support communication interface standard protocol (CSI) devices such as color computer annunciators and color graphic displays. The system must provide one loop controller circuit, two notification appliance circuits, and common form 'C' contacts for alarm, supervisory, and trouble. Contact ratings must be 24Vdc at 1A.
18. The panel must be provided with a digital alarm communicator transmitter:
 - a. A digital alarm communicator transmitter (DACT) module to transmit alarm, supervisory and trouble signals to a Central Monitoring Station (CMS). The DACT must support dual telephones lines, 20 PPS 4/2 communications, and configured for dual tone multi-frequency (DTMF) or pulse modes. It must be possible to delay AC power failure reports, auto test call, and site program using a touch tone phone and password.
 - b. For the link to a Central Monitoring Station service, provide a 3/4 inch (DN 21) empty rigid conduit from the fire alarm control panel to the telephone frame room. Also provide a 2 #12 THWN in 3/4 inch (DN 21) conduit run from a 20 amp fuse cutout in the Fire Signaling System cutout panel to the telephone frame room. Terminate both runs as directed.

2.6 COMPONENTS

A. Intelligent Devices - General

1. Each remote device must have a microprocessor with non-volatile memory to support its functionality and serviceability. Each device must store as required for its functionality the

following data: device serial number, device address, device type, personality code, date of manufacture, hours in use, number of alarms and troubles, time and date of last alarm, amount of environmental compensation left/used, last maintenance date, job/project number, current detector sensitivity values, diagnostic information (trouble codes) and algorithms required to process sensor data and perform communications with the loop controller.

- B. Photoelectric Smoke Detector (For Duct Applications and Machine or Electrical rooms).
1. Provide intelligent photoelectric smoke detector. The analog photoelectric detector must utilize a light scattering type photoelectric smoke sensor to sense changes in air samples from its surroundings. The integral microprocessor must dynamically examine values from the sensor and initiate an alarm based on the analysis of data. Systems using central intelligence for alarm decisions must not be acceptable. The detector must continually monitor any changes in sensitivity due to the environmental affects of dirt, smoke, temperature, aging and humidity. The information must be stored in the integral processor and transferred to the analog loop controller for retrieval using a laptop PC or the Signature Program/Service Tool. The photo detector must be rated for ceiling installation at a minimum of 30 ft (9.1m) centers and be suitable for wall mount applications. The photoelectric smoke detector must be suitable for direct insertion into air ducts up to 3 ft (0.91m) high and 3 ft (0.91m) wide with air velocities up to 5,000 ft/min. (0-25.39 m/sec) without requiring specific duct detector housings or supply tubes.
 - a. Temperature: 32oF to 120oF (0oC to 49oC)
 - b. Humidity: 0-93% RH, non-condensing.
 2. Duct Detector Housing,
 - a. Provide smoke detector duct housing assemblies to facilitate mounting an intelligent analog Photoelectric Detector along with a standard, relay or isolator detector mounting base. Provide for variations in duct air velocity between 300 and 4000 feet per minute (300 to 1000 feet per minute for ion-photo-heat detector). Protect the measuring chamber from damage and insects. Provide an air exhaust tube and an air sampling inlet tube which extends into the duct air stream up to ten feet. Provide drilling templates and gaskets to facilitate locating and mounting the housing. Provide five one gang knockouts for mounting optional Signature Series modules. Finish the housing in baked red enamel. Provide Remote Alarm LED Indicators and Remote Test Stations within 15 feet circuiting distance of its associated detector.
 3. Intelligent Heat Detectors Signature Series Model
 - a. The heat detector gathers analog information from their fixed temperature heat sensing elements and converts it into digital signals. The detector's on-board microprocessor measures and analyzes these signals. It compares the information to historical readings and time patterns to make an alarm decision. Digital filters remove signal patterns as to alleviate unwanted alarms. The microprocessor in each detector provides four additional benefits - Self-diagnostics and History Log, Automatic Device Mapping, Stand-alone Operation and Fast, Stable Communication.

- b. 70 foot (21.3 meter) spacing.
- c. 15° F (9° C)/min rate-of-rise/135° F (57° C) ft. and 135° F (57 ° C) fixed temperature type.
- d. Intelligent detector c/w integral microprocessor.
- e. Non-volatile memory.
- f. Automatic device mapping.
- g. Electronic addressing.
- h. Identification of defective detectors.
- i. Twin RED/GREEN status LEDs.
- j. Standard, relay, fault isolator, and audible mounting bases.

C. Intelligent Modules - General

- 1. It must be possible to address each Intelligent Signature Series module without the use of DIP or rotary switches. Devices using DIP switches for addressing must not be acceptable. The personality of multifunction modules must be programmable at site to suit conditions and may be changed at any time using a personality code downloaded from the Analog Loop Controller. Modules requiring EPROM, PROM, ROM changes or DIP switch and/or jumper changes must not be acceptable. The modules must have a minimum of 2 diagnostic LEDs mounted behind a finished cover plate. A green LED must flash to confirm communication with the loop controller. A red LED must flash to display alarm status. The module must be capable of storing up to 24 diagnostic codes which can be retrieved for troubleshooting assistance. Input and output circuit wiring must be supervised for open and ground faults.
 - a. The module must be suitable for operation in the following environment:
 - b. Temperature: 32oF to 120oF (0oC to 49oC)
 - c. Humidity: 0-93% RH, non-condensing
- 2. Single Input Module
 - a. Provide intelligent single input modules. The Single Input Module must provide one (1) supervised Class B input circuit capable of a minimum of 4 personalities, each with a distinct operation. The module must be suitable for mounting on North American 2 ½" (64mm) deep 1-gang boxes and 1 ½" (38mm) deep 4" square boxes with 1-gang covers. The single input module must support the following circuit types:
 - 1) Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - 2) Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - 3) Normally-Open Active Latching (Supervisory, Tamper Switches)
- 3. Dual Input Module

- a. Provide intelligent dual input modules. The Dual Input Module must provide two (2) supervised Class B input circuits each capable of a minimum of 4 personalities, each with a distinct operation. The module must be suitable for mounting on North American 2 ½" (64mm) deep 1-gang boxes and 1 ½" (38mm) deep 4" square boxes with 1-gang covers. The dual input module must support the following circuit types:
 - 1) Normally-Open Alarm Delayed Latching (Waterflow Switches)
 - 2) Normally-Open Active Non-Latching (Monitor, Fans, Dampers, Doors, etc.)
 - 3) Normally-Open Active Latching (Supervisory, Tamper Switches)

4. Control Relay Module

- a. Provide intelligent control relay modules. The Control Relay Module must provide one form "C" dry relay contact rated at 2 amps @ 24 Vdc to control external appliances or equipment shutdown. The control relay must be rated for pilot duty and releasing systems. The position of the relay contact must be confirmed by the system firmware. The control relay module must be suitable for mounting on North American 2 ½" (64mm) deep 1-gang boxes and 1 ½" (38mm) deep 4" square boxes with 1-gang covers.

D. Horn / Strobes

1. Fuse Cut Out/Fused Disconnect Switch:

- a. The primary source of power and the secondary source of power must each be provided with a means of disconnect from the fire alarm system. Each disconnect must consist of a fused disconnect switch, locked in the ON position with key kept on premises accessible only to authorized personnel. Such disconnect must be painted red and permanently identified as fire alarm circuit and labeled as to system/location served, with a means of interrupting the unfused neutral and all ungrounded conductors.
- b. The fire alarm system fused disconnect switch on the transformer secondary side must comply with the requirements of the primary and secondary power source fused disconnect switches specified above.
- c. Fused cutouts must be provided where multiple circuits are required to support the fire alarm system and related auxiliaries mounted in a fused cutout panel suitable for the number of circuits needed. The Contractor must provide an individual cartridge fused cut-out panel with three (3) poles and a removable, solid copper, neutral bar in fuse gap for the FCS, remote Data Gathering Panels (DGPs), booster power supplies and other fire alarm equipment. Fused cut-outs must be provided with silver sand fuses, current limiting type with an interrupting capacity rating of 200,000 amps (r.m.s. symmetrical). The fused cut-out panel must bear an engraved white-core phenolic or bakelite identification nameplate stating in minimum one-quarter inch (1/4") high white letters on a red background "FIRE ALARM FUSED CUT-OUT". A four (4) wire feeder must bring three phase 120/208 volt service to the fused cut-out.
- d. The size of the fuses must be sized appropriately but be thirty (30) amperes minimum.

- e. The feeder must be tapped off the main building service ahead of the main service switch but after the Current Transformers (Metering Transformers).

E. Manual Fire-Alarm Boxes

- a. General Requirements for Manual Fire-Alarm Boxes: Must be UL listed. Boxes must be finished in red with molded, raised-letter operating instructions in contrasting color; must show visible indication of operation; and must be mounted on recessed outlet box. If indicated as surface mounted, provide manufacturer's surface back box.
 - 1) Double-action mechanism requiring two actions to initiate an alarm, pull-lever type; with integral addressable module arranged to communicate manual-station status (normal, alarm, or trouble) to fire-alarm control unit.
 - 2) Indoor Protective Shield: Factory-fabricated clear plastic enclosure hinged at the top to permit lifting for access to initiate an alarm.

2.7 WIRING INSTALLATION

A. Electrical wiring serving fire alarm systems must comply with the following requirements:

- 1. Power conductors (above 75 volts) must be:
 - a. Copper: THHN, THWN/THHN, TFFN, TFN, FEP, RHH, RHW-2, XHH, or XHHW; minimum 600 volts; 90 C; for installation in rigid metallic conduit (RMC)intermediate metallic conduit (IMC) or electric metallic tubing (EMT).
 - b. Cable type MI, listed for 2-hour fire resistance rating.
- 2. Low voltage conductors (75 volts and less) must be:
 - a. Copper: THHN, THWN/THHN, TFFN, TFN, FEP, RHH, RHW-2, XHH, XHHW; minimum 600 volts; 90 C; for installation in RMC, IMC or EMT.
 - b. Minimum wire size No.18 AWG.
 - c. Multi-conductor cables run in raceways, or exposed as described hereinafter, and must be listed to UL 1424-05, Standard for Cables for Power-Limited Fire-Alarm Circuits, with the listing agency certifying compliance with the following additional requirements:
 - 1) Type FPLP only; minimum insulation thickness 15 mils; minimum temperature 150 C; colored red.
 - 2) Red colored jacket overall; minimum thickness 25 mils.
 - 3) Cable marked as per UL 1424 must bear additional description "ALSO CLASSIFIED NYC CERT. FIRE ALARM CABLE" legible without removing jacket.
- 3. Installation of conductors and raceways must be in accordance with the following:

- a. Power conductors must not be installed in common raceways with low voltage conductors.
 - b. Installations must comply with applicable requirements of the electrical code, or if the requirements of this rule exceed those of the electrical code must comply with the requirements of this rule.
 - c. Conductors other than MI cable must be run in raceway, except as specifically described in item (c)(3)(iv) of this rule.
4. Multi-conductor cables may be installed without raceway protection where cables are protected by building construction. Where not protected by building construction, cables must be located 8 feet (2438 mm) vertical or more above the finish floor and not subject to physical tampering or hazard. Locations within 8 feet (2438 mm) of the finished floor that are deemed as protected by building construction must include raised floors, shafts, telephone and communication equipment rooms and closets, and rooms used exclusively for fire alarm system equipment.
 5. All wiring within mechanical and elevator equipment rooms must be run in raceways.
 6. Raceways run within 8 feet (2438 mm) vertical of the finish floor in garage areas, loading docks, mechanical rooms, and elsewhere where subject to mechanical damage, must be rigid galvanized steel conduit only.
 7. Where wiring is required to be run in raceways, install conductors in RMC, IMC, or EMT except that multi-conductor cables may also be run in surface metal raceway. Flexible metallic conduit, not exceeding 36 inches (914 mm) in length, must be permitted for final connections to initiating and notification devices. Conductors for other electrical systems must not be installed in raceways containing conductors serving a fire alarm system.
 8. Where allowed to be run without raceway protection, multi-conductor cables must be installed as follows:
 - a. Cables must not depend on ceiling media, pipes, ducts, conduits, or equipment for support. Support independently from the building structure.
 - b. Secure by cable ties, straps or similar fittings, so designed and installed as not to damage the cable. Secure in place at intervals not exceeding 60 inches (1524 mm) on centers and within 12 inches (305 mm) of every associated cabinet, box or fitting.
 9. Installation of raceways, boxes and cabinets must comply with the following general requirements:
 - a. Covers of boxes and cabinets must be painted red and permanently identified as to their use.
 - b. Penetrations of fire-rated walls, floors or ceilings must be fire stopped. See drawing E-501 Detail 6 for raceway penetration fire stopping detail.
 - c. Within stairways, raceways must not be installed within 8 feet (2438 mm) vertical of the finish floor.

- d. Raceways or cables must not penetrate top of any equipment box or cabinet.
10. All conduits supplying 120-volt power to the fire command station and/or fire alarm control unit and/or to outlying control cabinets, must contain a green insulated grounding conductor sized in accordance with the electrical code (#10 AWG minimum). The grounding conductor must be connected to the ground bus or other suitable grounding terminal in each box and cabinet in which it enters. At the fuse cutout panel supplying the fire alarm system, a grounding electrode conductor sized and installed in accordance with the electrical code (#10 AWG minimum) must be provided.
11. For cabinets whose 120-volt supply is not derived from the main fire alarm system cutout panel, green insulated separate grounding electrode conductors, sized and installed as per the electrical code (#10 AWG minimum), must be provided. In steel-framed buildings, a connection to local steel structure will be acceptable.
12. Splices and terminations of wires and cables must be as follows:
 - a. Permitted only in boxes or cabinets specifically approved for that purpose.
 - b. Utilize mechanical connections specifically approved by UL 486A-03, Wire Connectors or UL 486C-04, Splicing Wire Connectors for the conductors, or if soldered, first joined so as to be mechanically and electrically secure prior to soldering and insulating. Temperature rating of completed splices must equal or exceed the temperature rating of the highest rated conductor.
13. Wiring for audible notification devices – speakers (i.e. stairwells) must be arranged so that a loss of a portion of the wiring in a stairwell will not render more than 60 percent of the devices of each type inoperative, and the devices must be so connected to the circuitry (i.e., by means of alternate “A” and “B” circuits) as to maintain at least partial audibility throughout the entire stairwell.

2.8 GROUNDING

- A. Ground cable shields and equipment according to system manufacturer's instructions to eliminate shock hazard and to minimize, to the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments.
- B. Signal Ground Terminal: Locate at main equipment rack or cabinet. Isolate from power system and equipment grounding.
- C. Connect to grounding electrode specified in Division 26 Section "Grounding." Install grounding electrodes of type, size, location, and quantity as indicated. Comply with installation requirements of Section 26 05 26 "Grounding and Bonding for Electrical Systems."
- D. Ground equipment and conductor and cable shields. For audio circuits, minimize, to the greatest extent possible, ground loops, common mode returns, noise pickup, cross talk, and other impairments.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. The entire system must be installed in a workmanlike manner, in accordance with approved manufacturer's wiring diagram. The contractor must furnish all conduit, wiring, outlet boxes, junction boxes, cabinets and similar devices necessary for the complete installation. All wiring must be of the type recommended by the manufacturer, approved by the FDNY, and must be installed in rigid, threaded conduit throughout.
- B. All penetration of floor slabs and fire walls must be fire stopped in accordance with all local fire codes.
- C. End of Line Resistors must be furnished as required for mounting as directed by the manufacturer.
- D. All wiring must be color coded throughout, to National Electrical Code standards.
- E. The system must be arranged to receive power from one three wire 120 Vac, 15 A supply. All low voltage operation must be provided from the fire alarm control panel.
- F. Field Quality Control
 - 1. The system must be installed and fully tested under the supervision of a trained manufacturer's representative. The system must be demonstrated to perform all of the function as specified.

3.3 TESTS

- A. Reports of any field testing during installation must be forwarded to the Commissioner.
- B. Each individual system operation on a circuit by circuit basis must be tested for its complete operation. The procedure for testing the entire fire alarm system must be set forth with the consent of the FDNY, the Commissioner and the manufacturer.

3.4 DOCUMENTATION AND INSTRUCTION

- A. The contractor must compile and provide the City of New York (3) complete manual on the completed system to include operating and maintenance instruction, catalog cuts of all equipment and components, as-built wiring diagrams and a manufacturer's suggested spare parts list.
- B. In addition to the above manuals, the contractor must provide the services of the manufacturer's trained representative for a period of four (4) hours to instruct City of New York's designated personnel on the operation and maintenance of the entire system. An End-User Instructional Video

must be included as part of the system documentation in two formats - DVD and PC (Media Player compatible).

END OF SECTION 28 46 00

SECTION 31 00 00

EARTHWORK

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes the following:

- 1. Acceptable types of fill.
- 2. Backfilling and compaction procedures.
- 3. Excavation procedures.
- 4. Quality control and inspection of earthwork.
- 5. Groundwater conditions and earthwork.
- 6. Subgrade preparation.

- B. Related Sections

- 1. Section 07 13 00 “Foundation Waterproofing” for Groundwater conditions and earthwork, for Subgrade preparation
- 2. Section 31 64 00 “Drilled Caissons” for Excavation procedures

1.3 GENERAL REQUIREMENTS

- A. Work of this section, as shown or specified must be in accordance with the requirements of the Contract Documents and 2014 New York City Building Code.

1.4 WORK INCLUDED

- A. All labor, materials, equipment, accessories, and services necessary for, or incidental to the completion of the excavation, foundation construction, and filling and grading as shown on the Drawings and specified herein.

- B. The work of this section includes, but is not limited to, the following:

NYPD Bomb Squad Building

Earthwork

Bronx, NY 10464

31 00 00-1

1. Removal of existing pavements, curbs, utilities, and former foundation walls, pile caps, grade beams etc., designated for removal; relocation of fence and fence posts when necessary and other structures encountered or left by wreckers, old walls, rubble, etc.
2. All earth, concrete, and rock excavation to the bottom of foundation subgrades, pile caps, foundation walls, pits and slabs as required and indicated on drawings or to a lower elevation to achieve required bearing.
3. Excavation, filling and rough grading of site area at adjacent structures and roadways as required and within the Contract Limit Line.
4. Excavation, filling, grading and compacting to required elevations for appurtenances and site work.
5. Excavation, filling, grading and compacting to required elevations for all floors and slabs on grade.
6. Excavation and trenching for mechanical trades, including but not limited to all plumbing, heating, water, gas and electric within the buildings as shown or required by the drawings; backfilling same with clean fill as described hereinafter; and thoroughly compacting to "Rough Grading" elevations. Excavation, filling and grading for mechanical trades outside the building must be the responsibility of each trade.
7. Providing additional approved suitable material for filling and rough grading.
8. Legal disposing off the site of surplus excavated materials unsuitable for filling or backfilling. Refer to environmental specifications.
9. Pumping and dewatering as required for work of this section and for foundation work.
10. Other labor and materials as may be reasonably inferred to be required to make the work under this Section complete.

1.5 RELATED SECTIONS

- A. Foundation Waterproofing – Section 07 13 00
- B. Drilled Caissons– Section 31 64 00

1.6 STANDARDS AND REFERENCES

- A. The following publications form a part of this Specification to the extent indicated by the specific citations in other paragraphs of this Specification. In case of conflict, the particular requirements of this Specification will govern, unless indicated otherwise.

1. Latest versions of American Society for Testing and Materials (ASTM) and American Association of State and Highway Transportation Officials (AASHTO) Publications and standards.
 2. ACI-318 latest edition-Building Code Requirements for Structural Concrete.
 3. Geotechnical Engineering Study prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture and Geology, D.P.C.
 4. 2014 New York City Building Code (NYCBC)
- B. Conform to the relevant provisions of the 2014 Building Code and Rules and Laws of the City of New York.

1.7 WORK DEFINITIONS

- A. Wherever the word “excavating”, “excavate”, “excavation”, “carried down”, “remove”, etc., are used, they must be taken to include the removal of all existing work, including brick work, rubble work, former foundation remnants, rubbish, earth, as well as rock, boulders, steel grillages and concrete and all other materials and obstructions encountered; they must also be taken to include all sheet piling, bracing, pumping, and all operations and items needed for the proper execution of the work. Excavation is considered unclassified.
- B. Where the words “finished grades”, “finished grade lines”, or “future finished grades”, appear in these specifications, they must be taken to mean the finished elevations as indicated on the drawings.
- C. Rough grading consists of cutting or filling to the elevation established on the Contract Drawings.

1.8 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.9 SUBMITTALS

- A. Test Reports: Submit the following information for each source of each material submitted for review and comment by the Commissioner:
1. Test reports on borrow material as follows:
 - a. Particle size analysis in accordance with ASTM D 422 (sieve only).
 - b. Soil classification in accordance with ASTM D 2487
 - c. Moisture content in accordance with ASTM D 2216

- d. Modified Compaction Curve in accordance with ASTM D 1557.
 - 2. Include data for all samples indicating the exact location and methods of transportation and placement of all materials.
 - 3. Include verification that borrow material is not contaminated.
 - B. Samples:
 - 1. Submit a 5-lb (minimum) sample of each borrow material proposed for use as general fill, drainage fill and controlled fill.
 - C. The Contractor must prepare and submit the following items to the Commissioner for approval at least 15 days before the start of said work. All calculations and shop drawings must be signed and sealed by a Professional Engineer licensed in the State of New York.
 - D. Method Statement: Submit a detailed method statement, drawings, and calculations to be reviewed by the Commissioner. The method statement, drawings and calculations must be prepared by a Professional Engineer licensed in the State of New York. The submittals must include but not limited to following:
 - 1. Earth excavation procedures.
 - 2. Backfilling and compacting material, equipment and procedures.
 - E. Catalog Cuts: Submit catalog cuts and manufacturer’s literature for compaction equipment, and waterproofing.
 - F. Dewatering: Submit descriptions, drawings, and equipment specifications and other information detailing the means and methods to be used for local dewatering of deep pits. Methods must be such that the groundwater lowering at the perimeter of the site does not exceed one foot or a level required to protect any adjacent structures.
 - G. Certification For Examination of Site and Records: Before proceeding with the Work, submit certification in an acceptable form, signed by the Contractor, stating that careful examination has been made of the site, existing structures, existing adjacent structures, records of utility lines, test boring records, soil samples, subsurface exploration reports, the Drawings, and all other Contract Documents.
- 1.10 QUALITY ASSURANCE
- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- 1.11 PROJECT CONDITIONS
- A. The Project (Rodman’s Neck Bomb Squad Headquarters (BSH)) is in Pelham Bay Park in the Bronx. The site is 56,000 square feet and occupies the entirety of New York City Block 5650
NYPD Bomb Squad Building Earthwork
Bronx, NY 10464 31 00 00-4

Lot 1. The site is on a peninsula extending south into the Hutchinson River between Eastchester Bay to the west and Pelham Bay to the east.

- B. Existing site grade is generally level at round el 8.5 (NAVD88) with no more than about a foot of relief across the site.
- C. The proposed development will consist of a series of permanent buildings, will replace several temporary wood-frame and modular buildings. The permanent buildings will include the #7 Dog Training building, the Bomb Squad Building and the #8 Storage Building. No cellar space is planned for these proposed buildings. The proposed #7 Dog Training building footprint will be about 1,000 square feet. The footprints of the Bomb Squad Building and the #8 Storage Building will be 6,500 square feet and 5,100 square feet, respectively.
- D. Subsurface Conditions – The general subsurface conditions at this site consist of fill, soft organic clay, followed by a layer of medium dense sand. Below the sand was a layer of highly decomposed rock that continued to the top of bedrock. The top of bedrock was encountered between about 23 and 35 feet below existing grade, corresponding to about el -15 to -27 (NAVD88). Bedrock sloped down within the site generally from north to south and east to west. Details regarding the subsurface conditions at the site are presented in the Geotechnical Report.
- E. Groundwater – Groundwater was typically measured to be between about el 5.2 (NAVD88).
- F. Obstructions including concrete, brick, metal debris, and boulders, may be encountered at the site.
- G. Soil and rock samples taken from the borings are available for the Contractor’s inspection.
- H. The Contractor, by careful examination, must stay informed as to the nature and location of the work; the conformation of the ground, the nature of the subsurface conditions; the locations of the groundwater table; the character, quality, and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can in any way effect the work.
- I. The Contractor must be held to have visited the site and to be familiar with the existing conditions of adjoining properties, utilities and buildings.
- J. The soil and groundwater may be impacted by contaminants.
- K. Soil samples and rock cores are available for the Contractor’s review. The City of New York makes no predictions or representations regarding the character or extent of soil, rock, or other subsurface conditions to be encountered during the work. Additional borings and other exploratory operations may be performed by Contractor, at the Contractor’s option and following the Commissioner’s approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.

- L. The Contractor must investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor must conform to all New York City and State, and Federal regulations in regard to the transportation of materials to and from and at the job site and must secure in advance such permits as may be required.
- M. Existing Utilities: Locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, provide adequate means of support and protection during the work.
 - 1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility company immediately for directions. Cooperate with The City of New York and utility companies in keeping respective services and facilities in operation. Correct damaged utilities to satisfaction of utility company.
 - 2. Do not interrupt existing utilities serving facilities occupied by The City of New York, during occupied hours, except when permitted in writing by the Commissioner and then only after acceptable temporary utility services have been provided. Provide minimum of 48 hour notice to the Commissioner, and receive written notice to proceed before interrupting any utility.
 - 3. Demolish and completely remove from site existing underground utilities indicated to be removed. Coordinate with utility companies for shutoff of services if lines are active.
- N. Examine drawings to determine sequence of operations, and relation to work of other trades. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.
- O. Compliance with all federal, state and local environmental and health and safety regulators, including but not limited to Occupational Safety and Health Administration (OSHA).

1.12 PROTECTION

- A. The work must be executed so that no damage or injury will occur to the existing public and adjoining or adjacent structures, streets, paving, sewers, gas, water, electric or any other pipes. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor must correct such damage and must assume all responsibility for such injury.
- B. The above must also include the protection of all existing utilities (including sewers, water lines, electrical lines and telecommunication lines) to remain in use within and adjacent to the area affected by the work of this project.
- C. Monuments, bench marks and other reference features on streets bounding this project, must be protected. Should these be disturbed in any manner, the Contractor must have them replaced.

- D. Excavation sides of any pits within the site and adjacent structure foundations must be protected by means of adequate bracing, shoring and anchoring at all times. No site excavation will proceed until adequate support for excavation sides is provided. Contractor is solely responsible for the stability, safety and protection of excavation sides.
- E. The Contractor must provide barricades, warning lights, and barriers to prevent accidents, and to prevent all hazards to protect the public and property at all times, including Saturdays, Sundays, and Holiday.

1.13 ERRORS IN DEPTH

- A. In the event that any part of the excavation is carried, through error, beyond the depth and the dimensions indicated on the drawings or called for in the specifications, then the Contractor, at their own expense, must furnish and install gravel, stone, or structural concrete with which to fill to the required level at all locations, subject to approval of the Commissioner.

1.14 SUBSURFACE STRUCTURES AND UTILITIES

- A. The Contractor must become acquainted with the existence and location of all surface and subsurface structures and utilities within the project area and beneath the surrounding streets. Contractor must not damage any of those utilities that are to remain and must leave them accessible and make the necessary provision by sheeting, hanging, supporting or other means necessary to obtain this result, subject to the approval of the New York City Building Department and Department of Transportation, and the utility companies involved.

1.15 DESIGN OF TEMPORARY WORK

- A. Temporary work must be designed and installed so that the permanent work can be conveniently and adequately erected. Contractor must be responsible for the adequacy of temporary work.
- B. Temporary work must be maintained in good condition.
- C. Temporary work must be changed, shifted, rebuilt, etc., as needed to suit the conditions of the permanent work.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. On-Site Soil: The use of on-site soils as backfill will not be permitted.
- B. Structural Fill or Controlled Fill: Well-graded sand and gravel, free of deleterious materials, organic material, cinders, frozen material, trash, masonry or rubble and free of stones having a dimension greater than 4 in. Of the material passing No. 4 Sieve, the percent by dry weight

passing the No. 200 sieve must be 10% or less and the percent by dry weight passing the No. 100 sieve must be 40% or less.

- C. Drainage Fill: Clean natural ¾-inch crushed stone (recycled concrete must not be used as drainage fill) having the following gradations:
- D. General Fill: Must have no more than 20% by weight of stones or masonry debris, containing no stones or other materials greater than 4 inches in any dimension and contain less than 50% by weight materials finer than No. 200 mesh sieve.

Sieve Size	%Passing by Weight
2 inch	100
¼ inch	25 to 60
No. 40	5 to 40
No. 200	0 to 5

- E. Fill for utility trenches must meet the criteria given for structural fill and must not contain sharp, angular pieces and pieces larger than 2 inches in any dimension.
- F. Before bringing any fill to the site, the Contractor must submit the source for approval by the Commissioner, in accordance with Section 1.9 of this specification.
- G. All fill materials (structural, granular, and general fill) required must be free from wood, debris, combustible materials, vegetable matter or any material subject to decay or disintegration. Fill material must not be contaminated.
- H. The use of recycled concrete aggregate must not be permitted for use as fill behind vertical foundation walls.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION OF PROJECT SITE

- A. Obtain all necessary permits to perform the work from the appropriate authorities and agencies prior to start of such work. Obey all applicable Occupational Safety and Health Administration (OSHA) rules and regulations.

- B. Install all necessary protection equipment, structures such as fences, signs, scaffolding, etc. prior to start of work.
- C. Remove all existing structures, utilities, pavement in accordance with the Contract Documents.
- D. Protect all utility lines, which are not to be abandoned. Contractor is responsible for any damage to utilities that may occur.

3.3 PROTECTION AND MONITORING OF ADJACENT STRUCTURES, STREETS AND UTILITIES

- A. The work must be executed so that no damage or injury will occur to the existing public and adjoining or adjacent structures, streets, paving, sewers, or utilities. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor must correct such damage and must assume all responsibility for such injury.

3.4 SITE DRAINAGE

- A. The Contractor must assume the responsibility for site drainage and must maintain such drainage during the life of this contract in a manner so as not to adversely affect adjacent areas and structures.

3.5 PUMPING AND DEWATERING

- A. The Contractor must assume the sole responsibility for site drainage upon entering the premises including obtaining and maintaining all relevant permits, and must maintain such drainage during the life of the contract, meeting all applicable regulations and permits, and so as not to adversely affect the adjacent areas.
- B. The groundwater must be maintained at least 2 ft below the subgrade level at the time of waterproofing installation and placement of concrete. For pit excavations, the groundwater must remain depressed until the concrete has reached 80 percent of its required strength.
- C. The Contractor must, during the progress of the work, provide and maintain all required pumps, wells, suction and discharge lines, power, etc. in sufficient number, capacity, and configurations to keep all excavation, pits, trenches, footings, foundations, and the entire property area free from accumulation of water at all times and under any and all circumstances and contingencies that may arise.
- D. The methods of dewatering must be at the option of the Contractor, provided that dewatering be accomplished in a manner that will preserve the strength of foundation strata, will not cause instability of the excavation sides, will not result in movement of excavation faces or loss of ground from beyond the property lines, and will not cause damage to existing structures, bridges, train tracks, streets, pavements, and utilities.

- E. The Contractor is responsible for obtaining all necessary permits to dewater the site so as not to impede this or any other work.
- F. Any dewatering method selected by the Contractor or which, after installation and while in operation, causes or threatens to cause damage to adjacent property must be modified by the Contractor at no expense to the City of New York.
- G. The Contractor is responsible for all remedial action and associated costs due to problems arising from improper control of surface water and groundwater.
- H. The Contractor must not use any portion of the building foundation units or any part thereof as a sump for drainage resulting from pumping in any other area. The Contractor must not conduct water to privately owned properties.

3.6 GENERAL EXCAVATION

- A. The excavation is unclassified and must comprise and include the satisfactory removal and legal disposal of all materials encountered regardless of the nature of the materials and must be understood to include, boulders, earth, hardpan, miscellaneous fill, foundations, structures, slabs, walls, utilities, pavements, curbs, piping and debris.
- B. All excavation must extend to the depths of the form and size required for the installation of the work as indicated on the drawings.
- C. Excavation must be to required elevations for bottom of pile caps, floors, pits, slabs, walls, etc. Excavation must be made to a depth that will allow installation of full depth of concrete slabs, sub-base, and waterproofing as shown on drawings within a 1 inch tolerance. Excavation lines must provide sufficient clearance for the proper execution of all concrete work including allowances for formwork, shoring and inspection.
- D. Materials that, in the opinion of the Commissioner, are not suitable for fill, any surplus earth and all rock, must be removed from the site and legally disposed of.
- E. The bottom of excavations must be leveled and graded to receive foundations, slabs, pits, trenches and grade beams.

3.7 TRENCH EXCAVATION

- A. Excavation for Building Slabs and Structural Members
 - 1. Subgrades of building slabs and structural members including framed slabs and grade beams must be approved by the Commissioner before proceeding with their construction. Subgrades resulting from excavation must be free of unsuitable material (fill, loose rock pieces, organics, debris, etc.) as judged by the Commissioner.

- 2. Where required, waterproofing must be installed in accordance with the Contract Drawings and related specification.
- 3. Unauthorized Excavation: Excavations performed below the elevations shown or specified, must be filled and compacted as hereinafter specified, at no additional cost.
- 4. Authorized Additional Excavation: Where the Commissioner determines that the bearing material encountered is unsuitable, remove the unsuitable bearing material. The removed material must be replaced with controlled fill or concrete as directed by the Commissioner.

3.8 PROOFROLLING

- A. Prior to backfilling, all excavations should be proofrolled using a minimum 3-ton roller. Any loose areas identified by proofrolling should be removed and replaced with controlled fill in accordance with Article 2.1/B.

3.9 FILLING, GRADING AND COMPACTING

- A. Filling and backfilling will not be performed until work has been inspected by the Commissioner. All wood, paper and other deleterious materials must be cleaned out from excavations before backfilling.
- B. The filling or backfilling within the area of the building must be done so that there will be no void spaces below floors and bottoms of pits and trenches, unless otherwise noted.
- C. General: Material for fill and backfill must be Controlled Fill as herein specified under Part 2 of these specifications. Material may be obtained from borrow sources and must be free of any contamination.
- D. Placing: Place fill in horizontal 12-inch-thick maximum loose layers to produce a uniform thickness of material. Start placement in the deepest area and progress approximately parallel to the finished grade. Do not place fill where free water is standing, on frozen subsoil or on surfaces that have not been approved.
- E. Compacting: Compact each layer of fill with appropriate equipment listed below in this Article to achieve as a minimum the following percentages of maximum density at optimum moisture when tested in accordance with ASTM D1557:

LOCATION	% MAX. DENSITY
Under Building Slab-on-Grade	95
Under Paved Areas	95

Under Structural Members and Structural Slabs	92
Behind Foundation Walls	95

- F. **Compaction Equipment:** Granular fills (sand, gravel, friable earth) must be compacted with a vibratory plate compactor not less than 0.5 ton in static weight to the extent possible. A jumping jack must be used in and around penetrations, small restrictive areas, or any other areas not accessible to the roller or heavy plate compactor.
- G. **Backfilling against Foundation Walls:** After completion of foundation walls and removal of forms, clean the excavation of all trash and debris before application of waterproofing and/or vapor barrier and placement of backfill.
- H. Do not backfill against foundation or basement walls until completion of supporting floor construction to top of backfill or to first level above top of backfill, unless adequate temporary shoring is provided.
- I. If Contractor elects to backfill against foundation or basement walls prior to completion of supporting floor slabs, these walls must be shored. Temporary shoring must be designed by a professional engineer licensed in the State of New York retained by the Contractor. Shoring design and calculations must be submitted to the Commissioner for their review and approval.
- J. In placing backfill, take special care to prevent wedge action, eccentric loading or overloading of the structure by equipment used for compacting backfill material, and to prevent damage to waterproofing on walls. Where subsoil drainage systems are installed, place backfill to prevent any damage to the systems. Any damage to waterproofing or drainage systems caused by backfilling or excavation operations must be corrected or replaced by the Contractor at own expense.
- K. Additional backfilling required to bring fill to the finished subgrades shown, must be done by the Contractor only after the concrete walls or piers, against which the backfilling is done, have attained their full design strength, have been braced and the written permission to backfill is obtained from the Commissioner. If fill is required on both sides of a wall, it must be brought up simultaneously and evenly on both sides.
- L. The Contractor must do all filling necessary to bring the ground surfaces to the required levels for floors, pits, and areaways as shown on the drawings.
- M. Any surplus materials must be removed from site and legally disposed of. Should additional material be required for the placing of backfill, other than material obtained from the site, the Contractor must obtain, deliver and place accepted backfill material as required.

3.10 FIELD QUALITY CONTROL

- A. The City of New York will engage a qualified Geotechnical Engineer to review all laboratory test results and submitted reports specified in this Section for special inspection.
- B. The City of New York’s Geotechnical Engineer will interpret the tests, state in each report whether or not the test specimens and results comply with all requirements of the Contract Documents and note any deviations.
- C. The City of New York’s Geotechnical Engineer will identify when and where samples are to be obtained for testing.
- D. The City of New York will engage a qualified testing agency to perform tests and inspections. The Contractor must collect samples and forward them to the City of New York’s Testing Agency. Testing Agency will submit the following laboratory test reports to the Commissioner.
 - 1. Laboratory results conducted on each type of borrow and fill material:
 - a. Gradation Analysis – ASTM D 422.
 - b. Atterberg Limits – ASTM D 4318.
 - c. Modified Moisture Density Curve Determination – ASTM D 1557.
 - 2. The City of New York’s Geotechnical Engineer will determine the conformance of materials to be used for fills.
- E. Field Inspection:
 - 1. All field inspections must comply with the requirements of the 2014 New York City Building Code.
 - 2. Building Slab Subgrades: The City of New York will engage a qualified special inspector to inspect subgrades for all building slabs. No pavement or slab can be constructed unless the subgrade is approved by the City of New York’s Special Inspector.
 - 3. Proofrolling: Proofrolling operations must be inspected by the qualified special inspector engaged by the City of New York.
 - 4. Backfilling and Compaction: The City of New York will hire a qualified testing agency to verify the densities of the fill placed. The testing agency must take field density tests of the fill placed and report to the Commissioner. No fill can be placed without inspection and approval of the City of New York’s testing agency and Commissioner. The testing agency will take field tests (in accordance with ASTM D 2922) of the subgrade for every 2,500 sq-ft, but not less than 3 tests per lift in each area, and a minimum of three tests for every compacted soil lift behind foundation walls.

3.11 CLEAN-UP

NYPD Bomb Squad Building

Earthwork

Bronx, NY 10464

31 00 00-13

- A. All excess material including, earth, rock, fill, must be removed from site and legally disposed of.
- B. All lumber, forms and metal work must be removed immediately after completion of work in local areas. The Contractor is responsible for removal of all debris produced by work to this section from the site.
- C. Sidewalk and streets adjoining the property must be broom-cleaned and free of debris, rubbish, trash and obstructions of any kind caused by the work of this Section.

END OF SECTION 31 00 00

SECTION 31 01 00

SITE WORK STANDARDS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes: the construction of roadways and utilities to support the project.

1.3 CITY OF NEW YORK SPECIFICATIONS AND STANDARDS

A. City of New York

1. Department of Design and Construction, Division of Infrastructure Standard Sewer Specifications dated December 1996.
2. Department of Environmental Protection, Bureau of Water Supply and Wastewater Collection, Latest Sewer Standard Specifications and Standard Drawings.
3. Department of Environmental Protection, Bureau of Water Supply and Wastewater Collection, Latest Standard Water Main Specifications and Standard Drawings.
4. Department of Transportation, Bureau of Traffic Division of Traffic Engineering and the Division of Street Lighting, Standard Specifications and Standard Drawings.
5. Department of Transportation, Bureau of Highway Operations, Standard Specifications Dated June 1986 with all the latest Addendums and Latest Standard Details of Construction.
6. Fire Department, Bureau of Fire Communications, Standard Specifications and Drawings.
7. Police Department, Communications Division, Standard Specifications and Drawings.
8. Department of Parks and Recreation Standard Specifications and Drawings.

B. State of New York

1. Department of Transportation Standard Specifications, Construction and Materials dated January 2, 1990; N.Y.S.D.O.T. Standard Drawings (latest revision).
- C. The preceding Specifications with their appropriate Standard Details will be referred to as follows:
 1. N.Y.C.D.E.P. Sewer Specifications
 2. N.Y.C.D.E.P. Water Specifications
 3. N.Y.C.D.O.T. Traffic Specifications
 4. N.Y.C.D.O.T. Highway Specifications
 5. F.D.N.Y.C. Fire Specifications
 6. N.Y.C.P.D. Police Specifications
 7. N.Y.C.D.P.R. Parks Specifications
 8. N.Y.S.D.O.T. Highway Specifications
- D. U.S. Department of Labor
 1. The Contractor must comply with Occupational Safety and Health Administration Standards for the Construction Industry.
- E. Technical Specifications
 1. The above referenced Standard Specifications and associated Standard Drawings and Details are hereby made an integral part of the Technical Specifications of the Contract Documents, except as modified, added to, or otherwise changed as required by this project.
 2. Any portion of these Standards Specifications such as references to unit price measurement and payment provisions, which are not applicable to the work of this Contract must be disregarded.

1.4 PRIVATE UTILITIES

- A. Private utilities, such as sewers, water mains, electric, gas, telephone, etc., exist in the project area. The Contractor is advised to protect the existing utilities which are to stay, and to maintain or reroute those which are to be removed or abandoned until new utilities are in place. Any damage done to facilities belonging to private utility companies must be restored by the Contractor at their own expense as per their specific standards and specifications.
- B. Contractor must notify utilities a minimum of ten working days prior to excavation, in compliance with New York State Industrial Code Rule 53 by calling the New York City One-Call Center at Telephone Number 1(800) 272-4480.

1.5 SPECIAL PROVISIONS

The following must become part of and apply to the Contract:

A. Lines and Grades

1. The Contractor must furnish lines and grades in accordance with Section 6.14 and 1.06.27 of the N.Y.C.D.O.T. Standard Specifications.
2. The Contractor must submit to the Commissioner a certification from Professional Engineer or Land Surveyor, Licensed in the State of New York, that the lines and grades used in the completed work comply with the contract requirements or such revisions thereof which the Commissioner must direct or order.
3. The Contractor must provide the required survey parties and all necessary surveying equipment. The Contractor must make all necessary computations and determine the alignment, elevation and position for all construction work. The Contractor must be responsible for the accuracy of all lines and grades established.
4. The Contractor must be responsible to make any adjustments necessary in the line and grades shown on the plans in order to ensure the new work meets existing conditions at the point of connection to existing roadways and access drives.

B. Specific Traffic Stipulations

1. The Contractor must perform the work in strict accordance with the specific traffic stipulations determined by NYCDOT and/or as directed by the Commissioner.

C. Contractor's Representative

1. The Contractor or their authorized representative must be present on the work site at all times while work is being progressed to receive and promptly execute all orders or directions of the Commissioner. The foregoing provision must be complied with irrespective of whether work is being progressed by the Contractor or their subcontractor's forces.

D. Maintenance of Traffic

1. Signs, barricades, lights and warning signals must be furnished and placed as necessary for the safety of vehicular and pedestrian traffic, and as directed by the Commissioner in consultation with NYCDOT.
2. Whenever maintenance of traffic is required on public or private streets and access roads and walks in conjunction with the construction work in the project area, the Contractor must follow rules and regulations of N.Y.C. D.O.T. Bureau of Traffic Operations and must observe the traffic stipulations set by NYCDOT.

E. Excavation

1. All excavation is unclassified. No additional compensation will be made for excavation of any items encountered, regardless of material or description. Project excavation must include any and all excavations required within the contract limits that may be required to construct the roadways and utilities, in accordance with the plans and specifications. Limited boring reports and test pit data may be available for Contractor's reference.

F. Construction Permits

1. The Contractor must obtain all applicable construction permits for the projects. The Contractor must obtain and pay for all necessary permits and certificates of inspection and must give all notices and pay all legal fees required by City departments and New York State agencies having jurisdiction in connection with the work under this Contract.
2. All work within private property areas performed under this Contract must conform to the rules and regulations of the Bureau of Electrical Control, Department of General Services, the Building Laws of the City of New York, and all other agencies having jurisdiction.
3. Upon completion of the work, the Contractor must obtain certificates of approval from the various agencies and departments having jurisdiction and must deliver a copy to the Commissioner.

1.6 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTIONS

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

END OF SECTION 31 01 00

SECTION 31 22 00

GRADING

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].
- B. Contractor accepts boring reports and includes all costs for removal of debris, rock, foundations and piles to complete the work of this section.

1.2 SUMMARY

A. Section Includes:

- 1) This work must consist of general earthwork provisions not covered elsewhere under other sections of these specifications. All excavation is “Unclassified”. No additional compensation will be made for excavation of items encountered, regardless of material or description.
- 2) The work must consist of the excavation and disposal of all materials encountered of any description. All excavation must be performed within the limits required for construction or as directed by the Commissioner.
 - a. Unclassified excavation must consist of the excavation and disposal of all materials, of any description, encountered in the course of construction, unless otherwise specified.
 - b. Unclassified excavation also includes all obstructions, piles, pile caps, structures, foundations, etc. encountered in the course of construction, such materials to be removed to a depth of 2' - 0" below the subgrade of the new construction (trench bottom, etc.)
- 3) Excavation must be done to the lines, grades and limits shown on the Contract Documents, or as otherwise required to complete the work.
- 4) Contractor must perform rough grading and proofrolling of all subgrade areas to within 1" of required subgrade elevation, except as modified in other sections of these Specifications.
- 5) Draining and/or pumping, if required, must be performed to keep excavations free from water.
- 6) Work must include stockpiling on site and disposing of off site excess suitable excavated granular material; Disposing of off site excavated material not suitable for backfilling, including rubbish and debris.

- 7) Laying out of lines and grades must be performed by a licensed Surveyor for final grading.
- 8) Work includes cleaning up the site upon completion of Contract Work.

1.3 RELATED WORK

- A. Related work is described in the following sections of the specifications.
Section 31 23 00
Excavation and Fill

1.4 REFERENCES

- A. Perform all required work in accordance with the applicable rules and regulations and the Codes and Ordinances of NYCDOT, NYCDDC, NYSDOT, and NYCDEP
- B. All work and material must comply with the provisions of Sections 4.11 and 6.02 of the NYCDOT Highway Specifications.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit for approval within 14 days after Notice to Proceed:
- C. Proposed methods, equipment and sequences of operations for excavation.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. The Contractor must not perform proofrolling or final grading operations on soil which is too wet to be properly rolled or compacted as determined by the Commissioner.

PART 2 PRODUCTS

2.1 MATERIALS

- A. See applicable provisions of Sections 31 23 00

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL EARTHWORK DRAINAGE AND GRADING PROVISIONS

- A. The Contractor must provide and maintain slopes, crowns and ditches on all excavation and embankments to ensure satisfactory surface drainage at all times. Ditches and other drainage facilities necessary to remove ponded water must be constructed as soon as practical to have the work area dry during the progression of work. All existing culverts and drainage system to remain must be maintained in satisfactory operating condition throughout the course of the work. If it is necessary to interrupt existing surface drainage, sewers or under-drainage, then temporary drainage facilities must be provided until the permanent drainage work is complete.
- B. Any portion of an embankment or subgrade which has, in the opinion of the Commissioner, been damaged by the Contractor's equipment during the course of construction, must be restored and recompactd by the Contractor to the satisfaction of the Commissioner.
- C. Where seepage causes instability of cut slopes, excavation and backfill or other corrective measures must be performed as ordered by the Commissioner. Excavation for the installation of slope protection may be necessary at any time and location throughout the duration of the contract and may not necessarily coincide with the Contractor's performance of the general excavation work.

3.3 COMPACTION

- A. See applicable provision of Section 31 23 00.

3.4 SCHEDULING OF WORK TO MINIMIZE SOIL EROSION

- A. The Contractor must prepare and submit to the Commissioner for approval, schedules for all excavation, stripping, embankment, fill and grading operations connected with the project in or outside of the project limits. Earthwork must not be started at a given location until the method and sequencing of all operations are established in accordance with approved plans and approved by the Commissioner and per Contractor's approved Erosion Control Scheme.

3.5 ARCHAEOLOGICAL SALVAGE

- A. Whenever, during the course of construction, historical objects are encountered, such objects must not be destroyed or moved. Work must be stopped and rescheduled to avoid disturbing such areas and the Commissioner be notified immediately.

END OF SECTION 31 22 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 23 00

EXCAVATION AND FILL

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

- 1) Grading, filling, proofrolling, compaction testing, and placement and compaction of stone subbase for placement of pavement.
- 2) Furnishing, placement and compaction of subbase material.
- 3) Draining and/or pumping, if required, to keep excavations free from water.
- 4) Stockpiling on site and disposing off site of excess suitable excavated granular material. Disposing off site of excavated material not suitable for filling, including concrete, timber, metal, rubbish and debris.
- 5) Laying out lines and grades by a surveyor for final grading.
- 6) Obtaining the services of an approved testing laboratory for compaction testing of backfill material.
- 7) Cleaning up the site upon completion of Contract work.

1.3 RELATED WORK

- | | |
|----------------------|-------------------------------|
| A. Section 31 22 00: | Grading |
| B. Section 31 25 00: | Erosion and Sediment Controls |
| C. Section 32 11 36: | Concrete Base Courses |
| D. Section 32 16 13: | Curbs and Gutters |

1.4 REFERENCES

- A. American Society for Testing and Materials (ASTM)
1. ASTM C 117 - Test Method for Material Finer than No. 200 Sieve in Mineral Aggregates by Washing.
 2. ASTM C 136 - Method for Sieve Analysis of Fine and Coarse Aggregates.

3. ASTM D 422 - Test Method for Particle- Size Analysis of Soils.
 4. ASTM D 698 - Test Methods for Moisture-Density Relations of Soils and Soil-Aggregate Mixtures Using 5.5 lb Hammer and 12 inches Drop. (Standard Proctor Test)
 5. ASTM D 1556 - Test Method for Density of Soil in Place by the Sand-Cone Method.
 6. ASTM D 2922 - Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods. (Mustow Depth)
 7. ASTM D 3017 - Test Method for Moisture Content of Soil and Soil-Aggregate in Place by Nuclear Methods. (Mustow Depth)
 8. ASTM D 4318 - Test Method for Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- B. NYSDOT Specifications and Standard Sheets and NYCDOT Specifications and Standard Drawings.

1.5 SUBMITTAL PROCEDURES:

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Proposed equipment to be used in compacting fill or backfill material.
- C. If imported fill is used, provide gradation curves for approval prior to start of work. When imported material is used, the contractor must submit a ticket with each load of material delivered to the site indicating date and time loaded and delivered, source of material, amount in the load and class of material.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.
- B. The Contractor must not perform proofrolling or final grading operations on soil which is too wet to be properly rolled or compacted as determined by the Commissioner.
- C. Fill material for grading will be subject to the approval of the Commissioner.
- D. Commissioner must inspect the subgrade prior to placement of subbase.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Fill within roadway areas must comply with the requirements of NYSDOT specifications and Section 4.11.3 of the NYCDOT highway specs.
- B. Granular base for sidewalks must comply with the requirements of NYSDOT specifications and Section 4.13.3 of the highway specifications, as modified by Addendum page AA-2K.
- C. Utility trench bedding and backfill requirements must be specified in Section 31 23 33 of these specifications.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 PREPARATION AND LAYOUT

- A. Establish extent of excavation by area and elevation; designate and identify datum elevation.
- B. Set required lines and levels.
- C. Maintain benchmarks, monuments and other reference points.

3.3 EXCAVATION

- A. All excavation is unclassified and consists of removal and disposal of material encountered when establishing required grade elevations unless otherwise noted on the Contract Drawings.
- B. Excavate to elevations required for installation of permanent construction in such a manner as to not disturb the subgrade below such elevations.
- C. All debris, excess material, and all material unsuitable for backfill or fill, must become the property of the Contractor and be disposed of off site.
- D. Unauthorized excavation consists of removing of materials beyond indicated subgrade elevations, limits or dimensions without specific direction of the Commissioner. Unauthorized excavation, as well as remedial work directed by the Commissioner, must be at the Contractor's expense.

- E. Fill must be placed at a moisture content within 2% of the optimum moisture content for the material to be placed. Material that is too wet for placement must not be used as back fill.

3.4 UTILITIES

- A. Existing utility systems and service lines to remain and those encountered during excavation, if damaged, must be restored at the Contractor's expense. Relocation of existing utility systems and service lines, to accommodate the completion of the project, whether on or off the site, must be the responsibility of the Contractor.

3.5 COMPACTION

- A. Prior to placement of fill, the subgrade must be proofrolled with a minimum of two passes by the approved roller that is to be used for backfill placement.
- B. Fill must be compacted to achieve a density of at least 95 percent of the Standard Proctor maximum density as determined by ASTM D 698.
- C. Fill must be placed in maximum twelve inch loose lifts and compacted with a maximum of six passes with an approved vibratory roller, except that hand-tamping will be required within 18-inches of underground facilities.
- D. Do not place and compact fill on frozen subgrade.

3.6 DEWATERING

- A. Prevent surface water and subsurface water or groundwater from flowing into excavations and from flooding project site and surrounding area.
- B. Do not allow water to accumulate in excavations. Provide and maintain pumps, sumps, suction and discharge lines, and other dewatering system components necessary to convey water away from excavations.
- C. Convey water removed from excavations and rain water to collecting or run-off areas. Establish and maintain temporary drainage ditches and other diversions outside excavation limits. Do not use trench excavations as temporary drainage ditches.

3.7 MATERIAL STORAGE

- A. Stockpile satisfactory excavated materials where directed. Place, grade and shape stockpiles for proper drainage.
- B. Locate and retain soil materials away from edge excavations.
- C. Storage areas must be subject to the approval of the Commissioner.

- D. All excess material not incorporated in the work must become the property of the Contractor and must be disposed of off site in a legal manner.

3.8 FIELD TESTS

- A. The City of New York will engage the services of an approved testing laboratory for Special Inspection to determine the in-place density of the soil after compaction is completed. All proctor analyses of soils and in-place density testing must comply with the requirements of NYSDOT specifications and Section 7.12 of the NYCDOT Highway Specifications.
- B. Compaction tests must be performed at a minimum frequency of one for every 2500 square feet of pavement area shown on the Contract Drawings. Tests may be ordered on compacted pavement subgrade or compacted granular base for sidewalks. Test methods may be either Sand-Cone (ASTM D 1556), or nuclear method determined by ASTM 3017, as approved by the Commissioner.
- C. If fill and backfill have not been sufficiently compacted as determined by in-place density tests, the compaction effort must be continued and moisture content must be adjusted as necessary until the specified compaction is obtained.

3.9 CLEAN UP

- A. All surplus materials furnished by the Contractor and all equipment and temporary structures must be removed from the site by the Contractor. All dirt and rubbish must be hauled off site and the construction site left clean to the satisfaction of the Commissioner.

END OF SECTION 31 23 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 23 33

TRENCHING AND BACKFILLING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. The excavation, bedding, backfilling and compaction for pipes and utility trenches.
 2. Removal of all obstructions encountered during the course of construction in trenches.
 3. Excavations within one foot of finished subgrade must be done with care to prevent disturbance to subgrade materials.
- B. To furnish and deliver backfill, place and compact backfill in the excavated trench for sewers, water mains and other utilities as shown on the plans in accordance with the specifications and/or directed by the Commissioner.
- C. Excavation to the lines, grades and limits shown on the Contract Drawings and Standard details.
- D. Draining and/or pumping, if required, to keep excavation and trenches free from water.
- E. Stockpiling on site and disposing off site excess suitable excavated granular material, disposing off site excavated material not suitable for backfilling, including rubbish and debris.
- F. Laying out lines and grades, by survey, for pipe/utility installation and final grading.
- G. Backfilling and compaction of stone bedding and backfill material to the lines and grades indicated on the Contract Drawings and Standard details.
- H. Protection of existing utilities and structures to remain that are exposed during excavation.
- I. Cleaning up the site upon completion of Contract work.

1.3 RELATED WORK

- A. Related work is described in the following sections of the specifications:
1. Section 31 22 00: Grading
 2. Section 31 25 00: Erosion and Sediment Controls

1.4 REFERENCES

- A. American Society for Testing and Materials (ASTM)
1. ASTM C 117- Test Method for Material Finer than No. 200 Sieve in Mineral Aggregates by Washing.
 2. ASTM C 136 - Method for Sieve Analysis of Fine and Coarse Aggregates.
 3. ASTM D 422 - Test Method for Particle - Size Analysis of Soils.
 4. ASTM D 698 - Test Methods for Moisture-Density Relations of Soils and Soil Aggregate Mixtures Using 5.5-lb Hammer and 12-in. Drop (Standard Proctor Test)
 5. ASTM D 1556 - Test Method for Density of Soil in Place by the Sand-Cone Method.
 6. ASTM D 2922 - Test Methods for Density of Soil and Soil-Aggregate in Place by Nuclear Methods. (Mustow Depth)
 7. ASTM D 3017 - Test Method for Moisture Content of Soil and Soil Aggregate in Place by Nuclear Methods. (Mustow Depth)
 8. ASTM D 4318 - Test Method for Liquid Limit, Plastic Limit and Plasticity Index of Soils.
- B. NYSDOT Specifications and Standard Sheets, Standard NYCDEP Sewer Specifications, NYCDEP Water Specifications, Standard Specifications of private utility companies and applicable Standard Drawings and NYCDOT requirements.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit 14 days prior to placement of backfill:
1. Proposed equipment to be used in compacting trench backfill material.
 2. For Select Granular Fill or where other imported fill is used, provide gradation curves. When imported material is used, the contractor must submit a ticket with each load of material delivered to the site indicating date and time loaded and delivered, source of material, amount in the load and class of material. This will not be a basis for payment.
- C. Submit 14 days prior to installation of final paving or subbase course:
1. Compaction test results of backfill material used in trench backfilling.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Work and materials must be in accordance with NYSDOT and NYCDOT requirements. Fill within utility areas must comply with the requirements of Section 4.11.3 of the NYCDOT highway specs.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 UTILITIES

- A. Prior to excavation, investigation must be made by the Contractor to determine the exact locations of existing underground structures and utilities. The Contractor must notify all affected utility companies in the area a minimum of 10 working days before commencing work.
- B. Contractor must excavate with extreme caution when excavating near or above locations of known or suspected pipes and utilities.
- C. Do not traverse paved areas with tracked vehicles or equipment such as carry-all scrapers which may damage such pavement unless protected to the satisfaction of the Commissioner.
- D. Existing underground utilities must be located prior to excavation of utility trenches.

3.3 EXCAVATION

- A. All trench excavation work must comply with Standard Sewer Specifications Sections 4.02 and 4.03 and with Form No. 5 of the Standard Water Specifications.
- B. Open cut from surface to elevations required for removal of utilities.
- C. Existing foundations, pile caps, or other existing construction must be removed in entirety within the limits of the excavation and 24" below subgrade. Piles are to be cut off at a 45 degree chamfer two feet below subgrade.

3.4 SHEETING AND SHORING

- A. Where required for safe excavation operations, for protection of adjacent utilities and structures or where otherwise required for performance of the Work, secure the sides of excavations against movement as follows:

1. Install sheet piling or sheeting held in place by waling and bracing members. Top of sheeting must extend at least six inches above ground.
 2. Do not excavate below the bottom of sheet piling or sheeting except as necessary to install sheeting.
 3. Comply with all NYCDOT, NYSDOT, NYCDDC, and NYCDEP rules and regulations.
- B. Where sheet piling or sheeting is required, submit detailed shop drawings and design calculations of the sheeting and bracing system to the Commissioner for review. Submit such drawings and calculations three (3) weeks prior to commencement of trench excavation. Shop drawings and calculations must be prepared by a Professional Engineer licensed in the State of New York who has a minimum of five years experience in the design of soil retaining structures. The shop drawings must be sealed and signed by a licensed NY State Professional Engineer. Sheeting design criteria must meet the requirements of NYCDEP Standard Sewer Specifications Section 4.05 and the minimum design loads given in Standard Sewer Dwgs. 71 and 72.
- C. Trenches may be widened to provide stable slopes or protected by use of a portable trench shield in lieu of sheeting.
- D. Sheeting and bracing materials must be removed in lifts during backfill operations.

3.5 EXISTING STRUCTURES AND UTILITIES

- A. Structures which are to remain must not be disturbed without consent of the Commissioner and representatives of affected utilities. Brace and shore structures and utilities when exposed to prevent damage. Any damage must be immediately reported to the affected utility company and the Commissioner. The Contractor will be responsible for restoration to the satisfaction of the Commissioner and the utility company.
- B. Perform excavation around and adjacent to existing structures, pipes and conduits which are to remain in place, without damage to or movement of existing construction. When excavation is to be performed under such structures, pipes and conduits, support them in a manner as approved by the Commissioner and the utility company to ensure uninterrupted operation of the supported items.

3.6 ABANDONED UTILITIES

- A. Close open ends of abandoned underground utilities with sufficiently strong closures to withstand pressures which may result after closing.
- B. Close open ends of metallic conduit and pipe with threaded galvanized metal caps or plastic plugs, or other suitable method for the type of material and size of pipe. Do not use wood plugs.
- C. Close open end of concrete and masonry utilities with not less than eight inches thick brick masonry bulkheads, constructed to completely fill the opening.

3.7 DEWATERING

- A. The Contractor must provide and maintain at their own expense ample means and equipment such as pumps, drains and sumps for dewatering and properly disposing of water entering the trenches, and other parts of the work.
- B. Prior to placement of any permanent construction or filling or backfilling any excavated area, lower the water table in said area to one foot below the elevation of the required subgrade and maintain this condition until the construction or pavement is placed thereon.
- C. Dewatering must be done in an approved manner such that the subgrade can be trimmed, foundation materials, pipe or concrete placed in the dry, without disturbing bearing materials, and water from the excavation must be disposed of in such a manner that will cause no injury to property or inconvenience to the public.
- D. Dewater in a manner to prevent the loss of ground due to the migration of soil fines into the dewatering system.

3.8 STORING MATERIALS AND CARE OF STRUCTURES

- A. All excavated and other materials must be so placed as not to endanger the work, and so that free access may be had at any time to all parts of the trench and to all hydrants and valves or pipes in the vicinity, and must be kept neatly in piles, so as to inconvenience little as possible public travel or adjoining tenants.
- B. Storage areas must be subject to the approval of the Commissioner.

3.9 ALIGNMENT AND GRADE

- A. Finished trench bottoms must be true and even and must be maintained to lines and grades established by the plans. Trench bottoms for gravity sewer or drainage pipes must be checked for alignment and grade to the satisfaction of the Commissioner before laying pipe.

3.10 BACKFILL AND COMPACTION

- A. Fill must be placed in maximum twelve inch loose lifts and compacted with a maximum of six passes with an approved vibratory roller, except that hand-tamping will be required within 18- inches of underground facilities.
- B. Overlap passes of roller must be a minimum of six inches.
- C. Moisture content of backfill and fill material must be within a range of plus or minus two percent of optimum.
- D. Do not place fill or backfill on frozen subgrade.

- E. The surface of filled areas must be within plus or minus one inch of elevations shown on the Contract Drawings unless a closer tolerance is necessary to meet requirements of other Sections of the specifications or the Contract Drawings.
- F. Fill within all utility areas must comply with the requirements of Section 4.11 of the NYCDOT highway specs. As noted in Section 4.11.6, fill must be compacted to achieve a density of at least 95 percent of the Standard Proctor maximum density.

3.11 CLEAN UP

- A. All surplus materials furnished by the Contractor and all tools and temporary structures must be removed from the site by the Contractor. All dirt and rubbish must be hauled off site and the construction site left clean to the satisfaction of the Commissioner.

3.12 FIELD TESTS

- A. The City of New York will engage the services of an approved testing laboratory for Special Inspection to determine the in-place density if the soil after compaction is completed. All proctor analyses of soils and in-place density testing must comply with NYSDOT Specifications and Section 7.12 of the NYCDOT Highway Specifications.
- B. Density tests are to be performed as directed at trench subgrade, at various lifts of compacted trench backfill and at pavement subgrade. The minimum number of field density tests that must be performed is as follows:
 - 1. At least one test must be performed on every lift.
 - 2. At least one test must be performed on every full work shift compaction operations.
 - 3. At least one test must be performed for every 100 cubic yards of material placed in trenches.
 - 4. At least one test must be performed for every 400 cubic yards of materials placed in large fills or embankment areas.
 - 5. Additional tests must be performed whenever a change in either the quality of compaction or gradation of backfill is suspected, as ordered by the Commissioner.
- C. If fill and backfill have not been sufficiently compacted as determined by in-place density tests, the compaction effort must be continued and moisture content must be adjusted as necessary until the specified compaction is obtained.

END OF SECTION 31 23 33

SECTION 31 25 00

EROSION AND SEDIMENTATION CONTROLS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. To provide erosion and sediment control structures and procedures including but not limited to the following. The Contractor must provide additional erosion control measures if so directed by the Commissioner.
 - a. Erosion control structures/methods:
 - 1) Silt fence, straw bales, temporary swales, stabilized construction entrances, dust control, etc.
 - 2) To comply with New York City and State regulations for erosion and sediment control during construction and to protect uncovered soil from erosion.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit shop drawings illustrating proposed sediment control structures and methods.
- C. Design of erosion and sediment control structures/methods must be as per New York Standards and Specifications for Erosion and Sediment Control.

1.4 REFERENCES

- A. New York Standards and Specifications for Erosion and Sediment Control, NYSDEC.
- B. Reducing the impact of storm water runoff, NYSSCS.

1.5 PERMITS

- A. The Contractor must obtain all necessary permits for disposing of storm water.

1.6 RELATED WORK

- A. Related work is described in the following section of the specifications.
 - 1. Section 31 22 00: Grading
 - 2. Section 31 23 00: Excavation and Fill

1.7 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Silt Fence
 - 1. Silt Fence Fabric: The fabric must meet the following specifications unless otherwise approved by NYC DEP.

Fabric Properties	Minimum Acceptable Value	Test Method
Grab Tensile Strength (lbs)	90	ASTM D 1682
Elongation at Failure (%)	50	ASTM D1682
Mullen Burst Strength (PSI)	190	ASTM D 3786
Puncture Strength (lbs)	40	ASTM D 751 (modified)
Slurry Flow Rate (gal/min/sf)	0.3	
Equivalent Opening Size	40-80	US Std Sieve CW -02215
Ultraviolet Radiation Stability (%)	90	ASTM G-26

2. Fence Posts (for fabricated units): The length must be a minimum of 36 inches long. Wood posts must be of sound quality hardwood with a minimum cross sectional area of 3.0 square inches. Steel posts must be standard T and U section weighing not less than 1.00 pound per linear foot.
 3. Wire Fence (for fabricated units): Wire fencing must be a minimum 14 ½ gage with a maximum 6 in. Mesh opening, or as approved.
 4. Prefabricated Units may be used in lieu of the above method providing the unit is installed per details shown.
- B. Individual strawbales must be minimum 3 feet long and wire or nylon bound.
- C. Stakes: Wooden stakes must be 2" x 2" x 4 to 5 feet long.

2.2 MANUFACTURERS

- A. Filter Fabric:
1. Suggested manufacturer:
 - a) TC Mirafi
 - b) Colbond
 - c) WebTec
 - d) Or approved equal.
- B. Prefabricated silt fence:
1. Suggested manufacturer:
 - a) Geo Fabrics
 - b) TC Mirafi
 - c) DGI Industries
 - d) Or approved equal.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Sediment basin must be provided as specified below and/or directed by the Commissioner.
1. An emergency spillway is required.
 2. One anti-seep collar must be used and placed 25 feet from the riser.
 3. Watertight bands must be used.
 4. All pipe material must be of good quality with no holes.

- B. Street drop inlet protection must be provided wherever diverted runoff from disturbed area must be conveyed to existing or new inlets as specified below.
1. Filter fabric must have an equivalent opening size of 40-85.
 2. Cut fabric from a continuous roll to eliminate joints.
 3. Place geotextile fabric under grate and over curb piece. Geotextile to be provided with sufficient excess fabric to allow 1" extension beyond grate in roadway area and 6" extension beyond back of curb.
 4. Coarse aggregate no. 8 to be installed above geotextile fabric on curb as required to keep fabric in place.

Fabric Properties	Light Duty Roads Grade Subgrade	Heavy Duty Haul Roads Rough Graded	Test Method
Grab Tensile Strength (lbs)	200	220	ASTM D1682
Elongation at Failure (%)	50	60	ASTM D1682
Mullen Burst Strength (lbs)	190	430	ASTM D3786
Puncture Strength (lbs)	40	125	ASTM D751 (modified)
Equivalent Opening Size	40-80	40-80	US Std Sieve CW -02215
Aggregate Depth (in)	6	10	--

- C. Field drop inlet protection must be provided wherever diverted runoff from disturbed area must be conveyed to existing or new inlets as specified below:
1. Filter fabric must have an EOS of 40-85. Burlap may be used for short term applications.
 2. Cut fabric from a continuous roll to eliminate joints. If joints are needed they will be overlapped to the next stake.
 3. Stake materials will be standard 2" x 4" wood or equivalent metal with a minimum length of 3 feet.
 4. Space stakes evenly around inlet 3 feet apart and drive a minimum 18 inches deep. Spans greater than 3 feet may be bridged with the use of wire mesh behind the filter fabric for support.
 5. Fabric must be embedded 1 foot minimum below ground and backfilled. It must be securely fastened to the stakes and frame.
 6. A 2" x 4" wood frame must be completed around the crest of the fabric for over flow stability.
- D. Stabilized construction entrance must be provided at all entrance and exit points of the construction site as specified below and/or directed by the Commissioner.
1. Filter cloth must be to the fabric properties shown below:

2. Stone Size: Use 2" stone, or reclaimed or recycled concrete equivalent.
3. Length: Not less than 50 feet (except on a single residence lot where a 30 foot minimum length would apply).
4. Thickness: Not less than six (6) inches.
5. Width: Twelve (12) foot minimum, but not less than the full width at points where ingress or egress occurs. Twenty-four (24) foot if single entrance to site.
6. Filter Cloth: Will be placed over the entire area prior to placing of stone.
7. Surface Water: All surface water flowing or diverted toward construction entrances must be piped across the entrance. If piping is impractical, a mountable berm with 5:1 slopes will be permitted.
8. Maintenance: The entrance must be maintained in a condition which will prevent tracking or flowing of sediment onto public rights-of way. All sediment spilled, dropped, washed or tracked onto public rights-of-way must be removed immediately.
9. When washing is required, it must be done on an area stabilized with stone and which drains into an approved sediment trapping device.
10. Periodic inspection and needed maintenance must be provided after each rain.

E. Dust Control

1. To prevent surface and air movement of dust from disturbed soil surfaces that may cause offsite damage, health hazards, and traffic safety problems, the following measures must be implemented:
 - a. Vegetative Cover: Buffer areas of vegetation should be left where practical.
 - b. Mulch: To cover disturbed areas by mulch (including gravel mulch).
 - c. Sprinkling: The site may be sprayed until the surface is wet.

END OF SECTION 31 25 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 31 41 16

SHEET PILING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:

1. To furnish, deliver and install sheeting necessary for protection of excavations including utility trenches and utility structures (manholes, etc.) in accordance with the plans, as per NYSDOT standards and specifications, N.Y.C.D.E.P. standards and specifications, OSHA requirements and/or as directed by the Commissioner.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit shop drawings for the type of sheeting the Contractor plans to use for the project area, complete with structural design and installation procedures, etc. for approval by the Commissioner. All structural designs, drawings and supporting documentation must be signed and sealed by a Professional Engineer licensed in the State of New York. Sheeting design criteria must follow the requirements of NYCDEP Standard Sewer Specification Section 4.05, and Standard Drawing Nos. 71 and 72 as well as all applicable NYSDOT standards and requirements.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. The Contractor has an option to use wood or metal sheeting. Each type of sheeting planned for use in the project area must be pre-approved.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Sheeting must be installed as per approved shop drawing plans.

END OF SECTION 31 41 16

SECTION 31 64 00

DRILLED CAISSONS

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. This Section includes the following:

1. Installation of drilled foundation caissons.
2. Testing requirements of drilled foundation caissons.
3. Special Inspections requirements of drilled foundation caissons.
4. Grout placement of drilled foundation caissons.
5. Steel reinforcement of drilled foundation caissons.
6. Monitoring and tolerances of drilled foundation caissons.

- B. Related Sections

1. Section 03 30 00 “Cast-in-Place Concrete” for Grout placement of drilled foundation caissons.
2. Section 07 13 00 “Foundation Waterproofing” for Installation of drilled foundation caissons and pile caps.

1.3 GENERAL REQUIREMENTS

- A. Work governed by this section, as shown or specified must be in accordance with the requirements of the Contract Documents and the 2014 New York City Building Code.
- B. Work of this Section, as shown or specified, must be in accordance with the Sediment and Erosion Control Plan, where applicable.

1.4 WORK INCLUDED

- A. Work of this Section includes all labor, materials, equipment, services and operations necessary to complete work of installing drilled caissons to lines and finished cut-off elevations as indicated on the Contract Drawings and as specified herein, including, but not limited to, the following:
1. Caissons must have capacities of 80 tons in compression and 50 tons in tension and 2 tons in lateral resistance.

2. Caissons must include casing that is a minimum thickness of 0.545 inches, with an outer diameter of 9.625 inches.
3. Caissons must include one reinforcement bar, size #14, made of steel grade 75.
4. Caissons must be constructed with rock sockets that have a minimum bond length of 6.5 feet, and a minimum diameter of 8.5 inches. Caisson rock sockets must be in New York City Building Code Class 1c or better bedrock.
5. Caissons must be tremie grouted with minimum 5 ksi grout.
6. Design and testing of grout mixes.
7. Submission of all required shop drawings, supporting data, mill certificates and the like for cement, admixtures, aggregates, water, reinforcing steel, accessories, compounds, coatings, and the like.
8. Furnish all required falsework, cribbing, dunnage, etc. to provide safe access to caisson locations.
9. Protection of the associated structures, and all other adjacent structures and utilities to remain.
10. Furnish all equipment, including down-hole digital video equipment and labor necessary to facilitate visual inspection and documentation of caisson rock sockets. Entry into caissons will not be required. The Contractor must provide all labor, materials, and equipment necessary for alternative means to verify the conditions of rock sockets where field conditions prevent use of down-hole video inspection.
11. Lateral load testing of 2 drilled caissons in total as indicated on the Contract Drawings. Caissons must have a permanent steel casing, reinforcing cage, and all necessary concrete fill so as to sustain the minimum design capacities as indicated on the Contract Drawings.
12. Removal and legal disposal of excess drilling mud and spoils generated as part of the drilling process.
13. Provide all field stakeout, field monitoring, and documentation of as-built conditions of caissons.
14. Provide all necessary labor and monitoring equipment necessary to monitor the inclination of the caissons during drilling as specified herein.
15. Submission of as-built caisson location survey, video inspection records, and installation logs.
16. The Contractor must provide the Special Inspector with reasonable office space (with heating, cooling, electricity) on site to conveniently prepare and maintain all necessary project records pertinent to their duties and store necessary equipment. This must include a minimum of one desk space, a lockable storage closet, and wireless internet access.

1.5 STANDARDS AND REFERENCES

- A. General: Except as modified or voided by requirements specified herein or by details or notes included in the Contract Drawings, the Work specified under this Section must conform to all applicable provisions of the codes, specifications, standards and other reference documents cited in this Specification and/or noted in the Contract Drawings.
- B. Codes: All Work under this Section must conform to the most restrictive requirements of the Building Code of the City of New York (2014).
- C. Where more stringent, the following codes, standards and specifications (latest edition), must apply to the Work, all as modified herein or by the above mentioned Building Code:
 - 1. Field Reference Manual: Specifications for Structural Concrete, ACI 301, with Selected ACI and ASTM References, SP 15. Contractor must keep at least one full copy in the field office at all times.
 - 2. Building Code Requirements for Structural Concrete (ACI 318-11) and Commentary (ACI 318R-11) referred to hereafter as ACI Code.
 - 3. Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete, ACI 211.1
 - 4. Guide for Measuring, Mixing, Transporting and Placing Concrete, ACI 304.
 - 5. Recommended Practice for Evaluation of Strength Test Results of Concrete, ACI 214.
 - 6. Structural Welding Code – Reinforcing Steel, ANSI/AWS D1.4.
 - 7. Structural Welding Code – Steel, ANSI/AWS D1.1
- D. ASTM (American Society for Testing and Materials) Specifications cited in ACI 318, ACI 301, this Specification or in cited reference documents must be the year of adoption or tentative adoption and revision listed in the latest edition of the Annual Book of ASTM Standard, "Index", except that, should a specific year of adoption or revision be cited by the Contract Documents, by Building Code, or be proposed by Contractor and accepted by City of New York, that edition must apply to and control the Work.
- E. Lateral Load Test Procedure: Lateral load tests must be performed in accordance with ASTM D3699 "Standard Test Method for Piles under Lateral Loads" (latest edition).
- F. Geotechnical Engineering Report prepared by Langan Engineering, Environmental, Surveying, Landscape Architecture, and Geology, D.P.C., dated 29 January 2021.
- G. The Contractor must meet NYCDEP Limitations for Effluent, NYSDEC and EPA limitations for discharge into any surface water bodies, federal EPA and State Department of Transportation regulations for shipping of regulated substances to off-site disposal facilities, and meet all regulatory requirements imposed by the Treatment, Storage and Disposal Facility. Regulations pertaining to the handling, transport and disposal of regulated substances/materials include, but are not limited to the following:
 - 1. USEPA Regulation 40 CFR Part 280, Underground Storage Tanks: Technical Requirements Final Rule and Office of Emergency and Remedial Response, Standard Safety Guides, PB92-983414.

2. New York City Fire Department, FP Directive 3-73 Division of Fire Protection, NYCAC Title 27, New York City Fire Prevention Code, Chapter 4 et seq., and Rule 21-02 of the City of New York. NYS Uniform Fire Prevention and Building Code (UFPBC) 1164.5.
3. NYS Department of Environmental Conservation (DEC)-Subdivision 6 NYCRR Part 613.9 (b) (DEC's Petroleum Bulk Storage (PBS) Regulation.
4. NYSDEC Petroleum Bulk Storage Regulations 6 NYCRR Part 613.9(b).
5. 6 NYCRR Part 360, Solid Waste Management Facilities, July 14, 1985.
6. 6 NYCRR Part 364, Waster Transporter Permits, January 10, 1985.
7. 6 NYCRR Part 371, Identification and List of Hazardous Waste, July 1, 1986.
8. 6 NYCRR Part 375 Environmental Remedial Programs, December 14, 2006.
9. NYSDEC, Ambient Water Quality Standards and Guidance Values.
10. NYSDEC Site Assessment at Bulk Storage Facilities, August 1, 1994, SPOTS Memo No 14.
11. NYSDEC Petroleum-Contaminated Soil Guidance Policy, August 1992, STARS Memo No. 1.
12. Rule 21-02 of the City of New York.
13. The 2014 New York City Building Code.
14. 29 CFR 1910 – Federal Occupational Safety and Health Administration (OSHA) standards.
15. NIOSH Occupational Safety and Health Guidance manual for Hazardous Waste Site Activities.
16. 29 CFR 1926 – Federal Construction Standards.
17. Resource Conservation and Recovery Act, 40 CFR Parts 260-265, Safe Entry and Cleaning of Petroleum Storage Tanks.
18. National Fire Prevention Association, Volume 30, “Flammable and Combustible Liquids Code.”
19. National Fire Prevention Association, Volume 327, “Cleaning or Safeguarding Small Tanks and Containers without Entry.”

 29. Department of Transportation 49 CFR 172 through 179
 30. Department of Transportation 49 CFR 387 (46 FR 30974)
 31. Department of Transportation DOT-E 8876
 32. Environmental Protection Agency 40 CFR 136 (41 FR 52779)
 33. Environmental Protection Agency 40 CFR 262 and 761
 34. Resource Conservation and Recovery Act (RCRA)
 35. NYCDEC, Rules of the City of New York (RCNY), Title 15, Chapter 19, Use of the Public Sewers.
 36. NYCDEP, Limitations for Effluent to Sanitary or Combined Sewers.
 37. NYCDEP, Dewatering Sampling and Testing Requirements.
- H. Any transporter of contaminated/hazardous materials must be licensed in the state in which handling and transportation must take place in accordance with all applicable regulations.
- I. Comply with OSHA (Occupational Safety and Health Administration) Standards and Regulations contained in Title 29 CFR Part 1910.120 “Hazardous Waste Operations and Emergency Response.”
- J. Comply with all federal, state and local environmental and health and safety regulators, including but not limited to Occupational Safety and Health Administration (OSHA).
- K. In case of conflict between regulations and specifications, the Contractor must comply with the most stringent requirements outlined in the applicable codes, regulations, and specifications.
- 1.6 INTERPRETATION OF DRAWINGS AND SPECIFICATIONS
- A. Direct questions relating to the intent of the Specifications or Drawings, quality of work required

thereby, to the Commissioner, in the event of disagreement the Commissioner's interpretations becomes final, conclusive, and binding on all parties.

- B. In case of disagreement between Drawings and Specifications, or within either document itself, the better quality, greater quantity, the stringent standards, or more costly work must be included in Contract Price and the matter referred to Commissioner's attention.

1.7 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.8 SUBMITTALS

- A. Unless otherwise indicated, transmit all submittals to the Commissioner for review. Review and approval of submittals by Commissioner is required before proceeding with ordering, fabricating, or any work of this Section. Submittal review will be of concept only and will not in any way diminish or limit Contractor's responsibility for the quality and performance of the work. All material orders are the sole responsibility of the Contractor.

- B. All required certifications and permits pertaining to the work of this Section.

- C. At least two weeks prior to mobilization of any equipment or materials to the Site, submit satisfactory proof of Contractor or Subcontractor qualifications for performing the Work specified herein, and name of Contractor's Professional Engineer licensed in the State of New York. Submit resumes of all key personnel, including supervising engineers and drilling operators and foreman.

- D. Shop Drawings and Caisson Details:

- 1. Where the Contractor elects to modify the caisson design from that indicated on the Contract Drawings, the Contractor must submit full design calculations and details prepared by a Professional Engineer, licensed in the State of New York. The Contractor's design must meet the requirements of all applicable codes and specifications and must be suitable for attaining the referenced design load capacities indicated on the Contract Drawings including connection details to the superstructure. Shop drawings must indicate the clear distance from all adjacent structures. Shop drawings must be signed and sealed by the Contractor's Professional Engineer licensed in the State of New York.

- E. Submitted shop drawings and caisson details must indicate the following information:

- 1. Schedule of all applicable caisson types, sizes, and design capacities;
- 2. Dimensions and lengths of rock sockets;
- 3. Location of rock socket bond zone and dimensions;
- 4. Schedule of reinforcing steel with all applicable dimensions, weights, and grades of embedded steel shapes;
- 5. Welding and splicing details.

- F. Manufacturer's or supplier's documentation certifying that casing, core beams and reinforcement

steel conform to the requirements specified herein. This must also include mill certificates covering physical and chemical tests. All material must be delivered to the site with clear identification to link the materials to the certificates and tests.

- G. Submit all grout mix designs, laboratory test results, and supplier data. Grout mix designs must be prepared by a Professional Engineer, licensed in the State of New York.
- H. Certification for Examination of Site and Records: Before proceeding with the work, submit certification in an acceptable form, signed by the Contractor, stating that careful examination has been made of the site, existing structures, existing adjacent structures, records of utility lines, test boring records, soil samples, subsurface exploration reports, the Contract Drawings, and all other Contract Documents.
- I. Installation Equipment and Procedures:
 - 1. The type of equipment for installation of caissons, including but not limited to drill rig, proposed soil and rock drilling bits, drilling techniques, and methods for passing obstructions, permanent and temporary casing (if required). Review of the drilling equipment does not relieve the Contractor from the responsibility of properly drilling caissons, in a satisfactory condition, to the specified criteria, to achieve the design capacities specified herein.
 - 2. Installation procedures for the caissons including but not limited to: detailed sequence of construction; drilling of any required pilot holes; use of temporary casing; drilling of rock sockets; optical or geophysical imaging to evaluate rock quality and the presence of obstructions; cleaning of the caisson prior to concreting; placement of grout fill under tremie; and placement of reinforcing steel.
 - 3. Methodology and details for establishing and maintaining the accurate centerline (at the top of caissons) during drilling operations (i.e., guide walls, jigs, etc.).
 - 4. Methodology for identifying and clearing obstructions such as concrete, timber, boulders, etc. including any pre-drilling or pre-excavation and associated backfilling including proposed backfill materials.
 - 5. Methodology for removing any existing piles.
 - 6. Methods for sealing the caisson and preventing groundwater and sediment infiltration.
 - 7. Methods for advancing the rock socket and removing spoils.
 - 8. Methods for cleaning the bottom of the rock socket.
 - 9. Methodology for maintaining a stable bottom during drilling including use, type, and estimated quantity of any mineral (i.e., bentonite) or polymer slurry products.
 - 10. Methodology to stabilize the borehole during drilling in the event that bottom heave or running sands are observed including temporary backfilling procedures and materials.
 - 11. Methodology and all necessary shop drawing for templates to ensure that the centerline location of rock sockets does not deviate more than 1 inch from the intended location.

12. Submit equipment for video inspection of rock sockets.
 13. Submit all materials data and procedures for the splicing of reinforcement and permanent and temporary casings.
 14. Submit detailed description of the tools and procedures for use in tremie placement of grout.
 15. Resumes of all welders to perform the work.
 16. Method of handling and disposal of drilling fluid and drilling spoils in compliance with soil management requirements.
 17. Corrective Action Plan: In the event that any tolerances specified herein are exceeded that necessitate abandonment or redrilling of caissons, the Contractor must prepare and submit a corrective action plan. The plan must include all pertinent means and methods to be employed in performing the corrective work.
 18. Submit procedures and supporting drawings and details pertaining to load testing including layout, and identification of test caissons.
 19. Submit product data sheets and calibration curves for all jacks, load cells, displacement transducers, and other test equipment.
- J. Caisson Identification Plan:
1. A plan clearly showing the designation and location of all caissons by an identification system, including the cut-off elevations for all caissons; location plan must be referenced to the Foundation Drawings. The plan must include the location of the centerline of each caisson referenced to a known benchmark and orientation.
 2. All detailed records for individual caissons must bear identification corresponding to that shown on the identification plan. A copy of this plan must also be available at the site for inspection at all times. The identification plan must be signed and sealed by a professional engineer licensed in the State of New York, and must be provided in electronic and hard copy formats.
- K. Survey:
1. Submit as-built survey plans prepared by a Professional Surveyor, licensed in the State of New York, showing the completed locations of the caissons at cut-off elevation with respect to the proposed locations. Survey must show actual locations of centers of caissons at top, made from accurate field surveys, with all other pertinent data. Caissons that exceed location tolerances specified herein must be highlighted and offset dimensions provided. As-built surveys must include a tabular summary of all data including: date of measurement; caisson ID; cut-off elevation; deviation measured in the north-south and east-west axes; and maximum percent inclination relative to the vertical axis. Surveys must be provided for review prior to installation of pile caps.
- L. Lateral Load Tests:
1. Prior to starting load tests, submit complete data on caissons, equipment, test locations, test

load frame, and test load procedures, including at a minimum:

- a. Relevant contractor experience with previous load tests
 - b. Caisson construction procedure, reinforcement and concrete strength
 - c. Caisson load reaction system
 - d. Details of instrumentation to be used
 - e. Details of any test caisson construction non-conformance and alternatives and corrective actions proposed
 - f. Typical report showing how the test data will be presented
 - g. Name and resume of full-time supervising Engineer for the testing
 - i) Type and accuracy of apparatus for applying load
 - h. Type and accuracy of apparatus for measuring load
 - i) Type and accuracy of apparatus for measuring deflection
 - i. Type and capacity of reaction load system, including drawings signed and sealed by a Professional Engineer licensed in the State of New York
2. Submit calibration reports for:
- a. Load cell
 - b. Test jack
 - c. Pressure gauge
 - d. Dial gauges.
 - e. Perform calibration tests by an independent testing laboratory with six months prior to the date submitted. Do not commence testing until all calibration has been accepted by the Commissioner.
3. Do not begin testing operations until the submittals have been accepted in writing by the Commissioner.

1.9 EXISTING UTILITIES

- A. Existing Utilities: Locate existing underground utilities within and beyond the areas of work. If utilities are indicated to remain in place, provide adequate means of support and protection during the work. Utilities scheduled for relocation are identified in the Contract Documents.
1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility company immediately for directions. Cooperate with The City of New York and utility companies in keeping respective services and facilities in operation. Correct damaged utilities to satisfaction of utility company.

2. Do not interrupt existing utilities serving facilities occupied by City of New York or others, during occupied hours, except when permitted in writing by the Commissioner and then only after acceptable temporary utility services have been provided. Provide minimum of 48-hour notice to the Commissioner, and receive written notice to proceed before interrupting any utility.
3. Where necessary, demolish and completely remove existing underground utilities indicated to be removed from the site. Coordinate with utility companies for shutoff of services if lines are active.
4. Examine drawings to determine sequence of operations, and relation to work of other trades. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades

1.10 PROTECTION

- A. The work must be executed so that no damage or injury will occur to the existing public and adjoining or adjacent structures, streets, paving, sewers, gas, water, electric or any other pipes. Should any damage or injury caused by the Contractor, or anyone in Contractor's employ, or by the work under this Contract occur, the Contractor must , at own expense, correct such damage and must assume all responsibility for such injury
- B. The above must also include the protection of all existing utilities (including sewers, water lines, electrical lines and telecommunication lines) to remain in use within and adjacent to the area affected by the work of this project.
- C. Monuments, bench marks and other reference features on streets bounding this project, must be protected. Should these be disturbed in any manner, the Contractor must have them replaced at no cost to the City of New York.
- D. While performing work of this Section, or any other related Section, the Contractor must take care that any operations do not adversely affect the stability and integrity of existing buildings and structures in the vicinity, or induce settlement in them.
- E. Contractor will bear the responsibility for any damage to tunnels, buildings, structures, utilities, sidewalks, pavement, and other facilities in the vicinity resulting from the Contractor's operations and the Contractor must take whatever measures are necessary to prevent the same. Should damage occur because of Work under this Section, all costs in connection with the correction of such damage and the restoration of damaged construction to its original condition must be borne by the Contractor.
- F. Provide barricades, warning lights, barriers, etc., to prevent accidents, avoid all necessary hazards and protect the public, the work and property at all times, including Saturdays, Sundays and holidays.

1.11 ENGINEERING SERVICES

- A. Contractor must retain at its own cost, an engineer licensed in the State of New York and experienced with drilled caisson operations. Contractor's engineer must be a registered Professional Engineer in the State of New York. Contractor's engineer must design all drilled caisson work where alternates are proposed. Contractor's engineer must sign and seal all

submittals related alternates for drilled caissons and must be present at all meetings associated with this Work.

- B. When a modification to the caisson design is elected, the Contractor must submit the Professional Engineer's caisson design, plans, and details, as specified herein, for review by the Commissioner.

1.12 SURVEYING

- A. Contractor must retain at its own cost, a land surveyor to perform all necessary field layout, monitoring, and to document as-built conditions. The Contractor's surveyor must be a New York State Licensed Land Surveyor. Non-licensed surveyors will only be used to independently verify results provided by the licensed surveyor.

1.13 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Source Quality Control: Contractor's material control procedures must be effective and must assure that all Work fulfills the requirements of the project as well as the applicable provisions of the Contract Documents.
- C. Contractor performing the Work of this Section must demonstrate that the firm and their personnel they intend to use for this project have recent successfully completed projects installing drilled caissons of the type, size and scale as those specified for this project. The staff for this project must include a supervising engineer with experience in the installation of drilled caissons. Drilling operators and foremen must have experience installing drilled caissons.
- D. All labor, materials, equipment and services necessary to make the Work comply with such requirements must be provided without additional cost to the City of New York.
- E. Contractor must procure and pay for all permits and licenses required to complete the Work of this Section.

1.14 QUALITY CONTROL - INSPECTION AND TESTING

- A. Special Inspection:
 - 1. The City of New York will engage, under the requirements of Section 1704.1 of the Building Code, one or more qualified Special Inspectors to observe and provide all necessary material testing related to the work of this Section. All inspections and all materials testing must be performed by Special Inspectors meeting the minimum qualifications outlined in RCNY 101 06.
 - 2. Caisson installation must be observed on a full-time basis by the City of New York's Special Inspector(s). Contractor must arrange for Special Inspector(s) to be on the site during caisson installation to verify that caissons are installed in accordance with design requirements and to perform any requisite materials testing.
 - 3. The Special Inspector(s) must prepare and submit daily reports summarizing the construction and/or material testing activities to the Commissioner for review.
 - 4. The Special Inspector(s) must submit detailed logs and test reports necessary to facilitate

any corrective design requirements by the Commissioner. The contents and format of all logs must be as directed by the Commissioner.

5. Where work is observed to be non-conforming, the Special Inspector must immediately inform the Commissioner of such conditions in writing. A summary of the observed non-conformance must be issued within 24 hours. The Special Inspector must maintain a tracking log of all non-conformances and must update the tracking log on a daily basis such that corrective measures, if required, can be facilitated in timely fashion. The tracking log must include such information as ID number, date opened, description of non-conformance, actions required, actions taken, and date closed.
6. The Special Inspector must provide all necessary certifications of the work in compliance with Building Code requirements.
7. When a suitable bottom is presumably reached in each caisson, the Special Inspector must determine if the caisson socket length is suitable and the bottom is suitably cleaned. Before placement of grout, the socket and any casings must be thoroughly cleaned and the rock inspected to verify that the rock is of the class on which the design has been predicated, or of a better class. Cleaning with buckets, water flush or air lift may be performed, as required.
8. Visual inspection will be made by down-hole digital video camera by the Contractor under the direction of the Special Inspector to determine the class of rock in the socket. The video recordings must clearly identify the caisson ID #, and separate files must be generated for each caisson inspected. If video inspection is not possible, the Contractor must provide other means to allow the Special Inspector to assess the rock socket (i.e., borings, geophysical methods, etc.). Alternative means to verify rock sockets may be subject to the approval of the Commissioner.
9. The Special Inspector must keep detailed records, including items completed each day, job and weather conditions, a log of each caisson drilled with soil or rock strata encountered, water entry and flow, drilling difficulties, fluid loss, obstructions, casing size and location, bottom cleanout and water removal, description of bearing material, depth and size of shaft, plumbness, location of center of caisson with respect to design location (survey by Contractor), top of caisson elevation (survey by Contractor), placement of steel reinforcement, size of reinforcement, location and types of splices for casings and reinforcement, concreting, grouting, and any other pertinent construction details. These records must be provided to the Commissioner, and others as directed.
10. The Special Inspector(s) must document all welding performed for steel casings and reinforcement. These records must be provided to Commissioner on a daily basis, and others as directed.
11. Grout Placement and Testing:
 - a. With respect to grout filling of caissons, the Special Inspector(s) will (with the Contractor's assistance) verify that the actual volumes of grout placed into the caissons are within the established acceptable criteria.
 - b. Grout testing must be as required in Specification Section 033000: Cast-in-Place Concrete and as specified herein. Grout testing must be performed by the Special

Inspector(s). As a minimum, six grout cylinders must be obtained per 25 cubic yards of grout placed; at least six cylinders must be obtained for each day of grout placement, and not less than one set of cylinders must be obtained for each caisson. The samples must be tested in accordance with ASTM C109. If the required design strength is not attained, caissons may be subject to rejection. The Contractor is responsible to install replacement caisson(s) as required at no additional cost to the City of New York.

- c. Only cylinders, or steel or brass cube molds, should be used to collect grout samples.
 - d. The Contractor must provide the Special Inspector(s) with suitable storage space and initial curing facilities for grout test specimens.
12. The Contractor must have the sole responsibility for coordinating the work with the Commissioner to assure that all tests and inspection procedures required by the Contract Documents and the New York City Building Codes are properly provided by the Special Inspector. The Contractor must cooperate fully with the Special Inspector in the performance of the work.
 13. Materials and installed work may require testing at any time as work progresses. Allow free access to material stockpiles and facilities. Tests not specifically indicated herein may be performed at City of New York's expense, as required by the Special Inspector.
 14. Retesting of rejected materials and installed work is the Contractor's responsibility and must be performed at the Contractor's expense.
 15. The Contractor must notify the Commissioner and all other necessary parties at least 72 hours prior to each day of caisson drilling to allow for the appropriate personnel to be on the site.
 16. The role of the Special Inspector(s) will not relieve the Contractor from any responsibility with respect to conformance to the proper workmanship, management of materials and waste, or any other requirements of the Contract Documents.
 17. The Contractor must prepare and periodically submit to the Commissioner for review partial area surveys to facilitate the design of corrective measures.
 18. Upon completion and approval of all caisson drilling, the Contractor must deliver to the Commissioner the original as-built tracings (equal in size to that of the Construction Drawings) and the requisite copies for review and filing with the New York City Building Department.

1.15 PROJECT CONDITIONS

- A. The Project (Rodman's Neck Bomb Squad Headquarters (BSH)) is in Pelham Bay Park in the Bronx. The site is 56,000 square feet and occupies the entirety of New York City Block 5650 Lot 1. The site is on a peninsula extending south into the Hutchinson River between Eastchester Bay to the west and Pelham Bay to the east.
- B. Subsurface Conditions – The general subsurface conditions at this site consist of fill, soft organic clay, followed by a layer of medium dense sand. Below the sand was a layer of highly

decomposed rock that continued to the top of bedrock. The top of bedrock was encountered between about 23 and 35 feet below existing grade, corresponding to about el -15 to -27 (NAVD88). Bedrock sloped down within the site generally from north to south and east to west. Details regarding the subsurface conditions at the site are presented in the Geotechnical Report.

- C. Groundwater – Groundwater was typically measured to be between about el 5.2 (NAVD88). Groundwater can be expected to fluctuate with weather and seasonal conditions by as much as a few feet.
- D. Obstructions including timber, brick, boulders, and historical waterfront structures may be encountered during caisson installation throughout the site and must be assumed present by the contractor.
- E. The Contractor, by careful examination, must stay informed as to the nature and location of the work; the conformation of the ground, the nature of the subsurface conditions; the locations of the groundwater table; the character, quality, and quantity of the materials to be encountered; the character of the equipment and facilities needed preliminary to and during the execution of the work; and all other matters which can in any way effect the work.
- F. The Contractor must be held to have visited the site and to be familiar with the existing conditions of adjoining properties, utilities and buildings.
- G. Soil samples and rock cores are available for the Contractor’s review. The City of New York makes no predictions or representations regarding the character or extent of soil, rock, or other subsurface conditions to be encountered during the work. Additional borings and other exploratory operations may be performed by Contractor, at the Contractor’s option and following the City of New York’s approval. No change in the Contract Sum will be authorized for such additional exploration undertaken by the Contractor.
- H. The Contractor must investigate the conditions of public thoroughfares and roads as to availability, clearances, loads, limits, restrictions, and other limitations affecting transportation to, ingress and egress of the site of the work. The Contractor must conform to all New York City and State, and Federal regulations in regard to the transportation of materials to and from and at the job site and must secure in advance such permits as may be required.
- I. Existing Utilities: Locate existing underground utilities in and beyond the areas of work. If utilities are indicated to remain in place, provide adequate means of support and protection during the work.
 - 1. Should uncharted, or incorrectly charted, piping or other utilities be encountered during excavation, consult utility company immediately for directions. Cooperate with The City of New York and utility companies in keeping respective services and facilities in operation. Correct damaged utilities to satisfaction of utility company.
 - 2. Do not interrupt existing utilities serving facilities occupied by City of New York, during occupied hours, except when permitted in writing by the Commissioner and then only after acceptable temporary utility services have been provided. Provide minimum of 48 hour notice to the Commissioner, and receive written notice to proceed before interrupting any utility.
 - 3. Demolish and completely remove from site existing underground utilities indicated to be

removed. Coordinate with utility companies for shutoff of services if lines are active.

- J. Examine drawings to determine sequence of operations, and relation to work of other trades. Start of work will signify acceptance of field conditions and will acknowledge coordination with other trades.
- K. Compliance with all federal, state and local environmental and health and safety regulators, including but not limited to Occupational Safety and Health Administration (OSHA).

1.16 PRECONSTRUCTION MEETING

- A. Prior to work on site, the Commissioner will arrange a series of meetings to discuss coordination and scheduling. Parties to be present: Commissioner, Testing Laboratory, Excavation subcontractor and subcontractor's Engineer and the Special Inspector. Review the earthwork procedures and responsibilities including testing and inspection procedures and requirements. Notify participants at least 3 working days prior to convening conference. Record discussions and agreements and furnish a copy to each participant.

1.17 DAILY PLANNING MEETING

- A. Coordinate with the Commissioner to arrange for daily site meeting with Special Inspector to review all proposed work before the start of each shift.

1.18 DELIVERY, STORAGE, AND HANDLING OF MATERIALS

- A. Deliver materials to the project site in such quantities and at such times to assure the continuity of caisson drilling operations, and to maintain the project schedule. Carefully handle caisson materials by means of rope slings or other means so as not to damage the materials.
- B. Casings and reinforcement must be stored in orderly groups above ground, sufficiently blocked to minimize bending stresses. Material exhibiting variations beyond specified limits must be considered distorted and must not be used in the work. Casing and reinforcement must each have unique identification tags confirming material lot number and origin.
- C. Concentrated loads, which occur during stacking or lifting, must be kept below the level that would produce permanent deformation or overstress of the material. Damaged material will be rejected from use in the performance of the work and must be removed from the site.

PART 2 – PRODUCTS

2.1 STEEL REINFORCEMENT

- A. Minimum sizes and quantities of all steel reinforcement must be one #20 per full-length of each caisson
- B. Plates must conform to ASTM A572, Grade 50.
- C. Reinforcing bars must conform to ASTM A615, Grade 150.
- D. Bar couplers must develop the ultimate tensile strength of the bars without evidence of any failure.
- E. Centralizers must be fabricated from plastic, steel, or a material that is non-detrimental to the

reinforcing steel. Wood must not be used.

- F. The cover to all reinforcement must be not less than 1.5 inches. Spacers must be designed and manufactured using durable materials and fixed to the reinforcement cage at intervals not exceeding 10 feet.

2.2 STEEL CASING

- A. Minimum sizes for steel casings must be 0.625 inches thick, and 13.625 inches in diameter.
- B. Steel casing must be of suitable quality and must consist of rolled and welded pipe meeting ASTM A252 Grade 3.

2.3 GROUT

- A. Contractor furnished grout mixes must be in accordance with Section 033000 – Cast-in-Place Concrete.
- B. Grout must have a minimum 28-day unconfined compressive strength of 5 ksi.
- C. Source Changes: Should the source of an ingredient change, for any of the grout products specified herein, Contractor must redesign the affected mix and must resubmit all prior to incorporating such material into the work.

2.4 WELDING MATERIALS

- A. All welding materials must be consistent with the requirements of the metals to be welded.
- B. Welding materials must be stored to prevent contamination and degradation of electrodes, filler, or shielding materials as per the manufacturer's specifications.

2.5 EQUIPMENT

- A. Provide equipment, machinery, tools, and other apparatus for drilling, digging, pumping, and hauling. Provide ample standby equipment to prevent flooding, distortion, or caving so that work may be carried on without interruption.
- B. The drilling equipment must be capable of advancing and withdrawing the down the-hole-hammer in a slow, steady, continuous motion and must have sufficient torque and weight to advance the caisson to the required depths specified on the Contract Drawings without loss of ground.
- C. Provide adequate lighting to permit clear sight conditions in all work and access areas.
- D. Provide hoisting equipment of sufficient capacity to handle casing, reinforcing steel, and other materials.
- E. Provide sufficient equipment to completely clean bottom prior to concreting and reinforcement installation.
- F. Provide hoses of sufficient size and strength, grout pump, and connections required to perform tremie grout placement. Provide bottom flap valve or temporary rubber plugs necessary to prevent

mixing of water and grout in the tremie pipe.

- G. Caisson Inspection Video Camera with pan and tilt Control.

PART 3 – EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 FIELD STAKEOUT

- A. Caissons must be staked out in the field by a New York State licensed Land Surveyor and must be verified independently by a second surveyor prior to commencement of drilling. The Contractor and Commissioner must meet on-site to review the proposed caisson locations and discuss any necessary modifications before drilling commences.

3.3 PRE-EXCAVATION AND USE OF TEMPORARY CASING

- A. Excavation and use of temporary casing for clearing obstructions, or otherwise, must not be performed without the approval of the Commissioner.
- B. All soils disturbed by excavation or pre-drilling must be properly compacted, or improved by grouting or other means acceptable to the Commissioner to prevent reduction of lateral resistance.
- C. Any annulus created through the removal of existing piles or the use of oversized temporary casing or by overcutting drilling methods must be filled with grout or other cementitious fill suitable to the Commissioner. The annulus must be filled prior to removal of temporary casing and the fill level must be topped off following removal of the temporary casing.

3.4 DRILLING, CONCRETING, AND PLACEMENT OF REINFORCEMENT

- A. The Contractor must drill all caisson sockets a minimum 8.5 inches in diameter, 6.5 feet long, in NYCBC class 1c or better material. Methods of construction must be as specified herein, but the Contractor is solely responsible for the adequacy of all operations.
- B. Caisson drilling equipment must have the minimum torque capacity and downward force capacity for the site conditions to install the caissons to the required depth. Selection of equipment must be the sole responsibility of the Contractor.
- C. Where required, casings must be advanced ahead of the drill stem, and a soil plug of at least 2 feet must be maintained until the casing is seated into bedrock. Drilling fluids, including but not limited to, water, mineral slurry, or polymer slurry must be provided as necessary to ensure a stable bottom throughout drilling. All methods employed must be as described in the Contractor's method statement.
- D. The Contractor's drilling methods must prevent inflow of soils from beyond the shaft limits (i.e., running sands, etc.) which can result in erosion, destabilization, and subsidence.
- E. External flushing of the casing during drilling must not be permitted.
- F. The Contractor must advance the rock socket to the minimum required depth and diameter shown

on the Contract Documents. The drilling method should produce a rough surface on the side walls of the rock socket.

- G. As soon as the required rock socket length is reached the Contractor must clean the caisson bottom of all loose material, and notify the Commissioner and Special Inspector, who will determine the actual bottom depth. The socket lengths indicated on the Contract Drawings are approximate, and may be adjusted by the authorized representative depending on the conditions of rock encountered. The caissons must be advanced into bedrock to obtain required socket length necessary for achieving the intended design load as determined by the Special Inspector.
- H. Down-hole digital video camera must be performed by the Contractor to allow inspection of the rock socket by the Special Inspector. Caissons must be flushed with clean water to remove sediment so that the side walls and bottom of the rock socket can be video inspected. Where conditions prevent the use of down-hole video, the Contractor must provide alternative means to establish the quality of rock within caissons including but not limited to drilling of test borings with rock coring and associated geophysical testing. Where borings are to be used in lieu of down-hole video, borings must be performed using methods acceptable to the Commissioner and must be taken prior to full scale caisson drilling (at the center axis of the element).
- I. If the Special Inspector's inspection indicates that the rock is not capable of providing the required design capacity, the shaft length must be advanced as directed by the Special Inspector, in consultation with the Commissioner, and the above steps repeated, unless other recommendations are made by the Commissioner.
- J. After shaft walls and bottom have been inspected and shown to comply with the Contract Documents, caissons must be reinforced and filled immediately with grout.
- K. Reinforcing steel must be clean and free of foreign matter that may adversely affect bond. All reinforcing steel must be centralized within the borehole and the minimum cover shown on the Contract documents must be maintained. Steel must be braced temporarily as required to facilitate making any required field splices and to maintain reinforcement in a suitable alignment.
- L. Steel reinforcement and centralizers must be lowered into the cased holes to the desired depth without difficulty. Partially inserted steel must not be driven or forced into the hole.
- M. Centralizers must be located a maximum of 5 feet below the cut-off level from the top of the caisson, and the bottom centralizer must be located a maximum of 5 feet from the bottom of the rock socket. The maximum spacing of the centralizer must be 10 feet. The Centralizers must permit the free flow of grout without misalignment of the reinforcement.
- N. Grout must be continuously placed by methods that ensure against segregation and dislodging of excavation sidewalls and must completely fill the shaft. Grout must be placed by tremie unless otherwise approved by the Commissioner. The discharge must be kept a minimum of 6 feet below the fresh grout surface during placement. Grout must be pumped until fresh grout is observed to be continuously discharging from the top of the caisson.
 - 1. Reinforcing steel must be placed within a maximum of 72 hours after the completion of the drilling of the rock socket unless otherwise approved by the Commissioner.
 - 2. Grout must be placed within 2 hours after installing the reinforcing steel unless otherwise approved by the Commissioner.

- O. Drilling of caissons must not be permitted within 20 feet of grout that has not cured for at least 24 hours, and within 10 feet of grout that has not cured for at least 3 days, unless otherwise approved by the Commissioner.
- P. A maximum of 2 inches of sediment will be permitted to accumulate at the bottom of the rock socket after video inspection and prior to grout placement. The Contractor must flush the rock socket immediately prior to placing grout to suspend sediment accumulated in the bottom of the socket. The Contractor must remove sediment greater than 2 inches prior to grout placement.
- Q. Grout must be placed using underwater tremie techniques only after water flow has stabilized.
- R. A rubber plug or other temporary separation device must be utilized to prevent mixing of water and grout in the tremie pipe. Tremie pipes must be removed from the caisson following grout placement unless otherwise approved by the Commissioner.
- S. Reinforcing steel must be centralized and braced as necessary to remain within proper alignment until grout has set.
- T. Grout must be brought to a true level surface inside the shaft and a full width cross key formed or dowels installed should it become necessary to interrupt placing grout in any caisson. Prior to placing additional grout, clean surface of laitance and slush with 1:1 Portland cement grout. The grout must have a water cement ratio not exceeding that of the grout.
- U. No extra payment will be made to the Contractor for overcoming of obstructions under any condition whatsoever.
- V. During drilling of caissons, all openings must be properly protected and covered when work is not in progress. Prevent debris from being dislodged in the caisson and grout. Suitable lights and barricades must be provided as required.

3.5 CAISSONS CUT OFF

- A. Caissons must be cut-off in a neat and workmanlike manner to the elevations given or implied from the drawings. Cutting must be done with approved equipment that will not damage the area below the cut surface.
- B. Where caissons are cut-off below the stipulated elevation, and where accepted by the Commissioner, the caisson cap may be both lowered and thickened so as to properly engage the caisson.
- C. Removal: Caissons cut material, regardless of length or volume, will be the property of Contractor, and must be disposed of in a legal manner. All debris resulting from excavation and drilling, removal of obstructions, and any material not to remain as part of the construction is to be removed and disposed of off-site by Contractor in a legal manner. The site must be cleaned at frequent intervals and no material can be stored on the site in a manner that would obstruct the easy access of equipment and personnel. Stock piling of material will not be permitted except where accepted by the Commissioner.

3.6 LOAD TESTING

- A. Axial Load Testing: None Required

B. Lateral Load Testing

1. Perform a minimum of six successful lateral load tests for the mini-caissons at the pile cut-off elevation.
2. Perform a minimum of two successful lateral load tests for the caissons at the pile cut-off elevation.
3. Load tests must be performed at locations selected by the Commissioner.
4. All load tests must be performed in accordance with ASTM D3966 and evaluated in accordance with the NYC Building Code.
5. Load tests must be administered by the Contractor and must be observed by the Special Inspector. The Special Inspector must record all load test data.
6. Load Schedule - The load schedule must be as follows (DL = Design Load):

Load (tons)	Hold Period
0.25 DL	10 min
0.5 DL	10 min
0.75 DL	15 min
DL	20 min
1.25 DL	20 min
1.5 DL	20 min
1.7 DL	20 min
1.8 DL	20 min
1.9 DL	20 min
2 DL	60 min
1.5 DL	10 min
DL	10 min
0.5 DL	10 min
0	10 min

7. Load and Deflection Measurements
 - a. Load cells must be used in series with the hydraulic cylinders to measure load. The load at the given load increment is to be governed by the readings from the load cell

- and not the equivalent pressure as read from the pressure gauge attached to the pump.
- b. Measure pile head movement with dial gauges capable of reading to the nearest 0.001 inch. Dial gauges must have a travel of at least 3 inches. Dial gauges must be mounted on an independent steel test frame to prevent relative movement during the load test.
 - c. Establish a separate mirror, wire, scale set-up, with scale capable of measuring to the nearest 0.025 inch.
 - d. Provide independent survey level measurements of the pile using optical level survey equipment capable of reading to the nearest 0.005 ft. The survey datum must be located so that it is not affected by either the test loading or the other site operations.
 - e. Load cells must be used in series with the hydraulic cylinders to measure load. The load at a given load increments is to be governed by the readings from the load cells and not the equivalent pressure as read from the pressure gauge attached to the pump.
8. Allowable Design Capacity
- a. The allowable design capacity must be: Fifty (50) percent of the applied lateral load resulting in 1 inch of gross lateral movement measured at the pile head.
9. Test Procedures
- a. Supervision: The installation of the entire testing system, testing and monitoring, are to be carried out in the full-time supervision of the Contractor's engineer experienced in caisson installation and testing.
 - b. Delay between installation and Testing: Loading testing of caissons must not commence until the strengths of materials are adequate to sustain the maximum required test load specified.
 - c. Load application: upon loading of each test caisson to the maximum test load, the load must be removed smoothly and the residual movement recorded.
 - d. Recording during loading states: the load, deflection and time must be recorded immediately upon reaching the load increment and at intervals in accordance with ASTM D3966. Should it not be possible to achieve the load increment, readings should be taken as directed by the Commissioner.
10. A detailed report must be prepared by the Special Inspector and must be submitted for review by the Commissioner. The load test report must include but not be limited to the following information:
- a. Caisson ID, design loads, geometry, and materials
 - b. Description of installation methods and equipment
 - c. Description of subsurface information including boring and testing logs

- d. Caisson installation logs and notes
- e. Description and details of test apparatus and methods
- f. Elevations and datum
- g. Concrete strength at time of testing
- h. Test data and notes pertaining to each test
 - i) Evaluation and rated capacity per NYC Building Code acceptance criteria.
11. Caissons tested as pairs by pushing or pulling one another will be considered a single load test, unless otherwise acceptable to the Commissioner.
12. Caissons not meeting the prescribed design loads must be immediately brought to the attention of the Commissioner.

3.7 MONITORING

A. Verticality

1. Inclination of the casing must be checked prior to initiation of drilling by optical surveying techniques or as approved by the Commissioner. The plumbness measurement must be provided to the Special Inspector and Commissioner prior to commencing with drilling. Initial deviation from vertical must not be greater than 1 percent prior to proceeding with drilling.

3.8 TOLERANCES

- A. Shafts must be vertical and with minimum diameter as indicated on the Contract Drawings or as approved by the Commissioner.
- B. Maximum permissible deviation of center of top of any caisson from required location at cut-off is 1 inch. Shafts must not be out of plumb more than 1% of shaft length, based on the final centers at top and bottom of caisson. Tolerances must be determined in the field by optical survey, performed by a Licensed Surveyor retained by the Contractor.
- C. Maximum permissible deviation of rebar cages from the as-built center of the caisson is 0.5 inches. Distribution and placement of rebar must meet the standard tolerances described in ACI 318-11.
- D. Tolerances must be determined in the field by optical survey, performed by a Licensed Surveyor retained by the Contractor.
- E. Damaged caissons, and caissons drilled outside the required drilling tolerances, will not be accepted.
- F. Caissons rejected after drilling must be cut-off and additional caissons drilled to replace the lost capacity as required by the Commissioner.
- G. If tolerances are exceeded, design and furnish, at no additional cost, all additional or corrective

construction to compensate for excessive eccentricity. Corrective construction must be submitted for approval by the Commissioner.

- H. The Contractor is responsible for all costs associated with review of such calculations and corrective construction by the Commissioner.
- I. Approvals: The Special Inspector will make final approval of caisson shaft holes and authorize subsequent grout placement.

3.9 SEQUENCE OF WORK

- A. Drilling of caissons must be performed so that reinforcing steel and grout placement is a continuous operation performed the same day that the excavation is completed, and in no instance greater than 72 hours following excavation, unless otherwise approved by the Commissioner.
- B. Grout must be placed within 2 hours after placement of reinforcement, unless otherwise approved by the Commissioner. The Contractor must flush the rock socket immediately prior to placing grout to suspend sediment accumulated in the bottom of the socket.

3.10 UNACCEPTABLE CAISSONS

- A. Unacceptable caissons are caissons that are rejected by the Special Inspector or Commissioner because of non-conformance including damage, failure to advance through obstructions, mislocation, misalignment, failure of socket inspection, failure to install the caisson using the approved equipment and procedures, or failure to install the caisson to the proper depth.
- B. Submit a written plan of action to the Commissioner for approval, showing how to correct the problem and prevent its reoccurrence.
- C. Correct or augment the caisson to the satisfaction of the Commissioner to make it acceptable. To mitigate and remedy unaccepted caissons, Contractor may be required to provide additional caissons or supplement caissons to meet specified requirements at no cost to the City of New York.
- D. The Contractor is responsible for all costs associated with review of such calculations by the Commissioner and corrective construction.

3.11 GROUT TESTING

- A. Coordination with Testing Agency: The Contractor has the sole responsibility for coordinating their work with the testing agency to assure that all test and inspection procedures required by the Contract Documents and the Department of Buildings are provided. The Contractor must cooperate fully with the Testing Agency in the performance of their work.
- B. Duties of the Testing Agency:
 - 1. Reports: The Testing Agency must prepare daily reports of the grout work including progress and description/area of work, tests made and results. The daily reports must be provided to the Commissioner.
 - 2. Rejection: The Testing Agency has the right to reject any material, at any time, when it is determined that the material or workmanship does not conform to the Contract Documents.

The Testing Agency must report deficiencies to the Commissioner and Contractor immediately.

C. Source Quality Control:

1. The Testing Agency must conduct grout quality evaluations for compliance with Specifications as follows:
 - a. Review and test Contractor's proposed materials.
 - b. Review and test Contractor's proposed grout mix designs.
 - c. Secure and test production samples at plants or stockpiles.
 - d. Check batching and mixing operations to extent deemed necessary to assure compliance with Specifications.

D. Field Quality Assurance:

1. General: The Testing Agency must test and inspect grout materials and operations as work progresses. Failure to detect any defective work or material will not in any way prevent later rejection when such a defect is discovered, nor will it obligate the Commissioner for final acceptance.
2. Testing Agency is responsible for monitoring grout placement as follows:
 - a. Testing Agency must provide qualified personnel at site to monitor concreting operations.
 - b. Record temperature of grout at time of placement.
 - c. Record weather conditions at time of placement, including temperature, wind speed, relative humidity, and precipitation.
 - d. Record types and amounts of admixtures added to grout batches, including that added after departure of grout trucks from batch plant.
 - e. Record amounts of and monitor dosing of high-range water-reducing admixtures added at site for site-added admixtures and re-dosing for plant-added admixtures.
 - f. Monitor consistency and uniformity of grout.
 - g. Monitor preparation for concreting operations, placement of grout, for conformance with Specifications.
3. Testing Agency must conduct tests of grout as follows:
 - a. Testing frequency: One sample set for all tests listed below must be taken at each caisson. Each set must have a minimum of 7-samples.
 - b. Obtain each test sample from different batches selected on a strictly random basis before commencement of grout placement. Record location in structure of sampled

grout.

- c. Determine air content of normal weight grout in accordance with either ASTM C 231 or ASTM C 138.
 - d. Determine unit weight of normal weight grout in accordance with ASTM C 138.
 - e. Conduct strength tests of grout as follows:
 - i) Secure sample sets in accordance with ASTM C 172.
 - ii) Mold cylinders in accordance with ASTM C 31 and cure under standard moisture and temperature conditions in accordance with ASTM C 31, Section 7 (a).
 - iii) Mold cubes must be made of brass or stainless steel.
 - iv) Test cylinders in accordance with ASTM C 39.
 - v) For 28 day mixes mold seven cylinders. Test one cylinder at three days, two cylinders at 7 days, two cylinders at 28 days, and one cylinder at 56 days. The 28 day strength must be the average of the two 28 day cylinders. One cylinder must be retained in reserve for later testing if required.
 - vi) If one cylinder in a test manifests evidence of improper sampling, molding or other damage, discard cylinder and base test results on that of remaining cylinder.
4. Testing Agency must evaluate grout for conformance with Specifications as follows:
- a. Strength test:
 - i) Testing Agency must maintain a compressive strength moving average, comprised of three consecutive strength test results, for each mix design used in Work.
 - ii) Strength level of grout will be considered satisfactory provided averages of all sets of three consecutive strength test results (i.e. moving average) equal or exceed specified 28-day strength, and no individual strength test result falls below specified 28-day strength by more than 500 psi.
 - iii) If strength tests fail to meet minimum requirements at 56 days (or longer for the reserve cylinders, grout represented by such tests must be considered questionable. The Commissioner may require the Contractor perform a core drill of the full depth of the caisson for quality examination and strength testing of core specimens.
 - iv) Grout samples must be molded, cured in a properly constructed curing box supplied by Contractor.
 - v) If the strength requirement is not met, Contractor must modify the proportions of the mix subject to the approval of the Commissioner. If the required design

strength is not attained after 28 days, then the Contractor must install replacement caisson(s) as required at no additional cost to the City of New York.

- E. If agitated continuously, the grout may be held in the truck for a period not exceeding two hours at temperatures below 70 degrees Fahrenheit and for a period not exceeding one hour at higher temperatures.
- F. Re-tempering of grout will not be permitted.

3.12 SPECIAL INSPECTION

- A. No work will be performed without the presence of the Special Inspector. The Contractor must notify the Special Inspector and the Commissioner a minimum of 72 hours prior to start of caisson installation and video inspection work.
- B. The Contractor must cooperate with the Special Inspector to facilitate the progress of inspection work. If the Contractor fails to cooperate with the Special Inspector, the Special Inspector must bring the matter to the attention of the Commissioner.
- C. Rock Socket Inspection
 - 1. Video inspection of caisson rock sockets must occur in the presence of the Special Inspector.
 - 2. Contractor must provide all necessary equipment and personnel to perform rock socket inspection via video camera.
 - 3. Rock socket video must be performed by the contractor, in the presence of the Special Inspector. The video file or CD must be provided to the Commissioner and Special Inspector within 48 hrs.
 - 4. Defects in the sockets must be addressed to the Commissioner's requirements. Contractor must correct all defects at no additional cost to the City of New York.
 - 5. The bottom of the rock sockets must be visible during video inspection.
 - 6. All sockets must be video inspected before placement of reinforcement steel and grout.

3.13 CLEAN-UP

- A. All excess material, including earth, rock and fill, must be removed from site and legally disposed of. Material handling and disposal must be in accordance with the Contract Documents
- B. All lumber, forms and metal work must be removed immediately after completion of local areas. The Contractor is responsible for removal of all debris produced by work to this section from the site.
- C. Sidewalk and streets adjoining the property must be broom cleaned and free of debris, rubbish, trash and obstructions of any kind caused by the work of this Section.

3.14 CLOSEOUT

A. Substantial Completion Requirements:

1. Provide final cleaning immediately prior to Substantial Completion inspection.
2. Corrective Work:
 - a. Remove, correct and reinstall, or restore in place damaged items.
 - b. Replace damaged materials or items with New if correction not acceptable to Commissioner.
3. Provide product data to complete Operation & Maintenance Manuals.

3.15 WASTE MANAGEMENT

- A. Separate and dispose of waste in accordance with the Project's Waste Management Plan.

END OF SECTION 31 64 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 11 23

AGGREGATE BASE COURSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:

Open-graded stone base must consist of the furnishing and placing of broken stone in the places designated on the plans, and in such other locations as field conditions require. The thickness and locations of the “open-graded stone base” must be shown on the plans, or as determined by field conditions and ordered by the Commissioner.

1.3 INTENT

- A. This section describes the construction of an open-graded stone base.

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All materials for this work must be of sound, clean, hard, durable freshly broken unweathered stone not contaminated with clay and free from any organic or other deleterious material. Prior to the placement of any base material, the Contractor must submit a representative sample to the Commissioner and obtain approval, in writing. The material must meet the following gradation requirements unless otherwise specified by NYSDOT specifications:

Sieve Size	Percent Passing (By Weight)
1 inch	100
3/4 inch	65-90
3/8 inch	45-75
No. 4	30-55
No. 100	4-15

- B. The quality of the stone particles must be determined by the Magnesium Sulphate Soundness Test. The maximum percent loss at 4 cycles, by weight, must be 20.
- C. Should, at any time during the work for any reason, the material fail to conform to the specified quality and gradation requirements, the Contractor must by the addition of selected acceptable material, and/or satisfactory manipulation, produce a material meeting the above requirements.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 METHODS

- A. The material must be spread in equal thickness layers. The spreading of any layer of this material must be done with spreader equipment approved by the Commissioner, and must be spread to such thickness that the maximum depth of the layer, after compaction, will be 6 inches. Spreading from piles dumped on the roadway will not be permitted. No segregation of large or fine particles will be allowed, but the material, as spread, must be well graded, with no pockets of fine material. Water must be added in such amounts as the Commissioner may consider necessary to obtain satisfactory compaction.
- B. When the moisture content if the layer is within the limits for proper compaction, the entire surface must be rolled with a pneumatic tired roller, having an operating weight of between 1,000 and 2,500 pounds per tire, or a smooth steel wheel roller, having a minimum weight of (10) tons. Each portion of the layer must be covered by a minimum of eight (8) passes of the roller.
 - 1. For heavier vibratory or more efficient types of approved compaction equipment, the minimum number of passes required on all portions of each layer must be determined by the Commissioner after appropriate field tests to evaluate the efficiency of such equipment. In limited areas, where the use of a roller is impractical, approved vibrating plate compactors or impact rammers must be used to compact the material.
- C. After compaction, the top surface of this base must not extend above, no more than ½ inch below, true grade and surface at any location. The base, at any location, must be compacted, finished and completed to the above tolerance and approved by the Commissioner, before any succeeding pavement course is placed at the location. Any depressions or holes must be filled

with approved coarse sand or screenings and the surface re-rolled. In all cases, this stone base must be so thoroughly compacted that it will not weave under the roller.

- D. The width of the layer of this base must be restricted to that required for placement of the lane being paved and must not be laid in excess of 500 linear feet without being compacted. No traffic or hauling other than that necessary for bringing material for the next course, must be permitted over this base. Should the subgrade, subbase, or any other material become churned up into or mixed with this base, for any reason whatsoever, the Contractor must, at own expense, remove such mixtures and replace with open-graded stone acceptable for this Section.
 - 1. The Contractor must assume full responsibility for any contamination and/or degradation of any part of this base during construction and must, at own expense, remove any and all portions of this base which do not conform to the requirements of these specifications and replace these portions with specified material.

- DI. Where indicated on the plans, an asphaltic tack coat must be applied to the surface of the stone base course for bonding to an overlying asphaltic concrete wearing course. Tack coat must be as per Section 321213.13 of these Specifications.

END OF SECTION 32 11 23

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 11 36

CONCRETE BASE COURSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. The construction of a concrete base for roadway pavements as shown on the plans and in accordance with NYCDOT Standard Specification, and as directed by the Commissioner.
 2. Concrete Pavement areas within NYSDOT jurisdiction to follow NYSDOT Standard Sheets and Specifications.

1.3 RELATED WORK

- A. Related work is described in the following sections of the specifications:
1. Section 32 12 19: Asphaltic Paving Wearing Course
 2. Section 32 12 13.13: Tack Coats

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. The Contractor must submit material certifications and concrete mix designs as required by NYSDOT and NYCDOT Standard Specifications to the Commissioner for review and approval prior to starting work.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. For areas within NYCDOT jurisdiction, all material must comply with Section 4.04 of NYCDOT Standard Specifications, Concrete must be Class B-32, type IA using Type I Portland cement, per Section 3.05.
- B. For areas within NYSDOT jurisdiction, follow NYSDOT Standard Sheets and Specifications.

2.2 INSERTS IN CONCRETE SUB-SLAB

- A. Diamond shape plate dowel - epoxy coated dowel with debonding material.
- B. Dowel basket - uncoated steel.
- C. Smooth dowel – round dowel provided with one debonded end cap.
- D. Reinforcing Wire Fabric: Galvanized, welded wire fabric, as indicated on drawings; comply with ASTM A 185/A 185M and ASTM A 82/A 82M except for minimum wire size.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 METHOD

- A. For areas within NYCDOT jurisdiction, the concrete roadway base paving must be 8" thick NYCDOT Class B-32 concrete or as shown on plans; cement must be Type I Portland. An approved air-entraining agent must be added at the time concrete ingredients are mixed with water. The concrete base must be finished three (3) inches below the surface of the new asphaltic concrete wearing course within a tolerance of $\pm 1/4$ inch throughout. The finished surface must be struck uniformly and be free of ruts, depressions, bumps and unevenness, suitable for temporary use as a vehicular riding surface and for the application of reflective cracking membrane under NYCDOT Specification Section 6.91. Also, transverse roadway joints must be sawcut every 20 feet as shown on NYCDOT Standard Drawing H-1040. Concrete base paving work and materials must comply with Section 4.04 of the NYCDOT Standard Specifications and with NYCDOT Standard Drawing Nos. H-1040 and H-1042A.
- B. For areas within NYSDOT jurisdiction, follow NYSDOT Standard Sheets and Specifications.

3.3 TESTING

- A. The City of New York will engage the services of an approved testing laboratory for Special Inspection to determine the in-place density of the soil after compaction is completed. All proctor analyses of soils and in-place density testing must comply with the requirements of NYSDOT specifications and Section 7.12 of the NYCDOT Highway Specifications.
- B. Concrete materials and operations must be tested and inspected as the work progresses.
- C. The Contractor must retain the services of an independent testing lab, licensed in New York State, to provide inspection services at the site during mixing and placement of all pours, prepare concrete cylinder samples, test cylinders for compressive strength and to provide test reports of the results. The testing lab representative must record the concrete slump, air content, concrete temperature and the concrete unit weight and yield for each set of cylinders taken and for each truck delivery. The Contractor must provide adequate facilities (heated, insulated curing box, etc.) on the project site for the safe storage and proper curing of the test cylinders for the first 24 hours, prior to transport to the testing lab.
- D. Sampling and testing must comply with NYSDOT Specifications and Standard Sheets as well as Sections 5.01, 5.02, 5.03 and 6.72 of the NYCDOT Standard Specifications.

END OF SECTION 32 11 36

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 12 13.13

TACK COATS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Furnish and install pavement tack coat on concrete bases and between bituminous layers in accordance with NYSDOT and N.Y.C.D.O.T. Standard Specifications as directed by the Commissioner.

1.3 RELATED WORK

- A. Related work is described in the following sections of the Specifications:
1. Section 32 12 19: Asphaltic Paving Wearing Course

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit material certificates.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Material to comply with NYSDOT Standard Specifications. Where applicable, Liquid Asphalt (RC -70), Emulsified Asphalt (RS-1) or Asphalt Cement (AC-20) complying with the requirements of N.Y.C.D.O.T. Standard Specification Section 6.58A (Latest Revision) must be furnished and applied.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 METHOD

- A. Apply tack coat per latest NYSDOT Standard Specifications or latest revision of Section 6.58A of the NYCDOT Standard Specifications.

END OF SECTION 32 12 13.13

SECTION 32 12 19

ASPHALTIC PAVING WEARING COURSE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Construct asphaltic concrete wearing course for roadways as shown on the plans and in accordance with NYSDOT Standard Specifications, N.Y.C.D.O.T. Standard Specifications, and as directed by the Commissioner.
 2. For areas under NYCDOT jurisdiction (and unless otherwise specified on plans), asphaltic concrete wearing course must consist of a binder mixture and a surface mixture, each 0.5 inches in thickness after compaction unless otherwise noted on plans or otherwise required by the NYSDOT Specifications. Additional binder mixture must be placed where required.

1.3 RELATED WORK

- A. Related work is described in the following sections of the specifications:
1. Section 32 12 13.13: Tack Coats

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Before the Contractor begins to manufacture the asphalt paving mixture, the Contractor must secure the Commissioner’s approval of the mix formula proposed for use. The Contractor must submit for this purpose a statement, in writing, of the sources of all ingredient materials, the penetration of the asphaltic cement and the percentages by weight and the number of pounds of each of the materials making up one batch.
1. The approved formula must not be changed without the written permission of the Commissioner.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. All materials must comply with the requirements of NYSDOT Standard Sheets and N.Y.C.D.O.T Standard Specifications Section 4.02A, latest revision.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 SUMMARY

- A. Asphaltic concrete wearing course to be provided as specified on plans.
- B. For areas under NYCDOT jurisdiction (and unless otherwise specified on plans), the 1" thick asphalt concrete wearing course must consist of ½" (after compaction) of plant-mixed Marshall design high friction Type 6F RA asphaltic concrete surface course placed on ½" (after compaction) plant mixed Marshall design Type 3 RA binder base course. A tack coat must be applied to the concrete base pavement prior to asphalt placement. Work and materials must comply with the latest revision of Section 4.02A of the NYCDOT Standard Specifications and with NYCDOT Standard Drawing Nos. H-1040 and H-1042A.

3.3 METHOD

- A. Before any asphaltic mixture is laid, the surface must be thoroughly swept and cleaned of all dirt, loose and foreign matter, and be free from standing water. No mixture must be deposited unless the surface on which it is to be laid is in a condition acceptable to the Commissioner.
 - 1. Unless otherwise specified, shown on the plans or directed by the Commissioner, surfaces on which asphaltic mixtures are to be laid must be given a tack coat as specified under Section 321213.13.
- B. The maximum length of asphaltic mixture which can be placed by an approved mechanical spreader in a continuous strip must not exceed 800 feet, unless permitted, in writing, by the Commissioner. Adjacent strips must be laid, subject to the above limitations, immediately after each previous strip is placed until the full width of roadway surface has been covered in the said maximum or permitted length.

- C. Binder mixture must be furnished and laid by means of a mechanical spreader of approved design to a depth which after final compaction must be equal to the specific depth. In areas where the use of a mechanical spreader is impractical, as determined by the Commissioner, other approved means of spreading and compaction may be permitted.
 - 1. Where permitted by the Commissioner, hand laying must comply with NYSDOT and N.Y.C.D.O.T. Standard Specifications.
- D. The surface of the binder course must be kept as free from traffic as is possible under working conditions, be clean, free from water, and if necessary, swept off immediately before the surface mixture is laid. Binder must be covered with surface mixture as soon as practicable and in all cases not later than the same day, unless otherwise directed by the Commissioner.
- E. All contact surfaces of curbs, gutters, headers, manholes etc., must, before the surface mixture is laid, be well painted with a thin uniform coating of approved hot asphaltic cement or liquid asphalt or emulsified asphalt.
- F. Surface mixture must be furnished and laid by means of mechanical spreader of approved design to a depth which after final compaction must be equal to the specific depth. In areas where the use of a mechanical spreader is impractical, as determined by the Commissioner, other approved means of spreading and compaction may be permitted.
 - 1. Where permitted by the Commissioner, hand laying of the mixture must comply with N.Y.C.D.O.T. Specifications.
- G. Leveling course mixture, on reaching the street, must be dumped on approved dumping boards or steel plates and must be immediately deposited by means of hot shovels over the area to be leveled, built-up or adjusted. It must be uniformly spread by means of hot iron rakes to a thickness that will provide a surface, after final compaction, which must be a constant depth, equal to the specified thickness of wearing course, below the proposed final surface of the wearing course. Where practical, a mechanical spreader of approved design may be used.
- H. Rolling must proceed continuously within the time limit requirements and rates provided under NYSDOT Standard Specifications and N.Y.C.D.O.T. Standard Specifications. Rolling equipment must comply with NYSDOT and N.Y.C.D.O.T. Specifications.
- I. The surface mixture must be laid in as nearly a continuous operation as possible and the roller must pass over the unprotected end of the freshly laid mixture only when the laying of the course is to be discontinued for such length of time as to permit the mixture to become chilled. In all such case, including the formation of joints, as herein required, provision must be made for proper bond with new mixture by cutting or trimming back the joint so as to expose an unsealed or granular surface for the full specified depth of the course. At the end of each day's work on the mixture, joints must be formed by laying and rolling against boards of the thickness of the compacted mixture, placed across the entire width of the pavement or by such other method as may be approved by the Commissioner. When the laying of the mixture is resumed, the exposed edge of the joint must be painted with a thin coat of approved hot asphaltic cement or liquid asphalt, and fresh mixture must be raked against the joint and thoroughly tamped with hot tampers and rolled. Hot smoothing irons may be used for sealing jobs.
- J. Mixtures must be spread and compacted during daylight under acceptable weather conditions presented in NYSDOT and N.Y.C.D.O.T. Standard Specifications.

3.4 TRAFFIC

- A. No traffic of any kind will be allowed on the pavement until permitted by the Commissioner.

3.5 DEFECTIVE WEARING COURSE

- A. Such portions of the completed wearing course as are defective in finish, compression, composition, density or do not comply with the requirements of these specifications, must be taken up, removed and replaced with suitable material properly laid in accordance with these specifications.

3.6 FIELD QUALITY CONTROL TESTING

- A. The Contractor must employ a qualified independent testing laboratory to perform thickness and density tests and submit test reports in accordance with NYSDOT and N.Y.C.D.O.T. Standard Specifications.

END OF SECTION 32 12 19

SECTION 32 15 40

CRUSHED STONE SURFACING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contractor Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes:

1. Crushed stone paving course for walkways and storage container areas, compacted with metal edge.

B. Related Sections:

1. Section 312333 "Trenching and Backfilling"
2. Section 321613 Curbs and Gutters
3. Section 329200 Turf and Grasses
4. Section 329300 Plants

1.3 REFERENCES

A. General:

1. The following documents form part of the Specifications to the extent stated. Where differences exist between codes and standards, the one affording the greatest protection shall apply.
2. Unless otherwise noted, the referenced standard edition is the current one at the time of commencement of the Work.

B. American Association of State Highway and Transportation Officials:

1. AASHTO T 27 Sieve Analysis of Fine and Coarse Aggregates.

1.4 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures.

- B. Shop Drawings: Submit plan layout of all crushed stone surfacing areas and detail drawings showing various components of the system, including subgrade and edging.
- C. Product Data: Manufacturer’s literature completely describing all components of crushed stone surfacing and edging including:
 - 1. Preparation instructions and recommendations.
 - 2. Installation methods and application procedures.
- D. Samples for Verification:
 - 1. Submit samples of each of the followings:
 - a. Three-pound sample of crushed bluestone surfacing material.
 - b. Edging material and stakes, not less than 12 inches long and 1 stake.

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 0140 00 “Quality Requirements”.
- B. Manufacturer’s: Company specializing in manufacturing Work of this Section with minimum 3 years documented experience.
- C. Single Source Responsibility: Obtain each crushed bluestone from single source.
- D. Mock-up: Provide a mock-up for evaluation of surface preparation, installation techniques and quality of application.
 - 1. Install 3-feet x 10-feet minimum of crushed bluestone surfacing, including edging. At location approved by Commissioner.
 - 2. Do not proceed with remaining work until installation of bluestone surfacing is approved by Commissioner.
 - 3. Approved mock-up may remain as part of completed Work.

1.6 DELIVERY, STORAGE AND HANDLING

- A. Bagged Materials: Accept delivery of materials only in unopened and undamaged containers bearing the brand name and manufacturer’s identification.

- C. Bulk Materials: Each load of crushed bluestone surfacing material arriving at the job site in bulk shall be accompanied by a delivery ticket containing the following minimum information.
 - 1. Quarry of origin.
 - 2. Amount, weight, and description of materials.
 - 3. Brand name and manufacturer’s identification

- D. Protect crushed bluestone surfacing and metal edging materials from contamination until ready for installation. Store under cover.

PART 2 - PRODUCTS

2.1 COARSE STONE

- A. Basis of Design Product: Subject to compliance with requirements, provide coarse stone- angular, crushed, bluestone, washed natural stone; free of shale, clay, friable materials and debris; graded in accordance with AASHTO T 27, within the following limits:

Sieve Size	Percent Passing
3/4-inch (20 mm)	[95] to [100]

- B. Supplied by Masonry Depot, 34 Evans Street, New Rochelle, NY, Tel: (914) 576-7777 or comparable product by one of the following:

- 1. Braen Supply, 400-402 Central Ave., Haledon, NJ, (973) 835-1419
- 2. Hardscrabble Supply, 110 Hardscrabble Road, North Salem, NY Tel: (914) 669-5150
- 3. Or approved equal.

2.2 STEEL EDGING

- A. Basis of Design Product: Subject to compliance with requirements, provide powder coated steel edging: 10’ long x 6” wide x ¼” thick with pre punched stake slots (3’-0” spacing) and stakes. Color: Black. Supplied by Colmet, 3333 Miller Park South, Garland, TX 75042, Tel: (800) 829-8225 Email: sales@colmet.com or comparable product by one of the following:

1.

- 1. Sure-Loc Edging, 310 E.6th St., Holland, MI 49423 Tel: (800) 787-3562
Email: info@surelocedging.com
- 2. Border Concept, 319 Enterprise Way, Pittston, PA 18640, Tel: (800) 845-3343
Email: sales@colmet.com
- 3. Or approved equal.

2.3 HERBICIDE

- A. Commercial chemical for weed control, registered by the EPA and not classified as restricted use, for location and condition of application. Application shall pose not short- or long-term health threats to installer or general public.

PART 3 - EXECUTION

3.1 EXECUTION REQUIRMENTS

- A. Refer to DDC General Conditions for executions requirements.

3.2 EXAMINATION

- A. Examine areas and conditions under which Work of this section will be performed. Notify Commissioner of any unsatisfactory preparation before proceeding.
- B. Correct conditions detrimental to timely and proper Work.
- C. Do not proceed until unsatisfactory conditions are corrected.
- D. Lay out work prior to the commencement of installation.

3.3 PREPARATION

- A. Excavation: Excavate to depth required so edges of crushed bluestone surfacing will match adjacent grades and have a maximum cross-slope of 2 percent. Ensure edges and bottom of excavation are in a smooth and even line.
- B. Subgrade Preparation: Plow, harrow and mix entire surface of the in-place subgrade to a depth of at least 6". After the material has been thoroughly mixed, the subgrade shall be brought to line and grade and compacted to 95% of the maximum laboratory dry density as determined by the Standard Proctor test.
- C. Herbicide: Apply herbicide per manufacturer's written instructions. Limit the application to the areas to receive crushed bluestone surfacing.

3.4 INSTALLATION

- A. Steel Edging: Install edging flush with top of crushed bluestone surfacing. Provide sufficient stakes to secure edging in place during and after crushed bluestone surfacing installation.
- B. Subgrade: Proof-roll the subgrade with heavy pneumatic -tired equipment to locate unstable areas and to identify soft pockets and areas of excess yielding. Do not proof-roll wet or saturated subgrades.
 - 1. Excavate soft spots, unsatisfactory soils, and areas of excessive pumping or rutting, as determined by Commissioner, and repave with compacted backfill or fill as directed.
 - 2. The surface of the completed subgrades shall be bladed smooth and uniform texture.
 - 3. The finished subgrade shall be uniform and free from deleterious debris such as organic materials, nails, stones, and loose soil.

3.5 INSTALLATION OF CRUSHED BLUESTONE SURFACING

- A. Spread crushed bluestone surfacing materials in 3-to-4-inch lifts. Spread the mix evenly and smoothly before compacting. Allow for 20-25% compaction.
- B. Wet the mix to ensure water has penetrated the full depth of the crushed bluestone surfacing material. And roll each lift to a uniform smooth surface with cross slope of 2% maximum. Compact lift to a minimum 95% density.
- C. Grade and smooth to required elevation; compact final lift with 1–3-ton drum roller or compactor.
- D. Minimum Compacted Thickness:
 - 1. Walkways and Container Areas: 6-inches
- E. Surface shall follow grades per plans. Allow for 1-2% cross pitch.

3.6 CLEAN-UP AND PROTECTION

- A. Thoroughly clean all areas where work has occurred. Remove from site excess material, debris and rubbish.
- B. Take all precautions necessary to protect completed work until Substantial Completion of project.

END OF SECTION 32 15 40

SECTION 32 16 13

CURBS AND GUTTERS

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Construct concrete curbs as shown on the plans and in accordance with the NYCDOT Standard Specifications and as directed by the Commissioner.

1.3 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 PRODUCTS

2.1 MATERIALS

- A. All materials must conform to NYCDOT standard specifications, Sections 4.08, and 4.09, as applicable, latest revisions.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 CONSTRUCTION

- A. All concrete curbs and headers must be constructed at the locations and of the types shown on the plans and must conform to N.Y.C.D.O.T Standard Drawings and Specifications or as directed by the Commissioner.
- B. Roadway curbing must be 11" deep concrete. Concrete must be NYCDOT Class A-40 Type II A; cement must be type II Portland. An approved air-entraining agent must be added at the time concrete ingredients are mixed with water. Work materials must comply with Section 4.09 of the NYCDOT Bureau of Highway Operations "Standard Specifications" and with NYCDOT Standard Drawing No. H-1010.

3.3 TESTING

- A. Concrete materials and operations must be tested and inspected as the work progresses.
- B. The contractor must be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix

CHAIN LINK FENCES AND GATES

PART 1 GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section includes:
 - 1. Chain link fencing.
 - 2. Gates.
 - 3. Hardware and accessories.
- B. Related Sections
 - 1. Section 03 30 00 "Cast-in-Place Concrete"

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".
- B. Product Data: Submit manufacturer's technical data and installation instructions for metal fencing and gates.

1.4 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".
- B. Provide chain link fences and gates as complete units controlled by a single source including necessary erection accessories, fittings, and fastenings.

PART 2 PRODUCTS

2.1 MANUFACTURER

- A. Subject to compliance with requirements, provide products of one of the following:
 - 1. Anchor Fence, Inc.

- 2. Colorguard Corp.
- 3. United States Steel.
- 4. Or approved equal.

2.2 FENCING

- A. Fabric: No. 9 gauge (0.148") finished size steel wires two (2) inch mesh, with top selvages knuckled for fabric sixty (60) inches high and under, and both top and bottom selvages twisted and barbed for fabric over sixty (60) inches high.
 - 1. Fabric finish, galvanized, ASTM A392, Class II, with not less than 2.0 oz. zinc per square foot of surface.
- B. Framework: Galvanized steel, ASTM A120, with not less than 1.8 oz. zinc per square foot of surface.
- C. Hardware and Accessories: Galvanized, ASTM A152, with zinc weights per Table 1.

2.3 FRAMING AND ACCESSORIES

- A. End, Corner, Line and Pull Posts: 2.875" O.D. steel pipe weighing 5.79 lbs. per linear foot.
 - 1. Space line posts 10' - 0" o.c. maximum, unless otherwise noted on Drawings.
- B. Gate Posts: Furnish posts for supporting single gate leaf, or one leaf of a double gate installation, for nominal gate widths as follows:

<u>Leaf Width</u>	<u>Gate Post</u>	<u>Lbs. per Linear Foot</u>
Up to 6'	2.875" OD pipe	5.79
Over 6' to 13'	4.000" OD pipe	9.11
Over 13' to 18'	6.625" OD pipe	18.97
Over 18'	8.625" OD pipe	28.55

- C. Top rail manufacturer's longest lengths, with expansion type couplings, approximately six (6) inches long, for each joint. Provide means for attaching top rail securely to each gate, corner, pull and end post.
 - 1. 1.66" OD pipe, 2.27 lbs. per square foot.
- D. Tension Wire: Seven (7) gauge, coated coil spring wire, metal and finish to match fabric located at bottom of fabric.
- E. Post Brace Assembly: Manufacturer's standard adjustable brace at end and gate posts and at both sides of corner and pull posts, with horizontal brace located at mid-height of fabric. Use same material as top rail for brace, and truss to line posts with 0.375" diameter rod and adjustable tightener.

- F. Post Tops: Weathertight closure cap, one cap for each post. Furnish caps with openings to permit passage of top rail.
- G. Stretcher Bars: One piece lengths equal to full height of fabric, with minimum cross section of 3/16" x 3/4". Provide one stretcher bar for each gate and end post, and two (2) for each corner and pull post, except where fabric is integrally woven into post.
- H. Stretcher Bar Bands: Space not over fifteen (15) inches o.c. to secure stretcher bars to end, corner, pull, and gate posts.
- I. Gates: Fabricate swing gate perimeter frames of 1.90" OD pipe. Metal and finish to match framework. Provide horizontal and vertical members to ensure proper gate operation and for attachment of fabric, hardware and accessories. Space so that frame members are not more than eight (8) feet apart.
 - 1. Assemble gate frames by welding or with special fittings and rivets, for rigid connections. Use same fabric as for fence, unless otherwise indicated. Install fabric with stretcher bars at vertical edges. Bars may also be used at top and bottom edges. Attach stretchers to gate frame at not more than fifteen (15) inches o.c. Attach hardware to provide security against removal or breakage. Install diagonal cross bracing consisting of 3/8" diameter adjustable length truss rods on gates to ensure frame rigidity without sag or twists, if required.
- J. Gate Hardware: Furnish the following hardware and accessories for each gate.
 - 1. Hinges: Size and material to suit gate size, non-lift-off type, offset to permit one-hundred-eighty (180) degree gate opening. Provide 1-1/2 pair of hinges for each leaf over six (6) feet nominal height.
 - 2. Latch: Forked type or plunger bar type to permit operation from either side of gate, with padlock eye as integral part of latch.
 - 3. Keeper: Provide keeper for vehicle gate, which automatically engages gate leaf and holds it in position until manually released.
 - 4. Double Gates: Provide gate stops for double gates, consisting of mushroom type of flush plate with anchors. Set in concrete, to engage center drip rod or plunger bar. Include locking device and padlock eyes as integral part of latch, using one padlock for locking both gate leaves.
 - 5. Sliding Gates: Provide manufacturer's standard heavy duty track, ball bearing hanger sheaves, overhead framing and supports, guides, stays, bracing, and accessories as required.
- K. Wire Ties: For tying fabric to line posts, use wire ties spaced twelve (12) inches o.c. For tying fabric to rails and braces, use wire ties spaced twenty-four (24) inches o.c. For tying fabric to tension wire, use hog rings spaced twenty-four (24) inches o.c. Manufacturer's standard procedure will be accepted if of equal strength and durability.

- L. Concrete: Provide concrete for post footings consisting of Portland cement, ASTM C150, aggregates ASTM C33, and clean water. Mix materials to obtain concrete with a minimum twenty-eight (28) day compressive strength of two-thousand-five-hundred (2500) psi using at least four (4) sacks of cement per cubic yard, one (1) inch maximum size aggregate, maximum three (3) inch slump, and two (2) percent to four (4) percent entrained air.

PART 3 EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Do not begin installation and erection before final grading is completed.
- B. Excavation: Drill holes for posts in firm, undisturbed or compacted soil.
 - 1. Excavate hole depths approximately three (3) inches lower than post bottom, with bottom of posts set not less than thirty-six (36) inches below finish grade surface.
- C. Setting Posts: Center and align posts in holes three (3) inches above bottom of excavation.
- D. Place concrete around posts and vibrate or tamp for consolidation. Check each post for vertical and top alignment, and hold in position during placement and finishing operations.
- E. Top Rails: Run rail continuously through post caps, bending to radius for curved runs. Provide expansion couplings as recommended by fencing manufacturer.
- F. Tension Wire: Install tension wires before stretching fabric and tie to each post with not less than six (6) gauge galvanized wire. Fasten fabric to tension wire using eleven (11) gauge galvanized steel hog rings spaced twenty-four (24) inches o.c.
- G. Fabric: Leave approximately two (2) inches between finish grade and bottom selvage, unless otherwise indicated. Pull fabric taut and tie to posts, rails, and tension wires. Install fabric on security side of fence, and anchor to framework so that fabric remains in tension after pulling force is released.
- H. Stretcher Bars: Thread through or clamp to fabric four (4) inches o.c., and secure to posts with metal bands spaced fifteen (15) inches o.c.
- I. Gates: Install gates plumb, level, and secure for full opening without interference. Install ground set items in concrete for anchorage, as recommended by fence manufacturer. Adjust hardware for smooth operation and lubricate where necessary.

- J. Tie Wires: Use U-shaped wire, conforming to diameter of pipe to which attached, clasping pipe and fabric firmly with ends twisted at least two (2) full turns. Bend wire to minimize hazard to persons or clothing.
- K. Fasteners: Install nuts for tension bands and hardware bolts on side of fence opposite fabric site. Peen ends of bolts or score threads to prevent removal of nuts.

SECTION 32 92 00

TURF AND GRASSES

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contractor Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

A. Section Includes:

1. Seeding of new lawns.
2. Sodding of new lawns.

B. Related Requirements:

1. Section 329113 “Soil Preparation” for soils and erosion control fabrics.
2. Section 329300 “Plants”

1.3 DEFINITIONS

- A. Pesticide: A substance or mixture intended for preventing, destroying, repelling, or mitigating a pest. This includes insecticides, miticides, herbicides, fungicides, rodenticides, and molluscicides. It also includes substances or mixtures intended for use as a plant regulator, defoliant, or desiccant.
- B. Planting Soil: Existing, on-site amended soil or imported soil; or manufactured soil that has been modified with soil amendments and perhaps fertilizers to produce a soil mixture best for plant growth.

1.4 PREINSTALLATION MEETINGS

- A. Preinstallation Conference: Conduct conference at Project site.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Sections 01 33 00 “Submittal Procedures”.
- B. Certification of grass seed.

1. Certification of each seed mixture.

C. Product certificates.

1.6 QUALITY ASSURANCE

A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

B. Installer Qualifications: Personnel Certifications: Installer's field supervisor shall have certification in one of the following categories from the Professional Landcare Network:

1. Landscape Industry Certified Technician - Exterior.
2. Landscape Industry Certified Lawncare Manager.
3. Landscape Industry Certified Lawncare Technician.

C. Pesticide Applicator: State licensed, commercial.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Seed and Other Packaged Materials: Deliver packaged materials in original, unopened containers showing weight, certified analysis, name and address of manufacturer, and indication of compliance with state and Federal laws, as applicable.

PART 2 - PRODUCTS

2.1 GRASS SEED MIX

A. Basis of Design Product: Subject to compliance with requirements, provide Grass seed mix Survivor 50/50. Supplied by Agrium Direct Solutions, 165 Orville Drive, Bohemia, NY, 11716. Tele: 631-286-0598 or comparable product by one of the following:

1. Tuf Turf – Lesco Inc. 1385 East 36thSt. Cleveland OH, 44114 Phone: (800)347-4272
2. Survivor Tall Fescue Blend- Johnston Seed Company, 319 West Chestnut, Enid OK, 73707 Phone: (580) 249-4449.
3. Or approved equal.

2.2 SOD

A. Sod: Certified and approved, Number 1 Quality/Premium, including limitations on thatch, weeds, diseases, nematodes, and insects, complying with TPI’s Specifications for Turfgrass Sod Materials” in the TPI "Guideline Specifications to Turfgrass Sodding," Turfgrass Producers International (TPI), 1855-A Hicks Road, Rolling Hills, IL 60008, (800) 405-8873.

1. Furnish viable sod of uniform density, color, and texture, strongly rooted and capable of vigorous growth and development when planted.
2. Thatch layer shall not exceed 1/8 inch (3 mm).

B. Turfgrass Species: Sod of grass species as follows, with not less than 95 percent germination, not less than 85 percent pure seed, and not more than 0.5 percent weed seed:

1. Proportioned by weight as follows:

- a. 80 percent improved turf-type tall fescue blend (*Festuca arundinacea*). Provide minimum of two varieties of improved turf-type tall fescue formulated for the Northeastern United States region:
- b. 20 percent Kentucky bluegrass blend (*Poa pratensis*). Provide minimum of two varieties of improved bluegrass formulated for the Northeastern United States Region.

C. Basis of Design Product: Subject to compliance with requirements, turf-type tall fescue grown with a mineral based soil. Sod seed mix certificates, and sod samples must be approved by the Commissioner. Sod grown and supplied by: DeLalio Sod Farms LLC, 652 Deer Park Avenue, Dix Hills, NY 11746, 800-326-4763 Or comparable sod, grown by one of the following:

1. DeLea Sod Fam, 444 Elmwood Rd., East Northport, NY, 631.368.8022
2. Schmitt's Sod Farm, 26 PinelawnRd. Mellville, NY 11747, 631.351.8873
3. Or approved equal

2.3 FERTILIZERS/MYCORRHIZAL FUNGAL INOCULANTS

A. Basis of Design Product: Subject to compliance with requirements, provide granular fertilizer with mycorrhizal fungal inoculants for new lawns by Plant Health Care, Inc or comparable product by one of the following:

1. Roots PHC Plant Saver
2. BioPlex
3. Or approved equal.

B. Size: Granular material in 10Kg box.

2.4 MULCHING PELLETS

A. Basis of Design Product: Subject to compliance with requirements, provide mulching pellet with seed starter for new lawn applications by Profile Products LLC, or comparable product by one of the following:

1. Penmulch Seed Accelerator
2. Lesco Hydrocover
3. Or approved equal.

2.5 PESTICIDES

- A. General: Pesticides shall not be used. Contractor shall report any evidence of pest problems to the Commissioner.

2.6 HOSE COVERS

- A. Hose Covers for Pedestrian Walkways – At all locations where water hoses cross pedestrian paths provide hose covers that meet the following minimum requirements:
 - 1. Color shall be bright yellow or orange.
 - 2. Channel below shall be large enough to accommodate the diameter of the hose.
 - 3. Sides shall be beveled to provide a smooth “ramp”.
 - 4. Shall withstand light vehicular use.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 TURF AREA PREPARATION

- A. Prepare planting area for soil placement and mix planting soil. Moisten prepared area before planting if soil is dry. Water thoroughly and allow surface to dry before planting. Do not create muddy soil.
- B. Before planting, obtain Commissioner acceptance of finish grading; restore planting areas if eroded or otherwise disturbed after finish grading.

3.3 INSTALLATION OF SEEDING

- A. Prior to seeding spread fertilizer and mycorrhizal inoculants by broadcast spreader at rates recommended by manufacturer.
- B. Sow seeds with spreader or seeding machine. Do not broadcast or drop seed when wind velocity exceeds 5 mph.
 - 1. Evenly distribute seed by sowing equal quantities in two directions at right angles to each other.
 - 2. Do not use wet seed or seed that is moldy or otherwise damaged.
 - 3. Do not seed against existing trees. Limit extent of seed to outside edge of planting saucer.
- C. Sow seed at a total rate of 8 lb./1000 sq. ft.
- D. Rake seed lightly into top 1/8 – 1/4 inch of soil, roll lightly, and water with fine spray.

- E. Protect seeded areas with by spreading mulching pellets. Spread uniformly at a minimum rate recommended by the manufacturer.

3.4 TURF MAINTENANCE

- A. General: Maintain and establish turf by watering, fertilizing, weeding, mowing, trimming, replanting, and performing other operations as required to establish healthy, viable turf. Roll, regrade, and replant bare or eroded areas and remulch to produce a uniformly smooth turf. Provide materials and installation the same as those used in the original installation. Maintenance shall continue for a minimum of 45 days after the area was seeded. Contractor shall furnish and set up hoses and sprinklers as required. All hoses that cross pedestrian paths shall be covered with hose covers.
- B. Mow turf as soon as top growth is tall enough to cut. Repeat mowing to maintain specified height without cutting more than one-third of grass height. Remove no more than one-third of grass-leaf growth in initial or subsequent mowings.

3.5 SATISFACTORY TURF

- A. Turf installations shall meet the following criteria as determined by Commissioner:
 - 1. Satisfactory Seeded Turf: At end of maintenance period, a healthy, uniform, close stand of grass has been established, free of weeds and surface irregularities, with coverage exceeding 90 percent over any 10 sq. ft. and bare spots not exceeding 3 by 3 inches.
- B. Use specified materials to reestablish turf that does not comply with requirements and continue maintenance until turf is satisfactory.

3.6 CLEANUP AND PROTECTION

- A. Maintain temporary construction fencing, barricades and warning signs as required to protect newly seeded areas from foot traffic and use. Maintain fencing and signs throughout and remove after turf grasses are established.

END OF SECTION 32 92 00

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 32 93 00

PLANTS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contractor Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract (City of New York Standard Construction Contract).

1.2 SUMMARY

- A. Section Includes: All labor, equipment, appliances, materials, and services, required for the furnishing and installation of all Landscaping work complete in accordance with the specifications and applicable drawings. Work includes, but is not limited to the following:
1. Trees
 2. Perennials and Grasses
 3. Soil and Amendments
 4. Landscape Materials
 5. Maintenance

1.3 REFERENCES

- A. ANSI/ANLA Z60.1 - American Standard for Nursery Stock; 2004.
- B. ANSI A300 Part 1 - American National Standard for Tree Care Operations -- Tree, Shrub and Other Woody Plant Maintenance -- Standard Practices; 2001.

1.4 DEFINITIONS

- A. Balled and Burlapped Stock: Plants dug with firm, natural balls of earth in which they are grown, with ball size indicated on drawings and as recommended by ANSI Z60.1 for type and size of tree or shrub required; wrapped, tied, rigidly supported, and drum-laced as recommended by ANSI Z60.1.
- B. Container-Grown Stock: Healthy, vigorous, well-rooted exterior plants grown in a container with well-established root system reaching sides of container and maintaining a firm ball when removed from container. Container shall be rigid enough to hold ball shape and protect root mass during shipping and be sized per ANSI Z60.1 for kind, type, and size of exterior plant required.
- C. Finish Grade: Elevation of finished surface of planting soil.
- D. Manufactured Topsoil: Soil produced off-site by homogeneously blending mineral soils or sand with stabilized organic soil amendments to produce topsoil or planting soil.

- E. Planting Soil: Native or imported topsoil, manufactured topsoil, or surface soil modified to become topsoil; mixed with soil amendments and perhaps fertilizer to produce a soil mixture best for plant growth.
- F. Subgrade: Surface or elevation of subsoil remaining after completing excavation, or top surface of a fill or backfill, before placing planting soil.
- G. Backfill: The earth used to replace or the act of replacing earth in an excavation.
- H. Pesticide: A substance or mixture intended for preventing, destroying, repelling or mitigating a pest. Pesticides include insecticide, miticide, herbicide, fungicide, rodenticide, and molluscicide. They also include substances or mixtures intended for use as a plant regulator, defoliant, or desiccant. Some sources classify herbicides separately from pesticides.
- I. Root Flare: (Also called ‘trunk flare.’) The area at the base of the plant’s stem or trunk where the stem or trunk broadens to form roots, the area of transition between the root system and the stem or trunk.

1.5 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Product Data: For each type of product indicated.
- C. Product Certificates: For soil amendments, fertilizers and mulch products, signed by product manufacturer, and complying with the following:
 - 1. Manufacturer’s certified analysis for standard products.
 - 2. Analysis of other materials by a recognized laboratory made per methods established by the Association of Official Analytical Chemists, where applicable.
- D. Qualification Data: For Landscape Installer.
- E. Material Test Reports: For imported topsoil.
- F. Planting Schedule: Indicating anticipated planting dates for plants.
- G. Maintenance Instructions: Recommended procedures to be established by Commissioner for maintenance of plants during a calendar year. Submit prior to the date of Substantial Completion and the start of the Guarantee Period.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

- B. Testing Agency Qualifications: An independent, state-operated, or university-operated laboratory; experienced in soil science, soil testing and plant nutrition; with the experience and capability to conduct the testing indicated; and that specializes in typed of tests to be performed.
- C. Topsoil Analysis: Furnish soil analysis by a qualified soil-testing laboratory stating percentages of organic matter; gradation of sand, silt, and clay content; cation exchange capacity; sodium absorption ratio; deleterious material; pH; and mineral and plant-nutrient content of topsoil.
 - 1. Report suitability of topsoil for plant growth. State recommended quantities of nitrogen, phosphorus, and potash nutrients and soil amendments to be added to produce a satisfactory topsoil.
- D. Provide quality, size, genus, species, and variety of exterior plants indicated, complying with applicable requirements in ANSI Z60.1, "American Standard for Nursery Stock".
 - 1. Selection of plants purchased under allowances will be made by Commissioner, who will tag plants at their place of growth before they are prepared for transplanting.
- E. Observation: Commissioner may observe trees and shrubs either at place of growth or at site before planting for compliance with requirements for genus, species, variety, size, and quality. Commissioner retains right to observe trees and shrubs further for size and condition of balls and root systems, insects, injuries, and latent defects and to reject unsatisfactory or defective material at any time during progress of work. Remove rejected trees or shrubs immediately from Project site.
 - 1. Notify Commissioner of sources of planting materials seven days in advance of delivery to site.

1.7 DELIVERY, STORAGE, AND HANDLING

- A. Do not prune trees and shrubs before delivery, except as approved by Commissioner. Protect bark, branches, and root systems from sun scald, drying, sweating, whipping, and other handling and tying damage. Do not bend or bind-tie trees or shrubs in such a manner as to destroy their natural shape. Provide protective covering of plants during delivery. Do not drop plants during delivery.
- B. Handle planting stock by root ball.
- C. Deliver plants after preparations for planting have been completed and install immediately. If new or transplant planting is delayed more than six hours after delivery, set plants in shade, protect from weather and mechanical damage, and keep roots moist.
 - 1. Set balled stock on ground and cover ball with blended topsoil.
 - 2. Do not remove container-grown stock from containers before time of planting.
 - 3. Water root systems of new and transplanted plants stored on-site with a fine-mist spray. Water as often as necessary to maintain root systems in a moist condition.

1.8 PROJECT CONDITIONS

- A. Coordinate planting periods with maintenance periods to provide required maintenance from date of Substantial Completion. Planting Restrictions: Plant during one of the following periods.

Plant	Spring Planting	Fall Planting
Deciduous Trees & Shrubs	March 1- May 15	October 15- Dec. 1
Evergreen Trees & Shrubs	April 1 – May 15	Sept. 1 – Oct. 15
Perennials & Grasses	April 15 – June 15	Sept. 1 – Oct. 15

- B. Weather Limitations: Proceed with planting only when existing and forecasted weather conditions permit.

1.9 WARRANTY

- A. Special Warranty: Warrant the following plants, for the warranty period indicated, against defects including death and unsatisfactory growth, except for defects resulting from lack of adequate maintenance, neglect, or abuse by Commissioner, or incidents that are beyond Contractor's control.
1. Warranty Period for Trees, Shrubs Perennials and Groundcover: Two year from date of Substantial Completion.
 2. Remove dead plants immediately. Replace immediately unless required to plant in the succeeding planting season.
 3. Replace exterior plants that are more than 25 percent dead or in an unhealthy condition at end of warranty period.

1.10 START-UP

- A. Trees and Shrubs: Maintain until the of date substantial completion by pruning, cultivating, watering, weeding, fertilizing and resetting to proper grades or vertical position, as required to establish healthy, viable plantings. Utilize an IPM (Integrated Pest Management) Program as required to keep shrubs free of insects and disease.
- B. When Substantial Completion has not been reached before end of planting season, continue maintenance during next planting season, until substantial completion is determined.
- C. Perennials & Grasses: Maintain until the date of substantial completion by watering, weeding, fertilizing, and other operations as required to establish healthy, viable plantings.
- D. Coordinate the installation of plant material with hand watering irrigation to minimize damage to plant material and ensure the plant material has 100% coverage.

PART 2 - PRODUCTS

2.1 TREE AND SHRUB MATERIAL

- A. General: Furnish nursery-grown trees and shrubs complying with ANSI Z60.1, with healthy root systems developed by transplanting or root pruning. Provide well-shaped, fully branched, healthy, vigorous stock free of disease, insects, eggs, larvae, and defects such as knots, sun scald, injuries, abrasions, and disfigurement.

- B. Grade: Provide trees and shrubs of sizes and grades complying with ANSI Z60.1 for type of tree and shrubs required. Trees and Shrubs of a larger size may be used if acceptable to Commissioner, with a proportionate increase in size of roots or balls.
- C. Label at least one tree, shrub, perennial, groundcover and vine plant of each variety and caliper with securely attached, waterproof tag bearing legible designation of botanical and common name.

2.2 SHADE AND FLOWERING TREES

- A. Shade Trees: Single-stem trees with straight trunk, well-balanced crown, and intact leader, of height and caliper indicated, complying with ANSI Z60.1 for type of trees required.
 - 1. Provide balled and burlapped or container-grown trees.
 - 2. Branching Height: one-half of tree height.
- B. Small Trees:
 - 1. Stem Form: Single or Multi-stem, clump, with three or more main stems.
 - 2. Provide balled and burlapped or container grown trees.

2.3 DECIDUOUS SHRUBS

- A. Provide balled and burlapped or container-grown shrubs.

2.4 CONIFEROUS EVERGREENS

- A. Form and Size: Specimen-quality, exceptionally heavy, tightly knit, symmetrically shaped coniferous evergreens and the following grade:
 - 1. Provide balled and burlapped or container grown trees.

2.5 PERENNIALS AND GRASSES

- A. Perennials and Grasses: Provide healthy, field-grown plants from a commercial nursery, of species and variety listed in the drawings.
 - 1. Provide container-grown perennials and grasses.

2.6 TOPSOIL

- A. Amended Planting Soil:
 - 1. Spread 1 ½” compost over area and incorporate into soil.
 - 2. Lime: as per test result recommendations.
 - 3. Weight of Sulfur or Iron Sulfate: As per test results recommendations.
 - 4. Weight of Agricultural Gypsum: As per test results recommendations.
 - 5. Weight of Super Phosphate: As per test results recommendations.
 - 6. Weight of Commercial Fertilizer: As per test results recommendations.
 - 7. Weight of Slow-Release Fertilizer: As per test results recommendations.

- B. Imported Planting – Soil: Manufactured soil consisting of manufacturer’s basic sandy loam per USDA textures, blended manufacturing facility with stabilized organic soil amendments, and other materials to produce viable planting soil.
1. Basis-of-Design Productions: Subject to compliance with requirements, provide standard blended Topsoil mix.
 2. Additional Properties of Manufacturer’s Basic Soil before amending: Soil reaction pH 6 to 7 and minimum 6 percent organic-matter content, friable and with sufficient structure to give good tilth and aeration.
 3. Unacceptable properties: Manufactured soil shall not contain the following:
 - a. Unacceptable Materials: Concrete slurry, concrete layers or chinks, cement plaster, building debris, oils, gasoline, diesel fuel, paint thinner, turpentine, tar, roofing compound, acid, and other extraneous materials that are harmful to plant growth.
 - b. Unsuitable Materials: Stones, roots, plants sod, clay lumps and pockets of coarse sand that exceed a combined maximum of 5 percent by dry weight of the manufactured soil.
 - c. Large Materials: Stones, clods, roots, clay lumps and pockets of coarse sand exceeding 1-½” inches in any dimension.
- C. Planting Soil Manufacturers -Suppliers
1. AG Choice, 714 Main St. Route 206, P.O. Box 1301, Andover, NJ 07821 Phone: (973)-786-5176. Fax (973)-786-6028, Or approved equal.
 2. We Care Denali, LLC, 400 Torne Valley Road, Bordentown, NJ Phone: (888)-325-1522
 3. Diamond Gro-New Enterprise Stone & Lime Co. Inc., 3912 Brumbaugh Rd., New Enterprise, PA 16664, Phone: (814)-766-2211

2.7 INORGANIC SOIL AMENDMENTS

- A. Lime: ASTM C 602, agricultural limestone containing a minimum 80 percent calcium carbonate equivalent and as follows:
1. Class: T with a minimum of 99 percent passing through a No. 8 sieve and minimum of 75 percent passing through a No. 60 sieve.
 2. Class: O with a minimum of 95 percent passing through a No. 8 sieve and minimum of 55 percent passing through a No. 60 sieve.
 3. Form: Provide lime in form of pelleted calcite limestone.
- B. Sulfur: Granular, biodegradable, and containing a minimum of 90 percent elemental sulfur, with a minimum of 99 percent passing through a No. 6 sieve and a maximum of 10 percent passing through a No. 40 sieve.
- C. Iron Sulfate: Granulated ferrous sulfate containing a minimum of 20 percent iron and 10 percent sulfur.
- D. Agricultural Gypsum: Minimum 90 percent calcium sulfate, finely ground with 90 percent passing through a No. 50 sieve.

- E. Sand: Clean washed, natural or manufactured, free of toxic materials and per ASTM C33.C33M.

2.8 ORGANIC SOIL AMENDMENTS

- A. Compost: Provide Humus Compost as supplied by AG Choice, 714 Main St. Route 206, P.O. Box 1301, Andover, NJ 07821 Phone: (973) -786-5176. Fax (973) 786-6028 Or approved equal.
- B. Compost Manufacturers - Suppliers
 1. AG Choice, 714 Main St. Route 206, P.O. Box 1301, Andover, NJ 07821 Phone: (973)-786-5176. Fax (973)-786-6028
 2. We Care Denali, LLC, 400 Torne Valley Road, Hillburn, NY, Phone: (888)-325-1522
 3. Diamond Gro -New Enterprise Stone & Lime Co. Inc., 3912 Brumbaugh Rd., New Enterprise, PA 1666, Phone: (814)- 766-2211

2.9 FERTILIZER/MYCORRHIZAL FUNGAL INOCULANTS

- A. Mycorrhizal Fungal Inoculants for newly planted shrubs and trees: PHC Tree Saver Packets manufactured by Plant Health Care, Inc. 285 Kappa Drive, Suite 100, Pittsburgh, PA 15238 USA (412)-826-5488, Or approved equal.
 1. Size: 85-gram bags
- B. Granular Fertilizer with Mycorrhizal Fungal Inoculants for newly planted perennials and groundcovers: PHC Flower Saver Plus Root Zone Treatment 3-4-3 manufactured by Plant Health Care, Inc. 285 Kappa Drive, Suite 100 Pittsburgh, PA 15238, USA (412) 826-5488, Or approved equal.
 1. Size: Granular materials in 11 lb. bag.
- C. Mycorrhizal Fungal Inoculants/ Granular Fertilizer Manufacturers -Suppliers
 1. Plant Health Care, Inc. 285 Kappa Drive, Suite 100, Pittsburgh, PA 15238 Phone:(412)-826-5488
 2. Roots PHC Plant Saver, Lebanon Seaboard Corp., 1600 E Cumberland St., Lebanon, PA 17402 Phone: (800) 233-0628
 3. Bio Plex, 114 Manheim St. Mt Joy, PA 17552, Phone: (800) 441-3572

2.10 MULCHES

- A. Organic Mulch: Free from deleterious materials and suitable as a top dressing of trees, shrubs, perennials and groundcover areas with less than 4:1 slope consisting of the following:
 1. Type: Shredded hardwood or shredded bark.

2.11 HERBICIDE

- A. The following herbicide or approved equal shall be used:
1. Sygenta “Tenacity Herbicide” for use in established landscape beds to selectively kill weeds. Syngenta Regional Headquarters, PO Box 18300, Greensboro, NC 27409, Phone (336) 632-6000
 2. Scott’s “Roundup” for use in planting beds lawn areas to kill all weeds and grasses. Roundup, 14111 Scottslawn Rd., Marysville, OH 43041 Phone: (866)324-264
 3. Desperado, Selective Herbicide, Agribusiness, 3300 South Parker Road, Suite 500, Aurora CO 80014, Phone: (720) 306-6340

2.12 PESTICIDES

- A. General: Pesticides shall not be used. Contractor shall report any evident of pest problems to the Commissioner.

2.13 MISCELLANEOUS PRODUCTS

- A. Anti-desiccant: Water-insoluble emulsion, permeable moisture retarder, film forming, for shrubs. Deliver in original, sealed, and fully labeled containers and mix per manufacturer’s written instructions.
- B. Heavy Duty Rubber Hose: Flexible and kink resistant, extra heavy, crush resistant brass couplings.
1. Size: 5/8” diameter x 50’ lengths / 200’ minimum.
- C. Hose Caddy: Heavy duty frame and 8” wide track wheels 20” by 17 ¾” hose reel.
- D. Hose Covers: Heavy duty bright orange or yellow polymer with channel below large enough to accommodate the diameter of a garden hose with smooth beveled or ‘ramped’ sides that can withstand light vehicular use.
- E. Spray Nozzle: Solid brass with full size nozzle with adjustable spray.
- F. Tripod Sprinkler with Spray Head: Heavy duty 48” x 34” tripod sprinkler frame with 30” extension and spray head with part or full circle water distribution up to 80’ in diameter.
- G. Tree Watering Devices: Contractor is responsible for keeping newly planted trees and shrubs watered for the duration on the contract and maintenance period.
1. Slow-Release Watering Device: Standard product manufactured for drip irrigation of plants and emptying its water contents over an extended time period manufactured from UV-light stabilized nylon reinforced polyethylene sheets, PVC, or HDPE plastic.
- H. Tree / Large Shrub Stakes: Softwood lumber, pointed end.

- I. Cable, Wire, Eye Bolts and Turnbuckles: Non-corrosive, of sufficient strength to withstand wind pressure and resulting movement of plant life.

PART 3 - EXECUTION

3.1 EXECUTION REQUIRMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 EXAMINATION

- A. Examine areas to receive soil and plants for compliance with requirements and conditions affecting installation and performance.
- B. Drainage: Notify Commissioner if subsoil conditions evidence unexpected water seepage or retention in shrub pits.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 PREPARATION

- A. Protect structures, utilities, sidewalks, pavements, fixtures, furnishings and other facilities from damage caused by soil and planting operations.

3.4 PLACING AND MIXING PLANTING SOIL OVER EXPOSED SUBGRADE

- A. General: Apply and mix un-amended soil with amendments on-site to produce required planting soil. Do not apply materials or till if existing subgrade is not graded proper elevations, frozen, muddy or excessively wet.
- B. Subgrade Preparation: Till subgrade to a minimum of 12 inches (12"). Remove stones larger than 1-1/2" in any dimension, sticks, roots, rubbish and other extraneous matter and legally dispose of.
- C. Mixing: Spread new imported soils to required depths to meet finish grades after mixing with amendments and natural settlement. Do not spread if soil is frozen, muddy or excessively wet.
 1. Amendments: Apply soil amendments, except compost and fertilizer, if required, evenly on surface, and thoroughly blend them not full depth of unamended soil to produce planting soil.
 - a. Mix lime and sulfur with dry soil before compost.
 - b. Mix fertilizer with planting soil no more than seven days before planting.
 2. Lifts: Apply and mix unamended soil and amendments in lifts not exceeding 8" in loose depth for material compacted by compaction equipment, and not more than 4" in loose depths for material compacted by hand-operated tampers.
- D. Compaction: Compact each blended life of planting soil to 82 percent of maximum Standard Proctor density per ASTM D 698 and tested in-place.

- E. Finish Grading: Grade planting soil to a smooth, uniform plane with loose uniformly fine texture. Roll and rake, removed ridges, and fill depressions to meet finish grades.

3.5 APPLYING COMPOST TO SURFACE OF PLANTING SOIL

- A. Application: Apply compost component of planting-soil mix 1-½ inches of compost to surface of in-place planting soil. Do not apply materials or till if existing soil is frozen, muddy or excessively wet.
- B. Finish Grading: Grade surface to a smooth, uniform plane with loose, uniformly fine texture. Roll and rake, remove ridges, and fill depressions to meet finish grades. In planting beds where soils meet existing edges of pavements the soil shall be placed three inches below the top of the pavement to allow for installation of the mulch.

3.6 PROTECTION AND CLEANING

- A. Existing Tree Protection Zone: Identify the critical root protection zone of the existing tree and minimize disturbance soil work and erosion control blanket installation in that area.
- B. Protect areas with in-place planting soil from additional compaction, disturbance, and contamination. Fence off these areas with temporary construction fence. Prohibit the following practices within these areas except as required to perform planting and hand watering operations. Where feasible limit necessary activities to the extent possible and use track mats as walking path surfacing to protect prepared areas from foot traffic.
 - 1. Storage of construction materials, debris, or excavated materials.
 - 2. Parking of vehicles or equipment.
 - 3. Vehicular Traffic.
- C. Remove surplus soil and waste including excess subsoil, unsuitable materials, excess erosion control blanket materials, trash and debris and dispose of them legally.

3.7 PLANTING BED ESTABLISHMENT

- A. Lay out planting beds and areas with multiple planting. Stake/mark locations, outline areas, adjust locations when directed and obtain Commissioner's acceptance of layout before planting. Make minor adjustments as required.
- B. Before planting, restore planting bed areas if eroded and damaged or otherwise disturbed after finish grading.

3.8 EXCAVATION FOR TREES AND SHRUBS PLANTING

- A. Planting Pits and Trenches: Excavate circular planting pits.
 - 1. Excavate planting pits with sides sloping inward at a 45-degree angle. Excavations with vertical sides are unacceptable. Over-excavate the hole and then build up a mound to support the root ball. Scarify sides of planting pit smeared or smoothed during excavation.

2. Excavate at least two times as wide as the root ball or container diameter.
3. Obstructions: Notify Commissioner if unexpected rock, root or utility obstructions detrimental to plants are encountered in excavations.

B. Backfill Soil: Subsoil and topsoil removed from excavation may be used as backfill unless otherwise indicated. Excavated soil must be amended.

3.9 TREE AND SHRUB PLANTING

A. Inspection: At time of planting, verify that root flare is visible at top of rootball per ANSIZ60.1. If root flare is not visible, remove soil in a level manner from the rootball to where the top-most root emerges from the trunk. After soil removal to expose the root flare, verify that the rootball still meets size requirements.

B. Roots: Remove stem girdling roots and kinked roots. Remove injured roots by cutting cleanly; do not break.

C. Set each plant plumb and in center of planting pit or trench with root flare 1” above finish grades.

1. Backfill: Planting soil- use amended on-site planting soil or new imported soil if required.
2. Balled and Burlapped Stock: After placing some backfill around the root ball to stabilize plant, careful cut and remove burlap, rope and entire wire backs. Remove pallet, if any, before setting. Do not use planting stock if rootball is cracked or broken before or during planting operations
3. Balled and Potted and Container-Grown Stock: Careful remove root ball from container without damaging root ball or plant. Cut any encircling roots and tease the edges of the rootball to blend with the interface between the rootball and the backfill soil.
4. Backfill around rootball in layers, tamping to settle soil, eliminate voids, and air pockets. When planting is approximately one-half filled water thoroughly and before placing the remainder of backfill. Repeat watering until no more water is absorbed.
5. Place Mycorrhizal Fungal Inoculants packets when pit is approximately one-half filled. Do not place packets on top of finished soil.
 - a. Quantity for Shrubs:

1) Up to 1 Gallon Container	1/3 rd packet
2) 1-2 Gallon Container	2/3 rd packet
3) 3-20 Gallon Container	1 packet
4) 8’ Ht. – 12’ Ht.	1 packet
5) 12’ Ht. – 16’ Ht.	2 packets
 - b. Quantity for Trees:

1) 18” – 24” Rootball	2 packets
2) 25” – 30” Rootball	3 packets
3) 31” – 44” Rootball	4 packets
6. Continue backfilling process. Water again after placing and tamping final layer of soil.

3.10 TREE AND SHRUB PRUNING

A. Remove only the dead, dying or broken branches. Do not prune to shape.

- B. Prune, thin, and shape trees only as directed by the Commissioner.
- C. Prune, thin and shape trees and shrubs per professional horticultural and arbor culture practices. Unless otherwise indicated by Commissioner, do not cut tree leaders; remove only injured dying or dead branches from trees and shrubs; and prune to retain their natural character.

3.11 PERENNIAL AND GRASS PLANTS

- A. Set out and space perennials and grasses as indicated on the drawings.
- B. Verify the soil was properly amended and that all fertilizers, mycorrhizal inoculants and other amendments were added.
- C. Use existing amended planting soil for backfill.
- D. Dig holes large enough to allow spreading of roots, a minimum of 2 times the size of the rootball post, container or root mass.
- E. Work soil around roots to eliminate air pockets and leave a slight saucer indentation around plants to hold water. Water thoroughly after hot sun and wind; remove protection if plants show evidence of recovery from transplanting shock.
- F. Water thoroughly after planting, taking care not to cover plant crowns with wet soil.

3.12 PLANTING AREA MULCHING

- A. All planting areas within the contract limit lines shall be mulched.
- B. Mulching: Apply 2-inch average thickness of shredded bark mulch extending to edge of planting bed as indicated or directed by Commissioner. Do not place mulch within 3 inches of trunks or stems.
- C. All new plants shall be mulched within 24 hours of being planted.

3.13 INSTALLING SLOW-RELEASE WATERING DEVICES

- A. Provide one slow-release watering device for each tree planted. Keep device filled on a daily basis. When irrigation system is operational remove slow-release watering devices.

3.14 PLANT MATERIAL IRRIGATION

- A. Contractor is responsible for keeping newly planted trees and shrubs watered for the duration of the contract period.
- B. All newly planted material shall be watered as required.
- C. Provide irrigation to all newly planted material by either portable sprinkler or hand watering.

- D. Portable hoses and sprinklers to be provided by the contractor and shall be set up at all planted areas. All hoses that crossroads or pedestrian walkways shall be covered with hose covers.
- E. All planted areas to be watered on a daily basis, or more as required.
- F. Prior to a weekend, holiday or other day when the contractor will not be on site, each planted area shall be fully watered saturated prior to the contractor leaving the site. The contractor shall coordinate with the Commissioner regarding having the facilities personnel perform watering on a day when the contractor is not on-site.

3.15 PLANT MAINTENANCE

- A. Maintain plantings by pruning, cultivating, watering, weeding, fertilizing, restoring planting saucers, resetting to proper grades or vertical position, and performing other operations as required to establish healthy viable plantings.
- B. Fill in, as necessary, soil subsidence that may occur because of settling or other processes. Replace mulch and erosion blanket materials damaged or lost in areas of subsidence.
- C. Apply treatments as required to keep plant materials, planted areas and soils free of pests and pathogens or disease. Use integrated pest management practices, when possible, to minimize use of pesticides and reduce hazards. Treatments include physical controls such as hosing off foliage and biological control agents.
- D. Protect plants from damage during installation and maintenance periods. Treat, restore or replace damaged plantings.

3.16 CLEANUP AND PROTECTION

- A. Promptly remove soil and debris created by landscape planting or maintenance work from paved areas. Clean wheels of equipment before leaving site to avoid tracking soil onto walks, or roads.
- B. Maintain temporary construction fencing, barricades and warning signs as required to protect newly planted areas from foot traffic and use. Maintain fencing and signs throughout and remove after plantings are established.

SECTION 33 14 19

VALVES AND HYDRANTS FOR WATER UTILITY SERVICE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Furnish and deliver various fire hydrants, valves and fenders conforming with NYCDEP and NYCFD Standards.
 2. Install fire hydrants, valves and fenders at the locations shown on the plans in accordance with NYCDEP and NYCFD Standard Drawings and Specifications.
 3. Submit manufacturer's material/product specifications and recommendations for installation.

1.3 RELATED WORK

- A. Related work is described in the following sections of the specifications.
1. Section 31 22 00: Grading
 2. Section 31 41 16: Sheet Piling
 3. Section 31 23 33: Trenching and Backfilling
 4. Section 33 42 41: Gratings and Frames for Stormwater Drainage Inlets
 5. Section 33 42 11: Stormwater Gravity Piping

1.4 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 "Submittal Procedures".

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

PART 2 - PRODUCTS

2.1 HYDRANTS

- A. All hydrants installed or replaced must conform to NYCDEP Standards and must be two-piece “breakaway” hydrants type S2-LP or D2-LP, as shown on the NYCDEP Bureau of Water Supply Standard Drawings Nos. 43250-Z or 43142-Z, respectively and as specified in the NYC Specifications No. 32H-1.

2.2 MATERIAL

- A. All material required to install fire hydrants including valves and valve boxes, connecting pipe and fenders must conform to NYCDEP Standards and Specifications.
- B. Wet and dry connections and corporation stops for connection to existing cast iron water mains must be in accordance with the “Rules and Regulations Governing and Restricting the Use and Supply of Water” as specified by the City of New York Department of Environmental Protection and with NYCDCP Water Supply Specifications, Form No. 6, Section 6.16.

2.3 FENDERS

- A. A minimum of two fenders must be installed for each hydrant. The fenders must conform to NYCDEP Standards.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 INSTALLATION

- A. Hydrants
 1. Hydrants must be installed in accordance with NYCDEP Standard Water Main Specifications, Form No. 8, and with AWWA Standard C600, entitled “Installation of Ductile Iron Water Mains and their Appurtenances”.
 2. All hydrants must stand plumb, each of their nozzles facing the curb at an angle of 45 degrees.
 3. Hydrants must be set to the established grade, with the centerline of the nozzle at an elevation above the grade as determined by the Commissioner.

4. Each hydrant must be connected to the main with a 6-inch diameter branch controlled by a 6-inch gate valve installed with valve box and appurtenances as shown on Bureau of Water Supply Standard Drawing No. 18581-B-Z.
 5. Drainage must be provided at the base of the hydrant by setting the hydrant upon a cast iron drain base and connecting it to the latter with 3/4-inch diameter brass pipe, tube log or soft-temper cooper tubing, and brass fittings, as shown on Bureau of Water Supply Standard Drawing No. 31050-Z, unless otherwise directed by the Commissioner.
 6. The drain pipe from the hydrant to the broken stone drain must be laid in the trench made for laying the hydrant branch and must be uniformly sloped to meet the top of the stone drain.
 7. Painting: The stand pipe above the ground line must be thoroughly cleaned, must be given one heavy coat of drying black enamel paint and the dome one heavy coat of bright aluminum paint.
 8. On the stand pipe, just below the nozzles, on the roadway face of the hydrant, must be stenciled, in white numerals five (5) inches high, the size of the main to which the hydrant is connected. The paint must be oil paint designed for exterior use.
- B. Fenders
1. Steel pipe hydrant fenders must be installed, encased in concrete in concrete collars, and painted in accordance with the applicable layout and method, details shown on Bureau of Water Supply Standard Drawing No. 45161-A-Z.
- C. Installation must be in accordance with requirements of the NYC Dept. of Environmental Protection and the manufacturer of the wet and dry connections to the existing water mains. Refer to Form Nos. 13 and 21 of the Standard Water Main Specifications.
- D. All connections must be tested in accordance with the requirements of the NYC Dept. of Environmental Protection.

END OF SECTION 33 14 19

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 31 13

SITE SANITARY SEWERAGE GRAVITY PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. The Contractor must furnish all labor, materials, supervision, equipment, tools, supplies and all other incidentals deemed necessary to install the sewer system and related site work. The work includes, but is not limited to the following:
 - a. Cast Iron Sewers
 - b. Excavation, Sheet piling and Bracing, and Backfill - (see Section 31 41 16)
 - c. Cutting into and Connecting Pipe into Existing Drainage Structures
 - d. Abandonment and removal of existing sewer structures (i.e., manholes, catch basins, etc.) and pipe
 - e. Providing Sewer House Connections
 - f. Inspection, sampling and testing of construction materials.

B. Related Sections include the following:

1. Section 31 41 16: Sheet Piling
2. Section 31 23 33: Trenching and Backfilling

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Unless otherwise specified or shown in the Contract Documents, all materials and workmanship must conform with all applicable provisions of the City of New York Department of Design and Construction, Division of Infrastructure Standard Sewer Specifications (SSS) latest edition, the New York City DEP General Specification 11-concrete (GS11) latest edition and the NYCDEP Sewer Design Standards (SDS) latest edition; and all revisions thereto, which are in effect are hereby made an integral part of the Technical Specifications of this Contract Document, except as modified hereinafter. All materials and workmanship must also conform with applicable requirements of NYSDOT Standard Sheets and Standard Specifications, latest edition.

- C. All materials and workmanship must also conform with relevant provisions of NYCDOT & NYCDEP stds.

1.4 AS-BUILT DRAWINGS, FINAL ACCEPTANCE AND GUARANTEE

- A. After the completion of the work, and as part of the close-out for the project, the Contractor must furnish without additional cost, and submit to the City of New York as-built drawings and final survey showing all work built as per the final plans or approved field changes. Such tracings must, in particular, indicate the final and actual sizes as well as locations and elevations thereof of any installed utilities, structures or related facilities.
- B. Final acceptance of the work must be obtained from the NYCDEP field inspector and the Commissioner, upon the satisfactory completion of all work.
- C. All work must be guaranteed for one year from the date of acceptance against all defects in materials, equipment and workmanship. Guarantee must also cover correcting damage to any part of the premises resulting from leaks or other defects in material, equipment and workmanship to the satisfaction of the Commissioner.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.6 MISCELLANEOUS

- A. All standards must be the latest edition and revision.
- B. The Contractor must notify NYCDOT, NYCDDC, NYSDOT and NYCDEP and secure and pay for all permits, licenses, and certificates relating to this work.

PART 2 - PRODUCTS

2.1 DEFINITIONS

- A. All definitions of materials must comply with SSS Section 2.01.

2.2 PIPE

- A. Extra Heavy Cast Iron Pipe (XHCI)

1. Pipe must be extra heavy cast iron pipe, conforming to ASTM A 74. Pipe must have an outer coating of coal tar. Cast iron fittings must have a pressure classification of at least equal to that of the pipe with which they are used. Fittings, joints, and accessories must comply with the requirement of ASTM A 74. All cast iron pipe must conform to Section 2.06 of the Standard Sewer Specifications, DDC, except for pipe lining requirement.

2. All pipe must have markings indicating weight, class, manufacturer's name, year of manufacture, and the letters CI. Markings must be cast or painted conspicuously in white paint that will withstand field handling on the outside of each pipe length, fitting, and special casting after the exterior shop coat has hardened.

2.3 CONCRETE

- A. Concrete for pipe cradles, encasements and drainage and structures must be homogeneous Class 40 mix with Grade 60 reinforcing steel and must comply with the requirements of GS11 as modified by SSS Section 2.08, except that the Contractor (not DEP) must retain concrete testing lab services.

2.4 MORTAR, PORTLAND CEMENT

- A. Portland cement mortar must be of the type specified in SSS Section 2.10.

2.5 GROUT, PORTLAND CEMENT

- A. Grout must be Type 2, unless otherwise specified, and must comply with SSS Section 2.11.

2.6 INSPECTION OF MATERIALS, SAMPLING AND METHODS OF TESTS

- A. All materials to be used under this Section must conform to requirements of the New York City DEP Standard Sewer Specification (SSS). Inspection and approval must be based on the standards and procedures set forth in SSS Section 3.01.
- B. The Contractor must furnish and deliver as directed, without charge, samples, affidavits and other information required of the materials intended to be used, as specified in SSS Section 3.02.
- C. Methods of test must comply with the requirements of SSS Section 3.03.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL CONSTRUCTION PROVISIONS

- A. Prosecution of work and staging operations must be shown on the plans and comply with SSS Section 4.01.2.
- B. Trench excavation must comply with Section 4.02.
- C. Earth excavation must comply with SSS Section 4.03.
- D. Excavation of boulders in trenches must comply with SSS Section 4.03A.
- E. Sheeting and bracing must comply with SSS Section 4.05 and with Section 31 41 16 of these Specifications.
- F. Backfilling must comply with SSS Section 4.06 and with Section 31 23 33 of these Specifications for Select Granular Fill and Clean Backfill requirements.
- G. Proctor analyses of soils and soil density testing must be performed as directed at trench subgrade, at various lifts of compacted trench backfill and at pavement subgrade, in accord with SSS Sections 4.06.3 and 4.06.4.
- H. All sewers and appurtenances to be constructed under this Contract must be tested for leakage. Methods of testing for leakage must comply with the requirements of SSS Section 4.08.
- I. Prior to the final inspection of the work completed under this Contract, the Contractor must make a closed-circuit television inspection and video tape recording of all sewers constructed and prepare a report detailing the results of the inspection, all in accord with SSS Section 5.25.
- J. Cleaning up must comply with SSS Section 4.09.
- K. Immediately after trench backfill and soil compaction operations, the Contractor must temporarily restore all sidewalk and street surfaces affected with a 4" thick asphaltic concrete binder base paving course on a 6" broken stone sub-base, as per SSS Section 4.09. Materials must comply with NYCDOT Standards and Specifications.
- L. The Contractor must maintain safe access to the various building sites within the project area.
- M. The Contractor must furnish, erect, and maintain at closures, intersections and at all other locations where necessary, all necessary standard or approved barricades, suitable and sufficient lights, approved reflectors, danger signals, warnings and closure signs, directional detour signs, for proper control of traffic and safety of the public. All barricades, danger signals, warning signs and obstructions must be illuminated at night and all lights must be kept burning from sunset until sunrise.
- N. Temporary fence must be installed around the immediate sewer construction work area in accord with SSS Section 5.30.
- O. The Contractor is to provide for maintenance of traffic in accordance with SSS Section 1.06.29.

- P. The Contractor must take necessary precautions to protect site conditions to remain. Should damage be incurred, the Contractor must restore the site condition to its original condition at own expense.
- Q. The Commissioner reserves the right to reject material or work which does not conform to the Contract Documents. Rejected work must be removed or corrected at the earliest possible time.

3.3 EXECUTION

- A. Cast iron pipe for sewers
 - 1. Cast iron pipe sewers and joints must comply with SSS Section 21.06, unless otherwise noted. Pipe must be placed in crushed stone bedding a minimum of 6 inches thick wrapped in filter fabric as shown on SDS Dwg. No. 62. Crushed stone must comply with SSS Section 4.12 and Section 31 52 00 of these Specifications.
- B. Sewer building connections
 - 1. Sewer building house connections must be constructed of the sizes and to the lines and grades shown on the Contract Drawings or as ordered in conformance with the provisions of the SSS Sections 5.13, 5.11 and 5.12, and with SDS Drawing Nos. 62, 63, 64 and 65.

END OF SECTION 33 31 13

THIS PAGE INTENTIONALLY LEFT BLANK

SECTION 33 42 11

STORMWATER GRAVITY PIPING

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

A. Section Includes:

1. The Contractor must furnish all labor, materials, supervision, equipment, tools, supplies and all other incidentals deemed necessary to install the sewer system and related site work. The work includes, but is not limited to the following:
 - a. HDPE, ESVP DIP and XHCI Sewers
 - b. Excavation, Sheeting and Bracing, and Backfill - (see Section 31 23 16.20)
 - c. Concrete Cradles - (see Section 31 23 16.20)
 - d. Concrete Manholes and Catch Basins (NYC Standard) - (see Section 33 42 30)
 - e. Ductile Iron Pipe for Catch Basin Connections (NYC Standard)
 - f. Cutting into and Connecting Pipe into Existing Drainage Structures
 - g. Abandonment and removal of existing sewer structures (i.e., manholes, catch basins, etc.) and pipe
 - h. Providing Sewer House Connections
 - i. Inspection, sampling and testing of construction materials.

B. Related Sections include the following:

1. Section 31 41 16: Sheet Piling
2. Section 31 23 33: Trenching and Backfilling
3. Section 33 42 30: Stormwater Area Drains and Inlets

1.3 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 "Quality Requirements".

- B. Unless otherwise specified or shown in the Contract Documents, all materials and workmanship must conform with all applicable provisions of the City of New York Department of Design and Construction, Division of Infrastructure Standard Sewer Specifications (SSS) latest edition, the New York City DEP General Specification 11-concrete (GS11) latest edition and the NYCDEP Sewer Design Standards (SDS) latest edition; and all revisions thereto, which are in effect are hereby made an integral part of the Technical Specifications of this Contract Document, except

as modified hereinafter. All materials and workmanship must also conform with applicable requirements of NYSDOT Standard Sheets and Standard Specifications, latest edition.

- C. All materials and workmanship must also conform with relevant provisions of NYCDOT & NYCDEP stds.

1.4 AS-BUILT DRAWINGS, FINAL ACCEPTANCE AND GUARANTEE

- A. After the completion of the work, and as part of the close-out for the project, the Contractor must furnish without additional cost, and submit to the City of New York as-built drawings and final survey showing all work built as per the final plans or approved field changes. Such tracings must, in particular, indicate the final and actual sizes as well as locations and elevations thereof of any installed utilities, structures or related facilities.
- B. Final acceptance of the work must be obtained from the NYCDEP field inspector and the Commissioner, upon the satisfactory completion of all work.
- C. All work must be guaranteed for one year from the date of acceptance against all defects in materials, equipment and workmanship. Guarantee must also cover correcting damage to any part of the premises resulting from leaks or other defects in material, equipment and workmanship to the satisfaction of the Commissioner.

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.6 MISCELLANEOUS

- A. All standards must be the latest edition and revision.
- B. The Contractor must notify NYCDOT, NYCDDC, NYSDOT and NYCDEP and secure and pay for all permits, licenses, and certificates relating to this work.
- C. In the case of a conflict between the City requirements and this Specification, the City specification must govern unless directed otherwise by the Commissioner.
- D. The Contractor must coordinate the work and cooperate with other trades working in the same general area.

PART 2 - PRODUCTS

2.1 DEFINITIONS

- A. All definitions of materials must comply with SSS Section 2.01.

2.2 PIPE

- A. Vitrified clay pipe must be extra-strength and must comply with SSS Section 2.02. Precast reinforced concrete pipe must comply with SSS Section 2.05. Ductile iron pipe must comply with Section 2.06. Cast iron soil pipe must conform with SSS Section 2.04. Joint materials for pipe must comply with SSS Section 2.07.
- B. High-Density Polyethylene Pipe (HDPE):
1. High Density Polyethylene pipe and fittings must have smoothed interior and corrugated annular exterior. The material of construction must consist of closed foam cell having a minimum compressive strength of 20 psi, which will provide high stress resistance to cracks.
 2. The bell-and-spigot HDPE piping network must be joined using watertight connections in accordance with the requirements of ASTM D3212. Elastomeric seals (Gaskets) made of polyisoprene and meeting the requirements of ASTM F477 must show no visible leaks when tested under a 10 ft hydrostatic water test or an ex-filtration rate that is consistent during a water test with a leakage rate that conforms with the design. Attach form CDD-1 for the acceptable ex-filtration rate.
 3. To prevent crumbling and provide better joint performance of the HDPE pipe, the bell and spigot ends must be reinforced, including a bell tolerance device. The bell tolerance device must be installed by the pipe manufacturer.
- C. Ductile Iron Pipe (D.I.P.)
1. Pipe must be centrifugally cast ductile iron pipe, 60-42-10 grade, conforming to ASTM A21.51, Class 56. Pipe must have an outer coating of coal tar. Ductile iron fittings must have a pressure classification of at least equal to that of the pipe with which they are used. Fittings, joints, and accessories must comply with the requirement of ANSI A21.10 and ANSI A21.11. All ductile iron pipe must conform to Section 2.06 of the Standard Sewer Specifications, DDC, except for pipe lining requirement.
 2. Fittings must be Thickness Class 56 for all sizes of pipe.
 3. All pipe must have markings indicating weight, class, manufacturer's name, year of manufacture, and the letters DI. Markings must be cast or painted conspicuously in white paint that will withstand field handling on the outside of each pipe length, fitting, and special casting after the exterior shop coat has hardened.
- D. Polyvinyl Chloride Pipe (P.V.C.)
1. Perforated pipe must be polyvinyl chloride pipe, conforming to ASTM D 2729 and ASTM D1784, cell class 12454 or 12364.. PVC pipe must be installed with the perforations facing down, 120 degrees apart.

2.3 CONCRETE

- A. Concrete for pipe cradles, encasements and drainage and structures must be homogeneous Class 40 mix with Grade 60 reinforcing steel and must comply with the requirements of GS11 as modified by SSS Section 2.08, except that the Contractor (not DEP) must retain concrete testing lab services.

2.4 BRICK

- A. Brick used in the construction of sewer structures must comply with SSS Section 2.09.

2.5 MORTAR, PORTLAND CEMENT

- A. Portland cement mortar must be of the type specified in SSS Section 2.10.

2.6 GROUT, PORTLAND CEMENT

- A. Grout must be Type 2, unless otherwise specified, and must comply with SSS Section 2.11.

2.7 IRON CASTINGS, GRAY AND MALLEABLE

- A. Iron casting, gray and malleable, must comply with SSS Section 2.13 and with Section 33 42 41 of these Specifications.

2.8 INSPECTION OF MATERIALS, SAMPLING AND METHODS OF TESTS

- A. All materials to be used under this Section must conform to requirements of the New York City DEP Standard Sewer Specification (SSS). Inspection and approval must be based on the standards and procedures set forth in SSS Section 3.01.
- B. The Contractor must furnish and deliver as directed, without charge, samples, affidavits and other information required of the materials intended to be used, as specified in SSS Section 3.02.
- C. Methods of test must comply with the requirements of SSS Section 3.03.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 GENERAL CONSTRUCTION PROVISIONS

- A. Prosecution of work and staging operations must be shown on the plans and comply with SSS Section 4.01.2.
- B. Trench excavation must comply with Section 4.02.
- C. Earth excavation must comply with SSS Section 4.03.
- D. Excavation of boulders in trenches must comply with SSS Section 4.03A.
- E. Sheeting and bracing must comply with SSS Section 4.05 and with Section 31 53 14 of these Specifications.
- F. Backfilling must comply with SSS Section 4.06 and with Section 31 23 16.20 of these Specifications for Select Granular Fill and Clean Backfill requirements.
- G. Proctor analyses of soils and soil density testing must be performed as directed at trench subgrade, at various lifts of compacted trench backfill and at pavement subgrade, in accord with SSS Sections 4.06.3 and 4.06.4.
- H. All sewers and appurtenances to be constructed under this Contract must be tested for leakage. Methods of testing for leakage must comply with the requirements of SSS Section 4.08.
- I. Prior to the final inspection of the work completed under this Contract, the Contractor must make a closed-circuit television inspection and video tape recording of all sewers constructed and prepare a report detailing the results of the inspection, all in accord with SSS Section 5.25.
- J. Cleaning up must comply with SSS Section 4.09.
- K. Immediately after trench backfill and soil compaction operations, the Contractor must temporarily restore all sidewalk and street surfaces affected with a 4" thick asphaltic concrete binder base paving course on a 6" broken stone sub-base, as per SSS Section 4.09. Materials must comply with NYCDOT Standards and Specifications.
- L. The Contractor must maintain safe access to the various building sites within the project area.
- M. The Contractor must furnish, erect, and maintain at closures, intersections and at all other locations where necessary, all necessary standard or approved barricades, suitable and sufficient lights, approved reflectors, danger signals, warnings and closure signs, directional detour signs, for proper control of traffic and safety of the public. All barricades, danger signals, warning signs and obstructions must be illuminated at night and all lights must be kept burning from sunset until sunrise.
- N. Temporary fence must be installed around the immediate sewer construction work area in accord with SSS Section 5.30.
- O. The Contractor is to provide for maintenance of traffic in accordance with SSS Section 1.06.29.

- P. The Contractor must take necessary precautions to protect site conditions to remain. Should damage be incurred, the Contractor must restore the site condition to its original condition at own expense.
- Q. The Commissioner reserves the right to reject material or work which does not conform to the Contract Documents. Rejected work must be removed or corrected at the earliest possible time.

3.3 EXECUTION

- A. **Vitrified clay pipe sewers**
 - 1. Vitrified clay pipe must be extra strength per SSS Section 21.02. Pipe construction must be as shown on SDS Dwg. No. 1 with Class 40 concrete pipe cradle, except that pipe must be fully encased in concrete where pipe cover is less than 4 feet. Joints must be Type 6-Elastomeric per SSS Section 2.07.3 (F).
- B. **Reinforced concrete pipe sewers**
 - 1. Reinforced concrete pipe sewers and joints must comply with SSS Section 21.05. Pipe construction must be as shown on SDS Dwg. No. 3 with Class 40 concrete cradle, except that pipe must be full encased in concrete where pipe cover is less than 4 feet.
- C. **Ductile iron pipe for sewers and catch basin connections**
 - 1. Ductile iron pipe sewers and joints must comply with SSS Section 21.06, and be Class 56 unless otherwise noted. All catch basin connection pipe must be cement-lined 12" diameter Class 56 ductile iron with push-on joints per SSS Section 5.10. Pipe must be placed in crushed stone bedding a minimum of 6 inches thick wrapped in filter fabric as shown on SDS Dwg. No. 62. Crushed stone must comply with SSS Section 4.12 and Section 31 52 00 of these Specifications.
- D. **Sewer building connections**
 - 1. Sewer building house connections must be constructed of the sizes and to the lines and grades shown on the Contract Drawings or as ordered in conformance with the provisions of the SSS Sections 5.13, 5.11 and 5.12, and with SDS Drawing Nos. 62, 63, 64 and 65.
- E. **Manholes**
 - 1. Manholes must be constructed as shown on the drawings. Manholes must be constructed of poured-in-place reinforced concrete or approved precast concrete units in conformance with the requirements of Sections 5.07 and 5.08 and the applicable Sewer Design Standards. The location of manholes shown on the Drawings is subject to change to suit field conditions. Such changes, if any, will be ordered by the Commissioner as the Work progresses, and must be done at no additional cost. Refer to Section 334500 of these Specifications.

- F. Catch basins (New York City standard)
 - 1. New York City Standard Type 1, Type 2 and Type 3 catch basins must be constructed of poured-in-place concrete or approved precast concrete units. Materials and construction methods must comply with the requirement of SSS Section 5.09 and applicable Sewer Design Standards. Refer to Section 334230 of these Specifications.

- G. Area drains
 - 1. Area drains are to be used for on-site areas only. See plans for area drain dimensional requirements.

- H. Abandonment and removal of existing sewer structures and pipe
 - 1. The extent of existing sewer structures to be abandoned or removed must be as shown on the Contract Drawings. Structures to be abandoned must be removed to a depth of 2.0 feet below proposed grade. The existing structure must be bulkhead as directed by the Commissioner, and hydraulically filled with clean sand. Salvageable material (castings, frames and grates, etc.) must be returned to a New York City sewer department yard in accordance with SSS Section 1.06.27 “salvageable materials”. The limits of existing sewer pipe to be abandoned or removed must be as shown on the Contract Drawings or as directed by the Commissioner. Sewer Pipe to be abandoned must be plugged with concrete for a length of 12 inches at the end of the pipe that enters the new or existing sewer structure to remain.

SECTION 33 42 31

STORMWATER AREA DRAINS AND INLETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
1. Construction of area drains, catch basins and manholes per NYCDEP Sewer Design Standard Drawings (SDS) and NYCDEP Standard Sewer Specifications (SSS) and as shown on the plans or directed by the Commissioner. All materials and workmanship must also conform with applicable requirements of NYSDOT Standard Sheets and Standard Specifications, latest edition.
 2. Furnish and install frames, grates and covers for sewer structures in accordance with SSS Section 2.13 and with Section 33 42 41 of these Specifications.

1.3 SUBMITTALS

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.
- B. Submit concrete design mix report and material certificates for concrete and mortar mixes.
- C. Submit product data for admixtures, curing compounds and reinforcement.
- D. Submit material certificates and catalog cuts for frames, grates and covers.
- E. Should the Contractor propose, as an alternate, the use of precast structures submit shop drawings and material certificates for such structures.

1.4 RELATED WORK

- A. Related work is described in the following sections of the specifications.
1. Section 31 22 00: Grading
 2. Section 31 41 16: Sheet Piling
 3. Section 31 23 33: Trenching and Backfilling
 4. Section 33 42 41: Gratings and Frames for Stormwater Drainage Inlets
 5. Section 33 42 11: Stormwater Gravity Piping

1.5 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Concrete must comply with NYCDEP Specification SSS Section 2.08 for Class 40.
- B. Steel reinforcement must comply with the requirements of ASTM A615, Grade 60, Billet Steel Bars for Concrete reinforcement.
- C. Gray iron castings must be class No. 30, ASTM A48, with a minimum tensile strength of 30,000 pounds per square inch. The flexural test described in ASTM A44 must be the primary test used in testing the iron. Comply with SSS Section 2.13 and Section 33 42 41 of these Specifications.
- D. For manholes and for all catch basins/inlets and area drains, bedding (where ordered by Commissioner) must be broken stone conforming with NYCDEP Standard Specifications Sections 4.12 & 5.18. Backfill material must comply with SSS Sections 5.14 and 4.06, as specified in Section 31 23 16.20 of these Specifications.
- E. Hydrodynamic separators to be precast concrete units with all required internal appurtenances for meeting the required water quality volume for stormwater treatment. Hydrodynamic separators to be:
 - 1. Hydro International, First Defense Optimum vortex separator,
 - 2. Advanced Drainage Systems, Inc; Barracuda MAX Hydrodynamic Separator
 - 3. CONTECH Stormwater Solutions, Continuous Deflective Separator (CDS)
 - 4. Or approved equal.
 - 5. Hydrodynamic separators to be installed per manufacturers requirements.
- F. Trench drain to be by:
 - 1. NDS, Pro Series
 - 2. ACO Polymer Products, Klassikdrain
 - 3. ABT Inc, Polydrain
 - 4. Or approved equal.
 - 5. Drainage structures to be installed per manufacturers requirements.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.

3.2 CONSTRUCTION

- A. The drainage structure installation or construction includes excavation, construction, backfilling and restoration of the pavement or ground, as shown on the plans, in accordance with NYCDEP Standard Sewer Specifications and as directed by the Commissioner.
- B. For manholes and for all catch basins/inlets, bedding (where ordered by Commissioner) must be broken stone (DEP Specifications Sections 4.12 & 5.18). Manholes and catch basins must conform with section 5.07, 5.08 and 5.09.
- C. All frames and grates must be adjusted to final grade.
- D. Applicable SDS drawings include Nos. 11; 13; 24; 28A, B, C; 29A, B, C; 30A, B, C, D; 31A, B, C; 32; 48; 49; 53; 54.

3.3 TESTING

- A. Concrete materials and operations must be tested and inspected as the work progresses in accord with the provisions of NYCDEP General Specification 11 (GS 11) - Chapter 16, as modified by SSS Section 2.08.
- B. The contractor must be responsible for, and bear all costs associated with the filing and securing of approvals, if any, for Form TR3: Technical Report Concrete Design Mix, including, but not limited to, engaging the services of a New York City licensed Concrete Testing Lab for the review and approval of concrete design mix, testing, signatures and professional seals, etc., compliant with NYC Department of Buildings requirements, for each concrete design mix.
- C. The testing lab representative must check the concrete slump, air content, concrete temperature and the concrete unit weight and yield for each set of cylinders and for each truck delivery. The Contractor must provide adequate facilities (heated, insulated curing box, etc.) on the project site for the safe storage and proper curing of concrete test cylinders for the first 24-hours, prior to transport to the testing lab.

SECTION 33 42 41

GRATINGS AND FRAMES FOR STORMWATER DRAINAGE INLETS

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

- A. The following documents apply to all required work for the Project: (1) the Contract Drawings, (2) the Specifications, (3) the General Conditions, (4) the Addendum and (5) the Contract [City of New York Standard Construction Contract].

1.2 SUMMARY

- A. Section Includes:
 - 1. Gray iron castings such as frames and grates, manhole frames and covers, etc. for sewer drainage structures, water main valve manholes or for street lighting pull boxes, and must conform with NYCDEP (or NYCDOT or NYSDOT where applicable) Standard Specifications, or as specified on the drawings.

1.3 STORAGE

- A. All castings must be stored as specified in the applicable NYC Standards and NYSDOT Specifications.

1.4 RELATED WORK

- A. Related work is described in the following sections of the specifications
 - 1. Section 33 42 31: Stormwater Area Drains and Inlets

1.5 SUBMITTAL PROCEDURES

- A. Refer to DDC General Conditions Section 01 33 00 “Submittal Procedures”.

1.6 QUALITY ASSURANCE

- A. Refer to DDC General Conditions Section 01 40 00 “Quality Requirements”.

PART 2 - PRODUCTS

2.1 MATERIALS

- A. Gray cast iron castings must be class No. 30, ASTM A48, with a minimum tensile strength of 30,000 pounds per square inch. The flexural test described in ASTM A44 must be the primary test used in testing the iron.
- B. All castings for inlets, catch basins, manholes, chambers, water main valve manholes, etc. must be as per NYCDEP Standards, or as specified on the drawings.
- C. The weight of each casting must be conspicuously painted thereon in white oil paint.
- D. The iron must be such as will make castings which are of close and even grain and easily machined.
- E. Castings must be true to pattern, free from cracks, gas bores, flaws and excessive shrinkage. Surface of castings must be free from burnt-on sand and must be reasonably smooth after cleaning. Runners, risers, fins and other cast-on pieces must be removed. Plugging and fillings will not be allowed.
- F. When “machining” is specified on the drawings, it must mean the use of a machine or machines having cutting tool or tools to produce such surfaces and dimensions to a true and even surface.
- G. The underside of the seating rim of manhole covers must be machined. The upper side of the cover seating rim of manhole heads must also be machined.
- H. Chemical and Physical requirements of gray iron must comply with requirements of ASTM A48.

PART 3 - EXECUTION

3.1 EXECUTION REQUIREMENTS

- A. Refer to DDC General Conditions for execution requirements.
