  1. Leave uncovered and unconcealed new, altered, extended, or replaced force-main piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
  2. Cap and subject piping to static-water pressure of 50 psig above operating pressure, without exceeding pressure rating of piping system materials. Isolate test source and allow to stand for four hours. Leaks and loss in test pressure constitute defects that must be repaired.
  3. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
  4. Prepare reports for tests and required corrective action.

### **3.8 CLEANING AND PROTECTION**

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

### **3.9 PIPING SCHEDULE**

- A. Flanges and unions may be used on aboveground pressure piping unless otherwise indicated.
- B. Aboveground, soil and waste piping NPS 4 and smaller shall be any of the following:
  1. Hubless, cast-iron soil pipe and fittings CISPI heavy-duty hubless-piping couplings; and coupled joints.
  2. Copper DWV tube, copper drainage fittings, and soldered joints.
  3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- C. Aboveground, soil and waste piping NPS 5 and larger shall be any of the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings and solvent stack fittings; CISP hubless-piping couplings; and coupled joints.
  3. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- D. Aboveground, vent piping NPS 4 and smaller shall be any of the following:
  1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  2. Hubless, cast-iron soil pipe and fittings; [CISPI] [heavy-duty] hubless-piping couplings; and coupled joints.
  3. Galvanized-steel pipe, drainage fittings, and threaded joints.
  4. Copper DWV tube, copper drainage fittings, and soldered joints.
    - a. Option for Vent Piping, NPS 2-1/2 and NPS 3-1/2: Hard copper tube, Type K; copper pressure fittings; and soldered joints.
  5. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.

- E. Aboveground, vent piping NPS 5 and larger shall be any of the following:
  - 1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.
  - 2. Hubless, cast-iron soil pipe and fittings; [CISPI] hubless-piping couplings; and coupled joints.
  - 3. Galvanized-steel pipe, drainage fittings, and threaded joints.
  - 4. Dissimilar Pipe-Material Couplings: Shielded, nonpressure transition couplings.
- F. Aboveground sanitary-sewage force mains NPS 1-1/2 and NPS 2 shall be any of the following:
  - 1. Hard copper tube, Type K; copper pressure fittings; and soldered joints.
  - 2. Galvanized-steel pipe, pressure fittings, and threaded joints.
- G. Belowground, sanitary and vent piping shall be the following:
  - 1. Extra heavy-weight, coated, cast iron bell and spigot pipe and fittings with Neoprene gasket joints.

**END OF SECTION**

**SECTION 22 13 19 – SANITARY WASTE PIPING SPECIALTIES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. The work under this section shall include all labor, material, plant equipment, services and administrative tasks required to complete and make operable the plumbing work

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Cleanouts.
  - 2. Floor drains with cleanout
  - 3. Backwater valves
  - 3. Roof flashing assemblies.
  - 4. Through-penetration firestop assemblies.
  - 5. Miscellaneous sanitary drainage piping specialties.
  - 6. Flashing materials.
- B. Related Requirements:
  - 1. Section 22 13 16 "Sanitary Waste and Vent piping" for piping inside the building, drainage piping specialties, and drains.

**1.3 ACTION SUBMITTALS**

- A. Product Data: For each type of product indicated. Include rated capacities, operating characteristics, and accessories for the following:
- B. Shop Drawings: Show fabrication and installation details for frost-resistant vent terminals.
  - 1. Wiring Diagrams: Power, signal, and control wiring.
- C. Field quality-control reports.

**1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For drainage piping specialties to include in emergency, operation, and maintenance manuals.

**1.5 QUALITY ASSURANCE**

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.
- C. Comply with NSF 14, "Plastics Piping Components and Related Materials," for plastic sanitary piping specialty components.

**1.6 COORDINATION**

- A. Coordinate size and location of concrete bases. Cast anchor-bolt inserts into bases. Concrete, reinforcement, and formwork requirements are specified in Section 033000 "Cast-in-Place Concrete."
- B. Coordinate size and location of roof penetrations.

**1.7 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Cultures: Provide 1-gal. Bottles of bacteria culture recommended by manufacturer of FOG disposal systems equal to 200 percent of amount installed, but no fewer than 2 1-gal. Bottles.

**PART 2 - PRODUCTS****2.1 CLEANOUTS**

- A. Exposed Metal Cleanouts:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - 1) Josam Company.
    - 2) MIFAB, Inc.
    - 3) Smith, Jay R. Mfg. Co.
    - 4) Tyler Pipe.
    - 5) Watts Drainage Products.
    - 6) Zurn Plumbing Products Group.
    - 7) Or approved equal.
  - 2. Standard: ASME A112.3.1, ASME A112.36.2M or ASTM A 74
  - 3. Size: Minimum 3-inch or same as connected drainage piping.
  - 4. Body: Cast-iron hubless, cast-iron soil pipe test tee as required to match connected piping.
  - 5. Closure: Countersunk cast-iron plug.
  - 6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  - 7. Cleanout plug: Brass. Countersunk square head.
- B. Cast-Iron Wall Cleanouts:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
    - a. Josam Company; Josam Div.
    - b. MIFAB, Inc.

- c. Smith, Jay R. Mfg. Co.
  - d. Tyler Pipe; Wade Div.
  - e. Watts Drainage Products.
  - f. Zurn Plumbing Products Group; Specification Drainage Operation.
  - g. Or approved equal.
- 2. Standard: ASME A112.36.2M. Include wall access.
  - 3. Size: Same as connected drainage piping.
  - 4. Body: Cast-iron hubless, cast-iron soil pipe test tee as required to match connected piping.
  - 5. Closure: Countersunk cast-iron plug.
  - 6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  - 7. Wall Access: Round, deep, chrome-plated bronze cover plate with screw.
  - 8. Wall Access: Round, nickel-bronze, wall-installation frame and cover.
  - 9. Cleanout plug: Brass. Countersunk square head.

## **2.2 FLOOR DRAINS WITH INTEGRAL TRAP AND FLOOR-LEVEL CLEANOUTS**

### **A. Cast-Iron Floor Drains:**

- 1. Manufacturers: Subject to compliance with requirements, provide products by the following:
  - a. Josam Company; Josam Div.
  - b. MIFAB, Inc.
  - c. Prier Products, Inc.
  - d. Smith, Jay R. Mfg. Co.
  - e. Tyler Pipe; Wade Div.
  - f. Watts Drainage Products.
  - g. Zurn Plumbing Products Group; Light Commercial Operation.
  - h. Or approved equal.
- 2. Standard: ASME A112.3.1, ASME A112.6. Or CSA B79
- 3. Pattern: Floor drain.
- 4. Body Material: Cast iron.
- 5. Seepage Flange Required.
- 6. Anchor Flange: Required.
- 7. Clamping Device: Required.
- 8. Outlet: Minimum 3-inch and Bottom.
- 9. Coating on Interior and Exposed Exterior Surfaces: Not required.
- 10. Sediment Bucket: Not required.

11. Top or Strainer Material: Removable strainer and Stainless Steel
12. Top of Body and Strainer Finish: Stainless Steel
13. Top Shape: Round.
14. Funnel: Not required.
15. Inlet Fitting: Not required Gray iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
16. Trap Material: Bronze
17. Trap Pattern: Standard P-trap
18. Trap Features: Cleanout

## **2.4 THROUGH-PENETRATION FIRESTOP ASSEMBLIES**

- A. Standard:
  1. Standard: UL 1479 assembly of sleeve-and-stack fitting with firestopping plug.
  2. Size: Same as connected soil, waste, or vent stack.
  3. Sleeve: Molded-PVC plastic, of length to match slab thickness and with integral nailing flange on one end for installation in cast-in-place concrete slabs.
  4. Stack Fitting: ASTM A 48, gray-iron, hubless-pattern wye branch with neoprene O-ring at base and gray-iron plug in thermal-release harness. Include PVC protective cap for plug.
  5. Special Coating: Corrosion resistant on interior of fittings.

## **2.5 MISCELLANEOUS SANITARY DRAINAGE PIPING SPECIALTIES**

- A. Floor-Drain, Trap-Seal Primer Fittings:
  1. Description: Cast iron, with threaded inlet and threaded or spigot outlet, and trap-seal primer valve connection.
  2. Size: Same as floor drain outlet with NPS 1/2 side inlet.
- B. Sleeve Flashing Device:
  1. Description: Manufactured, cast-iron fitting, with clamping device that forms sleeve for pipe floor penetrations of floor membrane. Include galvanized-steel pipe extension in top of fitting that will extend dimension identified by engineer, above finished floor and galvanized-steel pipe extension in bottom of fitting that will extend through floor slab.
  2. Size: As required for close fit to riser or stack piping.

## **2.6 FLASHING MATERIALS**

- A. Lead Sheet: ASTM B 749, Type L51121, copper bearing, with the following minimum weights and thicknesses, unless otherwise indicated:
  1. General Use: 4.0-lb/sq. ft., 0.0625-inch thickness.
  2. Vent Pipe Flashing: 3.0-lb/sq. ft., 0.0469-inch thickness.
  3. Burning: 6-lb/sq. ft., 0.0938-inch thickness.

- B. Copper Sheet: ASTM B 152/B 152M, of the following minimum weights and thicknesses, unless otherwise indicated:
  - 1. General Applications: 12 oz. /sq. ft.
  - 2. Vent Pipe Flashing: 8 oz. /sq. ft.
- C. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04- inch minimum thickness, unless otherwise indicated. Include G90 hot-dip galvanized, mill-phosphatized finish for painting if indicated.
- D. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thickness.
- E. Fasteners: Metal compatible with material and substrate being fastened.
- F. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- G. Solder: ASTM B 32, lead-free alloy.
- H. Bituminous Coating: SSPC-Paint 12, solvent-type, bituminous mastic.

### **PART 3 - EXECUTION**

#### **3.1 INSTALLATION**

- A. Install cleanouts in aboveground piping and building drain piping according to the following, unless otherwise indicated:
  - 1. Size same as drainage piping up to NPS 4. Use NPS for larger drainage piping unless larger cleanout is indicated.
  - 2. Locate at each change in direction of piping greater than 45 degrees.
  - 3. Locate at minimum intervals of 50 feet for piping NPS 4 and smaller and 100 feet for larger piping.
  - 4. Locate at base of each vertical soil and waste stack.
- B. For floor cleanouts for piping below floors, install cleanout deck plates with top flush with finished floor.
- C. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- D. Install floor drains at low points of surface areas to be drained. Set grates of drains flush with finished floor, unless otherwise indicated.
  - 1. Position floor drains for easy access and maintenance.
  - 2. Set floor drains below elevation of surrounding finished floor to allow floor drainage. Set with grates depressed according to the following drainage area radii:
    - a. Radius, 30 Inches or Less: Equivalent to 1 percent slope, but not less than 1/4-inch total depression.
    - b. Radius, 30 to 60 Inches: Equivalent to 1 percent slope.

- c. Radius, 60 Inches or Larger: Equivalent to 1 percent slope, but not greater than 1-inch total depression.
- 3. Install floor-drain flashing collar or flange so no leakage occurs between drain and adjoining flooring. Maintain integrity of waterproof membranes where penetrated.
- 4. Install individual traps for floor drains connected to sanitary building drain, unless otherwise indicated.
- E. Install trench drains at low points of surface areas to be drained. Set grates of drains flush with finished surface, unless otherwise indicated.
- F. Assemble and install ASME A112.3.1, stainless-steel channel drainage systems according to ASME A112.3.1. Install on support devices so that top will be flush with surface.
- G. Assemble non-ASME A112.3.1, stainless-steel channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- H. Assemble FRP channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- I. Assemble plastic channel drainage system components according to manufacturer's written instructions. Install on support devices so that top will be flush with adjacent surface.
- J. Install fixture air-admittance valves on fixture drain piping.
- K. Install stack air-admittance valves at top of stack vent and vent stack piping.
- L. Install air-admittance-valve wall boxes recessed in wall.
- M. Install roof flashing assemblies on sanitary stack vents and vent stacks that extend through roof.
- N. Install flashing fittings on sanitary stack vents and vent stacks that extend through roof.
- O. Assemble open drain fittings and install with top of hub 2 inches above floor.
- P. Install deep-seal traps on floor drains and other waste outlets, if indicated.
- Q. Install floor-drain, trap-seal primer fittings on inlet to floor drains that require trap-seal primer connection.
  - 1. Exception: Fitting may be omitted if trap has trap-seal primer connection.
  - 2. Size: Same as floor drain inlet.
- R. Install air-gap fittings on draining-type backflow preventers and on indirect-waste piping discharge into sanitary drainage system.
- S. Install sleeve flashing device with each riser and stack passing through floors with waterproof membrane.
- T. Install vent caps on each vent pipe passing through roof.
- U. Install wood-blocking reinforcement for wall-mounting-type specialties.
- V. Install traps on plumbing specialty drain outlets. Omit traps on indirect wastes unless trap is indicated.

### 3.2 CONNECTIONS

- A. Comply with requirements in Section 221316 "Sanitary Waste and Vent piping" for piping installation requirements. Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Install piping adjacent to equipment to allow service and maintenance.
- C. FOG Disposal Systems: Connect inlet and outlet to unit, connect flow-control fitting and fresh- air inlet piping to unit inlet piping, and connect vent piping between trap and media chamber. Connect electrical power.
- D. Grease Interceptors: Connect inlet and outlet to unit, and connect flow-control fitting and vent to unit inlet piping. Install valve on outlet of automatic draw-off-type unit.
- E. Grease Removal Devices: Connect controls, electrical power, factory-furnished accessories, and inlet, outlet, and vent piping to unit.
- F. Oil Interceptors: Connect inlet, outlet, vent, and gravity draw-off piping to unit; flow-control fitting and vent to unit inlet piping; and gravity draw-off and suction piping to oil storage tank.
- G. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."
- H. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."

### 3.3 FLASHING INSTALLATION

- A. Fabricate flashing from single piece unless large pans, sumps, or other drainage shapes are required. Join flashing according to the following if required:
  - 1. Lead Sheets: Burn joints of lead sheets 6.0-lb/sq. ft., 0.0938-inch thickness or thicker. Solder joints of lead sheets 4.0-lb/sq. ft., 0.0625-inch thickness or thinner.
  - 2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
  - 1. Pipe Flashing: Sleeve type, matching pipe size, with minimum length of 10 inches, and skirt or flange extending at least 8 inches around pipe.
  - 2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
  - 3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Install flashing for piping passing through roofs with counterflashing or commercially made flashing fittings, according to Section 07 6000 "Sheet Metal and Trim."
- F. Extend flashing up vent pipe passing through roofs and turn down into pipe, or secure flashing into cast-iron sleeve having calking recess.
- G. Fabricate and install flashing and pans, sumps, and other drainage shapes.

**3.4 LABELING AND IDENTIFYING**

- A. Distinguish among multiple units, inform operator of operational requirements, indicate safety and emergency precautions, and warn of hazards and improper operations, in addition to identifying unit. Nameplates and signs are specified in Section 220553 "Identification for Plumbing Piping and Equipment."

**3.5 FIELD QUALITY CONTROL**

- A. Perform tests and inspections and prepare test reports.
  - 1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect field-assembled FOG disposal systems and grease removal devices and their installation, including piping and electrical connections, and to assist in testing.
- B. Tests and Inspections:
  - 1. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  - 2. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.

**3.6 PROTECTION**

- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
- B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

**END OF SECTION**

**SECTION 22 14 13 – FACILITY STORM DRAINAGE PIPING****PART 1 - GENERAL****1.1 SUMMARY**

- A. This Section includes storm drainage inside the building up to a point 5'-0" outside the building including:
  - 1. Pipe, tube, and fittings.
  - 2. Special pipe fittings.

**1.2 PERFORMANCE REQUIREMENTS**

- A. Components and installation shall be capable of withstanding the following minimum working pressure, unless otherwise indicated:
  - 1. Storm Drainage Piping: 10-foot head of water.

**1.3 SUBMITTALS**

- A. LEED Submittal:
  - 1. Product Data for Credit EQ 4.1: For solvent cements and adhesive primers, including printed statement of VOC content.
- B. Field quality-control inspection and test reports.

**1.4 QUALITY ASSURANCE**

- A. Piping materials shall bear label, stamp, or other markings of specified testing agency.

**PART 2 - PRODUCTS****2.1 PIPING MATERIALS**

- A. Hub-and-Spigot, Cast-Iron Pipe and Fittings: ASTM A 74, Service class.
  - 1. Gaskets: ASTM C 564, rubber.
- B. Hubless Cast-Iron Pipe and Fittings: ASTM A 888 or CISPI 301.
  - 1. Shielded Couplings: ASTM C 1277 assembly of metal shield or housing, corrosion-resistant fasteners, and rubber sleeve with integral, center pipe stop.
    - a. Standard, Shielded, Stainless-Steel Couplings: CISPI 310, with stainless-steel corrugated shield; stainless-steel bands and tightening devices; and ASTM C 564, rubber sleeve.

**PART 3 - EXECUTION****3.1 PIPING APPLICATIONS**

- A. Special pipe fittings with pressure ratings at least equal to piping pressure ratings may be used in applications below, unless otherwise indicated.
- B. Aboveground storm drainage piping shall be:

1. Hubless cast-iron soil pipe and fittings; standard, shielded, stainless-steel couplings; and coupled joints.
- C. Underground storm drainage piping to 5'-0" outside building shall be one of the following:
1. Service class, cast-iron soil pipe and fittings; gaskets; and gasketed joints.

### **3.2 PIPING INSTALLATION**

- A. Site storm sewer and piping to a point 5'-0" outside the building is specified in Division 33 Section "Storm Utility Drainage Piping."
- B. Basic piping installation requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- C. Install cast-iron soil piping according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook," Chapter IV, "Installation of Cast Iron Soil Pipe and Fittings."
- D. Make changes in direction for storm piping using appropriate branches, bends, and long-sweep bends. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.
- E. Lay buried building drain piping beginning at low point of each system. Install true to grades and alignment indicated, with unbroken continuity of invert. Place hub ends of piping upstream. Install required gaskets according to manufacturer's written instructions for use of lubricants, cements, and other installation requirements. Maintain swab in piping and pull past each joint as completed.
- F. Install storm drainage piping at 1 percent downward in direction of flow.
- G. Sleeves are not required for cast-iron soil piping passing through concrete slabs-on-grade if slab is without membrane waterproofing.
- H. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.
- I. Install sleeves for piping penetrations of walls, ceilings, and floors. Comply with requirements for sleeves specified in Division 22 Section "Common Work Results for Plumbing".
- J. Install sleeve seals for piping penetrations of concrete walls and slabs. Comply with requirements for sleeve seals specified in Division 22 Section "Common Work Results for Plumbing".
- K. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 22 Section "Common Work Results for Plumbing".
- L. Install downspouts in column webs wherever possible.

### **3.3 JOINT CONSTRUCTION**

- A. Basic piping joint construction requirements are specified in Division 22 Section "Common Work Results for Plumbing."
- B. Hub-and-Spigot, Cast-Iron Soil Piping Gasketed Joints: Join according to CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for compression joints.

- C. Hubless Cast-Iron Soil Piping Coupled Joints: Join according to CISPI 310 and CISPI's "Cast Iron Soil Pipe and Fittings Handbook" for hubless-coupling joints.

### 3.4 HANGER AND SUPPORT INSTALLATION

- A. Pipe hangers and supports are specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment." Install the following:
  1. Vertical Piping: MSS Type 8 or Type 42, clamps.
  2. Individual, Straight, Horizontal Piping Runs: According to the following:
    - a. 100 Feet and Less: MSS Type 1, adjustable, steel clevis hangers.
    - b. Longer Than 100 Feet: MSS Type 43, adjustable roller hangers.
    - c. Longer Than 100 Feet, if Indicated: MSS Type 49, spring cushion rolls.
  3. Multiple, Straight, Horizontal Piping Runs 100 Feet or Longer: MSS Type 44, pipe rolls. Support pipe rolls on trapeze.
  4. Base of Vertical Piping: MSS Type 52, spring hangers.
- B. Install supports according to Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."
- C. Support vertical piping and tubing at base and at each floor.
- D. Rod diameter may be reduced 1 size for double-rod hangers, with 3/8-inch minimum rods.
- E. Install supports for vertical cast-iron soil piping every 15 feet.
- F. Support piping and tubing not listed above according to MSS SP-69 and manufacturer's written instructions.

### 3.5 CONNECTIONS

- A. Connect interior storm drainage piping to exterior storm drainage piping at a point 5'-0" outside the building. Use transition fitting to join dissimilar piping materials.
- B. Connect storm drainage piping to roof drains and storm drainage specialties.

### 3.6 FIELD QUALITY CONTROL

- A. During installation, notify authorities having jurisdiction at least 24 hours before inspection must be made. Perform tests specified below in presence of authorities having jurisdiction.
  1. Roughing-in Inspection: Arrange for inspection of piping before concealing or closing-in after roughing-in.
  2. Final Inspection: Arrange for final inspection by authorities having jurisdiction to observe tests specified below and to ensure compliance with requirements.
- B. Reinspection: If authorities having jurisdiction find that piping will not pass test or inspection, make required corrections and arrange for reinspection.
- C. Reports: Prepare inspection reports and have them signed by authorities having jurisdiction.
- D. Test storm drainage piping according to procedures of authorities having jurisdiction or in absence of published procedures, as follows:

1. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired. If testing is performed in segments, submit separate report for each test, complete with diagram of portion of piping tested.
2. Leave uncovered and unconcealed new, altered, extended, or replaced drainage piping until it has been tested and approved. Expose work that was covered or concealed before it was tested.
3. Test Procedure: Test drainage piping on completion of roughing in. Close openings in piping system and fill with water to point of overflow, but not less than 10-foot head of water. From 15 minutes before inspection starts to completion of inspection, water level must not drop. Inspect joints for leaks.
4. Repair leaks and defects with new materials and retest piping, or portion thereof, until satisfactory results are obtained.
5. Prepare reports for tests and required corrective action.

### **3.7 CLEANING**

- A. Clean interior of piping. Remove dirt and debris as work progresses.
- B. Protect drains during remainder of construction period to avoid clogging with dirt and debris and to prevent damage from traffic and construction work.
- C. Place plugs in ends of uncompleted piping at end of day and when work stops.

**END OF SECTION**

**SECTION 22 14 23 – STORM DRAINAGE PIPING SPECIALTIES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Roof drains.
  - 2. Deck drains
  - 3. Miscellaneous storm drainage piping specialties.
  - 4. Cleanouts.
  - 5. Flashing materials.

**1.2 SUBMITTALS**

- A. Product Data: For each type of product indicated.

**1.3 QUALITY ASSURANCE**

- A. Drainage piping specialties shall bear label, stamp, or other markings of specified testing agency.

**PART 2 - PRODUCTS****2.1 ROOF AND DECK DRAINS**

- A. Cast-Iron, Large-Sump, General-Purpose Roof Drains **RD**:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Josam Company.
    - b. Smith, Jay R. Mfg. Co.
    - c. Tyler Pipe; Wade Div.
    - d. Zurn Plumbing Products Group; Specification Drainage Operation.
  - 2. Standard: ASME A112.6.4, for general-purpose roof drains.
  - 3. Body Material: Cast iron.
  - 4. Dimension of Body: Nominal 15-inch diameter.
  - 5. Combination Flashing Ring and Gravel Stop: Not required.
  - 6. Flow-Control Weirs: Not required.
  - 7. Outlet Location: Bottom.
  - 8. Outlet Size: As indicated on drawings.
  - 9. Extension Collars: Not required.
  - 10. Underdeck Clamp: Required.
  - 11. Expansion Joint: Not required.

12. Dome Material: PE.

**B. Deck Drains DD:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Josam Company.
  - b. Smith, Jay R. Mfg. Co.
  - c. Tyler Pipe; Wade Div.
  - d. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.21.2, for drains.
3. Body Material: Cast iron.
4. Dimension of Body: Nominal 8 inch diameter.
5. Grate: Coated cast iron 8 inches square.
6. Outlet Location: Bottom.
7. Outlet Size: As indicated on drawings.

**2.2 MISCELLANEOUS STORM DRAINAGE PIPING SPECIALTIES**

**A. Downspout Boots:**

1. Description: Manufactured, ASTM A 48/A 48M, gray-iron casting, with strap or ears for attaching to building; 4 inch outlet; and shop-applied bituminous coating.
2. Size: Inlet size to match downspout and 4 inch outlet.

**B. Conductor Nozzles for Emergency Drain:**

1. Description: Nickel bronze body with threaded inlet and nickel bronze wall flange with mounting holes.
2. Size: Same as connected conductor.

**2.3 CLEANOUTS**

**A. Floor Cleanouts FCO:**

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  - a. Josam Company.
  - b. Smith, Jay R. Mfg. Co.
  - c. Tyler Pipe; Wade Div.
  - d. Zurn Plumbing Products Group; Specification Drainage Operation.
2. Standard: ASME A112.36.2M, for adjustable housing cleanouts.
3. Size: Same as connected branch.
4. Type: Adjustable housing.
5. Body or Ferrule Material: ABS.
6. Clamping Device: Required.

7. Outlet Connection: Inside calk.
  8. Closure: Plastic plug.
  9. Adjustable Housing Material: ABS Plastic with threads.
  10. Frame and Cover Material and Finish: Scoriated Nickel-bronze, copper alloy.
  11. Frame and Cover Shape: Round.
  12. Top-Loading Classification: Medium Duty.
- B. Test Tees:
1. Standard: ASME A112.36.2M and ASTM A 74, ASTM A 888, or CISPI 301, for cleanout test tees.
  2. Size: Same as connected drainage piping.
  3. Body Material: Hub-and-spigot, cast-iron soil-pipe T-branch or hubless, cast-iron soil- pipe test tee as required to match connected piping.
  4. Closure Plug: raised head, brass.
  5. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
- C. Wall Cleanouts **WCO**:
1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Josam Company.
    - b. Smith, Jay R. Mfg. Co.
    - c. Tyler Pipe; Wade Div.
    - d. Zurn Plumbing Products Group; Specification Drainage Operation..
  2. Standard: ASME A112.36.2M, for cleanouts. Include wall access.
  3. Size: Same as connected drainage piping.
  4. Body Material: Hubless, cast-iron soil-pipe test tee as required to match connected piping.
  5. Closure: Countersunk, drilled-and-threaded brass plug.
  6. Closure Plug Size: Same as or not more than one size smaller than cleanout size.
  7. Wall Access: Round, flat, chrome-plated brass or stainless-steel cover plate with screw.

## 2.4 FLASHING MATERIALS

- A. Copper Sheet: ASTM B 152/B 152M, 12 oz./sq. ft..
- B. Zinc-Coated Steel Sheet: ASTM A 653/A 653M, with 0.20 percent copper content and 0.04- inch minimum thickness unless otherwise indicated. Include G90 hot-dip galvanized, mill- phosphatized finish for painting if indicated.
- C. Elastic Membrane Sheet: ASTM D 4068, flexible, chlorinated polyethylene, 40-mil minimum thickness.

- D. Fasteners: Metal compatible with material and substrate being fastened.
- E. Metal Accessories: Sheet metal strips, clamps, anchoring devices, and similar accessory units required for installation; matching or compatible with material being installed.
- F. Solder: ASTM B 32, lead-free alloy.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install roof drains at low points of roof areas according to roof membrane manufacturer's written installation instructions. Roofing materials are specified in Division 07 Sections.
  - 1. Install flashing collar or flange of roof drain to prevent leakage between drain and adjoining roofing. Maintain integrity of waterproof membranes where penetrated.
  - 2. Install expansion joints, if indicated, in roof drain outlets.
  - 3. Position roof drains for easy access and maintenance.
- B. Install downspout boots at grade with top 12 inches above grade. Secure to building wall.
- C. Install conductor nozzles at exposed bottom of conductors where they spill onto grade.
- D. Install cleanouts in aboveground piping and building drain piping according to the following instructions unless otherwise indicated:
  - 1. Use cleanouts the same size as drainage piping up to NPS 4. Use NPS 4 for larger drainage piping unless larger cleanout is indicated.
  - 2. Locate cleanouts at each change in direction of piping greater than 45 degrees.
  - 3. Locate cleanouts at minimum intervals of 100 feet.
  - 4. Locate cleanouts at base of each vertical soil and waste stack.
- E. For floor cleanouts for piping below floors, install cleanout with top flush with finished floor.
- F. For cleanouts located in concealed piping, install cleanout wall access covers, of types indicated, with frame and cover flush with finished wall.
- G. Install test tees in vertical conductors and near floor.
- H. Install wall cleanouts in vertical conductors. Install access door in wall if indicated.
- I. Install sleeve flashing device with each conductor passing through floors with waterproof membrane.

### **3.2 CONNECTIONS**

- A. Comply with requirements for piping specified in Division 22 Sections. Drawings indicate general arrangement of piping, fittings, and specialties.

### **3.3 FLASHING INSTALLATION**

- A. Fabricate flashing from single piece of metal unless large pans, sumps, or other

drainage shapes are required. Join flashing according to the following if required:

1. Lead Sheets: Burn joints of 6.0-lb/sq. ft. lead sheets, 0.0938-inch thickness or thicker. Solder joints of 4.0-lb/sq. ft. lead sheets, 0.0625-inch thickness or thinner.
  2. Copper Sheets: Solder joints of copper sheets.
- B. Install sheet flashing on pipes, sleeves, and specialties passing through or embedded in floors and roofs with waterproof membrane.
1. Pipe Flashing: Sleeve type, matching the pipe size, with a minimum length of 10 inches and with skirt or flange extending at least 8 inches around pipe.
  2. Sleeve Flashing: Flat sheet, with skirt or flange extending at least 8 inches around sleeve.
  3. Embedded Specialty Flashing: Flat sheet, with skirt or flange extending at least 8 inches around specialty.
- C. Set flashing on floors and roofs in solid coating of bituminous cement.
- D. Secure flashing into sleeve and specialty clamping ring or device.
- E. Fabricate and install flashing and pans, sumps, and other drainage shapes.
- 3.4 PROTECTION
- A. Protect drains during remainder of construction period to avoid clogging with dirt or debris and to prevent damage from traffic or construction work.
  - B. Place plugs in ends of uncompleted piping at end of each day or when work stops.

#### **END OF SECTION**

**SECTION 22 16 16 – NATURAL GAS PIPING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Aboveground pipe and fittings from meter and main regulator to building equipment.
  - 2. Piping specialties and Art Room gas outlet.
  - 3. Piping and tubing joining materials.
  - 4. Valves.
  - 5. Pressure regulators.

**1.2 REFERENCE STANDARDS**

- A. The latest published edition of a reference shall be applicable to this Project unless identified by a specific edition date.
- B. All reference amendments adopted prior to the effective date of this Contract shall be applicable to this Project.
- C. All materials, installation and workmanship shall comply with the applicable requirements and standards addressed within the following references:
  - 1. 2009 Edition of the International Fuel Gas Code.
  - 2. Latest edition of NFPA 54.

**1.3 PERFORMANCE REQUIREMENTS**

- A. Minimum Operating-Pressure Ratings:
  - 1. Piping and Valves: 100 psig minimum unless otherwise indicated.
  - 2. Service Regulators: 100 psig minimum unless otherwise indicated.
- B. Natural-Gas System Pressure within Buildings: 2.0 psig or less

**1.4 SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Welding certificates.
- C. Field quality-control reports.
- D. Operation and maintenance data.

**1.5 QUALITY ASSURANCE**

- A. Steel Support Welding Qualifications: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code - Steel."
- B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

- C. **Manufacturer Qualifications:** The manufacturer providing material or equipment specified in this section must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
  - D. **Installer Qualifications:** The entity performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope, size and type to the required work.
  - E. Conformance to National Fuel Gas Code.
  - F. Material and installation requirements shall follow NFPA 54, state and local gas company codes.
  - G. Conformance to ANSI B31.
  - H. Gas regulators shall be AGA rated.
- 1.6 DELIVERY, STORAGE and HANDLING**
- A. Accept valves on Site in shipping containers with labeling in place, inspect for damage and store with a minimum of handling. Store plastic piping under cover out of direct sunlight. Do not store materials directly on the ground.
  - B. Protect piping systems from entry of foreign materials by temporary covers, completing sections of the work and isolating parts of completed system.

## **PART 2 - PRODUCTS**

### **2.1 GENERAL**

- A. All materials shall meet or exceed all applicable referenced standards, federal, state and local requirements, and conform to codes and ordinances of authorities having jurisdiction.

### **2.2 PIPES, TUBES, AND FITTINGS**

- A. Steel Pipe: ASTM A 53/A 53M, black steel, Schedule 40, Type E or S, Grade B.
  1. Malleable-Iron Threaded Fittings: ASME B16.3, Class 150, standard pattern.
  2. Unions: ASME B16.39, Class 150, malleable iron with brass-to-iron seat, ground joint, and threaded ends.

### **2.3 JOINING MATERIALS**

- A. Joint Compound and Tape: Suitable for natural gas.

### **2.4 GAS VALVES**

- A. All valves shall be designed, manufactured and approved for natural gas service.
- B. Line Shut-off Valves sizes 2 inches and smaller shall be iron body lubricated plug valve conforming to ASTM-A-126, U.L. Listed and A.G.A. Approved for natural gas service with threaded ends, wrench operation, rated for 200 WOG service pressure and -20 to 200 degrees F., manufactured by Nordstrom Model 142 or approved equal by Resun or McDonald, A. Y. Mfg. Co.

- C. Line Shut-off Valves sizes 2½ inches and larger shall be iron body lubricated plug valve conforming to ASTM-A-126, U.L. Listed and A.G.A. Approved for natural gas service with flanged ends, wrench operation, rated for 200 WOG service pressure and –20 to 200 degrees F., manufactured by Nordstrom Model 143 or approved equal by Resun or McDonald, A. Y. Mfg. Co.
- D. Appliance/Equipment Shut-off Valves at local connections sizes 2 inches and smaller shall be bronze body, full port ball or butterfly type, U.L. Listed and A.G.A. Approved for natural gas service with threaded ends, quarter turn lever handle operation, rated for 175 W.O.G. service pressure and 30 to 275 degrees F., manufactured by Nibco Model T585-70-UL or approved equal by Milwaukee or Apollo.
- E. Manual Emergency Shut-off Valves sizes 2 inches and smaller shall be bronze body, full port ball or butterfly type, U.L. Listed and A.G.A. Approved for natural gas service with threaded ends, quarter turn lever handle operation, rated for 175 W.O.G. service pressure and 30 to 275 degrees F., manufactured by Nibco Model T585-70-UL or approved equal by Milwaukee or Apollo.
- F. Automatic Emergency Shut-off Valves shall be U.L. Listed F.M. Approved for natural gas service, 2-way electrically tripped solenoid type; fail safe closed; manual reset; Type 1 solenoid enclosure; NBR seals and disc; stainless steel core tube and springs; copper coil; manufactured by ASCO Red Hat Series 8044 or approved equal by Honeywell or Jefferson.

## **2.5 PRESSURE REGULATORS**

- A. General Requirements:
  - 1. Single stage and suitable for natural gas.
  - 2. Steel jacket and corrosion-resistant components.
  - 3. Elevation compensator.
  - 4. End Connections: Threaded for regulators NPS 2 and smaller.
- B. Appliance Pressure Regulators: Comply with ANSI Z21.18.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Eaton Corporation; Controls Div.
    - b. Harper Wyman Co.
    - c. Maxitrol Company.
    - d. Itron
  - 2. Body and Diaphragm Case: Die-cast aluminum.
  - 3. Springs: Zinc-plated steel; interchangeable.
  - 4. Diaphragm Plate: Zinc-plated steel.
  - 5. Seat Disc: Nitrile rubber.
  - 6. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
  - 7. Factory-Applied Finish: Minimum three-layer polyester and polyurethane paint finish.

8. Atmospheric Vent: Factory installed.
9. Maximum Inlet Pressure: 2 psig
- C. Line Pressure Regulators: Comply with ANSI Z21.80.
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Belgas
    - b. Eaton Corporation; Controls Div.
    - c. Harper Wyman Co.
    - d. Maxitrol Company.
  2. Body and Diaphragm Case: Cast iron or die-cast aluminum.
  3. Springs: Zinc-plated steel; interchangeable.
  4. Diaphragm Plate: Zinc-plated steel.
  5. Seat Disc: Nitrile rubber resistant to gas impurities, abrasion, and deformation at the valve port.
  6. Orifice: Aluminum; interchangeable.
  7. Seal Plug: Ultraviolet-stabilized, mineral-filled nylon.
  8. Single-port, self-contained regulator with orifice no larger than required at maximum pressure inlet, and no pressure sensing piping external to the regulator.
  9. Pressure regulator shall maintain discharge pressure setting downstream, and not exceed 120 percent of design discharge pressure at shutoff.
  10. Overpressure Protection Device: Factory mounted on pressure regulator.
  11. Atmospheric Vent: Factory- or field-installed, stainless-steel screen in opening if not connected to vent piping.
  12. Maximum Inlet Pressure: 5 psig
  13. Suitable for outdoor use to minus 40 F ambient temperature.

## 2.6 DIELECTRIC UNIONS

- A. Dielectric Unions:
  1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
    - a. Hart Industries International, Inc.
    - b. McDonald, A. Y. Mfg. Co.
    - c. Watts Regulator Co.; a division of Watts Water Technologies, Inc.
    - d. Wilkins; a Zurn company.
  2. Description:
    - a. Standard: ASSE 1079.
    - b. Pressure Rating: 125 psig at 180 deg F.

- c. End Connections: Solder-joint copper alloy and threaded ferrous.

## **PART 3 - EXECUTION**

### **3.1 INDOOR PIPING INSTALLATION**

- A. Comply with NFPA 54 for installation and purging of natural-gas piping.
- B. Drawing plans, schematics, and diagrams indicate general location and arrangement of piping systems. Indicated locations and arrangements are used to size pipe and calculate friction loss, expansion, and other design considerations. Install piping as indicated unless deviations to layout are approved on Coordination Drawings.
- C. Arrange for pipe spaces, chases, slots, sleeves, and openings in building structure during progress of construction, to allow for mechanical installations.
- D. Install piping in concealed locations (as allowed per code) unless otherwise indicated and except in equipment rooms and service areas.
- E. Install piping indicated to be exposed and piping in equipment rooms and service areas at right angles or parallel to building walls. Diagonal runs are prohibited unless specifically indicated otherwise.
- F. Install piping above accessible ceilings to allow sufficient space for ceiling panel removal.
- G. Locate valves for easy access.
- H. Install piping free of sags and bends.
- I. Install fittings for changes in direction and branch connections.
- J. Verify final equipment locations for roughing-in.
- K. Comply with requirements in Sections specifying gas-fired appliances and equipment for roughing-in requirements.
- L. Drips and Sediment Traps: Install drips at points where condensate may collect, including service-meter outlets. Locate where accessible to permit cleaning and emptying. Do not install where condensate is subject to freezing.
  - 1. Construct drips and sediment traps using tee fitting with bottom outlet plugged or capped. Use nipple a minimum length of 3 pipe diameters, but not less than 3 inches long and same size as connected pipe. Install with space below bottom of drip to remove plug or cap.
- M. Extend relief vent connections for service regulators, line regulators, and overpressure protection devices to outdoors and terminate with weatherproof vent cap.
- N. Conceal pipe installations in walls, pipe spaces, utility spaces, above ceilings, unless indicated to be exposed to view. Pipe concealed in walls and partitions shall be installed in an approved chase or casing. Piping in concealed locations shall not have unions, tubing fittings, right and left couplings, bushings, compression couplings, nor swing joints made by combinations of fittings. Tubing joined by brazing is allowed, as are fittings listed for use in concealed locations.
- O. Use eccentric reducer fittings to make reductions in pipe sizes. Install fittings with level side down.

- P. Connect branch piping from top or side of horizontal piping.
- Q. Install unions in pipes NPS 2 and smaller, adjacent to each valve, at final connection to each piece of equipment.
- R. Do not use natural-gas piping as grounding electrode.
- S. Install strainer on inlet of each line-pressure regulator and automatic or electrically operated valve.
- T. Install pressure gage downstream from each line regulator. Pressure gages are specified in Division 23 Section "Meters and Gages for HVAC Piping."
- U. Install sleeves for piping penetrations of walls, ceilings, and floors, concrete walls or slabs. Comply with requirements for sleeves specified in Division 23 Section "Common Work Results for HVAC."
- V. Install escutcheons for piping penetrations of walls, ceilings, and floors. Comply with requirements for escutcheons specified in Division 23 Section "Common Work Results for HVAC."

### **3.2 VALVE INSTALLATION**

- A. Install manual gas shutoff valve for each gas appliance.
- B. Install regulators and overpressure protection devices with maintenance access space adequate for servicing and testing.
- C. Install cooking appliance shunt trip valve per valve manufacturer's instructions and in coordination with kitchen equipment contractor.

### **3.3 PIPING JOINT CONSTRUCTION**

- A. Ream ends of pipes and tubes and remove burrs.
- B. Remove scale, slag, dirt, and debris from inside and outside of pipe and fittings before assembly.
- C. Threaded Joints:
  - 1. Thread pipe with tapered pipe threads complying with ASME B1.20.1.
  - 2. Cut threads full and clean using sharp dies.
  - 3. Ream threaded pipe ends to remove burrs and restore full inside diameter of pipe.
  - 4. Apply appropriate tape or thread compound to external pipe threads unless dryseal threading is specified.
  - 5. Damaged Threads: Do not use pipe or pipe fittings with threads that are corroded or damaged. Do not use pipe sections that have cracked or open welds.

### **3.4 HANGER AND SUPPORT INSTALLATION**

- A. Comply with requirements for pipe hangers and supports specified in Division 22 Section "Hangers and Supports for Plumbing Piping and Equipment."

### **3.5 CONNECTIONS**

- A. Connect to utility's gas main after meter and regulator.

- B. Install natural-gas piping electrically continuous, and bonded to gas appliance equipment grounding conductor of the circuit powering the appliance according to NFPA 70.
- C. Install piping adjacent to appliances to allow service and maintenance of appliances.
- D. Connect piping to appliances using manual gas shutoff valves and unions. Install valve within 72 inches of each gas-fired appliance and equipment. Install union between valve and appliances or equipment.
- E. Sediment Traps: Install tee fitting with capped nipple in bottom to form drip, as close as practical to inlet of each appliance.

### **3.6 LABELING AND IDENTIFYING**

- A. Comply with requirements in Division 23 Section "Identification for HVAC Piping and Equipment" for piping and valve identification.

### **3.7 FIELD QUALITY CONTROL**

- A. Test, inspect, and purge natural gas according to NFPA 54 and authorities having jurisdiction.
- B. Natural-gas piping will be considered defective if it does not pass tests and inspections.
- C. Prepare test and inspection reports.

### **3.8 INDOOR PIPING SCHEDULE**

- A. Aboveground, branch & distribution piping NPS 2 and smaller shall be the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
  - 2. EXCEPTIONS:
    - a. All exposed piping 1½ inches and smaller located within areas utilized as return air plenums shall have welded joints with Schedule 40 socket welded forged steel fittings conforming to ASME B16.11.
    - b. All exposed piping 1½ inches and smaller serving laboratories from main natural gas riser to each emergency shut-off valve shall have welded joints with Schedule 40 socket welded forged steel fittings conforming to ASME B16.11.
- B. Aboveground, branch & distribution piping larger than NPS 2 shall be the following:
  - 1. Steel pipe with wrought-steel fittings and welded joints.

### **3.9 OUTDOOR PIPING SCHEDULE**

- A. Aboveground, NPS 2 and smaller shall be the following:
  - 1. Steel pipe with malleable-iron fittings and threaded joints.
- B. Aboveground, larger than NPS 2 shall be the following:
  - 1. Steel pipe with wrought-steel fittings and welded joints.

### **3.10 PAINTING**

- A. Comply with requirements in Section 099100 Painting for painting exterior natural-gas piping (ferrous metal).
- B. Paint exposed, exterior metal piping, valves, regulators, and piping specialties, except

components, with factory-applied paint or protective coating.

1. Gloss finish.
  2. Color - Yellow.
- C. Damage and Touchup: Repair marred and damaged factory-applied finishes with materials and by procedures to match original factory finish.

**END OF SECTION**

**SECTION 22 33 33 – INSTANTANEOUS ELECTRIC, DOMESTIC WATER HEATERS****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Section 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING.
- B. Section 22 05 23 - VALVES FOR PLUMBING PIPING.
- C. Section 22 11 16 - DOMESTIC WATER PIPING.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Flow-control, electric, tankless, water heaters.
  - 2. Domestic-water heater accessories.

**1.3 SUBMITTALS**

- A. Product Data: For each type and size of domestic-water heater indicated. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings:
  - 1. Wiring Diagrams: For power, signal, and control wiring.
- C. Product Certificates: For each type of tankless, electric, domestic-water heater, from manufacturer.
- D. Domestic-Water Heater Labeling: Certified and labeled by testing agency acceptable to authorities having jurisdiction.
- E. Warranty: Sample of special warranty.
- F. Operation and Maintenance Data: For electric, domestic-water heaters to include in emergency, operation, and maintenance manuals.

**1.4 QUALITY ASSURANCE**

- A. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.  
  
Compliance with ASHRAE/IESNA 90.1 is required by LEED 2009, LEED v4, IgCC, ASHRAE 189.1, and Green Globes and may be required even when they do not apply.
- B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1.
- C. NSF Compliance: Fabricate and label equipment components that will be in contact with potable water to comply with NSF 61 Annex G, "Drinking Water System Components - Health Effects."

**1.5 COORDINATION**

- A. Coordinate sizes and locations with actual equipment provided.

## 1.6 WARRANTY

- A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of electric, domestic-water heaters that fail in materials or workmanship within specified warranty period.
  - 1. Failures include, but are not limited to, the following:
    - a. Faulty operation of controls.
    - b. Deterioration of metals, metal finishes, and other materials beyond normal use.
  - 2. Warranty Periods: From date of Substantial Completion.
    - a. Electric, Tankless, Domestic-Water Heaters: Five year(s).

## PART 2 - PRODUCTS

### 2.1 ELECTRIC, TANKLESS, DOMESTIC-WATER HEATERS

- A. Flow-Control, Electric, Tankless, Domestic-Water Heaters:
  - 1. Manufacturers: Subject to compliance with requirements, provide products by the following
    - a. Eemax
    - b. EcoSmart
    - c. Bosch
    - d. Rheem
    - e. Or approved equal
  - 2. Standard: UL 499 for electric, tankless, domestic-water heater heating appliance.
  - 3. Construction: Copper piping or tubing complying with NSF 61 Annex G barrier materials for potable water, without storage capacity.
    - a. Connections: ASME B1.20.1 pipe thread
    - b. Minimum Dynamic Operating Pressure: 35 Psig
    - c. Maximum Dynamic Operating Pressure : 150 psig
    - d. Heating Element: Ni-Chrome
    - e. Temperature Control: Flow-control fitting.
  - 4. Performance:
    - a. On demand hot water. Flow switch activates heater only on demand
    - b. High temperature limit switch with automatic reset
    - c. Flow restricting aerator ensures proper temperature rise.
    - d. Ni-Chrome element
  - 5. Support: Bracket for wall mounting.

6. Capacity and Characteristics:
  - a. Flow Rate: 0.2 GPM to 1.0 GPM as indicated on the contract drawings
  - b. Maximum Temperature Setting: 110 °F
  - c. Power Demand: 1.44 Kw to 8.3 Kw as indicated on the contract drawings
  - d. Electrical Characteristics:
    - 1) Volts: 120.
    - 2) Phases: Single
    - 3) Hertz: 60.
    - 4) Full-Load Amperes: 20

## **2.2 DOMESTIC-WATER HEATER ACCESSORIES**

- A. Shock Absorbers: ASSE 1010 or PDI-WH 201, Size A water hammer arrester.
- B. Domestic-Water Heater Mounting Brackets: Manufacturer's factory-fabricated steel bracket for wall mounting, capable of supporting domestic-water heater.

## **2.3 SOURCE QUALITY CONTROL**

- A. Factory Tests: Test and inspect domestic-water heaters specified to be ASME-code construction, according to ASME Boiler and Pressure Vessel Code.
- B. Hydrostatically test commercial domestic-water heaters to minimum of one and one-half times pressure rating before shipment.
- C. Electric, domestic-water heaters will be considered defective if they do not pass tests and inspections.
- D. Prepare test and inspection reports.

## **PART 3 - EXECUTION**

### **3.1 DOMESTIC-WATER HEATER INSTALLATION**

- A. Electric, Tank-less, Domestic-Water Heater Mounting: Install electric, tank-less, domestic-water heaters at least 18 inches above floor on wall bracket.
  1. Maintain manufacturer's recommended clearances.
  2. Arrange units so controls and devices that require servicing are accessible.
  3. Place and secure anchorage devices. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.
  4. Install anchor bolts to elevations required for proper attachment to supported equipment.
  5. Anchor domestic-water heaters to substrate.
- B. Install electric, domestic-water heaters level and plumb, according to layout drawings, original design, and referenced standards. Maintain manufacturer's recommended clearances. Arrange units so controls and devices needing service are accessible.

1. Install shutoff valves on domestic-water-supply piping to domestic-water heaters and on domestic-hot-water outlet piping. Comply with requirements for shutoff valves specified in Section 220523 "Valves for Plumbing Piping,"

### **3.2 CONNECTIONS**

- A. Comply with requirements for piping specified in Section 221116 "Domestic Water Piping." Drawings indicate general arrangement of piping, fittings, and specialties.
- B. Where installing piping adjacent to electric, domestic-water heaters, allow space for service and maintenance of water heaters. Arrange piping for easy removal of domestic-water heaters.

### **3.3 IDENTIFICATION**

- A. Identify system components. Comply with requirements for identification specified in Section 220553 "Identification for Plumbing Piping and Equipment."

### **3.4 FIELD QUALITY CONTROL**

- A. Perform tests and inspections.
  1. Manufacturer's Field Service: Engage a factory-authorized service representative to inspect components, assemblies, and equipment installations, including connections, and to assist in testing.
  2. Leak Test: After installation, charge system and test for leaks. Repair leaks and retest until no leaks exist.
  3. Operational Test: After electrical circuitry has been energized, start units to confirm proper operation.
  4. Test and adjust controls and safeties. Replace damaged and malfunctioning controls and equipment.
- B. Prepare test and inspection reports.

### **3.5 DEMONSTRATION**

- A. Provide instruction for the City's maintenance personnel showing how to adjust, operate, and maintain tankless, electric, domestic-water heaters.

**END OF SECTION**

**SECTION 22 42 13.13 – COMMERCIAL WATER CLOSET AND URINAL****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Section 07 92 00 - JOINT SEALANTS.
- B. Section 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING.
- C. Section 22 05 23 - VALVES FOR PLUMBING PIPING.
- D. Section 22 07 19 - PLUMBING PIPING INSULATION.
- E. Section 22 11 16 - DOMESTIC WATER PIPING.
- F. Section 22 13 16 - SANITARY WASTE AND VENT PIPING.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Water Closet
  - 2. Flushometer valves.
  - 3. Toilet seats.
  - 4. Supports.

**1.3 DEFINITIONS**

- A. Effective Flush Volume: Average of two reduced flushes and one full flush per fixture.
- B. Remote Water Closet: Located more than 30 feet from other drain line connections or fixture and where less than 1.5 drainage fixture units are upstream of the drain line connection.

**1.4 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water closets.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.
- C. Operation and Maintenance Data: For flushometer valves to include in operation and maintenance manuals.
- D. Furnish extra materials that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Flushometer-Valve Repair Kits: Equal to 10 percent of amount of each type installed, but no fewer than 6 of each type.

## PART 2 - PRODUCTS

### 2.1 WATER CLOSET

- A. Water Closets: top spud.
1. American Standard "Vitreous China AFWALL Millenium Flowise Elongated Flushometer Toilet model 3351.101 Elongated bowl only , top spud or Approved equal
    - a. Standards: ASME A112.19.2/CSA B45.1
    - b. Material: Vitreous china.
    - c. Type: Powerful direct-fed siphon jet action
    - d. Style: Flushometer valve.
    - e. Rim Contour: Elongated bowl
    - f. Water Consumption: **1.28 gal.** per flush.
    - g. Spud Size and Location: NPS 1-1/2 inlet spud
  2. Toilet Seat: American Standard # 5905.100, BEMIS 1955SSCT 000, Kohler K-4731 Extra heavy duty open front less cover or approved equal
  3. Water-Closet Mounting Height: Top Seat Height 18"

### 2.2 FLUSHOMETER VALVES

- A. Lever-Handle, Diaphragm Flushometer Valves
1. HET High Efficiency Toilet Royal Flushometer model 111-1.28, Kohler K-76321, Zurn Z6000AV-HET or Approved Equal
  2. Standard: ASME A112.19.6 and ASSE 1037.
  3. Minimum Pressure Rating: 125 psig
  4. Features:
    - a. Permex synthetic rubber diaphragm with dual filtered fixed bypass
    - b. ADA complained metal oscillating Non-Hold-Open handle with triple seal handle packing
    - c. 1" IPS screwdriver Bak-Chek angle stop with free spinning vandal resistant stop cap
    - d. Adjustable Tailpiece
    - e. High Back Pressure Vacuum Breaker Flush Connection with One-piece Bottom Hex Coupling Nut
    - f. Spud Coupling and Flange for 1-1/2 " Top Spud
    - g. Sweat Solder Adapter with Cover Tube & Cast Wall Flange with Set Screw
    - h. High Copper, Low zinc Brass Castings for Dezincification Resistance
    - i. Non-Hold-Open Handle, Fixed Metering Bypass and No External Volume Adjustment to Ensure Water Conservation
    - j. Flush accuracy controlled by CID technology

- k. Diaphragm, handle packing, stop seat and vacuum breaker molded from PERMEX rubber compound for Chloramine resistance
  - l. Valve body, cover, tailpiece and control stop shall be in conformance with ASTM Alloy Classification for semi-red brass.
5. Consumption: 1.28 gal. per flush.

### **2.3 TOILET SEATS**

- A. Toilet Seats:
- 1. American Standard # 5905.100, BEMIS 1955SSCT 000, Kohler K-4731 Extra heavy duty open front less cover or approved equal
  - 2. Type: Commercial Extra Heavy duty
  - 3. Shape: Elongated rim, open front
  - 4. Hinge: Self-sustaining
  - 5. Hinge Material: Noncorroding metal.
  - 6. Color: White

### **2.4 SUPPORTS**

- A. Water Closet Carrier:
- 1. Standard: ASME A112.6.1M.
  - 2. Carrier: The contractor shall provide carrier fittings as required and provide suitable reinforcement for wall support.
  - 3. Description: The Contractor shall furnish and install any additional piping for waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before water-closet installation.
- B. Examine walls and floors for suitable conditions where water closets will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Water-Closet Installation:
- 1. Install level and plumb according to roughing-in drawings.
  - 2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.
  - 3. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ANSI A117.1-2009.

- B. Support Installation:
  - 1. Use carrier supports with waste-fitting assembly and seal.
  - 2. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.
- C. Flushometer-Valve Installation:
  - 1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
  - 2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
  - 3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
- D. Install toilet seats on water closets.
- E. Wall Flange and Escutcheon Installation:
  - 1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
  - 2. Install deep-pattern escutcheons if required to conceal protruding fittings.
  - 3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- F. Joint Sealing:
  - 1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
  - 2. Match sealant color to water-closet color.
  - 3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- G. Urinal Installation:
  - 1. Install urinals level and plumb according to roughing-in drawings.
  - 2. Install wall-hung, back-outlet urinals onto waste fitting seals and attached to supports.
  - 3. Install wall-hung, bottom-outlet urinals with tubular waste piping attached to supports.
  - 4. Install accessible, wall-mounted urinals at mounting height for the handicapped/elderly.
- H. Support Installation:
  - 1. Install supports, affixed to building substrate, for wall-hung urinals.
  - 2. Use off-floor carriers with waste fitting and seal for back-outlet urinals.
  - 3. Use carriers without waste fitting for urinals with tubular waste piping.
  - 4. Use chair-type carrier supports with rectangular steel uprights for accessible urinals.

- I. Flushometer-Valve Installation:
  - 1. Install flushometer-valve water-supply fitting on each supply to each urinal.
  - 2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
  - 3. Install lever-handle flushometer valves for accessible urinals with handle mounted on open side of compartment.
- J. Wall Flange and Escutcheon Installation:
  - 1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations.
  - 2. Install deep-pattern escutcheons if required to conceal protruding fittings.
  - 3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- K. Joint Sealing:
  - 1. Seal joints between urinals and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
  - 2. Match sealant color to urinal color.
  - 3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

### **3.3 CONNECTIONS**

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to water closets, allow space for service and maintenance.
- E. Operate and adjust urinals and controls. Replace damaged and malfunctioning urinals, fittings, and controls.
- F. Adjust water pressure at flushometer valves to produce proper flow.

### **3.4 ADJUSTING**

- A. Operate and adjust water closet and urinal and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.

### **3.5 CLEANING AND PROTECTION**

- A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed water closets and fittings.
- C. Do not allow use of water closets for temporary facilities unless approved in writing by the Engineer.

- D. Clean urinals and fittings with manufacturers' recommended cleaning methods and materials.
- E. Install protective covering for installed urinals and fittings.
- F. Do not allow use of urinals for temporary facilities unless approved in writing by the Engineer.

**END OF SECTION**

**SECTION 22 42 13.16 – COMMERCIAL WATER CLOSET AND URINAL****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Section 07 92 00 - JOINT SEALANTS.
- B. Section 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING.
- C. Section 22 05 23 - VALVES FOR PLUMBING PIPING.
- G. Section 22 07 19 " PLUMBING PIPING INSULATION.
- D. Section 22 11 16 " DOMESTIC WATER PIPING.
- E. Section 22 13 16 " SANITARY WASTE AND VENT PIPING.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Urinal
  - 2. Flushometer valves.
  - 3. Supports.

**1.3 DEFINITIONS**

- A. Effective Flush Volume: Average of two reduced flushes and one full flush per fixture.

**1.4 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for water closets.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring.
- C. Operation and Maintenance Data: For flushometer valves to include in operation and maintenance manuals.
- D. Furnish extra materials that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Flushometer-Valve Repair Kits: Equal to 10 percent of amount of each type installed, but no fewer than 6 of each type.

**PART 2 - PRODUCTS****2.1 URINAL**

- A. Urinal
  - 1. American Standard WASHBROOK FlowWise UNIVERSAL URINAL model 6590.001, Toto UT447E-01, Kohler - 4972-ET-0 Universal Top Spud or approved equal

2. Fixture:
  - a. Standards: Urinals shall conform to ASME A112.19.2M or CSA B45.1. Urinals shall conform to the hydraulic performance requirements of ASME A112.19.6, CSA B45.1
  - b. Material: Vitreous china.
  - c. Water Consumption: High Efficiency , Low Consumption Operates at 0.50 gpf
  - d. Elongated 14" rim from finished wall.
  - e. Extended sides for privacy
  - f. 2 wall hangers and Strainer
  - g. Spud Size and Location: ¾" inlet spud
  - h. Outlet Size and Location: NPS 2 inside
  - i. Nominal Dimensions: 14-1/8" X 18-7/8" X 26-1/8"
  - j. Color: White

## 2.2 URINAL FLUSHOMETER VALVES

- A. Lever-Handle, Diaphragm Flushometer Valves
  1. Royal Model 186-0.25 High Efficiency HEU Flushometer, Solan Model 8186-0.25 High Efficiency HEU, Zurn Model Z5758.207.00 or approved equal
  2. Standard: Shall conform to the hydraulic performance requirements of ASME A112.19.6
  3. Feature:
    - a. Dual Linear Filtered Bypass Diaphragm
    - b. ADA compliant Metal Oscillating Non-Hold-Open Handle with Triple Seal Handle Packing
    - c. 3/4" IPS screwdriver Bak-Chek angle stop with free spinning vandal resistant stop cap
    - d. Adjustable Tailpiece
    - e. High Back Pressure Vacuum Breaker Flush Connection with One-piece Bottom Hex Coupling Nut
    - f. Spud Coupling and Flange for 3/4 " Top Spud
    - g. Sweat Solder Adapter with Cover Tube & Cast Wall Flange with Set Screw
    - h. High Copper, Low zinc Brass Castings for Dezincification Resistance
    - i. Non-Hold-Open Handle, Fixed Metering Bypass and No External Volume Adjustment to Ensure Water Conservation
    - j. Flush accuracy controlled by CID technology
    - k. Diaphragm, handle packing, stop seat and vacuum breaker molded from PERMEX rubber compound for Chloramine resistance

- I. Valve body, cover, tailpiece and control stop shall be in conformance with ASTM Alloy Classification for semi-red brass.

## **2.3 SUPPORTS**

1. Carrier: The contractor shall provide carrier fittings as required and provide suitable reinforcement for wall support.
2. Description: The Contractor shall furnish and install any additional piping for Supply to urinal, Supply to flush valve, waste-fitting assembly, as required to match drainage piping material and arrangement with flexible pipe, sealant, couplings, gaskets, bolts and hardware matching fixture.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before water-closet installation.
- B. Examine walls and floors for suitable conditions where water closets will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 INSTALLATION**

- A. Water-Closet Installation:
  1. Install level and plumb according to roughing-in drawings.
  2. Install floor-mounted water closets on bowl-to-drain connecting fitting attachments to piping or building substrate.
  3. Install accessible, wall-mounted water closets at mounting height for handicapped/elderly, according to ANSI A117.1.
- B. Support Installation:
  1. Use carrier supports with waste-fitting assembly and seal.
  2. Install wall-mounted, back-outlet water-closet supports with waste-fitting assembly and waste-fitting seals; and affix to building substrate.
- C. Flushometer-Valve Installation:
  1. Install flushometer-valve, water-supply fitting on each supply to each water closet.
  2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
  3. Install lever-handle flushometer valves for accessible water closets with handle mounted on open side of water closet.
- D. Install toilet seats on water closets.
- E. Wall Flange and Escutcheon Installation:
  1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations and within cabinets and millwork.
  2. Install deep-pattern escutcheons if required to conceal protruding fittings.

3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- F. Joint Sealing:
1. Seal joints between water closets and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
  2. Match sealant color to water-closet color.
  3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- G. Urinal Installation:
1. Install urinals level and plumb according to roughing-in drawings.
  2. Install wall-hung, back-outlet urinals onto waste fitting seals and attached to supports.
  3. Install wall-hung, bottom-outlet urinals with tubular waste piping attached to supports.
  4. Install accessible, wall-mounted urinals at mounting height for the handicapped/elderly.
- H. Support Installation:
1. Install supports, affixed to building substrate, for wall-hung urinals.
  2. Use off-floor carriers with waste fitting and seal for back-outlet urinals.
  3. Use carriers without waste fitting for urinals with tubular waste piping.
  4. Use chair-type carrier supports with rectangular steel uprights for accessible urinals.
- I. Flushometer-Valve Installation:
1. Install flushometer-valve water-supply fitting on each supply to each urinal.
  2. Attach supply piping to supports or substrate within pipe spaces behind fixtures.
  3. Install lever-handle flushometer valves for accessible urinals with handle mounted on open side of compartment.
- J. Wall Flange and Escutcheon Installation:
1. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations.
  2. Install deep-pattern escutcheons if required to conceal protruding fittings.
  3. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- K. Joint Sealing:
1. Seal joints between urinals and walls and floors using sanitary-type, one-part, mildew-resistant silicone sealant.
  2. Match sealant color to urinal color.
  3. Comply with sealant requirements specified in Section 079200 "Joint Sealants."

**3.3 CONNECTIONS**

- A. Connect water closets with water supplies and soil, waste, and vent piping. Use size fittings required to match water closets.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."
- D. Where installing piping adjacent to water closets, allow space for service and maintenance.
- E. Operate and adjust urinals and controls. Replace damaged and malfunctioning urinals, fittings, and controls.
- F. Adjust water pressure at flushometer valves to produce proper flow.

**3.4 ADJUSTING**

- A. Operate and adjust water closet and urinal and controls. Replace damaged and malfunctioning water closets, fittings, and controls.
- B. Adjust water pressure at flushometer valves to produce proper flow.

**3.5 CLEANING AND PROTECTION**

- A. Clean water closets and fittings with manufacturers' recommended cleaning methods and materials.
- B. Install protective covering for installed water closets and fittings.
- C. Do not allow use of water closets for temporary facilities unless approved in writing by the Engineer.
- D. Clean urinals and fittings with manufacturers' recommended cleaning methods and materials.
- E. Install protective covering for installed urinals and fittings.
- F. Do not allow use of urinals for temporary facilities unless approved in writing by the Engineer.

**END OF SECTION**

**SECTION 22 42 16.13 – COMMERCIAL LAVATORIES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Section 07 92 00 - JOINT SEALANTS.
- B. Section 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING.
- C. Section 22 05 23 - VALVES FOR PLUMBING PIPING.
- D. Section 22 07 19 " PLUMBING PIPING INSULATION.
- E. Section 22 11 16 " DOMESTIC WATER PIPING.
- F. Section 22 13 16 " SANITARY WASTE AND VENT PIPING.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Lavatories.
  - 2. Faucets.
  - 3. Supply fittings.
  - 4. Waste fittings.
  - 5. Supports.
- B. Related Requirements:
  - 1. Section 224600 "Security Plumbing Fixtures" for security lavatories.

**1.3 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for lavatories.
  - 2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- B. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.
- C. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.
- D. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.
- E. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Faucet Washers and O-Rings: Equal to 6 of each type and size installed.
  - 2. Faucet Cartridges and O-Rings: Equal to 6 of each type and size installed.

## **PART 2 - PRODUCTS**

### **2.1 VITREOUS-CHINA, LAVATORIES**

- A. Lavatory: Wall-hung lavatory, vitreous china
  - 1. American Standard Murro Universal Design Wall-hung Lavatory with Everclean model 0954.004EC Faucets holes on 4 inch Ctrs with overflow with Shroud/Knee Contract Guard model 0059.020EC, Toto LHT241(G) with Contract Guard, Kohler K-2035-8 Wal-mount Sink or approved equal.
  - 2. Fixture:
    - a. Standard: Lavatories shall conform to ASME A112.2M
    - b. Bowl sizes: 15-1/1 inch wide, 13-1/2 inch front to back, 5 inch deep.
    - c. Nominal Size: 20.5 inch deep, 21-1/4 inch wide
    - d. Rear and sealed overflow
    - e. Recessed self-draining deck
    - f. Color: White
  - 3. Faucet: American Standard model 1340.227, Elkay LK656, Delta Commercial 2517-HDF Cast Centerset, 0.5 GPM pressure compensating, vandal-resistant non-aerated spray or approved equal.
    - a. Feature:
      - 1) Vandal-Resistant Brass Construction and Spray
      - 2) Pressure Compensating Non-Aerated Spray
      - 3) Automatic Shut-off
      - 4) Meets ADA Standard
      - 5) Replaceable Valve Cartridge
      - 6) Adjustable Flow Cycle
      - 7) Hot/Cold Button Indicators
      - 8) Lead Free: Faucet Contains no more than 0.25% total lead by weighted average.

### **2.2 LAMINAR-FLOW, FAUCET-SPOUT OUTLETS**

- A. NSF Standard: Comply with NSF 372 for faucet-spout-outlet materials that will be in contact with potable water.
- B. Description: Chrome-plated-brass, faucet-spout outlet that produces non-aerating, laminar stream. Include external or internal thread that mates with faucet outlet for attachment to faucets where indicated and flow-rate range that includes flow of faucet.

### **2.3 SUPPLY FITTINGS**

- A. NSF Standard: Comply with NSF 372 for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.

- C. Supply Piping: Chrome-plated-brass pipe or chrome-plated copper tube matching water-supply piping size. Include chrome-plated-brass or stainless-steel wall flange.
- D. Supply Stops: Chrome-plated-brass, one-quarter-turn, ball-type or compression valve with inlet connection matching supply piping.
- E. Risers:
  - 1. NPS 1/2
  - 2. Chrome-plated, rigid-copper-pipe and brass straight or offset tailpieces

## 2.4 WASTE FITTINGS

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. Drain: NPS 1-1/4 with a strainer, pop-up stopper, crossbar or other device shall be provided to restrict the clear opening of the waste outlet. Where a stopper is utilized, a built-in overflow shall be provided.
- C. Trap:
  - 1. Size: NPS 1-1/2
  - 2. Material: Chrome-plated, two-piece, cast-brass trap and swivel elbow with 0.032-inch- thick brass tube to wall and chrome-plated, or brass wall flange.

## 2.5 SUPPORTS

- A. Lavatory:
  - 1. Standard: ASME A112.6.1M.
  - 2. Carrier: The contractor shall provide carrier fittings as required and provide suitable reinforcement for wall support.
  - 3. Description: The Contractor shall furnish and install any additional piping for waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture

## PART 3 - EXECUTION

### 3.1 EXAMINATION

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before lavatory installation.
- B. Examine counters and walls for suitable conditions where lavatories will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

### 3.2 INSTALLATION

- A. Install lavatories level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-mounted lavatories.
- C. Install accessible wall-mounted lavatories at handicapped/elderly mounting height for people with disabilities or the elderly, according to ICC/ANSI A117.1-2009.
- D. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings.

Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."

- E. Seal joints between lavatories, counters, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- F. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible lavatories. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

### **3.3 CONNECTIONS**

- A. Connect fixtures with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

### **3.4 ADJUSTING**

- A. Operate and adjust lavatories and controls. Replace damaged and malfunctioning lavatories, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

### **3.5 CLEANING AND PROTECTION**

- A. After completing installation of lavatories, inspect and repair damaged finishes.
- B. Clean lavatories, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed lavatories and fittings.
- D. Do not allow use of lavatories for temporary facilities unless approved in writing by the Engineer.

**END OF SECTION**

**SECTION 22 42 16.16 – COMMERCIAL SINKS****PART 1 - PRODUCTS****1.1 RELATED DOCUMENTS**

- A. Section 07 9200 - JOINT SEALANTS.
- B. Section 22 0518 - ESCUTCHEONS FOR PLUMBING PIPING.
- C. Section 22 0523 - VALVES FOR PLUMBING PIPING.
- D. Section 22 0719 - PLUMBING PIPING INSULATION.
- E. Section 22 1116 - DOMESTIC WATER PIPING.
- F. Section 22 13 16 - SANITARY WASTE AND VENT PIPING.

**1.2 SUMMARY**

- A. Section Includes:
  - 1. Service sinks.
  - 2. Sink faucets.
  - 3. Supports.
  - 4. Supply fittings.
  - 5. Waste fittings.
- B. Related Requirements:

**1.3 SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for sinks.
  - 2. Include rated capacities, operating characteristic and furnished specialties and accessories.
- B. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.
- C. Maintenance Data: For sinks to include in maintenance manuals.
- D. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Faucet Washers and O-Rings: Equal to 10 percent of amount of each type and size installed.

## **PART 2 - PRODUCTS**

### **2.1 SERVICE SINKS**

#### A. Service Sinks:

1. Manufacture: American Standard Model 7695.008 With drilled back 2 holes on 8" centers and rim guard with cast iron P trap 7798.030, Elkay ESSW2520C with P-Trap LK173, Zurn Z5890 with P-Trap TS2900 or approved equal
2. Standard: ASME A112.19.1M
3. Fixture:
  - a. Enameled cast iron
  - b. Supplied with wall hanger and rim guard
  - c. Drilled back for faucet
  - d. Nominal Dimension: 24" X 20-1/2"
  - e. Bowl sizes: 19-7/8"X16-3/8"X10-1/2" ( Wide X Front to Back X Deep)
  - f. Trap Standard: 7798.030 cast iron "P" trap standard to wall and strainer for 3" iron pipe

### **2.2 SINK FAUCETS**

#### A. Faucet:

1. Manufacturer : American Standard Model 8344.012, Elkay LKB940C, Speakman SC-5811 Exposed Yoke Wall-Mount Utility Faucet or approved equal
2. Comply with NSF 372 for faucet-spout materials that will be in contact with potable water.
3. Standard: ASME A112.19.9M
4. Feature:
  - a. Top Brace
  - b. 6" cast brass spout with vacuum breaker
  - c. Ceramic disc valves
  - d. Integral supply stops
  - e. Vandal-resistant metal lever handles with hot and cold indicators
  - f. Bucket hook
  - g. 3/4" threaded hose end
  - h. 1/2" NPT female inlet

### **2.3 SUPPORTS**

#### A. Carrier:

1. Standard: ASME A112.6.12M.
2. Carrier: The contractor shall provide carrier for sink and faucet as required and provide suitable reinforcement for wall support.

3. Description: The Contractor shall furnish and install any additional piping for waste-fitting assembly, as required to match drainage piping material and arrangement with faceplates, couplings gaskets, and feet; bolts and hardware matching fixture

#### **2.4 SUPPLY FITTINGS**

- A. NSF Standard: Comply with NSF 372 for supply-fitting materials that will be in contact with potable water.
- B. Standard: ASME A112.18.1/CSA B125.1.

#### **2.5 WASTE FITTINGS**

- A. Standard: ASME A112.18.2/CSA B125.2.
- B. cast iron "P" trap standard to wall and strainer for 3" iron pipe

#### **2.6 GROUT**

- A. Characteristics: Non-shrink; recommended for interior and exterior applications.
- B. Packaging: Premixed and factory packaged.

### **PART 3 - EXECUTION**

#### **3.1 EXAMINATION**

- A. Examine roughing-in of water supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before sink installation.
- B. Examine walls, floors, and counters for suitable conditions where sinks will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### **3.2 INSTALLATION**

- A. Install sinks level and plumb according to roughing-in drawings.
- B. Install supports, affixed to building substrate, for wall-hung sinks.
- C. Set floor-mounted sinks in leveling bed of cement grout.
- D. Install water-supply piping with stop on each supply to each sink faucet.
  1. Exception: Use ball or gate valves if supply stops are not specified with sink. Comply with valve requirements specified in Section 220523 "Valves for Plumbing Piping".
  2. Install stops in locations where they can be easily reached for operation.
- E. Install wall flanges or escutcheons at piping wall penetrations in exposed, finished locations. Use deep-pattern escutcheons if required to conceal protruding fittings. Comply with escutcheon requirements specified in Section 220518 "Escutcheons for Plumbing Piping."
- F. Seal joints between sinks and counters, floors, and walls using sanitary-type, one-part, mildew-resistant silicone sealant. Match sealant color to fixture color. Comply with sealant requirements specified in Section 079200 "Joint Sealants."
- G. Install protective shielding pipe covers and enclosures on exposed supplies and waste piping of accessible sinks. Comply with requirements in Section 220719 "Plumbing Piping Insulation."

**3.3 CONNECTIONS**

- A. Connect sinks with water supplies, stops, and risers, and with traps, soil, waste, and vent piping. Use size fittings required to match fixtures.
- B. Comply with water piping requirements specified in Section 221116 "Domestic Water Piping."
- C. Comply with soil and waste piping requirements specified in Section 221316 "Sanitary Waste and Vent Piping."

**3.4 ADJUSTING**

- A. Operate and adjust sinks and controls. Replace damaged and malfunctioning sinks, fittings, and controls.
- B. Adjust water pressure at faucets to produce proper flow.

**3.5 CLEANING AND PROTECTION**

- A. After completing installation of sinks, inspect and repair damaged finishes.
- B. Clean sinks, faucets, and other fittings with manufacturers' recommended cleaning methods and materials.
- C. Provide protective covering for installed sinks and fittings.

**END OF SECTION**

**SECTION 22 45 00 – PRODUCTS – EMERGENCY PLUMBING FIXTURES****PART 1 - GENERAL****1.1 RELATED DOCUMENTS**

- A. Section 07 92 00 - JOINT SEALANTS.
- B. Section 22 05 18 - ESCUTCHEONS FOR PLUMBING PIPING.
- C. Section 22 05 23 - VALVES FOR PLUMBING PIPING.
- D. Section 22 07 19 - PLUMBING PIPING INSULATION.
- E. Section 22 11 16 - DOMESTIC WATER PIPING.
- F. Section 22 13 16 - SANITARY WASTE AND VENT PIPING.

**1.2 SUMMARY**

- A. This Section includes the following:
  - 1. Emergency shower and eye wash station.

**1.3 SUBMITTALS**

- A. Product Data: For each type of product.
- B. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for lavatories.
- C. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.
- D. Shop Drawings: Include diagrams for power, signal, and control wiring of automatic faucets.
- E. Coordination Drawings: Counter cutout templates for mounting of counter-mounted lavatories.
- F. Operation and Maintenance Data: For lavatories and faucets to include in operation and maintenance manuals.

**PART 2 - MATERIALS****2.1 MATERIALS**

- A. SAFETY SHOWER
  - 1. In accordance with the guidelines of ANSI Z358.1-2004, the safety shower should be able to supply a controlled flow of potable water, delivering 75.7 litres per minute (20gallons per minute).
  - 2. The shower unit should deliver water tepid (lukewarm) water upon activation. The temperature of water should at least be 15.5°C (60°F) to avoid causing hypothermia to the user. New installations of should be installed with plumbing for tepid water.
  - 3. The control valve should operate in less than one second upon its activation and must remain 'on' without the use of worker's hand, until it is intentionally shut off.

4. The valve shall be large enough to be easily located and operated by the user; the actuators must not be located more than 1.7 m (69 inches) above the surface where user stands.
5. The spray pattern of shower should have a diameter of 0.51 m (20 inches) at 1.53 inches) above the surface on which the injured worker stands.
6. The centre of the shower spray pattern should be located at least 0.46 m (16 inches from any obstructions, protrusions, or sharp objects.
7. The emergency shower must be installed with the showerhead not less than 2.08 m (82inches) or more than 2.44 m (96 inches) from the surface on which the user stands. If a shower enclosure is used, it shall provide a minimum unobstructed area of 0.87 m (3 inches) in diameter.

#### B. EYE WASH STATION

1. In accordance with the guidelines of ANSI Z358.1-2004, such eyewash equipment should ensure that a controlled flow of potable water is provided to both eyes simultaneously at a velocity low enough not to injure the user.
2. The eyewash units should have dual nozzle sprays.
3. Dust covers or protection devices should protect the nozzles that are supplied with the eyewash in place; they prevent dust and debris from falling inside the eyewash heads and potentially entering the eyes when the unit is turned on.
4. The dust covers should be automatically removed by actuation of the valve.
5. The plumbed eyewash unit should be capable of delivering 1.5 L of water per minute (0.4 gallons per minute) for at least 15 minutes continuously.
6. The eyewash unit should deliver tepid (lukewarm) water. The temperature of water should at least be 15.5°C (60°F) to prevent causing hypothermia or early cessation of flushing. New installations of eyewashes should be installed with plumbing for tepid water.
7. The valve should be large enough to be easily located and operated by the user; it shall go 'off' to 'on' in less than one second. Control valves shall be resistant to corrosion from potable water.
8. Manual or automatic actuators should be easy to locate and operate by touch.
9. The eyewash units should be installed and designed in such a manner that they do not require users' hands to operate upon activation, and allow both eyelids to be opened using both hands.
10. The unit should be located to provide enough room to allow the eyelids to be held open with the hands while the eyes are in the water stream.
11. The emergency eyewash station shall be identified with a highly visible sign. There should be no sharp projections or electrical hazards anywhere in the operating area of the unit. It should be ensured that the path leading to the emergency eyewash is clear of obstruction and that the immediate area is neat and easily accessible.

### PART 3 – EXECUTION

### 3.1 EMERGENCY SHOWER INSTALLATION

1. The emergency shower should be installed in compliance with ANSI standard Z 358.1-2004, and the manufacturer's instructions. Upon installation, equipment must be tested for leaks and proper functioning.
2. Emergency showers should be located in accessible locations that require no more than 10 seconds to reach and shall be located on the same level as the potential chemical or biological hazard.
3. Shower locations should be identified with highly visible signs and the areas shall be bright, well lit, and free of obstructions and projections.
4. The shower should supply water at a minimum rate of 75.7 Liters per minute (20 gallons per minute) for a period of at least fifteen minutes.
5. If the equipment piping is located in areas which are exposed to potential freezing temperatures, then it should be insulated or protected with appropriate material(s).
6. There must be a proper drainage system present near the shower; this will minimize any potential for contaminating the surface or groundwater.
7. Combination units with showers with eye and eye/face wash may be installed where feasible. The combination units shall be connected to a system capable of supplying adequate flushing fluid to meet the requirements of each component when all components are operated simultaneously. Combination units will be positioned so they can be used simultaneously by the user under the shower.

### 3.2 EYE WASH STATION INSTALLATION

1. Equipment shall be installed in compliance with ANSI standard Z 358.1-2004, and the manufacturer's instructions. Upon installation, equipment shall be tested for leaks.
2. Plumbed eyewash unit must be installed in accessible location that an injured person can reach in 10 seconds or less, which is roughly 55 unobstructed feet.
3. When acids or strong caustics/corrosive are used, equipment should be located within 10 feet of the work area and have unrestricted access to a well-lit area.
4. The unit should be located on the same level as the hazard and the path of travel must be free of obstructions that may inhibit the immediate use of the equipment. A door is considered to be an obstruction. If the hazard is not a corrosive, one intervening door can be present between the hazard and emergency equipment so long as the door opens in the same direction of travel as the person attempting to reach the emergency equipment; and/or the door does not lock to impede access to eyewash station.
5. Eyewash locations should be identified with highly visible signs and the areas shall be well-lit, and free of obstructions and projections.
6. There must be a proper drainage system present near the eyewash unit; this will minimize any potential of contamination to surface or groundwater.
7. Eyewashes should be mounted so that water nozzles are not less than 0.84 m (33 inches) and no greater than 1.15 m (45 inches) from the surface/ floor on which the user stands.

8. The eyewash must be, at least, 0.15 m (6 inches) away from the wall or any other obstruction.
9. Equipment piping that is located in areas exposed to potential freezing temperatures should be insulated or protected with appropriate material(s).
10. If feasible, the units should be located so one person can use both the eyewash and shower at the same time.
11. Drench hoses may supplement, but cannot replace the eyewash unit. A drench hose requires the use of at least one hand, rendering it impossible to hold both eyelids open simultaneously.
12. Personal or portable eyewash equipment should only be used where there is no access to plumbing, or where a personal eyewash unit is to be used as a first wash before proceeding to the eyewash station.

**END OF SECTION**

## SECTION 22 47 13 – DRINKING FOUNTAINS

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. Section includes drinking fountains and related components.

#### 1.2 SUBMITTALS

- A. Product Data: For each type of drinking fountain.
  - 1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
  - 2. Include operating characteristics, and furnished specialties and accessories.
- B. Maintenance Data: For drinking fountains to include in maintenance manuals.

### PART 2 - PRODUCTS

#### 2.1 DRINKING FOUNTAINS

- A. Drinking Fountain: Stainless steel, wall mounted.
  - 1. Stainless-Steel Drinking Fountains:
    - a. Haws, model 1119FR
    - b. Murdock A152-VR
    - c. Elaky LZSTL8WSSK
    - d. Or Approved Equal.

#### 2.2 SUPPORTS

- 1. Provide manufacturers standard supports for masonry construction coordinate supports installation with fabrication of stainless steel drinking fountain/bulletin board frame.

### PART 3 - EXECUTION

#### 3.1 EXAMINATION

- A. Examine roughing-in for water-supply and sanitary drainage and vent piping systems to verify actual locations of piping connections before fixture installation.
- B. Examine walls and floors for suitable conditions where fixtures will be installed.
- C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.2 INSTALLATION

- A. Install fixtures level and plumb according to roughing-in drawings. For fixtures indicated for children, install at height required by authorities having jurisdiction.
- B. Install off-the-floor carrier supports, affixed to building substrate, for wall-mounted fixtures.

- C. Seal joints between fixtures and walls using sanitary-type, one-part, mildew-resistant, silicone sealant. Match sealant color to fixture color.

### **3.3 CONNECTIONS**

- A. Make connection to the water supply, waste, and vent piping as per the NYC Plumbing Code, latest edition.

### **3.4 ADJUSTING**

- A. Adjust fixture flow regulators for proper flow and stream height.

### **3.5 CLEANING**

- A. After installing fixtures, inspect unit. Remove paint splatters and other spots, dirt, and debris. Repair damaged finish to match original finish.
- B. Clean fixtures, on completion of installation, according to manufacturer's written instructions.
- C. Provide protective covering for installed fixtures.
- D. Do not allow use of fixtures for temporary facilities unless approved in writing by the Engineer.

**END OF SECTION**

**SECTION 23 0529 – HANGERS AND SUPPORTS FOR HVAC PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Metal pipe hangers and supports.
  - 2. Thermal-hanger shield inserts.
  - 3. Fastener systems.
  - 4. Pipe stands.
  - 5. Equipment supports

**1.2 SUBMITTALS**

- A. Product Data: For each type of product.
- B. Shop Drawings: Signed and sealed by a qualified professional engineer licensed in the State of New York, for Approval by the Engineer. Show fabrication and installation details and include calculations for the following; include Product Data for components:
  - 1. Trapeze pipe hangers.
  - 2. Metal framing systems.
  - 3. Fiberglass strut systems.
  - 4. Pipe stands.
  - 5. Equipment supports.

**PART 2 - PRODUCTS****2.1 PERFORMANCE REQUIREMENTS**

- A. Structural Performance: Hangers and supports for HVAC piping and equipment shall withstand the effects of gravity loads and stresses within limits and under conditions indicated according to ASCE/SEI 7
  - 1. Design supports for multiple pipes, including pipe stands, capable of supporting combined weight of supported systems, system contents, and test water.
  - 2. Design equipment supports capable of supporting combined operating weight of supported equipment and connected systems and components.
  - 3. Design seismic-restraint hangers and supports for piping and equipment

**2.2 METAL PIPE HANGERS AND SUPPORTS**

- A. Manufacture: Subject to compliance with requirements, provide products by one of the following:
  - 1. Eaton: B-Line Series, Pipe, Hangers and Supports
  - 2. National Pipe Hanger Corporation
  - 3. Gulf State Hager's and Supports

4. Empire Industries
  5. Or approved equal
- B. Carbon-Steel Pipe Hangers and Supports:
1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  2. Galvanized Metallic Coatings: Pregalvanized, hot-dip galvanized, or electro-galvanized.
  3. Nonmetallic Coatings: Plastic coated, or epoxy powder-coated.
  4. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  5. Hanger Rods: Continuous-thread rod, nuts, and washer made of carbon steel or stainless steel.
- C. Stainless-Steel Pipe Hangers and Supports:
1. Description: MSS SP-58, Types 1 through 58, factory-fabricated components.
  2. Padded Hangers: Hanger with fiberglass or other pipe insulation pad or cushion to support bearing surface of piping.
  3. Hanger Rods: Continuous-thread rod, nuts, and washer made of stainless steel.

### **2.3 THERMAL-HANGER SHIELD INSERTS**

- A. Manufacture: Subject to compliance with requirements, provide products by one of the following:
1. Eaton: B-Line Series, Pipe, Hangers and Supports
  2. National Pipe Hanger Corporation
  3. Gulf State Hager's and Supports
  4. Empire Industries
  5. Or approved equal
- B. Insulation-Insert Material for Cold Piping: ASTM C 552, Type II cellular glass with 100-psi minimum compressive strength and vapor barrier.
- C. Insulation-Insert Material for Hot Piping: Water-repellent-treated, ASTM C 533, Type I calcium silicate with 100-psi minimum compressive strength.
- D. For Trapeze or Clamped Systems: Insert and shield shall cover entire circumference of pipe.
- E. For Clevis or Band Hangers: Insert and shield shall cover lower 180 degrees of pipe.
- F. Insert Length: Extend 2 inches beyond sheet metal shield for piping operating below ambient air temperature.

### **2.4 FASTENER SYSTEMS**

- A. Powder-Actuated Fasteners: Threaded-steel stud, for use in hardened portland cement concrete with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

- B. Mechanical-Expansion Anchors: Insert-wedge-type anchors for use in hardened portland cement concrete; with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.
  1. Indoor Applications: stainless steel.
  2. Outdoor Applications: Stainless steel.

## 2.5 PIPE STANDS

- A. General Requirements for Pipe Stands: Shop- or field-fabricated assemblies made of manufactured corrosion-resistant components to support roof-mounted piping.
- B. Compact Pipe Stand:
  1. Description: Single base unit with integral-rod roller, pipe clamps, or V-shaped cradle to support pipe, for roof installation without membrane penetration.
  2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
  3. Hardware: Galvanized steel or polycarbonate.
  4. Accessories: Protection pads.
- C. Low-Profile, Single Base, Single-Pipe Stand:
  1. Description: Single base with vertical and horizontal members, and pipe support, for roof installation without membrane protection.
  2. Base: Single, vulcanized rubber, molded polypropylene, or polycarbonate.
  3. Vertical Members: Two, stainless-steel, continuous-thread 1/2-inch rods.
  4. Horizontal Member: Adjustable horizontal, stainless-steel pipe support channels.
  5. Pipe Supports: Roller
  6. Hardware: Stainless steel.
  7. Accessories: Protection pads.
- D. High-Profile, Single Base, Single-Pipe Stand:
  1. Description: Single base, vertical and horizontal members, and pipe support, for roof installation without membrane penetration.
  2. Base: Single vulcanized rubber or molded polypropylene.
  3. Vertical Members: Two, stainless-steel, continuous-thread 1/2-inch rods.
  4. Horizontal Member: One, adjustable height, stainless-steel pipe support slotted channel or plate.
  5. Pipe Supports: Roller
  6. Hardware: Galvanized or Stainless steel.
  7. Accessories: Protection pads, 1/2-inch continuous-thread galvanized-steel rod or, 1/2-inch continuous-thread stainless-steel rod.
- E. High-Profile, Multiple-Pipe Stand:
  1. Description: Assembly of bases, vertical and horizontal members, and pipe supports, for roof installation without membrane penetration.

2. Bases: Two or more; vulcanized rubber
  3. Vertical Members: Two or more, galvanized or stainless]-steel channels.
  4. Horizontal Members: One or more, adjustable height, galvanized or stainless]-steel pipe support.
  5. Pipe Supports: Clevis hanger
  6. Hardware: Galvanized or Stainless steel.
  7. Accessories: Protection pads, 1/2-inch continuous-thread rod.
- F. Curb-Mounted-Type Pipe Stands: Shop- or field-fabricated pipe supports made from structural-steel shapes, continuous-thread rods, and rollers, for mounting on permanent stationary roof curb.

## 2.6 EQUIPMENT SUPPORTS

- A. Description: Welded, shop- or field-fabricated equipment support made from structural carbon-steel shapes.
- B. Manufacture: Subject to compliance with requirements, provide products by one of the following:
  1. Eaton: B-Line Series, Pipe, Hangers and Supports
  2. National Pipe Hanger Corporation
  3. Gulf State Hager's and Supports
  4. Empire Industries
  5. Or approved equal
- C. Carbon Steel: ASTM A 1011
- D. Structural Steel: ASTM A 36, carbon-steel plates, shapes, and bars; galvanized.
- E. Stainless Steel: ASTM A 240
- F. Threaded Rods: Continuously threaded. Zinc-plated or galvanized steel for indoor applications and stainless steel for outdoor applications. Mating nuts and washers of similar materials as rods.
- G. Grout: ASTM C 1107, factory-mixed and -packaged, dry, hydraulic-cement, nonshrink and nonmetallic grout; suitable for interior and exterior applications.
  1. Properties: Nonstaining, noncorrosive, and nongaseous.
  2. Design Mix: 5000-psi, 28-day compressive strength.

## PART 3 - EXECUTION

### 3.1 HANGER AND SUPPORT INSTALLATION

- A. Metal Pipe-Hanger Installation: Comply with MSS SP-58. Install hangers, supports, clamps, and attachments as required to properly support piping from the building structure.
- B. Thermal-Hanger Shield Installation: Install in pipe hanger or shield for insulated piping.

- C. Fastener System Installation:
  - 1. Install powder-actuated fasteners for use in lightweight concrete or concrete slabs less than 4 inches (100 mm) thick in concrete after concrete is placed and completely cured. Use operators that are licensed by powder-actuated tool manufacturer. Install fasteners according to powder-actuated tool manufacturer's operating manual.
  - 2. Install mechanical-expansion anchors in concrete after concrete is placed and completely cured. Install fasteners according to manufacturer's written instructions.
- D. Pipe Stand Installation:
  - 1. Pipe Stand Types except Curb-Mounted Type: Assemble components and mount on smooth roof surface. Do not penetrate roof membrane.
  - 2. Curb-Mounted-Type Pipe Stands: Assemble components or fabricate pipe stand and mount on permanent, stationary roof curb. See Section 077200 "Roof Accessories" for curbs.
- E. Install hangers and supports complete with necessary attachments, inserts, bolts, rods, nuts, washers, and other accessories.
- F. Equipment Support Installation: Fabricate from welded-structural-steel shapes.
- G. Install hangers and supports to allow controlled thermal and seismic movement of piping systems, to permit freedom of movement between pipe anchors, and to facilitate action of expansion joints, expansion loops, expansion bends, and similar units.
- H. Install lateral bracing with pipe hangers and supports to prevent swaying.
- I. Install building attachments within concrete slabs or attach to structural steel. Install additional attachments at concentrated loads, including valves, flanges, and strainers, NPS 2-1/2 and larger and at changes in direction of piping. Install concrete inserts before concrete is placed; fasten inserts to forms and install reinforcing bars through openings at top of inserts.
- J. Load Distribution: Install hangers and supports so that piping live and dead loads and stresses from movement will not be transmitted to connected equipment.
- K. Pipe Slopes: Install hangers and supports to provide indicated pipe slopes and to not exceed maximum pipe deflections allowed by ASME B31.9 for building services piping.
- L. Insulated Piping:
  - 1. Attach clamps and spacers to piping.
    - a. Piping Operating above Ambient Air Temperature: Clamp may project through insulation.
    - b. Piping Operating below Ambient Air Temperature: Use thermal-hanger shield insert with clamp sized to match OD of insert.
    - c. Do not exceed pipe stress limits allowed by ASME B31.9 for building services piping.
  - 2. Install MSS SP-58, Type 39, protection saddles if insulation without vapor barrier is indicated. Fill interior voids with insulation that matches adjoining insulation.
    - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.

3. Install MSS SP-58, Type 40, protective shields on cold piping with vapor barrier. Shields shall span an arc of 180 degrees.
  - a. Option: Thermal-hanger shield inserts may be used. Include steel weight-distribution plate for pipe NPS 4 and larger if pipe is installed on rollers.
4. Shield Dimensions for Pipe: Not less than the following:
  - a. NPS 1/4 to NPS 3-1/2: 12 inches long and 0.048 inch thick.
  - b. NPS 4: 12 inches long and 0.06 inch thick.
  - c. NPS 5 and NPS 6: 18 inches long and 0.06 inch thick.
  - d. NPS 8 to NPS 14: 24 inches long and 0.075 inch thick.
  - e. NPS 16 to NPS 24: 24 inches long and 0.105 inch thick.
5. Pipes NPS 8 and Larger: Include wood or reinforced calcium-silicate-insulation inserts of length at least as long as protective shield.
6. Thermal-Hanger Shields: Install with insulation same thickness as piping insulation.

### **3.2 EQUIPMENT SUPPORTS**

- A. Fabricate structural-steel stands to suspend equipment from structure overhead or to support equipment above floor.
- B. Grouting: Place grout under supports for equipment and make bearing surface smooth.
- C. Provide lateral bracing, to prevent swaying, for equipment supports.

### **3.3 METAL FABRICATIONS**

- A. Cut, drill, and fit miscellaneous metal fabrications for trapeze pipe hangers and equipment supports.
- B. Fit exposed connections together to form hairline joints. Field weld connections that cannot be shop welded because of shipping size limitations.
- C. Field Welding: Comply with AWS D1.1 procedures for shielded, metal arc welding; appearance and quality of welds; and methods used in correcting welding work; and with the following:
  1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
  2. Obtain fusion without undercut or overlap.
  3. Remove welding flux immediately.
  4. Finish welds at exposed connections so no roughness shows after finishing and so contours of welded surfaces match adjacent contours.

### **3.4 ADJUSTING**

- A. Hanger Adjustments: Adjust hangers to distribute loads equally on attachments and to achieve indicated slope of pipe.
- B. Trim excess length of continuous-thread hanger and support rods to 1-1/2 inches.

### 3.5 PAINTING

- A. Touchup: Clean field welds and abraded areas of shop paint. Paint exposed areas immediately after erecting hangers and supports. Use same materials as used for shop painting. Comply with SSPC-PA 1 requirements for touching up field-painted surfaces.
  - 1. Apply paint by brush or spray to provide a minimum dry film thickness of 2.0 mils.
- B. Touchup: Comply with requirements in Section 099113 "Exterior Painting", Section 099123 "Interior Painting" and Section 099600 "High-Performance Coatings" for cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint on miscellaneous metal.
- C. Galvanized Surfaces: Clean welds, bolted connections, and abraded areas and apply galvanizing-repair paint to comply with ASTM A 780/A 780M.

### 3.6 HANGER AND SUPPORT SCHEDULE

- A. Specific hanger and support requirements are in Sections specifying piping systems and equipment.
- B. Comply with MSS SP-58 for pipe-hanger selections and applications that are not specified in piping system Sections.
- C. Use hangers and supports with galvanized metallic coatings for piping and equipment that will not have field-applied finish.
- D. Use nonmetallic coatings on attachments for electrolytic protection where attachments are in direct contact with copper tubing.
- E. Use carbon-steel pipe hangers and supports, metal trapeze pipe hangers, and metal framing systems and attachments for general service applications.
- F. Use stainless-steel pipe hangers and stainless-steel attachments for hostile environment applications.
- G. Use copper-plated pipe hangers and copper attachments for copper piping and tubing.
- H. Use padded hangers for piping that is subject to scratching.
- I. Use thermal-hanger shield inserts for insulated piping and tubing.
- J. Horizontal-Piping Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
  - 1. Adjustable, Steel Clevis Hangers (MSS Type 1): For suspension of noninsulated or insulated, stationary pipes NPS 1/2 to NPS 30
  - 2. Yoke-Type Pipe Clamps (MSS Type 2): For suspension of up to 1050 deg F, pipes NPS 4 to NPS 24, requiring up to 4 inches of insulation.
  - 3. Carbon- or Alloy-Steel, Double-Bolt Pipe Clamps (MSS Type 3): For suspension of pipes NPS 3/4 to NPS 36, requiring clamp flexibility and up to 4 inches of insulation.
  - 4. Steel Pipe Clamps (MSS Type 4): For suspension of cold and hot pipes NPS 1/2 to NPS 24 if little or no insulation is required.
  - 5. Pipe Hangers (MSS Type 5): For suspension of pipes NPS 1/2 to NPS 4, to allow off-center closure for hanger installation before pipe erection.

6. Adjustable, Swivel Split- or Solid-Ring Hangers (MSS Type 6): For suspension of noninsulated, stationary pipes NPS 3/4 to NPS 8.
  7. Adjustable, Steel Band Hangers (MSS Type 7): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  8. Adjustable Band Hangers (MSS Type 9): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  9. Adjustable, Swivel-Ring Band Hangers (MSS Type 10): For suspension of noninsulated, stationary pipes NPS 1/2 to NPS 8.
  10. Split Pipe Ring with or without Turnbuckle Hangers (MSS Type 11): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 8.
  11. Extension Hinged or Two-Bolt Split Pipe Clamps (MSS Type 12): For suspension of noninsulated, stationary pipes NPS 3/8 to NPS 3.
  12. U-Bolts (MSS Type 24): For support of heavy pipes NPS 1/2 to NPS 30.
  13. Clips (MSS Type 26): For support of insulated pipes not subject to expansion or contraction.
  14. Pipe Saddle Supports (MSS Type 36): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate.
  15. Pipe Stanchion Saddles (MSS Type 37): For support of pipes NPS 4 to NPS 36, with steel-pipe base stanchion support and cast-iron floor flange or carbon-steel plate, and with U-bolt to retain pipe.
  16. Adjustable Pipe Saddle Supports (MSS Type 38): For stanchion-type support for pipes NPS 2-1/2 to NPS 36 if vertical adjustment is required, with steel-pipe base stanchion support and cast-iron floor flange.
  17. Single-Pipe Rolls (MSS Type 41): For suspension of pipes NPS 1 to NPS 30, from two rods if longitudinal movement caused by expansion and contraction might occur.
  18. Adjustable Roller Hangers (MSS Type 43): For suspension of pipes NPS 2-1/2 to NPS 24, from single rod if horizontal movement caused by expansion and contraction might occur.
  19. Complete Pipe Rolls (MSS Type 44): For support of pipes NPS 2 to NPS 42 if longitudinal movement caused by expansion and contraction might occur but vertical adjustment is unnecessary.
  20. Pipe Roll and Plate Units (MSS Type 45): For support of pipes NPS 2 to NPS 24 if small horizontal movement caused by expansion and contraction might occur and vertical adjustment is unnecessary.
  21. Adjustable Pipe Roll and Base Units (MSS Type 46): For support of pipes NPS 2 to NPS 30 if vertical and lateral adjustment during installation might be required in addition to expansion and contraction.
- K. Vertical-Piping Clamps: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Extension Pipe or Riser Clamps (MSS Type 8): For support of pipe risers NPS 3/4 to NPS 24

2. Carbon- or Alloy-Steel Riser Clamps (MSS Type 42): For support of pipe risers NPS 3/4 to NPS 24 if longer ends are required for riser clamps.
- L. Hanger-Rod Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel Turnbuckles (MSS Type 13): For adjustment up to 6 inches for heavy loads.
  2. Steel Clevises (MSS Type 14): For 120 to 450 deg F piping installations.
  3. Swivel Turnbuckles (MSS Type 15): For use with MSS Type 11, split pipe rings.
  4. Malleable-Iron Sockets (MSS Type 16): For attaching hanger rods to various types of building attachments.
  5. Steel Weldless Eye Nuts (MSS Type 17): For 120 to 450 deg F piping installations.
- M. Building Attachments: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel or Malleable Concrete Inserts (MSS Type 18): For upper attachment to suspend pipe hangers from concrete ceiling.
  2. Top-Beam C-Clamps (MSS Type 19): For use under roof installations with bar-joint construction, to attach to top flange of structural shape.
  3. Side-Beam or Channel Clamps (MSS Type 20): For attaching to bottom flange of beams, channels, or angles.
  4. Center-Beam Clamps (MSS Type 21): For attaching to center of bottom flange of beams.
  5. Welded Beam Attachments (MSS Type 22): For attaching to bottom of beams if loads are considerable and rod sizes are large.
  6. C-Clamps (MSS Type 23): For structural shapes.
  7. Top-Beam Clamps (MSS Type 25): For top of beams if hanger rod is required tangent to flange edge.
  8. Side-Beam Clamps (MSS Type 27): For bottom of steel I-beams.
  9. Steel-Beam Clamps with Eye Nuts (MSS Type 28): For attaching to bottom of steel I-beams for heavy loads.
  10. Linked-Steel Clamps with Eye Nuts (MSS Type 29): For attaching to bottom of steel I-beams for heavy loads, with link extensions.
  11. Malleable-Beam Clamps with Extension Pieces (MSS Type 30): For attaching to structural steel.
  12. Welded-Steel Brackets: For support of pipes from below or for suspending from above by using clip and rod. Use one of the following for indicated loads:
    - a. Light (MSS Type 31): 750 lb
    - b. Medium (MSS Type 32): 1500 lb
    - c. Heavy (MSS Type 33): 3000 lb
  13. Side-Beam Brackets (MSS Type 34): For sides of steel or wooden beams.

14. Plate Lugs (MSS Type 57): For attaching to steel beams if flexibility at beam is required.
  15. Horizontal Travelers (MSS Type 58): For supporting piping systems subject to linear horizontal movement where headroom is limited.
- N. Saddles and Shields: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Steel-Pipe-Covering Protection Saddles (MSS Type 39): To fill interior voids with insulation that matches adjoining insulation.
  2. Protection Shields (MSS Type 40): Of length recommended in writing by manufacturer to prevent crushing insulation.
  3. Thermal-Hanger Shield Inserts: For supporting insulated pipe.
- O. Spring Hangers and Supports: Unless otherwise indicated and except as specified in piping system Sections, install the following types:
1. Restraint-Control Devices (MSS Type 47): Where indicated to control piping movement.
  2. Spring Cushions (MSS Type 48): For light loads if vertical movement does not exceed 1-1/4 inches
  3. Spring-Cushion Roll Hangers (MSS Type 49): For equipping Type 41, roll hanger with springs.
  4. Spring Sway Braces (MSS Type 50): To retard sway, shock, vibration, or thermal expansion in piping systems.
  5. Variable-Spring Hangers (MSS Type 51): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from hanger.
  6. Variable-Spring Base Supports (MSS Type 52): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from base support.
  7. Variable-Spring Trapeze Hangers (MSS Type 53): Preset to indicated load and limit variability factor to 25 percent to allow expansion and contraction of piping system from trapeze support.
  8. Constant Supports: For critical piping stress and if necessary to avoid transfer of stress from one support to another support, critical terminal, or connected equipment. Include auxiliary stops for erection, hydrostatic test, and load-adjustment capability. These supports include the following types:
    - a. Horizontal (MSS Type 54): Mounted horizontally.
    - b. Vertical (MSS Type 55): Mounted vertically.
    - c. Trapeze (MSS Type 56): Two vertical-type supports and one trapeze member.
- P. Comply with MSS SP-58 for trapeze pipe-hanger selections and applications that are not specified in piping system Sections.
- Q. Comply with MFMA-103 for metal framing system selections and applications that are not specified in piping system Sections.

- R. Use mechanical-expansion anchors instead of building attachments where required in concrete construction.

**END OF SECTION**

**SECTION 23 0553 – IDENTIFICATION FOR HVAC PIPING AND EQUIPMENT****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes
  - 1. Equipment labels
  - 2. Fire or smoke or fir/smoke damper access door labels
  - 3. Warning signs and labels.
  - 4. Pipe labels.
  - 5. Duct labels.
  - 6. Stencils.
  - 7. Valve tags.
  - 8. Warning tags.

**1.2 SUBMITTALS**

- A. Product Data: For each type of product indicated.
- B. Samples: For color, letter style, and graphic representation required for each identification material and device.
- C. Equipment Label Schedule: Include a listing of all equipment to be labeled with the proposed content for each label.
- D. Valve numbering scheme.
- E. Valve Schedules: For each piping system to include in maintenance manuals.

**1.3 COORDINATION**

- A. Coordinate installation of identifying devices with completion of covering and painting of surfaces where devices are to be applied.
- B. Coordinate installation of identifying devices with locations of access panels and doors.
- C. Install identifying devices before installing acoustical ceilings and similar concealment.

**PART 2 - PRODUCTS****2.1 EQUIPMENT LABELS**

- A. Metal Labels for Equipment:
  - 1. Material and Thickness: Brass, 0.032-inch minimum thickness or anodized aluminum, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
  - 2. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
  - 3. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger

lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.

4. Fasteners: Stainless-steel rivets.
  5. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- B. Label Content: Include equipment's Drawing designation or unique equipment number, Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified.
- C. Equipment Label Schedule: For each item of equipment to be labeled, on 8-1/2-by-11-inch bond paper. Tabulate equipment identification number and identify Drawing numbers where equipment is indicated (plans, details, and schedules), plus the Specification Section number and title where equipment is specified. Equipment schedule shall be included in operation and maintenance data.

## 2.2 FIRE/ SMOKE DAMPER ACCESS DOOR LABEL

- A. Label Content: Fire or Smoke or Fire/Smoke damper access points shall be permanently identified on the exterior by label having letters not less than 0.5 inch in height reading: FIRE DAMPER, SMOKE DAMPER OR FIRE/SMOKE DAMPER.

## 2.3 WARNING SIGNS AND LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Red.
- C. Background Color: Yellow.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch (64 by 19 mm).
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Label Content: Include caution and warning information, plus emergency notification instructions.

## 2.4 PIPE LABELS

- A. General Requirements for Manufactured Pipe Labels: Preprinted, color-coded, with lettering indicating service, and showing flow direction conforming to ASME A13.1.
- B. Pretensioned Pipe Labels: Precoiled, semirigid plastic formed to cover full circumference of pipe and to attach to pipe without fasteners or adhesive.
- C. Self-Adhesive Pipe Labels: Printed plastic with contact-type, permanent-adhesive backing.

- D. Pipe Label Contents: Include identification of piping service using same designations or abbreviations as used on Drawings, pipe size, and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with piping system service lettering to accommodate both directions or as separate unit on each pipe label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inches high.

## 2.5 DUCT LABELS

- A. Material and Thickness: Multilayer, multicolor, plastic labels for mechanical engraving, 1/8 inch thick, and having predrilled holes for attachment hardware.
- B. Letter Color: Black.
- C. Background Color: White.
- D. Maximum Temperature: Able to withstand temperatures up to 160 deg F (71 deg C).
- E. Minimum Label Size: Length and width vary for required label content, but not less than 2-1/2 by 3/4 inch.
- F. Minimum Letter Size: 1/4 inch for name of units if viewing distance is less than 24 inches, 1/2 inch for viewing distances up to 72 inches, and proportionately larger lettering for greater viewing distances. Include secondary lettering two-thirds to three-fourths the size of principal lettering.
- G. Fasteners: Stainless-steel rivets.
- H. Adhesive: Contact-type permanent adhesive, compatible with label and with substrate.
- I. Duct Label Contents: Include identification of duct service using same designations or abbreviations as used on Drawings, duct size, and an arrow indicating flow direction.
  - 1. Flow-Direction Arrows: Integral with duct system service lettering to accommodate both directions or as separate unit on each duct label to indicate flow direction.
  - 2. Lettering Size: At least 1-1/2 inches high.

## 2.6 STENCILS

- A. Stencils: Prepared with letter sizes according to ASME A13.1 for piping; minimum letter height of 1-1/4 inches for ducts; and minimum letter height of 3/4 inch for access panel and door labels, equipment labels, and similar operational instructions.
  - 1. Stencil Material: Aluminum.
  - 2. Stencil Paint: Exterior, gloss, alkyd enamel or acrylic enamel black unless otherwise indicated. Paint may be in pressurized spray-can form.
  - 3. Identification Paint: Exterior, alkyd enamel or acrylic enamel in colors according to ASME A13.1 unless otherwise indicated.

## 2.7 VALVE TAGS

- A. Valve Tags: Stamped or engraved with 1/4-inch letters for piping system abbreviation and 1/2-inch numbers.
  - 1. Tag Material: Brass, 0.032-inch minimum thickness, and having predrilled or stamped holes for attachment hardware.
  - 2. Fasteners: Brass wire-link chain.

- B. Valve Schedules: For each piping system, on 8-1/2-by-11-inch bond paper. Tabulate valve number, piping system, system abbreviation (as shown on valve tag), location of valve (room or space), normal-operating position (open, closed, or modulating), and variations for identification. Mark valves for emergency shutoff and similar special uses.
  - 1. Valve-tag schedule shall be included in operation and maintenance data.

## **2.8 WARNING TAGS**

- A. Warning Tags: Preprinted or partially preprinted, accident-prevention tags, of plasticized card stock with matte finish suitable for writing.
  - 1. Size: Approximately 4 by 7 inches.
  - 2. Fasteners: Brass grommet and wire.
  - 3. Nomenclature: Large-size primary caption such as "DANGER," "CAUTION," or "DO NOT OPERATE."
  - 4. Color: Yellow background with black lettering.

## **PART 3 - EXECUTION**

### **3.1 PREPARATION**

- A. Clean piping and equipment surfaces of substances that could impair bond of identification devices, including dirt, oil, grease, release agents, and incompatible primers, paints, and encapsulants.

### **3.2 EQUIPMENT LABEL INSTALLATION**

- A. Install or permanently fasten labels on each major item of mechanical equipment.
- B. Locate equipment labels where accessible and visible.

### **3.3 PIPE LABEL INSTALLATION**

- A. Piping Color-Coding: Painting of piping is specified in 'Painting and Finishing'.
- B. Stenciled Pipe Label Option: Stenciled labels may be provided instead of manufactured pipe labels, at Installer's option. Install stenciled pipe labels complying with ASME A13.1 on each piping system.
  - 1. Identification Paint: Use for contrasting background.
  - 2. Stencil Paint: Use for pipe marking.
- C. Locate pipe labels where piping is exposed or above accessible ceilings in finished spaces; machine rooms; accessible maintenance spaces such as shafts, tunnels, and plenums; and exterior exposed locations as follows:
  - 1. Near each valve and control device.
  - 2. Near each branch connection, excluding short takeoffs for fixtures and terminal units. Where flow pattern is not obvious, mark each pipe at branch.
  - 3. Near penetrations through walls, floors, ceilings, and inaccessible enclosures.
  - 4. At access doors, manholes, and similar access points that permit view of concealed piping.
  - 5. Near major equipment items and other points of origination and termination.

6. Spaced at maximum intervals of 20 feet along each run. Reduce intervals to 15 feet in areas of congested piping and equipment.
  7. On piping above removable acoustical ceilings. Omit intermediately spaced labels.
- D. Pipe Label Color Schedule:
1. Conform to ASME A13.1

### **3.4 DUCT LABEL INSTALLATION**

- A. Install plastic-laminated duct labels with permanent adhesive on air ducts in the following color codes:
1. Blue: For exhaust-air ducts.
  2. ASME A13.1 Colors and Designs: For hazardous material exhaust.
- B. Stenciled Duct Label Option: Stenciled labels, showing service and flow direction may be provided instead of plastic-laminated duct labels, at Installer's option, if lettering larger than 1 inch high is needed for proper identification because of distance from normal location of required identification.
- C. Locate labels near points where ducts enter into concealed spaces and at maximum intervals of 50 feet in each space where ducts are exposed or concealed by removable ceiling system.

### **3.5 VALVE-TAG INSTALLATION**

- A. Install tags on valves and control devices in piping systems, except check valves; valves within factory-fabricated equipment units; shutoff valves; faucets; convenience and lawn-watering hose connections; and HVAC terminal devices and similar roughing-in connections of end-use fixtures and units. List tagged valves in a valve schedule.
- B. Valve-Tag Application Schedule: Tag valves according to size, shape, and color scheme and with captions similar to those indicated in the following subparagraphs:
1. Valve-Tag Size and Shape:
    - a. Hot Water: 2 inches round.
    - b. Gas: 2 inches square.
  2. Valve-Tag Color:
    - a. Hot Water: Natural
    - b. Gas: Yellow.
  3. Letter Color:
    - a. Hot Water: Black
    - b. Gas: Black

### **3.6 WARNING-TAG INSTALLATION**

- A. Write required message on, and attach warning tags to, equipment and other items where required.

**END OF SECTION**

**SECTION 23 0593 – TESTING, ADJUSTING AND BALANCING****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Contractor Responsibilities
  - 2. Drawing and Construction Review
  - 3. Factory testing
  - 4. Field Testing
  - 5. General procedures for Testing and Balancing
  - 6. Verification of Controls Operation
  - 7. Testing, Adjusting and Balancing of Air Systems:
    - a. Exhaust systems
    - b. Air supply systems
  - 8. Leakage Testing, Air Distribution System
  - 9. Measurement of final operating conditions of HVAC Systems.
  - 10. Sound measurement of equipment operating conditions.
  - 11. Vibration measurement of equipment operating conditions.
  - 12. Measurement of the Indoor Air Quality (IAQ) after the completion of the final balancing.
  - 13. Tolerances
- B. Testing, balancing and adjusting shall in no way relieve the Contractor of the warranty requirements.
- C. The Contractor shall furnish all fuel, water and electricity required in performing the testing, balancing and adjusting of mechanical systems.

**1.2 SCOPE OF WORK**

- A. General:
  - 1. Testing, adjust and confirm design airflows and water flow rates, pressure drops, operating pressures, temperatures and heat transfer performance for HVAC systems, including, but not limited to exhaust air systems, including all associated fans, diffusers, dampers and accessories, etc.
  - 2. Provide all necessary labor, materials, products, equipment and services to balance and test all HVAC systems, to verify conformance to specified quantities, and to the design of the mechanical system and for the testing of all the fire safety ventilations systems.
  - 3. Cooperate with all other trades, including, but not limited to, fire alarm, sheet metal and piping to ensure the Work is carried out without interference to other Work.

4. Provide openings required for pitot tube traverses. After balancing, close sheet metal openings with removable gasketed plugs. Submit samples of proposed plugs to the Engineer for approval.
  5. Conduct regular inspections during the mechanical systems installation and report on ductwork installation (likely to produce abnormal leakage or restrictions to airflow), piping installation, proper placement of dampers or valves, and any circumstance which will encumber the testing and balancing of the mechanical systems.
  6. Include all items of labor, materials, products, equipment and devices required to comply with standards and codes of the Authorities having Jurisdiction in accordance with the contract documents to balance all air and hydronic systems, to verify conformance to specified quantities and to the design of the mechanical system. Where quantities, sizes or other requirements indicated on the drawings or herein specified are in excess of the standard or local code requirements, the specifications and drawings shall govern.
- B. All work related to the preparation of the systems shall be the responsibility of the Contractor. No work shall proceed on the Testing, Balancing and Adjusting until all items required to be completed prior to the start of TAB work outlined in this section are complete.

### 1.3 DEFINITIONS

- A. AABC: Associated Air Balance Council.
- B. NEBB: National Environmental Balancing Bureau.
- C. TAB: Testing, adjusting, and balancing.
- D. TABB: Testing, Adjusting, and Balancing Bureau.
- E. TAB Specialist: An entity engaged to perform TAB Work
- F. Systems testing, adjusting, and balancing is the process of checking and adjusting all the building environmental systems to produce the design objectives. It includes
  1. The balance of air, and hydronic distribution systems.
  2. Adjustment of all systems to provide design quantities and pressures.
  3. Verification of performance of all equipment and automatic controls;
  4. Sound and vibration measurements.
  5. Indoor Air Quality (IAQ) measurements
- G. Test: To determine quantitative performance of equipment.
- H. Adjust: To regulate the specified air and fluid flow rates and air patterns at the terminal equipment (e.g., reduce fan speed, throttling, diffuser directional vane adjustment, etc.).
- I. Balance: To proportion flows within the distribution system (submains, branches, and terminals) according to specified design quantities.
- J. Procedure: Standardized approach and execution of sequence of work operations to yield reproducible results.

- K. Report forms: Test data sheets arranged for collecting test data in logical order for submission and review. These data sheets should also form the permanent record to be used as the basis for required future testing, adjusting, and balancing.
- L. Terminal: The point where the controlled fluid enters or leaves the distribution system. These are supply inlets on water terminals, supply outlets, return outlets on water terminals, and exhaust inlets registers, grilles, or louvers.
- M. Main: Duct containing the system's major or entire flow.
- N. Submain: Duct containing part of the systems' capacity and serving two or more branch mains.
- O. Branch main: Duct serving two or more terminals.
- P. Branch: Duct serving a single terminal.
- Q. "Data Register": See description hereinafter.

#### 1.4 REFERENCE STANDARDS

- A. All testing, balancing, and adjusting shall be performed in accordance with the latest applicable industry standards, those standards referenced in the applicable specifications, including the following:
  1. Code for Design of Heating, Ventilation and Air Conditioning (GBJ 19-87, GB 50019-2003).
  2. Environmental Air Quality Standards GB 3095-96.
  3. Design Regulation for Residential Building GB50096-1999.
  4. NEEB Testing, Adjusting and Balancing model specifications
  5. NEBB "Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems"
  6. ASHRAE - Standard 111 - 1988 Practices for Measurement, Testing, Adjusting, and Balancing of Building Heating, Ventilation, Air Conditioning, and Refrigeration Systems.
  7. ASHRAE - 2003 HVAC Applications Handbook: Chapter 37, Testing, Adjusting and Balancing.
  8. SMACNA - HVAC System Testing, Adjusting and Balancing (TAB) and Certification of Testing, Adjusting and Balancing Technicians.
  9. SMACNA "HVAC Air Duct Leakage Test Manual", First Edition, 1985.
- B. All equipment and material to be furnished and installed on this Project shall be in accordance with the requirements of the authorities having jurisdiction and suitable for its intended use on this Project.

#### 1.5 SUBMITTALS

- A. Qualification Data: Within 15 days of Contractor's Notice to Proceed, submit documentation that the TAB contractor and this Project's TAB team members meet the qualifications specified in "Quality Assurance" Article.
- B. Contract Documents Examination Report: Within 30 days of Contractor's Notice to Proceed, submit the Contract Documents review report as specified in Part 3.

- C. Strategies and Procedures Plan: Within 60 days of Contractor's Notice to Proceed, submit TAB strategies and step-by-step procedures as specified in "Preparation" Article.
- D. Submittal data shall include, but not be limited to:
  - 1. Air Balance Procedures, Recording Forms and Test Equipment.
  - 2. Air Balance Test Reports.
  - 3. Vibration and Alignment Readings.
  - 4. Sound Level Reading Test Equipment and Reporting Forms.
  - 5. Final Air Balance Readings.
- E. Certified TAB reports.
- F. Instrument calibration reports, to include the following:
  - 1. Instrument type and make.
  - 2. Serial number.
  - 3. Application.
  - 4. Dates of use.
  - 5. Dates of calibration.

## **1.6 QUALITY ASSURANCE**

- A. Testing and Balancing Agency Qualifications:
  - 1. The Contractor shall employ the services of an independent testing, adjusting, and balancing agency meeting the qualifications specified below, to be the single source of responsibility to test, adjust, and balance the building mechanical systems identified above, to produce the design objectives. Services shall include checking installations for conformity to design, measurement and establishment of the fluid quantities of the mechanical systems as required to meet design specifications, and recording and reporting the results.
  - 2. The independent testing, adjusting, and balancing agency shall be qualified in those testing and balancing disciplines required for this project.
  - 3. The air balance agency shall provide proof of having at least 5 years testing, adjusting and balancing experience, as well as having successfully completed at least five projects of similar size and scope.
  - 4. The work must be performed by a qualified Testing, Adjusting and Balancing Technician who may be assisted by other TAB Technicians. The Testing, Adjusting and Balancing Technician is responsible for:
    - a. Procedures to be followed
    - b. Accuracy of all testing
    - c. Integrity of recorded data
    - d. Entering all data and reporting any abnormal or notable conditions on the report forms
    - e. Initialing and dating each recorded data sheet

5. The General Section of the Balance Report shall include the names, and signatures, of the Technicians who were assigned to the project.
  6. Contractor's Quality Assurance Responsibilities: This Contractor is solely responsible for quality control of the Work. Comply with the general requirements of the contract.
- B. Indoor Air Quality (IAQ) Testing:
1. The Independent Testing, Adjusting and Balancing agency shall test the building air systems identified above, to produce an IAQ report.
  2. The testing and balancing agency, shall provide which IAQ testing shall include checking installations for conformity to design, measurement and establishment of the fluid quantities of the mechanical systems as required to meet design specifications, and recording and reporting the results.
  3. The testing and balancing agency shall provide proof of having at least 3 years testing experience, as well as having successfully completed at least three (3) projects of similar size and scope.
  4. The General Section of the Report shall include the names, signatures, and registration numbers of the Technicians who were assigned to the project.

#### **1.7 HVAC CONTRACTOR RESPONSIBILITIES**

- A. Prepare each system for testing and balancing.
- B. Cooperate with the testing agencies, provide access to all work, equipment and systems. Operate individual equipment and systems as requested by the testing and balancing agency.
- C. Put all heating, ventilating and air conditioning systems and equipment into full operation and shall continue the operation of same during each working day of testing and balancing. Operate systems under conditions required for proper testing, adjusting, and balancing.
- D. Notify the Testing, Adjusting and Balancing Technician, The City and Engineer TWO WEEKS prior to time system will be ready for testing, adjusting, and balancing. Project readiness shall include:
  1. Systems are started and running (fans have been checked for proper rotation).
  2. Permanent electrical power wiring is complete.
  3. Verification that all ductwork is fabricated and installed as specified.
  4. Ceilings are installed in critical areas where diffuser air pattern adjustment may be required. Access to balancing devices is provided.
  5. All equipment and ductwork access doors are securely closed.
  6. A complete review of the Contractor's Coordination Drawings for coordination of the provisions for the TAB process and instrumentation needed.
  7. All balancing, smoke and fire/smoke dampers are installed and in fully open positions.
  8. All isolation and balancing valves are open and control valves are operational.

9. System installation is complete, with Controls and Instrumentation installed and fully operational.
  10. The Testing Agency will provide the necessary input in the form of recommendation, and engineering drawings to facilitate testing construction.
- E. Where exhaust fans are provided with variable pitch sheaves, Contractor shall adjust sheaves, as required, at no additional cost to the The City, until desired Design Points (CFM and Static Pressure) are reached. If adjustment of the variable pitch sheaves is beyond the range of the sheaves, HVAC Contractor shall replace sheaves, as required, at no additional cost to the The City, until the desired Design Flow Points (Static Pressure) are reached. Where exhaust fan are specified with fixed ratio sheaves, HVAC Contractor shall provide a set of variable sheaves for initial adjustment and determination of proper RPM. HVAC Contractor shall provide the proper fixed sheaves and replace the variable sheaves and provide a final report verifying performance. This work shall be at no additional cost to the The City until desired Design Points (Flow and Static Pressure) are reached.

### **1.8 SEQUENCING AND SCHEDULING**

- A. Sequencing work to commence after completion of systems and schedule completion of work before Substantial Completion of Project.
- B. TAB Contractor Qualifications: Engage a TAB entity certified by NEBB or TABB.
  1. TAB Field Supervisor: Employee of the TAB contractor and certified by NEBB or TABB.
  2. TAB Technician: Employee of the TAB contractor and who is certified by NEBB or TABB as a TAB technician.
- C. TAB Conference: Meet with The City, Engineer, and Commissioning Authority on approval of the TAB strategies and procedures plan to develop a mutual understanding of the details. Require the participation of the TAB field supervisor and technicians. Provide seven days' advance notice of scheduled meeting time and location.
  1. Agenda Items:
    - a. The Contract Documents examination report.
    - b. The TAB plan.
    - c. Coordination and cooperation of trades and subcontractors.
    - d. Coordination of documentation and communication flow.
- D. Certify TAB field data reports and perform the following:
  1. Review field data reports to validate accuracy of data and to prepare certified TAB reports.
  2. Certify that the TAB team complied with the approved TAB plan and the procedures specified and referenced in this Specification.
- E. TAB Report Forms: Use standard TAB contractor's forms approved by Engineer.
- F. Instrumentation Type, Quantity, Accuracy, and Calibration: As described in ASHRAE 111, Section 5, "Instrumentation."

## 1.9 DRAWING AND CONSTRUCTION REVIEW

- A. Perform a preconstruction review of the following documents:
  - 1. Contract construction drawings
  - 2. Contract specifications
  - 3. Addenda
  - 4. Submittal data
  - 5. Shop drawings
  - 6. Automatic Control drawings
  - 7. Contractors Combined Services Drawings (all trades).
- B. Prepare a report of the preconstruction review list of recommended changes to allow most effective balancing.
- C. Perform a construction review of the mechanical installation during the progress of the project. Purpose of the reviews to be:
  - 1. Identify potential problems for performing balancing.
  - 2. Identify modifications which will aid balancing.
  - 3. Schedule and coordinate balancing with other work and other trades.
- D. Prepare a report of both preconstruction review and construction review to verify acceptance of installed conditions.
- E. Pre-Balancing Conference: Prior to beginning of the testing, adjusting, and balancing procedures, the Contractor shall schedule and conduct a conference with The City, Engineer and representatives of installers of the mechanical systems. The objective of the conference is to review the preconstruction and construction report and final coordination and verification of system operation and readiness for testing, adjusting, and balancing.

## 1.10 PROJECT/SITE CONDITIONS

- A. General: Do not proceed until systems requiring testing, adjusting and balancing are clean and free from debris, dirt, and discarded building materials.
- B. Air balance and testing shall not begin until system has been completed and is in full working order. The Contractor shall put all heating, ventilating and air conditioning systems and equipment into full operation with the final filters in place on all air handling units and shall continue the operation of same during each working day of testing and balancing.

## 1.11 WARRANTY

- A. Comply with the requirements of the General Conditions

## 1.12 COORDINATION

- A. Notice: Provide seven days' advance notice for each test. Include scheduled test dates and times.
- B. Perform TAB after leakage and pressure tests on air and water distribution systems have been satisfactorily completed.

## **PART 2 - PRODUCTS (NOT APPLICABLE)**

## **PART 3 - EXECUTION**

### **3.1 FACTORY TESTING**

- A. All factory testing where specified shall be performed in accordance with the latest applicable industry standards, with the manufacturer's recommendations and as specified in other sections of this work.

### **3.2 FIELD TESTING - GENERAL**

- A. During the progress of the Work, tests shall be made as specified herein, as specified in other sections of this work and as required by authorities having jurisdiction, including local authorities Inspection Department and Agency. Tests shall be conducted by the Contractor as part of the all HVAC Work and shall include all qualified personnel, equipment apparatus and services required to perform the tests.
- B. The Contractor shall submit proposed test procedures, in soft and hard copy, recording forms and test equipment for review at least six (6) months prior to the start and execution of testing.
- C. Leaks, damage, or defects discovered or resulting from tests shall be repaired or replaced to a like new condition. Leaky refrigerant pipe joints, ductwork, etc., shall be removed and replaced with acceptable materials.
- D. All equipment and instruments required for tests as well as additional thermometer wells, gauge and instrument connections shall be furnished and installed at no additional cost to the The City.
- E. All instruments used for testing and balancing must have been calibrated within a period of three (3) months prior to balancing. Instrument calibration shall be certified.
- F. Submit six (6) hard copies and six (6) soft copies of each complete testing and balancing and IAQ report to the Contractor, and to the Engineer for Engineer's review. The Contractor shall submit individual testing and balance reports for air and hydronic systems within two (2) weeks after the completion of the testing and balancing of systems.

### **3.3 EXAMINATION**

- A. Examine the Contract Documents to become familiar with Project requirements and to discover conditions in systems' designs that may preclude proper TAB of systems and equipment.
- B. Examine systems for installed balancing devices, such as test ports, gage cocks, thermometer wells, flow-control devices, balancing valves and fittings, and manual volume dampers. Verify that locations of these balancing devices are accessible. Submit report on findings to the Engineer.
- C. Examine the approved submittals for HVAC systems and equipment.
- D. Examine design data including HVAC system descriptions, statements of design assumptions for environmental conditions and systems' output, and statements of philosophies and assumptions about HVAC system and equipment controls.

- E. Examine equipment performance data including fan and pump curves.
  - 1. Relate performance data to Project conditions and requirements, including system effects that can create undesired or unpredicted conditions that cause reduced capacities in all or part of a system.
- F. Examine system and equipment installations and verify that field quality-control testing, cleaning, and adjusting specified in individual Sections have been performed.
- G. Examine test reports specified in individual system and equipment Sections.
- H. Examine HVAC equipment and verify that bearings are greased, belts are aligned and tight, and equipment with functioning controls is ready for operation.
- I. Examine strainers. Verify that startup screens are replaced by permanent screens with indicated perforations.
- J. Examine control valves for proper installation for their intended function of diverting or mixing fluid flows.
- K. Examine system pumps to ensure absence of entrained air in the suction piping.
- L. Examine operating safety interlocks and controls on HVAC equipment.
- M. Report deficiencies discovered before and during performance of TAB procedures. Observe and record system reactions to changes in conditions. Record default set points if different from indicated values.

### **3.4 PREPARATION**

- A. Prepare a TAB plan that includes strategies and step-by-step procedures.
- B. Complete system-readiness checks and prepare reports. Verify the following:
  - 1. Permanent electrical-power wiring is complete.
  - 2. Automatic temperature-control systems are operational.
  - 3. Equipment and duct access doors are securely closed.
  - 4. Windows and doors can be closed so indicated conditions for system operations can be met.

### **3.5 GENERAL PROCEDURES FOR TESTING AND BALANCING**

- A. Perform testing and balancing procedures on each system according to the procedures contained in AABC's "National Standards for Total System Balance" and ASHRAE 111] and in this Section.
  - 1. Comply with requirements in ASHRAE 62.1-2004, Section 7.2.2, "Air Balancing."
- B. Cut insulation, ducts and equipment cabinets for installation of test probes to the minimum extent necessary for TAB procedures.
  - 1. After testing and balancing, install test ports and duct access doors that comply with requirements specified under another section of this work.
  - 2. Install and join new insulation that matches removed materials. Restore insulation, coverings, vapor barrier, and finish according to the requirements specified under another section of this work.

- C. Mark equipment and balancing devices, including damper-control positions, valve position indicators, fan-speed-control levers, and similar controls and devices, with paint or other suitable, permanent identification material to show final settings.
- D. Take and report testing and balancing measurements in inch-pound (IP) units.

### **3.6 VERIFICATION OF CONTROL OPERATION**

- A. General: Perform the checks outlined in the following for all air and water system controls:
  - B. Thermostats and humidistats - Verify calibration and operation of all thermostats and humidistats. Any Deficiencies shall be reported for correction. Recheck after correction. Record thermostat set point and output signal, space temperature.
  - C. Damper Operation - Verify operation and position for all dampers. Any Deficiencies shall be reported for correction. Recheck after correction. Record set point, airflow and space temperature.
  - D. Other Controls - Simulate control operations with control contractor in accordance with design requirements and manufacturer's recommendations. Any deficiencies shall be reported for correction. Recheck after correction. Record thermostat set point and output signal, space temperature.

### **3.7 GENERAL PROCEDURES FOR BALANCING AIR SYSTEMS**

- A. Prepare test reports for both fans and outlets. Obtain manufacturer's outlet factors and recommended testing procedures. Crosscheck the summation of required outlet volumes with required fan volumes.
- B. Prepare schematic diagrams of systems' "as-built" duct layouts.
- C. Determine the best locations in main and branch ducts for accurate duct-airflow measurements.
- D. Check airflow patterns from the outdoor-air louvers and dampers and the return- and exhaust-air dampers through the supply-fan discharge and mixing dampers.
- E. Locate start-stop and disconnect switches, electrical interlocks, and motor starters.
- F. Verify that motor starters are equipped with properly sized thermal protection.
- G. Check dampers for proper position to achieve desired airflow path.
- H. Check for airflow blockages.
- I. Check condensate drains for proper connections and functioning.
- J. Check for proper sealing of air-handling-unit components.
- K. Verify that air duct system is sealed as specified in Section "Metal Ducts."
- L. Set HVAC system's air flow rates and water flow rates within the following tolerances:
  1. Supply, Return, and Exhaust Fans and Equipment with Fans: Plus or minus 5 percent.
  2. Air Outlets and Inlets: Plus or minus 5 percent.
  3. Heating-Water Flow Rate: Plus or minus 5 percent.

### 3.8 REPORTING

- A. Initial Construction-Phase Report: Based on examination of the Contract Documents as specified in "Examination" Article, prepare a report on the adequacy of design for systems' balancing devices. Recommend changes and additions to systems' balancing devices to facilitate proper performance measuring and balancing. Recommend changes and additions to HVAC systems and general construction to allow access for performance measuring and balancing devices.
- B. Status Reports: Prepare weekly progress reports to describe completed procedures, procedures in progress, and scheduled procedures. Include a list of deficiencies and problems found in systems being tested and balanced. Prepare a separate report for each system and each building floor for systems serving multiple floors.

### 3.9 FINAL REPORT

- A. General: Prepare a certified written report; tabulate and divide the report into separate sections for tested systems and balanced systems.
  - 1. Include a certification sheet at the front of the report's binder, signed and sealed by the certified testing and balancing engineer.
  - 2. Include a list of instruments used for procedures, along with proof of calibration.
- B. Final Report Contents: In addition to certified field-report data, include the following:
  - 1. Fan curves.
  - 2. Manufacturers' test data.
  - 3. Field test reports prepared by system and equipment installers.
  - 4. Other information relative to equipment performance; do not include Shop Drawings and product data.
- C. General Report Data: In addition to form titles and entries, include the following data:
  - 1. Title page.
  - 2. Name and address of the TAB contractor.
  - 3. Project name.
  - 4. Project location.
  - 5. Engineer's name and address.
  - 6. Engineer's name and address.
  - 7. Contractor's name and address.
  - 8. Report date.
  - 9. Signature of TAB supervisor who certifies the report.
  - 10. Table of Contents with the total number of pages defined for each section of the report. Number each page in the report.
  - 11. Summary of contents including the following:
    - a. Indicated versus final performance.
    - b. Notable characteristics of systems.

- c. Description of system operation sequence if it varies from the Contract Documents.
12. Nomenclature sheets for each item of equipment.
13. Data for all equipment, including manufacturer's name, type, size, and fittings.
14. Notes to explain why certain final data in the body of reports vary from indicated values.
15. Test conditions for fans and pump performance forms including the following:
  - a. Settings for outdoor-, return-, and exhaust-air dampers.
  - b. Conditions of filters.
  - c. Fan drive settings including settings and percentage of maximum pitch diameter.
  - d. Other system operating conditions that affect performance.
- D. System Diagrams: Include schematic layouts of air distribution systems. Present each system with single-line diagram and include the following:
  1. Quantities of exhaust airflows.
  2. Duct, outlet, and inlet sizes.
  3. Position of balancing devices.
- E. Fan Test Reports: For supply, return, and exhaust fans, include the following:
  1. Fan Data:
    - a. System identification.
    - b. Location.
    - c. Make and type.
    - d. Model number and size.
    - e. Manufacturer's serial number.
    - f. Arrangement and class.
    - g. Sheave make, size in inches (mm), and bore.
    - h. Center-to-center dimensions of sheave, and amount of adjustments in inches (mm).
  2. Motor Data:
    - a. Motor make, and frame type and size.
    - b. Horsepower and rpm.
    - c. Volts, phase, and hertz.
    - d. Full-load amperage and service factor.
    - e. Sheave make, size in inches (mm), and bore.
    - f. Center-to-center dimensions of sheave, and amount of adjustments in inches (mm).

- g. Number, make, and size of belts.
- 3. Test Data (Indicated and Actual Values):
  - a. Total airflow rate in cfm (L/s).
  - b. Total system static pressure in inches wg (Pa).
  - c. Fan rpm.
  - d. Discharge static pressure in inches wg (Pa).
  - e. Suction static pressure in inches wg (Pa).
- 4. Report Data:
  - a. Instrument type and make.
  - b. Serial number.
  - c. Application.
  - d. Dates of use.
  - e. Dates of calibration.

### 3.10 INSPECTIONS

- A. Final Inspection:
  - 1. After testing and balancing are complete, operate each system and randomly check measurements to verify that the system is operating according to the final test and balance readings documented in the final report.
  - 2. Check the following for each system:
    - a. Measure airflow of at one exhaust fan.
    - b. Measure water flow.
    - c. Measure room temperature at each thermostat/temperature sensor. Compare the reading to the set point.
    - d. Verify that balancing devices are marked with final balance position.
    - e. Note deviations from the Contract Documents in the final report.
  - 3. The TAB contractor's test and balance engineer shall conduct the inspection in the presence of Agency.
  - 4. If rechecks yield measurements that differ from the measurements documented in the final report by more than the tolerances allowed, the measurements shall be noted as "FAILED."
  - 5. If the number of "FAILED" measurements is greater than 10 percent of the total measurements checked during the final inspection, the testing and balancing shall be considered incomplete and shall be rejected.
- B. TAB Work will be considered defective if it does not pass final inspections. If TAB Work fails, proceed as follows:
  - 1. Recheck all measurements and make adjustments. Revise the final report and balancing device settings to include all changes; resubmit the final report and request a second final inspection.

2. If the second final inspection also fails, The City may contract the services of another TAB contractor to complete TAB Work according to the Contract Documents and deduct the cost of the services from the original TAB contractor's final payment.

C. Prepare test and inspection reports.

### **3.11 ADDITIONAL TESTS**

- A. Seasonal Periods: If initial TAB procedures were not performed during near-peak summer and winter conditions, perform additional TAB during near-peak summer and winter conditions.

**END OF SECTION**

**SECTION 23 0713 – DUCT INSULATION****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section includes
  - 1. Insulation materials
  - 2. Adhesives
  - 3. Mastics
  - 4. Lagging Adhesives
  - 5. Factory Applied Jackets
  - 6. Tapes
  - 7. Securements
  - 8. Corner Angle

**1.2 REFERENCE STANDARDS**

- A. SMACNA
- B. ASHRAE
- C. NFPA
- D. ASTM
- E. New York City Construction Code

**1.3 REFERENCE STANDARDS**

- A. Duct covering and lining, including adhesives when used, shall have a flame spread index not more than 25 and a smoke-developed index not more than 50, when tested in accordance with ASTM E 84 or UL 723, using the specimen preparation and mounting procedures of ASTM E 2331.
- B. Duct coverings and linings shall not flame, glow, smolder or smoke when tested in accordance with ASTM C 411 at the temperature to which they are exposed in service. The test temperature shall not fall below 250 °F.
- C. Factory label insulation and jacket materials and adhesive, mastic, tapes, and cement material containers, with appropriate markings of applicable testing agency.
- D. Mockups: Before installing insulation, build mockups for each type of insulation and finish listed below to demonstrate quality of insulation application and finishes. Build mockups in the location indicated or, if not indicated, as directed by Engineer. Use materials indicated for the completed Work.
  - 1. Ductwork Mockups:
    - a. One 10-foot section each of rectangular and round straight duct.
    - b. One each of a 90-degree mitered round and rectangular elbow, and one each of a 90-degree radius round and rectangular elbow.

- c. One rectangular branch takeoff and one round branch takeoff from a rectangular duct. One round tee fitting.
  - d. One rectangular and round transition fitting.
  - e. Four support hangers for round and rectangular ductwork.
  - f. Each type of damper and specialty.
2. For each mockup, fabricate cutaway sections to allow observation of application details for insulation materials, adhesives, mastics, attachments, and jackets.
  3. Notify Resident Engineer seven days in advance of dates and times when mockups will be constructed.
  4. Obtain Resident Engineer's approval of mockups before starting insulation application.
  5. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Engineer specifically approves such deviations in writing.
  6. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
  7. Demolish and remove mockups when directed.
- E. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004.
  - F. SMACNA - HVAC Duct Construction Standards, Latest Edition.
  - G. SMACNA – HVAC Air Duct Leakage Test Manual.
  - H. The contractor must comply with the specification in its entirety. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.
  - I. At the discretion of the Engineer, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.

#### 1.4 SUBMITTALS

- A. Product Data: For each type of product indicated. Include thermal conductivity, water-vapor permeance thickness, and jackets (both factory- and field-applied if any).
- B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
  1. Detail application of protective shields, saddles, and inserts at hangers for each type of insulation and hanger.
  2. Detail insulation application at elbows, fittings, dampers, specialties and flanges for each type of insulation.
  3. Detail application of field-applied jackets.
  4. Detail application at linkages of control devices.
- C. Samples: For each type of insulation and jacket indicated. Identify each Sample, describing product and intended use. Sample sizes are as follows:

1. Sheet Form Insulation Materials: 12 inches square.
  2. Sheet Jacket Materials: 12 inches square.
  3. Manufacturer's Color Charts: For products where color is specified, show the full range of colors available for each type of finish material.
- D. Material Test Reports: From a qualified testing agency acceptable to authorities having jurisdiction indicating, interpreting, and certifying test results for compliance of insulation materials, sealers, attachments, cements, and jackets, with requirements indicated. Include dates of tests and test methods employed.

## **1.5 DELIVERY, STORAGE, AND HANDLING**

- A. Packaging: Insulation material containers shall be marked by manufacturer with appropriate ASTM standard designation, type and grade, and maximum use temperature.

## **1.6 COORDINATION**

- A. Coordinate sizes and locations of supports, hangers, and insulation shields specified in Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
- B. Coordinate clearance requirements with duct Installer for duct insulation application. Before preparing ductwork Shop Drawings, establish and maintain clearance requirements for installation of insulation and field-applied jackets and finishes and for space required for maintenance.
- C. Coordinate installation and testing of heat tracing.

## **1.7 SCHEDULING**

- A. Schedule insulation application after pressure testing systems and, where required, after installing and testing heat tracing. Insulation application may begin on segments that have satisfactory test results.
- B. Complete installation and concealment of plastic materials as rapidly as possible in each area of construction.

## **PART 2 - PRODUCTS**

### **2.1 INSULATION MATERIALS**

- A. Comply with requirements in "Duct Insulation Schedule, General," "Indoor Duct and Plenum Insulation Schedule," and "Aboveground, Outdoor Duct and Plenum Insulation Schedule" articles for where insulating materials shall be applied.
- B. Products shall not contain asbestos, lead, mercury, or mercury compounds.
- C. Products that come in contact with stainless steel shall have a leachable chloride content of less than 50 ppm when tested according to ASTM C 871.
- D. Insulation materials for use on austenitic stainless steel shall be qualified as acceptable according to ASTM C 795.
- E. Foam insulation materials shall not use CFC or HCFC blowing agents in the manufacturing process.
- F. Mineral-Fiber Blanket Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 553, Type II and ASTM C 1290, Type III with factory-applied

FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.

1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. CertainTeed
    - b. John Manville; a Berkshire Hathaway Company
    - c. Knauf Insulation
    - d. or approved equal
- G. Mineral-Fiber Board Insulation: Mineral or glass fibers bonded with a thermosetting resin. Comply with ASTM C 612, Type IA or Type IB. For duct and plenum applications, provide insulation with factory-applied FSK jacket. Factory-applied jacket requirements are specified in "Factory-Applied Jackets" Article.
1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. CertainTeed
    - b. John Manville; a Berkshire Hathaway Company
    - c. Knauf Insulation
    - d. or approved equal

## 2.2 FIRE-RATED INSULATION SYSTEMS

- A. Fire-Rated Board: Structural-grade, press-molded, xonolite calcium silicate, fireproofing board suitable for operating temperatures up to 1700 deg F. Comply with ASTM C 656, Type II, Grade 6. Tested and certified to provide a 2 hour fire rating by an NRTL acceptable to authorities having jurisdiction.
- B. Fire-Rated Blanket: High-temperature, flexible, blanket insulation with FSK jacket that is tested and certified to provide a 2 hour fire rating by an NRTL acceptable to authorities having jurisdiction.

## 2.3 ADHESIVES

- A. Materials shall be compatible with insulation materials, jackets, and substrates and for bonding insulation to itself and to surfaces to be insulated unless otherwise indicated.
- B. Mineral-Fiber Adhesive: Comply with MIL-A-3316C, Class 2, Grade A.
  1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H.B Fuller Construction Products
    - b. Eagle Bridges; Marathon Industries
    - c. Foster Brand; H.B Fuller Construction Products
    - d. or approved equal
- C. ASJ Adhesive, and FSK Jacket Adhesive: Comply with MIL-A-3316C, Class 2, Grade A for bonding insulation jacket lap seams and joints.

1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
  - a. Childers Brand; H.B Fuller Construction Products
  - b. Eagle Bridges; Marathon Industries
  - c. Foster Brand; H.B Fuller Construction Products
  - d. or approved equal

## 2.4 MASTICS

- A. Materials shall be compatible with insulation materials, jackets, and substrates; comply with MIL-PRF-19565C, Type II.
- B. Vapor-Barrier Mastic: Water based; suitable for indoor use on below ambient services.
  1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H.B Fuller Construction Products
    - b. Foster Brand; H.B Fuller Construction Products
    - c. Knauf Insulation
    - d. or approved equal
  2. Water-Vapor Permeance: ASTM E 96/E 96M, Procedure B, 0.013 perm at 43-mil dry film thickness.
  3. Service Temperature Range: Minus 20 to plus 180 deg F.
  4. Solids Content: ASTM D 1644, 58 percent by volume and 70 percent by weight.
  5. Color: White.
- C. Vapor-Barrier Mastic: Solvent based; suitable for indoor use on below ambient services.
  1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H.B Fuller Construction Products
    - b. Foster Brand; H.B Fuller Construction Products
    - c. Knauf Insulation
    - d. or approved equal
  2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 35-mil dry film thickness.
  3. Service Temperature Range: 0 to 180 deg F.
  4. Solids Content: ASTM D 1644, 44 percent by volume and 62 percent by weight.
  5. Color: White.
- D. Vapor-Barrier Mastic: Solvent based; suitable for outdoor use on below ambient services.
  1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H.B Fuller Construction Products

- b. Foster Brand; H.B Fuller Construction Products
    - c. Knauf Insulation
    - d. or approved equal
  - 2. Water-Vapor Permeance: ASTM F 1249, 0.05 perm at 30-mil dry film thickness.
  - 3. Service Temperature Range: Minus 50 to plus 220 deg F.
  - 4. Solids Content: ASTM D 1644, 33 percent by volume and 46 percent by weight.
  - 5. Color: White.
- E. Breather Mastic: Water based; suitable for indoor and outdoor use on above ambient services.
- 1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H.B Fuller Construction Products
    - b. Foster Brand; H.B Fuller Construction Products
    - c. Knauf Insulation
    - d. or approved equal
  - 2. Water-Vapor Permeance: ASTM F 1249, 1.8 perms at 0.0625-inch dry film thickness.
  - 3. Service Temperature Range: Minus 20 to plus 180 deg F.
  - 4. Solids Content: 60 percent by volume and 66 percent by weight.
  - 5. Color: White.

## 2.5 LAGGING ADHESIVES

- A. Description: Comply with MIL-A-3316C, Class I, Grade A and shall be compatible with insulation materials, jackets, and substrates.
- 1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Childers Brand; H.B Fuller Construction Products
    - b. Foster Brand; H.B Fuller Construction Products
    - c. Knauf Insulation
    - d. or approved equal
  - 2. Fire-resistant, water-based lagging adhesive and coating for use indoors to adhere fire-resistant lagging cloths over duct insulation.
  - 3. Service Temperature Range: 0 to plus 180 deg F.
  - 4. Color: White.

## 2.6 SEALANTS

- A. FSK and Metal Jacket Flashing Sealants:
- 1. Manufacture: Subject to compliance with requirements, provide products by one of the following:

- a. Childers Brand; H.B Fuller Construction Products
  - b. Eagle Bridges; Marathon Industries
  - c. Foster Brand; H.B Fuller Construction Products
  - d. or approved equal
2. Materials shall be compatible with insulation materials, jackets, and substrates.
  3. Fire- and water-resistant, flexible, elastomeric sealant.
  4. Service Temperature Range: Minus 40 to plus 250 deg F.
  5. Color: Aluminum.

## **2.7 FACTORY-APPLIED JACKETS**

- A. Insulation system schedules indicate factory-applied jackets on various applications. When factory-applied jackets are indicated, comply with the following:
  1. FSK Jacket: Aluminum-foil, fiberglass-reinforced scrim with kraft-paper backing; complying with ASTM C 1136, Type II.

## **2.8 TAPES**

- A. FSK Tape: Foil-face, vapor-retarder tape matching factory-applied jacket with acrylic adhesive; complying with ASTM C 1136.
  1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. Avery Dennison Corporation, Specialty Tapes Division
    - b. Compac Corporation
    - c. Knauf Insulation
    - d. or approved equal
  2. Width: 3 inches.
  3. Thickness: 6.5 mils.
  4. Adhesion: 90 ounces force/inch in width.
  5. Elongation: 2 percent.
  6. Tensile Strength: 40 lbf/inch in width.
  7. FSK Tape Disks and Squares: Precut disks or squares of FSK tape.

## **2.9 SECUREMENTS**

- A. Bands:
  1. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - a. ITW Insulation Systems; Illinois Tool Works, Inc.
    - b. RPR Products, Inc.
    - c. Band – It Company Limited
    - d. or approved equal

2. Stainless Steel: ASTM A 167 or ASTM A 240, Type 304 or Type 316; 0.015 inch thick, 1/2 inch wide with wing seal or closed seal.
3. Aluminum: ASTM B 209 , Alloy 3003, 3005, 3105, or 5005; Temper H-14, 0.020 inch thick, 1/2 inch wide with wing seal or closed seal.
4. Springs: Twin spring set constructed of stainless steel with ends flat and slotted to accept metal bands. Spring size determined by manufacturer for application.

B. Insulation Pins and Hangers:

1. Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch diameter shank, length to suit depth of insulation indicated.
  - A. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Gemo
    - 4) or approved equal
2. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch diameter shank, and length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
  - a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Midwest Eastern Fasteners, Inc.
    - 4) or approved equal
3. Metal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
  - a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Midwest Eastern Fasteners, Inc.
    - 4) or approved equal
  - b. Baseplate: Perforated, galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  - c. Spindle: Copper- or zinc-coated, low-carbon steel fully annealed, 0.106-inch diameter shank, length to suit depth of insulation indicated.

- d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
4. Nonmetal, Adhesively Attached, Perforated-Base Insulation Hangers: Baseplate fastened to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
  - a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Gemo
    - 4) Midwest Eastern Fasteners, Inc.
    - 5) or approved equal
  - b. Baseplate: Perforated, nylon sheet, 0.030 inch thick by 1-1/2 inches in diameter.
  - c. Spindle: Nylon, 0.106-inch diameter shank, length to suit depth of insulation indicated, up to 2-1/2 inches.
  - d. Adhesive: Recommended by hanger manufacturer. Product with demonstrated capability to bond insulation hanger securely to substrates indicated without damaging insulation, hangers, and substrates.
5. Self-Sticking-Base Insulation Hangers: Baseplate welded to projecting spindle that is capable of holding insulation, of thickness indicated, and securely in position indicated when self-locking washer is in place. Comply with the following requirements:
  - a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Gemo
    - 4) Midwest Eastern Fasteners, Inc.
    - 5) or approved equal
  - b. Baseplate: Galvanized carbon-steel sheet, 0.030 inch thick by 2 inches square.
  - c. Spindle: Copper- or zinc-coated, low-carbon steel fully annealed, 0.106-inch diameter shank, length to suit depth of insulation indicated.
  - d. Adhesive-backed base with a peel-off protective cover.
6. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch thick, galvanized-steel sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.

- a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Gemo
    - 4) Midwest Eastern Fasteners, Inc.
    - 5) or approved equal
  - b. Protect ends with capped self-locking washers incorporating a spring steel insert to ensure permanent retention of cap in exposed locations.
7. Nonmetal Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch thick nylon sheet, with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Gemo
    - 4) Midwest Eastern Fasteners, Inc.
    - 5) or approved equal
- C. Staples: Outward-clinching insulation staples, nominal 3/4-inch wide, stainless steel or Monel.
- D. Wire: 0.062 inch soft-annealed, stainless steel
- a. Manufacture: Subject to compliance with requirements, provide products by one of the following:
    - 1) AGM Industries, Inc.
    - 2) Hardcast, Inc.
    - 3) Gemo
    - 4) Midwest Eastern Fasteners, Inc.
    - 5) or approved equal

## 2.10 CORNER ANGLES

- A. Aluminum Corner Angles: 0.040 inch thick, minimum 1 by 1 inch, aluminum according to ASTM B 209, Alloy 3003, 3005, 3105, or 5005; Temper H-14.
- B. Stainless-Steel Corner Angles: 0.024 inch thick, minimum 1 by 1 inch, stainless steel according to ASTM A 167 or ASTM A 240/A 240M, Type 304 or Type 316.

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine substrates and conditions for compliance with requirements for installation tolerances and other conditions affecting performance of insulation application.
  - 1. Verify that systems to be insulated have been tested and are free of defects.
  - 2. Verify that surfaces to be insulated are clean and dry.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.

### **3.2 PREPARATION**

- A. Surface Preparation: Clean and dry surfaces to receive insulation. Remove materials that will adversely affect insulation application.

### **3.3 GENERAL INSTALLATION REQUIREMENTS**

- A. Install insulation materials, accessories, and finishes with smooth, straight, and even surfaces; free of voids throughout the length of ducts and fittings.
- B. Install insulation materials, vapor barriers or retarders, jackets, and thicknesses required for each item of duct system as specified in insulation system schedules.
- C. Install accessories compatible with insulation materials and suitable for the service. Install accessories that do not corrode, soften, or otherwise attack insulation or jacket in either wet or dry state.
- D. Install insulation with longitudinal seams at top and bottom of horizontal runs.
- E. Install multiple layers of insulation with longitudinal and end seams staggered.
- F. Keep insulation materials dry during application and finishing.
- G. Install insulation with tight longitudinal seams and end joints. Bond seams and joints with adhesive recommended by insulation material manufacturer.
- H. Install insulation with least number of joints practical.
- I. Where vapor barrier is indicated, seal joints, seams, and penetrations in insulation at hangers, supports, anchors, and other projections with vapor-barrier mastic.
  - 1. Install insulation continuously through hangers and around anchor attachments.
  - 2. For insulation application where vapor barriers are indicated, extend insulation on anchor legs from point of attachment to supported item to point of attachment to structure. Taper and seal ends at attachment to structure with vapor-barrier mastic.
  - 3. Install insert materials and install insulation to tightly join the insert. Seal insulation to insulation inserts with adhesive or sealing compound recommended by insulation material manufacturer.
- J. Apply adhesives, mastics, and sealants at manufacturer's recommended coverage rate and wet and dry film thicknesses.
- K. Install insulation with factory-applied jackets as follows:
  - 1. Draw jacket tight and smooth.

2. Cover circumferential joints with 3-inch wide strips, of same material as insulation jacket. Secure strips with adhesive and outward clinching staples along both edges of strip, spaced 4 inches o.c.
  3. Overlap jacket longitudinal seams at least 1-1/2 inches. Clean and dry surface to receive self-sealing lap. Staple laps with outward clinching staples along edge at 4 inches o.c.
    - a. For below ambient services, apply vapor-barrier mastic over staples.
  4. Cover joints and seams with tape, according to insulation material manufacturer's written instructions, to maintain vapor seal.
  5. Where vapor barriers are indicated, apply vapor-barrier mastic on seams and joints and at ends adjacent to duct flanges and fittings.
- L. Cut insulation in a manner to avoid compressing insulation more than 75 percent of its nominal thickness.
- M. Finish installation with systems at operating conditions. Repair joint separations and cracking due to thermal movement.
- N. Repair damaged insulation facings by applying same facing material over damaged areas. Extend patches at least 4 inches beyond damaged areas. Adhere, staple, and seal patches similar to butt joints.

### **3.4 PENETRATIONS**

- A. Insulation Installation at Roof Penetrations: Install insulation continuously through roof penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation above roof surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside roof flashing at least 2 inches below top of roof flashing.
  4. Seal jacket to roof flashing with flashing sealant.
- B. Insulation Installation at Aboveground Exterior Wall Penetrations: Install insulation continuously through wall penetrations.
1. Seal penetrations with flashing sealant.
  2. For applications requiring only indoor insulation, terminate insulation inside wall surface and seal with joint sealant. For applications requiring indoor and outdoor insulation, install insulation for outdoor applications tightly joined to indoor insulation ends. Seal joint with joint sealant.
  3. Extend jacket of outdoor insulation outside wall flashing and overlap wall flashing at least 2 inches
  4. Seal jacket to wall flashing with flashing sealant.
- C. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.

- D. Insulation Installation at Fire-Rated Wall and Partition Penetrations: Terminate insulation at fire damper sleeves for fire-rated wall and partition penetrations. Externally insulate damper sleeves to match adjacent insulation and overlap duct insulation at least 2 inches.
  - 1. Comply with requirements in Section 078413 "Penetration Firestopping."
- E. Insulation Installation at Floor Penetrations:
  - 1. Duct: For penetrations through fire-rated assemblies, terminate insulation at fire damper sleeves and externally insulate damper sleeve beyond floor to match adjacent duct insulation. Overlap damper sleeve and duct insulation at least 2 inches.
  - 2. Seal penetrations through fire-rated assemblies. Comply with requirements in Section 078413 "Penetration Firestopping."

### **3.5 INSTALLATION OF FLEXIBLE ELASTOMERIC INSULATION**

- A. Seal longitudinal seams and end joints with manufacturers recommended adhesive to eliminate openings in insulation that allow passage of air to surface being insulated.

### **3.6 INSTALLATION OF MINERAL-FIBER INSULATION**

- A. Blanket Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
  - 1. Apply adhesives according to manufacturer's recommended coverage rates per unit area, for 100 percent coverage of duct and plenum surfaces.
  - 2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  - 3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    - b. On duct sides with dimensions larger than 18 inches, place pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    - d. Do not overcompress insulation during installation.
    - e. Impale insulation over pins and attach speed washers.
    - f. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  - 4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch

outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

- a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
  - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
5. Overlap unfaced blankets a minimum of 2 inches on longitudinal seams and end joints. At end joints, secure with steel bands spaced a maximum of 18 inches o.c.
  6. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
  7. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.
- B. Board Insulation Installation on Ducts and Plenums: Secure with adhesive and insulation pins.
1. Apply adhesives according to manufacturer's recommended coverage rates per unit area.
  2. Apply adhesive to entire circumference of ducts and to all surfaces of fittings and transitions.
  3. Install either capacitor-discharge-weld pins and speed washers or cupped-head, capacitor-discharge-weld pins on sides and bottom of horizontal ducts and sides of vertical ducts as follows:
    - a. On duct sides with dimensions 18 inches and smaller, place pins along longitudinal centerline of duct. Space 3 inches maximum from insulation end joints, and 16 inches o.c.
    - b. On duct sides with dimensions larger than 18 inches, space pins 16 inches o.c. each way, and 3 inches maximum from insulation joints. Install additional pins to hold insulation tightly against surface at cross bracing.
    - c. Pins may be omitted from top surface of horizontal, rectangular ducts and plenums.
    - d. Do not overcompress insulation during installation.
    - e. Cut excess portion of pins extending beyond speed washers or bend parallel with insulation surface. Cover exposed pins and washers with tape matching insulation facing.
  4. For ducts and plenums with surface temperatures below ambient, install a continuous unbroken vapor barrier. Create a facing lap for longitudinal seams and end joints with insulation by removing 2 inches from one edge and one end of insulation segment. Secure laps to adjacent insulation section with 1/2-inch outward-clinching staples, 1 inch o.c. Install vapor barrier consisting of factory- or

field-applied jacket, adhesive, vapor-barrier mastic, and sealant at joints, seams, and protrusions.

- a. Repair punctures, tears, and penetrations with tape or mastic to maintain vapor-barrier seal.
  - b. Install vapor stops for ductwork and plenums operating below 50 deg F at 18-foot intervals. Vapor stops shall consist of vapor-barrier mastic applied in a Z-shaped pattern over insulation face, along butt end of insulation, and over the surface. Cover insulation face and surface to be insulated a width equal to two times the insulation thickness, but not less than 3 inches.
5. Install insulation on rectangular duct elbows and transitions with a full insulation section for each surface. Groove and score insulation to fit as closely as possible to outside and inside radius of elbows. Install insulation on round and flat-oval duct elbows with individually mitered gores cut to fit the elbow.
  6. Insulate duct stiffeners, hangers, and flanges that protrude beyond insulation surface with 6-inch wide strips of same material used to insulate duct. Secure on alternating sides of stiffener, hanger, and flange with pins spaced 6 inches o.c.

### **3.7 FIRE-RATED INSULATION SYSTEM INSTALLATION**

- A. Where fire-rated insulation system is indicated, secure system to ducts and duct hangers and supports to maintain a continuous fire rating.
- B. Insulate duct access panels and doors to achieve same fire rating as duct.
- C. Install firestopping at penetrations through fire-rated assemblies. Fire-stop systems are specified in Section 078413 "Penetration Firestopping."

### **3.8 DUCT INSULATION SCHEDULE, GENERAL**

- A. Plenums and Ducts Requiring Insulation:
  1. Indoor, concealed supply and outdoor air.
  2. Indoor, exposed supply and outdoor air.
  3. Indoor, concealed return located in unconditioned space.
  4. Indoor, exposed return located in unconditioned space.
- B. Items Not Insulated:
  1. Fibrous-glass ducts.
  2. Metal ducts with duct liner of sufficient thickness to comply with energy code and ASHRAE/IESNA 90.1.
  3. Factory-insulated flexible ducts.
  4. Factory-insulated plenums and casings.
  5. Flexible connectors.
  6. Vibration-control devices.
  7. Factory-insulated access panels and doors.

### **3.9 INDOOR DUCT AND PLENUM INSULATION SCHEDULE**

1. Inside building envelop in unconditioned space supply, return and relief air duct and plenum insulation shall be the following (Minimum R-6)
  - a. Mineral-Fiber Blanket: 2 inches thick and  $R= 3.0 \text{ f.ft}^2\text{.F/Btu}$  per inch thickness,  $K= 0.26 \text{ Btu.in /h.ft}^2$ . 1.5-lb/ cu.ft. normal density.

**END OF SECTION**

**SECTION 23 3113 – METAL DUCTS****PART 1 - GENERAL:**

Contractor shall install ductwork as per drawing. Ductwork material shall galvanized sheet steel 20 gage thickness unless otherwise indicated. Ductwork shall be as per SMACNA requirements. Contractor shall provide 1" acoustic insulation inside and 2" thermal insulation outside as per drawings. All duct size dimensions in drawing shown is clear space. All connection between ducts, or ducts and equipment of dissimilar metals shall be furnished with a non-conductive gasket to prevent contact between dissimilar metals.

**1.1 SUMMARY**

- A. Section includes
  - 1. Rectangular ducts and fittings.
  - 2. Round and flat-oval ducts and fittings
  - 3. Sheet metal materials.
  - 4. Duct liner.
  - 5. Sealants and gaskets.
  - 6. Hangers and supports.

**1.2 REFERENCE STANDARDS**

- A. SMACNA
- B. ASHRAE
- C. NFPA
- D. ASTM
- E. International Mechanical Code
- F. ACGIH - American Conference of Industrial Hygienists

**1.3 QUALITY ASSURANCE**

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004.
- C. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems,"
- D. SMACNA - HVAC Duct Construction Standards, Latest Edition.
- E. SMACNA – HVAC Air Duct Leakage Test Manual.
- F. The contractor must comply with the specification in its entirety. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.
- G. At the discretion of the Engineer, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance.
- H. At the discretion of the Engineer, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance. If on inspections,

changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.

- I. Duct sealants, liners, insulation, etc. shall have a UL label and shall have a Flame Spread rating not over 25 and a Smoke Developed rating no higher than 50, when in the final dry state.
- J. The contractor must comply with the specification in its entirety. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.

#### **1.4 SUBMITTALS**

- A. Mechanical Contractor shall submit all sheet metal ductwork shop drawings to the AC unit manufacturer prior to submission to the Engineer for review. AC unit manufacturer shall approve the air performance and acoustical performance of the AC units in the location and with the ductwork configuration and construction as shown on the shop drawings. AC unit manufacturer shall indicate approval directly on the ductwork shop drawing.

#### **1.5 DEFINITIONS**

- A. Sealing Requirements Definitions: For the purposes of duct systems sealing requirements specified in this Section, the following definitions apply.
  - 1. Seams: A seam is defined as jointing of two longitudinally (in the direction of airflow) oriented edges of duct surface material occurring between two joints. All other duct surface connections made on the perimeter are deemed to be joints.
  - 2. Joints: Joints include girth joints, branch and subbranch intersections; so-called duct collar tap-ins; fitting subsections, louver and air terminal connection to ducts; access door and access panel frames and jambs; duct, plenum and casing abutments to building structures.

#### **1.6 SYSTEM PERFORMANCE REQUIREMENTS**

- A. All ductwork indicated on the Drawings, specified or required for the air conditioning and ventilating systems shall be of materials as hereinafter specified unless indicated otherwise. All air distribution ductwork shall be fabricated, erected, supported, etc., in accordance with all applicable standards of SMACNA Duct Manuals where such standards do not conflict with NFPA 90A and where class of construction equals or exceeds that specified herein.
- B. All ductwork shown on the Drawings, specified or required for the heating, ventilating and air conditioning systems shall be constructed and erected in a first class workmanlike manner. The work must be free of noise, chatter, whistling, vibration, and free from pulsation under all conditions of operation. After the system is in operation, should these defects occur, they shall be corrected as directed by the Engineer.
- C. Except for special ducts specified elsewhere herein, all sheet metal used on the project shall be constructed from prime galvanized steel sheets and/or coils up to 60" in width. Each sheet shall be stenciled with manufacturer's name and gauge. Coils of sheet steel shall be stenciled throughout on ten foot (10') centers with manufacturer's name and must be visible after duct is installed. Sheet metal must conform to SMACNA sheet metal tolerances as outlined in SMACNA's "HVAC Duct Construction Standards."
- D. Provide a duct system with minimum resistance to airflow. Take-offs shall be throated and transitions made as gradual as possible. 'Bullhead' or sharp take-offs are not

acceptable. Branch take-offs shall be 45 deg entry type. Straight tap or butt flanged connections are not acceptable. Clinch lock connections are preferred.

- E. The duct system design, as indicated, has been used to select and size air moving and distribution equipment and other components of the air system. Changes or alterations to the layout of configuration of the duct system must be specifically approved in writing. Accompany requests for layout modifications with calculations showing that the proposal layout will provide the original design results without increasing the system total pressure.
- F. Structural Performance: Duct hangers and supports, wind and seismic restraints shall withstand the effects of gravity, wind and seismic loads and stresses within limits and under conditions described in another section of this work.
- G. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

## **PART 2 - PRODUCTS**

### **2.01 GENERAL**

- A. Duct dimensions indicated on drawings are clear, inside dimensions. The sheet metal dimensions shall be increased to accommodate internal liner where liner is required.
- B. Drawings are diagrammatic and indicate the arrangement of the principal apparatus, ductwork and piping and shall be followed as closely as possible. All offsets, rises, drops, fittings and accessories are not indicated on drawings, but shall be provided as required to install system. Carefully investigate structure, finish conditions, and the work of other sections affecting sheet metal work, including work associated with testing, adjusting and balancing, in order to arrange all items accordingly. Provide best possible arrangement so as to provide maximum headroom and maintenance clearances.
- C. In addition to sheet metal ductwork specified herein, furnish and install, or install as furnished by other sections, accessories and devices including, but not limited to, air distribution devices, smoke detectors, plenums, canopy hoods, and blank-off panels at unused louver areas.
- D. Furnish and install intake and exhaust plenums attached to louvers.
- E. Except as noted, all reinforcement shall be external.

### **2.02 DUCTWORK FABRICATION REQUIREMENTS**

- A. All Ductwork construction shall comply with both the "SMACNA HVAC Duct Construction Standards" and "SMACNA HVAC Air Duct Leakage Test Manual", latest editions.
- B. Joints, Seams and Connections: All longitudinal and transverse joints, seams and connections in metallic and no-metallic ducts shall be constructed as specified in "SMACNA HVAC Duct Construction Standards - Metal and Flexible" and SMACNA HVAC Air Duct Leakage Test Manual", and NAIMA Fibrous Glass Duct Construction Standards latest editions for static-pressure class, applicable sealing requirements, materials involved, reinforcement, duct-support intervals. All joints, longitudinal and transverse seams and connections in ductwork shall be securely fastened and sealed with welds, gaskets, mastics (adhesives), mastic-plus-embedded-fabric systems, liquid sealants or tapes. Closure systems used to seal ductwork listed and labeled in accordance with UL 181A shall be marked "181 A-P" for pressure-sensitive tape, "181 A-M" for mastic or 181

A-H" for heat-sensitive tape. Closure systems used to seal flexible air ducts and flexible air connectors shall comply with UL 181B and shall be marked "181 B-FX" for pressure-sensitive tape or "181 B-M" for mastic. Duct connections to flange of air distribution system equipment shall be sealed and mechanically fastened. Mechanical fasteners for use with flexible nonmetallic air ducts shall comply with UL 181B and shall be marked "181 B-C." Closure systems used to seal metal duct shall be installed in accordance with the manufacturer's installation instructions. Unlisted duct tape is not permitted as a sealant on any metal ducts.

- C. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 2, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Duct systems shall be galvanized steel
- E. The specifications refer to SMACNA standards, which shall be considered minimal. If local codes require standards other than described in SMACNA, local codes shall govern.

Duct System	SMACNA Table No.	SMACNA Pressure Classification	SMACNA Seal Classification
All return ducts and general exhaust ducts (toilets, MER Ventilation, non-lab exhaust, etc.)	2-4	-3" wg	B

### 2.03 RECTANGULAR DUCTS AND FITTINGS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  1. Sheet Metal Connectors Inc.
  2. DUCTMATE Industries Inc.
  3. ZEN Industries Inc.
  4. Ward Industries, Inc.; A division of Hart & Cooley, Inc.
  5. Or approved equal
- B. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" based on indicated static-pressure class unless otherwise indicated.
- C. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-1, "Rectangular Duct/Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- D. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 2-2, "Rectangular

Duct/Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

- E. Elbows, Transitions, Offsets, Branch Connections, and Other Duct Construction: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Fittings and Other Construction," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

## **2.04 ROUND AND FLAT-OVAL DUCTS AND FITTINGS**

- A. General Fabrication Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 3, "Round, Oval, and Flexible Duct," based on indicated static-pressure class unless otherwise indicated. Retain manufacturer list to require factory-fabricated, single-wall round and flat-oval ducts and fittings; delete to allow shop-fabricated ducts and fittings.
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
    - a. Sheet Metal Connectors Inc.
    - b. DUCTMATE Industries Inc.
    - c. ZEN Industries Inc.
    - d. Ward Industries, Inc.; A division of Hart & Cooley, Inc.
    - e. Or approved equal
- B. Flat-Oval Ducts: Indicated dimensions are the duct width (major dimension) and diameter of the round sides connecting the flat portions of the duct (minor dimension).
- C. Transverse Joints: Select joint types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-1, "Round Duct Transverse Joints," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. Transverse Joints in Ducts Larger Than 60 Inches in Diameter: Flanged.
- D. Longitudinal Seams: Select seam types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-2, "Round Duct Longitudinal Seams," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  - 1. Fabricate round ducts larger than 90 inches in diameter with butt-welded longitudinal seams.
  - 2. Fabricate flat-oval ducts larger than 72 inches in width (major dimension) with butt-welded longitudinal seams.
- E. Tees and Laterals: Select types and fabricate according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 3-5, "90 Degree Tees and Laterals," and Figure 3-6, "Conical Tees," for static-pressure class, applicable sealing requirements, materials involved, duct-support intervals, and other provisions in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."

**2.05 SHEET METAL MATERIALS**

- A. General Material Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.
- B. Galvanized Sheet Steel: Comply with ASTM A 653/A 653M, A924.
  - 1. Galvanized Coating Designation: G90.
  - 2. Finishes for Surfaces Exposed to View: Mill phosphatized.
- C. Factory- or Shop-Applied Antimicrobial Coating:
  - 1. Apply to the surface of sheet metal that will form the interior surface of the duct. An untreated clear coating shall be applied to the exterior surface.
  - 2. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
  - 3. Coating containing the antimicrobial compound shall have a hardness of 2H, minimum, when tested according to ASTM D 3363.
  - 4. Surface-Burning Characteristics: Maximum flame-spread index of 25 and maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
  - 5. Shop-Applied Coating Color: White.
  - 6. Antimicrobial coating on sheet metal is not required for duct containing liner treated with antimicrobial coating.
- D. Reinforcement Shapes and Plates: ASTM A 36/A 36M, steel plates, shapes, and bars; black and galvanized.
  - 1. Where black- and galvanized-steel shapes and plates are used to reinforce aluminum ducts, isolate the different metals with butyl rubber, neoprene, or EPDM gasket materials.
- E. Tie Rods: Galvanized steel, 1/4-inch (6-mm) minimum diameter for lengths 36 inches (900 mm) or less; 3/8-inch (10-mm) minimum diameter for lengths longer than 36 inches (900 mm).

**2.06 FLEXIBLE CONNECTIONS - FANS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
  - a. Flex master
  - b. CertainTeed Corporation
  - c. Sheet Metal Connectors Inc.
  - d. DUCTMATE Industries Inc.
  - e. Price Industries
  - f. Johns Manville
  - g. Or approved equal

- B. Where indicated, provide connections made with flexible material so as to prohibit the transfer of vibration from fans to ductwork connecting thereto, without air leakage. The material between the clamps shall have sufficient slack so as to prevent tearing due to fan movement
- C. The flexible connections shall be a minimum of 12" long. Material shall be mechanically locked to the outside helix. Use of adhesives to lock fabric in place is not acceptable. The helix is constructed of a corrosive resistant galvanized steel, formed and mechanically locked to the ducts fabric on the outside to prevent tearing.
- D. Flexible fabric ductwork shall be rated at 6" positive pressure and at 4" negative pressure.
- E. Flexible metal duct shall be listed UL Class 1.
- F. Flexible connections shall be fabricated from approved flame proofed fabric conforming to NFPA 90A. Asbestos cloth is not permitted.
- G. Indoor installations shall be Neoprene or vinyl coated fabrics.
- H. Outdoor installations shall use Hypalon coated fabric by Colmant Coated Fabric, Duct Mate Industries, Trelleborg Company or approved equal.

## 2.07 DUCT LINER

- A. Fibrous-Glass Duct Liner: Comply with ASTM C 1071, NFPA 90A, or NFPA 90B; and with NAIMA AH124, "Fibrous Glass Duct Liner Standard."
  - 1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
    - a. CertainTeed Corporation
    - b. Sheet Metal Connectors Inc.
    - c. DUCTMATE Industries Inc.
    - d. Price Industries
    - e. Johns Manville
    - f. Or approved equal
  - 2. Maximum Thermal Conductivity:
    - 1) Type I, Flexible: 0.27 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
    - 2) Type II, Rigid: 0.23 Btu x in./h x sq. ft. x deg F at 75 deg F mean temperature.
  - 3. Antimicrobial Erosion-Resistant Coating: Apply to the surface of the liner that will form the interior surface of the duct to act as a moisture repellent and erosion-resistant coating. Antimicrobial compound shall be tested for efficacy by an NRTL and registered by the EPA for use in HVAC systems.
  - 4. Solvent or Water Based Liner Adhesive: Comply with NFPA 90A or NFPA 90B and with ASTM C 916.
- B. Insulation Pins and Washers:
  - 1. Cupped-Head, Capacitor-Discharge-Weld Pins: Copper- or zinc-coated steel pin, fully annealed for capacitor-discharge welding, 0.106-inch diameter shank, and

- length to suit depth of insulation indicated with integral 1-1/2-inch galvanized carbon-steel washer.
2. Insulation-Retaining Washers: Self-locking washers formed from 0.016-inch thick stainless steel; with beveled edge sized as required to hold insulation securely in place but not less than 1-1/2 inches in diameter.
- C. Shop Application of Duct Liner: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Figure 7-11, "Flexible Duct Liner Installation."
1. Adhere a single layer of indicated thickness of duct liner with at least 90 percent adhesive coverage at liner contact surface area. Attaining indicated thickness with multiple layers of duct liner is prohibited.
  2. Apply adhesive to transverse edges of liner facing upstream that do not receive metal nosing.
  3. Butt transverse joints without gaps, and coat joint with adhesive.
  4. Fold and compress liner in corners of rectangular ducts or cut and fit to ensure butted-edge overlapping.
  5. Do not apply liner in rectangular ducts with longitudinal joints, except at corners of ducts, unless duct size and dimensions of standard liner make longitudinal joints necessary.
  6. Apply adhesive coating on longitudinal seams in ducts with air velocity of 2500 fpm.
  7. Secure liner with mechanical fasteners 4 inches from corners and at intervals not exceeding 12 inches transversely; at 3 inches from transverse joints and at intervals not exceeding 18 inches longitudinally.
  8. Secure transversely oriented liner edges facing the airstream with metal nosings that have either channel or "Z" profiles or are integrally formed from duct wall. Fabricate edge facings at the following locations:
    - a. Fan discharges.
    - b. Intervals of lined duct preceding unlined duct.
    - c. Upstream edges of transverse joints in ducts where air velocities are higher than 2500 fpm or where indicated.
  9. Secure insulation between perforated sheet metal inner ducts of same thickness as specified for outer shell. Use mechanical fasteners that maintain inner duct at uniform distance from outer shell without compressing insulation.
    - a. Sheet Metal Inner Duct Perforations: 3/32-inch diameter, with an overall open area of 23 percent.
  10. Terminate inner ducts with buildouts attached to fire-damper sleeves, dampers, turning vane assemblies, or other devices. Fabricated buildouts (metal hat sections) or other buildout means are optional; when used, secure buildouts to duct walls with bolts, screws, rivets, or welds.

**2.08 SEALANT AND GASKETS**

- A. General Sealant and Gasket Requirements: Surface-burning characteristics for sealants and gaskets shall be a maximum flame-spread index of 25 and a maximum smoke-developed index of 50 when tested according to UL 723; certified by an NRTL.
- B. Two-Part Tape Sealing System:
  - 1. Tape: Woven cotton fiber impregnated with mineral gypsum and modified acrylic/silicone activator to react exothermically with tape to form hard, durable, airtight seal.
  - 2. Sealant: Modified styrene acrylic.
  - 3. Water resistant.
  - 4. Mold and mildew resistant.
  - 5. Service: Indoor and outdoor.
  - 6. Service Temperature: Minus 40 to plus 200 deg F (Minus 40 to plus 93 deg C).
  - 7. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum.
  - 8. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).
- C. Water-Based Joint and Seam Sealant:
  - 1. Application Method: Brush on.
  - 2. Solids Content: Minimum 65 percent.
  - 3. Shore A Hardness: Minimum 20.
  - 4. Water resistant.
  - 5. Mold and mildew resistant.
  - 6. VOC: Maximum 75 g/L (less water).
  - 7. Maximum Static-Pressure Class: 10-inch w.g (2500 Pa), positive and negative.
  - 8. Service: Indoor or outdoor.
  - 9. Substrate: Compatible with galvanized sheet steel (both PVC coated and bare), stainless steel, or aluminum sheets.
- D. Flanged Joint Sealant: Comply with ASTM C 920.
  - 1. General: Single-component, acid-curing, silicone, elastomeric.
  - 2. Type: S
  - 3. Grade: NS
  - 4. Class: 25
  - 5. Use: O
  - 6. For indoor applications, use sealant that has a VOC content of 250 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

- E. Flange Gaskets: Butyl rubber, neoprene, or EPDM polymer with polyisobutylene plasticizer.
- F. Round Duct Joint O-Ring Seals:
  1. Seal shall provide maximum leakage class of 3 cfm/100 sq. ft. at 1-inch w.g (0.14 L/s per sq. m at 250 Pa) and shall be rated for 10-inch w.g (2500-Pa) static-pressure class, positive or negative.
  2. EPDM O-ring to seal in concave bead in coupling or fitting spigot.
  3. Double-lipped, EPDM O-ring seal, mechanically fastened to factory-fabricated couplings and fitting spigots.

## **2.09 HANGERS AND SUPPORTS**

- A. Hanger Rods for Noncorrosive Environments: Cadmium-plated steel rods and nuts.
- B. Hanger Rods for Corrosive Environments: Electro galvanized, all-thread rods or galvanized rods with threads painted with zinc-chromate primer after installation.
- C. Strap and Rod Sizes: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," "Rectangular Duct Hangers Minimum Size," and "Minimum Hanger Sizes for Round Duct."
- D. Steel Cables for Galvanized-Steel Ducts: Galvanized steel complying with ASTM A 603.
- E. Steel Cables for Stainless-Steel Ducts: Stainless steel complying with ASTM A 492.
- F. Steel Cable End Connections: Cadmium-plated steel assemblies with brackets, swivel, and bolts designed for duct hanger service; with an automatic-locking and clamping device.
- G. Duct Attachments: Sheet metal screws, blind rivets, or self-tapping metal screws; compatible with duct materials.
- H. Trapeze and Riser Supports:
  1. Supports for Galvanized-Steel Ducts: Galvanized-steel shapes and plates.
  2. Supports for Stainless-Steel Ducts: Stainless-steel shapes and plates.
  3. Supports for Aluminum Ducts: Aluminum or galvanized steel coated with zinc chromate.

## **PART 3 - EXECUTION**

### **3.01 DUCT INSTALLATION**

- A. Drawing plans, schematics, and diagrams indicate general location and arrangement of duct system. Indicated duct locations, configurations, and arrangements were used to size ducts and calculate friction loss for air-handling equipment sizing and for other design considerations. Install duct systems as indicated unless deviations to layout are approved on Shop Drawings and Coordination Drawings.
- B. All ductwork indicated on drawings is schematic. Therefore, changes in duct size and/or location shall be made where necessary to conform to space conditions, at no additional cost to the Engineer.

- C. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.
- D. Provide necessary offsets, transitions and streamliners to avoid interference with the building construction, piping, or equipment. Locate ducts with sufficient space around equipment to allow normal operating and maintenance activities.
- E. Provide fittings, branches, inlets and outlets in such a manner that air turbulence is reduced to a minimum.
- F. Provide a duct system with minimum resistance to airflow. Take-offs shall be throated and transitions made as gradual as possible. 'Bullhead' or sharp take-offs are not acceptable. Branch take-offs shall be 45 deg entry type. Straight tap or butt flanged connections are not acceptable. Clinch lock connections are preferred.
- G. Provide straight runs of ductwork at equipment, fans, coils, terminal boxes and humidifiers per manufacturer's recommendations.
- H. Provide flexible connector where ductwork connects to fans, air handling units and other rotating equipment and where indicated on drawings.
- I. Furnish and install manual dampers, fire dampers, registers, grilles, register boxes, access doors, sound traps, etc., as described elsewhere in the specifications and as required for a complete system, ready for operation.
- J. Where fire and smoke dampers, automatic dampers or combination fire/smoke dampers are shown on drawings or are required, their selection shall be made so that the dampers of all ratings and types shall be of the nominal 100% face area type, with blade package and frame components out of the airstream. These dampers shall include the required oversize enclosures that shall be sealed by the damper manufacturer for the appropriate duct pressure class into which they are installed. Such dampers shall have appropriate rectangular, flat oval or round duct collars to facilitate connection of mating ductwork. The Contractor shall be responsible for any additional sealing of duct collars and connections required to maintain the duct seal class requirements, but shall not jeopardize the UL breakaway connection.
- K. All dampers are to be selected and installed with duct transitions so that the damper clear open area (including frames, stops, etc.), equals to or exceeds the connecting duct (inlet and outlet) clear open area (duct clear inside dimensions). The mechanical contractor shall provide the required duct transitions.
- L. Install ducts with fewest possible joints.
- M. Install factory- or shop-fabricated fittings for changes in direction, size, and shape and for branch connections.
- N. Unless otherwise indicated, install ducts vertically and horizontally, and parallel and perpendicular to building lines.
- O. Install ducts close to walls, overhead construction, columns, and other structural and permanent enclosure elements of building.
- P. Install ducts with a minimum clearance of 1 inch plus allowance for insulation thickness.
- Q. Route ducts to avoid passing through transformer vaults and electrical equipment rooms and enclosures.
- R. Where ducts pass through non-fire-rated interior partitions and exterior walls and are exposed to view, cover the opening between the partition and duct or duct insulation with

sheet metal flanges of same metal thickness as the duct. Overlap openings on four sides by at least 1-1/2 inches (38 mm).

- S. Protect duct interiors from moisture, construction debris and dust, and other foreign materials. Comply with SMACNA's "Duct Cleanliness for New Construction Guidelines." Ductwork shall not be left exposed for more than 8 hours at a time.
- T. Provide companion flange joints, fabricated in the sheet metal contractor's shop, similar to SMACNA Type T-24a, T-25a or T-25b (Table 2-32, SMACNA, "HVAC DUCT CONSTRUCTION STANDARDS"). Joints shall be consistent with ductwork pressure class. PVC clips are not permitted (use metal) and all corners shall be bolted (boltless connectors are not permitted).
- U. All ductwork unless otherwise noted shall be hung with 1 in. x 1/8 in. galvanized iron bands. Ductwork with cross sectional area under 4 square feet shall be hung on 8'-0 in. centers. For ducts with a cross-sectional area of more than 4 sq. ft. but not over 10 sq. ft. hangers shall be no more than 6 feet apart, and for ducts with a cross sectional area of more than 10 sq. ft. hangers shall be no more than 4 ft. apart. All hangers shall be bent (2" minimum) under the bottom as well as the sides and secured with sheet metal screws.
- V. Where ducts are stacked they shall be independently supported as above or shall be supported on minimum 1 1/4" x 1 1/4" x 1/8" angle cradle hung by either 1 1/4" x 1 1/4" x 1/8" angles or 3/8" diameter threaded rod.
- W. All ductwork shall be substantially built with approved joints and seams smooth on the inside and a neat finish on the outside. Duct joints as near air tight as possible, with laps made in the direction of air flow and no flanges projecting into the air stream. Ducts shall be adequately braced to prevent vibration. All angles shall be galvanized or shop painted with two coats or rust resistant paint.

### **3.02 INSTALLATION OF EXPOSED DUCTWORK**

- A. Protect ducts exposed in finished spaces from being dented, scratched, or damaged.
- B. Trim duct sealants flush with metal. Create a smooth and uniform exposed bead. Do not use two-part tape sealing system.
- C. Grind welds to provide smooth surface free of burrs, sharp edges, and weld splatter. When welding stainless steel with a No. 3 or 4 finish, grind the welds flush, polish the exposed welds, and treat the welds to remove discoloration caused by welding.
- D. Maintain consistency, symmetry, and uniformity in the arrangement and fabrication of fittings, hangers and supports, duct accessories, and air outlets.
- E. Repair or replace damaged sections and finished work that does not comply with these requirements.

### **3.03 DUCT SEALING**

- A. Seal ducts for duct static-pressure, seal classes, and leakage classes specified herein according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
- B. Sealant: Water based elastomeric compound, gun or brush grade, maximum 25 flame spread and 50 smoke developed (dry state) specifically for sealing ductwork. Use products as recommended by manufacturer for low, medium or high pressure systems.

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
  - a. Hardcast
  - b. United McGill
  - c. Polymer Adhesives
  - d. Ductmate
  - e. Or approved equal
- C. Provide liquid sealant, with or without compatible tape, for low clearance slip joints and heavy, permanently elastic mastic type where clearances are larger. Oil base caulking and glazing compounds are not acceptable.
- D. Tape: Use only tape specifically designated by the sealant manufacturer. SMACNA recommends that foil tape not be used and that pressure sensitive tape not be used on bare metal surface or on dry sealant.
- E. Seal ducts at a minimum to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
  1. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible."
  2. Outdoor, Supply-Air Ducts: Seal Class A.
  3. Outdoor, Exhaust Ducts: Seal Class C.
  4. Outdoor, Return-Air Ducts: Seal Class C.
  5. Unconditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class B.
  6. Unconditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class A.
  7. Unconditioned Space, Exhaust Ducts: Seal Class C.
  8. Unconditioned Space, Return-Air Ducts: Seal Class B.
  9. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg and Lower: Seal Class C.
  10. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg: Seal Class B.
  11. Conditioned Space, Exhaust Ducts: Seal Class B.
  12. Conditioned Space, Return-Air Ducts: Seal Class C.

#### **3.04 HANGER AND SUPPORT INSTALLATION**

- A. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Chapter 4, "Hangers and Supports."
- B. Ducts shall be supported with approved hangers at intervals not exceeding 10 feet or other approved duct support systems designed in accordance with the New York City Building Code. Flexible and other factory-made ducts shall be supported in accordance with the manufacturer's installation instruction. Ducts shall not be hung from or supported by suspended ceilings.

- C. Fasteners appropriate for construction materials to which hangers are being attached.
  - 1. Where practical, install concrete inserts before placing concrete.
  - 2. Install powder-actuated concrete fasteners after concrete is placed and completely cured.
  - 3. Do not use powder-actuated concrete fasteners for seismic restraints.
- D. Hanger Spacing: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Table 4-1 (Table 4-1M), "Rectangular Duct Hangers Minimum Size," and Table 4-2,
- E. Hangers Exposed to View: Threaded rod and angle or channel supports.
- F. Support vertical ducts with steel angles or channel secured to the sides of the duct with welds, bolts, sheet metal screws, or blind rivets; support at each floor and at a maximum intervals of 16 feet (5 m).
- G. Install upper attachments to structures. Select and size upper attachments with pull-out, tension, and shear capacities appropriate for supported loads and building materials where used.

### **3.05 SEISMIC-RESTRAINT-DEVICE INSTALLATION**

- A. Install ducts with hangers and braces designed to support the duct and to restrain against seismic forces required by applicable building codes. Comply with SMACNA's "Seismic Restraint Manual: Guidelines for Mechanical Systems." and ASCE/SEI 7.
  - 1. Space lateral supports a maximum of 40 feet o.c., and longitudinal supports a maximum of 80 feet o.c.
  - 2. Brace a change of direction longer than 12 feet.
- B. Select seismic-restraint devices with capacities adequate to carry present and future static and seismic loads.
- C. Install cables so they do not bend across edges of adjacent equipment or building structure.
- D. Install cable restraints on ducts that are suspended with vibration isolators.
- E. Install seismic-restraint devices using methods approved by an evaluation service member of the ICC Evaluation Service
- F. Attachment to Structure: If specific attachment is not indicated, anchor bracing and restraints to structure, to flanges of beams, to upper truss chords of bar joists, or to concrete members.
- G. Drilling for and Setting Anchors:
  - 1. Identify position of reinforcing steel and other embedded items prior to drilling holes for anchors. Do not damage existing reinforcement or embedded items during drilling. Notify the Engineer if reinforcing steel or other embedded items are encountered during drilling. Locate and avoid prestressed tendons, electrical and telecommunications conduit, and gas lines.
  - 2. Do not drill holes in concrete or masonry until concrete, mortar, or grout has achieved full design strength.

3. Wedge Anchors: Protect threads from damage during anchor installation. Heavy-duty sleeve anchors shall be installed with sleeve fully engaged in the structural element to which anchor is to be fastened.
4. Set anchors to manufacturer's recommended torque, using a torque wrench.
5. Install zinc-coated steel anchors for interior applications and stainless-steel anchors for applications exposed to weather.

### **3.06 CONNECTIONS**

- A. Make connections to equipment with flexible connectors complying with these specifications.
- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for branch, outlet and inlet, and terminal unit connections.

### **3.07 PAINTING**

- A. Paint interior of metal ducts that are visible through registers and grilles and that do not have duct liner. Apply one coat of flat, black, latex paint over a compatible galvanized-steel primer. Paint materials and application requirements are specified in Section 'Painting and Finishing'.

### **3.08 FIELD QUALITY CONTROL**

- A. Perform tests and inspections.

### **3.09 LEAKAGE, TESTING, AIR DISTRIBUTION SYSTEMS**

- A. Each air distribution system shall be tested for leakage before insulation is applied.
- B. Testing will be done under another section of this work. Refer to section TESTING, ADJUSTING AND BALANCING for additional requirements.
- C. This contractor is responsible to provide all necessary personnel to assist in the testing as well as make all provisions for the installation and removal of testing equipment, probes, sensors, etc.
- D. Disassemble, reassemble, and seal segments of systems to accommodate leakage testing and for compliance with test requirements.
- E. Give (7) seven days' advance notice for testing.

### **3.10 DUCT SYSTEM CLEANLINESS TESTS**

- A. Visually inspect duct system to ensure that no visible contaminants are present
- B. Test sections of metal duct system, chosen randomly by the Engineer, for cleanliness according to "Vacuum Test" in NADCA ACR, "Assessment, Cleaning and Restoration of HVAC Systems."
  1. Acceptable Cleanliness Level: Net weight of debris collected on the filter media shall not exceed 0.75 mg/100 sq. cm.
- C. Duct system will be considered defective if it does not pass tests and inspections.
- D. Prepare test and inspection reports.

**3.11 START UP**

- A. Air Balance: Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC."

**END OF SECTION**

**SECTION 23 3300 – AIR DUCT ACCESSORIES****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Backdraft and pressure relief dampers.
  - 2. Manual volume dampers.
  - 3. Control dampers.
  - 4. Fire dampers.
  - 5. Turning vanes.
  - 6. Duct-mounted access doors.
  - 7. Flexible connectors.
  - 8. Duct accessory hardware.

**1.2 REFERENCE STANDARDS**

- A. SMACNA
- B. ASHRAE
- C. NFPA
- D. ASTM
- E. International Mechanical Code
- F. New York City Construction Code
- G. ACGIH - American Conference of Industrial Hygienists

**1.3 QUALITY ASSURANCE**

- A. In accordance with AWS qualification tests for welding processes involved. Certify that their qualification is current.
- B. NFPA Compliance: Comply with the following NFPA Standards:
  - 1. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems," except as indicated otherwise.
- C. SMACNA - HVAC Duct Construction Standards, Latest Edition.
- D. SMACNA – HVAC Air Duct Leakage Test Manual.
- E. The contractor must comply with the specification in its entirety. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.
- F. At the discretion of the City, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance.

#### 1.4 SUBMITTALS

- A. Shop Drawings: For duct accessories. Include plans, elevations, sections, details and attachments to other work.
  - 1. Detail duct accessories fabrication and installation in ducts and other construction. Include dimensions, weights, loads, and required clearances; and method of field assembly into duct systems and other construction. Include the following:
    - a. Special fittings.
    - b. Manual volume damper installations.
    - c. Control-damper installations.
    - d. Fire-damper, smoke-damper, combination fire- and smoke-damper, ceiling, and corridor damper installations, including sleeves; and duct-mounted access doors and remote damper operators.
    - e. Wiring Diagrams: For power, signal, and control wiring.
- B. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which ceiling-mounted access panels and access doors required for access to duct accessories are shown and coordinated with each other, using input from Installers of the items involved.
- C. Operation and Maintenance Data: For air duct accessories to include in operation and maintenance manuals.
- D. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
  - 1. Fusible Links: Furnish quantity equal to 100 percent of amount installed

#### 1.5 DEFINITIONS

- A. Sealing Requirements Definitions: For the purposes of duct systems sealing requirements specified in this Section, the following definitions apply.
  - 1. Seams: A seam is defined as jointing of two longitudinally (in the direction of airflow) oriented edges of duct surface material occurring between two joints. All other duct surface connections made on the perimeter are deemed to be joints.
  - 2. Joints: Joints include girth joints, branch and subbranch intersections; so-called duct collar tap-ins; fitting subsections, louver and air terminal connection to ducts; access door and access panel frames and jambs; duct, plenum and casing abutments to building structures.

#### 1.6 SYSTEM PERFORMANCE REQUIREMENTS

- A. All ductwork indicated on the Drawings, specified or required for the air conditioning and ventilating systems shall be of materials as hereinafter specified unless indicated otherwise. All air distribution ductwork shall be fabricated, erected, supported, etc., in accordance with all applicable standards of SMACNA Duct Manuals where such standards do not conflict with NFPA 90A and where class of construction equals or exceeds that specified herein.
- B. All ductwork shown on the Drawings, specified or required for the heating, ventilating and air conditioning systems shall be constructed and erected in a first class workmanlike manner. The work must be free of noise, chatter, whistling, vibration, and free from

pulsation under all conditions of operation. After the system is in operation, should these defects occur, they shall be corrected as directed by the Engineer.

- C. Except for special ducts specified elsewhere herein, all sheet metal used on the project shall be constructed from prime galvanized steel sheets and/or coils up to 60" in width. Each sheet shall be stenciled with manufacturer's name and gauge. Coils of sheet steel shall be stenciled throughout on ten foot (10') centers with manufacturer's name and must be visible after duct is installed. Sheet metal must conform to SMACNA sheet metal tolerances as outlined in SMACNA's "HVAC Duct Construction Standards."
- D. Provide a duct system with minimum resistance to airflow. Take-offs shall be throated and transitions made as gradual as possible. 'Bullhead' or sharp take-offs are not acceptable. Branch take-offs shall be 45 deg entry type. Straight tap or butt flanged connections are not acceptable. Clinch lock connections are preferred.
- E. The duct system design, as indicated, has been used to select and size air moving and distribution equipment and other components of the air system. Changes or alterations to the layout of configuration of the duct system must be specifically approved in writing. Accompany requests for layout modifications with calculations showing that the proposal layout will provide the original design results without increasing the system total pressure.
- F. Structural Performance: Duct hangers and supports, wind and seismic restraints shall withstand the effects of gravity, wind and seismic loads and stresses within limits and under conditions described in another section of this work.
- G. Airstream Surfaces: Surfaces in contact with the airstream shall comply with requirements in ASHRAE 62.1-2004.

## 1.7 QUALITY ASSURANCE

- A. ASHRAE Compliance: Applicable requirements in ASHRAE 62.1-2004, Section 5 - "Systems and Equipment" and Section 7 - "Construction and System Start-Up."
- B. ASHRAE/IESNA Compliance: Applicable requirements in ASHRAE/IESNA 90.1-2004.
- C. NFPA 90A, "Standard for the Installation of Air Conditioning and Ventilating Systems,"
- D. SMACNA – HVAC Duct Construction Standards, Latest Edition.
- E. SMACNA – "Guidelines for Welding Sheet Metal."
- F. The contractor must comply with the specification in its entirety.
- G. At the discretion of the Engineer, sheet metal gauges, and reinforcing may be checked at various times to verify all duct construction is in compliance. If on inspections, changes have been made without prior approval, the contractor will make the applicable changes to comply with this specification, at the contractor's expense.
- H. Duct sealants, liners, insulation, etc. shall have a UL label and shall have a Flame Spread rating not over 25 and a Smoke Developed rating no higher than 50, when in the final dry state.

## PART 2 - PRODUCTS

### 2.1 ASSEMBLY DESCRIPTION

- A. Comply with NFPA 90A, "Installation of Air Conditioning and Ventilating Systems," and with NFPA 90B, "Installation of Warm Air Heating and Air Conditioning Systems."

- B. Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for acceptable materials, material thicknesses, and duct construction methods unless otherwise indicated. Sheet metal materials shall be free of pitting, seam marks, roller marks, stains, discolorations, and other imperfections.

## 2.2 MATERIALS

- A. Galvanized Sheet Steel: Comply with ASTM A 653
  - 1. Galvanized Coating Designation: G90
  - 2. Exposed-Surface Finish: Mill phosphatized.
- B. Reinforcement Shapes and Plates: Galvanized-steel reinforcement where installed on galvanized sheet metal ducts; compatible materials for aluminum and stainless-steel ducts.
- C. Tie Rods: Stainless steel, 1/4-inch minimum diameter for lengths 36 inches or less; 3/8-inch minimum diameter for lengths longer than 36 inches.

## 2.3 BACKDRAFT AND PRESSURE RELIEF DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  - 1. GREENHECK
  - 2. RUSKIN
  - 3. CARNES
  - 4. Tuttle and Baily
  - 5. Or approved equal
- B. Description: Gravity balanced.
- C. Maximum Air Velocity: 2000 fpm
- D. Maximum System Pressure: 2-inch wg.
- E. Frame: Hat-shaped, 0.063-inch-thick extruded aluminum or 0.052-inch-thick stainless steel, with welded corners and mounting flange.
- F. Blade Action: Parallel.
- G. Blade Seals: Neoprene, mechanically locked.
- H. Blade Axles:
  - 1. Material: Aluminum.
  - 2. Diameter: 0.20 inch
- I. Tie Bars and Brackets: Aluminum
- J. Return Spring: Adjustable tension.
- K. Bearings: Steel ball or synthetic pivot bushings.
- L. Accessories:
  - 1. Adjustment device to permit setting for varying differential static pressure.
  - 2. Counterweights and spring-assist kits for vertical airflow installations.

3. Electric actuators.
4. Chain pulls.
5. Screen Mounting: Front mounted in sleeve.
  - a. Sleeve Thickness: 20 gage minimum.
  - b. Sleeve Length: 6 inches minimum.
6. Screen Mounting: Rear mounted.
7. Screen Material: Aluminum.
8. Screen Type: Bird
9. 90-degree stops.

## 2.4 **MANUAL VOLUME DAMPER**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  1. GREENHECK
  2. RUSKIN
  3. CARNES
  4. Tuttle and Baily
  5. Or approved equal
- B. Standard, Aluminum, Manual Volume Dampers:
  1. Standard leakage rating, with linkage outside airstream.
  2. Suitable for horizontal or vertical applications.
  3. Frames: Hat-shaped, 0.10-inch- thick, aluminum sheet channels; frames with flanges for attaching to walls and flangeless frames for installing in ducts.
  4. Blades:
    - a. Multiple or single blade.
    - b. Parallel- or opposed-blade design.
    - c. Stiffen damper blades for stability.
    - d. Roll-Formed Aluminum Blades: 0.10-inch- thick aluminum sheet.
    - e. Extruded-Aluminum Blades: 0.050-inch- thick extruded aluminum.
  5. Blade Axles: Stainless steel
  6. Bearings:
    - a. Oil-impregnated bronze or Molded synthetic or Stainless-steel sleeve.
    - b. Dampers in ducts with pressure classes of 3-inch wg or less shall have axle's full length of damper blades and bearings at both ends of operating shaft.
  7. Tie Bars and Brackets: Aluminum.
- C. Jackshaft:
  1. Size: 1-inch diameter.

2. Material: Galvanized-steel pipe rotating within pipe-bearing assembly mounted on supports at each mullion and at each end of multiple-damper assemblies.
3. Length and Number of Mountings: As required to connect linkage of each damper in multiple-damper assembly.

D. Damper Hardware:

1. Zinc-plated, die-cast core with dial and handle made of 3/32-inch-thick zinc-plated steel, and a 3/4-inch hexagon locking nut.
2. Include center hole to suit damper operating-rod size.
3. Include elevated platform for insulated duct mounting.

## 2.5 CONTROL DAMPERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:

1. GREENHECK
2. RUSKIN
3. CARNES
4. Or approved equal

B. Low-leakage rating, with linkage outside airstream, and bearing AMCA's Certified Ratings Seal for both air performance and air leakage.

C. Frames:

1. U shaped.
2. 0.064-inch thick stainless steel.
3. Mitered and welded corners.

D. Blades:

1. Multiple blade with maximum blade width of 8 inches.
2. Parallel- and opposed blade design.
3. Stainless steel.
4. 0.064 inch thick single skin
5. Blade Edging: Closed-cell neoprene
6. Blade Edging: Inflatable seal blade edging, or replaceable rubber seals.

E. Blade Axles: 1/2-inch diameter; stainless steel; blade-linkage hardware of zinc-plated steel and brass; ends sealed against blade bearings.

1. Operating Temperature Range: From minus 40 to plus 200 deg F.

F. Bearings:

1. Stainless-steel sleeve.
2. Dampers in ducts with pressure classes of 3-inch wg. or less shall have axles full length of damper blades and bearings at both ends of operating shaft.
3. Thrust bearings at each end of every blade.

## 2.6 FIRE DAMPERS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  - 1. GREENHECK
  - 2. RUSKIN
  - 3. CARNES
  - 4. Arlan Damper Corp.
  - 5. Nailor Industries Inc.
  - 6. Air Balance Inc.
  - 7. Or approved equal
- B. Type: Static and dynamic rated and labeled according to UL 555 by an NRTL.
- C. Closing rating in ducts up to 4-inch wg static pressure class and minimum 4000-fpm velocity.
- D. Fire Rating: 3 hours.
- E. Frame: Curtain type with blades outside airstream except when located behind grille where blades may be inside airstream]; fabricated with roll-formed, 0.034-inch- thick galvanized steel; with mitered and interlocking corners.
- F. Mounting Sleeve: Factory- or field-installed, galvanized sheet steel.
  - 1. Minimum Thickness: 0.138 inch thick, as indicated, and of length to suit application.
  - 2. Exception: Omit sleeve where damper-frame width permits direct attachment of perimeter mounting angles on each side of wall or floor; thickness of damper frame must comply with sleeve requirements.
- G. Mounting Orientation: Vertical or horizontal as indicated.
- H. Blades: Roll-formed, interlocking, 0.034-inch- thick, galvanized sheet steel. In place of interlocking blades, use full-length, 0.034-inch-thick, galvanized-steel blade connectors.
- I. Horizontal Dampers: Include blade lock and stainless-steel closure spring.
- J. Heat-Responsive Device: Replaceable, 165 deg F rated, fusible links.
- K. Heat-Responsive Device: Electric, resettable link and switch package, factory installed, 165 deg F rated.

## 2.7 FLANGE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  - 1. Sheet Metal Connectors Inc.
  - 2. DUCTMATE Industries Inc.
  - 3. ZEN Industries Inc.
  - 4. Ward Industries, Inc.; A division of Hart & Cooley, Inc.
  - 5. Or approved equal

- B. Description: Roll-formed, factory-fabricated, slide-on transverse flange connectors, gaskets, and components.
- C. Material: Galvanized steel.
- D. Gage and Shape: Match connecting ductwork.

## **2.8 TURNING VANES**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  - 1. Sheet Metal Connectors Inc.
  - 2. DUCTMATE Industries Inc.
  - 3. ZEN Industries Inc.
  - 4. METALAIRE, Inc.
  - 5. SEMCO Incorporated
  - 6. Ward Industries, Inc.; A division of Hart & Cooley, Inc.
  - 7. Or approved equal
- B. Manufactured Turning Vanes for Metal Ducts: Curved blades of galvanized sheet steel; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
  - 1. Acoustic Turning Vanes: Fabricate airfoil-shaped aluminum extrusions with perforated faces and fibrous-glass fill.
- C. Manufactured Turning Vanes for Nonmetal Ducts: Fabricate curved blades of resin-bonded fiberglass with acrylic polymer coating; support with bars perpendicular to blades set; set into vane runners suitable for duct mounting.
- D. General Requirements: Comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 4-3, "Vaness and Vane Runners," and 4-4, "Vane Support in Elbows."
- E. Vane Construction: Single wall.
- F. Vane Construction: Single wall for ducts up to 48 inches wide and double wall for larger dimensions.

## **2.9 DUCT-MOUNTED ACCESS DOORS**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers:
  - 1. GREENHECK
  - 2. RUSKIN
  - 3. Nailor Industries Inc.
  - 4. DUCTMATE Industries Inc.
  - 5. Or approved equal
- B. Duct-Mounted Access Doors: Fabricate access panels according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible"; Figures 7-2 , "Duct Access Doors and Panels," and 7-3, "Access Doors - Round Duct."

1. Door:
  - a. Double wall, rectangular.
  - b. Galvanized sheet metal with insulation fill and thickness as indicated for duct pressure class.
  - c. Vision panel.
  - d. Hinges and Latches: 1-by-1-inch butt or piano hinge and cam latches.
  - e. Fabricate doors airtight and suitable for duct pressure class.
2. Frame: Galvanized sheet steel, with bend-over tabs and foam gaskets.
3. Number of Hinges and Locks:
  - a. Access Doors Less Than 12 Inches Square: No hinges and two sash locks.
  - b. Access Doors up to 18 Inches Square: Two hinges and two sash locks.
  - c. Access Doors up to 24 by 48 Inches: Continuous and two compression latches with outside and inside handles.
  - d. Access Doors Larger than 24 by 48 Inches: Continuous and two compression latches with outside and inside handles.

C. Pressure Relief Access Door:

1. Door and Frame Material: Galvanized sheet steel.
2. Door: Single wall with metal thickness applicable for duct pressure class.
3. Operation: Open outward for positive-pressure ducts and inward for negative-pressure ducts.
4. Factory set at 10-inch wg
5. Doors close when pressures are within set-point range.
6. Hinge: Continuous piano.
7. Latches: Cam.
8. Seal: Neoprene or foam rubber.
9. Insulation Fill: 1-inch thick, fibrous-glass or polystyrene-foam board.

**2.10 DUCT ACCESS PANEL ASSEMBLIES**

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
  1. Ductmate Industries Inc.
  2. Flame Gard, Inc.
  3. 3M
  4. Or approved equal
- B. Labeled according to UL 1978 by an NRTL.
- C. Panel and Frame: Minimum thickness 0.0428-inch stainless steel.
- D. Fasteners: Stainless steel. Panel fasteners shall not penetrate duct wall.

- E. Gasket: Comply with NFPA 96; grease-tight, high-temperature ceramic fiber, rated for minimum 2000 deg F.
- F. Minimum Pressure Rating: 10-inch wg , positive or negative.

## 2.11 FLEXIBLE CONNECTORS

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following manufacturers
  1. DUCTMATE Industries Inc.
  2. Duro Dyne, Inc.
  3. Thermaflex.
  4. Or approved equal
- B. Materials: Flame-retardant or noncombustible fabrics.
- C. Coatings and Adhesives: Comply with UL 181, Class 1.
- D. Metal-Edged Connectors: Factory fabricated with a fabric strip 3-1/2 inches wide attached to two strips of 2-3/4-inch- wide, 0.028-inch- thick, galvanized sheet steel or 0.032-inch- thick aluminum sheets. Provide metal compatible with connected ducts.
- E. Indoor System, Flexible Connector Fabric: Glass fabric double coated with neoprene.
  1. Minimum Weight: 26 oz./sq. yd. .
  2. Tensile Strength: 480 lbf/inch in the warp and 360 lbf/inch in the filling.
  3. Service Temperature: Minus 40 to plus 200 deg F .
- F. Outdoor System, Flexible Connector Fabric: Glass fabric double coated with weatherproof, synthetic rubber resistant to UV rays and ozone.
  1. Minimum Weight: 24 oz./sq. yd. .
  2. Tensile Strength: 530 lbf/inch in the warp and 440 lbf/inch in the filling.
  3. Service Temperature: Minus 50 to plus 250 deg F.
- G. High-Temperature System, Flexible Connectors: Glass fabric coated with silicone rubber.
  1. Minimum Weight: 16 oz./sq. yd..
  2. Tensile Strength: 285 lbf/inch in the warp and 185 lbf/inch in the filling.
  3. Service Temperature: Minus 67 to plus 500 deg F.
- H. High-Corrosive-Environment System, Flexible Connectors: Glass fabric with chemical-resistant coating.
  1. Minimum Weight: 14 oz./sq. yd. .
  2. Tensile Strength: 450 lbf/inch in the warp and 340 lb./inch in the filling.
  3. Service Temperature: Minus 67 to plus 500 deg F.
- I. Thrust Limits: Combination coil spring and elastomeric insert with spring and insert in compression, and with a load stop. Include rod and angle-iron brackets for attaching to fan discharge and duct.

1. Frame: Steel, fabricated for connection to threaded rods and to allow for a maximum of 30 degrees of angular rod misalignment without binding or reducing isolation efficiency.
2. Outdoor Spring Diameter: Not less than 80 percent of the compressed height of the spring at rated load.
3. Minimum Additional Travel: 50 percent of the required deflection at rated load.
4. Lateral Stiffness: More than 80 percent of rated vertical stiffness.
5. Overload Capacity: Support 200 percent of rated load, fully compressed, without deformation or failure.
6. Elastomeric Element: Molded, oil-resistant rubber or neoprene.
7. Coil Spring: Factory set and field adjustable for a maximum of 1/4-inch movement at start and stop.

## **2.12 DUCT ACCESSORY HARDWARE**

- A. Instrument Test Holes: Cast iron or cast aluminum to suit duct material, including screw cap and gasket. Size to allow insertion of pitot tube and other testing instruments and of length to suit duct-insulation thickness.
- B. Adhesives: High strength, quick setting, neoprene based, waterproof, and resistant to gasoline and grease.

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION**

- A. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.
- B. Install duct accessories of materials suited to duct materials; use galvanized-steel accessories in galvanized-steel and fibrous-glass ducts, stainless-steel accessories in stainless-steel ducts, and aluminum accessories in aluminum ducts.
- C. Compliance with ASHRAE/IESNA 90.1-2004 includes Section 6.4.3.3.3 - "Shutoff Damper Controls," restricts the use of backdraft dampers, and requires control dampers for certain applications. Install backdraft and control dampers at inlet of exhaust fans or exhaust ducts as close as possible to exhaust fan unless otherwise indicated.
- D. Install volume dampers at points on supply, return, and exhaust systems where branches extend from larger ducts. Where dampers are installed in ducts having duct liner, install dampers with hat channels of same depth as liner, and terminate liner with nosing at hat channel.
  1. Install steel volume dampers in steel ducts.
  2. Install aluminum volume dampers in aluminum ducts.
- E. Set dampers to fully open position before testing, adjusting, and balancing.
- F. Install test holes at fan inlets and outlets and elsewhere as indicated.
- G. Install fire and smoke dampers according to UL listing.

- H. Connect ducts to duct silencers with flexible duct connectors or rigidly.
- I. Install duct access doors on sides of ducts to allow for inspecting, adjusting, and maintaining accessories and equipment at the following locations:
  - 1. On both sides of duct coils.
  - 2. Upstream and downstream from duct filters.
  - 3. At outdoor-air intakes and mixed-air plenums.
  - 4. At drain pans and seals.
  - 5. Downstream from manual volume dampers, control dampers, backdraft dampers, and equipment.
  - 6. Adjacent to and close enough to fire or smoke dampers, to reset or reinstall fusible links. Access doors for access to fire or smoke dampers having fusible links shall be pressure relief access doors and shall be outward operation for access doors installed upstream from dampers and inward operation for access doors installed downstream from dampers.
  - 7. At each change in direction and at maximum 50-foot spacing.
  - 8. Upstream and downstream from turning vanes.
  - 9. Upstream or downstream from duct silencers.
  - 10. Control devices requiring inspection.
  - 11. Elsewhere as indicated.
- J. Install access doors with swing against duct static pressure.
- K. Access Door Sizes:
  - 1. One-Hand or Inspection Access: 8 by 5 inches.
  - 2. Two-Hand Access: 12 by 6 inches.
  - 3. Head and Hand Access: 18 by 10 inches.
  - 4. Head and Shoulders Access: 21 by 14 inches.
  - 5. Body Access: 25 by 14 inches.
  - 6. Body plus Ladder Access: 25 by 17 inches.
- L. Label access doors according to Section 230553 "Identification for HVAC Piping and Equipment" to indicate the purpose of access door.
- M. Install flexible connectors to connect ducts to equipment.
- N. For fans developing static pressures of 5-inch wg and more, cover flexible connectors with loaded vinyl sheet held in place with metal straps.
- O. Connect terminal units to supply ducts directly or with maximum 12-inch lengths of flexible duct. Do not use flexible ducts to change directions.
- P. Connect diffusers or light troffer boots to ducts directly or with maximum 60-inch lengths of flexible duct clamped or strapped in place.
- Q. Connect flexible ducts to metal ducts with adhesive plus sheet metal screws.
- R. Install duct test holes where required for testing and balancing purposes.

- S. Install thrust limits at centerline of thrust, symmetrical on both sides of equipment. Attach thrust limits at centerline of thrust and adjust to a maximum of 1/4-inch movement during start and stop of fans.

### **3.2 FIELD QUALITY CONTROL**

- A. Tests and Inspections:
  - 1. Operate dampers to verify full range of movement.
  - 2. Inspect locations of access doors and verify that purpose of access door can be performed.
  - 3. Operate fire dampers to verify full range of movement and verify that proper heat-response device is installed.
  - 4. Inspect turning vanes for proper and secure installation.
  - 5. Operate remote damper operators to verify full range of movement of operator and damper.

**END OF SECTION**

**SECTION 23 3423 – HVAC POWER VENTILATORS****PART 1 - GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Ceiling-mounted ventilators.
  - 2. Centrifugal ventilators - roof downblast.
  - 3. Centrifugal ventilators - roof upblast.
  - 4. Sidewall propeller fans.

**1.2 ACTION SUBMITTALS**

- A. Product Data: For each type of product.
  - 1. Construction details, material descriptions, dimensions of individual components and profiles, and finishes for fans.
  - 2. Rated capacities, operating characteristics, and furnished specialties and accessories.
  - 3. Certified fan performance curves with system operating conditions indicated.
  - 4. Certified fan sound-power ratings.
  - 5. Motor ratings and electrical characteristics, plus motor and electrical accessories.
  - 6. Material thickness and finishes, including color charts.
  - 7. Dampers, including housings, linkages, and operators.
  - 8. Prefabricated roof curbs.
  - 9. Fan speed controllers.
- B. Shop Drawings:
  - 1. Include plans, elevations, sections, and attachment details.
  - 2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of each field connection.
  - 3. Include diagrams for power, signal, and control wiring.
- C. Engineering Services: Calculate requirements for selecting vibration isolators and seismic restraints. Provide calculations to verify materials provided meet specified performance requirements. Calculations shall bear the seal of a Professional Engineer registered in the State of New York.

**1.3 INFORMATIONAL SUBMITTALS**

- A. Coordination Drawings: Floor plans, reflected ceiling plans, and other details, or BIM model, drawn to scale, showing the items described in this Section and coordinated with all building trades.
- B. Seismic Qualification Data: For fans, accessories, and components, from manufacturer.

1. Basis for Certification: Indicate whether withstand certification is based on actual test of assembled components or on calculation.
2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

C. Field quality-control reports.

#### **1.4 CLOSEOUT SUBMITTALS**

- A. Operation and Maintenance Data: For HVAC power ventilators to include in normal and emergency operation, and maintenance manuals.

#### **1.5 MAINTENANCE MATERIAL SUBMITTALS**

- A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.
1. Belts: One set(s) for each belt-driven unit.

### **PART 2 - PRODUCTS**

#### **2.1 DOME TYPE POWER ROOF VENTILATORS**

- A. Housing: Weatherproof heavy gage spun aluminum construction with large rolled bead for strength, galvanized base, and rigid galvanized steel internal supports
1. Housing does not provide any internal structural support.
  2. Equipped with oversized electrical conduit chase thru curb cap and into motor compartment.
  3. Pre-wired to junction box mounted in motor compartment
  4. Equipped with electrical disconnect switch.
- B. Fan Assembly:
1. Centrifugal Fan Wheel: Statically and dynamically balanced backward inclined type constructed of aluminum, spark resistant, non overloading, and matched with deeply spun venturis.
  2. Direct Drive Motor: Continuous duty, permanently lubricated, multi-speed, with thermal overload protection, and mounted out of the main airstream.
  3. Belt Drive Motor: Continuous duty, ball bearing design, permanently lubricated, and mounted out of the main air stream.
    - a. Shafts: Steel, turned, ground, polished, and rust protected.
    - b. Ball Bearings: Heavy duty type rated for minimum L50 life exceeding 200,000 hours.
    - c. Pulleys: Adjustable, cast iron, machined and keyed, and sized for 150 percent of horsepower at its rated maximum speed.
- C. Disconnect Switch: UL approved for the use, non-fused safety type disconnect switch, located under the fan housing. Factory installed wiring run in flexible metal

conduit.

D. Dampers:

1. Types:
  - a. Automatic self-opening back draft type, with spring actuated return.
  - b. Low Leakage motorized type.
2. Frame: Steel.
3. Blades: Aluminum.
4. Bearings: Bronze or nylon.
5. Blade Edge Seals: Vinyl.
6. Jamb Seals: Flexible metal compression type.

E. Insect/Bird Screen: Aluminum.

## 2.2 UPBLAST TYPE POWER ROOF VENTILATORS

A. Housing: Weatherproof heavy gage spun aluminum construction with large rolled bead for strength, galvanized base, and rigid galvanized steel internal supports

1. Housing does not provide any internal structural support.
2. Equipped with oversized electrical conduit chase thru curb cap and into motor compartment.
3. Pre-wired to junction box mounted in motor compartment
4. Equipped with electrical disconnect switch.
5. Belt Drive Units: Large diameter cooling tube provides ambient air to flow over motor.

B. Fan Assembly:

1. Centrifugal Fan Wheel: Statically and dynamically balanced backward inclined type constructed of aluminum, spark resistant, non overloading, and matched with deeply spun venturis.
2. Belt Drive Motor: Continuous duty, ball bearing design, permanently lubricated, and mounted out of the main air stream.
  - a. Shafts: Steel, turned, ground, polished, and rust protected.
  - b. Ball Bearings: Heavy duty type rated for minimum L50 life exceeding 200,000 hours.
  - c. Pulleys: Adjustable, cast iron, machined and keyed, and sized for 150 percent of horsepower at its rated maximum speed.

C. Kitchen Exhaust Fans:

1. Conforming to NFPA 96 Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations.
  - a. Fans UL 762 listed for 400 degrees F.
  - b. Factory rewired weather proof junction box mounted to exterior of fan housing complete with disconnect switch.

- c. Grease Collector/Separator Box: Directs grease from single swiveling collection spout to durable galvanized steel box, trapping grease and residue, and avoiding discharge onto roof surface, and separates water from the grease which prolongs the time required between periodic maintenance.
- D. Disconnect Switch: UL approved for the use, non-fused safety type disconnect switch, located under the fan housing. Factory installed wiring run in flexible metal conduit.
- E. Dampers:
  - 1. Types:
    - a. Low Leakage motorized type.
  - 2. Frame: Steel.
  - 3. Blades: Aluminum.
  - 4. Bearings: Bronze or nylon.
  - 5. Blade Edge Seals: Vinyl.
  - 6. Jamb Seals: Flexible metal compression type.
- F. Insect/Bird Screen: Aluminum.

### 2.3 ROOF CURBS

- A. Type: Factory fabricated, braced and stiffened to form a rigid weatherproof unit.
  - 1. Construction:
    - a. Single wall welded construction.
  - 2. Materials:
    - a. Minimum No. 18 gage galvanized steel.
  - 2. Insulation: Rigid fiberglass, minimum 1-1/2 inch thick.
  - 3. Provide vented roof curbs for kitchen exhaust applications.
- B. Extended Bases: Same construction as roof curb.
  - 1. Provide hinged cap if access is required.
  - 2. Provide vented extended bases for kitchen applications.

### 2.4 DIRECT DRIVE SIDEWALL MOUNTED PROPELLER FANS

- A. General Description:
  - 1. Fan arrangement shall be either supply or exhaust, see Fan Schedule
  - 2. Sidewall mounted applications
  - 3. Performance capabilities up to 7,100 cubic feet per minute (cfm) and static pressure to 0.625 inches of water gauge
  - 4. Fans are available in eight sizes with nominal wheel diameters ranging from 8 inches through 24 inches (8 - 24 unit sizes)
  - 5. Maximum continuous operating temperature 130 Fahrenheit (54.4 Celsius)

6. Each fan shall bear a permanently affixed manufacturer's engraved metal nameplate containing the model number and individual serial number
- B. Wheel:
1. Propeller shall be aluminum blade riveted to steel hub
  2. A standard square key and set screw or tapered bushing shall lock the propeller to the motor shaft
  3. Statically and dynamically balanced in accordance with AMCA Standard 204-05
  4. The propeller and fan inlet will be matched and shall have precise running tolerances for maximum performance and operating efficiency
- C. Motors:
1. Motor enclosures: Totally enclosed fan cooled.
  2. Motors are permanently lubricated, sleeve bearing type on sizes 8-12 and ball bearing type on sizes 14-24 to match with the fan load and furnished at the specific voltage and phase
  3. Accessible for maintenance
- D. Drive Frame:
1. Drive frame assemblies and fan panels shall be galvanized steel
  2. Drive frame shall have welded wire or formed channels and fan panels shall have prepunched mounting holes, formed flanges and a deep formed one piece inlet venturi
- E. Disconnect Switches:
1. NEMA rated: 12
  2. Positive electrical shut-off
  3. Wired from fan motor to junction box
- F. Options/Accessories:
1. Dampers:
    - a. Type: Gravity
    - b. Prevents outside air from entering back into the building when fan is off
    - c. Balanced for minimal resistance to flow
    - d. Galvanized frames with prepunched mounting holes
  2. Dampers Guards:
    - a. Guard material: Galvanized
    - b. Shall completely enclose the damper or wall opening on the discharge side of the fan
  3. Discharge Diffusers:
    - a. Constructed of heavy gauge galvanized steel frame and blades
    - b. Shall have prepunched mounting flanges

- c. Designed to mount to the interior end of the wall housing when used in the supply configuration
- 4. Finishes:
  - a. Types: Epoxy
- 5. Horizontal Mounting:
  - a. Allows fan to be mounted in a horizontal configuration
- 6. Wall Housing:
  - a. Mounting arrangement: Flush Interior
  - b. Constructed of galvanized steel with heavy gauge mounting flanges and prepunched mounting holes
  - c. Housing shall include OSHA approved motor guard
  - d. Reduces installation time and provides maximum installation flexibility
- 7. Wall Collar:
  - a. Constructed of galvanized steel with heavy gauge mounting flanges and prepunched mounting holes
  - b. Guard type: OSHA Guard
  - c. Protective guard completely enclose the motor and drive side of the fan
  - d. Coated with Permatector, a thermal setting polyester urethane

## **PART 3 - EXECUTION**

### **3.1 INSTALLATION OF HVAC POWER VENTILATORS**

- A. Install roof curbs in complete accordance with the manufacturer's printed installation instructions and approved shop drawings (if any).
- B. Install power roof ventilators on roof curbs, with approved fastening devices, in accordance with manufacturer's printed installation instructions.
- C. Adjust damper linkages for proper damper operation. Install units with clearances for service and maintenance.
- D. Label units according to requirements specified in Section 230553 "Identification for HVAC Piping and Equipment."

### **3.2 DUCTWORK CONNECTIONS**

- A. Drawings indicate general arrangement of ducts and duct accessories. Make final duct connections with flexible connectors. Flexible connectors are specified in Section 233300 "Air Duct Accessories."

### **3.3 ELECTRICAL CONNECTIONS**

- A. Connect wiring according to Section 260519 "Low-Voltage Electrical Power Conductors and Cables."
- B. Ground equipment according to Section 260526 "Grounding and Bonding for Electrical Systems."

- C. Install electrical devices furnished by manufacturer, but not factory mounted, according to NFPA 70 and NECA 1.
  - 1. Nameplate shall be laminated acrylic or melamine plastic signs, as specified in Section 260553 "Identification for Electrical Systems."
  - 2. Nameplate shall be laminated acrylic or melamine plastic signs with a black background and engraved white letters at least 1/2 inch (13 mm) high.

### **3.4 CONTROL CONNECTIONS**

- A. Install control and electrical power wiring to field-mounted control devices.
- B. Connect control wiring according to Section 260523 "Control-Voltage Electrical Power Cables."

### **3.5 FIELD QUALITY CONTROL**

- A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect components, assemblies, and equipment installations, including connections.
- B. Perform tests and inspections with the assistance of a factory-authorized service representative.
- C. Tests and Inspections:
  - 1. Verify that shipping, blocking, and bracing are removed.
  - 2. Verify that unit is secure on mountings and supporting devices and that connections to ducts and electrical components are complete. Verify that proper thermal-overload protection is installed in motors, starters, and disconnect switches.
  - 3. Verify that there is adequate maintenance and access space.
  - 4. Verify that cleaning and adjusting are complete.
  - 5. Disconnect fan drive from motor, verify proper motor rotation direction, and verify fan wheel free rotation and smooth bearing operation. Reconnect fan drive system, align and adjust belts, and install belt guards.
  - 6. Adjust belt tension.
  - 7. Adjust damper linkages for proper damper operation.
  - 8. Verify lubrication for bearings and other moving parts.
  - 9. Verify that manual and automatic volume control and fire and smoke dampers in connected ductwork systems are in fully open position.
  - 10. Disable automatic temperature-control operators, energize motor and adjust fan to indicated rpm, and measure and record motor voltage and amperage.
  - 11. Shut unit down and reconnect automatic temperature-control operators.
  - 12. Remove and replace malfunctioning units and retest as specified above.
- D. Test and adjust controls and safeties. Controls and equipment will be considered defective if they do not pass tests and inspections.
- E. Prepare test and inspection reports.

### **3.6 ADJUSTING**

- A. Adjust damper linkages for proper damper operation.
- B. Adjust belt tension.
- C. Comply with requirements in Section 230593 "Testing, Adjusting, and Balancing for HVAC" for testing, adjusting, and balancing procedures.
- D. Replace fan and motor pulleys as required to achieve design airflow.
- E. Lubricate bearings.

### **3.7 DEMONSTRATION**

- A. Engage a factory-authorized service representative to train Agency's maintenance personnel to adjust, operate, and maintain centrifugal fans.

**END OF SECTION**

## SECTION 23 3713 – DIFFUSERS, REGISTERS AND GRILLES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. This section includes the following:
  - 1. Grilles and Registers

#### 1.2 REFERENCE STANDARDS

- A. All air distribution equipment shall be designed, manufactured and tested in accordance with the latest applicable industry standards including the following:
  - 1. SMACNA – Sheet Metal and Air Conditioning National Association.
  - 2. ASHRAE - Test and rate air devices in accordance with ASHRAE Standard 70-2006.
  - 3. ARI – Test and rate air devices in accordance with ARI Standards.
  - 4. ADC Seal – Provide devices bearing ADC Certified Rating Seal.
  - 5. AMCA Compliance: Test and rate air devices in accordance with AMCA Standards and shall bear AMCA Certified Seal.
  - 6. NFPA Compliance: Install air devices in accordance with NFPA90A “Standard for the Installation of Air Conditioning and Ventilating Systems.”
- B. All equipment and material to be furnished and installed as part of this work shall be UL or ETL listed, in accordance with the requirements of the authorities having jurisdiction and suitable or its intended use.

#### 1.3 SUBMITTALS

- A. Product Data: For each type of product indicated, include the following:
  - 1. Data Sheet: Indicate materials of construction, finish, and mounting details; and performance data including throw and drop, static-pressure drop, and noise ratings.
  - 2. Diffuser, Register, and Grille Schedule: Indicate drawing designation, room location, quantity, model number, size, and accessories furnished.
- B. Manufacturer shall submit engineering data in a manner to facilitate convenient review of the following factors:
  - 1. Throw, terminal velocity, noise criteria (NC), sound power, static pressure and total pressure of each type and size of air outlet.
  - 2. Supply air units shall distribute the specified quantity of air evenly throughout the occupied zone uniformly, draftlessly and noiselessly. Sound levels shall not exceed ratings as required in the "Acoustical Treatment" section of these specifications.
- C. The manufacturer shall provide published performance data for the diffusers, registers and grilles. They shall be tested in accordance with ANSI/ASHRAE Standard 70-2006.
- D. Samples for Initial Selection: For diffusers, registers, and grilles with factory-applied color finishes.

- E. Samples for Verification: For diffusers, registers, and grilles, in manufacturer's standard sizes to verify color selected.
- F. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from Installers of the items involved:
  - 1. Ceiling suspension assembly members.
  - 2. Method of attaching hangers to building structure.
  - 3. Size and location of initial access modules for acoustical tile.
  - 4. Ceiling-mounted items including lighting fixtures, diffusers, grilles, speakers, sprinklers, access panels, and special moldings.
  - 5. Duct access panels.
- G. Source quality-control reports.

#### **1.4 PRODUCT DELIVERY, STORAGE AND HANDLING**

- A. Deliver air distribution devices wrapped in factory-fabricated fiber-board type containers. Identify on outside of container type of device and location to be installed. Avoid crushing or bending and prevent dirt and debris from entering and settling in devices.
- B. Store air outlets and inlets in original cartons and protect from weather and construction work traffic. Where possible, store indoors, when necessary to store outdoors, store above grade and enclose with waterproof wrapping.

### **PART 2 - PRODUCTS**

#### **2.1 DIFFUSERS, REGISTERS AND GRILLES - GENERAL**

- A. Contractor shall furnish and install where shown on the drawings all air devices, diffusers, grilles and registers of the sizes, types and capacities indicated and as required for proper distribution of conditioned air within the conditioned spaces and for return of conditioned air from the conditioned spaces to the various air conditioning systems. Exhaust grilles and registers shall also be provided where indicated on the drawings and as required for the proper flow of exhaust air.
- B. Devices shall be aluminum or steel, as specified by the Engineer and shall be factory finished with baked enamel finish or extruded aluminum finish of color selected by architect.
- C. Air inlets and outlets shall be tested in accordance with ASHRAE 70.
- D. Throw, horizontal distance from the diffuser to the point where the theoretical centerline velocity is 50 feet per minute, shall not exceed the horizontal distance between the diffuser and the nearest wall, or half the horizontal distance between ceiling diffusers.
- E. Equipment manufacturer must submit engineering data in a manner to facilitate convenient review of the following factors: aspiration ability, including temperature and velocity transverse, throw and drop of each unit, noise criteria ratings for each unit, sizes, free area and quality of construction.
- F. Supply air units shall distribute the specified quantity of air evenly throughout the occupied zone uniformly, draftlessly and noiselessly. Sound levels shall not exceed ratings as required in the "Acoustical Treatment" section of these specifications.

- G. For devices installed in plaster construction, supply plaster frames as required for setting. All design and margin construction shall be coordinated with architectural requirements. Plaster frames where required shall be constructed of same material and finish as air terminal.
- H. The air outlet manufacturer shall review architectural plans and shall be responsible for furnishing all air outlets with mounting frames and margins that are fully compatible with ceiling construction.
- I. All ceiling diffusers shall be furnished and installed with an equalizing deflector and volume damper. If diffuser is to be used for return air, omit equalizing deflector. Supply diffusers shall be designed to protect ceilings from streaking and smudging. Blank-off or sectorizing baffles shall be furnished as indicated.
- J. Coordinate duct connections with coordination drawings.

## 2.2 MANUFACTURERS:

- A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
  1. Titus
  2. Greenheck
  3. Anemostat
  4. Pric
  5. CARNES
  6. Or approved equal.

## 2.3 DIFFUSER

- A. Supply Diffuser( SD)
  1. Supply Diffuser shall be Louvered Core- Lattice Face TITUS Model SG-TDC, Truair, Continental Industries or approved equal
  2. Face plate: 12-gauge stainless steel with 13/16" square holes and 3/16" fret bars
  3. Louvered diffuser with border type 1 (surface mount) with 4 way blow pattern.
  4. Construction material: stainless steel with 1-1/4" wide border on all sides.
  5. Corners shall be welded with full penetration resistance welds.
  6. 1-1/2" x 1-1/2" x 3/16" rear angle frame with 1/34" x 20 NC weld nuts
- B. Supply Diffuser (CRD)
  1. Supply Diffuser shall be TITUS Model TMS-FR, Truair, Continental Industries or approved equal
  2. Border Type 3 (Lay-In) With Fire Damper and Full Face.
  3. Volume Adjustment damper control
  4. Ceiling Module 12x12 with round neck 6

## **2.4 REGISTERS**

- A. Return Air Register ( RR)
  - 1. Return air register shall be TITUS Model 350ZRL. Truair, Continental Industries or approved equal.
  - 2. The fixed deflection blades shall be parallel to the long dimension of the register.
  - 3. Construction material: Extruded aluminum with 1-1/4" wide border on all sides.
  - 4. Corners shall be welded with full penetration resistance welds.
  - 5. Deflection blades shall be contoured to a specifically designed and tested cross section to meet test performance data.
  - 6. Opposed blade damper shall be constructed of heavy gauge steel or aluminum. Damper must be operable from face of the register.

## **2.5 SOURCE QUALITY CONTROL**

- A. Verification of Performance: Rate diffusers, registers, and grilles according to ASHRAE 70, "Method of Testing for Rating the Performance of Air Outlets and Inlets."

## **PART 3 - EXECUTION**

### **3.1 EXAMINATION**

- A. Examine areas where diffusers, registers, and grilles are to be installed for compliance with requirements for installation tolerances and other conditions affecting performance of equipment.
- B. Proceed with installation only after unsatisfactory conditions have been corrected.
- C. The air outlet manufacturer shall review architectural plans and shall be responsible for furnishing all air outlets with mounting frames and margins that are fully compatible with ceiling construction.

### **3.2 INSTALLATION**

- A. Install diffusers, registers, and grilles level and plumb.
- B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Air outlet and inlet locations have been indicated to achieve design requirements for air volume, noise criteria, airflow pattern, throw, and pressure drop. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel. Where architectural features or other items conflict with installation, notify Agency for a determination of final location.
- C. Install diffusers, registers, and grilles with airtight connections to ducts and to allow service and maintenance of dampers, air extractors, and fire dampers.

### **3.3 ADJUSTING**

- A. After installation, adjust diffusers, registers, and grilles to air patterns indicated, or as directed, before starting air balancing.

**END OF SECTION**

**SECTION 232000 – HVAC PIPING****PART 1 GENERAL****1.01 RELATED WORK SPECIFIED ELSEWHERE**

- A. Through Penetration Firestops: Section 078400.
- B. Sealants: Section 079200.

**1.02 SUBMITTALS**

- A. Product Data:
  - 1. Catalog sheets and specifications indicating manufacturer name, type, applicable reference standard, schedule, or class for specified pipe and fittings.
  - 2. Material Schedule: Itemize pipe and fitting materials for each specified application in Pipe and Fittings Schedule in Part 3 of this Section. Where optional materials are specified indicate option selected.
- B. Quality Control Submittals:
  - 1. Installers Qualification Data:
    - a. Brazer Qualification Data for Refrigerant Piping: State refrigerant piping brazing experience; include names, home addresses and social security numbers of brazers.
  - 2. Manufacturer's Data: Copy of mill certificates, laboratory test and manufacturing reports relating to chemical and physical properties of pipe, fittings, and related materials.
  - 3. Contract Closeout Submittals:
    - a. Copy of Final Testing Record Log.

**1.03 QUALITY ASSURANCE**

- A. Qualifications of Brazers: Comply with the following:
  - 1. Certification of brazing operators by recognized authorities which require a qualification test.
  - 2. Refrigerant Piping: The persons performing the brazing and their Supervisors shall be personally experienced in refrigerant piping brazing procedures.

**1.05 DELIVERY, STORAGE, AND HANDLING**

- A. Pipe Storage:
  - 1. Upon the receipt of each shipment of pipe on the job, maintain the pipe marking, and store pipe in accordance with ASTM material specifications, and method of manufacture (seamless, etc.) of each length of pipe.
  - 2. Pipe markings shall be clearly readable at the time of pipe installation.

3. If at the time of its installation, any length of pipe not readily identifiable will be subject to rejection, or arbitrary downgrading by the Engineer to the lowest grade which has been received on the job to that date.
4. Provide factory-applied plastic end-caps on each length of pipe and tube, except for concrete, corrugated metal, bell and-spigot, and clay pipe.
  - a. Maintain end-caps through shipping, storage and handling to prevent pipe-end damage and prevent entrance of dirt, debris, and moisture.

## **PART 2 PRODUCTS**

### **2.01 COPPER AND BRASS PIPE, TUBING AND FITTINGS**

- A. Copper Tube, Types K, L and M: ASTM B 88.
- B. ACR Tube: ASTM B 280.
- C. Wrot Copper Tube Fittings, Solder Joint: ASME B16.22.
- D. Cast Copper Alloy Tube Fittings, Solder Joint: ASME B16.18.
- E. Flared Tube Fittings:
  1. Water Tube Type: ASME B16.26.
  2. Automotive Tube Type: SAE J512.
  3. Refrigerant Tube Type: SAE J513.

### **2.02 JOINING AND SEALANT MATERIALS**

- A. Thread Sealant:
  1. LA-CO Industries', Slic-Tite Paste with Teflon.
  2. Loctite Corp.'s No. 565 Thread Sealant.
  3. Thread sealants for potable water shall be NSF approved.
- B. Solder: Solid wire type (for refrigerant piping) conforming to the following:
  1. Type 2: Lead-free tin-silver solder (ASTM B 32 Alloy Grade Sn 96); All-State Welding Products Inc.'s 430, Engelhard Corp.'s Silvabrite, or J.W. Harris Co. Inc.'s Stay-Brite.
  2. Type 3: Lead-free tin-silver solder (ASTM B 32 Alloy Grade E, AC, or HB); Engelhard Corp.'s Silvabrite 100, Federated Fry Metals' Aqua Clean, or J.W. Harris Co. Inc.'s Stay-Safe Bridgit.
- C. Brazing Alloys (for refrigerant piping):
  1. Type 1: AWS A5.8, Class BCup-5, for brazing copper to brass, bronze, or copper; Engelhard's Silvaloy 15, J.W. Harris Co. Inc.'s Stay-Silv 15, and Handy & Harman's Sil-Fos.
  2. Type 2: AWS A5.8, Class BAg-7, for brazing copper to steel or stainless steel; Engelhard's Silvaloy-56T, J.W. Harris Co. Inc.'s Safety-Silv 56, and Handy & Harman's Braze 560.

- D. Brazing Flux: AWS Type FB3A; Handy & Harman's Handy Flux or J.W. Harris Co. Inc.'s Stay-Silv.

### **2.03 PACKING MATERIALS FOR BUILDING CONSTRUCTION PENETRATIONS**

- A. Oiled Oakum: Manufactured by Nupak of New Orleans, Inc., 931 Daniel St., Kenner, LA 70062, (504)466-1484.

### **2.04 DIELECTRIC CONNECTORS**

- A. Dielectric Fitting: Bronze ball valve with end connections and pressure rating to match associated piping.
  - 1. Nipples with inert non-corrosive thermoplastic linings are not acceptable.

### **2.05 PIPE SLEEVES**

- A. Type A: Schedule 40 steel pipe.
- B. Type B: No. 16 gage galvanized sheet steel.
- C. Type C: Schedule 40 steel pipe with 1/4 inch steel collar continuously welded to pipe sleeve. Size steel collars as required to span a minimum of one cell or corrugation, on all sides of the rough opening thru the metal deck.
- D. Type D: No. 16 gage galvanized sheet steel with 16 gage sheet steel metal collar rigidly secured to sleeve. Size metal collars as required to span a minimum of one cell or corrugation, on all sides of the rough opening thru the metal deck.

### **2.06 FLOOR, WALL AND CEILING PLATES**

- A. Cast Brass: Solid type with polished chrome plated finish, and set screw.
  - 1. Series Z89 by Zurn, 929 Riverside Drive, Grosvenordale, CT 06255, (800) 243-1830.
  - 2. Model FCP by Viking, 5150 Beltway Dr. SE, Caledonia, Michigan 49316 (800) 968-9501.
  - 3. Or approved equal.

## **PART 3 EXECUTION**

### **3.01 INSTALLATION - GENERAL**

- A. Install piping at approximate locations indicated, and at maximum height.
- B. Install piping clear of door swings, and above sash heads.
- C. Make allowances for expansion and contraction.
- D. Allow for a minimum of one inch free air space around pipe or pipe covering, unless otherwise specified.
- E. Install vertical piping plumb.
- F. Use fittings for offsets and direction changes, except for Type K soft annealed copper tube.

- G. Cut pipe and tubing ends square; ream before joining.
- H. Threading: Use American Standard Taper Pipe Thread Dies.
  - 1. Thread brass pipe with special threading dies.
- I. Make final connections to equipment with unions, flanges, or mechanical type joint couplings.

### 3.02 PIPE JOINT MAKE-UP

- A. Threaded Joint: Make up joint with a pipe thread compound applied in accordance with the manufacturer's printed application instructions for the intended service.
- B. Soldered Joint: Thoroughly clean tube end and inside of fitting with emery cloth, sand cloth, or wire brush. Apply flux to the pre-cleaned surfaces. Install fitting, heat to soldering temperature, and join the metals with type solder specified. Remove residue.
- C. Brazed Joint: Thoroughly clean tube end and inside of fitting with emery cloth, sand cloth, or wire brush. Apply flux to the pre-cleaned surfaces. Install fitting, heat to brazing temperature, and join the metals with brazing alloy. Remove residue.
- D. Refrigerant Pipe Joint:
  - 1. Hard Drawn Tubing, Brazed Joint: Make up joint with appropriate type of brazing alloy. Sweep piping interior with dry nitrogen at a rate of 1 to 3 cfm during brazing operation.
  - 2. Hard Drawn Tubing, Soldered Joint: Solder joints with Type 2 solder at valves, controls, and other locations where brazing temperatures could cause damage.
- E. Dissimilar Pipe Joint:
  - 1. Joining Bell and Spigot and Threaded Pipe: Install a half coupling on the pipe or tube end to form a spigot, and caulk into the cast iron bell.
  - 2. Joining Dissimilar Threaded Piping: Make up connection with a threaded coupling or with companion flanges.
  - 3. Joining Dissimilar Non-Threaded Piping: Make up connection with adapters recommended by the manufacturers of the piping to be joined.
  - 4. Joining Galvanized Steel Pipe and Brass Pipe or Copper Tubing: Make up joint with a dielectric connector.
  - 5. Joining FRP and Threaded Pipe: Make up connection with adapters as recommended by manufacturers of piping being joined.

### 3.03 PIPING PENETRATIONS

- A. Sleeve Schedule: Unless otherwise shown, comply with the following schedule for the type of sleeve to be used where piping penetrates wall, floor, or roof construction:

<u>CONSTRUCTION</u>	<u>SLEEVE TYPE</u>
1. Frame construction.	None Required
2. Foundation walls.	A*
3. Non-waterproof interior walls.	B*
4. Non-waterproof interior floors on metal decks.	D*
5. Non-waterproof interior floors not on metal decks.	B*
6. Floors not on grade having a floor drain.	A
7. Floors over mechanical equipment, steam service, machine, and boiler rooms.	A
8. Floors finished or to be finished with latex composition or terrazzo, and on metal decks.	D*
9. Floors finished or to be finished with latex composition or terrazzo, and not on metal decks.	A
10. Earth supported concrete floors.	None Required
11. Exterior concrete slabs on grade.	A
12. Fixtures with floor outlet waste piping.	None Required
13. Metal roof decks.	C
14. Non-metal roof decks.	A

\*Core drilling is permissible in lieu of sleeves where marked with asterisks.

**B. Diameter of Sleeves and Core Drilled Holes:**

1. Unless otherwise specified, size holes thru floors and walls in accordance with the through penetration fire stopping system being used.

**C. Length of Sleeves (except as shown otherwise on Drawings):**

1. Walls and Partitions: Equal in length to total finished thickness of wall or partition.

2. Floors, Finished: Equal in length to total finished thickness of floor and extending 1/2 inch above the finished floor level, except as follows:

a. In furred spaces at exterior walls, extend sleeve one inch above the finished floor level.

3. Roofs: Equal in length to the total thickness of roof construction, including insulation and roofing materials, and extending one inch above the finished roof level.

**3.04 FLOOR, WALL AND CEILING PLATES**

- A. Install plates for exposed uninsulated piping passing thru floors, walls, ceilings, and exterior concrete slabs as follows:
  - 1. In Finished Spaces:
    - a. Piping 4 Inch Size and Smaller: Solid or split, chrome plated cast brass.
  - 2. Unfinished Spaces (Including Exterior Concrete Slabs): Solid, unplated cast iron.
  - 3. Fasten plates with set screws.
  - 4. Plates are not required in pipe shafts or furred spaces.

**3.05 PIPE AND FITTING SCHEDULE**

- A. Where options are given, choose only one option for each piping service. No deviations from selected option will be allowed.
- B. Schedule of Pipe and Fittings for the different piping services is as follows:
  - 1. Refrigerants (RS, RL, HG & RD) 350 psig and less:
    - a. All Sizes: Type ACR hard drawn copper tubing with wrought copper fittings, and brazing alloy, unless otherwise specified.
  - 2. Drain Piping:
    - a. Condensate Drain Piping: Type M hard drawn copper tubing with wrought copper or cast copper alloy solder fittings, and Type 3 solder.

**END OF SECTION**

**SECTION 23 55 13 – FURNACES****PART 1 GENERAL****1.01 SUBMITTALS**

- A. Product Data: Catalog sheets, performance charts, specifications and installation instructions for each type of furnace.
- B. Contract Closeout Submittals
  - 1. Operation and Maintenance Data; Deliver 2 copies of the O&M data for the installed products to the Engineer.

**1.02 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Furnace shall be UL listed and labeled.
  - 2. Install in accordance with NFPA 54 National Fuel Gas Code.
  - 3. Install in accordance with NFPA 31 installation of oil burning equipment.

**PART 2 PRODUCTS****2.01 FURNACES, GENERAL**

- A. Fuel: Design furnace - burner units for firing with Commercial No. 2 fuel oil (CS 12-48).
- B. Fuel: Design furnace - burner units for firing with natural gas, rated at 120,000 Btu.
- C. Furnace - Burner - Control Unit: Each furnace shall be a complete factory assembled and packaged unit, consisting of a heat exchanger, fuel burning equipment, blower section, filter section, operating controls, safety controls and wiring. The unit shall be complete with a factory fabricated, reinforced, insulated, sheet steel jacket, with a corrosion resistant baked enamel finish. Access doors, or easily removable panels, shall be provided for servicing of all internal components and changing of filters.
- D. Blower Unit: Quiet operating, heavy duty centrifugal type installed on a single heavy duty shaft, mounted on self-aligning ball or lifetime lubricated bearings, Vee belt driven by an electric motor. Isolate motor from steel frame with resilient mountings.
- E. Filter Section: 1 inch thick throw-away type filters installed in a built-in filter rack. Provide sufficient area so that the air velocity through filters does not exceed 300 fpm.

**2.02 GAS FIRED FURNACES**

- A. Heat Exchanger: All welded construction, multiple flue gas pass type, fabricated of heavy gage black sheet steel.
- B. Gas Burners: Atmospheric type, slotted or drilled cast iron burners, or

stainless steel ribbon type.

- C. Gas Burner Controls: Combination main gas control valve and pressure regulator and safety pilot. Draft diverter shall be of the built-in type or furnished for installing on top of unit.
- D. Operating Controls: Factory wired and mounted on unit. Controls shall include fan and limit control with built-in summer switch, and an automatic thermostatic temperature regulator.

### **PART 3 EXECUTION**

#### **3.01 INSTALLATION**

- A. Install furnace of type and capacity as noted on the drawings. Provide sufficient room for cleaning and servicing all components.
- B. Install thermostat at location indicated on drawings.

#### **3.02 FUEL FOR START-UP AND TESTING**

- A. Oil: Refer to Section entitled "Fuel Storage Tanks and Accessories".
- B. Gas: Connect to existing installed gas piping or install gas service piping for firing furnaces, all as required by the drawings and the specifications.
- C. Testing: Upon completion of the installation, and in the presence of the Engineer, conduct a performance test on the furnace, for the purpose of checking general operation, proving electrical and mechanical controls and making necessary adjustments.

**END OF SECTION**

**SECTION 238113 – AIR CONDITIONERS****PART 1 GENERAL****1.01 RELATED WORK SPECIFIED ELSEWHERE**

- A. Pipe and Pipe Fittings: Section 232000.
- B. Vibration Isolation: Section 230550.
- C. Seismic Restraints: Section 230550.
- D. Insulation: Section 230719.
- E. Air Filters: Section 234100.
- F. Cleaning and Testing: Section 230593.
- G. Wiring for Motors and Motor Controllers: Section 260523.
- H. Motors, Motor Controllers and Control Wiring: Section 260221.

**1.02 PERFORMANCE REQUIREMENTS**

- A. Design air handling unit and supports to withstand all seismic loads. Refer to seismic loading criteria on the Contract Drawings.
- B. Seismic Performance: Design and install air handling units to assure continued performance of their intended function when subjected to the specified seismic forces.
- C. Seismic Performance: Design and install air handling units to assure that they remain in place with no separation of any parts when subjected to the specified seismic forces.
- D. The design of the air handling units and supports shall be performed by a professional engineer licensed in the State of New York and experienced in the seismic design of air handling units.

**1.02 SUBMITTALS**

- A. Product Data: Manufacturer's catalog sheets, brochures, performance charts, test data, standard schematic drawings, specifications and installation instructions for each type unit.
- B. Quality Control Submittals:
  - 1. Copy of Seismic Qualifications Certificate.
- C. Contract Closeout Submittals:
  - 1. Operation and Maintenance Data: Deliver 2 copies of the O&M data for the installed products to the Engineer.

**1.03 QUALITY ASSURANCE**

- A. Regulatory Requirements:
  - 1. Units shall be factory tested and the design, construction and installation shall be in accordance with the following: ARI, UL and NFPA and all State and Local codes or regulations having jurisdiction.

2. Rate cooling capacities in accordance with the ARI.
  3. Electrical components shall be UL listed and factory wiring shall conform to the UL Specifications.
- B. Seismic Qualification Certificate: Certificate from air handling unit manufacturer covering air handling units, accessories, supports, and components; and consisting of the following:
1. Basis for Certification: Indicate whether Withstand Certification is based on actual test of assembled components or on calculation.
  2. Dimensioned Outline Drawings of Equipment Unit: Identify center of gravity and locate and describe mounting and anchorage provisions, and loads transmitted to structure at each attachment point.
  3. Detailed description of equipment anchorage devices on which the certification is based including installation requirements.
  4. Comprehensive seismic engineering analysis of air handling units and supports.

#### **1.04 MAINTENANCE**

- A. Maintenance Service: A full equipped authorized service organization capable of an 8 hours response to service calls and must be available 24 hours a day, 7 days a week to service the completed Work.

### **PART 2 PRODUCTS**

#### **2.01 AIR CONDITIONERS**

- A. Type: Specifically designed for installation in computer rooms. Furnish equipment totally piped and wired, including all controls. Upon placement in their permanent location in the building, only remote equipment piping and electrical power connections shall be required to make the unit(s) operable.
- B. Unit Casing and Frame: Fabricate from heavy gage corrosion resistant steel, properly reinforced for maximum strength and rigidity with an all welded tubular steel or structural steel angle and channel iron framework. Casing shall be of sectional construction, with easily removable or hinged gasketed access panels with fastening devices for ease in servicing all components. Thermally and acoustically line internal surfaces of casing sections in contact with room or conditioned air, with insulation having a non-eroding surface finish. Factory finish all exposed surfaces of unit cabinet and frame with a minimum three coat corrosion resistant baked enamel finish, color as selected by the Engineer from the manufacturer's standard color charts.
- C. Cooling Section: Factory sealed refrigerant system consisting of compressors and evaporator section designed for use with Refrigerant R-410A.
1. Compressors: Accessible, semi-hermetic, reciprocating, direct-driven, constant speed, 1750 RPM industrial type with suction

- strainer and reversible oil pumps for pump down control and forced lubrication to all bearing surfaces. Mount compressors on vibration isolators and provide with built-in overloads, oil sight glass, high pressure switch with manual reset and low pressure switch for pump down. Isolate compressors in a compartment separate from the conditioned air space.
2. Evaporator Coil: Multiple row, DX coil, with two independent refrigerant circuits, arranged in an A frame pattern. Fabricate coils from seamless copper tubing with aluminum fins mechanically bonded to tubing. Arrange the refrigerant coil faces, so that each compressor will be utilizing the complete coil face area of each refrigerant circuit. Provide each refrigerant circuit with a hot gas muffler, liquid line filter drier, refrigerant sight glass and moisture indicator, adjustable equalized expansion valves and liquid line solenoid valves. Provide a stainless steel condensate drain pan under the evaporator coil, with threaded drain piping connection in bottom.
- D. Fan Section: Two double width, double inlet centrifugal fans, multiple "V" belt driven by a maximum 1750 RPM motor, mounted on an adjustable slide base. Install wheels on a heavy duty steel shaft having self-aligning ball bearings. Statically and dynamically balance fan assembly at factory.
- E. Filter Chamber: Integral part of unit provided with access from both sides of unit. Provide filters as recommended by the manufacturer.
- F. Accessories: Provide each air conditioner with the following:
1. Vibration isolation base, of type and kind as recommended and furnished by the air conditioner manufacturer.
  2. Removable rear panels (for center of room installations).
  3. Automatic flush cycle on humidifiers.
  4. Hot gas by-pass.
  5. Disconnect switch (non-locking or locking).
- G. Control Center: Integral part of the units, located on the front side with a hinged door. Provide solid state electronic circuitry, factory wired, with each circuit individually fused and provided with contractors, relays and starters controlled by a 24 volt control circuit. Isolate center from conditioned air stream so as to allow for servicing with the system in operation.
- H. Electronic Control System:
1. Total solid state system including start button, stop button, silencing button, temporary loss of power indicator, manual reset circuit breakers, plug-in solid state temperature control with sensitivity adjustment, plug-in solid state humidity control and a back lighted monitoring panel. No visible indicating light shall appear on the panel, unless the actual operating system function requires. When required by system demand the following visual indicators shall appear: Cooling Stage 1 & 2, Heating Stage 1, 2 & 3; Humidification, Dehumidification, Change Filters.

2. Provide each temperature and humidity controller with an adjusting sensing point for room conditions. In addition, provide the temperature and humidity controls with a "push-to-test" calibration check button and built-in visual indicators to indicate control mode of operation. Provide all controls and control sensors of the easily accessible, plug-in module type.
- I. Winter Control System: Provide a control system utilizing condenser fan speed control complete with pressure transducers, thermostats and control circuit factory wired and packaged to form a fan speed control box, designed for field installation. Pressure transducer shall automatically sense the highest pressure of operating compressors and control the variable speed condenser fan so as to maintain proper head pressure. Design of system shall allow for positive start-up in an ambient temperature of -30 degrees F. Provide with fan speed control system a solid state winter start-up kit to be installed as an integral part of the control panel. Include with winter control package insulated refrigerant receivers, pressure relief valves for each circuit, head pressure three-way control valves and valves for isolating the refrigerant charge.

## **2.02 REMOTE AIR COOLED CONDENSER**

- A. General: Provide an air cooled refrigerant condenser of the draw-through vertical discharge type. Furnish unit complete with a multiple circuit coil; direct driven electric motor operated propeller fans, all totally protected by a heavy duty sheet metal casing, complete with a structural metal stand and wire fan guards. Furnish unit completely factory assembled and provided with all the necessary control and accessories, for operation in ambient air temperatures down to -30 degrees F.
- B. Fabrication:
  1. Casing: Heavy gage galvanized steel or aluminum sheet metal, reinforced and bolted or welded to assure rigidity. Provide gasketed access panels as required for servicing the motors and all components.
  2. Fan Assembly: Propeller type fans arranged for vertical discharge, with aluminum blades and center hubs of zinc coated steel with a corrosion-resistant coating. Coat fan shafts with a weather-resistant coating. Furnish drip-proof fan motors, resiliently mounted and designed for year-round operation, with permanently lubricated ball bearings.
  3. Coil: Multiple circuit high capacity type, fabricated of seamless copper tubing with aluminum fins mechanically bonded to tubing. Furnish a maximum fin spacing of 10 per inch.
  4. Finish: Provide all exposed surfaces of condenser with a factory applied corrosion-resistant baked enamel finish.

**PART 3 EXECUTION****3.01 INSTALLATION**

- A. Unless otherwise shown or specified install the Work of this Section in accordance with the manufacturer's printed installation instructions.
- B. Provide all piping and electrical connections to units through knock-out openings in bottom of units.

**3.02 FIELD QUALITY CONTROL**

- A. Preliminary Requirements: Provide the services of a Company Field Advisor for the following:
  - 1. Inspect air conditioning system installations prior to start-up.
  - 2. Supervise initial start-up of equipment.
  - 3. Instruction of City Personnel.
  - 4. Service.
- B. Air Conditioning System Pre-Start-Up and Start-Up:
  - 1. Upon completion of air conditioner installations, the Company Field Advisor shall visit the site, inspect the installations and notify the Engineer of any Work which must be done or modified prior to start-up.
  - 2. Upon completion of required Work, or modifications to installed Work and miscellaneous testing, all as required by the particular air conditioning system or apparatus, the Company Field Advisor shall supervise the conditioner start-up.
  - 3. Start-up the system and conduct a preliminary test, for the purpose of checking the general operation of the air conditioner, proving mechanical and electrical controls and making necessary adjustments.
  - 4. Provide pre-start-up check list, start-up list and operating instructions for air conditioner, framed under rigid plastic and place where directed in the Computer Room.
- C. Instruction of City Personnel: The manufacturer's representative shall instruct authorized City Personnel in the operation and maintenance of the air conditioning equipment and all accessories. Provide a minimum of hours for instruction purposes, exclusive of all pre-start-up, start-up and service call time.

**END OF SECTION**

**SECTION 26 0519 – LOW-VOLTAGE ELECTRICAL POWER CONDUCTORS AND CABLES****PART 1 GENERAL****1.1 SUBMITTALS**

- A. Product Data: Catalog sheets, specifications and installation instructions.

**1.2 PRODUCT DELIVERY**

- A. Mark and tag insulated conductors and cables for delivery to the site. Include:
1. Contractor's name.
  2. Project title and number.
  3. Date of manufacture (month & year).
  4. Manufacturer's name.
  5. Data which explains the meaning of coded identification (UL assigned electrical reference numbers, UL assigned combination of color marker threads, etc.).
  6. Environmental suitability information (listed or marked "sunlight resistant" where exposed to direct rays of sun; wet locations listed/marked for use in wet locations; other applications listed/marked suitable for the applications).

**1.3 CODES AND STANDARDS**

- A. National Fire Protection Association (NFPA):
1. NFPA 70 National Electrical Codes.
- B. Underwriters Laboratories, Inc.:
1. UL 13 Power Limited Circuit Cables.
  2. UL 44 Thermoset-Insulated Wires and Cables.
  3. UL-83 Thermoplastic Insulated Wire and Cables.
  4. UL486A Wire Connectors for Use with Copper Conductors.
  5. UL 486B Wire Connectors and Soldering Lugs for Use with Aluminum Conductors.
  6. UL 486C Splicing Wire Connectors
  7. UL 486D Insulated Wire Connector Systems for Underground Use or in Damp or Wet Locations.
  8. UL 486E Equipment Wiring Terminals for Use with Aluminum and/or Copper Conductors.
  9. UL 493 Thermoplastic Insulated Underground Feeder and Branch Circuit Cables.
  10. UL 510 Polyvinyl Chloride, Polyethylene, and Rubber Insulating Tape.
  11. UL 854 Service Entrance Cables.

12. UL 1569 Metal Clad Cables.
- C. National Electrical Manufacturers Association (NEMA):
  1. WC-30 Color Coding of Wires and Cables.
  2. ICEA/S-73-532/NEMA WC-57 Control Cables.
  3. ICEA/S-95-658/NEMA WC-70 Nonshielded 0-2kV Cables

## **PART 2 PRODUCTS**

### **2.1 INSULATED CONDUCTORS AND CABLES**

- A. Date of Manufacture: No insulated conductor more than one year old when delivered to the site will be acceptable.
- B. Acceptable Companies: American Insulated Wire Corp., BICC General Cable Industries Inc., Cerro Wire & Cable Co. Inc., Pirelli Cable Corp., Rome Cable Corp., Southwire Co or approved equal.
- C. Conductors: Annealed uncoated copper or annealed coated copper in conformance with the applicable standards for the type of insulation to be applied on the conductor. Conductor sizes No. 8 and larger shall be stranded.
- D. Types:
  1. Electric Light and Power Wiring:
    - a. General: Rated 600V, NFPA 70 Type FEP, THHN, THW, THW-2, THWN, THWN-2, XHH, XHHW, XHHW-2.
    - b. THWN Gasoline and Oil Resistant: Polyvinylchloride insulation rated 600 V with nylon jacket conforming to UL requirements for type THWN insulation, with the words "GASOLINE AND OIL RESISTANT II" marked thereon.
    - c. USE, USE-2: Dual rated heat and moisture resistant "EPR" insulation rated 600 V with jacket or dual purpose insulation/protective covering conforming to UL requirements for type USE service entrance cables.
  2. Class 1 Wiring:
    - a. No. 18 and No. 16 AWG: Insulated copper conductors suitable for 600 volts, NFPA 70 types KF-2, KFF-2, PAFF, PF, PFF, PGF, PGFF, PTF, SF-2, SFF-2, TF, TFF, TFN, TFFN, ZF, or ZFF.
    - b. Larger than No. 16 AWG: Insulated copper conductors suitable for 600 volts, in compliance with NFPA 70 Article 310.
    - c. Conductor with other types and thickness of insulation may be used if listed for Class 1 circuit use.

3. Class 2 Wiring:
  - a. Multiconductor Cables: NFPA 70 Article 725, Types CL2P, CL2R, CL2.
  - b. Other types of cables may be used in accordance with NFPA 70 Table 725-61 "Cable Uses and Permitted Substitutions", as approved.
4. Class 3 Wiring:
  - a. Single Conductors No. 18 and No. 16 AWG: Same as Class 1 No. 18 and No. 16 AWG conductors except that:
    - 1) Conductors are also listed as CL3.
    - 2) Voltage rating not marked on cable except where cable has multiple listings and voltage marking is required for one or more of the listings.
  - b. Multiconductor Cables: NFPA 70 Article 725, Types CL3P, CL3R, CL3.
  - c. Other types of cables may be used in accordance with NFPA 70, Table 725-61 "Cable Uses and Permitted Substitutions", as approved.

## 2.2 ELECTRICAL CIRCUIT PROTECTIVE SYSTEM

- A. Minimum 1-Hour Fire Rating: A system listed in UL Building Materials Directory, product category Electrical Circuit Protective Systems (FHIT).

## 2.3 CONNECTORS

- A. General:
  1. Connectors specified are part of a system. Furnish connectors and components, and use specific tools and methods as recommended by connector manufacturer to form complete connector system.
  2. Connectors shall be UL 486 A listed, or UL 486 B listed for combination dual rated copper/aluminum connectors (marked AL7CU for 75 degrees C rated circuits and AL9CU for 90 degrees C rated circuits).
- B. Splices:
  1. Spring Type:
    - a. Rated 105° C, 600V; Buchanan/Ideal Industries Inc.'s B-Cap, Electrical Products Div./3M's Scotchlok Type Y, R, G, B, O/B+, R/Y+, B/G+, or Ideal Industries Inc.'s Wing Nuts or Wire Nuts or approved equal.
    - b. Rated 150° C, 600V; Ideal Industries Inc.'s High Temperature Wire-Nut Model 73B, 59B, 3M, Waytek Inc. or approved equal.

2. Indent Type with Insulating Jacket:
    - a. Rated 105° C, 600V; Buchanan/Ideal Industries Inc.'s Crimp Connectors, Ideal Industries Inc.'s Crimp Connectors, Penn-Union Corp.'s Penn-Crimps, Thomas & Betts Corp.'s STA-KON or approved equal.
  3. Indent Type (Uninsulated): Anderson/Hubbell's Versa-Crimp, VERSAtile, Blackburn/T&B Corp.'s Color-Coded Compression Connectors, Electrical Products Div./3M's Scotchlok 10000, 11000 Series, Framatome Connectors/Burndy's Hydent, Penn-Union Corp.'s BCU, BBCU Series, Thomas & Betts Corp.'s Compression Connectors or approved equal.
  4. Connector Blocks: NSI Industries Inc.'s Polaris System, Cooper Industries, Thomas & Betts or approved equal.
  5. Resin Splice Kits: Electrical Products Div./3M's Scotchcast Brand Kit Nos. 82A Series, 82-B1 or 90-B1, Scotchcast Brand Resin Pressure Splicing Method or approved equal.
  6. Heat Shrinkable Splices: Electrical Products Div./3M's ITCSN, Raychem Corp.'s Thermofit Type WCS, Thomas & Betts Corp.'s SHRINK-KON Insulators or approved equal.
  7. Cold Shrink Splices: Electrical Products Div./3M's 8420 Series, 5418A Wesco, SPA004SX Eaton or approved equal.
- C. Gutter Taps: Anderson/Hubbell's GP/GT with GTC Series Covers, Blackburn/T&B Corp.'s H-Tap Type CF with Type C Covers, Framatome Connectors/Burndy's Polytap KPU-AC, H-Crimpit Type YH with CF-FR Series Covers, ILSCO's GTA Series with GTC Series Covers, Ideal Industries Inc.'s Power-Connect GP, GT Series with GIC covers, NSI Industries Inc.'s Polaris System, OZ/Gedney Co.'s PMX or PT with PMXC, PTC Covers, Penn-Union Corp.'s CDT Series, Thomas & Betts Corp.'s Color-Keyed H Tap CHT with HTC Covers or approved equal.
- D. Terminals: Nylon insulated pressure terminal connectors by Amp-Tyco/Electronics, Electrical Products Div./3M, Framatome Connectors/Burndy, Ideal Industries Inc., Panduit Corp., Penn-Union Corp., Thomas & Betts Corp., Wiremold Co or approved equal.
- E. Lugs:
1. Single Cable (Compression Type Lugs): Copper, one or 2 hole style (to suit conditions), long barrel; Anderson/Hubbell's VERSAtile VHCL, Blackburn/T&B Corp.'s Color-Coded CTL, LCN, Framatome Connectors/Burndy's Hylug YA, Electrical Products Div./3M Scotchlok 31036 or 31145 Series, Ideal Industries Inc.'s CCB or CCBL, NSI Industries Inc.'s L, LN Series, Penn-Union Corp.'s BBLU Series, Thomas & Betts Corp.'s 54930BE or 54850BE Series or approved equal.
  2. Single Cable (Mechanical Type Lugs): Copper, one or 2 hole style (to suit conditions); Blackburn/T&B Corp.'s Color-Keyed Locktite Series, Framatome Connectors/Burndy's Qiklug Series, NSI

Industries Inc.'s Type TL, Penn-Union Corp.'s VI-TITE Terminal Lug Series, Thomas & Betts Corp.'s Locktite Series or approved equal.

3. Multiple Cable (Mechanical Type Lugs): Copper, configuration to suit conditions; Framatome Connectors/Burndy's Qiklug Series, NSI Industries Inc.'s Type TL, Penn-Union Corp.'s VI-TITE Terminal Lug Series, Thomas & Betts Corp.'s Color-Keyed Locktite Series or approved equal.

## 2.4 TAPES

- A. Insulation Tapes:
  1. Plastic Tape: Electrical Products Div./3M's Scotch Super 33+, Scotch 88, Plymouth Rubber Co.'s Plymouth/ Bishop Premium 85CW, Shurtape EV77 or approved equal.
  2. Rubber Tape: Electrical Products Div./3M's Scotch 130C, Plymouth Rubber Co.'s Plymouth/Bishop W963 Plysafe, Shurtape LR 117 or approved equal.
- B. Moisture Sealing Tape: Electrical Products Div./3M's Scotch 2200 or 2210, Plymouth Rubber Co.'s Plymouth/Bishop 4000 Plyseal-V, Shurtape LR 117 or approved equal.
- C. Electrical Filler Tape: Electrical Products Div./3M's Scotchfil, Plymouth Rubber Co.'s Plymouth/Bishop 125 Electrical Filler Tape, WW-EF-15 Electrical Filler Tape NSI Industries or approved equal.
- D. Color Coding Tape: Electrical Products Div./3M's Scotch 35, Plymouth Rubber Co.'s Plymouth/Bishop Premium 37 Color Coding, EV 077C Shurtape or approved equal.
- E. Arc Proofing Tapes:
  1. Arc Proofing Tape: Electrical Products Div./3M's Scotch 77, Mac Products Inc.'s AP Series, Plymouth Rubber Co.'s Plymouth/Bishop 53 Plyarc, WW-ARC-30 NSI Industries or approved equal.
  2. Glass Cloth Tape: Electrical Products Div./3M's Scotch 27/Scotch 69, Mac Products Inc.'s TAPGLA 5066,, Plymouth Rubber Co.'s Plymouth/Bishop 77 Plyglas, FT 175 Shurtape or approved equal.
  3. Glass-Fiber Cord: Mac Products Inc's MAC 0527 or approved equal.

## 2.5 WIRE-PULLING COMPOUNDS

- A. To suit type of insulation; American Polywater Corp.'s Polywater Series, Electric Products Div./3M's WL, WLX, or WLW, Greenlee Textron Inc.'s Y-ER-EAS, Cable Cream, Cable Gel, Winter Gel, Ideal Industries Inc.'s Yellow 77, Aqua-Gel II, Agua-Gel CW, Thomas & Betts Corp.'s Series 15-230 Cable Pulling Lubricants, or Series 15-631 Wire Slick or approved equal.

## 2.6 TAGS

- A. Precision engrave letters and numbers with uniform margins, character size minimum 3/16 inches high.

1. Phenolic: Two color laminated engraver's stock, 1/16 inch minimum thickness, machine engraved to expose inner core color (white).
2. Aluminum: Standard aluminum alloy plate stock, minimum .032 inches thick, engraved areas enamel filled or background enameled with natural aluminum engraved characters.

## **2.7 WIRE MANAGEMENT PRODUCTS**

- A. Cable Clamps and Clips, Cable Ties, Spiral Wraps, etc: Catamount/T&B Corp., Ideal Industries Inc, Hubbell Burndy or approved equal.

## **PART 3 EXECUTION**

### **3.1 INSTALLATION**

- A. Install conductors in raceways after the raceway system is completed.
- B. No grease, oil, or lubricant other than wire-pulling compounds specified may be used to facilitate the installation of conductors.

### **3.2 CIRCUITING**

- A. Do not change, group or combine circuits other than as indicated on the drawings without written permission from the Engineer.

### **3.3 COMMON NEUTRAL CONDUCTOR**

- A. A common neutral may be used for 2 or 3 branch circuits where the circuits are indicated on the drawings to be enclosed within the same raceway, provided each branch circuit is connected to different phase busses in the panelboard.
- B. Exceptions - The following circuits shall have a separate neutral:
  1. Circuits containing ground fault circuit interrupter devices.
  2. Circuits containing solid state dimmers.
  3. Circuits recommended by equipment manufacturers to have separate neutrals.

### **3.4 CONDUCTOR SIZE**

- A. Conductor Size:
  1. For Electric Light and Power Branch Circuits: Install conductors of size shown on drawings. Where size is not indicated, the minimum size allowed is No. 12 AWG.
  2. For Class 1 Circuits:
    - a. No. 18 and No. 16 AWG may be used provided they supply loads that do not exceed 6 amps (No. 18 AWG), or 8 amps (No. 16 AWG).
    - b. Larger than No. 16 AWG: Use to supply loads not greater

than the ampacities given in NFPA 70 Section 310-15.

3. For Class 2 Circuits: Any size to suit application.
4. For Class 3 Circuits: Minimum No. 18 AWG.

### 3.5 COLOR CODING

- A. Color Coding for 120/208 Volt Electric Light and Power Wiring:
  1. Color Code:
    - a. 2 wire circuit - black, white.
    - b. 3 wire circuit - black, red, white.
    - c. 4 wire circuit - black, red, blue, white.
  2. White to be used only for an insulated grounded conductor (neutral). If neutral is not required use black and red, or black, red and blue for phase to phase circuits.
    - a. "White" for Sizes No. 6 AWG or Smaller:
      - 1) Continuous white outer finish, or:
      - 2) Three continuous white stripes on other than green insulation along its continuous length.
    - b. "White" for Sizes Larger Than No. 6 AWG:
      - 1) Continuous white outer finish, or:
      - 2) Three continuous white stripes on other than green insulation along its continuous length, or:
      - 3) Distinctive white markings (color coding tape) encircling the conductor, installed on the conductor at time of its installation. Install white color coding tape at terminations, and at 1' 0" intervals in gutters, pullboxes, and manholes.
  3. Colors (Black, Red, Blue):
    - a. For Branch Circuits: Continuous color outer finish.
    - b. For Feeders:
      - 1) Continuous color outer finish, or:
      - 2) Color coding tapes encircling the conductors, installed on the conductors at time of their installation. Install color coding tapes at terminations, and at 1' 0" intervals in gutter, pullboxes, and manholes.
- B. Color Coding For 277/480 Volt Electric Light and Power Wiring:
  1. Color Code:
    - a. 2 wire circuit – brown, gray.
    - b. 3 wire circuit – brown, yellow, gray.
    - c. 4 wire circuit – brown, yellow, orange, gray.

2. Gray to be used only for an insulated grounded conductor (neutral). If neutral is not required use brown and yellow, or brown, yellow and orange for phase to phase circuits.
  - a. "Gray" For Sizes No. 6 AWG or Smaller.
    - 1) Continuous gray outer finish.
  - b. "Gray" For Sizes Larger Than No. 6 AWG:
    - 1) Distinctive gray markings (color coding tape) encircling the conductor, installed on the conductor at time of its installation. Install gray color coding tape at terminations, and at 1' 0" intervals in gutters, pullboxes, and manholes.
  - c. Colors (Brown, Yellow, Orange):
  - d. For Branch Circuits: Continuous color outer finish.
  - e. For Feeders:
    - 1) Continuous color outer finish, or:
    - 2) Color coding tapes encircling the conductors, installed on the conductors at the time of their installation. Install color coding tapes at terminations, and at 1' 0" intervals in gutters, pullboxes, and manholes.
- C. More Than One Nominal Voltage System Within A building: Permanently post the color coding scheme at each branch-circuit panelboard.
- D. Existing Color Coding Scheme: Where an existing color coding scheme is in use, match the existing color coding if it is in accordance with the requirements of NFPA 70.
- E. Color Code For Wiring Other Than Electric Light and Power: In accordance with ICEA/NEMA WC-30 "Color Coding of Wires and Cables". Other coding methods may be used, as approved.

### 3.6 IDENTIFICATION

- A. Identification Tags: Use tags to identify feeders and designated circuits. Install tags so that they are easily read without moving adjacent feeders or requiring removal of arc proofing tapes. Attach tags with non-ferrous wire or brass chain.
  1. Interior Feeders: Identify each feeder in pullboxes and gutters. Identify by feeder number and size.
  2. Exterior Feeders: Identify each feeder in manholes and in interior pullboxes and gutters. Identify by feeder number and size, and also indicate panel designation from which feeder originates.
  3. Street and Grounds Lighting Circuits: Identify each circuit in manholes and lighting standard bases. Identify by circuit number and size, and also indicate building number and panel designation from which circuit originates.

- B. Identification Plaque: Where a building or structure is supplied by more than one service, or has any combination of feeders, branch circuits, or services passing through it, install a permanent plaque or directory at each service, feeder and branch circuit disconnect location denoting all other services, feeders, or branch circuits supplying that building or structure or passing through that building or structure and the area served by each.

### **3.7 WIRE MANAGEMENT**

- A. Use wire management products to bundle, route, and support wiring in junction boxes, pullboxes, wireways, gutters, channels, and other locations where wiring is accessible.

### **3.8 EQUIPMENT GROUNDING CONDUCTOR**

- A. Install equipment grounding conductor:
  - 1. Where specified in other Sections or indicated on the drawings.
  - 2. In conjunction with circuits recommended by equipment manufacturers to have equipment grounding conductor.
- B. Equipment grounding conductor is not intended as a current carrying conductor under normal operating circumstances.
- C. Color Coding For Equipment Grounding Conductor:
  - 1. Color Code: Green.
  - 2. "Green" For sizes No. 6 AWG or Smaller:
    - a. Continuous green outer finish, or:
    - b. Continuous green outer finish with one or more yellow stripes, or:
    - c. Bare copper (see exception below).
  - 3. "Green" For Sizes Larger Than No. 6:
    - a. Stripping the insulation or covering from the entire exposed length (see exception below).
    - b. Marking the exposed insulation or covering with green color coding tapes.
    - c. Identify at each end and at every point where the equipment grounding conductor is accessible.
  - 4. Exception For use of Bare Copper: Not allowed for use where NFPA 70 specifically requires equipment grounding conductor to be insulated, or where specified in other Sections or indicated on the drawings to be insulated.

### **3.9 SPECIAL GROUNDING CONDUCTORS**

- A. Technical Power System Grounding (Equipment grounding conductor isolated from the premises grounded conductor except at a single grounded termination point): Install an insulated grounding conductor

running with the circuit conductors for isolated receptacles or utilization equipment requiring an isolated ground:

1. Color Code: Green.
2. "Green" For Isolated Grounding Conductor:
  - a. Continuous green outer finish, or:
  - b. Continuous green outer finish with one or more yellow stripes, and:
  - c. Different than the "green" used for the equipment grounding conductor run with the circuit (where required).
3. Install label at every point where the conductor is accessible, identifying it as an "Isolated Grounding Conductor".

### 3.10 ARC PROOFING

- A. Arc proof feeders installed in a common pullbox or manhole as follows:
  1. Arc proof new feeders.
  2. Arc proof existing feeders that are spliced to new feeders.
  3. Arc proof each feeder as a unit (except feeders consisting of multiple sets of conductors).
  4. Arc proof feeders consisting of multiple sets of conductors by arc proofing each set of conductors as a unit.
  5. Arc proof feeders with half-lapped layer of 55 mils thick arc proofing tape and random wrapped or laced with glass cloth tape or glass-fiber cord. For arc proofing tape less than 55 mils thick, add layers to equivalent of 55 mils thick arc proofing tape.

### 3.11 INSULATED CONDUCTOR AND CABLE SCHEDULE - TYPES AND USE

- A. Electric Light and Power Circuits:
  1. FEP, THHN, THW, THW-2, THWN, THWN-2, XHH, XHHW, or XHHW-2: Wiring in dry or damp locations (except where special type insulation is required).
  2. THWN, THWN-2, XHHW, XHHW-2, USE, or USE-2: Wiring in wet locations (except where type USE or USE-2 insulated conductors are specifically required, or special type insulation is required).
  3. THHN, THW-2, THWN-2, XHHW, or XHHW-2: Wiring for electric discharge lighting circuits (fluorescent, HID), except where fixture listing requires wiring rated higher than 90° C.
  4. THWN Marked "Gasoline and Oil Resistant": Wiring to gasoline and fuel oil pumps.
  5. USE, or USE-2: Underground/ below grade wiring.
  6. USE, or USE-2 Marked "Sunlight Resistant":
    - a. Service entrance wiring to the service equipment.
    - b. Wiring exposed to the weather and unprotected (except where special type insulation is required).

- B. Emergency Feeder Circuits: Use electrical circuit protective system.
- C. Class 1 Circuits: Use Class 1 wiring specified in Part 2 (except where special type insulation is required).
- D. Class 2 Circuits: Use Class 2 wiring specified in Part 2 (except where special type insulation is required).
- E. Class 3 Circuits: Use Class 3 wiring specified in Part 2 (except where special type insulation is required).

### 3.12 CONNECTOR SCHEDULE - TYPES AND USE

- A. Temperature Rating: Use connectors that have a temperature rating, equal to, or greater than the temperature rating of the conductors to which they are connected.
- B. Splices:
  - 1. Locations:
    - a. For Conductors No. 8 AWG or Smaller: Use spring type pressure connectors, indent type pressure connectors with insulating jackets, or connector blocks (except where special type splices are required).
    - b. For Conductors No. 6 AWG or Larger: Use connector blocks or uninsulated indent type pressure connectors. Fill indentions in uninsulated connectors with electrical filler tape and apply insulation tape to insulation equivalent of the conductor, or insulate with heat shrinkable splices or cold shrink splices.
    - c. Gutter Taps in Panelboards: For uninsulated type gutter taps fill indentions with electrical filler tape and apply insulation tape to insulation equivalent of the conductor, or insulate with gutter tap cover.
  - 2. Damp Locations: As specified for dry locations, except apply moisture sealing tape over the entire insulated connection (moisture sealing tape not required if heat shrinkable splices or cold shrink splices are used).
  - 3. Wet Locations: Use uninsulated indent type pressure connectors and insulate with resin splice kits, cold shrink splices or heat shrinkable splices.  
  
Exception: Splices above ground which are totally enclosed and protected in NEMA 3R, 4, 4X enclosures may be spliced as specified for damp locations.
- C. Terminations:
  - 1. For Conductors No. 10 AWG or Smaller: Use terminals for:
    - a. Connecting wiring to equipment designed for use with terminals.
  - 2. For Conductors No. 8 AWG or Larger: Use compression or mechanical type lugs for:

- a. Connecting cables to flat bus bars.
  - b. Connecting cables to equipment designed for use with lugs.
3. For Conductor Sizes Larger Than Terminal Capacity On Equipment: Reduce the larger conductor to the maximum conductor size that terminal can accommodate (reduced section not longer than one foot). Use compression or mechanical type connectors suitable for reducing connection.

**END OF SECTION**

**SECTION 26 0526 – GROUNDING AND BONDING FOR ELECTRICAL SYSTEMS****PART 1 GENERAL****1.1 SUBMITTALS**

- A. Product Data: Catalog sheets, specifications and installation instructions.

**PART 2 PRODUCTS****2.1 MATERIALS**

- A. Ground Clamps (Cable to Pipe): Blackburn/T&B Corp.'s GUV, Framatome Connectors/Burndy Corp.'s GAR, GD, GP, GK, OZ/Gedney Co.'s ABG, CG or approved equal.
- B. Ground Clamps (Cable to Rod): Blackburn/T&B Corp.'s GG, GGH, JAB, JABH, GUV, Dossert Corp.'s GN, GPC, Framatome Connectors/Burndy Corp.'s GP, GX, GRC, OZ/Gedney Co.'s ABG or approved equal.
- C. Ground Lugs: Copper, one or 2 hole style (to suit conditions), long barrel; Anderson/Hubbell's VERSAtile VHCL, Blackburn/T&B Corp.'s Color-Coded CTL, LCN, Framatome Connectors/Burndy's Hylug YA, Electrical Products Div./3M Scotchlok 31036 or 31145 Series, Ideal Industries Inc.'s CCB or CCBL, or Thomas & Betts Corp.'s 54930BE ,54850BE Series or approved equal.
- D. Exothermic Type Weld: Erico Inc.'s Cadweld Process, Furseweld/T&B Corp.'s, Hubbell BurndyExothermic Welding System or approved equal.
- E. Compression Connectors: Thomas & Betts, Burndy Corp.'s, 3M ScotchlokHyground System or approved equal.
- F. Rod Electrodes: Copper clad (minimum .010 jacket) ground rods minimum 3/4 inches diameter by 10'-0" long.
- G. Plate Electrodes: Copper plates minimum 0.06 inches thick by 2'-0" square feet of surface area.
- H. Grounding Electrode Conductors and Bonding Conductors: Copper conductors, bare or insulated with THW, THW-2, XHHW, XHHW-2, THWN, THWN-2 or THHN insulation.
- I. Hardware: Silicon-bronze bolts, nuts, flat and lock washers etc. as manufactured by Dossert Corp., Framatome Connectors/Burndy Corp., OZ/Gedney Co or approved equal.

**PART 3 EXECUTION****3.1 INSTALLATION**

- A. Connections:
  - 1. Make grounding and bonding connections, except buried connections, with silicon-bronze hardware and ground clamps, ground lugs or compression connectors, to suit job conditions.

2. For buried connections use exothermic type weld or compression connectors.

**END OF SECTION**

**SECTION 26 05 29 – HANGERS AND SUPPORTS FOR ELECTRICAL SYSTEMS****PART 1 GENERAL****1.1 SUBMITTALS**

- A. Shop Drawings: Show support details if different from methods specified or shown on the drawings.
- B. Product Data: Catalog sheets, specifications and installation instructions.

**PART 2 PRODUCTS****2.1 ANCHORING DEVICES**

- A. Sleeve Anchors (FS FF-S-325 Group II, Type 3, Class 3): Molly/Emhart's Parasleeve Series, Phillips' Red Head AN, HN, FS Series, Ramset's Dynabolt Series or approved equal.
- B. Wedge Anchors (FS FF-S-325 Group II, Type 4, Class 1): Hilti's Kwik Bolt Series, Molly/Emhart's Parabolt Series, Phillips' Red Head WS, Ramset's Trubolt Series or approved equal.
- C. Self-Drilling Anchors (FS FF-S-325 Group III, Type 1): Phillips' Red Head Series S, Ramset's Ram Drill Series or approved equal.
- D. Non-Drilling Anchors (FS FF-S-325 Group VIII, Type 1): Hilti's Drop-In Anchor Series, Phillips' Red Head J Series, Ramset's Dynaset Series or approved equal.
- E. Stud Anchors (FS FF-S-325 Group VIII, Type 2): Phillips' Red Head JS Series or approved equal.

**2.2 CAST-IN-PLACE CONCRETE INSERTS**

- A. Continuous Slotted Type Concrete Insert, Galvanized:
  - 1. Load Rating 2000 lbs./ft.: Kindorf's D-990.
  - 2. Manufactured by Kindorf Thomas & Betts, B-line, Versa Bar or approved equal.
- B. Threaded Type Concrete Insert: Galvanized ferrous castings, internally threaded.
- C. Wedge Type Concrete Insert: Galvanized box-type ferrous castings, designed to accept bolts having special wedge shaped heads.

**2.3 MISCELLANEOUS FASTENERS**

- A. Except where shown otherwise on the Drawings, furnish type, size, and grade required for proper installation of the Work, selected from the following: Furnish galvanized fasteners for exterior use, or for items anchored to exterior walls, except where stainless steel is indicated.
  - 1. Standard Bolts and Nuts: ASTM A 307, Grade A, regular hexagon head.
  - 2. Lag Bolts: FS FF-B-561, square head type.

3. Machine Screws: FS FF-S-92, cadmium plated steel.
  4. Machine Bolts: FS FF-B-584 heads; FF-N-836 nuts.
  5. Wood Screws: FS FF-S-111 flat head carbon steel.
  6. Plain Washers: FS FF-W-92, round, general assembly grade carbon steel.
  7. Lock Washers: FS FF-W-84, helical spring type carbon steel.
  8. Toggle Bolts: Tumble-wing type; FS FF-B-588, type, class and style as required to sustain load.
- B. Stainless Steel Fasteners: Type 302 for interior Work; Type 316 for exterior Work; Phillips head screws and bolts for exposed Work unless otherwise specified.

## **2.4 TPR (THE PEEL RIVET) FASTENERS**

- A. 1/4 inch diameter, threadless fasteners distributed by Subcon Products, SFS Intec, Ornit blind rivets or approved equal.

## **2.5 POWDER DRIVEN FASTENER SYSTEMS**

- A. Olin Corp.'s Ramset Fastening Systems, or Phillips Drill Company Inc.'s Red Head Powder, Hilti Inc Actuated Systems or approved equal.

## **2.6 HANGER RODS**

- A. Mild low carbon steel, unless otherwise specified; fully threaded or threaded each end, with nuts as required to position and lock rod in place. Unless galvanized or cadmium plated, provide a shop coat of red lead or zinc chromate primer paint.

## **2.7 "C" BEAM CLAMPS**

- A. With Conduit Hangers:
1. For 1 Inch Conduit Maximum: B-Line Systems Inc.'s BG-8, BP-8 Series, Caddy/Erico Products Inc.'s BC-8P and BC-8PSM Series, GB Electrical Inc.'s HIT 110-412 Series or approved equal.
  2. For 3 Inch Conduit Maximum: Appleton Electric Co.'s BH-500 Series beam clamp with H50W/B Series hangers, Kindorf's 500 Series beam clamp with 6HO-B Series hanger, OZ/Gedney Co.'s IS-500 Series beam clamp with H-OWB Series hanger or approved equal.
  3. For 4 Inch Conduit Maximum: Kindorf's E-231 beam clamp and E-234 anchor clip and C-149 series lay-in hanger; Unistrut Corp.'s P2676 beam clamp and P-1659A Series anchor clip with J1205 Series lay in hanger, Eaton B-Line Beam C Clamps HDG, Emerson Appleton Beam Clamp or approved equal.
- B. For Hanger Rods:
1. For 1/4 Inch Hanger Rods: B-Line Systems Inc.'s BC, Caddy/Erico Products Inc.'s BC, GB Electrical Inc.'s HIT 110, Kindorf's 500, 510, Unistrut Corp.'s P1648S, P2398S, P2675, P2676 or approved equal.
  2. For 3/8 Inch Hanger Rods: Caddy/Erico Products Inc.'s BC, Kindorf's 231-3/8, 502, Unistrut Corp.'s P1649AS, P2401S, P2675, P2676 or approved equal.
  3. For 1/2 Inch Rods: Appleton Electric Co. BH-500 Series, Kindorf's 500 Series, 231-1/2, OZ/Gedney Co.'s IS-500 Series, Unistrut Corp.'s P1650AS, P2403S, P2676 or approved equal.

4. For 5/8 Inch Rods: Unistrut Corp.'s P1651AS beam clamp and P1656A Series anchor clip or approved equal.
5. For 3/4 Inch Rods: Unistrut Corp.'s P1653S beam clamp and P1656A Series anchor clip or approved equal.

## 2.8 CHANNEL SUPPORT SYSTEM

- A. Channel Material: 12 gage steel.
- B. Finishes:
  1. Phosphate and baked green enamel/epoxy.
  2. Pre-galvanized.
  3. Electro-galvanized.
  4. Hot dipped galvanized.
  5. Polyvinyl chloride (PVC), minimum 15 mils thick.
- C. Fittings: Same material and finish as channel.
- D. UL Listed Systems:
  1. B-Line Systems Inc.'s B-22 (1-5/8 x 1-5/8 inches), B-12 (1-5/8 x 2-7/16 inches), B-11 (1-5/8 x 3-1/4 inches).
  2. Grinell Corp.'s Allied Power-Strut PS 200 (1-5/8 x 1-5/8 inches), PS 150 (1-5/8 x 2-7/16 inches), PS 100 (1-5/8 x 3-1/4 inches).
  3. Kindorf's B-900 (1-1/2 x 1-1/2 inches), B-901 (1-1/2 x 1-7/8 inches), B-902 (1-1/2 x 3 inches).
  4. Unistrut Corp.'s P-3000 (1-3/8 x 1-5/8 inches), P-5500 (1-5/8 x 2-7/16 inches), P-5000 (1-5/8 x 3-1/4 inches).
  5. Versabar Corp.'s VA-1 (1-5/8 x 1-5/8 inches), VA-3 (1-5/8 x 2-1/2 inches).
  6. Or approved equal.

## 2.9 MISCELLANEOUS FITTINGS

- A. Side Beam Brackets: B-Line Systems Inc.'s B102, B103, B371-2, Kindorf's B-915, or Versabar Corp.'s VF-2305, VF-2507 or approved equal.
- B. Pipe Straps:
  1. Two Hole Steel Conduit Straps: B-Line Systems Inc.'s B-2100 Series, Kindorf's C-144 Series, Unistrut Corp.'s P-2558 Series or approved equal.
  2. One Hole Malleable Iron Clamps: Kindorf's HS-400 Series, OZ/ Gedney Co.'s 14-G Series, 15-G Series (EMT) or approved equal.
- C. Deck Clamps: Caddy/Erico Products Inc.'s DH-4-T1 Series or approved equal.
- D. Fixture Stud and Strap: OZ/Gedney Co.'s SL-134, Steel City's FE-431 or approved equal.
- E. Supporting Fittings for Pendent Mounted Industrial Type Fluorescent Fixtures on Exposed Conduit System:

1. Ball Hanger: Appleton Electric Co.'s AL Series, Crouse-Hinds Co.'s AL Series, Eaton Cooper Industries or approved equal.
  2. Flexible Fixture Hanger: Appleton Electric Co.'s UNJ-50, UNJ-75, Crouse-Hinds Co.'s UNJ115, Eaton Cooper Industries or approved equal.
  3. Flexible (Hook Type) Fixture Hanger: Appleton Electric Co.'s FHFF, Crouse-Hinds Co.'s UNH-1, Eaton Cooper Industries or approved equal.
  4. Eyelet: Unistrut Corp.'s M2250, Eaton Cooper Industries, Schneider Electric or approved equal.
  5. Eyelet with Stud: Kindorf's H262, Unistrut Corp.'s M2350, Schneider Electric, Eaton Cooper Industries or approved equal.
  6. Conduit Hook: Appleton Electric Co.'s FHSN, Crouse-Hinds Co.'s UNH-13, Eaton Cooper Industries or approved equal.
- F. Supporting Fasteners (Metal Stud Construction): Metal stud supports, clips and accessories as produced by Caddy/Erico, Eaton Cooper Industries, Schneider Electric Products Inc or approved equal.

## **PART 3 EXECUTION**

### **3.1 INSTALLATION**

- A. Where specific fasteners are not specified or indicated for securing items to in-place construction, provide appropriate type, size, and number of fasteners for a secure, rigid installation.
- B. Install anchoring devices and other fasteners in accordance with manufacturer's printed instructions.
- C. Make attachments to structural steel wherever possible.

### **3.2 FASTENER SCHEDULE**

- A. Material:
  1. Use cadmium or zinc coated anchors and fasteners in dry locations.
  2. Use hot dipped galvanized or stainless steel anchors and fasteners in damp and wet locations.
  3. For corrosive atmospheres or other extreme environmental conditions, use fasteners made of materials suitable for the conditions.
- B. Types and Use: Unless otherwise specified or indicated use:
  1. Cast-in-place concrete inserts in fresh concrete construction for direct pull-out loads such as shelf angles or fabricated metal items and supports attached to concrete slab ceilings.
  2. Anchoring devices to fasten items to solid masonry and concrete when the anchor is not subjected to pull out loads, or vibration in shear loads.
  3. Toggle bolts to fasten items to hollow masonry and stud partitions.
  4. TPR fasteners to fasten items to plywood backed gypsum board ceilings.

5. Metallic fasteners installed with electrically operated or powder driven tools for approved applications, except:
  - a. Do not use powder driven drive pins or expansion nails.
  - b. Do not attach powder driven or welded studs to structural steel less than 3/16 inch thick.
  - c. Do not support a load, in excess of 250 lbs from any single welded or powder driven stud.
  - d. Do not use powder driven fasteners in precast concrete.

### 3.3 ATTACHMENT SCHEDULE

- A. General: Make attachments to structural steel or steel bar joists wherever possible. Provide intermediate structural steel members where required by support spacing. Select steel members for use as intermediate supports based on a minimum safety factor of 5.
  1. Make attachments to steel bar joists at panel points of joists.
  2. Do not drill holes in main structural steel members.
  3. Use "C" beam clamps for attachment to steel beams.
- B. Where it is not possible to make attachments to structural steel or steel bar joists, use the following methods of attachment to suit type of construction unless otherwise specified or indicated on the drawings:
  1. Attachment to Steel Roof Decking (No Concrete Fill):
    - a. Decking With Hanger Tabs: Use deck clamps.
    - b. Decking Without Hanger Tabs:
      - 1) Before Roofing Has Been Applied: Use 3/8 inch threaded steel rod welded to a 4 x 4 x 1/4 inch steel plate and installed through 1/2 inch hole in roof deck.
      - 2) After Roofing Has Been Applied: Use welding studs, or self-drilling/tapping fasteners. Exercise extreme care when installing fasteners to avoid damage to roofing.
  2. Attachment to Concrete Filled Steel Decks (Total thickness, 2-1/2 inches or more):
    - a. Before Fill Has Been Placed:
      - 1) Use thru-bolts and fish plates.
      - 2) Use welded studs. Do not support a load in excess of 250 pounds from a single welded stud.
    - b. After Fill Has Been Placed: Use welded studs. Do not support a load in excess of 250 lbs from a single welded stud.
  3. Attachment to Cast-In-Place Concrete:
    - a. Fresh Concrete: Use cast-in-place concrete inserts.

4. Attachment to Cored Precast Concrete Decks:
  - a. New Construction: Use thru-bolts and fish plates before Construction Work Contractor has placed concrete fill over decks.
5. Attachment to Hollow Block or Tile Filled Concrete Deck:
  - a. New Construction: Use cast-in-place concrete inserts by having Construction Work Contractor omitting blocks and pouring solid blocks with insert where required.
6. Attachment to Waffle Type Concrete Decks:
  - a. New Construction:
    - 1) Use cast-in-place concrete inserts in fresh concrete.
    - 2) If concrete fill has been applied over deck, thru-bolts and fish plates may be used where additional concrete or roofing is to be placed over the deck.
7. Attachment to Precast Concrete Planks: Use anchoring devices, except do not make attachments to precast concrete planks less than 2-3/4 inches thick.
8. Attachment to Precast Concrete Tee Construction:
  - a. New Construction:
    - 1) Use tee hanger inserts between adjacent flanges.
    - 2) Use thru-bolts and fish plates, except at roof deck without concrete fill.
  - b. Existing Construction:
    - 1) Use anchoring devices installed in webs of tees. Install anchoring devices as high as possible in the webs.
  - c. Do not use powder driven fasteners.
  - d. Exercise extreme care in drilling holes to avoid damage to reinforcement.
9. Attachment to Wood Construction: Use side beam brackets fastened to the sides of wood members to make attachments for hangers.
  - a. Under 15 lbs Load: Attach side beam brackets to wood members with 2 No. 18 x 1-1/2 inch long wood screws, or 2 No. 16 x 1-1/2 inch long drive screws.
  - b. Over 15 lbs Load: Attach side beam brackets to wood members with bolts and nuts or lag bolts. Do not use lag bolts in wooden members having a nominal thickness (beam face) under 2 inches in size. Install bolts and nuts or lag bolts in the side of wood members at the mid-point or slightly above. Install plain washers under all nuts.

LOAD	LAG BOLT SIZE	BOLT DIA.
15 lbs to 30 lbs	3/8 x 1-3/4 inches	3/8 inch
31 lbs to 50 lbs	1/2 x 2 inches	1/2 inch
Over 50 lbs to load limit of structure.	Use bolt & nut	5/8 inch

- c. Bottom chord of wood trusses may be utilized as structural support, but method of attachment must be specifically approved.
  - d. Do not make attachments to the diagonal or vertical members of wood trusses.
  - e. Do not make attachments to the nailing strips on top of steel beams.
10. Attachment to Metal Stud Construction: Use supporting fasteners manufactured specifically for the attachment of raceways and boxes to metal stud construction.
- a. Support and attach outlet boxes so that they cannot torque/twist. Either:
    - 1) Use bar hanger assembly, or:
    - 2) In addition to attachment to the stud, also provide far side box support.

### 3.4 CONDUIT SUPPORT SCHEDULE

- A. Provide number of supports as required by New York City Electrical Code.
- B. Use pipe straps and specified method of attachment where conduit is installed proximate to surface of wood or masonry construction.
  - 1. Use hangers secured to surface with specified method of attachment where conduit is suspended from the surface.
- C. Use "C" beam clamps and hangers where conduit is supported from steel beams.
- D. Use deck clamps and hangers where conduit is supported from steel decking having hanger tabs.
  - 1. Where conduit is supported from steel decking which does not have hanger tabs, use clamps and hangers secured to decking, utilizing specified method of attachment.
- E. Use channel support system supported from structural steel for multiple parallel conduit runs.
- F. Where conduits are installed above ceiling, do not rest conduit directly on runner bars, T-Bars, etc.
  - 1. Conduit Sizes 2-1/2 Inches and Smaller: Support conduit from ceiling supports or from construction above ceiling.
  - 2. Conduit Sizes Over 2-1/2 Inches: Support conduit from beams, joists, or trusses above ceiling.

### 3.5 LIGHTING FIXTURE SUPPORT SCHEDULE

- A. General: Do not support fixtures from ceilings or ceiling supports unless it is specified or indicated on the drawings to do so.
1. Support fixtures with hanger rods attached to beams, joists, or trusses. Hanger rod diameter, largest standard size that will fit in mounting holes of fixture.
    - a. Where approved, channel supports may span and rest upon the lower chord of trusses and be utilized for the support of lighting fixtures.
    - b. Where approved, channel supports may span and be attached to the underside of beams, joists, or trusses and be utilized for the support of lighting fixtures.
  2. Use 2 nuts and 2 washers on lower end of each hanger rod to hold and adjust fixture (one nut and washer above top of fixture housing, one nut and washer below top of fixture housing).
    - a. Where specified that an adequately supported outlet box is to support a fixture or be utilized as one point of support, support the box so that it may be adjusted to bring the face of the outlet box even with surface of ceiling.
- B. Specific Installations Where Fixtures May Be Supported From New Ceilings Being Installed By Construction Work Contractor:
1. Support surface mounted fluorescent fixtures and incandescent fixtures directly from plywood backed gypsum board ceilings.
  2. Support surface mounted fluorescent fixtures and incandescent fixtures directly from framing or furring members of fire rated suspended ceilings (double gypsum board).
  3. Support recessed mounted fluorescent fixtures and incandescent fixtures directly from furring members of furred gypsum board ceilings.
  4. Support recessed mounted fluorescent fixtures and incandescent fixtures directly from the suspension system of suspended acoustical ceilings. Exception: Support each fixture weighing more than 50 pounds (including lamps) independent of the suspended ceiling grid.
  5. Deliver documents which state actual fixture weights and indicate fixture locations to the Engineer.
- C. Number of Supports For Ceiling Mounted Lighting Fixtures: Provide at least the following number of supports. Provide additional supports when recommended by fixture manufacturer, or shown on the drawings.
1. Commercial and Industrial Fluorescent Fixtures:
    - a. Support individual fluorescent fixtures less than 2 feet wide at 2 points.
    - b. Support continuous row fluorescent fixtures less than 2 feet wide at points equal to the number of fixtures plus one. Uniformly distribute the points of support over the row of fixtures.
    - c. Support individual fluorescent fixtures 2 feet or wider at 4 corners.

- d. Support continuous row fluorescent fixtures 2 feet or wider at points equal to twice the number of fixtures plus 2. Uniformly distribute the points of support over the row of fixtures.
  - e. An adequately supported outlet box may be utilized as one point of support for fixtures weighing less than 50 pounds.
2. Vandal Resistant, and Minimum Security Fluorescent Fixtures:
    - a. Support individual fluorescent fixtures less than 2 feet wide at 4 corners.
    - b. Support continuous row fluorescent fixtures less than 2 feet wide at points equal to twice the number of fixtures. Uniformly distribute the points of support.
    - c. Support individual fluorescent fixtures 2 feet or wider at each corner and one support midway along each side of longest axis (6 supports total).
    - d. Support continuous row fluorescent fixtures 2 feet or wider at points equal to 4 times the number of fixtures. Uniformly distribute the points of support.
    - e. An adequately supported outlet box may be utilized as one point of support for fixtures weighing less than 50 pounds.
  3. Medium Security Fluorescent Fixtures: Support each fixture at minimum of 6 points (each corner and midway along each side of longest axis). Outlet box shall not be counted as a point of support.
  4. Maximum Security Fluorescent Fixtures: Support each fixture at minimum of 8 points (each corner, and 2 supports spaced equally along each side of longest axis). Outlet box shall not be counted as a point of support.
  5. Mercury Vapor, Metal Halide, and High Pressure Sodium Fixtures:
    - a. Commercial Style: Support fixture at 2 points.
    - b. Industrial Style: Support individual fixtures at one point.
    - c. Vandal Resistant Style: Support fixture at 4 points.
    - d. An adequately supported outlet box may be utilized as one point of support for fixtures weighing less than 50 pounds.
  6. Commercial and Industrial Incandescent Fixtures: Support fixture from adequately supported outlet box, to suit fixture design (fixture weight less than 50 pounds).
  7. Vandal Resistant Incandescent Fixtures: Support fixture from adequately supported outlet box to suit fixture design, plus 2 fasteners through back of fixture into suitable construction behind fixture.
- D. Number of Supports For Wall Mounted Lighting Fixtures: Provide at least the following number of supports. Provide additional supports when recommended by fixture manufacturer, or shown on the drawings.
1. Commercial and Industrial Fluorescent Fixtures:
    - a. Support individual fluorescent fixtures 2 feet long or less at 2 points.
    - b. Support individual fluorescent fixtures over 2 feet long at 3 points.

- c. Support continuous row fluorescent fixtures at points equal to twice the number of fixtures. Uniformly distribute the points of support.
  - d. An adequately supported outlet box may be utilized as one point of support for fixtures weighing less than 50 pounds.
2. Vandal Resistant, and Minimum Security Fluorescent Fixtures:
- a. Support individual fluorescent fixtures 2 feet long or less at 4 points (each corner).
  - b. Support individual fluorescent fixtures over 2 feet long at 6 points (each corner and midway along each side of longest axis).
  - c. Support continuous row fluorescent fixtures at points equal to 6 times the number of fixtures. Uniformly distribute the points of support.
  - d. An adequately supported outlet box may be utilized as one point of support for fixtures weighing less than 50 pounds.
3. Medium Security, and Maximum Security Fluorescent Fixtures:
- a. Support each fluorescent fixture 2 feet long or less at minimum of 4 points (each corner).
  - b. Support each fluorescent fixture over 2 feet long, to 3 feet long at a minimum of 6 points (each corner and midway along each side of longest axis).
  - c. Support each fluorescent fixture over 3 feet long, to 8 foot long at minimum of 8 points (each corner, and 2 supports spaced equally along each side of longest axis).
  - d. Outlet box shall not be counted as a point of support.
4. Mercury Vapor, Metal Halide, and High Pressure Sodium Fixtures:
- a. Commercial and Industrial Style: Support fixture at 2 points (Support arm mounted style at 4 points).
  - b. Vandal Resistant Style: Support fixture at 4 points.
  - c. An adequately supported outlet box may be used as one point of support for fixtures weighing less than 50 pounds.
5. Commercial and Industrial Incandescent Fixtures: Support fixture from adequately supported outlet box, to suit fixture design (fixture weight less than 50 pounds).
6. Vandal Resistant Incandescent Fixtures: Support fixture from adequately supported outlet box to suit fixture design, plus 2 fasteners through back of fixture into suitable construction behind fixture.

### **3.6 CHANNEL SUPPORT SYSTEM SCHEDULE**

- A. Use channel support system where specified or indicated on the drawings.
- B. Channel supports may be used, as approved, to accommodate mounting of equipment.

C. Material and Finish:

1. Dry Locations: Use 12 gage steel channel support system having any one of the specified finishes.
2. Damp Locations: Use 12 gage steel channel support system having any one of the specified finishes except green epoxy/enamel.
3. Wet Locations: Use 12 gage steel channel support system having hot dipped galvanized, or PVC finish.

**END OF SECTION**

**SECTION 26 0533 – RACEWAY AND BOXES FOR ELECTRICAL SYSTEMS****PART 1 GENERAL****1.1 REFERENCES**

- A. NEMA, ANSI, and UL.

**1.2 SUBMITTALS**

- A. Product Data: Catalog sheets, specifications and installation instructions.

**1.3 MAINTENANCE**

- A. Spare Parts: Furnish the following items in the manufacturer's original containers labeled with the names of the items and locations where the items would be used. Store them at the site where directed:
  - 1. Touch up coating compound (one spray type can and one non-spray can with brush top).

**PART 2 PRODUCTS****2.1 RACEWAYS**

- A. Rigid Ferrous Metal Conduit: Steel, hot dipped galvanized on the outside and inside, UL categorized as Rigid Ferrous Metal Conduit (identified on UL Listing Mark as Rigid Metal Conduit - Steel or Rigid Steel Conduit), by Allied Tube & Conduit Corp., LTV Copperweld, Wheatland Tube Co or approved equal.
- B. Intermediate Ferrous Metal Conduit: Steel, galvanized on the outside and enameled on the inside, UL categorized as Intermediate Ferrous Metal Conduit (identified on UL Listing Mark as Intermediate Metal Conduit or IMC), by Allied Tube & Conduit Corp., LTV Copperweld, Wheatland Tube Co or approved equal.
- C. Electrical Metallic Tubing: Steel, galvanized on the outside and enameled on the inside, UL categorized as Electrical Metallic Tubing (identified on UL Listing Mark as Electrical Metallic Tubing), by Allied Tube & Conduit Corp., LTV Copperweld, Wheatland Tube Co or approved equal.
- D. Flexible Metal Conduit: Galvanized steel strip shaped into interlocking convolutions, UL categorized as Flexible Metal Conduit (identified on UL Listing Mark as Flexible Steel Conduit or Flexible Steel Conduit Type RW), by AFC Cable Systems Inc., Anamet Electrical Inc., Electri-Flex Co., International Metal Hose Co or approved equal.
- E. Liquid-tight Flexible Metal Conduit: UL categorized as liquid-tight flexible metal conduit (identified on UL Listing Mark as Liquid-Tight Flexible Metal Conduit, also specifically marked with temperature and environment application data), by AFC Cable Systems Inc., Anamet Electrical Inc., Electri-Flex Co., Universal Metal Hose Co or approved equal.
- F. Rigid Nonmetallic PVC Conduit, Fittings, and Accessories: UL categorized as Rigid Nonmetallic, Schedule 40 and Schedule 80 PVC conduit

(identified on UL Listing Mark as Rigid Nonmetallic Conduit Aboveground and Underground Schedule 40; Rigid Nonmetallic Conduit Aboveground and Underground Extra Heavy Wall Schedule 80), by Beck Mfg./Picoma Industries, Cantex Inc., Carlon/Div. Of Lamson and Sessions, Ipex Inc., J-M Mfg. Co. Inc., National Pipe & Plastics Inc., Queen City Plastics Inc or approved equal.

- G. Plastic Coated Rigid Metal Conduit, Fittings, and Accessories: Rigid ferrous metal conduit, fittings, and accessories coated with 40 mils thick polyvinylchloride coating; Ocal/T&B Corp.'s Ocal-Blue System, PCD Inc.'s KorKap, KorKap XL, or Robroy Industries' Plasti-bond Perma-Cote System or approved equal.

## 2.2 FITTINGS AND ACCESSORIES

- A. Insulated Bushings:
1. Threaded, malleable iron/zinc electroplate with 105 degrees C minimum plastic insulated throat; Appleton Electric Co.'s BU501 Series, Cooper/Crouse-Hinds' 1031 Series, OZ/Gedney Co.'s IBC-50 Series, Raco Inc.'s 1132 Series, Steel City/T & B Corp.'s BI-901 Series, Thomas & Betts Corp.'s 1222 Series or approved equal.
  2. Threaded malleable iron with 150 degrees C plastic throat; Appleton Electric Co.'s BU501 Series, Cooper/Crouse-Hinds' H1031 Series, OZ/Gedney Co.'s IBC-50 Series or approved equal.
- B. Plastic Bushings for 1/2 and 3/4 Inch Conduit:
1. 105 degrees C minimum temperature rating; Appleton Electric Co.'s BBU50, BBU75, Blackburn (T & B Corp.'s) 50 BB, 75 BB, Cooper/Crouse-Hinds' 931,932, or OZ/Gedney Co.'s IB-50, IB-75, Raco Inc.'s 1402, 1403, Steel City/T & B Corp.'s BU-501, BU-502, Thomas & Betts Corp.'s 222, 223 or approved equal.
  2. 150 degrees C temperature rating; Appleton Electric Co.'s BBU50H, BBU75H, Cooper/Crouse-Hinds' H-931, H-932, OZ/Gedney Co.'s A-50, A-75 or approved equal.
- C. Insulated Grounding Bushings:
1. Threaded, malleable iron/zinc electroplate with 105 degrees C minimum plastic insulated liner, and ground lug; Appleton Electric Co.'s GIB-50 Series, Cooper/Crouse-Hinds' GLL Series, OZ/Gedney Co.'s IBC-50L Series, Raco Inc.'s 1212 Series, Steel City/T & B Corp.'s BG-801 (1/2 to 2") Series, Thomas & Betts Corp.'s 3870 or approved equal.
  2. Threaded malleable iron/zinc electroplate with 150 degrees C plastic insulated liner, and ground lug; Appleton Electric Co.'s GIB Series, Cooper/Crouse-Hinds' HGLL Series, or OZ/Gedney Co.'s IBC-50L Series, Thomas & Betts Corp.'s 3870 or approved equal.
- D. Connectors and Couplings:
1. Locknuts: UL, steel/zinc electroplate; Appleton Electric Co.'s BL-50 Series, Cooper/Crouse-Hinds' 11 Series, OZ/Gedney Co.'s 1-

- 50S Series, Raco Inc.'s 1002 Series, Steel City/T&B Corp.'s LN-101 Series, Thomas & Betts Corp.'s 141 Series or approved equal.
2. Grounding Wedge: Thomas & Betts Corp.'s 3650 Series, Schneider Electric, OZ/Gedney Co.'s or approved equal.
  3. Couplings For Rigid Metal and IMC Conduit: Standard galvanized threaded couplings as furnished by conduit manufacturer, Allied Tube & Conduit Corp.'s Kwik-Couple, Eaton Cooper Industries, OZ/Gedney Co.'s or approved equal.
  4. Three Piece Conduit Coupling For Rigid Metal and IMC Conduit: Steel, malleable iron, zinc electroplate; Allied Tube & Conduit Corp.'s Kwik-Couple, Appleton Electric Co.'s EC-50 Series, Cooper/Crouse-Hinds' 190M Series, OZ/Gedney Co.'s 4-50 Series, Raco Inc.'s 1502 Series, Steel City/T & B Corp.'s EK-401 Series, Thomas & Betts Corp.'s 675 Series or approved equal.
  5. Electrical Metallic Tubing Couplings and Insulated Connectors: Compression type, steel/zinc electroplate; Appleton Electric Co.'s TW-50CS1, TWC-50CS Series, Cooper/Crouse-Hinds' 1650, 660S Series, Raco Inc.'s 2912, 2922 Series, Steel City/T & B Corp.'s TC-711 Series, Thomas & Betts Corp.'s 5120, 5123 Series or approved equal.
  6. Flexible Metal Conduit Connectors: Arlington Industries Inc.'s Saddle-Grip, OZ/Gedney Co.'s C-8T, 24-34T, ACV-50T Series, Thomas & Betts Corp.'s Nylon Insulated Tite-Bite Series or approved equal.
  7. Liquid-tight Flexible Metal Conduit Connectors: Steel, malleable iron, zinc electroplate, insulated throat; Appleton Electric Co.'s STB Series, Cooper/Crouse-Hinds' LTB Series, OZ/Gedney Co.'s 4Q-50T Series, Raco Inc.'s 3512 Series, Steel City/T & B Corp.'s LT-701 Series, Thomas & Betts Corp.'s 5332 Series or approved equal.
- E. Conduit Bodies (Threaded):
1. Malleable Iron/Zinc Electroplate: Zinc electroplate malleable iron or cast iron alloy bodies with zinc electroplate steel covers; Appleton Electric Co.'s Unilets, Cooper/Crouse-Hinds' Condulets, OZ/Gedney Co.'s Conduit Bodies or approved equal.
- F. Expansion Fittings:
1. Malleable Iron, Zinc Electroplate Finish: Appleton Electric Co.'s, XJ,OZ/Gedney Co.'s AX (TX for EMT), Eaton Cooper Industries with external bonding jumper or approved equal.
  2. Electrogalvanized Steel: Cooper/Crouse-Hinds' XJG (XJG-EMT for EMT), Appleton Electric JBEW Series, Schneider Electric with internal grounding or approved equal.
- G. Deflection Fittings: Appleton Electric Co.'s DF, Cooper/Crouse-Hinds' XD, OZ/Gedney Co.'s Type DX or approved equal.

- H. Hazardous Location Fittings:
  - 1. Sealing Fittings: Appleton Electric Co.'s EYS, ESU w/Kwiko sealing compound and fiber filler, Cooper/Crouse-Hinds' EYS, EZS w/Chico A sealing compound and Chico X filler, OZ/Gedney Co.'s EY, EYA with EYC sealing compound and EYF damming fiber or approved equal.
  - 2. Other Type Fittings: As required to suit installation requirements, by Appleton Electric Co., Cooper/Crouse-Hinds, OZ/Gedney Co or approved equal.
- I. Sealant for Raceways Exposed to Different Temperatures: Sealing compounds and accessories to suit installation; Appleton Electric Co.'s DUC, or Kwiko Sealing Compound with fiber filler, Cooper/Crouse-Hinds' Chico A Sealing Compound with Chico X fiber, Electrical Products Division 3M Scotch products, OZ Gedney Co.'s DUX or EYC sealing compound with EYF damming fiber, Thomas & Betts Corp.'s Blackburn DX or approved equal.
- J. Pulling-In-Line For Installation in Spare and Empty Raceways: Polypropylene monofilament utility line; Greenlee Textron Inc.'s Poly Line 430, 431, Ideal Industries Powr-Fish Pull-Line 31-340 Series, Gardner Bender PI232b Gardner Bender Poly-Pull™ Pull Line, 6500' PI232b or approved equal.

## **PART 3 EXECUTION**

### **3.1 RACEWAY INSTALLATION - GENERAL**

- A. Number of Raceways: Do not change number of raceways to less than the number indicated on the drawings.
  - 1. Each raceway shall enclose one 3 phase circuit group (i.e., Ph A, B, C, N) unless otherwise indicated on the drawings.
- B. Number of Raceways: Do not change number of raceways to less than the number indicated on the drawings.
- C. Raceways for Future Use (Spare Raceways and Empty Raceways): Draw fish tape through raceways in the presence of the Resident Engineer to show that the raceway is clear of obstructions.
  - 1. Leave a pulling-in line in each spare and empty raceway.
- D. Conduit Installed Concealed:
  - 1. Install conduit concealed unless otherwise indicated on the drawings.
  - 2. New Construction:
    - a. Run conduit in the ceilings, walls, and partitions.
    - b. Conduit may not be installed in concrete floor slab (concrete slabs that are both ceilings and floors shall be treated as floor slabs).
    - c. Install conduit in concrete slabs, under slabs on grade, or under slabs above finished ceilings where

indicated on the drawings. Concrete slabs that are both ceilings and floors shall be treated as floor slabs.

- 1) Conduit in Slab: Run 1/2 and 3/4 inch conduit in the slab where placement of reinforcement and slab thickness is sufficient to allow 1-1/2 inches of concrete cover over conduit, otherwise run conduit under slab. Run conduit one inch and larger in the slab in the specific location(s) where it is indicated on the drawing to be run in the slab, otherwise run conduit under slab.
    - a) Run conduit under reinforcement where reinforcement is in upper portion or middle of slab.
    - b) Run conduit over reinforcement where reinforcement is in lower portion of slab.
    - c) Run conduit between reinforcement where reinforcement is in upper and lower portions of slab.
    - d) Separate parallel conduits minimum of 2 inches so that each conduit will be enveloped in concrete.
    - e) Pass conduit over steel beams, if any, parallel with the reinforcement.
    - f) Tie down conduit to avoid movement during placement of concrete.
    - g) Demonstrate to the Engineer that conduit has been placed to allow minimum of 1-1/2 inches of concrete cover.
  - 2) Conduit Under Slab on Grade:
    - a) Run conduit under vapor barrier, if any.
    - b) Install equipment grounding conductor in each conduit. Bond at boxes and equipment to which conduit is connected.
  - 3) Conduit Under Slab, Above Finished Ceiling:
    - a) Attach conduit to bottom of slab or structure supporting the slab.
    - b) Firestop through-penetrations of the slab.
3. If any portions of the conduit system cannot be installed concealed due to conditions encountered in the building, report such conditions and await approval in writing before proceeding.
- E. Conduits Penetrating Concrete Floor Slabs (Concrete slabs that are both ceilings and floors shall be treated as floor slabs):
1. Provide a minimum of 2 inches between conduits that vertically

- penetrate elevated concrete slabs.
- 2. Provide firestopping and spray on fireproofing at locations where conduits penetrate surface of floor slab and slab is part of fire rating required for construction.
- F. Conduit Installed Exposed:
  - 1. Install conduit exposed where indicated on the drawings.
  - 2. Install conduit tight to the surface of the building construction unless otherwise indicated or directed.
  - 3. Install vertical runs perpendicular to the floor.
  - 4. Install runs on the ceiling perpendicular or parallel to the walls.
  - 5. Install horizontal runs parallel to the floor.
  - 6. Do not run conduits near heating pipes.
  - 7. Installation of conduit directly on the floor will not be permitted.
- G. Conduit Size: Not smaller than 3/4 inch electrical trade size. Where type FEP, THHN, THWN, THWN-2, XHH, XHHW, or XHHW-2 conductors are specified for use under Section 16121, the minimum allowable conduit size for new Work shall be based on Type THW conductors.
- H. Conduit Bends: For 3/4 inch conduits, bends may be made with manual benders. For all conduit sizes larger than 3/4 inch, manufactured or field fabricated offsets or bends may be used. Make field fabricated offsets or bends with an approved hydraulic bender.

### 3.2 RACEWAY INSTALLATION - SPECIAL AREAS

- A. Raceways Exposed to Different Temperatures: Where portions of an interior raceway system are exposed to widely different temperatures, seal interior and exterior of raceway to prevent circulation of air from a warmer to a colder section through the raceway installation.
  - 1. Heated Areas to Unheated Areas: After conductors are installed, seal interior of the raceway at the nearest conduit body, outlet or junction box in the heated area adjoining the unheated area.
- B. Conduit in Waterproofed Floors: Install conduit runs in waterproof floors to avoid penetrating the waterproofing. Avoid penetration of waterproofing with conduit risers so far as practicable.
  - 1. Where it is necessary to puncture the waterproofing for a conduit riser, install a standard weight steel pipe sleeve extending one inch above the finished floor level. Flash the steel pipe sleeve to the waterproofing with 16 ounce copper. Construct the flashing with a copper tube extending the full height of the sleeve, soldered to a copper base extending 6 inches in all directions from the sleeve.
  - 2. The flashing will be integrated into the waterproofing by the Construction Contractor. Provide solid cast brass floor plates with chromium finish where pipe sleeves are exposed in rooms.

- C. Conduit in Hazardous Areas: Install Work in hazardous areas in accordance with the NFPA 70. The hazardous areas and the degree of hazard for each area are indicated on the drawings.
  - 1. Install sealing fittings in concealed conduit runs in a recessed box with blank face plate to match other face plates in the area.

### 3.3 RACEWAY SCHEDULE

- A. Rigid Ferrous Metal Conduit: Install in all locations unless otherwise specified or indicated on the drawings.
- B. Liquid-tight Flexible Metal Conduit: Install equipment grounding conductor in liquid-tight flexible metal conduit and bond at each box or equipment to which conduit is connected:
  - 1. Use 1 to 3 feet of liquid-tight flexible metal conduit (UL listed and marked suitable for the installation's temperature and environmental conditions) for final conduit connection to:
    - a. Motors with weather-protected or totally enclosed housings.
    - b. Equipment subject to vibration (damp and wet locations).
    - c. Equipment requiring flexible connection for adjustment or alignment (damp and wet locations).
- C. Plastic Coated Rigid Metal Conduit:
- D. Wireways: May be used indoors in dry locations for exposed raceway between grouped, wall mounted equipment.

### 3.4 FITTINGS AND ACCESSORIES SCHEDULE

- A. General:
  - 1. Use fittings and accessories that have a temperature rating equal to, or higher than the temperature rating of the conductors to be installed within the raceway.
  - 2. Use zinc electroplate or hot dipped galvanized steel/malleable iron or cast iron alloy fittings and accessories in conjunction with ferrous raceways in dry and damp locations unless otherwise specified or indicated on the drawings.
  - 3. Use insulated grounding bushings or grounding wedges on ends of conduit for terminating and bonding equipment grounding conductors, when required, if cabinet or boxes are not equipped with grounding/bonding screws or lugs.
  - 4. Use caps or plugs to seal ends of conduits until wiring is installed to exclude foreign material.
  - 5. Use insulated grounding bushings on the ends of conduits that are not directly connected to the enclosure, such as stub-ups under equipment, etc., and bond between bushings and enclosure with equipment grounding conductor.
  - 6. Use expansion fittings where raceways cross expansion joints (exposed, concealed, buried).

7. Use deflection fittings where raceways cross expansion joints that move in more than one plane.
8. Use 2 locknuts and an insulated bushing on end of each conduit entering sheet metal cabinet or box in dry or damp locations.
  - a. Plastic bushing may be used on 1/2 and 3/4 inch conduit in lieu of insulated bushing.
  - b. Terminate conduit ends within cabinet/box at the same level.
- B. For Rigid and Intermediate Metal Conduit: Use threaded fittings and accessories. Use 3 piece conduit coupling where neither piece of conduit can be rotated.
- C. For Electrical Metallic Tubing: Use compression type connectors and couplings.
- D. For Flexible Metal Conduit: Use flexible metal conduit connectors.
- E. For Liquid-tight Flexible Metal Conduit: Use liquid-tight connectors.
- F. For Rigid Nonmetallic PVC Conduit: Use conduit manufacturer's standard fittings and accessories.
- G. For Multioutlet Assembly: Use manufacturer's standard fittings and accessories.
- H. For Wireways: Use wireway manufacturer's standard fittings and accessories.

**END OF SECTION**

## SECTION 26 0553 – IDENTIFICATION FOR ELECTRICAL SYSTEMS

### PART 1 GENERAL

#### 1.1 SUMMARY

- A. Section Includes:
  - 1. Electrical identification materials and devices required to comply with ANSI C2, NFPA 70, OSHA standards, and authorities having jurisdiction.
- B. Related Sections:
  - 1. Section 26 05 19 – Low Voltage Electrical Power Conductors and Cables
  - 2. Section 26 05 33 - Raceways and Boxes for Electrical Systems
  - 3. Section 26 24 16 – Panelboards
  - 4. Section 26 27 26 - Wiring Devices
  - 5. Section 26 29 34 - Safety Switches

#### 1.2 REFERENCES

- A. American National Standards Institute (ANSI) Publications:
  - 1. ANSI/ASME A13.1 “Scheme for the Identification of Piping Systems”
- B. Institute of Electrical and Electronics Engineers (IEEE) Publications:
  - 1. C2 “ASC C2 Eighth Interim Collection of the National Electrical Safety Code”
- C. National Fire Protection Association (NFPA) Publications:
  - 1. 70 "National Electric Code"

#### 1.3 SUBMITTALS

- A. Submit “Letter of Conformance” indicating specified items selected for use in Project with the following supporting data:
  - 1. Product Data: For each electrical identification product indicated.

#### 1.4 QUALITY ASSURANCE

- A. Comply with IEEE C2.
- B. Comply with NFPA 70 "National Electric Code”
- C. Comply with ANSI A13.1 and NFPA 70 for color-coding.

### PART 2 PRODUCTS

#### 2.1 MANUFACTURERS

- A. Approved Manufacturers:
  - 1. Brady USA, Inc. (800-541-1686)
  - 2. Panduit corp. (800-777-3300)
  - 3. Seton Identification Products (800-571-2596)

## 2.2 RACEWAY AND CABLE LABELS

- A. Comply with ANSI A13.1, Table 3, for minimum size of letters for legend and for minimum length of color field for each raceway and cable size.
- B. Pre-tensioned, Wraparound Plastic Sleeves: Flexible, preprinted, color-coded, acrylic band sized to suit the diameter of the line it identifies and arranged to stay in place by pretensioned gripping action when placed in position.
- C. Colored Adhesive Tape: Self-adhesive vinyl tape not less than 3 mils thick by 1 to 2 inches wide.
- D. Underground-Line Warning Tape: Permanent, bright-colored, continuous-printed, vinyl tape.
  - 1. Not less than 6 inches wide by 4 mils thick.
  - 2. Compounded for permanent direct-burial service.
  - 3. Embedded continuous metallic strip or core.
  - 4. Printed legend indicating type of underground line.
- E. Tape Markers: Vinyl or vinyl-cloth, self-adhesive, wraparound type with preprinted numbers and letters.
- F. Aluminum, Wraparound Marker Bands: Bands cut from 0.014-inch thick aluminum sheet, with stamped or embossed legend, and fitted with slots or ears for permanently securing around wire or cable jacket or around groups of conductors.
- G. Plasticized Card-Stock Tags: Vinyl cloth with preprinted and field-printed legends. Orange background, unless otherwise indicated, with eyelet for fastener.
- H. Aluminum-Faced, Card-Stock Tags: Weather-resistant, 18-point minimum card stock faced on both sides with embossable aluminum sheet, 0.002 inch thick, laminated with moisture-resistant acrylic adhesive, punched for fasteners, and preprinted with legends to suit each application.

## 2.3 NAMEPLATES AND SIGNS

- A. Safety Signs: Comply with 29 CFR, Chapter XVII, Part 1910.145.
- B. Engraved Plastic Nameplates and Signs: Engraving stock, melamine plastic laminate, minimum 1/16 inch thick for signs up to 20 sq. in. and 1/8 inch thick for larger sizes.
  - 1. Engraved legend with black letters on white face.
  - 2. Punched or drilled for mechanical fasteners.
- C. Baked-Enamel Signs for Interior Use: Preprinted aluminum signs, punched or drilled for fasteners, with colors, legend, and size required for the application. 1/4-inch grommets in corners for mounting.
- D. Exterior, Metal-Backed, Butyrate Signs: Weather-resistant, nonfading, preprinted, cellulose-acetate butyrate signs with 0.0396-inch galvanized-steel backing; and with colors, legend, and size required for the application. 1/4-inch grommets in corners for mounting.
- E. Fasteners for Nameplates and Signs: Self-tapping, stainless-steel screws or No. 10/32, stainless-steel machine screws with nuts and flat and lock washers.

## 2.4 MISCELLANEOUS IDENTIFICATION PRODUCTS

- A. Cable Ties: Fungus-inert, self-extinguishing, one-piece, self-locking, Type 6/6 nylon cable ties.
  - 1. Minimum Width: 3/16 inch.
  - 2. Tensile Strength: 50 lb minimum.
  - 3. Temperature Range: Minus 40 to plus 185 deg F.
  - 4. Color: According to color-coding.

## PART 3 EXECUTION

### 3.1 INSTALLATION

- A. Identification Materials and Devices: Install at locations for most convenient viewing without interference with operation and maintenance of equipment.
- B. Lettering, Colors, and Graphics: Coordinate names, abbreviations, colors, and other designations with corresponding designations in the Contract Documents or with those required by codes and standards. Use consistent designations throughout Project.
- C. Sequence of Work: If identification is applied to surfaces that require finish, install identification after completing finish work.
- D. Self-Adhesive Identification Products: Clean surfaces before applying.
- E. Circuits with More Than 600 V: Identify raceway and cable with "DANGER--HIGH VOLTAGE" in black letters 2 inches high, stenciled with paint at 10-foot intervals over a continuous, painted orange background. Identify the following:
  - 1. Entire floor area directly above conduits running beneath and within 12 inches of a basement or ground floor that is in contact with earth or is framed above unexcavated space.
  - 2. Wall surfaces directly external to conduits concealed within wall.
  - 3. All accessible surfaces of concrete envelope around conduits in vertical shafts, exposed in the building, or concealed above suspended ceilings.
  - 4. Entire surface of exposed conduits.
- F. Color Banding Raceways and Exposed Cables: Band exposed and accessible raceways of the systems listed below:
  - 1. Bands: Pre-tensioned, wraparound plastic sleeves; colored adhesive tape; or a combination of both. Make each color band 2 inches wide, completely encircling conduit, and place adjacent bands of two-color markings in contact, side by side.
  - 2. Band Locations: At changes in direction, at penetrations of walls and floors, at 50-foot maximum intervals in straight runs, and at 25-foot maximum intervals in congested areas.
  - 3. Apply the following colors to the systems listed below:
    - a. Fire Alarm System: Red.
    - b. Fire-Suppression Supervisory and Control System: Red and yellow.

- c. Combined Fire Alarm and Security System: Red and blue.
  - d. Security System: Blue and yellow.
  - e. Mechanical and Electrical Supervisory System: Green and blue.
  - f. Telecommunication System: Green and yellow.
- G. Caution Labels for Indoor Boxes and Enclosures for Power and Lighting: Install pressure-sensitive, self-adhesive labels identifying system voltage with black letters on orange background. Install on exterior of door or cover.
- H. Circuit Identification Labels on Boxes: Install labels externally.
- 1. Exposed Boxes: Pressure-sensitive, self-adhesive plastic label on cover.
  - 2. Concealed Boxes: Plasticized card-stock tags.
  - 3. Labeling Legend: Permanent, waterproof listing of panel and circuit number or equivalent.
- I. Paths of Underground Electrical Lines: During trench backfilling, for exterior underground power, control, signal, and communication lines, install continuous underground plastic line marker located directly above line at 6 to 8 inches below finished grade. Where width of multiple lines installed in a common trench or concrete envelope does not exceed 16 inches overall, use a single line marker. Install line marker for underground wiring, both direct-buried cables and cables in raceway.
- J. Secondary Service, Feeder, and Branch-Circuit Conductors: Color-code throughout the secondary electrical system.
- 1. Color-code 208/120-V system as follows:
    - a. Phase A: Black.
    - b. Phase B: Red.
    - c. Phase C: Blue.
    - d. Neutral: White.
    - e. Ground: Green.
  - 2. Color-code 480/277-V system as follows:
    - a. Phase A: Yellow.
    - b. Phase B: Brown.
    - c. Phase C: Orange.
    - d. Neutral: White with a colored stripe or gray.
    - e. Ground: Green.
  - 3. Factory apply color the entire length of conductors, except the following field-applied, color-coding methods may be used instead of factory-coded wire for sizes larger than No. 10 AWG:
    - a. Colored, pressure-sensitive plastic tape in half-lapped turns for a distance of 6 inches from terminal points and in boxes where splices or taps are made. Apply last two turns of tape with no tension to prevent possible unwinding. Use 1-inch wide tape in colors specified. Adjust tape bands to avoid obscuring cable identification markings.

- b. Colored cable ties applied in groups of three ties of specified color to each wire at each terminal or splice point starting 3 inches from the terminal and spaced 3 inches apart. Apply with a special tool or pliers, tighten to a snug fit, and cut off excess length.
- K. Power-Circuit Identification: Metal tags or aluminum, wraparound marker bands for cables, feeders, and power circuits in vaults, pull and junction boxes, manholes, and switchboard rooms.
1. Legend: 1/4-inch steel letter and number stamping or embossing with legend corresponding to indicated circuit designations.
  2. Tag Fasteners: Nylon cable ties.
  3. Band Fasteners: Integral ears.
- L. Apply identification to conductors as follows:
1. Conductors to Be Extended in the Future: Indicate source and circuit numbers.
  2. Multiple Power or Lighting Circuits in the Same Enclosure: Identify each conductor with source, voltage, circuit number, and phase. Use color-coding to identify circuits' voltage and phase.
  3. Multiple Control and Communication Circuits in the Same Enclosure: Identify each conductor by its system and circuit designation. Use a consistent system of tags, color-coding, or cable marking tape.
- M. Apply warning, caution, and instruction signs as follows:
1. Warnings, Cautions, and Instructions: Install to ensure safe operation and maintenance of electrical systems and of items to which they connect. Install engraved plastic-laminated instruction signs with approved legend where instructions are needed for system or equipment operation. Install metal-backed butyrate signs for outdoor items.
  2. Emergency Operation: Install engraved laminated signs with white legend on red background with minimum 3/8-inch high lettering for emergency instructions on power transfer, load shedding, and other emergency operations.
- N. Equipment Identification Labels: Engraved plastic laminate. Install on each unit of equipment, including central or master unit of each system. This includes power, lighting, communication, signal, and alarm systems, unless units are specified with their own self-explanatory identification. Unless otherwise indicated, provide a single line of text with 1/2-inch high lettering on 1-1/2-inch high label; where two lines of text are required, use labels 2 inches high. Use white lettering on black field. Apply labels for each unit of the following categories of equipment using mechanical fasteners:
1. Panelboards, electrical cabinets, and enclosures.
  2. Access doors and panels for concealed electrical items.
  3. Electrical switchgear and switchboards.
  4. Emergency system boxes and enclosures.
  5. Disconnect switches.
  6. Enclosed circuit breakers.
  7. Motor starters.

8. Push-button stations.
9. Power transfer equipment.
10. Contactors.
11. Remote-controlled switches.
12. Dimmers.
13. Control devices.
14. Transformers.
15. Telephone switching equipment.
16. Fire alarm master station or control panel.
17. Security-monitoring master station or control panel.

**END OF SECTION**

**SECTION 26 0923 – LIGHTING CONTROL DEVICES****PART 1 GENERAL****1.1 SUBMITTALS**

- A. Submittals Package: Submit the shop drawings, and the product data specified below at the same time as a package.
- B. Shop Drawings: Wiring and/or schematic diagram of the control circuits as proposed to be installed (standard diagrams will not be accepted).
- C. Product Data: Catalog sheets, specifications and installation instructions.

**PART 2 PRODUCTS****2.1 TIME CONTROLS**

- A. Astronomic Dial: Intermatic Inc.'s V45000CR Series, Paragon Electric Co.'s 4213-SZ Series, Tork Inc.'s ZL Series or approved equal, having:
  - 1. Surface mounted NEMA 3 enclosure, with lockable hasp.
  - 2. Day omitting device, with 3 omitting screws.
  - 3. 120 volt operation, DPST, minimum rating 40A per pole.
  - 4. Mechanical reserve power feature to keep dial on time for minimum of 10 hours in event of power failure.

**PART 3 EXECUTION****3.1 INSTALLATION**

- A. Install lighting controls in accordance with manufacturers printed instructions unless otherwise indicated.
- B. Wire circuit so that lighting is:
  - 1. On at dusk by time control.
  - 2. Off at dawn by time control.

**END OF SECTION**

**SECTION 26 2416 – PANELBOARDS****PART 1 GENERAL****1.1 REFERENCES**

- A. NEMA, UL.

**1.2 SUBMITTALS**

- A. Submittal Packages: Submit the shop drawings, product data, and the quality control submittals specified below at the same time as a package.
- B. Shop Drawings; include the following for each panelboard:
  - 1. Cabinet and gutter size.
  - 2. Voltage and current rating.
  - 3. Panelboard short circuit rating. Indicate if rating is Fully Rated Equipment Rating, or where acceptable, UL listed Integrated Equipment Short Circuit Rating.
  - 4. Circuit breaker enumeration (frame, ATE, poles, I.C.).
    - a. Indicate if circuit breakers are suitable for the panelboards Fully Rated Equipment Rating, or where acceptable, are series connected devices which have been test verified and listed with UL (include documentation proving the compatibility of the proposed circuit breaker combinations). Circuit breakers do not have to be listed as series connected devices when all of the circuit breaker interrupting ratings are equal to, or greater than, the short circuit rating of the panelboard.
  - 5. When indicated on the panelboard schedule, a coordinated selective scheme between the main circuit breaker and branch/feeder circuit breakers so that under fault conditions the branch/feeder circuit breaker clears the fault while the main circuit breaker remains closed.
  - 6. Accessories.
- C. Product Data:
  - 1. Catalog sheets, specifications and installation instructions.
  - 2. Bill of materials.
- D. Quality Control Submittals:
  - 1. Company Field Advisor Data: Include:
    - a. Name, business address and telephone number of Company Field Advisor secured for the required services.
    - b. Certified statement from the Company listing the qualifications of the Company Field Advisor.
    - c. Services and each product for which authorization is given by the Company listed specifically for this project.
- E. Contract Closeout Submittals:

1. System acceptance test report.
2. Certificate: Affidavit, signed by the Company Field Advisor and notarized, certifying that the system meets the contract requirements and is operating properly.
3. Operation and Maintenance Data: Deliver 2 copies of the O&M data for the installed products to the Engineer.

### 1.3 QUALITY ASSURANCE

- A. Company Field Advisor: Secure the services of a Company Field Advisor from the manufacturer of the programmable solid state circuit breakers for a minimum of 8 working hours for the following:
1. Render advice regarding final adjustment and programming of the circuit breakers.
  2. Witness final system test and then certify that the circuit breakers are installed in accordance with the contract documents and are operating properly.
  3. Provide instruction for facility personnel on the operation and maintenance of the circuit breakers (minimum of two 1 hour sessions).
  4. Explain available service programs to facility supervisory personnel for their consideration.

## PART 2: PRODUCTS

### 2.1 PANELBOARDS

- A. As produced by General Electric Co., Square D Co., Cutler-Hammer/Eaton Corp., Challenger Electrical Equipment Corp., Siemens/ITE, Westinghouse Electric Corp. or approved equal having:
1. Flush or surface type cabinets as indicated on the drawings.
  2. Increased gutter space for gutter taps, sub-feed wiring, through-feed wiring, oversize lugs.
  3. UL label "SUITABLE FOR USE AS SERVICE EQUIPMENT" where used as service equipment.
    - a. Where indicated, equip panelboards used as service equipment with secondary surge arresters; GE's Tranquell Series, Joslyn's Mfr. Co.'s Surge Tec Series, Intermatic Incorp.'s AG2401 or AG6503, Square D Co.'s SDSA 1175 or SDSA 3650 or approved equal to suit system primary (transformer size, available current) and secondary characteristics.
  4. Door-In-Door and one piece trim. Doors fastened to trim with or continuous hinges. Trim fastened to cabinet with devices having provision for trim adjustment.
  5. Yale No. 511S, 721DR-26 Olymous Lock Inc, 3310-24/SN Sugatsune America Inc., or approved equal locks with brass cylinder rosette, blind fastened from inside of door. 2 No. 47 keys with each lock (Exception: Not more than 7 keys, total).

6. Door lock. 2 keys with each lock (Exception: Not more than 7 keys, total).
7. Solid copper bus bars rated 1000amps/in2. Ampere rating of bus bars not less than frame size of main circuit breaker.
8. Full capacity copper neutral bus in panelboards where neutrals are required.
9. Copper equipment grounding bus in panelboards where equipment grounding conductors are required.
10. Sections designated "space" or "provision for future breaker" equipped to accept future circuit breakers.
11. Lock on devices for exit light, fire alarm, stair well circuits.
12. Provisions for padlocking circuit breaker handle in OFF position where indicated.
13. Directory.
14. Remote control switches where indicated. Automatic Switch Co.'s ASCO 920 (225A max.), ASCO 911 (2000A max.), Zenith Controls Inc.'s MVP (225A max.), ZMH (1200A max.) or approved equal with:
  - a. 120 volt control circuit including transformer and fuses.
  - b. Hand-off-auto (HOA) switch, relays, and accessories when used with 2 wire control devices. Mount HOA switch and relays in NEMA 1 enclosure adjacent to panelboard. Connect HOA switch and relays into the control circuit of each automatically operated remote control switch to allow selection of operating mode. Include nameplate indicating purpose of HOA switch and load controlled.
15. Short circuit rating not less than indicated on panelboard schedule. Furnish panelboards having Fully Rated Equipment Rating (the short circuit rating of the panelboard is equal to the lowest interrupting rating of any device installed in the panelboard). Exception:
  - a. Where indicated to be acceptable on panelboard schedule, panelboard having UL listed Integrated Equipment Short Circuit Rating may be used.
16. Molded case, bolt-on circuit breakers:
  - a. Mounting: Individually mounted main circuit breaker (when MCB is required), and group mounted branch/feeder circuit breakers to accommodate the circuit breaker style and panelboard construction.
  - b. Components: See panelboard schedule for specific components required for each circuit breaker. In addition to the specific components, equip each circuit breaker with additional components as required to achieve a coordinated selective scheme between the main circuit breaker and the branch/feeder circuit breakers when indicated on the panelboard schedule that a coordinated selective scheme is required.
  - c. Single pole 15 ATE and 20 ATE circuit breakers marked SWD where used as switches.
  - d. Single pole and two pole 15, 20, and 30 ATE circuit breakers rated for

high intensity discharge lighting loads when applicable.

## 2.2 NAMEPLATES

- A. General: Precision engrave letters and numbers with uniform margins, character size minimum 3/16 inch high.
  - 1. Phenolic: Two color laminated engravers stock, 1/16 inch minimum thickness, machine engraved to expose inner core color (white).
  - 2. Aluminum: Standard aluminum alloy plate stock, minimum .032 inches thick, engraved areas enamel filled or background enameled with natural aluminum engraved characters.
  - 3. Materials for Outdoor Applications: As recommended by nameplate manufacturer to suit environmental conditions.

## PART 3 EXECUTION

### 3.1 INSTALLATION

- A. Install panelboards in accordance with NEMA Publication No. PB1.1 "General Instructions for Proper Installation, Operation and Maintenance of Panelboards Rated 600 Volts or Less".
  - 1. Set/program the circuit breakers.
- B. Flush Cabinets: Set flush cabinets so that edges will be flush with the finished wall line. Where space will not permit flush type cabinets to be set entirely in the wall, set cabinet as nearly flush as possible, and cover the protruding sides with the trim extending over the exposed sides of the cabinet and back to the finished wall line.
- C. Directory: Indicate on typewritten directory the equipment controlled by each circuit breaker, and size of feeder servicing panelboard. For power panelboards also include ATE rating and feeder size for each breaker.
- D. Identification:
  - 1. Use nameplates, or stencil on front of each panelboard with white paint, "LP-1, PP-1, etc." in 1/2 inch lettering corresponding to panelboard designations on the drawings, and electrical parameters (phase, wire, voltage).
  - 2. Install a nameplate on each panelboard which explains the means of identifying each ungrounded system conductor by phase and system. Examples of nameplate statements:
    - a. Identification of 120/208 Volt Circuit Conductors:
      - 2 wire circuit - white\*, black.
      - 3 wire circuit - white\*, black, red.
      - 4 wire circuit - white\*, black, red, blue.
    - \*White is used only as neutral. Where neutral is not required, black, red, or black, red, blue is used for phase to phase circuits.
    - b. Identification of 277/480 Volt Circuit Conductors:
      - 2 wire circuit - natural gray\*\*, brown.

3 wire circuit - natural gray\*\*, brown, yellow.

4 wire circuit - natural gray\*\*, brown, yellow, orange.

\*\*Natural gray is used only as neutral. Where neutral is not required, brown, yellow, or brown, yellow, orange is used for phase to phase circuits.

### **3.2 FIELD QUALITY CONTROL**

#### **A. Preliminary System Test:**

1. Preparation: Have the Company Field Advisor adjust the completed circuit breakers and then operate them long enough to assure that they are performing properly.
2. Run a preliminary test for the purpose of:
  - a. Determining whether the circuit breakers are in a suitable condition to conduct an acceptance test.
  - b. Checking instruments and equipment.
  - c. Providing instruction to facility personnel.

#### **B. System Acceptance Test:**

1. Preparation: Notify the City's Representative at least 3 working days prior to the test so arrangements can be made prior to the test to have a Facility Representative witness the test.
2. Make the following tests:
  - a. Test circuit breakers which have ground fault protection in accordance with the approved information sheets and test form.
  - b. Test programmable solid state trip devices in accordance with the manufacturer's recommendations.
3. Supply all equipment necessary for system adjustment and testing.
4. Submit written report of test results signed by the Company Field Advisor and the the Engineer. Mount a copy of the final report in a conspicuous location on, or inside, the panelboard door.

**END OF SECTION**

**SECTION 26 2726 – WIRING DEVICES****PART 1 GENERAL****1.1 SUBMITTALS**

- A. Product Data: Catalog sheets, specifications and installation instructions.

**PART 2 PRODUCTS****2.1 SWITCHES**

A. Local Switches, Single Pole:

1. 15A, 120/277 V ac; Bryant's 4801, Crouse-Hinds/AH's 1891, General Electric's GE5931-1G, Hubbell's 1201/1101, Leviton's 1201/1101, Pass & Seymour's 15AC1, Woodhead's 1891 or approved equal.
2. 20A, 120/277 V ac; Bryant's 4901, Crouse-Hinds/AH's 1991, General Electric's GE 5951-1G, Hubbell's 1121/1221, Leviton's 1121/1221, Pass & Seymour's 20AC1, Woodhead's 1991 or approved equal.
3. 30A, 120/277 V ac; Bryant's 3001, Crouse-Hinds/AH's 3991, General Electric's GE 5991-1G, Hubbell's 3031, Leviton's 3031, Pass & Seymour's 30AC1 or approved equal.

B. Local Switches, Double Pole:

1. 15A, 120/277 V ac; Bryant's 4802, Crouse-Hinds/AH's 1892, General Electric's GE5932-1G; Hubbell's 1202/1102, Leviton's 1202/1102, Pass & Seymour's 15AC2, Woodhead's 1892 or approved equal.
2. 20A, 120/277 V ac; Bryant's 4902, Crouse-Hinds/AH's 1992, General Electric's GE5952-1G, Hubbell's 1222/1122, Leviton's 1222/1122, Pass & Seymour's 20AC2, Woodhead's 1992 or approved equal.
3. 30A, 120/277 V ac; Bryant's 3002, Crouse-Hinds/AH's 3992, General Electric's GE5992-1G, Leviton's 3032, Pass & Seymour's 30AC2 or approved equal.

C. Local Switches, Three-Way:

1. 15A, 120/277 V ac; Bryant's 4803, Crouse-Hinds/AH 1893, General Electric's GE5933-1, Hubbell's 1203/1103, Leviton's 1203/1103, Pass & Seymour's 15AC3, Woodhead's 1893 or approved equal.
2. 20A, 120/277 V ac; Bryant's 4903, Crouse-Hinds/AH's 1993, General Electric's GE5953-1G, Hubbell's 1223/1123, Leviton's 1223-2/1123-2, Pass & Seymour's 20AC3, Woodhead's 1993 or approved equal.
3. 30A, 120/277 V ac; Bryant's 3003, Crouse-Hinds/AH's 3993, General Electric's GE5993-1G, Leviton's 3033, Pass & Seymour's 30AC3 or approved equal.

- D. Local Switches, Four-Way:
1. 15A, 120/277 V ac; Bryant's 4804, Crouse-Hinds/AH's 1894, General Electric's GE5934-1G, Hubbell's 1204/1104, Leviton's 1204-2/1104-2, Pass & Seymour's 15AC4, Woodhead's 1894 or approved equal.
  2. 20A, 120/277 V ac; Bryant's 4904, Crouse-Hinds/AH's 1994, General Electric's GE5954-1G, Hubbell's 1224/1124, Leviton's 1224-2/1124-2, Pass & Seymour's 20AC4, Woodhead's 1994 or approved equal.
  3. 30A, 120/277 V ac; Crouse-Hinds/AH's 3994, General Electric's GE5994-1G or approved equal.
- E. Local Switches, Key-Operated:
1. Similar to toggle type local switches except operated by removable key instead of lever. Furnish 2 keys with each switch.
- F. Local Switch with Neon Pilot:
1. 15A, 120/277 V ac; General Electric's GE7945-1, Leviton's 5226, Pass & Seymour's 692 or approved equal.
  2. Switch similar to local switches previously specified, with separate neon pilot (requires 2 gang installation).
    - a. Neon pilot (125 V, 1/25W): Bryant's 48071-R, Crouse-Hinds/AH's 1720-RED, General Electric's GE4218-0, Pass & Seymour's 437 or approved equal.
- G. Lighted Toggle Switches:
1. Clear toggle, lighted in on position, 15A, 120 V, single pole; Hubbell's 1201-PLC, Leviton's 1201 PLC or approved equal.
  2. Ivory toggle lighted in off position, 15A, 120 V; Bryant's 4801-GLI, Crouse Hines/AH's 1891IL, General Electric's SL112-2G, Hubbell's 1201-IL, Leviton's 1201 LHI, Pass & Seymour's 15AC1ISL or approved equal.
- H. Dimmer Switches (Incandescent, 120 V ac):
1. 600 Watts; Lutron's C-600, General Electric's DI-61UL or approved equal.
  2. 1000 Watts; Lutron's C-1000 or approved equal.
  3. 1500 Watts; Lutron's C-1500 or approved equal.
  4. 2000 Watts; Lutron's C-2000 or approved equal.
- I. Momentary Contact Switches:
1. Three position, center off, toggle, 15A, 120/277 V ac, single pole; Bryant's 4821, Crouse-Hinds/AH's 1895, General Electric's GE5935-1G, Hubbell's 1556, Leviton's 1256, Pass & Seymour's 1250 or approved equal.
  2. Three position, center off, key operated, 15A, 120/277 V ac, single pole; Bryant's 4821-L, Crouse-Hinds/AH's 1895-L, General Electric's GE5935-OLG, Hubbell's 1556-L, Pass & Seymour's 1250-L or approved equal.

3. Momentary contact switch with neon pilot. Switch similar to momentary contact switch previously specified, with separate neon pilot (requires 2 gang installation).
  - a. Neon Pilot: 125 V, 1/125W; Bryant's 48071-R, Crouse-Hinds/AH's 1720-RED, General Electric's GE4218-0, Pass & Seymour's 437 or approved equal.

## 2.2 RECEPTACLES

- A. Specification Grade Receptacles:
  1. Single receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W); Bryant's 5251, Crouse-Hinds/AH's 5251, General Electric's 5251-1, Hubbell's 5251, Leviton's 5251, Pass & Seymour's 5251 or approved equal.
  2. Duplex receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W); Bryant's 5252/5242 , Crouse-Hinds/AH's 5252/5242, General Electric's GEN5252-1, Hubbell's 5252/5242, Leviton's 5252/5242, Pass & Seymour's 5252/5242 or approved equal.
  3. Single receptacle, NEMA 5-20R (20A, 125 V, 2P, 3W); Bryant's 5361/5351, Crouse-Hinds/AH's 5361/5351, General Electric's GE4103-1, Hubbell's 5361/5351, Leviton's 5361/5351, Pass & Seymour's 5351 or approved equal.
  4. Duplex receptacle, NEMA 5-20R (20A, 125 V, 2P, 3W); Bryant's 5362, Crouse-Hinds/AH's 5352/5342, General Electric's GE5352-1, Hubbell's 5352, Leviton's 5352, Pass & Seymour's 5352 or approved equal.
- B. Safety Grounding Receptacles:
  1. Duplex receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W); Bryant's SG-62, 8200S, Crouse-Hinds/AH's 6352, General Electric's GE4058-1, Hubbell's SG-62, Leviton's 5262-SG ,Pass & Seymour's SG-62 or approved equal.
- C. Electric Clock Receptacles:
  1. Single receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W), brass or stainless steel face plate to match hardware; Bryant's 2828-G, 2828-GS, Crouse-Hinds/AH's 5708, General Electric's GE4224-5, Hubbell's 5233, 5235, Leviton's 5261-CH, Pass & Seymour's S3733, S3733-SS or approved equal.
- D. Ground Fault Interrupter Receptacles:
  1. Duplex receptacle rated 15A (NEMA 5-15R), circuit-ampacity 20A; Bryant's GFR52FT, Crouse-Hinds/AH's GF5242, General Electric's GF5242, Hubbell's GF5252, Leviton's 6599, Pass & Seymour's 1591S, Daniel Woodheads 5252GF or approved equal.
  2. Duplex receptacle rated 20A (NEMA 5-20R), circuit ampacity 20A; Bryant's GFR53FT, Crouse-Hind/AH's GF5342, General Electric's GF5342, Hubbell's GF 5352, Leviton's 6899, Pass & Seymour's 2091S, Daniel Woodheads 5352GF or approved equal.
- E. Isolated Ground Receptacles:
  1. Single receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W); Bryant's 5261-IG, Crouse-Hinds/AH's IG5261, General Electric's GE-8210-IG, Hubbell's IG4710 &, Leviton's 5261-IG, Pass & Seymour's IG5261 or approved equal.

2. Duplex receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W); Bryant's 5262-IG, Crouse-Hinds/AH's IG-5262, General Electric's GE-8200-IG, Hubbell's IG-5262, Leviton's 5262-IG, Pass & Seymour's IG-6200 or approved equal.
  3. Single receptacle, NEMA 5-20R (20A, 125 V, 2P, 3W); Bryant's, Crouse-Hinds/AH's, General Electric's GE8310-IG2, Hubbell's, Leviton's, Pass & Seymour's or approved equal.
  4. Duplex receptacle, NEMA 5-20R (20A, 125 V, 2P, 3W); Bryant's, Crouse-Hinds/AH's, General Electric's GE8300-IG, Hubbell's, Leviton's, Pass & Seymour's or approved equal.
- F. Corrosion Resistant Receptacles:
1. Duplex receptacle, NEMA 5-15R (15A, 125 V, 2P, 3W): Bryant's 5262-CR, Crouse-Hinds/AH's 5262CR, General Electric's GE5262-C, Hubbell's 5262-ILH, Pass & Seymour's CR6200 or approved equal.
- G. Special Purpose Receptacles: Furnish matching nylon, polycarbonate or armored plug with each receptacle. Furnish matching wall plate with each receptacle (.040" brass, Type 302 stainless steel, weatherproof, threaded box type, as required):
1. Type A: NEMA 14-20R (3P, 4W, 20A, 125/250 V, W/G); Crouse-Hinds/AH's 5759, General Electric's 1420, Hubbell's 8410 or approved equal.
  2. Type B: NEMA 14-30R (3P, 4W, 30A, 125/250 V, W/G); Bryant's 9430FR, Crouse-Hinds/AH's 5744N, General Electric's GE4191-3, Hubbell's 9430A, Leviton's 278, Pass & Seymour's 3864 or approved equal.
  3. Type C: NEMA 14-50R (3P, 4W, 50A, 125/250 V, W/G); Bryant's 9450FR, Crouse-Hinds/AH's 5754N, General Electric's GE4181-3, Hubbell's 9450A, Leviton's 279, Pass & Seymour's 3894 or approved equal.
  4. Type D: NEMA 14-60R (3P, 4W, 60A 125/250 V, W/G); Bryant's 9460FR, Crouse-Hinds/AH's 9460N, General Electric's GE4171-3, Hubbell's 9460A, Pass & Seymour's 3871 or approved equal.
  5. Type E: NEMA 10-20R (3P, 3W, 20A, 125/250 V); Bryant's 9326, Crouse-Hinds/AH's 9140, General Electric's GE4124-1, Hubbell's 6810, Pass & Seymour's 6810 or approved equal.
  6. Type F: NEMA 10-30R (3P, 3W, 30A, 125/250 V); Bryant's 9303, Crouse-Hinds/AH's 9344N, General Electric's GE4132-3, Hubbell's 9350, Leviton's 5207, Pass & Seymour's 3860 or approved equal.
  7. Type G: NEMA 10-50R (3P, 3W, 50A, 125/250 V); Bryant's 9306, Crouse-Hinds/AH's 7985N, General Electric's GE4152-3, Hubbell's 7962, Leviton's 5206GR, Pass & Seymour's 3890 or approved equal.
  8. Type H: NEMA L5-15R (2P, 3W, 15A, 125 V, W/G); Bryant's 4710, Crouse-Hinds/AH's 4710, General Electric's GL0510, Hubbell's 4710, Pass & Seymour's 4710 or approved equal.
  9. Type I: NEMA L5-20R (2P, 3W, 20A 125 V, W/G); Bryant's 70520FR, Crouse-Hinds/AH's 6200, General Electric's GL0520, Hubbell's 2310A, Pass & Seymour's L520-R or approved equal.

10. Type J: NEMA L5-30R (2P, 3W, 30A, 125 V, W/G); Bryant's 70530FR, Crouse-Hinds/AH's 6330, General Electric's GL0530, Hubbell's 2610A, Leviton's 70530-FR, Pass & Seymour's L530-R or approved equal.
11. Type K: NEMA L6-15R (2P, 3W, 15A, 250 V, W/G); Bryant's 70615FR, Crouse-Hinds/AH's 6560, General Electric's GL0610, Hubbell's 4560, Leviton's 70615FR, Pass & Seymour's 4560 or approved equal.
12. Type L: NEMA L6-20R (2P, 3W, 20A, 250 V, W/G); Bryant's 70620FR, Crouse-Hinds/AH's 6210, General Electric's GL0620, Hubbell's 2320A, Leviton's 70620-FR, or Pass & Seymour's L620-R, Slater's L620R or approved equal.
13. Type M: NEMA L6-30R (2P, 3W, 30A, 250 V, W/G); Bryant's 70630FR, Crouse-Hinds/AH's 6340, General Electric's GL0630, Hubbell's 2620, Pass & Seymour's L630-R or approved equal.
14. Other Types: As produced by Bryant, Crouse-Hinds/AH, General Electric, Hubbell, Pass & Seymour or approved equal. NEMA configuration and ratings to suit requirements or approved equal.

### 2.3 WALL PLATES

- A. Stainless Steel Wall Plates: Type 302 stainless steel with satin finish; Bryant's 93 Series, Crouse-Hinds/AH's 93\_Series, General Electric's 93 Series, Hubbell's 93 Series, Leviton's 910-40 Series, Pass & Seymour's 93 Series or approved equal.
- B. Weatherproof Covers: Crouse-Hinds WLRS, WLRD, Hubbell's 52, 74 Series, Pass & Seymour's 45 Series or approved equal.
- C. Covers for Threaded Type Boxes: Stamped sheet steel, gasketed device covers as produced by Hoffman Co, Crouse-Hinds Co., OZ/Gedney, Co or approved equal.

### 2.4 NAMEPLATES

- A. Phenolic Type: Standard phenolic nameplates with 3/16 inch minimum size lettering engraved thereon.
- B. Embossed Aluminum: Standard stamped or embossed aluminum tags, 3/16 inch minimum size lettering, as produced by Seton Name Plate Corp., Tech Products Inc, MGC Metal Grafix, American Nameplate or approved equal.

### 2.5 OCCUPANCY SENSOR

- A. Passive Infrared (PIR) Line voltage ceiling mounted lighting occupancy sensor with built in daylight harvesting photocell Leviton Model No. 02C15-IDW, Cooper Lighting Solution Model No. OAC-P-1500DMV, Hubbell Control Solution Model No. OMNI-DT or approved equal.

## PART 3 EXECUTION

### 3.1 INSTALLATION

- A. Install wiring devices in outlet boxes.
- B. Local Switches:
  1. Install local switches rated 15A, 120/277 V ac for switches unless otherwise shown on the drawings or specified.

2. Install switches indicated Sa, Sb, Sc, etc, for control of outlets, with corresponding letters on the same circuit.
  3. Where more than one switch occurs at same location in a 120 volt system, arrange switches in gangs and cover with one face plate.
  4. Install switches in a 277 volt system in separate single boxes if voltage between exposed live metal parts of adjacent switches exceeds 300 volts.
  5. Install single and double pole switches so that switch handle is up when switch is in the "On" position.
- C. Receptacles:
1. Install Specification Grade receptacles, NEMA 5-15R, 15A, 125 V, 2P, 3W, for duplex receptacles and single receptacles unless otherwise shown on the drawings or specified.
  2. Install receptacles with ground pole in the down position.
- D. Wall Plates:
1. Install wall plates on all wiring devices in dry locations, with finish to match hardware in each area.
  2. Install hospital wall plates on Type HG receptacles.
  3. Install blank wall plates on outlet boxes which are for future equipment except telephone outlets.
  4. Install 5/8 inch bushed wall plates on telephone outlets.
  5. Fasten wall plates with vandal resistant screws in patients' area. Deliver 10 screw keys to the facility.
  5. Fasten wall plates with vandal resistant screws in offices and public access areas. For all other locations pop rivet wall plates to the wiring devices. Deliver 10 screw keys to the facility.
- E. Weatherproof Covers: Install weatherproof covers on wiring devices in damp and wet locations.
- F. Nameplates: Provide phenolic or embossed aluminum nameplate for each special purpose receptacle indicating phase, ampere and voltage rating of the circuit. Attach nameplate with rivets or tamperproof fasteners to wall plate or to wall above receptacle. Wall plates may be engraved with required data in lieu of separate nameplates.
- G. Mats: Where flush plates are required over outlet boxes that cannot be set deep enough for the plates to fit closely over the finished wall surfaces, provide oak mats to fill the space between the finished wall surface and the plate.
- H. Receptacles On Emergency Circuits: Install red colored receptacles. Engrave faceplates "EMERGENCY" in 3/16 inch high lettering and fill engraving with contrasting color filler material.

**END OF SECTION**

## SECTION 26 5119 – LED INTERIOR LIGHTING

### PART 1 GENERAL

#### 1.1 SUBMITTALS

- A. Product Data: Catalog sheets, specifications and installation instructions, including:
  - 1. Technical information for each fixture that proves that its ballast meets specified requirements. Include data which proves proposed lamp and ballast combinations do not exceed specified total harmonic distortion.
  - 2. Candlepower distribution curves for each type fixture if different from Company or catalog number specified.
- B. Samples: One of each product if requested.
- C. Quality Control Submittals:
  - 1. List of Installations for LED Drivers: If brand names other than those specified are proposed for use, furnish the name, address, and telephone number of at least 5 comparable installations which can prove the proposed products have operated satisfactorily for 1 year.

#### 1.2 MAINTENANCE

- A. Special Tools:
  - 1. Two tools to remove and install each type and size of fasteners on fixtures equipped with vandal resistant fasteners.

### PART 2 PRODUCTS

#### 2.1 COMPONENT DESCRIPTIONS

- A. Additional Components: Equip fixtures with the following additional components, as applicable:
  - 1. Plaster frames as required for installation of recessed and semi-recessed fixtures.
  - 2. Safety clips for fixtures installed in grid ceilings.
  - 3. End caps for individually mounted fixtures and end of continuous row fixtures.
  - 4. Finishing collar or combination finishing collar/outlet box for surface mounted fixture used with exposed raceway:
    - a. Finishing Collar: Same finish and peripheral dimensions as the fixture base, including provisions for mounting, slots to fit over raceway and of depth to cover outlet box and extend back to ceiling or wall.

- b. Combination Finishing Collar/Outlet Box: Same finish and peripheral dimensions as the fixture base, gage or thickness of metal as required by National Electrical Code, including provisions for mounting and knockouts or threaded bosses for entrance of raceway.
- B. Fixtures are as shown in the fixture schedule on the contract drawings.

## **PART 3 EXECUTION**

### **3.1 INSTALLATION**

- A. General: Install fixtures at locations indicated on the drawings.
- B. Finishing Collar or Combination Finishing Collar/Outlet Box (Surface Mounted Fixture Used With Exposed Raceway):
  - 1. Provide finishing collar where surface mounted fixture is installed on an exposed raceway outlet box and the fixture base is larger than the outlet box.
  - 2. Provide combination finishing collar/outlet box where surface mounted fixture is not indicated to be installed on an exposed raceway outlet box, but raceway cannot be run directly into fixture body due to fixture design.

**END OF SECTION**

**SECTION 26 53 00 – EXIT LIGHT FIXTURES****PART 1 GENERAL****1.01 SUBMITTALS**

- A. Product Data: Catalog sheets, specifications and installation instructions.
- B. Samples: One of each product if different from Company or catalog number specified.

**1.02 QUALITY ASSURANCE**

- A. List of Installations: If brand names other than those specified are proposed for use, furnish the name, address, and telephone number of at least 5 comparable installations which can prove the proposed products have operated satisfactorily for one year.

**1.03 MAINTENANCE**

- A. Special Tools: Furnish 2 tools to remove and install fasteners on fixtures equipped with vandal resistant fasteners.

**PART 2 PRODUCTS****2.01 EXIT LIGHT FIXTURES**

- A.. Type XEVR: Kenall Mfg. Co.'s MMEX Series, L.C. Doan Co.'s XTL Series having:
  - 1. Red light emitting diodes (L.E.D.s) with protective polycarbonate clear lens to protect L.E.D.s. Fixtures shall not contain optical or light diffusing panels.
  - 2. Battery pack which illuminates LED lamp upon failure of normal source and maintains not less than 60 percent of the initial emergency illumination for a period of at least 1-1/2 hours.
  - 3. Directional arrows where indicated on drawings.
  - 4. Vandal resistant fasteners.

**PART 3 EXECUTION****3.01 INSTALLATION**

- A. Install the Work of this Section in accordance with the manufacturer's printed instructions.

**END OF SECTION**

## SECTION 32 31 10 – FENCES AND GATES

### PART 1 - GENERAL

#### 1.1 SUMMARY

- A. General: Provide fences and gates in accordance with requirements of the Contract Documents.
- B. Related Work Specified Elsewhere
  - 1. Concrete footings, walls, retaining walls, curbs, nosings, and other such items required for installation of fences and gates are furnished and installed under "Cast-in-Place Concrete" and project Civil and Landscape Documents.
  - 2. Miscellaneous metal fabrications and accessories for fences and gates are furnished and installed under this Section per the requirements of Section 05 50 00 "Metal Fabrications".
  - 3. Paints and Coatings for fences and gates are furnished and installed under this Section per the requirements of Section 09 90 00 "Paints and Coatings".

#### 1.2 REFERENCES

- A. General: Comply with the applicable provisions of the referenced standards except as modified by governing codes and the Contract Documents. Where a recommendation or suggestion occurs in the referenced standards, such recommendation or suggestion shall be considered mandatory. In the event of conflict between referenced standards, this specification or within themselves, the more stringent standard or requirement shall govern.
  - 1. American Society for Testing and Materials (ASTM)
    - a. ASTM E894 "Standard Test Method for Anchorage of Permanent Metal Railing Systems and Rails for Buildings "
    - b. ASTM E935 "Standard Test Methods for Performance of Permanent Metal Railing Systems and Rails for Buildings".
    - c. ASTM E985 "Standard Specification for Permanent Metal Railing Systems and Rails for Buildings".
    - d. ASTM E1481 "Standard Terminology of Railing Systems and Rails for Buildings".
  - 2. American Welding Society
    - a. AWS D1.1 "Structural Welding Code".
    - b. AWS D1.3 "Structural Welding Code -Sheet Steel".
    - c. AWS D1.6 "Structural Welding – Stainless Steel".
  - 3. The Society for Protective Coatings (SSPC): "Steel Structures Painting Manual, Volume 2, Systems and Specifications".

4. Industrial Fasteners Institute (IFC)
  - a. "Fastener Standards Book".

### 1.3 SYSTEM DESCRIPTION

- A. Performance Requirements
  1. Structural Performance: Provide for fences and gates capable of withstanding design loads of the Work within limits and under conditions indicated and as follows:
    - a. Structural requirements shall be as indicated on project structural contract document requirements.
    - b. Wind Loading: Design, fabricate and install fences and gates so that the installed fences and gates will withstand project, ASCE-7, and New York City Building Code required inward and outward pressure.
  2. Fences and Supports that are simultaneously serving as Guardrails, protecting surfaces 30 inches or more above adjacent grade:
    - a. Design and construct to withstand a 200 lbf. load applied at any point, downward or horizontally or the simultaneous application of a lateral force of 40 plf and a vertical force of 50 plf , both applied at the top of the railing; the more stringent requirement governing.
  3. Temperature Change Provisions: Design, fabricate and install exterior components to provide for expansion and contraction over an ambient temperature range of 120 deg. F. and a surface temperature range of 180 deg. F. without buckling, undue stress on members or anchors, and other detrimental effects. Fabricate joints that will be exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.
  4. Design Modifications: Make design modifications of work shown only as may be necessary to meet performance requirements and coordinate the work. Variations in details and materials which do not adversely affect appearance, durability or strength shall be submitted to the Engineer for review. Maintain the general design concept without altering profiles and alignments shown.

### 1.4 SUBMITTALS

- A. Product Data: Submit for Engineer's action. Furnish manufacturer's literature describing the general properties of each product to be used in the Work. Include, manufacturer's technical data documenting the primary function, quality and performance of each system and containing specification for each material, load tables, dimension diagrams and installation instructions, or other such information as required by the drawings and specifications.
- B. Shop Drawings: Submit for Engineer's action. Provide shop drawings detailing fabrication, installation and erection of fences and gates, including dimensioned plans and elevations, drawn at a minimum scale of 1 in. = 1 ft. and details of sections, connections, anchorage and accessory items, drawn at a minimum scale of 3 in. = 1 ft.. Provide templates for anchors and bolts specified for installation under other Sections.

1. Setting Drawings: Provide setting drawings and templates for the location of fences and gates that are to be embedded in or anchored to concrete or masonry.
- C. Samples: Label samples to indicate product, characteristics, and location in the Work. Samples will be reviewed for color and appearance only. Furnish sufficient samples to establish the full range of colors and textures for materials exposed in the finished work. Compliance with other requirements is the responsibility of the Contractor. Provide the following:
1. Fence Post: Two (2) 24 inch lengths each with welded fence post cap fully finished.
  2. Fence Panel: Two (2) 24 inch x 24 inch fence panels with perimeter support bars fully finished.
- D. Quality Control Submittals: Submit the following for Engineer's information:
1. Reports: copies of welder pre-qualification and other welding procedures in form prescribed in AWS "Structural Welding Code".

## 1.5 QUALITY ASSURANCE

- A. Qualified Installer: The entity performing the work of this section must, within the last five (5) consecutive years prior to the bid opening have successfully completed in a timely fashion at least three (3) projects similar in scope, size and type to the required work.
- B. Single Source Responsibility: Obtain each type metal fabrication from one source of a single manufacturer and with sufficient production capacity to produce required units without causing delay to the Work. Obtain accessory products used in conjunction with fences and gates from the fences and gates manufacturer or from sources acceptable to the fences and gates manufacturer. The manufacturer must, for the past five (5) years, have been regularly engaged in the manufacture of material or equipment similar in type to that required for this Project. Such material or equipment provided by the manufacturer must have been in satisfactory service for not less than five (5) years.
- C. Regulatory Requirements: Comply with applicable requirements of the laws, codes, ordinances and regulations of Federal, State and Municipal authorities. Obtain necessary approvals from the NYC Building Department.
- D. Mock-Up(s):
1. Fence:
    - a. After sample approval, build eight (8) feet high fence mock-up as detailed on contract documents, provide six (6) foot wide and two (2) post fence section unless otherwise shown. The Work of this mock-up shall be constructed on approval of workmanship, construction, installation, finish and colors of the approved sample fence.
    - b. Clean mock-ups with materials and techniques intended for use on the Project.
    - c. Obtain acceptance of visual qualities of mock-up before proceeding with the final work.

- E. Pre-Installation Meetings: Prior to the start of the Work, meet at the Project site to review methods and sequence of metal fabrication installation, special details and conditions, standard of workmanship, testing and quality control requirements, job organization and other pertinent topics related to the Work.

## **1.6 DELIVERY, STORAGE, AND HANDLING**

- A. Storage and Handling: Store fences and gates items under cover and off the ground. Handle in a manner so as to protect surfaces and to prevent distortion of, and any other type of damage to, fabricated pieces.

## **PART 2 - PRODUCTS**

### **2.1 METAL MATERIALS**

- A. Metal Surfaces, General: For fences and gates work which will be exposed to view in the finished work, use only materials which are smooth and free of surface blemishes including pitting, seam marks, roller marks, rolled trade names and roughness. Remove blemishes by grinding, or by welding and grinding, prior to cleaning, treating, and applying surface finishes.
- B. Steel
  1. Structural Steel Shapes, Plates and Bars: ASTM A36.
  2. Rolled Steel Floor Plates: ASTM A786 rolled from plate complying with ASTM A36 or ASTM A283, Grade C or D. Thickness shown for raised pattern safety plates is exclusive of projected pattern.
  3. Steel Tubing: ASTM A500; Cold-formed, welded or seamless process. For exterior use and other locations noted, provide hot-dip galvanized (minimum spangle) tubing in accordance with ASTM A153.
  4. Steel Pipe: ASTM A53, Type S, Grade B, suitable for close coiling, black finish unless galvanizing is required; standard weight (Schedule 40), unless otherwise indicated or required to satisfy performance criteria.
  5. Steel Bars and Bar Size Shapes: ASTM A675, Grade 65, or ASTM A36.
  6. Cold Finished Steel Bars: ASTM A108, grade as selected by fabricator.
  7. Cold Rolled Carbon Steel Sheets: Commercial quality, or structural quality, complying with ASTM A1008, Grade A, unless another grade is required by design loads, stretcher leveled if exposed, free from scale, pitting or other defects.
  8. Galvanized Carbon Steel Sheets: ASTM A653, hot-dip galvanized with G90 coating (minimum spangle), either commercial quality or structural quality, Grade 33, unless another grade is required for design loads.
  9. Uncoated, Hot-Rolled Steel Sheet: Commercial quality, or structural quality, complying with ASTM A1011, Grade 30, unless another grade is required by design loads.
- C. Stainless Steel
  1. ASTM A240; Provide the most suitable austenitic alloy, form and finish required to produce the Work. Provide Type 316 and low carbon 316L for

components to be welded (exterior), type 304 and low carbon 304L for components to be welded (interior), unless otherwise noted.

- a. Plate and Sheet: ASTM A480, Stretcher level sheets.
- b. Bar Stock and Shapes: ASTM A276.
- c. Round, Square and Rectangular Welded Tubing: ASTM A554, Grades MT 316 or MT 316L as standard.
- d. Pipe: ASTM A312 (A312M), Grade TP 304.
- e. Castings: ASTM A743 (A743M), Grade CF8 or CF20.

D. Castings

Gray Iron Castings: ASTM A48, Class 30 unless another class is indicated or required by structural loads.

1. Malleable Iron Castings: ASTM A47, Grade 32510.
2. Ductile Iron Castings: ASTM A536, grade as selected by fabricator.
3. Abrasive Castings: Metal shown or specified, of suitable alloy for casting and for structural strength, with an evenly distributed exposed surface treatment of not less than 2 oz./ft.<sup>2</sup> of abrasive granules. Provide electric furnace produced virgin aluminum oxide granules ranging in size from No. 16 to No. 24 and fired into the metal surface.

## 2.2 FASTENER AND ANCHORAGE MATERIALS

- A. Concrete Inserts and Anchors: Anchors and inserts capable of sustaining, without failure, the load imposed within a safety factor of 4 as determined by tested in accordance with ASTM E448. Threaded or wedge type, galvanized ferrous castings, either malleable iron ASTM A47 or cast steel ASTM A27. Provide bolts, washers and shims as required, hot dip galvanized, ASTM A153, Class A.
- B. Fasteners and Anchorage Devices: Provide fasteners complying with the requirements of Industrial Fasteners Institute standards. Type, grade, class and style best suited for the respective purpose. Use countersunk flat-head Phillips type machine screws for exposed fasteners, except where Allen head screws are required. Use stainless steel fasteners for exterior construction and for fastening components fabricated of galvanized steel.
  1. Provide Type 304 or 316 stainless-steel fasteners for exterior use.
    - a. Provide Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, nuts and, where required, flat washers; ASTM F593 for bolts and ASTM F594 for nuts.
  2. Expansion Anchors: Anchor bolt and sleeve assembly of material indicated below with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E488, conducted by a qualified independent testing agency.
    - a. Material for Exterior Conditions: Alloy Group 1 or 2 stainless-steel

bolts complying with ASTM F593 and nuts complying with ASTM F594.

- C. Non-metallic Shrinkage Resistant Grout: Premixed, prepackaged, nonmetallic, noncorrosive, nonstaining, non-gaseous, shrinkage resistant product containing selected silica sands, Portland cement, shrinkage compensating agents, plasticizing and water-reducing agents, complying with CE-CRD-C621 and ASTM C1107 Grade B or Grade C, free of gas-producing or gas-releasing agents, oxidizing catalysts, inorganic accelerators and chlorides. Grout shall be bleed free and attain 7,500 psi compressive strength in 28 days at a fluid consistency of 20 to 30 seconds. Provide one of the following:
1. "Five Star Grout" (U.S. Grout Corp.).
  2. "Masterflow 713 Plus" (Chemrex Inc.).
  3. "Crystex" (L&M Construction Chemicals, Inc.).
  4. "Sure Grip Grout" (Dayton Superior).
  5. Or approved equal.

### 2.3 PAINT MATERIALS

- A. Paint: Provide primer and finish paint as supplied by a single manufacturer for the entire project.
1. Exterior Metal Primer: Compatible with finish coats of paint; shop apply primer to the respective dry film mil thickness specified or as recommended by the manufacturer; Provide one of the following:
    - a. "Hi-Build Epoxoline II Series N69" (Tnemec Co. Inc.); 4.0 - 6.0 mils (100µm -150µm) d.f.t.
    - b. "Carboguard 888 Series" (Carboline Co.); 4.0 - 6.0 mils (100µm - 150µm) d.f.t.
    - c. "Interseal 670HS (International Paint), 4.0-8.0 mils (100µm - 200µm) min d.f.t.
    - d. Or approved equal.
  2. Finish Paint for Exterior Exposed Metals: Color as selected by the Engineer. Shop finish paint apply to the fullest extent possible, respective dry film mil thickness specified or as recommended by the manufacturer; one of the following:
    - a. "Carbothane 133 Series/833" (Carboline Co.). 3.0 - 5.0 mils (75µm -125µm) d.f.t.
    - b. "Endura-Shield II 1075" (Tnemec Co. Inc.); 3.0 - 5.0 mils (75µm - 125µm) d.f.t.
    - c. "Interthane 870UHS" (International Paint), 5.0- 8.0 mils (125µm - 200µm) min d.f.t.
    - d. Or approved equal.
  3. Galvanizing Repair Paint: Zinc rich paint for repairing galvanized surfaces and field welds complying with requirements of ASTM A780. Thickness of applied galvanizing repair paint shall be not less than coating thickness

required by ASTM A123 or ASTM A153 as applicable.

4. Dielectric Separator: Cold applied, asphalt emulsion type complying with ASTM D1187, non-sagging, resistant to severe corrosion conditions; applied in two coats for an overall minimum dry film thickness of 25 mils (625 $\mu$ m) or heavy coating of epoxy paint in minimum 2.0 mils (50 $\mu$ m) dry film.

## 2.4 FABRICATION

- A. Supplementary Parts: Include supplementary parts necessary to complete fences and gates work though not definitely shown or specified. Such parts include, but are not limited to, interface components necessary for the installation or anchorage to Work.
- B. Verification of Measurements and Dimensions and Coordination and Schedule of Work: Verify measurements and dimensions at the job site and cooperate in the coordination and scheduling of the work of this Section with the work of related trades (with particular attention given to the installation of items embedded in concrete and masonry).
- C. Formation of Exposed Work: Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges. Ease exposed edges to a radius of approximately 1/32 in., unless otherwise shown. Form bent metal corners to smallest radius possible without causing grain separation or otherwise impairing work.
- D. Formation of Exposed Connections: Form exposed connections with hairline joints, flush and smooth; using concealed fasteners where possible. Exposed threaded portion of bolts and screws shall be cut off flush with adjacent metal. Cut, drill, punch and tap as required for the installation and attachment of other work to fences and gates work. Shear and punch metals cleanly and accurately. Remove burrs. Remove sharp or rough areas on exposed traffic surfaces.
- E. Formation of Metal Work: Form metal work built in with concrete or masonry for anchorage, or provide suitable anchors, expansion shields, or other anchoring devices shown or required to provide support for intended use. Furnish metal work in ample time for setting and securing in place.
- F. Procedures for Joints and Welds: Make joints as strong and rigid as adjoining sections. Make welds continuous along entire line of contact, except where spot welding is indicated. Grind exposed welds flush and smooth to match and blend with adjoining surfaces. Welded connections may be used where bolted connections are shown. Fabricate joints exposed to weather in a manner to exclude water, or provide weep holes where water may accumulate.
  1. Make up threaded connections tight so that threads are entirely concealed. Shoulder and head, dowel and pin abutting bars. Provide bolt and screw heads flat and countersunk in exposed work. Carefully machine, fit and secure removable members by means of Allen-head set screws of proper size and spacing.
- G. Galvanizing
  1. ASTM A153, Classes A and B, for galvanizing iron and steel hardware.
  2. ASTM A123, for galvanizing rolled, pressed and forged steel shapes,

plates, bars, strip 1/8 in. thick and heavier and for assembled steel

3. Items to be Galvanized: Galvanize ferrous metal utilized on the exterior and items embedded in concrete whether interior or exterior, unless otherwise specified. Galvanize other items where specified or shown.
- H. Preassembly of Items: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Following trial fit, disassemble units only as necessary for shipping and handling. Clearly mark units for reassembly. Provide alignment and splice plates for accurate field fit.

## 2.5 FENCING AND GATES

- A. Provide painted, hot-dipped galvanized steel fences and gates as indicated on drawings.
- B. Provide fence panel and gate systems with post/banding/framing/mounting clips/hardware as required by project performance requirements and as follows:
  1. Fence and Gate panels:
    - a. 80% view-blocking "orsogrill style" vertical fixed louver bars, 1/16 inch thick by 1-31/32 inch wide, spaced at 1-13/16 inch on center.
    - b. Cross rods: 5/32 inch diameter rods welded perpendicular to back side of louver bars and spaced at 5-7/32 inches.
    - c. Framing bars: 1-13/16 inch by 1/4 inch flat bars.
    - d. Fence and Gate Panel Manufacturer:
 

Barnett Bates Corp.

      - 1) A & T Iron Works
      - 2) Grating Pacific, Inc.
      - 3) Or equal as approved by Engineer.
  2. Posts:
    - a. As indicated on drawings and as required by project performance requirements.
    - b. Posts shall be set in concrete footing and/or curbs specified under Cast-in-Place Concrete and project Landscape Documents.
  3. Sliding Gate Hardware:
    - a. As indicated on drawings and as required by project performance requirements.
    - b. Basis of Design: Subject to compliance with requirements, provide cantilever style sliding gate hardware from DuraGates or comparable product by one of the following:
      - 1) Architectural Iron Designs.
      - 2) T S Distributors.
      - 3) Or approved equal.
    - c. Cantilevered Sliding Gate Hardware (no ground track or leading

edge wheel):

- 1) Large carriage monobloc body, Model CGS-350.8G.
- 2) Large galvanized track, CGS-345G.
- 3) End wheel for track, CGS-347G.
- 4) Bottom end cup for track, CGS-346G.
- 5) Adjustable wall mounting bracket, CG-15G.
- 6) Upper adjustable end cup, CG-30G.
- 7) Threaded tie rod for carriage, CG-348-M20.
- 8) Foundation plate, CG-05G.
- 9) Stainless steel tension bars, CGI-40
- 10) Guides: CG-251 and as applicable to project.
- 11) Locking: As indicated on drawings.
- 12) Handle: As indicated on drawings.

4. Swing Gate Hardware:

- a. As indicated on drawings and as required by project performance requirements.
- b. Basis of Design: Subject to compliance with requirements, provide swing gate hardware from Tymetal Corp. or comparable product by one of the following:
  - 1) Architectural Iron Designs.
  - 2) T S Distributors.
  - 3) Or approved equal.
- c. Swing Gate Hardware:
  - 1) Hinges: Maintenance free, sealed bearing industrial grade gate hinges, full depth welded to the gate frame and support posts. Minimum three (3) per gate leaf.
  - 2) Leading edge wheel: Maintenance free, sealed bearing industrial grade gate wheel. One (1) per gate leaf.
  - 3) Locking: As indicated on drawings.
  - 4) Handle: As indicated on drawings.

C. Provide fencing posts and panels formed into the shapes indicated. Joints and connections full-depth welded with welds of proper size and shape; all welds ground smooth.

D. Finish: Provide galvanizing and finish paint.

1. After fabrication, hot-dip galvanize to 1.25 ounces per square foot minimum zinc coating in accordance with ASTM A123.
2. Painted finish as specified herein.

## 2.6 MISCELLANEOUS FRAMING AND SUPPORTS

- A. Steel Framing, Subframing and Supports: Provide steel framing and subframing and supports for applications shown and not specifically provided as part of the work of other trades.
  - 1. Material and Finish: Painted, hot-dipped galvanized steel.
- B. Steel Weld Plates and Angles: Provide painted, hot-dipped galvanized steel weld plates and angles not specified in other Sections, for items as needed to complete the Work.
- C. Items Required for Framing and Support: Furnish bent, or otherwise custom-fabricated, bolts, plates, anchors, hangers, dowels, and other miscellaneous painted, hot-dipped galvanized steel shapes as required for framing and supporting items concrete or other structures. Fabricate items to sizes, shapes, and dimensions required.
- D. Fabrication of Miscellaneous Units: Fabricate miscellaneous units to sizes, shapes and profiles shown or, if not shown, of required dimensions to receive adjacent work to be retained by framing. Fabricate from structural steel shapes and plates and steel bars, of welded construction using mitered joints for field connection, except where otherwise shown. Cut, drill and tap units to receive hardware and similar items.
- E. Anchors and Inserts: Provide units with integrally welded anchors for casting into concrete or building into masonry. Furnish inserts if units must be installed after concrete is placed.
  - 1. Space anchors 24 in. o.c. and provide minimum anchor units of 1-1/4 in. x 8 in. x 3 in. steel straps, except as otherwise shown.

## 2.7 SHOP CLEANING AND PAINTING

- A. Fences and gates Work: Hot-dip galvanize fences and gates work, except members of stainless steel, unless otherwise specified.
- B. Removal Of Oil, Grease And Similar Contaminants: Remove oil, grease and similar contaminants in accordance with SSPC SP-1 "Solvent Cleaning", prior to additional surface preparation specified.
- C. Metal Surfaces: Clean and prepare metal surfaces before hot-dip alvanizing. Remove rust and mill scale in accordance with SSPC SP-3 "Power Tool Cleaning", and SSPC SP-6 for exterior exposed ferrous metal.
- D. Application of Primer for Painting Prep: Immediately after surface preparation, apply primer in accordance with manufacturer's instructions. Use painting methods which will result in full coverage and dry film thickness specified.
- E. Procedures for Primer and Finish Paint: Apply one shop coat of primer to fabricated metal items, except apply 2 coats of primer to surfaces inaccessible after assembly or erection. In addition, apply one shop coat of finish paint to entire surfaces of exterior loose lintels, shelf and relieving angles, dunnage and other items as noted or specified. Use thinners only as specified by the coating manufacturer. The entire coating system shall be as supplied by a single manufacturer.
- F. Dissimilar Materials: Separate dissimilar metals with coating of dielectric

separator. Do not extend coating onto exposed or finished surfaces.

## **2.8 SOURCE QUALITY CONTROL**

- A. Contractor's Quality Control Responsibilities: Contractor is solely responsible for quality control of the Work.
- B. Contractor's Inspection and Testing Agency: Contractor shall employ, at its own expense, an independent full time inspection agency to perform testing and inspection services for metal fabrication work as follows. Non-conforming Work shall be retested and paid for by Contractor.
  - 1. Shop Inspection of Connections: Perform 100% visual inspection at bolted and welded connections in the Work. Examine the size, quality and placement of each connection to verify installation in accordance with Contract Documents and actioned shop drawings.

## **PART 3 - EXECUTION**

### **3.1 GENERAL**

- A. Manufacturer's Instructions: Prepare substrates and install the work of this Section, including, components and accessories in accordance with the manufacturer's instructions, except where more stringent requirements are shown or specified, and where project conditions require extra precautions or provisions to ensure satisfactory performance of the Work.

### **3.2 EXAMINATION**

- A. Verification of Conditions: Examine the areas to receive the Work and the conditions under which the Work would be performed. Contractor shall remedy conditions detrimental to the proper and timely completion of the Work. Do not proceed until unsatisfactory conditions have been corrected.

### **3.3 COORDINATION**

- A. Coordinate installation of anchorages for fences and gates. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.
- B. Coordinate installation of steel weld plates and angles for casting into concrete that are specified in this Section but required for work of another Section. Deliver such items to Project site in time for installation.

### **3.4 PREPARATION**

- A. Substrate Acceptability: Commencement of installation shall constitute acceptance of substrate conditions by the Installer

### **3.5 INSTALLATION**

- A. General: Install work as shown, plumb, level and in line with adjacent materials where required. Provide fastenings as indicated on the Drawings, specified herein or as shown on final shop drawings. Fit exposed connections accurately together to form tight hairline joints.
  - 1. Weld Plates and Angles: Coordinate installation of weld plates and angles for casting into concrete construction that are specified in this Section but

required for work of another Section. Deliver such items to Project site in time for installation.

2. Anchorages: Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions and directions for installation of anchorages, including steel weld plates and angles, concrete inserts, sleeves, anchor bolts and other miscellaneous items having integral anchors that are to be embedded in concrete or masonry construction. Coordinate delivery of such items to the project site. Deliver items which are to be built into the work of other Sections in time so as not to delay the progress of the Work.
- B. Procedures for Fastening Metal Work: Except where otherwise specified for a particular item for built-in work, fasten metal work to concrete or solid masonry with embedded anchors or expansion bolts, and to hollow block with toggle bolts. Fastening to wood plugs will not be permitted. Drill holes for bolts to the exact diameter of the bolt. Provide screws threaded full length to the screw head.
- C. Field Welding: Comply with AWS Welding Code for procedures related to field welding as related to appearance and quality of welds made and for methods used in correcting welding work. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals. Obtain fusion without undercut or overlap. Remove welding flux immediately. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.
- D. Protection of Finished Surfaces: Protect finished surfaces against damage during construction and remove protection at time of substantial completion.
- E. Dissimilar Materials: Separate dissimilar metals with heavy coating of dielectric separator. Do not extend coating onto exposed or finished surfaces.
- F. Fencing and Gates:
1. Install fencing in accordance with manufacturer's installation instructions and approved shop drawings.
  2. Install fence posts as shown on the Drawings. Set the posts plumb and level.
  3. After the posts have been set in place and properly supported to hold them in line and grade, the annular space shall be filled with non-shrink, cementitious grout. The grout shall be flush with the concrete. After the grout has cured, the Contractor shall install polyurethane sealant around the fence post. Sealant shall be applied in strict accordance with the manufacturer's instructions, and shall be tooled in as required to maintain drainage from posts.
  4. Do not install bent, bowed, or otherwise damaged panels. Remove damaged components from site and replace. Secure fence panels with vandal resistant stainless steel bolts to fence posts after posts have been set in footings.
  5. Touch-up damaged finish with paint supplied by manufacturer and matching original coating in color and level of protection.

**3.6 FIELD QUALITY CONTROL**

- A. Contractor's Quality Control Responsibilities: Contractor is solely responsible for quality control of the Work.
- B. Connection Identification: Assign each bolting crew and welder an identifying symbol, and require them to mark every connection, so that an inspector may identify the person(s) making each connection.
- C. Qualification for Field Welding: Qualify the welding operators and welding procedures in accordance with AWS D1.1 and D1.3 requirements.
- D. Field Inspection of Connections: Perform 100% visual inspection at bolted and welded connections in the Work. Examine the size, quality and placement of each connection to verify installation in accordance with Contract Documents and actioned shop drawings.

**3.7 ADJUSTING**

- A. Procedures for Cleaning, Painting and Touch-Up: Immediately after erection, clean field welds, bolted connections, marred and abraded surfaces. Paint and touch-up paint with the specified paint system. Touch up galvanized surfaces in accordance with ASTM A780.

**END OF SECTION**

**(NO TEXT ON THIS PAGE)**

**PC - PAGES**

**PARALLEL  
CONVEYANCE  
SPECIFICATIONS**

---

**CONTRACT SANDRESM1**

The specifications in the Parallel Conveyance Specifications (PC-Pages) cover the procurement, fabrication, and construction of the branch interceptor replacement parallel conveyance, construction methods and associated works at East 10th Street as part of the East Side Coastal Resiliency (ESCR) Project.

The PC-Pages supplement the specifications shown on the Specifications and Standards of New York City sheet at the beginning of this Volume 3, which apply to the work except as modified in these Contract Documents.

**(NO TEXT ON THIS PAGE)**

**SECTION 01 11 00 – SUMMARY OF WORKS – 10TH STREET PARALLEL CONVEYANCE****PART 1 GENERAL****1.1 SUMMARY**

- A. This Section provides a summary of the main items of work for the 10th Street Parallel Conveyance (10th St PC). The work consists of furnishing all equipment, superintendence, labor, skill, material and all other items necessary for the construction of the branch interceptor replacement parallel conveyance as part of the East Side Coastal Resiliency Project.
- B. This Section Includes:
  - 1. Location and Description of Work
  - 2. Work Included in the Contract
  - 3. Related Sections
  - 4. Site Characterization Reports and Information

**1.2 PAYMENT**

- A. There is no separate payment provision for this Section. The terms of measurement and payment for each principal item of work is provided in the related specification sections.

**1.3 RELATED SECTIONS**

- A. All Contract Documents, including all other specifications sections in this Contract, will apply to this Section.
- B. Specifications sections related to the principal items of work covered under this Contract are organized into the following Sections:
  - 1. COMMON WORKS SECTIONS cover general provisions and requirements that are in addition to NYC DEP BWSO Standard Sewer and Water Main Specifications and the NYC DOT Standard Highway Specifications. The COMMON WORKS SECTIONS include:
    - a. 01 43 10 – Contractor's Work Quality
    - b. 01 65 00 – Product Delivery Requirements
    - c. 01 73 12 – Maintenance of Operations and Construction Staging
    - d. 01 73 17 – Installation of Equipment
  - 2. APPURTENANT WORKS SECTIONS cover requirements that are in addition to or modify (modifications are noted as such) the NYC DEP BWSO Standard Sewer and Water Main Specifications for appurtenant works required for the complete construction and installation of the principle items of work. APPURTENANT WORKS SECTIONS include:
    - a. 05 05 23.01 – Welding
    - b. 05 05 23.02 – Miscellaneous Metal Fastenings
    - c. 05 06 00.01 – Schedules for Stainless Steel Work

- d. 05 50 00 – Metal Fabrications
- e. 05 52 13.05 – Welded Pipe Railings (Stainless Steel)
- f. 05 53 01.02 – Stainless Steel Floor Gratings
- g. 09 91 00 - Painting
- h. Modification to 50.61 – Sewers in Jacked Steel Sleeves

**1.4 REFERENCES**

- A. Not Used

**1.5 DESCRIPTION**

- A. Location of Work
  - 1. Work performed under this Contract takes place in the sewershed of the East Side Coastal Resiliency Project, including the branch interceptor replacement at East 10th Street and trenchless crossing of the FDR Drive as shown on the Contract Drawings.
- B. Work Included in the Contract.
  - 1. Contract Name: SANDRESM1
  - 2. Principal Items of Work: Construction of new 42” branch interceptor to replace existing 24” branch interceptor at East 10th Street including trenchless crossing under FDR Drive.
- C. Datum Plane
  - 1. All elevations are in reference to the North American Vertical Datum of 1988 (NAVD88).

**END OF SECTION**

**SECTION 01 43 10 – CONTRACTOR’S WORK QUALITY****PART 1 GENERAL****1.1 SUMMARY**

- A. Section Includes:
  - 1. Contractor’s Quality Assurance / Quality Control Management Plan
  - 2. Defective Work, Equipment or Materials
  - 3. Welding Certification and Welding Inspection
  - 4. Inspection and Testing of Concrete
  - 5. Leakage Tests
  - 6. Contractor's Surveyor

**1.2 PAYMENT**

- A. There is no specific Payment provisions for this Section, and shall be deemed included in the prices bid for the respective Contract items.

**1.3 RELATED SECTIONS**

- A. Section 01 43 10 – Contractor’s Work Quality
- B. Section 01 43 15 – Witness Shop Testing

**1.4 REFERENCES**

- A. AWS American Welding Society
- B. ASME American Society of Mechanical Engineers
- C. NYS Steel Construction Manual

**1.5 DESCRIPTION**

- A. Contractor Quality Assurance / Quality Control Plan
  - 1. The Contractor shall establish, execute and submit to the Engineer a Quality Assurance / Quality Control (QA/QC) Management plan for the services and operation of equipment which will be supplied under this Contract. The plan shall provide the Contractor with adequate measures for verification and conformance to defined requirements by its personnel and all subcontractors, fabricators, suppliers, and vendors.
- B. Defective Work, Equipment or Materials
  - 1. Any defective or imperfect Work, equipment, or materials furnished by the Contractor which is discovered before the Final Acceptance of the Work, or during the guarantee period, shall be removed immediately even though it may have been overlooked by the Engineer and approved for payment. The Contractor shall repair such defect, without compensation, in a manner satisfactory to the Engineer.

2. Unsuitable materials and equipment may be rejected, notwithstanding that such defective Work, materials and equipment may have been previously overlooked by the Engineer and accepted or approved for payment.
3. If any workmanship, materials or equipment shall be rejected by the Engineer as unsuitable or not in conformity with the Specifications or Contract Drawings, the Contractor shall promptly replace such materials and equipment with acceptable materials and equipment at no additional cost to the City. Equipment or materials rejected by the Engineer shall be tagged as such and shall be immediately removed from the Site.
4. The Engineer may order tests of imperfect or damaged Work equipment, or materials to determine the required functional capability for possible acceptance, if there is no other reason for rejection. The cost of such tests shall be borne by the Contractor, and the nature, tester, extent and supervision of the tests will be as determined by the Engineer. If the results of the tests indicate that the required functional capability of the Work, equipment, or material was not impaired, the Work, equipment or materials may be deemed acceptable, in the discretion of the Engineer. If the results of such tests reveal that the required functional capability of the questionable Work, equipment or materials has been impaired, then such Work, equipment or materials shall be deemed imperfect and shall be replaced. The Contractor may elect to replace the imperfect Work, equipment or material in lieu of performing the tests.
5. If, in the making of any test, it is ascertained by the Engineer that the material or equipment does not comply with the Contract, the Contractor will be notified thereof, and it will be directed to refrain from delivering said material or equipment, or to promptly remove it from the site or from the Work and replace it with acceptable material at no additional cost to the City. Upon rejection of any material or equipment submitted as the equivalent of that specifically named in the Contract, the Contractor shall immediately proceed to furnish the named material or equipment.
6. All welding must conform to the requirements of Specification Section 05 05 23.01 – Welding, and all other welding requirements as applicable and as determined by the Engineer.

C. Inspection and Testing of Concrete

1. Inspection and testing of concrete shall be in accordance with NYC Department of Environmental Protection (DEP) Bureau of Water and Sewer Operations (BWSO) Standard Sewer and Water Main Specifications.
2. All concrete shall be class 40 concrete, 4,000 psi, unless otherwise shown. Where indicated on the drawings, provide class 50 concrete, average cylinder strength not less than 5,000 psi. For class 50 concrete, adjust acceptance of structure limits 5,000 psi to 4,000 psi (retained payment), and less than 4,000 psi (rejected and removed).

**D. Leakage Tests**

1. All new pipelines and appurtenant structures and all new liquid containing structures shall be field tested for leakage after installation in accordance with NYC DEP BWSO Standard Sewer and Water Main Specifications.

**E. Contractor's Surveyor**

1. The Structures and Equipment Contractor shall retain the services of a licensed land surveyor, registered in the State of New York, to perform survey work including but not limited to establishing line and grade, in advance of the construction; and to perform other surveying services for the Work included under the Contract. The surveyor shall be subject to the approval of the Engineer. Survey drawings shall be submitted to the Engineer for approval.
2. The Contractor shall erect, install and maintain survey platforms, targets, benchmarks and similar facilities to be used by the Engineer in the performance of its inspection services; shall perform all survey work required before, during and after construction; and shall be in accordance with NYC DEP BWSO Standard Sewer and Water Main Specifications.

**1.6 QUALITY ASSURANCE**

- A. A Quality Management Plan must be submitted for review and approval.

**1.7 SUBMITTALS****A. Quality Assurance / Quality Management Plan**

1. Within 15 days after the commencement work date given in the Notice to Proceed (NTP), the Contractor shall provide its QA/QC management plan to the Engineer for approval. The Engineer's review and acceptance of the Contractor's QA/QC plan shall not relieve the Contractor from any of its obligation to perform the Work.
2. Inspection of the Work by the Engineer is made solely for the benefit of the City. The inspection of the Work shall not relieve the Contractor of any of its obligations to fulfill the Contract as herein prescribed, and defective Work shall be repaired or replaced at the Contractor's sole expense. The Contractor's assigned QA/QC personnel are subject to the Engineer's review and continued acceptance. No Work covered by the QA/QC plan shall start until the Engineer's written acceptance of the Contractor's QA/QC plan has been obtained.
3. The QA/QC plan should consist of the following quality elements:
  - a. Roles & Responsibilities, communication protocols
    - b. Management and Production Inspections
    - c. Off-Site Supplier Quality
    - d. Vendor Capability Inspections
    - e. Notification & Coordination with the Engineer
    - f. Inspection Instructions
    - g. Traceability

- h. Pre-Activity Meeting
  - i. Initial Inspections
  - j. Witness Shop Testing & QA Inspections
- B. QA Acceptance / Shipping / Material Marking & Identification
- 1. On-Site Receiving & Materials / Equipment Control
  - 2. Material / Equipment Receiving
  - 3. CMTRs / Certificate of Compliance
  - 4. Traceability
  - 5. On-Site Storage, Care, & Maintenance
  - 6. QA/QC Process and Operational Procedures
  - 7. Submittal Management
  - 8. Request for Information (RFI)
- C. Five-Phases of Inspection Procedures
- 1. Phase 1 – Client Pre-Activity Meeting
  - 2. Phase 2 – Initial Inspections
  - 3. Phase 3 – On-Going Inspections
  - 4. Phase 4 – Witness Shop Test Inspection and QA Inspections
  - 5. Phase 5 – Final Inspections – Punch lists
- D. Inspection and Test Plan (ITP)
- 1. Build Work Plan Procedure
  - 2. Checklist & Hold Point Procedure
  - 3. Witness and Hold Points
  - 4. Control of Measuring & Calibrated Test Equipment Procedure
  - 5. Reporting and control non-conforming work
- E. Control & Responsibility
- 1. Non-Conformance Reporting (NCR) Disposition
  - 2. QC Verification
  - 3. Documentation
- F. Root Cause Analysis (RCA) Process
- 1. Thresholds for RCA
  - 2. Process
  - 3. Preventive Action Plan
  - 4. Implementation
  - 5. Measurement of Effectiveness

- G. Continuous Improvement
  - 1. Recognition and Accountability
  - 2. Measurement and Monitoring
  - 3. Performance & Issues Matrix
  - 4. Management Reviews
  - 5. Audit and Assessments
- H. Welding Control
  - 1. Full Compliance with Specifications and Applicable Codes
- I. Additional Submittals
  - 1. The Contractor shall submit the following information prior to entering into a supply or service subcontract.
  - 2. Contract number, supplies or services to be provided and a general description of the proposed item(s), such as trade name, type, etc. The name and address of the manufacturer and the location of the plant at which supplies will be manufactured and tested as required, or at which the services will be performed.
  - 3. Experimental and test data required to support the claimed performance of the supplies.
  - 4. A description of the testing plant, including the hydraulic, electrical and other facilities, in sufficient detail to show that the plant is adequately equipped for performing the tests, if such testing is required.
- J. Any additional information that the Engineer may deem necessary in order to determine the ability of the supply or service company to produce the item as called for by the Specifications.

## **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. All materials & equipment must be received, stored in a safe & adequate environment as per approved procedures.

## **PART 2 PRODUCTS**

### **2.1 MATERIALS / EQUIPMENT**

- A. All work of assembly, installation, and construction shall be done in a neat, first class, and workman like manner. If the quality of the material, fixtures, fittings, supplies, equipment or work required by the Contract Drawings does not agree with that required by the Specifications, the required quality must be supplied. In asking for prices on, or placing orders for, materials, fixtures, fittings, supplies, and equipment intended for use or installation under this Contract, the Contractor shall provide the manufacturer or dealer with such complete information from these Specifications as may in any case be necessary. In every case, it shall quote in full to each such manufacturer or dealer the text of this subparagraph, as well as the text of such other portions of the contract, as are appropriate.

**PART 3 EXECUTION****3.1 EXAMINATION / PREPARATION**

- A. Notice of Intent to Commence Manufacture
  - 1. The Contractor shall give notice in writing to the Engineer sufficiently in advance of its intention to commence the manufacture or preparation of materials especially manufactured or prepared for use in or as part of the permanent construction as detailed in Section 01 43 10 – Contractor's Work Quality and Section 01 43 15 – Witness Shop Testing. Such notice shall contain a request for inspection, the date of commencement and the expected date of completion of the manufacture or preparation of materials. Upon receipt of such notice, the Engineer will: arrange to have a representative present at such times during the manufacture as may be necessary to inspect the materials; or notify the Contractor that the inspection will be made at a point other than the point of manufacture; or notify the Contractor that inspection will be waived.
  - 2. In those instances, where the City inspector(s) arrive at the agreed-upon location, at the agreed-upon date and time, and find that the article(s) to be inspected are not ready for inspection, the inspector(s) will not wait at the facility. All additional travel expenses incurred shall be borne by the Contractor and shall be deducted from the Contractor's next payment, unless otherwise determined by City.
- B. Field Measurements
  - 1. The Contractor shall take all necessary measurements in the field to determine the exact dimensions for all Work required and verify all pertinent data and dimensions shown on the Contract Drawings prior to shop drawing submissions and construction.

**3.2 ADJUSTING / PROTECTION / CLEANUP**

- A. All materials and equipment must be protected & wrapped during transport, storage & post installation.

**END OF SECTION**

**SECTION 01 65 00 – PRODUCT DELIVERY, STORAGE AND HANDLING****PART 1 GENERAL****1.1 SUMMARY**

- A. Section Includes:
1. Delivery of products
  2. Handling of products
  3. Storage of products
  4. Protection of material and equipment
  5. Inspection of items
  6. Supporting heavy loads

**1.2 PAYMENT**

- A. There is no separate payment provision for this section, and shall be deemed included in the prices bid for the respective Contract items.

**1.3 RELATED SECTIONS - Not Used****1.4 REFERENCES - Not Used****1.5 DESCRIPTION**

- A. General Requirements
1. The Contractor shall make all arrangements for transportation, delivery and handling of materials and equipment required for installation and completion of the Work.
  2. Storage space at the site is limited. On-site storage only in areas permitted. Any off-site storage locations or facilities are to be inspected and approved by the Engineer prior to storing items.
    - a. When storage of materials and equipment is off-site, deliveries to the site shall be scheduled to coincide with installation of the items.
    - b. If necessary to move stored materials and equipment during construction, the Contractor shall move or cause to be moved materials and equipment without any additional compensation.
  3. Unless otherwise specified, the City's docking facilities or hoisting equipment at or near the project site will not be available for the Contractor's use.
  4. Transport and handle products in accordance with manufacturers' instructions and in compliance with all Federal, State and Local Laws.

**1.6 QUALITY ASSURANCE - Not Used****1.7 SUBMITTALS - Not Used****1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Delivery of Products

1. The Contractor shall arrange deliveries of products in accordance with construction schedules and with ample time to facilitate inspection prior to installation.
  2. The Contractor shall coordinate deliveries to avoid conflict with Work and conditions at the site and to accommodate the following:
    - a. Limitations of storage space
    - b. Availability of equipment and personnel for handling products
    - c. Materials and equipment shall not be delivered to Site until related Shop Drawings, including the manufacturer's recommended storage instructions, have been approved by the Engineer.
    - d. Materials and equipment shall not be delivered to Site until required storage facilities have been provided.
    - e. Products shall be delivered to the Site in the manufacturer's original, unopened, labeled containers. The Engineer shall be informed of all deliveries of all materials and equipment.
    - f. Partial deliveries of component parts of equipment shall be clearly marked to identify the equipment, to permit easy accumulation of parts and to facilitate assembly.
    - g. Immediately on delivery, the Contractor shall inspect shipments to ensure:
      - 1) Product complies with requirements of Contract Documents and approved Submittals.
      - 2) Quantities are correct.
      - 3) Containers and packages are intact and labels are legible.
      - 4) Products are properly protected and undamaged.
- B. Handling of Products
1. The Contractor shall provide equipment and personnel necessary to handle products in a manner that prevents soiling or damage to products or packaging.
  2. The Contractor shall provide additional protection during handling as necessary to prevent scraping, marring or otherwise damaging products or surrounding surfaces.
  3. The Contractor shall handle products in a manner that prevents bending or overstressing.
  4. Heavy components shall be lifted only at designated lifting points.
  5. Materials and equipment shall be handled at all times in a safe manner and as recommended by manufacturer or supplier so that no damage will occur to them. Do not drop, roll or skid products off delivery vehicles. Hand carry or use suitable materials handling equipment.
- C. Storage of Products
1. Handle and lift products only at designated lift points and by methods to avoid soiling, disfigurement, bending, overstressing and damage.

2. Store products on shelves, in bins, or in neat groups of like items, with seals and labels intact and legible, and in a manner to provide access for maintenance and inspection.
3. Store loose granular materials on clean, solid, flat surfaces and prevent mixing with foreign matter. Store fabricated products supported above the ground on skids or blocking. Provide erosion control and surface drainage to prevent erosion and ponding of water as per the contract documents or directed by the Engineer.
4. Cover products subject to discoloration or deterioration with impervious sheet covering and protect products from soiling and staining.
5. Store and protect products that are subject to damage by the elements in weather-tight or climate-controlled enclosures, and according to manufacturer's instructions. Maintain temperature, ventilation, and humidity within ranges stated in manufacturer's instructions.
6. Attach applicable manufacturer's storage service instructions labeled "STORAGE SERVICE INSTRUCTIONS ENCLOSED" to exterior of each stored product.
7. Inspect, maintain and service stored products on a regularly scheduled basis, consistent with manufacturer's instructions.
8. Record inspection, maintenance and services performed and keep log available for review by the Engineer.

D. Protection of Materials and Equipment

1. The Contractor shall make every effort to minimize extended storage periods of materials and equipment at the Site by judiciously scheduling deliveries to coincide with construction needs.
2. Unless otherwise specified, storage of any mechanical or electrical equipment or other ultraviolet or weather sensitive items out of doors at any time is prohibited regardless of the protection furnished. Storage of mechanical and electrical equipment within structures at the Site will not be permitted unless the structures are enclosed. A structure shall be considered to be enclosed when it is roofed and has protection of doorways, windows and other opening closures.
3. All mechanical and electrical equipment shall be coated, wrapped and otherwise protected from snow, rain, drippings of any sort, dust, mud, condensed water vapor, etc., during shipment, storage, and installation and until placed in service.
4. All storage areas for motors shall be heated. Space heaters shall be supplied, as required, in all enclosures being utilized for storage of motors. Motors equipped with space heaters shall be properly wired and the heaters activated while the motors are in storage.
5. Should storage of mechanical and electrical equipment become necessary before it can be stored at the Site, the Contractor shall provide storage in a weatherproof warehouse.

6. Materials may be stored out of doors if supported above ground surface on wood runners and protected with approved, effective and durable covers.
7. All storage and protection of materials and equipment at the Site shall be subject to the approval of the Engineer.
8. Prior to installation of the equipment, the Contractor shall have the manufacturer inspect the equipment and certify that its condition has not been detrimentally affected by a long storage period. Such certifications by the manufacturer shall be deemed to mean that the equipment is judged by the manufacturer to be in a condition equal to that of equipment that has been shipped, installed, tested and accepted in a minimum time period. As such, the manufacturer will guarantee the equipment equally in both instances. If such a certification is not given, the equipment shall be judged to be defective, and shall be removed and replaced at the Contractor's expense.
9. When stored materials and equipment are moved from the storage location to the Site, the Contractor shall move or cause to be moved the items without additional compensation.

E. Inspection of Items

1. The Contractor shall inspect all items including all boxes, crates and packages containing materials and equipment for damage that may have occurred during shipment prior to their removal from the truck or other manner of conveyance. Any damage shall be reported immediately to the Engineer.
2. The Contractor shall then carefully remove the materials and equipment from the truck or trucks on which they were shipped. The materials and equipment shall then be transported to the place of installation at the job Site. The Contractor shall be liable for loss or damage to the materials and equipment that may occur while being unloaded, transported, stored or installed.
3. All materials and equipment that arrives at the job site during normal working hours shall be unloaded as soon as practicable.

F. Supporting Heavy Loads

1. In all cases where heavy loads or demolition may temporarily affect existing slabs, the Contractor shall confirm the slab's load sustaining ability. Whenever heavy loads are to be stored or temporarily imposed on slabs, or whenever the structures may be impacted by demolition, the Contractor shall submit for approval by the Engineer a plan of procedure prepared by a licensed professional engineer, indicating a structural analysis of the slabs and methods of distributing loads, and providing auxiliary support so that slabs and beams are not loaded in excess of their design loadings.

**END OF SECTION**

**SECTION 01 73 12 – MAINTENANCE OF OPERATIONS & CONSTRUCTION STAGING****PART 1 GENERAL****1.1 SUMMARY**

- A. Maintenance of site operations
- B. General criteria and restrictions
- C. Construction staging

**1.2 PAYMENT**

- A. There is no separate payment provision for this Section, and shall be deemed included in the prices bid for the respective Contract items.

**1.3 RELATED SECTIONS**

- A. Division 1 General Provisions of the NYC DEP BWSO Standard Sewer and Water Main Specifications Section 10.13

**1.4 REFERENCES**

- A. Not Used

**1.5 DESCRIPTION**

- A. In addition to the requirements of NYC DEP BWSO Standard Sewer and Water Main Specifications Section 10.13, the Contractor shall adhere to the following:
  - 1. Throughout construction of the upsized 10th Street branch interceptor, the Contractor shall be responsible for maintaining the flow to the interceptor through the existing 24" branch interceptor, new 42" branch interceptor, and/or temporary bypass throughout construction. Contractor shall also be entirely responsible for the design of any temporary supports to maintain the integrity of the existing interceptor through construction and installation of the upsized branch interceptor on 10th Street. The design of temporary works shall be signed and sealed by a licensed New York State Professional Engineer and submitted along with the proposed construction approach to the Engineer for approval prior to start of construction.
  - 2. The contractor shall submit sewer bypass designs and calculations to DEP BWT Operations for approval 90 days prior to construction. The Contractor shall be entirely responsible for the installation, performance, and maintenance of the temporary bypass.
  - 3. Contractor shall notify DEP BWT Operations 24 hours prior to entry into DEP structures and/or interceptors.
  - 4. Throughout construction, the Contractor shall provide the following:
    - a. Contractor shall provide for air passage through branch interceptor manhole covers to prevent cover displacement in the event of air pressure build up in the interceptor during construction.
    - b. Prior to modifications to the existing interceptor manhole and branch interceptor, the Contractor shall implement measures to

prevent and capture any debris from entering the interceptor flow. The branch interceptor shall be cut using demo or wire saw or other similar method such that debris is fully captured during the cutting activity. Jackhammering and other disruptive methods are not permitted. The Contractor shall promptly remove any debris, silt, etcetera which enters the interceptor.

- c. CCTV inspection of the existing 24" branch interceptor and the interceptor 500 feet upstream and downstream of the modified existing interceptor manhole shall be conducted before construction. CCTV inspection of the new 42" branch interceptor and the interceptor 500 feet upstream and downstream of the modified existing interceptor manhole shall be conducted after construction.
- d. The Contractor shall be responsible for the structural integrity and flow through the branch interceptor and interceptor manhole within 500 feet of upstream and downstream of work extents. Contractor shall repair any breaks and/or leaks and perform all required maintenance to immediately remove and dispose of any debris at the Contractor's own cost and expense.
- e. Wireless level sensors shall be provided for remote monitoring of all bypass pumping suction and discharge points. High water level alarms with dial-out to Contractor shall be provided.

#### B. Maintenance of Site Operations

1. The Contractor shall perform its work in a manner such that the City can keep the existing site/facility in continuous dependable operation. Any temporary work that may be required to maintain the site/facility in operation shall be furnished by the Contractor at the direction of the Engineer at no extra cost to the City.
2. The Contractor must keep the Engineer of the facility/site informed of any Work that may interfere with normal operations. The Engineer must receive a written request at least 15 days in advance of proposed work.
  - a. The CPM schedule maintained by the Contractor shall not serve as prior notice. No work shall proceed prior to the written approval of City.
3. Unless otherwise permitted by the facility/site representative, no existing valves or equipment shall be operated by the Contractor.
4. The employees of the Contractor or its Subcontractors may be prohibited from entering or using some areas of the site/facility.

#### C. General Criteria and Restrictions

1. The following general criteria and restrictions shall apply to the Work except where otherwise noted in the Contract:
  - a. When the connection of a new pipeline to an existing structure or pipeline requires a shutdown of the existing structure or pipeline, the new pipeline except for the final connection shall be tested prior to proceeding with the shutdown. When the final connection is

- completed, including complete survey and inspection of pipe in accordance with NYC DEP BWSO Standard Sewer and Watermain Specifications, the new pipeline shall be tested again in its entirety.
- b. The Contractor shall provide all pumps, piping, valves, etc., as necessary to dewater all conduits, channels, and pipes directly to a location approved by the Engineer.
  - c. The Contractor shall provide all pumps, piping, valves, etc., as necessary, to remove unused chemicals from all pipes as described herein.
  - d. The Contractor shall flush and clean all process channels, conduits, manholes, and tanks after they have been removed from service.
  - e. Any modification to, relocation of, connection to or shutdown of an existing tank, vessel, conduit, channel, pipe, etc. shall not be scheduled or occur prior to the Engineer's written approval. The Contractor is advised that the conduits, channels and tanks may contain accumulations of putrescible materials which will remain on the walls and inverts. These materials emit noxious, odorous and hazardous gases such as hydrogen sulfide and methane. The Contractor is advised to ventilate and test the air of all confined spaces prior to entry.
  - f. The Contractor is advised that existing valves, gates and other devices shall be considered as inoperable and subject to leaking. The Contractor shall be responsible for designing, furnishing, installing and removing all temporary devices, stop logs, plugs or bulkheads necessary to isolate or dewater pipes, channels, conduits, or tanks to perform the work.
  - g. The Contractors shall install and maintain temporary drainage and containment, to the satisfaction of the City, where the existing drainage and containment has been removed due to construction progress until the permanent replacement drainage and containment system has been installed.
  - h. The Contractor shall coordinate its activities with the other contractors on the site so as to comply with the provisions of these specifications and their intent.
2. The following general restrictions shall be applied to all equipment and appurtenant utility systems:
- a. The restrictions provided herein serve to maintain the existing site facilities in continuous operation and to coordinate with other construction activities at the site in accordance with the requirements of the authorities having jurisdiction.
  - b. Existing fire suppression piping at / near Work Sites shall be operational at all times until replaced.
  - c. Plumbing Facilities: All building plumbing systems such as sanitary facilities, roof and floor drains, pumping, etc., shall be maintained until turned over by site operations for demolition.

- d. Storm Drainage: Storm drainage on the site shall be operational at all times. If necessary, the Contractor shall pump between manholes during the installation of new piping or underground utilities. Roof drainage shall be maintained at all times and no roof shall be permitted to accumulate standing water.
  - e. All site drainage flows shall not be interrupted.
  - f. Power, Light and Communication Systems: Electric power, lighting service, security camera systems and communications systems shall be maintained in uninterrupted operation in all areas that remain in operation. Individual units may be disconnected as required for replacement or relocation.
  - g. Sump Pumps and Sumps: All existing sumps shall be maintained in an operable condition with either existing pumps or temporary pumps. Interim piping, power and controls shall be provided as required.
  - h. Drainage Pipes and Conduits:
    - 1) Unless otherwise specified, the contents of all pipes, conduits, pits or other liquid containing structures shall be transferred to a location approved by the Engineer using hoses, piping or pumps if hydraulic conditions so require them. The Contractor, whose work requires the draining, shall provide the pumps, piping and hoses.
    - 2) If a drain is not available on the pipe to be drained, then a wet tap shall be made using a tapping saddle and valve. No uncontrolled spillage of a pipe's contents shall be allowed, nor shall a pipe's contents be discharged to a sump.
    - 3) Any spillage shall be immediately washed down and the floor drains, sumps and sump pump discharge piping flushed out to prevent clogging and odors.
  - i. Temporary Partitions and Enclosures: The contractors shall provide temporary partitions and enclosures as required by the contract documents where necessary to maintain dust-free, heated and ventilated spaces in areas which are adjacent to the work and which must be kept operational by site operations personnel.
3. The following requirements shall be adhered to in development of the circulation plan to be submitted in accordance with the provisions of this Section.
- a. Comply with, at a minimum, all requirements of the following:
    - 1) Division 1 General Provisions of the NYC DEP BWSO Standard Sewer and Water Main Specifications
  - b. Construction-related vehicles and activities shall not impede or otherwise adversely affect the flow of regular traffic traveling on the roads leading to and adjacent to the Work location, except as allowed by the traffic stipulations.

- 1) Construction-related vehicles and activities shall be understood as including vehicles operated and activities undertaken by the Contractor (including employees, subcontractors, and visitors). Regular traffic shall be understood as referring to all vehicles other than construction-related vehicles.
  - c. Perform the Work required in this Contract in accordance with applicable traffic and safety rules, regulations, ordinances, and permit conditions.
  4. Any temporary work that may be needed to maintain the site facilities in operation, and that is made necessary by the requirements of the Contract or by the Contractor's activities, shall be provided by the Contractor as specified under the Contract Documents or at the direction of and at no extra cost to the City.
  5. The Contractor shall not remove any items from service without written permission from the Engineer. Upon receiving written approval from the Engineer, the Contractor shall proceed with the Work and shall proceed continuously until the Work is completed, tested, and made ready for operation.
- D. Construction Staging
1. The Work included under this Contract, shall be performed in accordance with the Contract Documents. Further, the Contractor shall submit a comprehensive work schedule to the Engineer to demonstrate that it shall rigidly adhere to these requirements.

**END OF SECTION**

**SECTION 01 73 17 – INSTALLATION OF EQUIPMENT****PART 1 GENERAL****1.1 SUMMARY**

- A. Contractor shall provide all labor, materials, equipment, incidentals, and appurtenances as shown, specified and required, to install equipment.

**1.2 PAYMENT**

- A. There is no separate payment provision for this Section, and shall be deemed included in the prices bid for the respective Contract items.

**1.3 DESCRIPTION****A. General**

1. This Section includes the following:
  - a. Concrete foundations, bases, dowels and anchor bolts.
  - b. Sleeves, recesses, openings, chases and related concrete installation items.
  - c. Supervision by manufacturers' representatives.
  - d. Workmanship.
  - e. Clearance and safeguards.
  - f. Alignment and leveling.
  - g. Cutting and patching.
  - h. Lubrication.
  - i. Maintenance of installed equipment.
  - j. Protection of installed equipment.
2. The Contractor shall have adequate resources on site, including labor, materials, construction tools and equipment, to successfully perform the Work.
3. The Contractor shall be responsible for locating, aligning and leveling all equipment and shall employ a surveyor licensed in the State of New York to set all lines and levels of equipment to the accuracies specified in the Contract Documents.
4. Manufacturer's complete and official installation instructions, including permissible tolerances, shall be furnished in duplicate with each unit of equipment or set of identical units.
5. All equipment shall be installed in accordance with the approved shop drawings (including manufacturer's specifications, drawings, and tolerances) and under the direct supervision of the required manufacturer's representative. In no instance shall the directions of the manufacturer's representative contravene the Engineer's direction.

6. Equipment shall be erected in a neat and workmanlike manner on the foundations at the locations and elevations shown on the approved shop drawings unless directed otherwise by the Engineer during installation.
  7. As a condition precedent to the acceptance of equipment installed and operating, the Contractor shall provide the Engineer with written certification, obtained from each company manufacturing equipment for the Work that the equipment is installed and does operate in accordance with the Contract Documents and manufacturer's recommendations.
- B. Concrete Foundations, Bases, Dowels and Anchor Bolts:
1. The Contractor shall provide all reinforced concrete foundations, bases, dowels, and anchor bolts for all equipment and piping furnished under this Contract.
    - a. All reinforced concrete bases and supports shall be steel reinforced and dowelled to floor slabs. Where possible, dowels shall be in place before new floor slab concrete is placed.
  2. Where not explicitly stated in the Contract Documents, the Contractor shall utilize foundation bolt drawings or templates for the installation of equipment requiring concrete bases.
  3. Dowelling into existing work shall be provided under this Contract.
    - a. Anchor bolts penetrating into existing reinforced concrete work shall be in accordance with Specification Section 05 05 23.02 – Miscellaneous Metal Fastenings.
    - b. All concrete bases for equipment shall be treated with an approved sealer to prevent oil and grease from seeping into the concrete.
  4. Installation of reinforced concrete bases and the installation of dowels and anchor bolts into existing and new reinforced concrete work shall be in accordance with the Contract Documents and the manufacturer's recommendations, and shall be subject to the approval of the Engineer.
- C. Sleeves, Recesses, Openings, Chases and Related Concrete Installation Items:
1. The Contractor shall make provisions as shown on the Contract Drawings, specified, and/or otherwise required for sleeves, recesses, openings, chases, and related items, for installation of the equipment and materials
  2. When the Contract requires the placing of conduits, saddles, boxes, cabinets, sleeves, inserts, foundation bolts, anchors and other similar work in floors or walls of buildings and structures, they shall be promptly installed in conformity with the Contract Documents. The Contractor shall arrange the work in strict conformity with the approved construction schedule and avoid interferences with the work of other contractors.

## **PART 2 EXECUTION**

### **2.1 EXAMINATION / PREPARATION**

- A. Concrete foundations for equipment must meet the manufacturer's recommendations and shall be adequate in size, suitable for the equipment

erected thereon, properly reinforced, and tied into floor slabs by means of reinforcing bars or dowels. Foundation bolts of ample size and strength shall be provided and properly positioned by means of suitable templates and secured during placement of concrete. Foundations shall be built and bolts installed in accordance with the manufacturers approved drawings.

- B. Before mounting equipment on a foundation, the Contractor shall clean the top surface; if necessary, rough it with a star chisel and clean again; and clean out all foundation bolt sleeves.
  - 1. The Contractor shall provide a sufficient number of shims about 2-in. wide and 4-in. long, and of a varying thickness from 1/8-in. to 1/2-in.. A combination of these shims shall be placed next to each foundation bolt to bring the bottom of the bedplate or frame about 1/8 inch above the final setting. The equipment shall be lowered by changing the combination of shims. The Contractor shall use brass shim stock of various thicknesses, and continue to level the equipment a little at a time and in rotation until it is at the correct elevation in both directions.
  - 2. When the equipment is level, the Contractor shall tighten down on the foundation bolts a little at a time, in rotation, to make certain the equipment remains level and does not shift on the shims. A preliminary alignment check shall be made before grout is placed.
- C. Equipment shall be set, aligned and assembled in conformance with manufacturer's instructions. Runout tolerances by dial indicator method of alignment shall be plus or minus 0.002-in. or as directed by the manufacturer, whichever is more stringent.
- D. All blocking, wedges, shims, filling pieces, or other materials required for the proper support and leveling of equipment during installation shall be furnished by the Contractor. All temporary supports shall be removed, except the shims, which may be left in place with the approval of the Engineer. Any grinding necessary to bring parts to proper bearing after erection shall be done at the expense of the Contractor.
- E. Each piece of equipment or supporting base, bearing on concrete foundations, shall be bedded in grout. The Contractor shall provide a minimum of 1½-in. thick grouting under the entire base plate supporting each pump, motor drive unit, and other equipment. Grouting shall be as specified in the respective equipment specification section(s) and as approved by the Engineer.
- F. When motors are shipped separately from driven equipment, the motors shall be received, stored, have insulation resistance tested once a month, and the reports submitted to the Engineer. Space heaters shall be supplied in all enclosures being utilized for storage of motors. After driven equipment is set, the motors shall be set, mounted, shimmed, mill righted, coupled and connected complete.
- G. Moving parts shall be rotated a minimum of once weekly before and after installation to ensure proper lubrication and to avoid metal-to-metal welding and to prevent "flat-spotting" of bearings.
- H. Anchor and expansion bolts shall be furnished by the Contractor as specified and required by this Contract Documents.

- I. At threaded connections, a molybdenum disulfide anti-seize compound shall be applied to all threads in mechanical connections such as bolts, studs, cap screws, tubing, etc., unless otherwise indicated.

## 2.2 IMPLEMENTATION

### A. Workmanship:

1. The following erection details are not intended to be all-inclusive, but only to cover some of the important practices. In all cases, only the best methods known to the trades are to be employed.
2. Only those workers qualified in the handling, setting, alignment, leveling and adjustment of the type of equipment supplied shall be employed in the Work.
3. An oil bath heater shall always be used to expand couplings, gears, etc. They shall not be forced or driven on equipment shafts, nor shall they be subjected to an open flame or torch.
4. Wedging shall not be permitted. Only the least number of flat shims are to be used in leveling equipment (shims are to be clean and free of slag). All shims, filling pieces, keys packing, red or white lead grout, or other materials necessary to properly align, level and secure apparatus in place shall be furnished by the Contractor. All parts intended to be plumb or level must be proven exactly so. Any grinding necessary to bring parts to proper bearing after erection shall be done at the expense of the Contractor.
5. Proper tools shall be used in the assembly of equipment and materials to prevent marring the surface of shafts, nuts, or other parts.
6. Connections requiring gaskets shall be tightened evenly all around to ensure uniform stress over the entire gasket area.
7. No equipment and materials shall be altered or repaired, and no burning or welding will be permitted on any parts having machined surfaces, except by written permission of the Engineer.
8. No rigging shall be done from any structure without the permission of the Engineer, and the Contractor shall be completely responsible for any damage to the structure due to its operations.
9. Only such equipment and materials that shall not damage the structure or equipment and materials shall be used on the Work.
10. The Contractor shall be responsible for the exact alignment of equipment with associated piping and, under no circumstances, will "pipe springing" be allowed.
11. Misaligned holes shall be reamed, as excessive driving of bolts or keys will not be permitted.
12. The Contractor shall furnish and install all necessary plugs in lubrication holes to prevent entry of foreign material.

### B. Clearances and safeguards:

1. All devices, equipment, and systems furnished under this Contract shall be fabricated and installed so that the necessary and required clearances are

provided for operation, maintenance, repair, and replacement. It is the Contractor's responsibility to review the Contract Drawings and ensure that the necessary and required clearances are available, and it is the Contractor's responsibility to notify the Engineer in the event that such clearances cannot be provided based on the Contract Documents.

2. The construction arrangement, assembly locations, and guarding of all equipment shall conform to the latest ANSI safety practices, the New York State Industrial Code, and all standards specified in the Contract Documents.
- C. Alignment and leveling:
1. All couplings shall be aligned while the equipment is free from all external loads.
  2. Both angular and parallel alignment shall be checked, and the degree of misalignment shall be recorded and submitted to the Engineer.
  3. Dial indicators shall be used for the checking of angular and parallel alignment. During rotation of the held couplings in performance of this test, they shall be maintained in the same relative position, and the dial indicator readings shall be taken at the same place on the circumference of the coupling.
  4. Misalignment shall not exceed the manufacturer's tolerances.
- D. Cutting and patching:
1. Whenever it becomes necessary to cut existing work, the location and size of cut and method of cutting shall be as approved by the Engineer and adjacent work shall not be damaged. On completion of the cutting, all affected areas shall be restored satisfactorily by qualified workers.
- E. Lubrication:
1. All lubrication shall be performed by the Contractor in accordance with the lubricant specifications and directions furnished by the manufacturer.
    - a. If required by the manufacturer's specifications and/or instructions, the Contractor shall provide lubrication of equipment while in storage, from delivery to installation.
  2. The Contractor shall furnish required lubricants for the equipment until it is accepted.
  3. Lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance. New lubricants shall be put into the equipment at the time of acceptance.

## **2.3 FIELD TESTING / QUALITY CONTROL**

- A. Supervision by Manufacturer's Representative: The Contractor shall provide the services of qualified technical representatives of the equipment manufacturers who shall adequately supervise, in person and on site, the installation and testing of all equipment furnished under this Contract and instruct the Contractor's

personnel and City operating personnel on maintenance and operation of its equipment.

1. The manufacturers' representatives shall devote, at a minimum, the entire amount of time specified under the relevant Specification sections for the equipment. Any additional time required to achieve successful installation and operation shall be at the expense of the Contractor.
2. The manufacturers' representatives shall sign in and out in a log for this purpose kept by the Engineer on every occasion they are on the Site and shall indicate time of arrival, departure, and the purpose of their visit.

## **2.4 STARTUP / DEMONSTRATION**

- A. Not Used

## **2.5 ADJUSTING / PROTECTION / CLEANUP**

- A. During the period between installation and substantial completion, the Contractor shall maintain all equipment in accordance with the equipment manufacturer's instructions as approved by the Engineer.
1. The Contractor shall also provide protection of installed equipment, as required, to prevent damage and remove protection devices/facilities, when no longer needed, prior to completion of work:
    - a. Projections such as wall corners, jambs, sills and soffits of openings, shall be covered in areas used for traffic and for passage of products in subsequent work.
    - b. Equipment for which shop finish paint is required shall be protected in the shop and during transportation and installation to prevent injury and abrasion. Such equipment shall be scheduled for installation when a building is considered enclosed and as late as possible in the construction schedule. However, maintenance of schedules may require the installation of such equipment in unheated areas and in areas where masonry work, concrete finishing, steel erection, painting, and other work will be in progress.
      - 1) Shop finished Work shall be protected during and after installation by waterproof wrappings sealed to prevent condensation on surfaces. Wrappings shall be sufficient to protect surfaces from damage by drippings from masonry and painting work, and additional covering or sheathing shall be provided to protect equipment from contact damage that might result from work in progress in adjacent areas.
      - 2) Prior to Substantial Completion, wrappings and coverings shall be removed, equipment shall be cleaned and all scratches and abrasions shall be refinished.

**END OF SECTION**

**SECTION 05 05 23.01 – WELDING****PART 1 GENERAL****1.1 SUMMARY**

- A. The Contractor shall perform all field welding as specified herein and as indicated on the Contract Drawings. The work shall include, but not limited to, the following items:
  - 1. Procedure specifications.
  - 2. Procedure qualifications.
  - 3. Welder, welding operator and tacker qualifications.
  - 4. Inspection.
  - 5. Testing and repair of defective welds.

**1.2 PAYMENT**

- A. Work performed under this Section shall be paid for as part of work performed in accordance with NYC DEP BWSO Standard Sewer and Water Main Specification Sections 51.11 and 51.71.

**1.3 RELATED SECTIONS**

- A. All Common Works specifications sections (Division 01) apply to this Section.
- B. Requirements from the following sections also apply to this Section:
  - 1. Section 05 06 00.01 – Schedules for Stainless Steel Work
  - 2. Section 05 50 00 – Metal Fabrications

**1.4 REFERENCES**

- A. Definitions
  - 1. Definitions of welding terms shall be in accordance with ANSI/AWS A3.0.
- B. Reference Standards:
  - 1. AISC-04 - Specification for Structural Steel Buildings - Allowable Stress Design and Plastic Design.
  - 2. ANSI/AWS A2.4 - Standard Symbols for Welding, Brazing and Nondestructive Examination.
  - 3. ANSI/AWS A3.0 - Standard Welding Terms and Definitions.
  - 4. ANSI/AWS D1.1 - Structural Welding Code - Steel.
  - 5. ANSI/AWS D1.4 - Structural Welding Code – Reinforcing Steel.
  - 6. ANSI/AWS D1.6 - Structural Welding Code - Stainless Steel.
  - 7. AWS Z49.1 - Safety in Welding and Cutting and Allied Processes.

**1.5 DESCRIPTION**

- A. All welding shall be performed in accordance with ANSI/AWS D1.1 and ANSI/AWS D1.6.
- B. All structural welding and gas cutting shall conform to the requirements of the American Welding Society (AWS), American Society of Mechanical Engineers (ASME), NYC Department of Buildings (DOB) and the New York City Construction Code. All welding of pipe, fittings and pipeline equipment shall be performed by

qualified welders as specified by the latest requirements of the ASME and AWS codes and their supplements, as applicable.

- C. Welders shall be certified in compliance with AWS D1.1 through D1.6, as applicable and as approved by the Engineer, and shall be qualified by an independent testing laboratory approved by the Engineer.
- D. Welding shall not be started until welding procedures, welders, welding operators and tackers have been qualified and copies of all records and reports submitted and approved by the Engineer.
- E. The Contractor shall be responsible for the quality of welding and shall maintain records of the test results obtained from the welding procedure, welder, welding operator and tackers performance qualifications.
- F. Each weld shown or indicated on the Contract Drawings shall be made as specified on the approved procedure specifications provided to cover each type of weld.
- G. Test specimens shall be prepared by the Contractor for each type of welded joint as designated in Article 1.6.A, Welding Procedure Qualifications. Destructive tests of specimens for procedure and welder qualifications shall be conducted in accordance with ANSI/AWS D1.1, Section 4, Qualifications, and the requirements specified herein.
- H. Symbols
  - 1. Symbols on the Contract Drawings, shop drawings and erection drawings shall be in accordance with ANSI/AWS A2.4.
- I. Safety Precautions
  - 1. Safety precautions during welding shall conform to AWS Z49.1.
- J. Welding Requirements
  - 1. Contract Drawings will include the following information:
    - a. Size, length, type and location of welds.
    - b. Location of welds for which non-destructive testing is required. When location of non-destructive testing is not shown, it will be indicated by the Engineer in the field.
  - 2. Workmanship and techniques for welded construction shall conform to the requirements of ANSI/AWS D1.1 and AISC-04. When ANSI/AWS D1.1 and AISC-04 are in conflict, the requirements of ANSI/AWS D1.1 shall govern.
  - 3. Where dissimilar steel are welded together, the procedure used shall be the same as the one used for the lower strength steel.
  - 4. All groove welds shall be 100 percent complete penetration welds as defined in ANSI/AWS D1.1 or shown in ANSI/AWS D1.4 for reinforcing steel, regardless of whether a backup plate is shown or whether the supplementary backing weld or melt-through symbol is included, in each groove-weld symbol shown unless partial penetration is included in the weld symbol.

5. Gun welded studs shall conform to the requirements of ANSI/AWS D1.1, Section 7.
6. Upon completion of welding, all weld splatter, flux, slag and burrs left by attachments shall be removed. Welds shall be repaired to produce a workmanlike appearance with uniform weld contours and dimensions. All sharp corners of material which is to be painted or coated shall be ground to a minimum of 1/32-inch on the flat.

K. Standard of Acceptance

1. Dimensional tolerances for welded construction, details of welds, and quality of welds shall be in accordance with the applicable requirements of ANSI/AWS D1.1, ANSI/AWS D1.4 and the Contract Drawings.
2. The welding shall be subject to inspection and tests in the shop and project site. Inspection and tests in the shop will not relieve the Contractor of the responsibility to furnish weldments of satisfactory quality.
3. All welding exhibiting any cracks, either in the weld metal or the parent metal, will be rejected.
4. Incomplete fusion or lack of penetration will not be allowed, and the weld will be rejected.
5. When materials or workmanship do not conform to the acceptance requirements, the Engineer reserves the right to reject material or workmanship or both at any time before final acceptance of the structure containing the weldment.

L. Corrections and Repairs

1. General: In lieu of rejection of an entire piece or member containing welding which is unsatisfactory or which indicates inferior workmanship, the corrective measures listed hereinafter may be permitted by the Engineer. The Engineer's specific approval must be obtained before making each correction. Corrective measures shall be made at the Contractor's expense and to the satisfaction of the Engineer and/or an acceptable independent testing lab.
2. Defective or unsound welds or base metal shall be corrected either by removing and replacing the entire welds, or as follows:
  - a. Excessive convexity and overlap shall be reduced by removal of excess weld metal.
  - b. Any concavity of weld, crater, undersize welds or undercutting shall be corrected by cleaning and depositing additional weld metal.
  - c. Excessive weld porosity, slag, inclusions or incomplete fusion shall be repaired by removing defective portions and rewelding.
  - d. Cracks in weld or base metal shall be repaired by removing crack throughout its length, including sound weld metal 2 inches beyond each end of the crack and rewelding.
3. The removal of defective weld metal or portions of the base metal shall be done by chipping, grinding, oxygen cutting, oxygen gouging, or air carbon-

arc and in such a manner that the remaining weld metal or base metal is not nicked or undercut.

4. Additional weld metal shall be deposited using an electrode smaller than that used for making the original weld, and not more than 5/32-inch diameter. The surface shall be cleaned thoroughly before welding.
5. Caulking of welds shall not be permitted.
6. Improperly fitted parts may be cut apart and rewelded. Members distorted by welding shall be straightened by mechanical means or by carefully supervised application of a limited amount of localized heat.
  - a. The temperature of heated areas shall not exceed 1,200 degrees Fahrenheit (a dull red color). Temperature shall be carefully measured with temperature indicating crayons during the heating operation.
  - b. Parts to be heated for straightening shall be substantially free of stress and from external forces, except those stresses resulting from mechanical means used in conjunction with the application of heat.
7. Peening of welds is prohibited.

## 1.6 QUALITY ASSURANCE

### A. Welding Procedure Qualifications

1. General: Except for prequalified or previously qualified procedures, the Contractor shall qualify the welding procedure specifications for any welding procedure performed in the fabrication of weldments.
2. Welding procedure specification and the results of the procedure qualification test for each type of welding, which requires procedure qualifications, shall be submitted for approval. Approval of any procedure, however, will not relieve the Contractor of the sole responsibility for producing a finished structure meeting all the requirements of these Specifications. This information shall be submitted on the forms in Annex E of ANSI/AWS D1.1.
  - a. Procedures, when qualified, become the welding procedure specifications and are to be followed in making welds on the subject materials and provide a means of assuring reproducible results and quality control.
  - b. Separate procedure specifications shall be prepared for each type of weld.
  - c. Welding procedure specifications shall be individually identified and shall be referenced on the shop drawings and erection drawings or shall be suitably keyed to the Contract Drawings.
3. Previous Qualifications: Welding procedures previously qualified by test may be acceptable for this Contract without requalification if the following conditions are met:

- a. Testing was performed by the Contractor's welder at an approved, AWS Accredited Test Facility.
  - b. The qualified welding procedure conforms to the requirements of this Section and is applicable to welding conditions encountered under this Contract.
  - c. The welder, welding operator and tacker qualification tests conform to the requirements of this Section and are applicable to welding conditions encountered under this Contract.
4. Prequalified Procedures: Welding procedures which are considered prequalified as specified in ANSI/AWS D1.1 and ANSI/AWS D1.4, will be accepted without further qualification.
- a. The Contractor shall submit for approval a listing and an annotated drawing to indicate the joints not prequalified.
  - b. Procedure qualification shall be required for the joints not prequalified.
5. Retests: If welding procedure fails to meet the requirements of ANSI/AWS D1.1 or ANSI/AWS D1.4, the procedure specification shall be revised and requalified.
- a. At the Contractor's option, with the Engineer's approval, welding procedure may be retested in accordance with the standards.
  - b. If the welding procedure is qualified through retesting, all test results, including those of test welds that failed to meet the requirements, shall be submitted with the welding procedure.
- B. Welder, Welding Operator and Tacker Qualification
1. General Information: Each welder, welding operator and tacker assigned to work on this Contract shall be certified in conformance with ANSI/AWS D1.1, Section 4. Welders performing field welding shall also be New York City certified, and all welding shall be done in conformity with the NYBC and BS&A.
  2. Certificates: Before assigning any welder, welding operator or tacker to work under this Contract, the Contractor shall submit to the Engineer the names of the welders, welding operators and tackers to be employed and certification that each individual is qualified as specified.
    - a. The certification shall state the type of welding and positions for which the welder, welding operator or tacker is qualified, the code and procedure under which the individual is qualified, the date qualified, and the name of the firm and person certifying the qualification tests.
    - b. The certification shall be kept on file at the job site by the Contractor. The certification shall be kept current for the duration of the Contract
    - c. All shop welding shall be performed in accordance with the relevant work-specific requirements in the Specifications and Contract Drawings.

- d. If existing certification is not approved or not submitted, then the welders/welding shop/tack welders must be qualified in accordance with the above procedures and tests, as administered by an inspection agency approved by the Engineer. All costs associated with the required tests for certification and/or retests, if any, shall be borne by the Contractor. The Quality Assurance Section shall be given a notice of not less than 5 business days prior to such tests and may elect to witness any or all of these tests
    - e. Any deviation from the above shall not be permitted without a written waiver from the Engineer or the Engineer's designee.
3. Identification of Welds: The Contractor shall assign each welder, welding operator or tacker an identifying number, letter or symbol which shall be used to identify all welds made by that person. For identification, the welder, welding operator or tacker shall apply the assigned symbol adjacent to the weld by means of a rubber stamp, felt tipped marker with waterproof ink or other methods that do not cause an indentation in the metal. Identification with die stamps or electric etches shall not be allowed.
4. Record of Welds: The Contractor shall maintain a record of all welders, welding operators and tackers employed on the Contract showing the date and results of tests and the identification mark assigned to each person. These records shall be certified by the Contractor and copies of the records shall be furnished to the Engineer.
5. Previous Qualifications: At the discretion of the Engineer, welders, welding operators and tackers qualified by test within the previous 6 months may be accepted for this Contract without requalification if all of the following conditions are met:
  - a. Copies of the welding procedure specifications, the procedure qualification test records, and the welder, welding operator, and tacker qualification test records are submitted and approved in accordance with the requirements shown on the Contract Drawings.
  - b. Testing was performed by an approved testing laboratory.
  - c. The previously-qualified welding procedure conforms to the requirements of this Section and is applicable to welding conditions encountered under this Contract.
  - d. The welder, welding operator and tacker qualification tests conform to the requirements of this Section and are applicable to welding conditions encountered under this Contract.
6. Renewal of Qualifications: Requalification of a welder or welding operator shall be required under any of the following conditions:
  - a. It has been more than 6 months since the welder or welding operator has used the specific welding process for which they are qualified.
  - b. There is specific reason to question the welder or welding operator's ability to make welds that meet the requirements of these Specifications.

- c. The welder or welding operator was qualified by an employer other than those firms performing work under this Contract, and a qualification test has not been taken within the past 12 months. Records showing periods of employment, name of employer where welder, or welding operator, was last employed, and the process for which qualified shall be submitted as evidence of conformance.
- d. A tacker who passes the qualification test shall be considered eligible to perform tack welding indefinitely in the positions and with the processes for which they are qualified, unless there is some specific reason to question the tacker's ability. In such a case, the tacker shall be required to pass the prescribed tack welding test.

## **1.7 SUBMITTALS**

- A. The Contractor shall prepare and submit Shop Drawings for approval of the Engineer. Submittals shall include, but not be limited to, the following:
  - 1. Erection drawings, and catalog data on welding equipment and materials.
  - 2. Welding procedure specifications.
  - 3. Welding procedure qualifications and test records.
  - 4. Welder, welding operator and tacker qualifications and test records.
  - 5. Records of tests and inspections of installed welds.
  - 6. Testing or inspection agency selection.

## **PART 2 PRODUCTS**

### **2.1 MATERIALS / EQUIPMENT**

- A. All welding equipment, electrodes, welding wire and fluxes shall be capable of producing satisfactory welds when used by a qualified welder or welding operator performing qualified welding procedures.
- B. All welding equipment and materials shall comply with the applicable requirements of ANSI/AWS D1.1 and ANSI/AWS D1.4.
- C. Electrodes for Welding
  - 1. Electrodes for welding aluminum shall comply with the Aluminum Association Specifications and AWS D1.2.
  - 2. Electrodes for welding stainless steel and other metals shall comply with AWS A5.4.
  - 3. Electrodes for welding carbon steel shall comply with AWS A5.5.

## **PART 3 EXECUTION**

### **3.1 FIELD TESTING / QUALITY CONTROL**

- A. Supervision
  - 1. All shop and field welding shall be under the immediate supervision of a representative of a standard testing agency or an approved inspection agency reporting directly to, and under the control of, the Engineer.
  - 2. Procedures and techniques for inspection shall be in accordance with the applicable requirements of ANSI/AWS D1.1. The Contractor shall submit the name of such agency to the Engineer for approval before starting work.

3. The costs of all welding inspections and tests shall be borne by the Contractor
4. All welds shall be inspected visually by the Contractor in accordance with Section V of the ASME Code, or D1.1, Clause 6, Table 6.1 as approved by the Engineer.

**B. Inspection and Tests**

1. The Engineer will make periodic checks of each welder to determine that welds are being made as specified in the approved procedure specifications. Welding speed may be estimated.
2. All welds will receive 100 percent visual inspection to determine weld size and profile, surface cracks, overlap, and undercut.
  - a. The Contractor shall submit the name of such testing agency to the Commissioner for approval before starting Work.
    - 1) All shop and field welds in structural steel shall be visually inspected by an AWS certified welding inspector, whom shall be approved by the Engineer. The Contractor shall furnish a letter of certification for each welded connection stating that these requirements have been met.
    - 2) The costs of all welding supervision and inspections shall be borne by the Contractor. The Contractor shall engage inspectors to inspect welded connections and to perform tests and prepare test reports.
    - 3) Ten (10) percent of all butt and bevel welds which extend continuously for 24 inches or less will be completely tested in accordance with AWS D1.1, Part B, Radiographic Testing of Welds, Chapter 6. All butt and bevel welds which extend continuously for more than 24 inches will be radiographically spot tested at intervals not exceeding 36 inches.
    - 4) Welds that are required by the Engineer and/or inspectors to be corrected shall be corrected or redone and retested as directed, at the Contractor's expense and to the satisfaction of the Engineer and/or an acceptable independent testing lab.
3. The Engineer reserves the right to perform any additional test on any weld, including liquid penetrant, magnetic particle, radiographic, and ultrasonic. The costs of such testing will be borne by the Contractor if unsatisfactory welds are discovered, or by the Engineer if the welds are satisfactory.

**END OF SECTION**

**SECTION 05 05 23.02 – MISCELLANEOUS METAL FASTENINGS****PART 1 GENERAL****1.1 SUMMARY**

- A. The Contractor shall furnish all materials, labor, and equipment required to provide all metal fastening in accordance with the Contract Drawings and as specified herein.

**1.2 PAYMENT**

- A. Work performed under this Section shall be paid for as part of work performed in accordance with NYC DEP BWSO Standard Sewer and Water Main Specification Sections 51.11 and 51.71.

**1.3 RELATED SECTIONS**

- A. Section 05 05 23.01 - Welding.

## 1.5 DESCRIPTION

- A. Not Used

## 1.6 QUALITY ASSURANCE

- A. Fasteners not manufactured in the United States shall be tested and certification provided with respect to specified quality and strength standards. Certifications of origin shall be submitted for all U.S. fasteners supplied on the project. Fasteners to be tested shall be randomly selected by the Engineer in the field.
- B. All welding shall be performed by welders certified in accordance with AWS. Certifications of field welders shall be submitted prior to performing any field welds as per Section 05 05 23.01 – Welding. Welding shall comply with, but not limited to the following:
  - 1. AWS D1.1 for Steel
  - 2. AWS D1.2 for Aluminum
  - 3. AWS D1.6 for Stainless Steel.
  - 4. Inadequate welds shall be corrected or redone and retested to the satisfaction of the Engineer, at no additional cost to the City.
- C. Fasteners and concrete anchors will be inspected in accordance with the Inspection Article in Part 3.
- D. Manufacturer's load tables and certified performance tests for titanium bolts shall be provided.

## 1.7 SUBMITTALS

- A. The Contractor shall submit Shop Drawings and material specifications for approval by the Engineer. Submittals shall include, but not be limited, to the following:
  - 1. Shop Drawings providing the manufacturer, fastener type, certification of the fastener's material and capacity and product data such as:
    - a. Product information
    - b. Technical information
    - c. Manufacturer's Installation Instructions (MPII)
    - d. ICC-ES Evaluation Report.
  - 2. Copy of valid AWS certification for each person who is to perform field welding.
  - 3. Certified weld inspection reports, when required.

4. Adhesive Anchors
  - a. For all adhesive anchors, submit anchor sizes and location plan
  - b. Testing methods, procedures and equipment.
  - c. In the event that any adhesive anchors fail field testing, submit a detailed procedure for the removal and replacement of those anchors.

## **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Materials stored outdoors shall be supported above ground surfaces and protected with approved effective and durable covers.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Expansion anchors shall be:
  1. Power-Stud wedge expansion anchor as manufactured by Powers Fasteners, Inc., Brewster, NY;
  2. Kwik Bolt 3 (KB3) expansion anchor as manufactured by Hilti, Plano, TX;
  3. Strong-Bolt 2 Wedge Anchor as manufactured by Simpson Strong-Tie, Pleasanton, CA;
  4. Or approved equal.
- B. Screw anchors shall be:
  1. Type 316 stainless steel KH-EZ screw anchor as manufactured by Hilti, Plano, TX;
  2. Type 316 stainless steel Wedge-Bolt screw anchor as manufactured by Powers Fasteners Inc., Brewster, NY;
  3. Type 316 stainless steel Titen-HD screw anchor as manufactured by Simpson Strong-Tie, Pleasanton, CA;
  4. Or approved equal.
- C. Sleeve or drop-in anchors shall be as manufactured by:
  1. Hilti Inc., Plano, TX;
  2. Powers Fasteners Inc., Brewster, NY;
  3. Simpson Strong-Tie, Pleasanton, CA;
  4. Or approved equal.
- D. Adhesive Dowels and Anchors
  1. Epoxy adhesive anchor system shall be:
    - a. PE1000+ as manufactured by Powers Fasteners Inc., Brewster, NY;
    - b. HIT-RE 500-V3 as manufactured by Hilti, Plano, TX;

- c. Or approved equal.
2. Vinylester adhesive anchor system shall be:
  - a. AC100+ Gold as manufactured by Powers Inc., Brewster, NY;
  - b. HIT HY-200 as manufactured by Hilti, Plano, TX;
  - c. A7+ as manufactured by ITW Ramset/Redhead, Glendale Height, IL;
  - d. AT-XP as manufactured by Simpson Strong-Tie, Pleasnaton, CA;
  - e. Or approved equal.
- E. The wedge inserts shall be as manufactured by:
  1. Hohmann & Barnard, Inc., Hauppauge, NY;
  2. Or approved equal.
- F. Expansion Bolts in Structural Steel Connections shall be:
  1. Type HB Hollo-Bolt as manufactured by Lindapter, Syracuse, NY;
  2. Or approved equal.

## **2.2 MATERIALS / EQUIPMENT**

- A. Anchor Bolts
  1. Anchor bolts for equipment attachment shall be of stainless steel Type 316 with nitronic 60 stainless steel nuts and locknuts.
  2. All other anchor bolts shall be Type 316 stainless steel with nitronic 60 stainless steel nuts.
  3. Pipe sleeves around anchor bolts shall be of the size and configuration shown on the Contract Drawings.
  4. Material for anchor bolts submerged in salt water or corrosive liquids for which stainless steel Type 316 is not suitable shall be as indicated in the Contract.
- B. Stainless Steel Bolts
  1. Stainless steel bolts shall conform to ASTM F593. All fasteners shall be Type 316 stainless steel. Unless otherwise specified, fasteners for aluminum members shall be Type 304 stainless steel. Fasteners for stainless steel members shall be of matching grade.
  2. Stainless steel bolts shall have hexagonal heads with a raised letter or symbol on the bolts indicating the manufacturer, and be supplied with hexagonal nuts meeting the requirements of ASTM F594. Nuts shall be of the same alloy as the bolts and shall have a raised letter or symbol indicating the manufacturer.
  3. Nuts for stainless steel bolts for elements which are indicated on the Contract Drawings to be removable shall be made of nitronic 60 alloy.
  4. Material for bolts submerged in salt water or corrosive liquids for which stainless steel Type 316 is not suitable shall be as indicated in the Contract.

### C. Post-Installed Anchors

1. Concrete anchors shall be one of the types listed below as indicated on the Contract Drawings. Unless otherwise noted, all concrete anchors which are submerged, or which are subject to vibration from equipment such as pumps and generators, shall be injected, adhesive anchors. The determination of anchors equivalent to those listed below shall be based on test data performed by a commercial testing laboratory.
  - a. Mechanical Anchors
    - 1) Expansion anchors shall be wedge, sleeve, or drop-in mechanical anchors.
    - 2) Screw anchors shall be one-piece threaded anchor with a finished hexagonal head.
  - b. Adhesive anchors shall be two part injection type.
  - c. Where anchor type is not indicated on the Contract Drawings, the wedge expansion anchor shall be used.
2. Expansion anchors shall be fully threaded, medium duty, Type 316 stainless steel anchors. Shall be sized and embedded to depths as shown on the Contract Drawings. If embedment depth is not given, the standard embedment depth as recommended by the manufacturer shall be used.
  - a. Manufacturer for Expansion anchor shall be as specified in this Section.
3. Screw anchors shall be a one piece, heavy duty anchor with a finished hexagonal head. Screw anchors shall be sized and embedded to depths as shown on the Contract Drawings. If embedment depth is not given, the standard embedment depth as recommended by the manufacturer shall be used.
  - a. Manufacturer for screw anchor shall be as specified in this Section.
4. Adhesive dowels shall consist of Grade 60 reinforcing steel ASTM A 615. Adhesive concrete anchors shall consist of Type 316 stainless steel ASTM F593 or Grade B7 high strength carbon ASTM A193 threaded rods or bolts anchored with a two-part injection type adhesive system into hardened concrete or grout-filled masonry. The adhesive system shall use a two-component adhesive mix and shall be injected with a static mixing nozzle following manufacturer's instructions. The anchor diameter, type, and embedment depth shall be as shown on the Contract Drawings.
  - a. The embedment depth of the rod/bolt shall provide a minimum allowable bond strength that is equal to the allowable tensile capacity of the rod/bolt (see Table 1) unless noted otherwise on the Contract Drawings.
  - b. Manufacturer for Epoxy adhesive and Vinylester adhesive anchor systems and shall be as specified in this Section.
  - c. Adhesive anchoring system shall have an ICC-ES Evaluation Service Report issued in accordance with AC308.

- d. Adhesive for the anchors must qualify under ACI 355.4.

Table 1 Allowable Tensile Capacity (Kips) for Standard Manufacturer Embedment		
Size	Concrete Anchors Wedge Type	Concrete Anchors with Injection Adhesive System
3/8"	1.3	2.1
1/2"	2.4	3.8
5/8"	3.3	5.9
3/4"	4.8	8.4
7/8"	5.6	11.0
1"	7.1	15.0

5. Concrete anchors shall be of Stainless Steel Type 316 unless noted otherwise. Concrete anchors for stainless steel attachments shall be of matching grade.
6. All concrete anchors exposed to water and waste shall be Type 316 stainless steel and shall have nitronic 60 stainless steel nuts.
7. Material for concrete anchors submerged in salt water or other corrosive liquids for which stainless steel Type 316 is not suitable shall be as indicated in the Contract.

D. Concrete Inserts

1. Wedge Type Inserts:

- a. The concrete inserts for attachment of shelf angles or brick relieving angles to the reinforced concrete beams or concrete encased steel beams, shall be wedge type inserts. The inserts shall have an askew head bolt to produce an automatic tightening action when a load is placed on the bolt.
- b. The wedge inserts shall be of malleable iron, hot dipped galvanized. The askew bolt and the horseshoe shim plates shall be of stainless steel Type 304 or 316. The type of insert and size of bolts shall be as shown on the Contract Drawings.
- c. Manufacturer for wedge inserts shall be as specified in this Section.

E. Eye Bolts

1. Eyebolts shall be of the size indicated on the Contract Drawings and shall conform to ASTM A489 unless noted otherwise.
2. Carbon steel eyebolts shall be galvanized

F. Expansion Bolts in Structural Steel Connections

1. Expansion bolts for connecting to hollow section steel or where access is restricted (blind-bolts) shall be Type 316 stainless steel with a hex head such as specified in this Section.

**PART 3 EXECUTION****3.1 EXAMINATION / PREPARATION**

- A. The Contractor shall field verify all dimensions and condition of the materials to be connected, review the Drawings and report any discrepancies to the Engineer for clarification prior to starting fabrication.

**3.2 INSTALLATION**

- A. Anchor Bolts, Adhesive Anchors and Concrete Anchors:
1. Anchor bolts shall be installed in accordance with AISC "Code of Standard Practice" by setting in concrete while it is being placed and positioned by means of a rigidly held template.
  2. The installation of concrete anchors shall be done in strict conformance with the manufacturer's field demonstration and recommendations.
  3. The holes drilled for adhesive anchors shall be cleaned by use of a fiber bristle brush and dry compressed air. The anchors shall be supported in the correct position until the adhesive sets and gains enough strength to prevent any dislocation. Adhesive anchors shall not be tightened or loaded until the adhesive has fully cured as recommended by the manufacturer.
  4. No concrete anchor shall be installed before base concrete has attained specified 28-day strength.
  5. Concrete anchors shall not be used in place of anchor bolts without Engineer's approval.
- B. Bolts:
1. Unless otherwise specified, where aluminum and steel members are connected together they shall be fastened with Type 304 stainless steel bolts and isolated with micarta, nylon, rubber, or approved equal.
- C. Concrete Inserts: Provide concrete inserts where shown on the Contract Drawings. Inserts shall be firmly held in position in the forms and sealed from intrusion of concrete mortar during concrete placement.
- D. Adhesive Dowels and Adhesive Concrete Anchors
1. Concrete is to be a minimum of 21 days old at time of anchor installation
  2. Work shall be performed by certified ACI/CRSI Adhesive Anchor Installers under continuous special inspection
  3. Shall be installed in accordance with Manufacturer's Published Installation Instructions (MPII), the applicable ICC-ES ESR and in accordance with NYC Buildings Bulletin 2009-019
  4. Adhesive anchoring installation shall be subject to special inspection requirements of NYCBC section BC 1704.32.
  5. Adhesive anchor shall be identified by labels on the packaging including manufacturer's name, product designation and the requirements specified in ICC-ES AC308, Annex A.

- E. Welding
  - 1. Welding shall comply with the requirements of Section 05 05 23.01 - Welding.

### 3.3 FIELD TESTING / QUALITY CONTROL

- A. Inspection
  - 1. At least 25 percent of the concrete anchors to be installed shall be proof tested to 1.33 times the allowable load specified by the manufacturer of the system.
  - 2. Welding inspection shall be done in accordance with the requirements of Section 05 05 23.01 - Welding.
  - 3. Adhesive Anchors: Adhesive anchoring installation shall be subject to special inspection requirements of NYCBC section BC 1704.32.
- B. Testing of Adhesive Dowels and Adhesive Concrete Anchors
  - 1. Field testing:
    - a. Testing to be performed by a NYC Buildings Department approved special inspection agency to perform field testing of the installed anchors in accordance with NYCBC BC 1704.32 and ICC-ES ESR and the applicable sections of ASTM E488 in the presence of the Engineer.
    - b. Anchors that are to be tested are as indicated on the Contract Drawings.
  - 2. Pull-out testing:
    - a. A total of 15% of the adhesive anchors designated for testing are to be tested and no more than one (1) bolt is to be tested per connection.
    - b. The Engineer will randomly choose the anchors to be tested.
    - c. Testing of the adhesive anchors shall not begin until all the anchors are installed.
    - d. If only one anchor fails, all the adhesive anchors will be accepted. If a second anchor fails, an additional 5% of the anchors shall be tested. If more than 20% of the total anchors tested fail, all the anchors shall be removed and replaced.
  - 3. Removal and replacement of failed test anchors:
    - a. Remove all anchors that fail the field test without damage to the surrounding concrete.
    - b. Redrill holes to remove adhesive bonding material residue and clean in accordance with Manufacturer's Published Installation Instructions (MPII).
    - c. Reinstall new anchors that are the same size as the removed anchors and install the new anchors in the same exact location as

the removed anchor. Do not reuse the failed anchors, they shall be discarded.

- d. Assign reinstalled anchors into batches only containing reinstalled anchors of the same diameter, embedment length and adhesive bonding material system, and field test in accordance with the above sections.

**END OF SECTION**

**SECTION 05 06 00.01 – SCHEDULES FOR STAINLESS STEEL WORK****PART 1 GENERAL****1.1 SUMMARY**

- A. The Contractor shall furnish, install and erect the stainless steel work as specified herein and shown on the Contract Drawings.
- B. Stainless steel work shall be furnished complete with all accessories, mountings and appurtenances of the type of stainless steel and finish as specified or required for a satisfactory installation.

**1.2 PAYMENT**

- A. Work performed under this Section shall be paid for as part of work performed in accordance with NYC DEP BWSO Standard Sewer and Water Main Specification Sections 51.11 and 51.71.

**1.3 RELATED SECTIONS**

- A. Requirements from the following sections also apply to this Section:
  - 1. Section 05 05 23.01 - Welding.

**1.4 REFERENCES**

- A. Definition:
  - 1. No definition of additional terms is required for this Section.
- B. Reference Standards:
  - 1. ASTM A193 - Alloy-Steel and Stainless Steel Bolting Materials for High-Temperature Service.
  - 2. ASTM A194 - Carbon and Alloy Steel Nuts for Bolts for High-Pressure and High-Temperature Service.
  - 3. ASTM A262 - Practice for Detecting Susceptibility to Intergranular Attack in Austenitic Stainless Steel.
  - 4. ASTM A276 - Stainless and Heat-Resisting Steel Bars and Shapes.
  - 5. ASTM A314 - Stainless and Heat-Resisting Steel Billets and Bars for Forging.
  - 6. ASTM A380 - Practice for Cleaning and Descaling Stainless Steel Parts, Equipment and Systems.
  - 7. ASTM A473 - Stainless and Heat-Resisting Steel Forgings.
  - 8. ASTM A666 - Austenitic Stainless Steel, Sheet, Strip, Plate and Flat Bar.
  - 9. ASTM F593 - Stainless Steel Bolts, Hex Cap Screws and Studs.
  - 10. ASTM F594 - Stainless Steel Nuts.
  - 11. ASME B1.1 - Unified Inch Screw Thread (UN and UNR Thread Form).

## 1.5 DESCRIPTION

### A. Tests

1. All stainless steel materials including stainless test welds, shall be checked for compliance with tests for susceptibility to intergranular attack. Such tests shall be Practices A, B and E of ASTM A262. Detailed procedures for the tests shall be submitted to the Engineer for approval prior to start of work. Practice A shall be used only for acceptance of materials but not for rejection of materials, and shall be used for screening material intended for testing in Practice B and Practice E. The maximum acceptable corrosion rate under Practice B shall be 0.004 inch per month, rounded off to the third decimal place. If the certified mill report indicates that such test has been satisfactory performed, the fabricator may not be required to repeat the test. Material passing Practice E shall be acceptable.
2. Sample selection for the susceptibility to intergranular attack tests shall be as follows:
  - a. One (1) sample per each heat treatment lot for plates and forgings;
  - b. One (1) sample per each Welding Procedure Qualification regardless of the joint design;
  - c. If tests indicate a reduction in corrosion resistance, welding procedure shall be adjusted or heat treatment determined as needed to restore required corrosion resistance;
  - d. The samples so chosen shall have received all the post-weld heat treatments identical to the finished part.

## 1.6 QUALITY ASSURANCE

- A. Shop inspections may be made by the Engineer. The Contractor shall give ample notice to the Engineer prior to the beginning of any stainless steel fabrication work so that inspection may be provided. The Contractor shall furnish all facilities for the inspection of materials and workmanship in the shop, and the inspectors shall be allowed free access to the necessary parts of the works.
- B. Inspectors shall have the authority to reject any materials or work which does not meet the requirements specified herein or of the Contract Drawings.
- C. Inspection at the shop is intended as a means of facilitating the work and avoiding errors, but is expressly understood that it will in no way relieve the Contractor from the responsibility for furnishing proper materials or workmanship.

## 1.7 SUBMITTALS

- A. The Contractor shall prepare and submit Shop Drawings for all stainless steel fabrication for approval of the Engineer. Submittals shall include, but not be limited to, the following:
  1. Certified test reports for susceptibility to intergranular attack.
  2. Affidavit of compliance with type of stainless steel shown on the Contract Drawings or specified herein.
  3. Certified weld inspection reports.

4. Cleaning and handling of stainless steel in accordance with Article "Cleaning and Handling" in this Section.
- B. Samples of finish, on each type of stainless steel to be furnished, shall be submitted in accordance with the Quality Assurance requirements of the Contract.

## **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Mechanical damage (e.g., scratches and gouges) to the stainless steel material can occur during handling. Care shall be taken in the material handling since such mechanical damage will result in the passive oxide film being "punctured" leading to a possible lower resistance to the initiation of corrosion than the surrounding chemically-passivated surface. Corrosion in such areas can be accelerated by the galvanic corrosion effect due to the unfavorable relative area ratios which would exist.
- B. Stainless steel plates and sheets shall be stored vertically in racks and not be dragged out of the racks or over one another. Racks shall be protected to prevent iron contamination.
- C. Heavy stainless steel plates shall be carefully separated and chocked with wooden blocks so that the forks of a fork-lift could be inserted between plates without mechanically damaging the surface.
- D. Stainless steel plates and sheets laid out for use shall be off the floor and be divided by wooden planks to prevent surface damage and to facilitate subsequent handling.
- E. Plate clamps, if used, shall be used with care as the serrated faces can dig in, indent and gouge the surface.
- F. Stainless steel fabrications shall be loaded in such a manner that they may be transported and unloaded without being overstressed, deformed or otherwise damaged.
- G. Stainless steel fabrications and packaged materials shall be protected from corrosion and deterioration and shall be stored in a dry area. Materials stored outdoors shall be supported above ground surfaces on wood runners and protected with approved effective and durable covers.
- H. Stainless steel fabrications shall not be placed in or on a structure in a manner that might cause distortion or damage to the fabrication. The Contractor shall repair or replace damaged stainless steel fabrications or materials as directed by the Engineer.

## **PART 2 PRODUCTS**

### **2.1 MATERIALS / EQUIPMENT**

- A. Materials and Finishes
  1. Type and finish of stainless steel to be utilized for fabrication shall be the type and finish indicated on the Contract Drawings or as specified herein for the intended service and conforming to the applicable ASTM standard.

2. The basic mill forms (sheet, strip, plate and bar) are classified by size as shown on Table 1. Tables 2, 3 and 4 identify finishes and conditions in which sheet, bar and plate are available.
3. Tables 2, 3 and 4 show numbered finishes and conditions for sheet, bar and plate. While there are no specific designations for polished finishes on bar or plate, the sheet finish designations are used to describe the desired effect. This also applies to finishes on ornamental tubing.
4. There are three standard finishes for strip, which are broadly described by the finishing operations employed:
  - a. No. 1 Strip Finish is approximately the same as No. 2D Sheet Finish. It varies in appearance from dull gray matte to a fairly reflective surface, depending largely on alloy composition and amount of cold reduction.
  - b. No. 2 Strip Finish is approximately the same as a No. 2B sheet finish. It is smoother, more reflective than No. 1, and likewise varies with alloy composition.
  - c. Bright annealed finish is a highly reflective finish that is retained by final annealing in a controlled atmosphere furnace.

**Table 1 - Classification of Stainless Steel Product Form**

Item	Description	Dimensions		
		Thickness	Width	Diameter or Size
Sheet	Coils and cut length: Mill finishes Nos. 1, 2D and 2B Polished finishes Nos. 3, 4, 6, 7 & 8	under 3/16" under 3/16"	24" and over all widths	-- --
Strip	Cold finished, coils or cut lengths Polished finishes Nos. 3, 4, 6, 7 & 8	under 3/16" under 3/16"	under 24" all widths	-- --
Plate	Flat rolled or forged	3/16" and over	over 10"	--
Bar	Hot finished rounds, squares, octagons and hexagons Hot finished flats	-- 1/8" to 8" incl.	-- 1/4" to 10" incl.	1/4" and over --
	Cold finished rounds, squares, octagons and hexagons Cold finished flats	-- 1/8" to 4- 1/2"	-- 3/8" to 4- 1/2"	over 1/8" --
Wire	Cold finishes only: (in coil) Round, square, octagon, hexagon and flat wire	under 3/16"	under 3/8"	--
Pipe & Tubing	Several different classifications, with differing specifications, are available.			
Extrusion	Not considered "standard" shapes. Currently limited in size to approximately 6-1/2" diameter or structurals.			

**Table 2 - Standard Mechanical Sheet Finishes**

<p><b>Unpolished or Rolled Finishes:</b></p> <p>No. 1 A rough dull surface which results from hot rolling to the specified thickness followed by annealing and descaling.</p>	<p>No. 4 A polished surface obtained by finishing with a 120-150 mesh abrasive, following initial grinding with coarser abrasives. This is a general purpose bright finish with a visible "grain" which prevents mirror reflection.</p>
<p>No. 2D A dull finish which results from cold rolling followed by annealing and descaling, and may perhaps get a final light roll pass through unpolished rolls. A 2D finish is used where appearance is of no concern.</p>	<p>No. 6 A dull satin finish having lower reflectivity than No. 4 finish. It is produced by Tampico brushing the No. 4 finish in a medium of abrasive and oil. It is used for architectural applications and ornamentation where a high luster is undesirable, and to contrast with brighter finishes.</p>
<p>No. 2B A bright cold-rolled finish resulting in the same manner as No. 2D finish, except that the annealed and descaled sheet receives a final light roll pass through polished rolls. This is the general purpose cold-rolled finish that can be used as is, or as a preliminary step to polishing.</p>	<p>No. 7 A high reflective finish that is obtained by buffing finely ground surfaces but not to the extent of completely removing the "grit" lines. It is used chiefly for architectural and ornamental purposes.</p>
<p><b>Polished Finishes:</b></p> <p>No. 3 An intermediate polish surface obtained by finishing with a 100 grit abrasive. Generally used where a semi-finished polished surface is required. A No. 3 finish usually receives additional polishing during fabrication.</p>	<p>No. 8 The most reflective surface, which is obtained by polishing with successively finer abrasives and buffing extensively until all grit lines from preliminary grinding operations are removed. It is used for applications such as mirrors and reflectors.</p>

**Table 3 - Conditions and Finishes for Bar**

Conditions	Surface Finishes <sup>1</sup>
Hot worked only	(a) Scale not removed (excluding spot conditioning) (b) Rough turned <sup>2</sup> (c) Pickled or blast cleaned and pickled.

Conditions	Surface Finishes <sup>1</sup>
Annealed or otherwise heat treated.	(a) Scale not removed (excluding spot conditioning) (b) Rough turned (c) Pickled or blast cleaned and pickled (d) Cold drawn or cold rolled (e) Centerless ground (f) Polished
Annealed and cold worked to high tensile strength <sup>3</sup>	(d) Cold drawn or cold rolled (e) Centerless ground (f) Polished

Table 4 - Conditions and Finishes for Plate

Conditions	Surface Finishes <sup>1</sup>
Hot worked only	(a) Scale not removed (excluding spot conditioning) (b) Rough turned <sup>2</sup> (c) Pickled or blast cleaned and pickled.
Annealed or otherwise heat treated.	(a) Scale not removed (excluding spot conditioning) (b) Rough turned (c) Pickled or blast cleaned and pickled (d) Cold drawn or cold rolled (e) Centerless ground (f) Polished
Annealed and cold worked to high tensile strength <sup>3</sup>	(d) Cold drawn or cold rolled (e) Centerless ground (f) Polished

Condition and Finish	Description and Remarks
Hot rolled	Scale not removed. Not heat treated. Plates not recommended for final use in this condition. <sup>4</sup>
Hot rolled, annealed or heat treated	Scale not removed. Use of plates in this condition is generally confined to heat resisting applications. Scale impairs corrosion resistance. <sup>1</sup>
Hot rolled, annealed or heat treated, blast cleaned or pickled	Condition and finish commonly preferred for corrosion resisting and most heat resisting applications.
Hot rolled, annealed, descaled and temper passed	Smoother finish for specialized applications.

Condition and Finish	Description and Remarks
Hot rolled, annealed, descaled cold rolled, annealed, descaled, optionally temper passed	Smooth finish with greater freedom from surface imperfection than the above.
Hot rolled, annealed or heat treated, surface cleaned and polished	Polished finishes refer to Table 2.
<p>Notes:</p> <ol style="list-style-type: none"> <li>1. Surface finishes (b), (e) and (f) are applicable to round bars only.</li> <li>2. Bars of the 4xx series stainless steels which are highly hardenable, such as Types 414, 420, 420F, 431, 440A, 440B and 440C, are annealed before rough turning. Other hardenable grades, such as Types 403, 410, 416 and 416Se, may also require annealing depending on their composition and size.</li> <li>3. Produced in Types 302, 303Se, 304 and 316.</li> <li>4. Surface inspection is not practicable on plates which have not been pickled or otherwise descaled.</li> </ol>	

B. Fasteners

1. Stainless steel fasteners shall be used for joining stainless steel work.
2. Stainless steel fasteners shall be made of alloys that are equal to or more corrosion resistant than the materials they join.

## 2.2 FABRICATION / ASSEMBLING / FINISHES

A. Fabrication

1. Holes for bolts and screws shall be drilled. Fastenings shall be concealed where practicable. Joints exposed to the weather shall be formed to exclude water.
2. As far as practicable, all fabricated units shall be fitted and assembled in the shop, with all cuts and bends made to precision measurements in accordance with details shown on approved shop drawings.
3. Work shall be fabricated so that it is installed in a manner that will provide for expansion and contraction, prevent the shearing of bolts, screws and other fastenings, ensure rigidity, and provide close fitting of sections.
4. All finished and/or machined faces shall be true to line and level. Stainless steel sections shall be well formed to shape and size with sharp lines and angles; curved work shall be sprung evenly to curves.
5. All work shall be fitted together at the shop as far as possible, and delivered complete and ready for erection. Proper care shall be exercised in handling all work so as not to injure the finished surfaces.

## **PART 3 EXECUTION**

### **3.1 EXAMINATION / PREPARATION**

- A. Field Measurements
1. The Contractor shall verify all dimensions and shall make any field measurements necessary and shall be fully responsible for accuracy and layout of the work.
  2. The Contractor shall review the Contract Drawings and any discrepancies shall be reported to the Engineer for clarification prior to starting fabrication.

### **3.2 IMPLEMENTATION**

- A. Installation
1. All stainless steel fabrications shall be erected square, plumb and true, accurately fitted, adequately anchored in place, set at proper elevations and positions.
  2. All inserts, anchor bolts and all other miscellaneous work specified herein or shown on the Contract Drawings or required for the proper completion of the work, which are embedded in concrete, shall be properly set and securely held in position in the forms before the concrete is placed.
  3. All stainless steel fabrications shall be installed in conformance with details shown on the Contract Drawings or on the approved shop drawings.
- B. Welding
1. Welding shall be done in a manner that will prevent buckling and in accordance with Section 05 05 23.01 - Welding, and as modified hereinafter. Field welding of stainless steel is not permitted.
  2. All welds exposed in the work shall be ground smooth and finished to match the finish of the adjacent stainless steel surfaces.
  3. Select weld rods that provide weld filler metal having corrosion resistant properties as nearly identical or better than the base metal to insure preservation of the corrosion-resistant properties. Provide heat treatment at welds where testing of weld procedure indicates it is required to restore the corrosion resistance.
  4. Thermal conductivity of stainless steel is about half that of other steels; and the following methods may be used to accommodate this situation:
    - a. Use lower weld current setting.
    - b. Use skip-weld techniques to minimize heat concentration.
    - c. Use back-up chill bars or other cooling techniques to dissipate heat.
  5. Edges of the stainless steel to be welded shall be cleaned of contaminants.
- C. Cleaning and Handling
1. All stainless steel surfaces shall be precleaned, descaled, passivated and inspected before, during and after fabrication in accordance with the applicable sections of ASTM A380 and as detailed in the procedures to be submitted to the Engineer for approval prior to start of work. Degreasing

and passivation of stainless steel articles shall be conducted as the last step after fabrication.

2. Measures to protect cleaned surfaces shall be taken as soon as final cleaning is completed and shall be maintained during all subsequent handling, storage and shipping.
  - a. The Contractor shall submit for approval specific procedures listing all the steps to be followed in detecting contamination and in descaling, cleaning, passivation and protecting of all stainless steel.
  - b. Area showing clear indications of contamination shall be recleaned, repassivated and reinspected.
3. At approved stages in the shop operations, contaminants such as scale, embedded iron, rust, dirt, oil, grease and any other foreign matter shall be removed from the metal, as directed or approved by the Engineer. The adequacy of these operations shall be checked by the Engineer. Operations in the shop shall be conducted so as to avoid contamination of the stainless steel and to keep the metal surfaces free from dirt and foreign matter.
4. In order to prevent incipient corrosion during fabrication, special efforts shall be made at all times to keep all stainless steel surfaces from coming in contact with other metals.
  - a. Stainless steel and stainless steel welds shall be cleaned with clean sand, stainless steel wool, stainless steel brushes, or other approved means and shall be protected at all times from contamination by any materials, including carbon steel, that shall impair its resistance to corrosion.
  - b. Approved methods of cutting grinding and handling shall be used to prevent contamination. If air-arc, or carbon-arc cutting is used, additional metal shall be removed by approved mechanical means so as to provide clean, weldable edges. All grinding of stainless steel shall be performed with aluminum oxide or silicon carbide grinding wheels bonded with resin or rubber. Grinding wheels used on carbon steel shall not be used on stainless steel.
  - c. Sand, grinding wheels, brushes and other materials used for cleaning stainless steel shall be checked periodically by the Engineer for contaminants. Cleaning aids found to contain contaminants shall not be used on the work.

**END OF SECTION**

**SECTION 05 50 00 – METAL FABRICATIONS****PART 1 GENERAL****1.1 SUMMARY**

- A. The Contractor shall furnish, fabricate and install all metal fabrications not specifically included in other Sections and required for the completion of the work as shown on the Contract Drawings and as specified herein.
- B. Metal fabrications shall be provided complete with all accessories, base attachments, fastenings and other appurtenances as specified and as may be required for a satisfactory installation.
- C. Unless otherwise shown, specified or required, design, workmanship and erection shall conform to or exceed the applicable requirements of the documents listed hereinafter in Article 1.04 to the extent that the provisions of such documents are not in conflict with the requirements of this Section.

**1.2 PAYMENT**

- A. Work performed under this Section shall be paid for in accordance with NYC DEP BWSO Standard Sewer and Water Main Specification Sections 51.11 and 51.71

**1.3 RELATED SECTIONS**

- A. Requirements from the following sections also apply to this Section:
  - 1. Section 05 05 23.01 - Welding
  - 2. Section 05 05 23.02 - Miscellaneous Metal Fastenings
  - 3. Section 05 06 00.01 - Schedules for Stainless Steel Work
  - 4. Section 05 52 13.05 - Welded Pipe Railings (Stainless Steel)
  - 5. Section 05 53 01.02 - Stainless Steel Floor Gratings

**1.4 REFERENCES**

- A. Definition:
  - 1. No definition of additional terms is required for this Section.
- B. Reference Standards:
  - 1. ASTM A36 - Structural Steel.
  - 2. ASTM A48 - Gray Iron Castings.
  - 3. ASTM A276 - Stainless and Heat-Resisting Steel Bars and Shapes.
  - 4. ASTM A480 - General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plates, Sheet and Strips.
  - 5. ASTM A666 - Austenitic Stainless Steel, Sheet, Strip Plate and Flat Bar.
  - 6. ASTM B209 - Aluminum and Aluminum-Alloy Sheet and Plate.
  - 7. ASTM B221 - Aluminum-Alloy Extruded Bars, Rods, Wire, Shapes and Tubes.

8. ASTM B308 - Aluminum-Alloy 6061-T6 Standard Structural Profiles.
9. ANSI/AWS D1.1 - Structural Welding Code.
10. ANSI/AWS D1.2 - Structural Welding Code - Aluminum.
11. New York City Building Code (NYBC).
12. American Institute of Steel Construction (AISC).
13. AISC Manual of Steel Construction.
14. AISC Specification for Design and Fabrication of Structural Steel for Buildings Including the Commentary.
15. Aluminum Association Specifications for Aluminum Constructions.
16. Aluminum Company of America, "Welding and Brazing Aluminum".
17. Occupational Safety and Health Administration (OSHA), U.S. Department of Labor.

## **1.5 DESCRIPTION**

- A. Not Used

## **1.6 QUALITY ASSURANCE**

- A. Shop inspections may be made by the Engineer's representatives. The Contractor shall give ample notice to the Engineer prior to the beginning of any fabrication work so that inspection may be provided. The Contractor shall furnish all facilities for the inspection of materials and workmanship in the shop, and the inspectors shall be allowed free access to the necessary parts of the works.
- B. Inspectors shall have the authority to reject any materials or work which does not meet the requirements of these Specifications.
- C. Inspection at the shop is intended as a means of facilitating the work and avoiding errors, but is expressly understood that it will in no way relieve the Contractor from the responsibility for furnishing proper materials or workmanship under this Section. Design of Members and Connections
  1. All details shown are typical; similar details shall apply to similar conditions, unless otherwise shown or specified. Dimensions shall be verified at the site without causing delay in the work.
- D. For temporary works, complete design calculation and Shop Drawings shall be prepared, signed and stamped with the seal of a Licensed Professional Engineer, licensed to practice in the State of New York and recognized as an expert in the required work unless the design and details have been shown on the Contract Drawings.
- E. "Pencil-line" thin butt joints shall be provided.
- F. Shop Assembly: Items in the shop shall be preassembled to the greatest extent possible, so as to minimize field splicing and assembly of units at the site. Units shall be disassembled only to the extent necessary for shipping and handling limitations. Units shall be clearly marked for reassembly and coordinated installation.

## 1.7 SUBMITTALS

- A. The Contractor shall submit Shop Drawings and other materials for the approval of the Engineer. Shop drawings shall include, but not be limited to, the following:
  - 1. Layout drawings shall indicate all structural shapes, sizes and dimensions.
  - 2. Certifications, schedules, design calculations, detailed drawings, plans, elevations, and details of sections and connections
  - 3. Detail drawings shall indicate jointing and anchoring details.
  - 4. Anchor bolts and setting plans
  - 5. Erection drawings
- B. No fabrication shall be started until Shop Drawings have been approved by the Engineer.
- C. The following shall also be submitted:
  - 1. Manufacturer's specifications, load table, installation instructions, setting drawings and templates for location and installation of miscellaneous metal items, appurtenances and anchorage devices.
  - 2. Certified weld inspection reports.
- D. The following samples shall be furnished: Representative samples of bolts, anchors and inserts as requested by the Engineer. The review shall be for type and finish only. Compliance with all other requirements shall be the exclusive responsibility of the Contractor.
- E. Record Drawings: During progress of the work, an up to date set of drawings showing Field and Shop Drawing modifications shall be kept. Immediately upon completion of work, Record Drawings showing the actual in-place installation of all work constructed and/or installed under this Section shall be provided. Drawings shall include all necessary plans, sections and details, with all reference dimensions and elevations required for complete Record Drawings of the work.

## 1.8 DELIVERY, STORAGE, AND HANDLING

- A. Metal fabrications shall be handled in such a manner that they may be transported and unloaded without being over-stressed, deformed or otherwise damaged.
- B. Metal fabrications and packaged materials shall be protected from corrosion and deterioration and shall be stored in a dry area. Materials stored outdoors shall be supported above ground surfaces on wood runners and protected with effective and durable covers approved by the Engineer.
- C. Metal fabrications shall not be placed in or on a structure in a manner that might cause distortion or damage to the fabrication. The Contractor shall repair or replace damaged metal fabrications or materials as directed by the Engineer.
- D. Materials shall be delivered to the site at such intervals to insure uninterrupted progress of the work. Anchor bolts and anchorage devices, which are to be embedded in cast-in-place concrete or masonry shall be delivered, in ample time not to delay that work.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Floor access hatch shall be as manufactured by:
  - 1. USF Fabrication, Inc., Hialeah, FL;
  - 2. Acudor Products, Inc., Fairfield, NJ;
  - 3. Presey Corporation, Wassaic, NY
  - 4. Or approved equal.

### **2.2 MATERIALS / EQUIPMENT**

- A. Materials
  - 1. Stainless steel shapes and plate shall be Type 316 stainless steel for bolted constructions and 316L for welded construction as detailed on the Contract Drawings and conforming to the applicable requirements of Section 05 06 00.01 - Schedules for Stainless Steel Work. Shapes shall conform to ASTM A276. Stainless steel plates shall conform to ASTM A480 and ASTM A666.
  - 2. Bolting hardware shall be as specified in Section 05 05 23.02 - Miscellaneous Metal Fastenings.
  - 3. Concrete anchors shall be as specified in Section 05 05 23.02 - Miscellaneous Metal Fastenings.
  - 4. Frames and covers shall be of cast iron, unless otherwise shown on the contract plans, complying with the requirements of Section 22.01, Type 1. Malleable iron or cast steel covers, when required, shall comply with the requirements of Section 22.01 and Section 22.04 of the NYC DEP BWSO Standard Sewer and Water Main Specifications
  - 5. Steps shall be cast iron and shall comply with the requirements of Section 22.01, Type 1, or shall be copolymer polypropylene plastic manhole steps with one-half (1/2) inch Grade 60 steel reinforcement and shall comply with the Sewer Design Standards.
- B. Access Stairs, Ship Ladders and Platforms
  - 1. Platforms, associated access stairs and ship ladders shall have stainless steel structural members, stainless stair treads, and stainless platform gratings as specified herein unless shown otherwise on the Contract Drawings.
  - 2. Structural stainless steel sections shall conform to ASTM A276 and all work shall conform to the AISC Manual of Steel Construction.
  - 3. Stainless steel platform and stair tread gratings pattern shall be as specified in Section 05 53 01.02 – Stainless Steel Floor Gratings. Stair treads shall be designed to support a uniform live load of 175 pounds per square foot with a maximum deflection of 1/240 of the span.
  - 4. Stainless steel platform grating shall be designed for the loads as specified herein or as shown on the Contract Drawings.

5. Stainless steel handrails shall be as specified under Section 05 52 13.05 - Welded Pipe Railings (Stainless Steel) and shall be coordinated with stair, ship ladder and platform fabrication. Handrail attachment to stairs, ship ladders and platform shall be in accordance with the details shown on the Contract Drawings.

C. Floor Access Hatches

1. Floor access hatches shall be double leaf, Type JD hatches except for openings less than 4 feet long which shall have single leaf hatches Type J. Manufacturer for floor access hatch shall be as specified in this Section.
2. Hatch size shall be as shown on the Contract Drawings. Hatch leaf shall be water-tight made of stainless steel diamond-pattern plate designed to withstand a live load as indicated on the Contract Drawings for the adjacent floor or deck area. Channel or tee type frame shall be of stainless steel with an anchor flange around the perimeter. All access hatches as indicated on the drawings shall be provided with recessed handles and shall be provided with automatic hold-open arm with a release handle.
3. All hardware shall be of stainless steel and shall include heavy forged hinges, spring operators, an automatic hold-open arm with release handle, and a snap lock with removable handle. The location of hinges, hold-open arm with release handle shall be as shown on the Contract Drawings and/or approved by the Engineer
4. Double leaf doors shall be provided with safety bars to go across the open sides of the door, when in the open position. Brackets shall be provided on the underside of the doors to hold the safety bars when not in use.
5. Access hatches supporting floor loads shall be detailed and fabricated based on calculations indicating that they comply with New York City Building Code for the loading designated on the Contract Drawings for the adjacent floor area. If no loading is designated, a minimum design load of 300 pounds per square foot shall be used or as required for the intended use.
6. If the access doors are located in areas subject to vehicular traffic, they shall be designed for HS-20 loading.

D. Stainless Steel Lintels and Shelf Angles

1. Lintels and shelf angles shall be bent or rolled angles, fabricated of stainless steel Type 316. All angles shall conform to the sizes, shapes, dimensions and details as noted on the Contract Drawings. The lintels assembled by welding shall be fabricated of stainless steel Type 316L.
2. All mounting and assembly hardware shall be Type 316 stainless steel.

E. Anchor Bolts

1. Anchor bolts shall be as specified in Section 05 05 23.02 - Miscellaneous Metal Fastenings.

F. Vertical Ladders

1. Aluminum ladders shall be fabricated from aluminum 6061-T6 as detailed on the Contract Drawings.

2. Stainless steel ladders shall be fabricated from Type 316L stainless steel as detailed on the Contract Drawings.
  3. Wall mounted ladders shall have welded brackets attached to the wall with concrete or masonry anchors.
  4. Ladders shall comply with OSHA 1910.27.
  5. Safety cages or fall prevention system shall be required on all ladders exceeding twenty feet height between landings.
  6. The third rail required for the fall prevention system shall be of the same material as the ladder.
- G. Fall Prevention System
1. All ladders shall be provided with a fall prevention system.
  2. The fall prevention system shall be the RTC 2000 Climb-Rite System as manufactured by:
    - a. The Research and Trading Corporation.
    - b. Saf-T-Climb as manufactured by the Norton Company/Air Space Devices, Inc., Cerritos, California.
    - c. Or approved equal.
  3. All necessary components shall be furnished, including two safety belts for each fall prevention installation to provide a complete and fully operational fall prevention system. Safety belts shall fit a waist range from 23 inches to 54 inches.
- H. Rung Ladder
1. All metal ladder rungs must have a minimum diameter of three-fourths inch. The distance between rungs, cleats, and steps of fixed ladders cannot exceed 12 inches and have to be uniform throughout the length of the ladder. The minimum clear length of rungs or cleats shall be 16 inches

### **2.3 FABRICATION / ASSEMBLING / FINISHES**

- A. Fabrication of steel and stainless steel shall be in accordance with the Specification for the Design Fabrication and Erection of Structural Steel for Building of the AISC. Fabrication of aluminum shall be in accordance with the Aluminum Association Specifications for Aluminum Structures.
- B. Holes for bolts and screws shall be drilled. Fastenings shall be concealed where practicable. Joints exposed to the weather shall be formed to exclude water.
- C. As far as practicable, all fabricated units shall be fitted and assembled in the shop, with all cuts and bends made to precision measurements in accordance with details shown on approved shop drawings.
- D. Work shall be fabricated so that it is installed in a manner that will provide for expansion and contraction, prevent the shearing of bolts, screws and other fastenings, ensure rigidity, and provide close fitting of sections.
- E. Welding of carbon and low alloy steel shall conform to the applicable requirements of ANSI/AWS D1.1, and Section 05 05 23.01 - Welding. Welding of aluminum shall

conform to the applicable recommendations of the Aluminum Company of America publication, "Welding and Brazing Aluminum"; ANSI/AWS D1.2 and Aluminum Association Specification for Aluminum Constructions. Welding shall be done in a manner that will prevent permanent buckling and all welds exposed in the finished work shall be ground smooth.

- F. All finished and/or machined faces shall be true to line and level. Steel and aluminum shall be standard, and well finished. Sections shall be well formed to shape and size with sharp lines and angles; curved work shall be sprung evenly to curves.
- G. All work shall be fitted together at the shop as far as possible, and delivered complete and ready for erection. Proper care shall be exercised in handling all work so as not to damage the finished surfaces

### **PART 3 EXECUTION**

#### **3.1 EXAMINATION / PREPARATION**

- A. Field Measurements
  - 1. The Contractor shall verify all dimensions and shall make any field measurements necessary and shall be fully responsible for accuracy and layout of the work.
  - 2. The Contractor shall review the Contract Drawings and any discrepancies shall be reported to the Engineer for clarification prior to starting fabrication.
- B. Inspection
  - 1. The Contractor shall examine the alignment of the substrate and conditions under which metal fabrications work is to be performed and notify the Engineer in writing of unsatisfactory conditions. Do not proceed with the metal fabrication and installation work until unsatisfactory conditions have been corrected in a manner acceptable to the Engineer.

#### **3.2 IMPLEMENTATION**

- A. Installation
  - 1. All metal fabrications shall be erected square, plumb and true, accurately fitted, adequately anchored in place, set at proper elevations and positions.
  - 2. All inserts, anchor bolts and all other miscellaneous metal work specified herein or shown on the Contract Drawings or required for the proper completion of the work, which are embedded in concrete, shall be properly set and securely held in position in the forms before the concrete is placed.
  - 3. All miscellaneous metal fabrications shall be installed in conformance with details shown on the Contract Drawings or on the approved shop drawings.

**END OF SECTION**

**SECTION 05 52 13.05 – WELDED PIPE RAILINGS (STAINLESS STEEL)****PART 1 GENERAL****1.1 SUMMARY**

- A. This Section describes the requirements for stainless steel welded pipe railing. Stainless steel welded pipe railing and auxiliary system components shall be provided as specified herein and in the Contract; and as shown on the Contract Drawings. Contractor shall provide all labor, materials, tools, equipment and incidentals as shown, specified and required to furnish and install all stainless steel welded pipe railing.
- B. Unless otherwise shown or specified, stainless steel welded pipe railing shall consist of a system of two rails welded to posts spaced not more than 5 feet 0 inches on center and a system of handrails supported from adjacent construction by mounting brackets spaced at not more than 5 feet 0 inches on center.

**1.2 PAYMENT**

- A. Work performed under this Section shall be paid for as part of work performed in accordance with NYC DEP BWSO Standard Sewer and Water Main Specification Sections 51.11 and 51.71.

**1.3 RELATED SECTIONS**

- A. Requirements from the following sections also apply to this Section:
  - 1. Section 05 05 23.02 - Miscellaneous Metal Fastenings
  - 2. Section 05 06 00.01 - Schedules for Stainless Steel Work

**1.4 REFERENCES**

- A. Reference Standards:

18. AMP 521-01 (R2012) - Architectural Metal Products Division of The National Association of Architectural Metal Manufacturers. Pipe Railing Systems Manual
19. ASTM A 312 - Seamless and Welded Austenitic Stainless Steel Pipes, Standard Specification for
20. 29 CFR 1910.23 - Guarding Floor and Wall Openings And Holes

## **1.5 DESCRIPTION**

- A. Not Used

## **1.6 QUALITY ASSURANCE**

- A. Manufacturer Qualifications:

1. Engage a single fabricator, with undivided responsibility for detailing and performance of the stainless steel welded railing systems.
2. Engage a firm which can show minimum of three years previous successful experience in detailing and fabrication of stainless steel welded pipe railing systems of scope and type similar to the required work.
3. Materials and fabrication procedures shall be subject to inspection and tests in the mill, shop, and field, conducted by a qualified inspection agency in compliance with ASTM E329 and ASTM E548. Such inspections and tests shall not relieve the Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements.

- B. Installer Qualifications:

1. Engage a single installer skilled, trained and with successful and documented experience in the installation of stainless steel welded pipe railing systems and with specific skill and successful experience in the erection of the types of materials required; and who agrees to employ only tradesmen with specific skill and successful experience in this type of work. Submit names and qualification to Engineer along with the following information on a minimum of three successful projects:

- a. Names and telephone numbers of owner, architects or engineers responsible for projects.
  - b. Approximate contract cost of the stainless steel welded pipe railing.
  - c. Amount of area installed.
- C. Performance Criteria:
1. Maintain the visual design concept shown, and the technical requirements specified, including modules, profiles, alignment of components and requirements for finish.
  2. Contractor shall provide stainless steel welded pipe handrail and railing system that conforms to the City of New York Building Code, ASTM E985 and CFR 29, Part 1910.23, including the 200 pound loading requirement, and including the requirement that specific types of occupancies and sizes of contributing protected areas shall incorporate greater design load resistance into welded pipe railing system, in compliance with ASTM E985, than that specified herein.
    - a. Completed handrail and railing shall withstand a uniform lateral force of 50 pounds per linear foot and a vertical uniform downward force of 50 pounds per linear foot, both applied simultaneously at the top of the handrail and railing, performance tested in accordance with Test Method A and B of ASTM E935.
    - b. Intermediate and bottom rails shall withstand simultaneously applied lateral uniform forces of 40 pounds per linear foot and a vertical load of 50 pounds per linear foot, however, lateral and vertical loads on intermediate and bottom railings need not be considered in the detailing and fabrication of posts and anchorages.
    - c. For railings having solid panels or picket balusters, the panels or picket balusters shall be detailed and fabricated to withstand a uniform lateral load of 50 pounds distributed over any round or square area of one square foot located anywhere within the infill area or a 50 pound per foot penetration cone, performance tested in accordance with Test Method C and D of ASTM E 935.
    - d. Concentrated 200 pound load and uniform force conditions shall not be applied simultaneously.
    - e. Other pertinent requirements ceded to ANSI A1264.1 by governing authorities having jurisdiction at the Site.
    - f. Bending stresses shall not exceed 75 percent of the yield stress of the material. Applied loads shall not produce permanent residual deformation in the completed work when loads are removed. Load-deformation data shall be determined in accordance with ASTM E935.
    - g. Maximum allowable deflections shall be in accordance with ASTM E985.
    - h. Where no computations provide the needed information, testing, in compliance with ASTM E935, shall be performed for verification that

stainless steel welded pipe railing system and auxiliary system components comply with specified performance requirements and the requirements of governing authorities having jurisdiction.

3. Thermal Control: Provide adequate expansion within the fabricated system that allows for a thermal expansion and contraction caused by a material temperature range of 140 degrees F to -20 degrees F without warp or bow of system components. Distance between expansion joints shall be based on providing a 1/4 inch wide joint at 70 degrees F which accommodates a movement of 150 percent of the calculated amount of movement for the specified temperature range.
4. Provide expansion joints in handrail and railing system Work where systems cross expansion joints in structure.
5. Configuration of all stainless steel welded pipe handrail and railing systems shall be as shown on the Contract Drawings. All details shown on the Contract Drawings are typical; similar details apply to similar conditions, unless specifically noted otherwise on the Contract Drawings. Verify dimensions at the site without causing delay in the work.
6. Manufacturer is responsible for detailing of stainless steel welded pipe handrail and railing system.

D. Anchors and Supports:

1. Anchorage system shall be structurally analyzed based on results of tests in compliance with ASTM E488 and ASTM E894. Anchors shall be tested for static, seismic, fatigue and shock loadings in series. Static tests shall include tension, shear, flexure, and torsion load resistance.
2. When the size, length or load carrying capacity of an anchor bolt, concrete anchor or concrete insert is not shown on the Contract Drawings, provide the size, length and capacity required to carry the design load times a minimum safety factor of four when installed in cast-in-place concrete and a minimum safety factor of six when installed in unit masonry construction.
3. Sizes shown on the Contract Drawings shall be considered minimum.

## 1.7 SUBMITTALS

- A. The Contractor shall submit Shop Drawings for approval of the Engineer. Submittals shall include, but not be limited, to the following:
- B. Samples:
  1. Full size sample, 2 foot - 0 inches long, of assembled stainless steel welded pipe railing system at post and rail intersections with all associated components including typical welded connections, mounted toe-board and sleeve, and handrail complete with mounting brackets all with specified controlled uniform finish.
  2. Samples will be reviewed by City for color, finish, joinery appearance and workmanship only. Compliance with all other requirements is the responsibility of Contractor.

- C. Shop Drawings:
1. Drawings for the fabrication and erection of stainless steel welded pipe railing and handrail systems with sizes of members, components and anchorage devices, all based on specified requirements
  2. Include copies of manufacturer's specifications, standard and custom detail drawings and installation instructions and manufacturer's catalog showing complete selection of standard and custom components, auxiliary system components and miscellaneous accessories for selection by City. Include all plans and elevations identifying the location of all railing and handrails, and all expansion joints. Show all anchorage items.
  3. Profiles of stainless steel welded pipe railing and handrail system components, and the details of forming, jointing, sections, connection, internal supports, trim, and accessories. Show details of the stainless steel welded pipe railing and handrail drawn at 1-1/2 inch scale.
- D. Certificates: Submit for approval the following:
1. Copies of material purchase receipts, for this project, signed by a certified and licensed Notary Public, verifying that material purchased for the Work complies with material designations specified as confirmed by approved Shop Drawings.
  2. Furnish certification that laboratory loading tests have been performed on the handrail, railing and anchorage systems verifying compliance with performance criteria specified, and that it conforms to all applicable CFR, ANSI and ASTM requirements for loads and deflections and that the data derived from such tests has been used by the registered professional engineer in the design calculations and engineering analyses of the welded pipe railing and auxiliary system components.
  3. Certification of welders and welding procedures shall be submitted as specified.

## **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. Delivery of Materials:
1. Stainless steel welded pipe railing systems which are damaged during delivery or while being unloaded shall not be stored on Site. Remove such units from Site and replace panels with new, undamaged material.
- B. Storage of Materials:
1. Store stainless steel welded pipe railing and accessory materials in a dry location and free from exposure to sun and condensation; with good air circulation around each piece and with protection from windblown rain.
  2. Store stainless steel welded pipe railing and accessory materials under tarpaulin covers and in an area protected from dirt, damage, weather and from the construction activities of all Contractors. Do not store outside or allow items to become wet or soiled in any way while on Site.
  3. Do not store in contact with concrete, earth or other materials that might cause corrosion, staining, scratching or damage to finish. Do not install system components which become dented, scratched or damaged in any

way. Remove such components from site and replace with new, undamaged material.

- C. Handling of Materials:
1. Do not subject stainless steel welded pipe railing and accessory materials to bending or stress. Do not carry or transport panels in the horizontal (flat) position. Hold panels upright on edge when handling.
  2. Do not damage edges or handle material in a manner that will cause scratches, warps or dents.
  3. Keep on-Site handling to a minimum.
  4. Maintain protective covering on railings and handrails. System components which are damaged during installation shall be removed from Site and replaced with new, undamaged material.

## **1.9 SPARE PARTS, SPECIAL TOOLS, AND SUPPLIES**

- A. Not Used

## **1.10 SPECIAL WARRANTY PROVISIONS / GUARANTEE PERIODS**

- A. Not Used

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Not Used

### **2.2 MATERIALS / EQUIPMENT**

- A. Stainless Steel Mechanical Tubing: Provide the following:
1. Stainless Steel Mechanical Tubing: ASTM A554, Type 316L, annealed. Provide posts and rails with 1.90-inch outside diameter, 0.109-inch wall thickness.
  2. Stainless Steel Fittings: Same material as rails except where otherwise shown on Contract Drawings.
- B. Post Reinforcing Insert: ASTM A312, Grade TP316L, welded stainless steel pipe, 1.66-inch outside diameter, 0.140 wall thickness (Schedule 40S).
- C. Toe-boards: ASTM A666, Type 316L stainless steel. Provide Toe-boards to the dimensions and details shown on the Contract Drawings and as follows:
1. Provide same finish as rails and handrails, securely fastened in place with not more than 1/4 inch clearance above floor level.
  2. Provide for thermal expansion and contraction in Toe-boards over the entire range of temperatures specified. Thermal movement shall not cause warping or buckling of Toe-boards.
  3. Toe-boards shall meet the requirements of 29 CFR, Part 1910.23, Section (e). Minimum thickness of stainless steel plate shall be 3/16-inch.

4. Toe-boards shall follow curvature of stainless steel welded pipe railing. Where stainless steel welded pipe railing is shown to have curved contours at corners, or other locations, the toe-board shall likewise be curved to follow line of stainless steel welded pipe railing system.
- D. Brackets, Flanges, and Plates: Provide ASTM A666, Type 316L stainless steel brackets, flanges and plates. Components shall be selected by City from manufacturer's standard and custom components. Components shall be in accordance with manufacturer's recommendations and as acceptable to City as shown on approved Shop Drawings.
  - E. Chain, Snaps and Eyebolts: Provide oblong 0.250-inch welded link, Type 316L stainless steel chain weighing 57 pounds per cubic foot, each link 1-1/8-inch by 7/16-inch. Provide 1/4-inch threaded quick link stainless steel eye bolts with heavy-duty swivel snaps and spring loaded latches.
  - F. Post Sleeves: Provide the following ASTM A312, Grade TP316L stainless steel sleeves:
    1. Post Sleeves for Fixed Railing: 3.50-inch outside diameter, 0.216-inch wall thickness (Schedule 40S), 6-inch long post sleeves, as required for anchorage to concrete and masonry. Components shall be in accordance with manufacturer's recommendations and as acceptable to City as shown on approved Shop Drawings.
    2. Removable Railing Post Sleeves: 6-inch long, Schedule 40S post sleeves for removable railing sections. Size post sleeves for snug fit to avoid removable railing lateral movement. Provide continuous cylindrical Teflon inserts to fill annular space between sleeve and post with top cover flange flush with top of mounting surface.
  - G. Railing Gates: Provide the following:
    1. Hinges: Provide railing gates with two self-closing hinges.
    2. Latches and Stops: Provide one latch and stop with rubber bumper and 1-inch diameter plastic knob for each railing system gate shown on the Contract Drawings.
  - H. Accessory and Miscellaneous Materials: Provide all accessory items and system components of ASTM A666, Type 316 stainless steel, finished to match posts and rails.
  - I. Concealed Connector Sleeves (Rail Splice Inserts): Provide ASTM A312, Grade TP316L stainless steel, 1.66-inch outside diameter, 0.140-inch wall thickness (Schedule 40S), minimum 5-inches long.
  - J. Welding Electrodes and Filler Metal: Provide type and alloy of filler metal and electrode as recommended by manufacturer of metal to be welded and as required for strength and compatibility of finished items.
  - K. Concrete and Masonry Anchors: Concrete and masonry anchors shall be as specified in Section 05 05 23.02 - Miscellaneous Metal Fastenings.
    1. Anchors shall be of stainless steel Type 316 and a minimum size of 1/2 inch diameter.

- L. Non-Shrink, Non-Metallic Grout:
  - 1. Provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and is recommended by the manufacturer for exterior use.
  - 2. Pre mixed, factory-packaged, non staining, non-corrosive, non-gaseous, cementitious grout, complying with ASTM C1107, requiring only the addition of water at the Site.
- M. Bolting Materials: As specified in Section 05 05 23.02 - Miscellaneous Metal Fastenings.

### **2.3 FABRICATION / ASSEMBLING / FINISHES**

- A. Provide stainless steel welded pipe railing and handrail systems completely factory fabricated using fabrication techniques recommended for stainless steel. Use tools and fabrication equipment dedicated only to the fabrication of Type 300 series stainless steels to completely eliminate ferrous contamination.
- B. Preassemble items in the shop to the greatest extent possible, so as to minimize field splicing and assembly of units at the Site. Disassemble units only to the extent necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation.
  - 1. Railing shall be assembled in sections as long as practicable. Posts shall be connected to flanges and fittings by welding. Surfaces of butt joints shall be ground smooth and square to obtain flush and tight joints undetectable from surrounding finish on all surfaces of the pipe.
  - 2. On-Site welding shall not be permitted.
- C. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges. Fabricate all corners without the use of fittings. Form bent metal corners to the smallest radius possible without causing grain separation or otherwise impairing the work. Provide not less than 4 inch outside radius.
  - 1. 1. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cylindrical cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of handrail or railing components.
- D. Cope intersections of rails and posts and weld joints. Butt weld end-to-end joints of railings or use welding connectors. Lower rails shall be coped and welded to the posts.
  - 1. Components shall be coped at perpendicular and skew connections to provide close fit.
- E. Provide for expansion and contraction in the railing system as required by performance criteria. At each side of expansion joints located in the structure to which the railing system is attached, provide an end post and railing return located 16 inches from the joint. Separation between returns shall match the width of the structure expansion joint.
- F. Cut, reinforce and tap components to receive finish hardware, screws, and similar items.

- G. Shear and punch metals cleanly and accurately. Remove burrs from exposed cut edges and ease exposed edges to a radius of approximately 1/32 inch.
- H. Provide wall returns at ends of wall-mounted handrails. Close end returns, unless clearance between end of handrail and wall is 1/4 inch or less.
  - 1. Close ends of handrail and railing members with prefabricated end fittings.
- I. Chains
  - 1. Chains shall be provided across openings in stainless steel welded pipe railing where shown on the Contract Drawings. One end of each chain shall be attached to a 1/4-inch eye bolt in the post and the other end shall be attached by means of an approved heavy stainless steel swivel eye snap hook to a similar eye bolt in the opposite post.
- J. Weep Holes
  - 1. Provide 15/64 inch diameter weep holes at the lowest point on all railing system posts and along the bottom side of railing system rails.
  - 2. Provide pressure relief holes at closed ends of handrails and railings.
- K. Welding
  - 1. Welding shall comply with the requirements of AWS and NYBC.
  - 2. Provide uniform, tight and dense welds, uniformly ground smooth and blended so no roughness shows after finishing, and without visible transition to metal surfaces so that welded surface matches contours of adjoining surfaces.
    - a. Welded joints shall be continuous, and made watertight.
    - b. or shown on the Contract Drawings.
  - 3. All welding shall be performed with Inert Gas Tungsten Arc Welding using Direct Current, Straight Polarity. The non-consumable electrode shall be 1/16-inch diameter, 2 percent threated tungsten electrode and have a point ground on the end similar to a pencil point. The welding current shall be between 70 and 100 amperes. The shielding gas shall be argon, helium or a combination of both with a minimum flow of 15 cubic feet per hour. Filler metal shall be Type 316L, stainless steel.
- L. Finishes
  - 1. All handrail, railing, exposed supports and Toe-boards shall be provided with a uniform, bright, mill-polished surface obtained by finishing with a 150 - 220 mesh abrasive, following initial grinding with coarser abrasives. The finish shall be characterized by very fine parallel "grit lines" and be within a uniform range established as either an AISI No. 4 or 5 finish, with final finish established by Sample submission as approved by Engineer in compliance with Section 05 06 00.01 - Schedules for Stainless Steel Work and AISI/NIDI 9012 or AMP/NAAMM AMP 503.

## 2.4 SOURCE QUALITY CONTROL / SHOP TESTS

- A. Obtain all stainless steel welded pipe handrail and railing system components and accessories from the same manufacturer.

- B. Provide qualified welding processes and welding operators in accordance with ANSI/AWS "Structural Welding Code" D1.1, Section 5, Qualification.
- C. Provide certification that all welders employed on, or to be employed for, the fabrication of the stainless steel welded pipe rail system have satisfactorily passed AWS qualification tests within the previous twelve months. Contractor shall ensure that all certification are kept current.
- D. Allowable Tolerances:
  - 1. Limit variation of cast-in-place inserts, sleeves and field-drilled holes to the following:
    - a. Spacing:  $\pm 3/8$  inch.
    - b. Alignment:  $\pm 1/4$  inch.
    - c. Plumb:  $\pm 1/8$  inch.
  - 2. Limit variation of completed handrail and railing system alignment to  $1/4$  inch in 12 feet and  $1/16$  inch in 3 feet.
  - 3. Toe Boards: Trueness:  $\pm 1/8$  inch
- E. Set rails horizontal and parallel to rake of steps or ramps to within  $1/4$  inch in 12 feet.

## **PART 3 EXECUTION**

### **3.1 EXAMINATION / PREPARATION**

- A. The Contractor shall examine the alignment of the substrate and conditions under which the stainless steel welded pipe railing system work is to be performed and notify City in writing of unsatisfactory conditions. Do not proceed with the stainless steel welded pipe railing system work until unsatisfactory conditions have been corrected in a manner acceptable to City.
- B. Protection: Protect cast-in-place sleeves and field-drilled holes from debris and water intrusion by use of temporary covers or removable foam inserts that completely fill the cast-in-place sleeve.
- C. Coordinate installation of anchorages for handrails and railings. Furnish setting drawings, templates, and installation instructions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in cast-in-place concrete or masonry. Deliver to Site in time for installation.
- D. Verify dimensions by taking measurements at the Site without causing delay in the work. Where measurements cannot be taken at the Site without delaying the work, establish dimensions and proceed with fabrication of handrails and railings without Site measurements. Coordinate construction to ensure that actual dimensions correspond to established dimensions.

### 3.2 ERECTION

- A. Fastening to In-Place Construction
1. General: Do not erect components which have become scarred, dented, chipped, discolored or otherwise damaged or defaced. Railing and handrail system components which have holes, cuts, gouges, deep scratches or dents of any kind shall be removed from the Site before installation. Repairs to correct such work shall not be approved by City. Remove and replace with new material at no cost to the City.
  2. Posts and rail sections shall be brought into final alignment by stainless steel welded pipe railing installer.
  3. Provide anchorage devices and fasteners where necessary for securing railing and handrail items to in-place construction, including threaded fasteners for concrete and masonry inserts, through-bolts and other connectors as required. Use only Type 316 stainless steel devices and fasteners.
  4. Flanged fittings shall be secured to steel with nuts, bolts and washers; to hollow glazed structural tile and masonry with masonry anchors; and to solid grouted masonry and concrete with concrete anchors. Flanges not bearing on metal shall be set in non-shrink grout.
  5. Provide end posts and railing returns at 16-inches on each side of structural expansion joints. Separation between returns shall match the width of the structural expansion joint.
  6. Field-dowel connections shall be located at posts.
- B. Cutting, Fitting and Placement
1. Perform cutting, drilling and fitting required for installation. Set the work accurately in location, alignment and elevation, plumb, level, true and free of rack, measured from established lines and levels.
  2. Fit exposed connections accurately together to form tight hairline joints. Do not cut or abrade the surface of units which have not been finished after fabrication, and are intended for field connections by mechanical or other means without further cutting or fitting.
  3. Handrails supported from walls, partitions and similar construction shall be supported by brackets located within 18 inches of handrail terminations and at intermediate points spaced not more than 5 feet on center. Drill wall plate portion of the mounting bracket to receive one bolt, unless otherwise shown on the Contract Drawings as concealed anchorage. Provide flush-type wall-return fittings with the same projection as that shown for mounting brackets. Secure mounting brackets and wall-return fittings to building construction as follows:
    - a. For anchorage to concrete and solid masonry units, use concrete anchors.
    - b. For anchorage to hollow masonry units, use toggle bolts having square heads.

4. Make all splices as near as possible to posts but not exceeding 12 inches from the nearest post. Permanent field splice connections shall be made using manufacturer's recommended minimum 5-inch long Type 316 stainless steel connector sleeves. Tight press-fit all field splice connectors and install in accordance with manufacturer's written instructions as provided on approved Shop Drawings.
5. Space posts 5 feet - 0 inches on center and connect sections as shown on Shop Drawings approved by Engineer.
6. Expansion Joints: Provide slip joints with internal sleeve extending 2 inches minimum beyond joint on each side. Construct expansion joints as for field splices except fasten internal sleeve securely to one side of rail assembly. Locate joints within 6 inches of posts. Submit proposed locations of expansion joints to City.

### **3.3 FIELD TESTING / QUALITY CONTROL**

- A. An anchor testing program shall be established based on ASTM E488 and ASTM E894. Perform tension, shear, flexure, and shock loading resistance tests.
  1. Test a minimum of one anchor for every three posts and one anchor for every three railing supports.
  2. Based on initial results of testing, test additional anchors in order to verify that design safety factors have been provided by anchor installation.
- B. Anchors: Suitable equipment shall be used to perform tests required to verify correct installation of anchors and provide proof loads on anchors installed at the Site in accordance with ASTM E488 and ASTM E894.
- C. The Contractor shall provide a field report on anchor testing results to City, in compliance with ASTM E488 and ASTM E894, for final approval of welded pipe railing system along with recommendations for remedial work required to bring anchors up to load resistance requirements specified and required by governing authorities having jurisdiction.
- D. Acceptance and payment will not be made to the Contractor until report has been approved by the Engineer and remedial work is tested and shown to be in compliance with specified performance requirements.

### **3.4 STARTUP / DEMONSTRATION**

- A. Not Used

### **3.5 ADJUSTING / PROTECTION / CLEANUP**

- A. Adjusting
  1. Adjust railings and handrails prior to securing in place to ensure proper matching at butting joints and correct alignment throughout their length. Plumb posts in each direction.
  2. Anchor posts in concrete by means of sleeves set and anchored into concrete substrate and by side-mounting, in areas shown on the Contract Drawings. Provide closure secured to the bottom of the sleeves. Unless otherwise shown on the Contract Drawings, after the posts have been inserted into the sleeves, fill the annular space between posts and sleeves

solid with non-shrink, non-metallic grout as specified. Crown grout away from posts.

3. Anchor posts to steel with stringer or support flanges, angle-type or floor-type as required by conditions, shop-connected to posts and bolted to the steel supporting members.
4. Side-mount posts by fastening them securely in brackets attached to steel or concrete and in accordance with Shop Drawings approved by City.
5. Provide hinged railing sections where shown on the Contract Drawings. Provide hinges and latch for connection to adjacent railing.
6. At walkways and other locations where railing is provided on each side, locate railing system posts opposite each other.

**B. Protection**

1. Protect railing system from damage by the work of all contractors.
2. Remove defective railing system components immediately upon discovery of damage, and replace with material that meets specification requirements, so that all stainless steel welded pipe railing system components will be without damage or surface blemish at the time of Substantial Completion.

**C. Cleanup**

1. Clean exposed surfaces of stainless steel welded pipe railing work of every substance before leaving the site after completion of installation. Comply with recommendations of both the stainless steel welded pipe railing and finish manufacturer. Do not use abrasives or non-approved solvent cleaners. Test cleaning techniques on an un-used section of railing before employing cleaning technique in the work.
  - a. Remove protective plastic as recommended by manufacturer.
  - b. Remove all stains, dirt, grease and other substances by washing railings and handrails thoroughly using clean water and soap. Rinse with clean water.
  - c. Do not use acid cleaning solutions, steel wool or other harsh abrasives.
  - d. If stains remain after washing, remove finish and restore in accordance with recommendations of the manufacturer.
2. Leave stainless steel welded pipe railing and handrails, free from dents, burrs, scratches, holes and other blemishes. Refinish minor scratches to be indistinguishable from adjacent un scarred areas. If, after refinishing, damage remains visible when viewed from five feet away, or if finish of work has been altered to the point where it appears different from adjacent work, Contractor shall replace damaged work with new undamaged material at no additional expense to the City.

**END OF SECTION**

**SECTION 05 53 01.02 – STAINLESS STEEL FLOOR GRATINGS****PART 1 GENERAL****1.1 SUMMARY**

- A. The Contractor shall furnish and install all stainless steel floor gratings as indicated on the Contract Drawings and specified herein.
- B. Gratings shall be complete with frames, anchors, fastening devices and miscellaneous appurtenances.

**1.2 PAYMENT**

- A. Work performed under this Section shall be paid for as part of work performed in accordance with NYC DEP BWSO Standard Sewer and Water Main Specification Sections 51.11 and 51.71.

**1.3 RELATED SECTIONS**

- A. Section 05 05 23.01 - Welding.

**1.4 REFERENCES**

- A. ASTM A167 - Stainless and Heat-Resisting Chromium-Nickel Steel Plate, Sheet, and Strip.
- B. ASTM A276 - Stainless and Heat-Resisting Steel Bars and Shapes.
- C. ASTM A480 - General Requirements for Flat-Rolled Stainless and Heat-Resisting Steel Plates, Sheet and Strips.
- D. ASTM A666 - Austenitic Stainless Steel, Sheet, Strip, Plate, and Flat Bar.
- E. ASTM F593 - Stainless Steel Bolts, Hex Cap Screws and Studs.
- F. ASTM F594 - Stainless Steel Nuts.
- G. ANSI/NAAMM MBG 531 - Metal Bar Grating Manual.
- H. ANSI/NAAMM MBG 532 - Heavy Duty Metal Bar Grating Manual.
- I. NAAMM MBG 533 - Welding Specifications for Fabrication of Steel, Aluminum and Stainless Steel Bar Grating.
- J. ASTM A992 - Steel Plates, Shapes and Bars; Carbon, Structural.
- K. National Association of Architectural Metal Manufacturers (NAAMM).
- L. New York City Building Code (NYBC).

**1.5 DESCRIPTION**

- A. Design Requirements
  - 1. The design live load for grating covering floor openings shall be that designated for the adjacent floor area but not less than a uniform load of 150 pounds per square foot or a concentrated load of 300 pounds distributed over a 12-inch square area at the center of span, whichever produces the greater stress.

2. The design live load for grating on platforms shall be as designated on the Contract Drawings but not less than a uniform load of 100 pounds per square foot.
3. Grating in areas subject to vehicular traffic shall be designed for the maximum weight vehicle which can access the area. Forklifts or other similar wheeled vehicles shall have maximum wheel loads defined by the manufacturer. When wheel loads are not defined by the manufacturer, the wheel load shall be defined as 40 percent of the gross loaded weight of the maximum size vehicle to be accommodated.
4. The maximum allowable deflection due to dead load plus live load shall not exceed the span divided by 240, but not more than 1/4 inch.
5. Gratings shall be designed in accordance with the design criteria specified herein, and the NAAMM specifications, unless otherwise noted on the Contract Drawings or as required by the NYBC.

## **1.6 QUALITY ASSURANCE**

- A. Not Used

## **1.7 SUBMITTALS**

- A. The Contractor shall submit Shop Drawings and material specifications of all gratings for approval by the Engineer.
- B. Gratings shall not be manufactured until the Contractor's Shop Drawings have been approved by the Engineer.
- C. Samples of grating and fastening devices shall be submitted for approval by the Engineer.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Not Used

### **2.2 MATERIALS / EQUIPMENT**

- A. Type of Gratings
  1. Unless otherwise shown or specified, gratings shall be one of the following types and shall be the product of one manufacturer:
    - a. Type "A" - Parallel bearing bars, with cross members at right angles.
    - b. Type "B" - Parallel bearing bars, with diagonal cross members.
- B. Materials
  1. Floor gratings and appurtenances shall be Type 316L Stainless Steel and shall conform to the requirements specified herein and to the following standards:
    - a. Gratings: ASTM A167; ASTM A480; ASTM A666

- b. Frames, Curb Angles, Braces, Skirt Angles, Bolts and Fastening Devices: ASTM A276; ASTM A480; ASTM F593, ASTM F594

### 2.3 FABRICATION / ASSEMBLING / FINISHES

- A. Gratings shall be accurately fabricated, free from warps, twists or other defects which affect the appearance and serviceability of the grating,
- B. The tops of the grating bearing bars and cross bars shall be in the same plane.
- C. Gratings shall have a mill finish unless otherwise noted on the Contract Drawings.
- D. All welds shall be ground smooth and conform to the requirements of Section 05 05 23.01 - Welding and NAAMM MBG 533.
- E. Openings in and edges of all grating sections shall be banded with bearing bars. Bands shall be welded to all intersecting members.
- F. Grating Fabrication
  - 1. Type "A" Grating (Pressure Locked or Welded) shall consist of parallel bearing bars spaced not more than 1-3/16 inches on centers joined by cross members spaced not more than 4 inches on center (unless shown otherwise on the Contract Drawings), to form rectangular openings. Approved welded, electric-forged, slotted, friction fitted or interlocking joints shall be used in joining cross members to the bearing bars to give the grating the required strength, rigidity and durability. The distance between the support and the nearest cross bar shall not exceed 2 inches.
  - 2. Type "B" Grating (Welded or Riveted) shall consist of parallel bearing bars spaced not more than 1-5/16 inches on center, joined by welded or riveted bent diagonal cross bars. Rivets shall be 1/4 inch in diameter and shall be spaced not more than 4 inches on center unless shown otherwise on the Contract Drawings. The distance between the support and the center of the nearest rivet shall not exceed 1 inch.
  - 3. Minimum grating depth shall be 1-1/4 inches with bearing bars not less than 3/16 inches thick.
  - 4. Welded cross members shall not be less than 3/16 inch in thickness. Mechanically interlocked cross members shall not be less than 1/8 inch in thickness. The depth of cross members shall not be less than one-half the depth of the bearing bars, but such depth need not exceed 1 inch. Riveted cross members shall be as specified for mechanically interlocked cross members.
  - 5. Each section of grating shall be sized to weigh a maximum of 100 pounds unless noted otherwise on the Contract Drawings.
- G. Grating Cut-outs
  - 1. Stems, columns and similar work. Where more than two bearing bars are included in the cut-out, banding bars of the same dimensions as the bearing bars shall be provided around the opening and welded or electric-forged to the component parts of the grating.

#### H. Grating Stair Treads and Landings

1. Grating stair treads shall be 1 inch wider than tread widths shown on the Contract Drawings and shall be securely fastened to angles or carrier bars which in turn shall be fastened to stringers. The outer edge or nosing of stair treads shall be so constructed as to make it distinctly visible and contrasting with the other part of the tread. Non-slip nosings shall be furnished on all the stair treads and landings.

### 2.4 SOURCE QUALITY CONTROL / SHOP TESTS

- A. Not Used

## PART 3 EXECUTION

### 3.1 EXAMINATION / PREPARATION

- A. Field Measurements
  1. The Contractor shall check all dimensions in the field after all piping and equipment are set in place and determine the exact dimensions and locations of openings and cut-outs.
  2. Templates shall be made where required for location and size of openings and cut-outs.
  3. The Contractor shall field verify all pertinent dimensions prior to grating fabrication.

### 3.2 INSTALLATION

- A. Installation
  1. Gratings shall be installed with each section readily removable and replaceable. Adjacent units shall be neatly fitted together.
  2. The clearance at the ends or between sections of gratings shall be a maximum of 1/4 inch.
  3. Tops of gratings shall be set flush with surrounding construction.
  4. Gratings shall be set with a full and uniform end bearing on the stainless steel frames to preclude rocking movement; wedges or similar shimming devices shall not be used.
- B. Fastening Devices
  1. Approved fastening devices shall be installed to hold the gratings rigidly to the supports with means for easy removal.
  2. Fastening devices shall not protrude above the walking surface of the grating.
  3. Fasteners shall be installed in accordance with the manufacturer's recommendations.

**END OF SECTION**

**SECTION 09 91 00 – PAINTING****PART 1 GENERAL****1.1 SUMMARY**

- A. Painting, as specified herein, shall include, but not be limited to, preparation of surfaces, shop painting of items furnished, and field painting of structures, piping, conduit, ducts and equipment, and marking of piping and electrical conduit.
- B. Painting shall be provided as shown on the Contract Drawings, specified herein or in the Contract, or as required for a complete installation.

**1.2 PAYMENT**

- A. There is no separate payment provision for this Section, and shall be deemed included in the prices bid for the respective Contract items.

**1.3 RELATED SECTIONS**

- A. Section 40 05 97 - Identification for Process Equipment.

**1.4 REFERENCES**

- A. Codes and standards referred to in this Section shall be as follows:
  - 1. SSPC - The Society of Protective Coatings (formerly of Steel Structures Painting Council)
    - a. SSPC-SP 1 Solvent cleaning
    - b. SSPC-SP 6 Commercial blast cleaning
    - c. SSPC-SP 10 Near white cleaning
    - d. SSPC-SP 2 Hand tool cleaning
    - e. SSPC-SP 11 Power tool cleaning to bare metal
    - f. SSPC- SP 15 Commercial grade power tool cleaning
    - g. SSPC-SP 16 Brush off Blast Cleaning of Non Ferrous Metals
  - 2. ASTM - American Society for Testing Materials
    - a. ASTM D3359 - Measuring Adhesion by Tape Test
    - b. ASTM D16- Terminology Relating to Paint, Varnish, Lacquer, and related Products.
- B. NSF- National Sanitation Foundation

**1.5 DESCRIPTION**

- A. Safety Requirements
  - 1. All painting materials specified herein, and ingredients of coatings containing substances that are potentially toxic or hazardous shall be shipped with warning labels. These products shall be applied in strict conformance with the safety requirements of the following:
    - a. The Manufacturer

- b. The National Paint and Coatings Association (NPCA)
- c. The Society of the Plastics Industry (SPI)
- d. The Manufacturing Chemist Association (MCA)
- e. The Society of Protective Coatings formerly of Steel Structures Painting Council (SSPC)
- f. The United States Government Occupational Safety and Health Administration (OSHA)
- g. The Health and Safety Requirements of the State of New York (PESH- Public Employees Safety and Health)
- h. The Health and Safety Requirements of the City of New York (COSH- Citywide Office of Safety and Health)

**B. Environmental Requirements**

**1. Weather:**

- a. Air and surface Temperatures: Prepare surfaces and apply and cure coatings within air and surface temperature range in accordance with manufacturer's instructions.
- b. Surface Temperature: Minimum of 5 degrees F (3 degrees C) above dew point.
- c. Relative Humidity: Prepare surfaces and apply and cure coatings within relative humidity range in accordance with manufacturer's instructions.
- d. Precipitation: Do not prepare surfaces or apply coatings in rain, snow, fog or mist.
- e. Wind: Do not spray coatings if wind velocity is above manufacturer's limit.

**2. Ventilation**

- a. Provide ventilation during coating evaporation stage in confined or enclosed areas in accordance with AWWA D102.

**3. Dust and Contaminants:**

- a. Schedule coating work to avoid excessive dust and airborne contaminants.

**4. Protect work areas from excessive dust and airborne contaminants during coating application and curing.**

**1.6 QUALITY ASSURANCE**

**A. Paint Quality Assurance Records**

- 1. The following information shall be recorded for every paint project and submitted to the Engineer:
  - a. Date
  - b. Shift

- c. Part Temperature
- d. Dew Point
- e. Paint Batch Number/s
- f. Mixing Time for Each Part and the Combined Parts of a Paint System
- g. Pot Life
- h. Curing Time of Primer and Finish Layers
- i. Paint thickness measurements (DFT)
- j. Holiday Test Results and Repair Data
- k. Peel Test Results and Repair Data
- l. Foreman or Supervisor's Signature

B. Test Surfaces

- 1. The Contractor shall paint certain areas of concrete and other surfaces, where directed, using approved coatings for use by the Engineer for comparisons with coating systems applied during the progress of the work.
- 2. Such coated areas shall not be subsequently painted during the entire period of construction or during the guarantee period.
- 3. At the end of the guarantee period, the test surfaces shall be inspected by the Engineer for any deterioration such as cracks, blisters, flakes and excessive chalking.
- 4. The Contractor shall supply all material and labor and shall perform any remedial work on all such deteriorated surfaces using the coating system represented by the test surface at no additional cost to the City.

C. Painting Requirements

- 1. General: The Contract does not specify the surface treatment for every individual part of the work, however this Contract shall be provided with a complete painting job throughout the work as specified herein. All items customarily or specified to be shop painted shall be primed and finished in the shop. Field painting will not be allowed unless requested in writing to the Engineer, and written consent is given by the Engineer. In general, only areas that are to be field welded are not to be painted until field erected.
- 2. Manufacturer's Standard Finished Items: The following items shall be furnished with the manufacturer's standard prime and finish coats applied in the shop: pumps, motors, gears, gear housings, air compressors, wall fans, temperature control and instrument panels, process air blowers, engines, filters, strainers, air dryers, meters, gas boosters, gas turbines, generators, panelboards, transformers, boilers, condensing units, water chillers, cooling towers, condensers, heat exchangers, humidifiers, air handling units, sound attenuators, air conditioning and dehumidification units, convactor cabinets, unit heaters, enclosures for finned tube radiators, cabinet heaters, boilers, wood seats, lockers, metal toilet partitions, metal

urinal screens, aluminum fascia, motor control centers, aluminum light standards, and hoisting equipment. Steel reinforcing bars for concrete shall be coated in accordance with the Contract. When powder coatings are required by the Contract, the powder coatings shall be in accordance with the requirements of the manufacturer of the item.

3. Painted Items: The following items shall be painted as specified herein: steel water storage tank, structural steel and wrought metals, composite metal floor deck, pipelines, hangers and supports, sluice gates, pumps and pumps parts, valves, valve and sluice gate operators and stands, guard housings, air filter equipment, effluent strainers, heat exchangers, air receivers, tanks, air silencing equipment, storage tanks, gas domes, sediment tanks, steel stair framing, steel lintels, hollow metal doors and frames, gypsum wallboard, interior concrete block, interior concrete walls, columns, beams and ceilings, covering over insulation on piping, electrical conduit systems, small piping and copper tubing, ducts, covering over ducts, and PVC piping, valves and fittings.
4. Unpainted Items: The following items shall not be painted, unless otherwise specified: registers, grilles, dampers and linkage, fire sprinklers, name and identification plates and tags, floor gratings, brass pipe and fittings, brass valves, stainless steel, wood, stop log panels, spray-on fireproofing steel to receive spray-on fireproofing, surfaces to receive field welding, and fraying surfaces of high strength bolted connections.

## 1.7 SUBMITTALS

- A. Contractor shall submit Shop Drawings for approval of the Engineer. Submittals shall include, but not be limited to: catalog cuts and reference materials.
  1. Color Chart: The Contractor shall submit the manufacturer's standard color chart for color selection for painting of items other than process piping, valves, pipe line equipment, pump casings, blowers and other mechanical equipment and their drive units, all of which shall be in conformance with the "BACKGROUND COLOR" of the General Color Code specified in Section 40 05 97 - Identification for Process Equipment.
  2. Paint Samples: The Contractor shall submit:
    - a. Two one-quart samples of each required kind of paint material, or the ingredients thereof which are to be mixed on the job.
    - b. Samples shall be labeled as required under Article 1.07, and shall include the certificate of the manufacturer stating the actual percentages by weight and volume of all ingredients entering into the mixture.
    - c. Upon request, further samples shall be provided as the work progresses.
    - d. Painting materials shall not be applied without written approval of samples by the Engineer.
  3. Painted Surface Samples:
    - a. Upon request, duplicate samples of the results obtained by painting and finishing various materials on the work shall be submitted.

Such samples, and the approved paint applied thereto, shall be applied in strict conformance with these Sections.

- b. Finished areas shall be considered adequate for the purpose of determining the quality of the work. All painting work shall be performed in a quality equal to the approved samples.
  - c. Where equipment is customarily shipped with a standard finish, samples of the proposed color and finish shall be submitted for approval prior to shipping.
4. Certification: The Contractor shall furnish:
    - a. Affidavits from the manufacturer certifying that materials furnished conform to the requirements specified
    - b. And that paint products have been checked for compatibility.
  5. Immersion Certification: The Contractor shall furnish:
    - a. Affidavits from the manufacturer certifying that coatings in immersion service contain no water soluble solvents or corrosion inhibitive (active) pigments with slight water solubility.
  6. List of Paints: The Contractor shall submit:
    - a. A list of paint products with mil thickness and solids by volume, including all paint applied in the shop and in the field. The list shall be in accordance with the requirements of this Section and the recommendations of the paint manufacturer.
  7. Applicator's Quality assurance:
    - a. Submit list of a minimum of 5 completed projects of similar size and complexity to this work. Include for each project:
      - 1) Project name and location
      - 2) Name of owner
      - 3) Name of contractor
      - 4) Name of engineer
      - 5) Name of coating manufacturer
      - 6) Approximate area of coatings applied.
      - 7) Date of completion.
  8. Warranty:
    - a. Submit manufacturer's standard warranty.

## **1.8 DELIVERY, STORAGE, AND HANDLING**

- A. General: All products and materials shall be delivered, stored, and handled as specified in Contract Documents and as follows:
- B. Delivery and Storage: All paint materials delivered and stored at the site shall be from the approved manufacturer only.

- C. Packaging and Labeling: Paints, stains, varnish or ingredients of paints to be used on the job shall be properly prepared, packed, and labeled. All materials shall be delivered to the site in original, unbroken containers bearing the manufacturer's printed labels, which shall specify the following:
1. Project and Contract No.
  2. Name of Manufacturer
  3. Address of Manufacturer
  4. Generic Name of Paint or Ingredients
  5. Brand and Trade Mark
  6. Schedule Letter as Listed Herein
  7. Percent Solids by Volume
  8. Net Quantity
  9. Date of Manufacturer
  10. Date Packed
- D. Storage: Painting materials shall be stored at the site in manner and place which shall be in accordance with applicable codes and regulations, and in accordance with manufacturer's instructions. The storage space shall be kept clean at all times. Every precaution shall be exercised to eliminate fire hazards.

## **PART 2 PRODUCTS**

### **2.1 MANUFACTURERS**

- A. Standards of Quality: Proprietary protective coatings included herein by brand name or trade mark are given solely as standards of quality and for bidding purposes and do not preclude the use of an approved equivalent.
- B. Latest Products: Unless specified otherwise, the proprietary protective coatings of the manufacturer's latest products in regular production on the date of receipt of order shall be provided.
- C. Equivalents: Equivalent products shall be of a standard, regularly produced product of a manufacturer. Equivalent products shall be submitted on their applicable published printed literature that states the generic type, instructions for use, solids by volume, application rates, and chemical components of vehicles and solids. Equivalent products shall be accompanied by a list of projects where each of the coatings has been used on new construction and has rendered satisfactory service for at least three years. Should the manufacturer's literature of the product being offered call for higher film thickness, the greater film thickness shall be applied, and the submitted schedule shall so state.
1. Paintings approved as manufactured by these Painting Manufacturers:
    - a. Tnemec Company, Inc., Kansas City, MO.
    - b. Sherwin Williams, Cleveland, OH.
    - c. International Paint, Houston, TX.

- d. Carboline Company, St. Louis, MO.
- e. PPG Amercoat, Little Rock, AR.
- f. Or approved equal

## 2.2 MATERIALS / EQUIPMENT

- A. General:
1. Compatible shop and field coats shall be provided.
  2. All coats of paint for any particular surface shall be from the same manufacturer.
  3. Paint shall be of approved color as selected from the manufacturer's standard range of colors.
  4. The Contractor shall submit proposed modifications to the specified painting systems for the Engineer's approval prior to use.
  5. Paints containing lead or manganese driers shall not be submitted.
- B. Classification of Paints: Alphabetical designations have been used in the following list to classify/group acceptable paints by the type and quality of materials desired. Equivalent material from the manufacturers named above or from other approved manufacturers may be used in any of these paint groups in accordance with the procedures for substitution.

CLASSIFICATION OF PAINTS		
Paint Group	Product Name and Number	Dry Film Thickness Mils per Coat
<b>A</b>	<b>Tnemec:</b> Series V69 Hi-Build Epoxoline II	3.0-5.0
	<b>Carboline:</b> Carboguard 60/61 or Carboguard 635	3.0-6.0 3.0-6.0
	<b>Sherwin Williams:</b> Copoxy Shop Coat Primer	2.0-4.0
	<b>International Paint:</b> Integrated 345 or Devran 224HS	3.0-4.0
	<b>PPG:</b> Amercoat 370	4.0-6.0
<b>B</b>	<b>Tnemec:</b> Series V140-44 BR Pota-Pox Plus	4.0-6.0
	<b>Carboline:</b> Sanitile 120	1.0-2.0
	<b>Sherwin Williams:</b> Dura-Plate 235 (Waste Water)	3.0-5.0
	<b>International Paint:</b> Interseal 670 HS or Bar Rust 233HS	3.0-6.0
	<b>PPG:</b> Amerlock 2/400	4.0-6.0

**2.3 FABRICATION / ASSEMBLING / FINISHES**

A. Not Used

**2.4 SOURCE QUALITY CONTROL / SHOP TESTS**

A. Not Used

**PART 3 EXECUTION****3.1 EXAMINATION / PREPARATION**

A. Surface Preparation: Prior to painting, Surface preparation prior to painting shall be in accordance with the following guidelines and as recommended by the painting material manufacturer.

<b>SURFACE PREPARATION GUIDELINES</b>	
<b>Class of Work</b>	<b>Preparation of Surface Prior to Painting</b>
Structural Steel and Steel Encased in Concrete, Masonry or Fireproofing	All visible oil, grease, dirt, dust, mill scale, rust, paint, oxides, corrosion products and other foreign matter shall be removed by compressed air nozzle blasting, centrifugal wheels or other specified method. Discoloration caused by certain stains shall be limited to no more than 33 percent of each square inch of surface area in accordance with Society of Protective Coatings (SSPC-SP6).
Steel (other than structural, encased or galvanized) and Steel Submerged Under Water	All visible oil, grease, dirt, dust, mill scale, rust, paint, oxides, corrosion products and other foreign matter shall be removed by compressed air nozzle blasting, centrifugal wheels or other specified method. Discoloration caused by certain stains shall be limited to no more than 5 percent of each square inch of surface area in accordance with Society of Protective Coatings (SSPC-SP10).
Galvanized Steel and Other Metals	All welds, beads, blisters or protuberances, other than identification markings shall be smooth, and other imperfections shall be removed. All nonferrous metals and galvanized steel, whether shop primed or field primed, shall be solvent cleaned in accordance with Society of Protective Coatings (SSPC-SP1).
Canvas Pipe Covering	All adhering debris shall be removed and indentations or other unsightly spots shall be smoothed out to give a uniform, even surface. Surfaces shall be brushed clean.

<b>SURFACE PREPARATION GUIDELINES</b>	
<b>Class of Work</b>	<b>Preparation of Surface Prior to Painting</b>
Concrete and Masonry Surfaces	Concrete and masonry shall be dried for a minimum of 28 days and then the dry concrete and masonry shall be brushed and washed to remove all loose dirt, dust, free lime and other deleterious substances by approved methods. Protruding fins and other adhering matter shall be removed or ground until a smooth, even finish is obtained. Concrete surfaces to be painted shall be acid etched or otherwise roughened as recommended by the manufacturer of the coating to be applied, to produce a slightly granular surface required for adherence of coating to the concrete, unless otherwise indicated.
PVC	All adhering debris shall be removed and surface shall be roughened using suitable sandpaper. Surfaces shall be dry and free from dirt, oil, grease etc.

### 3.2 APPLICATION

- A. General: All painting and coatings shall be applied in accordance with the manufacturer's recommendations and approved submittals. A representative of the paint manufacturer shall inspect the surfaces to be painted and shall advise on the proper application. The paint manufacturer representative shall periodically be consulted regarding ambient temperature and humidity conditions.
- B. Shop Painting: The following items shall be provided with shop coats of primer and finish coats as herein specified before exposure to the weather:
1. Metals:
    - a. Structural steel  
Note: Consider using hot dip galvanizing at crevices or hard to reach places on steel structural.
    - b. Miscellaneous steel and wrought iron
    - c. Ornamental wrought and light iron
    - d. Iron castings
  2. Machinery and Equipment:
    - a. Mechanical and electrical equipment
  3. Pipe:
    - a. All piping except galvanized iron, stainless steel, aluminum, copper, brass and bronze piping.
- C. Field Painting: All painting at the site of the project is hereby designated as field painting for those items that cannot be shop painted or are touched up due to minor damage to the painted surface.

1. Repair and Repainting: Field coatings shall not be applied until all marred surfaces have been repaired or repainted. Shop coated surfaces shall be thoroughly cleaned and retouched prior to the application of successive paint coats in the field.
  2. Unpainted Materials: Do not paint or finish copper, bronze, chromium plate, nickel, stainless steel, aluminum (except ducts and conduit adjacent to finish painted surfaces), monel metal, lead, lead coated copper and brass, except as otherwise indicated.
  3. Items to Receive Coating: All ferrous metals and insulated surfaces shall be provided with a protective coating. Interior surfaces, exposed masonry walls and concrete walls, floors and ceilings shall be provided with protective coatings as indicated on the drawings and specified.
  4. Surface Condition: Only surfaces that are dry and free from dust, grease or other undesirable or interfering substances shall receive coatings. Coatings shall be as specified herein in the "Material Painting Schedule".
  5. Application: Finish coats shall be applied after all adjacent work has been completed. Successive coats shall have different shades or tints of color wherever possible. Colors shall be as selected and approved by the Engineer. Prime and successive finish coats shall be cleaned, sand papered, or otherwise treated before the next coat is applied, in accordance with the recommendations of the coating manufacturer, and as approved by the Engineer. All coats shall be inspected and approved by the Engineer, before application of any succeeding coats. All coats shall be applied to the dry film thickness (DFT) specified. Coatings shall be applied by skilled personnel under adequate illumination. All painted surfaces shall be left in a clean, orderly and acceptable condition.
  6. Surface and Atmospheric Conditions: Paints shall not be applied when the surface temperature is less than 40 degrees F, when the relative humidity exceeds 85 percent, or when the surface to be painted is wet or damp, unless more stringent requirements are called for by the paint manufacturer.
- D. Field Painting Operations: Surfaces to be given protective coating shall be thoroughly cleaned. Scratches and abrasions on equipment which has been shop coated shall be refinished and all surfaces to be field painted shall be approved by the Engineer before proceeding with painting. Painting shall be performed in a continuous and orderly operation to facilitate adequate inspection, however material subject to weathering or corrosion shall be given prime coats as quickly as practicable.
1. Method of Application: All paint material shall be applied by brush or roller. Spray painting will be permitted only with the specific approval of the Engineer. Surfaces which are so close together as to prevent the insertion of a standard size roller or brush shall be painted thoroughly with the prescribed number of coats by using special narrow rollers or brushes.
  2. Adjacent Areas: Areas under and adjacent to painted surfaces shall be fully protected at all times. Dripped or spattered paint shall be promptly removed and any adjacent surfaces that have been damaged or discolored by overspray shall be repaired, refinished, and repainted.

3. Tinting: Successive coats of paint shall be tinted to make the various coats easily distinguishable. Undercoats of paint shall be tinted to the approximate shade of the final coat of paint. Final coats of paint shall not be applied until all other work has been completed, the dirt and rubbish removed and the surfaces suitably prepared. Paint to be applied shall be at room temperature.
4. Conditions for Application: Each coat of paint shall be given sufficient time to cure per the manufacturer's recommendation before application of the succeeding coat. Each succeeding coat shall be applied within the recoat time specified by the manufacturer; otherwise the painted surface shall be prepared per the manufacturer's recommendation before it is recoated. Exterior painting will not be allowed in dust laden air, during damp or threatening weather, or on moist or wet surfaces, or when the surface temperature is below 40 degrees F on a falling thermometer or under 50 degrees for catalyzed epoxy material; it will not be allowed in extreme heat or when metal is hot enough to cause the paint to blister and produce a porous film. Do not apply interior painting until the building is thoroughly dry. If the temperature in the interior of the building, in the opinion of the Engineer, is too low painting will be stopped until the building is heated. Proper ventilation and sufficient heat shall be maintained to permit the paint to dry. The building shall be maintained to be free from dust.
5. Remedial Work: Any paint found defective shall be removed. Touch-up and remedial painting shall be provided as directed and as required until completion and acceptance of final work. If damage to the painted surface is excessive, as determined by the Engineer, that item shall be rejected and shipped back, at Contractor's expense, to be properly recoated before it can be accepted.
6. Application: Each coat of paint shall be applied as a continuous film of uniform thickness, free of pinholes and blemishes, to the maximum extent practicable. Any thin spots or areas missed in the application shall be repainted and permitted to dry before the next coat is applied. An approved low voltage wet sponge "holiday" detector shall be used as directed by the Engineer. All paint shall be carefully applied to a smooth even coating without runs or sagging. Enamels shall be brushed with a smooth even flow. Each coat of paint shall be dry, not only on the surface, but throughout the thickness of the paint film, before the next coat is applied. Finished surfaces shall be uniform in gloss, finish, and color, and free from flash spots and brush marks. In all cases, the resultant paint film produced shall be satisfactory in all respects to the Engineer.
7. Thinning: If the paint material must be diluted for application by spray gun, the coating shall be built up to the same film thickness achieved with undiluted material (i.e., one gallon of paint as originally furnished must not cover a greater surface area when sprayed than when applied unthinned by brush). Where thinning is necessary, only the products of the manufacturer furnishing the paint shall be used for the particular purpose, and thinning shall be done with the manufacturer's knowledge, in accordance with printed instructions.

8. Thickness and Adhesion Testing: Dry film thickness of each coat shall be as specified herein. Dry film thickness will be checked by the Engineer or a representative with a magnetic gauge for ferrous metal in accordance with SSPC 2 or Tooke gauge destructive test for concrete. Film thickness of shop coats or other previously applied coating shall be checked by the Engineer or a representative and recorded before painting in order to determine thickness of field coats. Dry film thicknesses for concrete surfaces shall be determined by measuring with a wet-film gauge and by material consumption. Paint adhesion shall be tested by the peel method in accordance with ASTM D 3359.
  9. Inaccessible Items: Exposed members which will be inaccessible after erection shall be painted and cleaned prior to erection.
  10. Coverage: All surfaces to be painted shall be completely covered. When color on undercoats shows through the final coat of paint, surfaces shall be covered by additional coats until paint is of uniform color and appearance and coverage is complete.
  11. Safe Atmosphere: The Contractor shall provide sufficient temporary ventilation during painting operations in enclosed areas to remove moisture and solvents, and to keep the atmosphere safe from harmful or dangerous fumes and dust levels for personnel.
- E. Workmanship: Only skilled painters shall perform the work and specialists shall be employed where required. Finished surface shall not show brush marks or other irregularities. Top and bottom edges of doors shall be painted as required for the adjacent surfaces. Undercoats on hollow metal shall be thoroughly and uniformly sanded with No. 00 sandpaper, or equal abrasive, to remove all surface defects and provide a smooth, even surface.
- F. Mixing: All paints and coatings shall be mixed in accordance with the manufacturer's instructions on the printed label. The Contractor shall provide galvanized iron pans of sufficient size to contain all mixing pails and mix all paints and ingredients therein.
- G. Rates of Application: Paints shall be applied so as to give coverage per gallon not greater than that recommended by the manufacturer. Quantities of paint used for successive coats on the various parts of the work shall be recorded in a manner satisfactory to the Engineer.
- H. Touch-Up of Shop-Primed and Finished Items: Touch-up of any and all damaged portions and imperfections in shop-primed and finished items shall be accomplished using the same paint as used for the shop prime and finish. Surface shall be prepared prior to touch-up by wire brushing and sanding to remove rust, scale and loose paint.
- I. Aluminum and Incompatible Surfaces: Where aluminum surfaces come in contact with incompatible metals, lime, mortar, concrete or other masonry materials, one field coat of Group A paint as specified under Article 2.03 "Classification of Paints" in this Section shall be applied to the incompatible surfaces.
- J. Concealed Surfaces: All wall surfaces which will be concealed by equipment shall be painted before equipment installation.

### **3.3 ADJUSTING / PROTECTION / CLEANUP**

- A. The Contractor shall touch up and restore any finish damaged. Paint or other finishes spilled, splashed or splattered shall be removed from all surfaces using care so as not to mar any surface or item being cleaned.
  - 1. The Contractor shall rectify any failures or breakdowns, loosening of the paint or coatings through the guarantee period, regardless of the paint systems used. This will require removal of the entire coating where failure occurs and repainting with the coating system previously specified. Patching will not be allowed.

END OF SECTION

**SECTION ESCR 50.61 – SEWERS IN JACKED STEEL SLEEVES****50.61.1 INTENT**

This section describes construction of sewer carrier pipe in a jacked steel sleeves.

**50.61.2 DESCRIPTION****(A) GENERAL**

- (1) The sleeves and sewer carrier pipes must be constructed to the sizes, kinds, classes and wall thicknesses of pipe specified and in accordance with the details shown on the contract drawings. The construction of the sewers herein must be by means of pipe jacking a steel sleeve with the use of slurry microtunnel boring machine (MBTM) for excavation followed by the insertion of a sewer carrier pipe.

Microtunneling is defined as the trenchless installation of the pipe by pneumatically jacking the pipe behind a remotely controlled, steerable, laser-guided MTBM. MBTM must be capable of adequately and safely counter-balancing prevailing hydrostatic and earth loads at the face of excavation and remove the excavation spoil with the use of pressurized slurry system; no other type tunnel method will be permitted.

- (2) Dewatering of the ground around the tunnel shall not be permitted. Launch and receiving shafts shall be constructed of secant pile or other suitable support of excavation system that minimizes seepage into the shaft and minimizes any drawdown of the water table outside of the shaft.
- (3) It must be the Contractor's responsibility to choose the type of tunnel boring machine and its equipment and accessories to be used to complete the tunnel bore.

The Contractor must replace any equipment deemed necessary in order to complete the tunnel bore. This includes the mixed ground or soil cutter head and any other required equipment. No additional or separate payment will be made for any equipment replacement that is required to complete the tunnel bore.

**(B) GEOTECHNICAL CONDITIONS**

Geotechnical data provided by the City is for information purposes only. The Contractor must perform the Contractor's own geotechnical investigations and assessment to ensure that the type of tunnel boring machine (together with equipment and accessories) the Contractor chooses to use is capable of completing the tunnel bore through historic gill and very soft organic organic clay and remove all materials encountered (e.g. soil, boulders, timber pile, debris, etc.).

The Contractor must thoroughly investigate the geotechnical conditions of the strata through which the tunnel boring is to be accomplished. After performing this thorough investigation the Contractor must prepare a construction report in accordance with the NYC DEP Standard Sewer and Water Specifications Section 76.11 - Construction Report for the approval of the Engineer. (See Subsection 50.61.3 - Submittals, paragraph (1)).

**50.61.3 SUBMITTALS**

The Contractor must submit the following:

- (1) Before commencing any operations associated with the construction of sewers in jacked steel sleeves the Contractor must submit the construction report specified above. In

addition to the requirements specified in Section 76.11, the construction report must contain all investigative geotechnical information and determinations as to tunnel boring operation, and all means and methods of construction that will be required to complete the tunnel bore. The Construction Report must also state the Contractor's assumptions regarding the subsurface conditions to be encountered during shaft and microtunnel construction.

- (2) Details of the MTBM the Contractor chooses to use together with required equipment and accessories. Include the following:
  - (a) Machine specifications (including but not limited to equipment, accessories, means and methods of spoil removal) together with a letter from the microtunneling machine manufacturer stating that the selected machine together with equipment, accessories and means and methods of spoil removal is capable of progressing through the anticipated subsurface conditions, and capable of removing spoils effectively.
  - (b) Details of MTBM slurry system and soil separation methods including proposed slurry formulations and calculations of the system capacity to handle flows at all proposed distances and changes of elevations to and from the MTBM.
  - (c) Jacking system details (jacks and jacking frames), method of operation, thrust capacity and sleeve details. Describe method of control to prevent the maximum allowable jacking force from being exceeded.
  - (d) Description of lubrication mix equipment and procedure for lubricating the pipe during jacking operations, including estimated volume for the anticipated soils.
  - (e) Active Direction Control details and means of controlling line and grade.
  - (f) Method for supporting the MTBM and maintaining line and grade while excavating in the very soft soils present at this site.
- (3) Before commencing any operations associated with the construction of sewers in jacked steel sleeves the Contractor must submit a detailed description of the proposed method of installation including locations and dimensions of launching/receiving shafts, insertion procedures, design and method of bracing (including but not limited to type and location of spacers, and anti-floatation design) and all shop drawings required for review and approval by the Engineer. These submittals must include procedural details to allow the Engineer to evaluate the procedure to be used. All pertinent dimensions, material properties, and design calculations must be shown.
- (4) Estimated jacking force calculations and pipe material calculations must be prepared and submitted. It must be the sole responsibility of the Contractor to determine the maximum anticipated construction loads, including maximum jacking forces, Factor of Safety, and to ensure that the anticipated loads are implemented in the manufacturer's design of the pipe. These calculations must be submitted to the Engineer for review and approval, and must bear the signature and seal of a Licensed Professional Engineer, currently registered in the State of New York.
- (5) Prepare and submit a proposed contingency plan for potential situations that may occur during tunneling operations. This submittal must at a minimum address the following scenarios:
  - (a) The MTBM hits an obstruction.
  - (b) Cuttings do not settle/separate with the equipment on site.

- (c) The target laser is distorted by heat and/or humidity or has been knocked out of alignment. Describe which operational parameters will be observed/measured/recorded so that it can be determined if the above are occurring or have just occurred.
  - (d) The jacking pressures start to increase rapidly and there is reasonable concern for completing jacking operations to the receiving shaft.
  - (e) The MTBM “freezes” during jacking operations.
  - (f) Method for accessing the face of the MTBM from the receiving shaft if needed to remove an obstruction. Contractor to provide details for supporting the ground and maintaining a stable tunnel face without dewatering the ground or exceeding the allowable surface settlement along the tunnel alignment. Vertical rescue shafts are not permitted within FDR Drive.
- (6) Unless otherwise provided for in the contract documents, submit a proposed plan showing location of required geotechnical instrumentation and any other Contractor proposed instrumentation. Include product information indicating the instrumentation sizes, material types, specifications, installation procedures, location and other pertinent data. The instrumentation installation specialist performing the installation of the geotechnical instrumentation must have appropriate experience and expertise with installing the instrumentation and monitoring; proof of this experience must be included with this plan.
- (7) Shaft Excavation and Support submittal requirements in accordance with NYC DEP BWSO Standard Sewer and Water Main Specifications. Shaft Excavation and Support submittal, bearing the signature and seal of a Licensed Professional Engineer, currently registered in the State of New York, must include:
- (a) Detailed narrative outlining the construction sequence.
  - (b) Engineering calculations, assumptions, and methodologies for the design of the shaft excavation support system. The Contractor must design excavation support systems and working slabs to withstand earth and hydrostatic pressures, bottom heave, equipment loads, applicable traffic and construction loads, and other surcharge loads to allow the safe construction of the tunnel and associated structures without excessive movement or settlement of the ground, and to prevent damage to adjacent structures, streets, and utilities. Use lateral earth pressures consistent with ground conditions, soil properties (type, composition, compaction, moisture content, etc.), water table, etc., described in the contract documents and in accordance with NYC, AISC and ACI code provisions, as applicable. Each component of the shaft excavation and support system must be designed to safely support the maximum combination of loads and other conditions that may occur during construction. These submittals must consider all beginning, intermediate and final construction stages of shaft installation. The Contractor must also submit the Contractor’s groundwater control system.
  - (c) Break-out and Break-in plans indicating type of support installed to transfer loads and maintain excavation support, groundwater control, and stability of the excavation when a MTBM exits or enters a shaft. Contractor must utilize shaft launch and exit seals to prevent inflow of groundwater, slurry, lubrication and soil. Seals must be sized to accommodate microtunneling boring machine and jacking pipe, and must not impair the performance of the shaft excavation support system. Groundwater inflows at each seal must be less than one (1) gallon per minute, and total soil inflows at each seal must be less than two (2) cubic feet for the entire duration of the jacking operation. Seal

design/installation must incorporate localized ground improvement as necessary to meet these criteria.

(d) Microtunneling machine thrust block design and details for the launching shaft including calculations demonstrating that the ground behind the thrust block has adequate bearing capacity for the maximum anticipated loads developed by the main jacking system. Provide details for treating or reinforcing the ground behind the thrust block if necessary, to achieve adequate bearing capacity. The thrust block must be perpendicular to the proposed pipe alignment. The thrust block must be designed to support the maximum jacking pressure developed by the main jacking system.

Review of the Contractor's Shaft Excavation and Support submittal by the Engineer does not relieve the Contractor of the Contractor's responsibility to provide and maintain an adequate support system achieving the specified requirements.

- (8) Excess Materials Disposal Plan: Excess materials disposal plan must include treatment (as applicable), transportation methods and routes, disposal location details for excess excavated materials (soil, rock, etc.), and disposal methods for groundwater generated during construction of tunnel and shafts. Included in this plan must be estimated quantities for disposal of all excess excavated materials and groundwater.
- (9) Proposed insertion plan for grout fill of annular space between the sewer carrier pipe and steel sleeve. Grouting fill of annular space plan must include details of grout fill materials (including source), installation procedures, equipment utilized, grout fill quality control measures, and means of protecting new sewer facilities during grout fill placement including carrier pipe buoyance force calculations, bulkhead design and carrier pipe blocking details. Such method must be capable of filling all voids between the steel sleeve and the carrier pipe for the entire length, and must not be capable of damaging the sewer carrier pipe and its jointing, nor capable of damaging or misaligning the brace and support spacers installed to align and insulate the sewer carrier pipe, nor cause any leakage of grout to the outside soil area of the steel sleeve.
- (10) Experience qualifications for the Contractor/Subcontractor and key personnel performing the tunneling in accordance with Subsection 50.61.6.
- (11) Daily reports and records of grout placement including but limited to volumes placed, stationing of placement, injection locations, pressures, unit weight test results, time of placement, and designation of cylinder samples prepared that day.
- (12) Compressive strength test results from a certified testing laboratory.
- (13) Shop drawings must be submitted in accordance with all applicable provisions of Subsection 40.05.5 - Shop Drawings, as required. Design criteria must be submitted in accordance with all applicable requirements of Subsection 40.05.6 - Design Criteria, as required.
- (14) All the above must be submitted as a complete package. All designs must bear the signature and seal of a Licensed Professional Engineer, currently registered in the State of New York
- (15) No work associated with the construction of sewers in jacked steel sleeves must commence until the Contractor receives all required approved shop drawings from the Department of Design and Construction, Division of Infrastructure.
- (16) Upon the completion of microtunneling/pipe-jacking activities the Contractor will be required to submit a report that will include copies of all Daily Logs along with a description

of any unusual events or problems encountered during microtunneling/pipe-jacking operation. In addition, all numerical data must be entered into Excel Format. A copy of the Excel file must be submitted along with this report.

#### 50.61.4 MATERIALS

- (A) Ductile iron carrier pipe must comply with the requirements of Section 21.06 and must be Class 56 unless otherwise specified.
- (B) Steel Sleeves must have an outer diameter (O.D.) and must have a minimum sleeve thickness as shown on the contract drawings. The steel must conform to ASTM A134 (plates: ASTM A283, Grade C) API std. 5L, Grade B. The jacked steel sleeve must be designed to withstand jacking thrust as well as external loads (including but not limited to skin friction, friction due to weight of pipe, face pressure due to strata type, and face pressure required to counteract slurry pressure). A minimum factor of safety of 2.5 must be used for jacking thrusts. Hydrostatic tests will not be required for steel sleeves.

All connections between successive steel sleeve pipe lengths must be continuously butt-welded. Welds must be made in conformance with AWS D1.1. However, mechanical type T7 Permalok joint connections with a seal pass weld at each joint will be permitted in lieu of butt welded joints between successive steel sleeve pipe providing this joint can be shown to be capable of withstanding the installation loads and will not result in excessive deflection of the pipe.

- (C) Joints for ductile iron pipe must comply with the requirements of Subsection 21.06.5.
- (D) Grout utilized to fill the voids between the steel sleeve and the sewer carrier pipe must be Low Weight Cement Grout as described below:

##### Low Weight Cement Grout:

- (a) Grout must consist of neat Portland cement, water, Mearlcrete Foam Liquid concentrate and other materials as manufactured and recommended by the Aerix Industries or approved equal.
- (b) Portland cement must comply with the requirements of General Specification 11 - Concrete, as modified in Section 23.01, and must be Type II.
- (c) Mixing water must be a maximum of six (6) gallons per bag of cement (water/cement ratio is 0.53), and be potable, free from deleterious amounts of acid, alkali, salts, oils and organic materials.
- (d) Wet Density must be 95-lb/ft<sup>3</sup> maximum.  
Dry Density must be 90-lb/ft<sup>3</sup> maximum.  
Minimum 7-Day Compressive Strength must be 300-psi.  
Minimum 28-Day Compressive Strength must be 1,000-psi.
- (E) Grout utilized to fill the voids between the outside of the jacked sleeve and the soil/rock must be Pressure Grout as described below:

##### Pressure Grout:

- (a) Pressure grout must consist of neat Portland cement or it must be mixed in a proportion by volume of one (1) part Portland cement and one (1) part sand or it must be mixed by volume of one (1) part Portland cement to one and one-half (1-1/2) parts lime flour and one-fiftieth (1/50) part Interplast IV.

- (b) All parts must be mixed with clean fresh water to the desired consistency. In no case must more than eight (8) gallons of water be mixed per bag of cement.
  - (c) Shall have a minimum compressive 28-day strength of 500-psi.
  - (d) A set of three (3) pressure grout ports must be positioned 120 degrees apart on the steel sleeve and each set must be spaced apart 5 feet longitudinally within the steel sleeve.
- (F) Casing spacers, if selected for use by Contractor for supporting the carrier pipe within the jacked pipe, shall be Model SSI with EPDM skids by Advance Products and Systems, Inc., Style CCS by Cascade Waterworks Mfg. Co., Black Widow SS by Spider Mfg., or approved equal.

#### **50.61.5 METHODS**

##### **(A) GENERAL**

The Contractor must install launching and receiving shafts at the locations and in accordance with the requirements shown, specified, ordered or approved. Excavation support system for each shaft must be as shown, specified, ordered or approved. Shafts must be properly constructed and braced to withstand both external loads (soil, water, etc.), and internal jacking loads. The Contractor must furnish, install and remove to the extent required; thrust blocks or whatever provisions may be required in driving the sleeve forward. A jacking frame with integrated pipe guides or steel rails or beams embedded in concrete must be used in the launching shaft for placement and alignment of each piece of sleeve during installation procedures. Special care must be taken when setting the pipe guide rails to ensure correctness of the alignment, grade and stability. Jacking operations must not commence until the concrete thrust block has attained the required strength.

The steel sleeve must be jacked into position by the use of jacks of sufficient capacity to push the pipe and MTBM through the existing strata (soil and/or rock). Upon completion of the jacked section (launching shaft to receiving shaft) the Contractor must immediately pressure grout from the interior of the steel sleeve in conformance with Subsection 50.61.10.

The Contractor must follow the recommendations of the pipe manufacturer regarding the installation of the sewer carrier pipe. The recommended installation method used by the Contractor must be such that no damage will occur to the carrier pipe when it is inserted or during grouting operations.

The Contractor must install the sewer carrier pipe to the line and grade required within the steel sleeve, as shown on the Contract Drawings. Sewer carrier pipe must be properly braced and supported with spacers that are electrically insulated from the steel sleeve. The brace and support spacers must be installed and positioned in accordance with the manufacturer's recommendations and must not inhibit the flow of grout. The Contractor must submit design and method of bracing (including but not limited to type and location of spacers, and floatation design concerns) prior to installation of carrier pipe for approval by the Engineer. Proper precautions must be taken by the Contractor to prevent floatation or motion of the carrier pipe during the grouting operation.

Dewatering around the excavated shafts is not permitted. Groundwater infiltration in the excavation shall be prevented as much as practical. Dewatering activities must not impair the performance of the microtunneling equipment or process. The Contractor must meet all applicable requirements for groundwater treatment and disposal.

**(B) CONTROL OF LINE AND GRADE**

- (1) Lines and grades must conform to the requirements of Subsection 10.09 and as amended herein. The Contractor must establish the baselines and benchmarks in accordance with this contract.
- (2) The Contractor must submit to the Engineer copies of field notes used to establish all lines and grades. However, the Contractor remains fully responsible for the accuracy of the Contractor's work. All survey work must be performed under the direction of a New York State Licensed Surveyor and all submissions must be sealed and signed by the Licensed Surveyor.
- (3) If there is any movement during construction, it must be the Contractor's responsibility to detect and correct it as required. When the excavation is off-line or grade, the Contractor must return to the design line and/or grade over the remaining portion of the drive at a rate of no more than one (1) inch per twenty-five (25) feet.
- (4) The microtunnel excavation and run of steel sleeve must be controlled in such a manner that the deviation of the steel sleeve from grade is not more than one (1) inch nor from line more than two (2) inches. The Contractor must make note of all possible encumbrances and structures in the line of work, which may restrict clearances.
- (5) Record the exact position of the MTBM at least once per shift to ensure the alignment is within the specified tolerances. Make the survey at the MTBM to allow immediate correction of misalignment before allowable tolerances are exceeded. The tunnel guidance system may be used; however, select times to measure and record this information after the air temperatures have stabilized throughout the pipe to ensure accurate readings.

**(C) EQUIPMENT**

- (1) The microtunnel boring machine (MTBM) must be a pressurized face, slurry machine manufactured by a company that specializes in the design and fabrication of this type of equipment and has at least ten (10) years of experience. The MTBM must be capable of controlling the volume of excavated material removed from the excavation face at all times. In addition, the MTBM machine must:
  - (a) Be capable of maintaining the excavation face under wet, dry and adverse soil conditions and prevent loss of ground through the machine. The MTBM must provide satisfactory support of the excavation face at all times.
  - (b) Be articulated to allow steering in the ground conditions encountered.
  - (c) Incorporate a suitable seal between the microtunnel boring machine and the leading pipe.
  - (d) Provide protection to the electric and hydraulic motors and operating controls against water damage.
  - (e) Use bi-directional drive on the cutter-head wheel, and/or adjustable fins or other means, to control roll.
  - (f) Be capable of exerting a controllable pressure against the face, during both excavation and shutdown periods, to support the excavation face, prevent

groundwater inflows, prevent running and flowing soils, and prevent loss of ground.

- (g) Be capable of controlling the volume of excavated material removed at the excavation face and coordinating the machine advance rate to avoid over excavation. The MTBM must include an automated spoil transportation slurry system that balances the groundwater and face pressures by the use of a slurry pressure balance system. System must be capable of adjustment required to maintain stability of the excavation face for the subsurface conditions to be encountered and must monitor and continuously balance the groundwater and face pressure to prevent loss of slurry or uncontrolled groundwater inflow.
  - (h) Be fully steerable both horizontally and vertically.
  - (i) Be capable of injecting lubricant between sleeve and the ground to reduce friction between sleeve and ground. The Contractor to determine the need for lubrication of the sleeve pipe exterior during tunnel excavation and jacking pipe installation. Lubrication equipment shall be capable of operating continuously.
- (2) Guidance of the microtunnel boring machine must be through a remote console by means of active direction control, in or adjacent to the launching shaft. At a minimum, the thrust force, rate of advance, distance along heading, deviation from line and deviation from grade must be monitored and displayed on the remote console.
  - (3) Operate systems following manufacturer's instructions and recommendations. Copies of operations manuals shall be made available to the Engineer and operational personnel on site.
  - (4) Test full system in accordance with manufacturer's recommendations on completion of set-up and before commencing tunneling operations. Record the test results and provide a copy of the test report to the Engineer.
  - (5) Before commencement of the drive, demonstrate to the Engineer that required set up procedures and system checks are completed and the required materials are at hand to commence the drive.

(D) SAFETY

The Contractor must carry out the Contractor's operations in strict accordance with OSHA, NYC and the Manufacturer's safety requirements.

The Contractor must provide adequate ventilation in the shafts at all times. Air quality in the shafts must be tested immediately prior to each change in shift. Air quality in the jacked pipe must be tested prior to personnel entry and periodically thereafter as required by law.

The Contractor must provide adequate lighting in the tunnel shafts and around equipment being utilized. Power and lighting circuits must be separated and thoroughly insulated.

(E) GEOTECHNICAL INSTRUMENTATION

The Contractor must install, monitor, and provide reporting for geotechnical instrumentation at the locations and in accordance with the requirements shown, specified, ordered or approved.

### **50.61.6 QUALIFICATIONS**

The microtunneling/pipe-jacking Contractor or subcontractor performing the work required under this contract must be experienced in work of this nature and must have successfully completed a minimum of two (2) tunneling projects in the last five (5) years using pressurized face microtunneling/pipe-jacking equipment with a closed face tunnel shield and positive controlled face pressure. One of the successfully completed projects must have been in similar ground conditions (strata type and hydrostatic head), as to those anticipated on this contract. The Contractor must submit a description of such projects, which must include at a minimum, a listing of the locations, dates of projects, owners, pipe types and sizes, type of equipment utilized, ground conditions, drive lengths, maximum line and grade deviations and other information relevant to the issue of the successful completion of such projects.

The microtunneling/pipe-jacking project superintendent must have at least five (5) years of recent previous experience in tunneling using the proposed MTBM equipment. Experience shall be in a minimum of five (5) previous tunneling projects of similar size, drive lengths and ground conditions with at least two (2) projects with a minimum size of 48-inch diameter. Tunneling operations shall be performed under the direction of tunneling supervisor who shall be in responsible charge throughout the tunneling operation.

The microtunneling/pipe-jacking machine operator(s) must be experienced in tunneling with prior knowledge and ability to properly operate the MTBM systems being employed. All operators shall have minimum of five (5) years of experience performing tunneling of similar size, drive lengths and ground conditions with at least two (2) projects with a minimum 48-inch diameter.

Prior to the start of work the Contractor will be required to submit the name and resume of the microtunneling/pipe-jacking subcontractor for approval.

### **50.61.7 REPORTING REQUIREMENTS**

The Contractor must maintain a Daily Log of all microtunneling/pipe-jacking activities. A copy of this log must be submitted to the Engineer on a daily basis. The log, at a minimum, must record the following in relationship to the advancement rate: (Advancement rate utilized for recording must be in one (1) foot intervals, unless otherwise directed by the Engineer.)

- (1) Date and Time compared to the advancement rate.
- (2) Total Jacking Pressures compared to the advancement rate, including all peak pressures.
- (3) Cutter Head Torque compared to the advancement rate.
- (4) Position of the MTBM with respect to the design line and grade.
- (5) Amounts, times and locations of lubrication.
- (6) Unusual events or problems encountered.
- (7) Upon completion of a bore (launching shaft to receiving shaft) the locations, pressures and amounts of grout placed to fill all voids between the outside of the jacked sleeve and the soil/rock.

### **50.61.8 CLEANING**

Prior to the insertion of the carrier pipe the Contractor will be required to remove and properly dispose of all sediments and deposits from within the steel sleeve.

The Contractor must furnish all water and pumping equipment necessary for the cleaning operation. The sleeve must be clean and entirely free from projections that might interfere with the insertion of the carrier pipe through it.

#### **50.61.9 INSPECTION AND TESTING**

Immediately after the completion of the cleaning operation, the Engineer will conduct (unless waived in writing by the Engineer) a visual inspection of the steel sleeve for any defect or leakage so those repairs, if necessary, can be made. No carrier pipe must be installed until authorized by the Engineer.

The Contractor must provide the Engineer, without charge, all facilities and assistance necessary to perform this visual inspection of the steel sleeve, and for obtaining any information the Engineer requires in order to access the progress and manner of the work performed.

The entire installation procedure must be rigorously inspected as herein specified, but inspection must not relieve the Contractor of responsibility to furnish material and perform work in accordance with the specifications. If at any time it is found that the pipe insertion procedure is not in accordance with these specifications, the pipe so installed will be subject to rejection.

After the sewer carrier pipe has been inserted into the steel sleeve and prior to grouting between the steel sleeve and the carrier pipe, the Contractor must test for leakage the sewer carrier pipe in accordance with Section 40.11 – Leakage And Leakage Tests For Sewer Lines.

Leakage or infiltration in excess of the specified amount must be located and stopped and all visible leaks must be stopped to the satisfaction of the Engineer, all at the Contractor's own expense.

The Contractor shall perform the following tests on specimens of the grout fill material placed outside of the jacking pipe and on specimens of low weight cement grout placed around the carrier pipe:

1. Unit Weight: Unit weight (wet density) tests shall be made from the first batch mixed each day, after a change in mix design, every 30 minutes during pumping, and from each batch of grout from which compression test cylinders are made.
2. Compressive strength test cylinders shall be made in the field, cured and stored in the laboratory, and tested in accordance with ASTM C495. One set of six (6) test cylinders (3 inches by 6 inches) shall be made for each shift when grout is placed. Each set of compressive strength test cylinders shall be marked or tagged with the date and time of day the cylinders were made, the location in the work where the grout represented by the cylinder was placed, batch number and unit weight (wet density). One additional set of test cylinders shall be made from each additional 25 cubic yards, or major fraction thereof, placed in any one shift. Two cylinders from each set shall be tested at an age of 7 days, 28 days and 56 days.

#### **50.61.10 GROUTING**

##### **(A) GROUT FILL OUTSIDE JACKED SLEEVE**

Upon completion of a jacked section (launching shaft to receiving shaft) the Contractor must immediately pressure grout from the interior of the steel sleeve. Pressure grout must be placed under pressure to fill all annular voids between the outside of the jacked sleeve and the soil. Pressure grouting must not cause heave or damage to the surface. The pressure must not exceed 8 psi.

Systems of standard pipe, fittings, hose and special grouting outlets embedded in the sleeve must be provided by the Contractor. Care must be taken to insure that parts of the system are maintained free from dirt. Cement grout must be forced under pressure into the grouting connections. Grouting must start at the lowest connections and must proceed until grout begins to flow from upper connections. Connections must then be made to those holes and the operation continued to completion. During the grouting process, each grout plug must be removed and the grout-mixing machine must be connected to the hole by means of a hose and nipple cut to the same thread as the screw plug.

The sleeve must have grout holes equipped with pipe half couplings. The two (2) inch standard pipe half couplings welded into the holes in the sleeve must be provided with threaded cast iron plugs. Plugs must be no less than five-eighths (5/8) inch in diameter.

Apparatus for mixing and placing grout must be capable of mixing effectively and stirring the grout and then forcing it into the grout connections in a continuous uninterrupted flow. When grouting is completed the grout plugs in each section must be screwed into the grout holes for their full length and tightened to provide a watertight seal.

The Contractor must take all necessary precautions to prevent grout from escaping and setting on inner surface of steel sleeve. The Contractor must remove such grout and restore the surface to its original condition.

The Contractor must provide the Engineer all facilities necessary for the inspection of pressure grouting operation to ensure complete filling of the annular void. These facilities must include removing of grout plugs as required for inspection behind the steel sleeve. Any voids found must be grouted at once as directed by the Engineer.

The Contractor must keep and furnish to the Engineer an accurate log of grouting operations, pressures, rates of pumping, amount of cement for each change in water/cement ratio and such other data as are required by the Engineer. The log must be supplied by the Contractor to the Engineer or the Engineer's representative after each shift.

After completion of pressure grouting the sewer carrier pipe must be installed to the line and grade required within the steel sleeve.

(B) GROUT FILL AROUND CARRIER PIPE

After the carrier pipe is satisfactorily installed and passes inspection and testing, the carrier pipe must be secured to the steel sleeve at each end with a 12-inch thick minimum concrete plug. Unless otherwise shown on the contract drawings, the Contractor must submit along with the required submittal in Subsection 50.61.3 the design of these concrete plugs. The design of these concrete plugs must incorporate a method for securing the concrete plugs to the ends of the steel sleeve and carrier pipe so as to be capable of withstanding the grouting pressures without slippage or blow-out at the ends. The concrete plugs design must include an air relief port located at the highest (top) point of the plug.

After approval by the Engineer the entire annular space between the inside of the steel sleeve and the outside of the sewer carrier pipe must be filled with Low Weight Cement Grout in one continuous uninterrupted operation to prevent occurrence of any voids between the steel sleeve and the carrier pipe.

The grout fill must be placed by pneumatic or pumping equipment under a pressure between to ensure that the entire void space has been evenly and completely filled. The pressure must be continuously monitored and care must be taken to avoid damaging the

carrier pipe. Equipment and methods of placement of the grout fill will be subject to review by the Engineer. Mixing or pumping equipment that may damage the foam must not be used.

The volume of the grout being placed must be monitored and recorded. A comparison between the theoretical volume and the actual volume of grout placed must be done and any discrepancies must be brought to the attention of the Engineer.

The Contractor must also fill the holes used to place the grout.

#### **50.61.12 MEASUREMENT**

The quantity of sewer in jacked steel sleeve to be measured for payment must be the number of linear feet of each size, kind, type, class and wall thickness of sewer carrier pipe together with jacked steel sleeve incorporated in the work, complete, as shown, specified or required, measured horizontally along the center line of sewer. Measurement must be from inside face of launching shaft to inside face of receiving shaft.

#### **50.61.13 PRICE TO COVER**

The contract price for "SEWERS IN JACKED STEEL SLEEVES" must be the unit price bid per linear foot for each size, kind, class and wall thickness of sewer carrier pipe together with jacked steel sleeve and must cover the cost of all labor, materials, plant, equipment, samples, tests and insurance required and necessary to construct the sewers in jacked steel sleeves to the sizes and to the lines and grades shown, including the earth removal and disposal of all materials of whatever nature encountered; additional subsurface investigations; geotechnical instrumentation and related monitoring and reporting; all sheeting and bracing; pumping; fluming; bridging; connections; maintaining flow in sewers; backfilling; etc.); launching and receiving shafts, complete (including temporary excavation supports, groundwater control, thrust block, jacking frame, launch and exit seals, etc.); installation of steel sleeves; grouting required to fill voids between the outside of the jacked steel sleeve and the soil/rock; cleaning of steel sleeves; application of protective coating and top coating to interior surfaces of concrete carrier pipe; preparation, submittal and approval of all required shop drawings and designs; obtaining of all necessary permits; and furnishing and installing all other items necessary to complete this work and do all work incidental thereto, all in accordance with the contract drawings, specifications and standards and as directed by the Engineer.

In addition, included in the price hereunder must be the cost of all labor and materials necessary to remove all specified and ordered existing sewers, manholes, structures and appurtenances that may be in the launching and receiving shafts and in the line of the work and to do all the work incidental thereto, all in accordance with Subsections 10.13 and 10.28 of the specifications and as directed by the Engineer.

Payment will be made under:

**(NO TEXT ON THIS PAGE)**

## **SECTION ESCR 4.25 RECOVERY WELL INSTALLATION**

### **4.25.1 INTENT.**

This document defines the requirements for the installation of Non-Aqueous Phase Liquid (NAPL) recovery wells as part of the recovery well network included in the New York State Department of Environmental Conservation (NYSDEC)-approved Mitigation Work Plan (MWP) for Manufactured Gas Plant (MGP)-Related NAPL Contamination. The Engineer, in consultation with NYSDEC, will determine the need for the subsequent well installations beyond the initial recovery wells, which are shown on the Drawings. The Contractor is responsible for the installation of all recovery wells as required by NYSDEC in compliance with NYSDEC-approved MWP for MGP-Related NAPL Contamination.

### **4.25.2 RELATED DOCUMENTS.**

- (A) Drawings and general provisions of the Contract apply to this Section.
- (B) Related Documents
  - (1) East Side Coastal Resiliency: Mitigation Work Plan for MGP-Related NAPL Contamination [and associated MGP Waste Management Plan (WMP) and Health and Safety Plan (HASP)], prepared by AKRF under the Hazen and Sawyer / AKRF JV.
  - (2) East Side Coastal Resiliency: Remedial Action Plan (RAP) [and associated Construction HASP (CHASP), prepared by AKRF under the Hazen and Sawyer / AKRF JV.
  - (3) East Side Coastal Resiliency: Supplemental Subsurface Investigation Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF JV.
  - (4) East Side Coastal Resiliency: Environmental Subsurface Investigation Report for Parallel Conveyance & Isolation Gates, Borough of Manhattan, New York, prepared by AKRF under the AKRF / KSE JV.
  - (5) East Side Coastal Resiliency: Supplemental Subsurface Investigation Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF JV.
  - (6) East Side Coastal Resiliency Project Area One: Subsurface Exploration Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF JV.
  - (7) East Side Coastal Resiliency Project Area Two: Subsurface Exploration Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF JV.
  - (8) Remedial Investigation Report, Operable Unit 2 (OU2) – Former East 21<sup>st</sup> Street Works – Site # V00536, New York, New York, AECOM.
  - (9) Remedial Investigation Report, Stuyvesant Town Former Manufactured Gas Plant Sites, VCA Index D2—0003-02-08, AECOM.
  - (10) Remedial Investigation Report for Operable Unit 2 – East 11<sup>th</sup> Street Works Site – NYSDEC Site No. V00534, New York, New York, ARCADIS.

### **4.25.3 DESCRIPTION.**

- (A) The Contractor will comply with all requirements of the Contract Documents. No work under this section will be performed without the supervision of the Engineer.
- (B) Installation of all recovery wells will be performed and paid under this section.

**4.25.4 SUBMITTALS.****(A) INITIAL SUBMITTALS**

- (1) The Contractor will obtain all applicable permits before commencing any work and provide them to the Engineer.
- (2) The Contractor will prepare a site Health and Safety Plan (HASP). All Contractor site personnel will be required to read and sign the HASP.
- (3) The Contractor will submit a Recovery Well Installation Plan for review and approval by the Engineer in accordance with this section 30 days prior to the start of work. The Plan must include:
  - (a) Statement of Qualifications. The Statement should provide sufficient data and information to demonstrate that the entity performing the work is fully experienced in environmental drilling operations.
  - (b) Lists of all materials and equipment proposed for the work. List will include all materials for the construction of the recovery wells, protective clothing/equipment, drilling equipment/rigs, and drums. The Contractor will submit materials data sheets for all materials for which such data sheets are available. Submit specification sheets for drill equipment/rigs.
  - (c) A copy of the certificate of license that the entity performing the drilling work is a licensed drilling contractor in the State of New York.
  - (d) The name, address, and applicable permits of the proposed disposal/recycling facility(s) for disposal of drilling cuttings and fluids.
  - (e) Disposal Facility disposal characterization sampling requirements, including, but not limited to: number of samples, parameters, type of analyses and methods of sampling and analysis.
  - (f) Names, addresses, and 6 New York Codes, Rules and Regulations (NYCRR) Part 364 Permits of all transporters.
  - (g) Proof of permit, license or authorization to transport waste in all states through which waste will be transported.
  - (h) All local, state, and federal permits required for the transport and disposal of all waste resulting from the work of this section.
  - (i) Equipment decontamination procedures and setup.
  - (j) Material Safety Data Sheets for any products proposed for use on site.
  - (k) Spill prevention and response procedures.

**(B) DURING WORK SUBMITTALS**

- (1) Submit documentation of final satisfactory disposal (i.e., manifests, weight tickets) within 30 days of disposal in accordance with the Recovery Well Installation Plan.

**(C) POST PROJECT/CONTRACT CLOSEOUT SUBMITTALS**

- (1) Compilation of all completed and signed waste shipment record forms, bills of lading, manifests, and disposal receipts pertaining to this work.
- (2) As-Built Drawings: Provide as-built drawings giving actual locations, construction details, and depths for each of the installed recovery wells.

**4.25.5 GENERAL REQUIREMENTS.**

- (A) All work must be accomplished in accordance with Federal, State, and local requirements and accepted safety standards. Before initiating the work, consult applicable regulatory and permit requirements with the appropriate government agencies. Contractor is responsible to advise the Engineer or his/her designated representative of any conflict between applicable regulatory requirements and this specification.
- (B) Recovery well installation work cannot commence until the cutoff wall and flood wall installation is complete for the area in closest proximity to an individual proposed recovery well. If a recovery well is proposed in an area where re-grading and/or material import for increasing elevation is proposed, the recovery well installation work cannot commence until the regrading and/or material import work have been completed.
- (C) The Contractor will obtain all applicable permits before commencing any work.
- (D) The Contractor will call for utility mark outs from the New York City/Long Island One Call Center prior to the commencement of work. If a proposed recovery well location is in conflict with utilities, subsurface structures, or other features, the Engineer will determine the location of the needed offset in coordination with the Contractor. The Contractor is responsible to protect both marked and unmarked existing utilities and structures during the work. Private utility mark-outs and/or pre-clearing borings utilizing soft-dig technologies may also be conducted as deemed necessary by the Contractor.
- (E) Drilling equipment is expected to be decontaminated prior to arrival at the Site and also after each boring and/or recovery well installation. Potential additional decontamination may be requested at the discretion of the Engineer.
- (F) The City reserves the right to inspect all work performed under this section. In addition, the Engineer reserves the right to reject all work that does not comply with the terms of this section. The City will not be held accountable for any costs associated with the rejection and repair or replacement of work not performed in accordance with this section. The Engineer must approve any deviations to this section in writing. The work, as defined by this section, will be completed in full by the Contractor within the mutually agreed upon schedule.

**4.25.6 SPECIAL REQUIREMENTS.**

- (A) The Contractor will attend a kick-off meeting with the Engineer prior to the onset of this work.
- (B) Personnel may be exposed to MGP hydrocarbon liquids, vapors, or wastes during this work that may require specialized training and the use of personal protective equipment (PPE).
- (C) MGP Hydrocarbon Substances: Personnel working on-site will be made aware of appropriate health precautions. Symptoms of intoxication may result when high concentrations of MGP hydrocarbon vapors are inhaled. The following health precautions are suggested:
  - (1) Minimize the chance of inhaling MGP hydrocarbon vapors.
  - (2) Keep MGP liquids away from eyes, skin, and mouth. They are harmful if ingested.

- (3) Use soap and water, or waterless hand cleaner, to remove any MGP product or associated coal tar from the skin. Do not use gasoline or similar solvent to remove oil or grease from the skin.
- (4) Avoid using hydrocarbon-soaked leather goods.
- (5) All disposable PPE (i.e., gloves, masks, boot covers, coveralls, caps, etc.) will be disposed of off-site on a daily basis by the Contractor. If heavily soiled, this material should be drummed and properly disposed of at a facility licensed to handle hydrocarbon-contaminated materials.
- (6) Keep working area clean and well ventilated.
- (7) Spills/contamination will be reported to the Engineer immediately. The Engineer will notify the appropriate regulatory agency(s) for any spill reporting.
- (8) Clean up spills promptly. The Contractor will be equipped with oil sorbent materials. These materials will be drummed or otherwise properly contained and disposed of at a facility licensed to handle hydrocarbon-contaminated materials.
- (9) The health and safety of the Contractor's employees and subcontractors to the Contractor is the sole responsibility of the Contractor.

#### **4.25.7 AUTHORITY TO STOP WORK.**

- (A) Causes for suspension/stopping of work may be at any time if a determination by the Engineer is made that conditions are not within those set within this section, applicable regulations, and/or the RAP, MGP WMP, or associated HASP/CHASP. The stoppage of work will continue until conditions have been corrected to the satisfaction of the Engineer. Standby time taken to resolve any problems will be at no additional expense to The City.

#### **4.25.8 PREPARATION.**

##### **(A) SITE SECURITY**

- (1) The perimeter of the immediate work area will be secured with fencing or equivalent equipment to secure the site and prevent entry by non-site personnel.
- (2) The Engineer will inspect the security measures prior to the start of work and any requested modifications will be made in a timely manner.
- (3) Exits/entrances to the active work area or site perimeter must be secured with a locking gate, and all gates must be locked and secured during non-business hours.

##### **(B) EROSION AND SEDIMENT CONTROLS**

- (1) Best management practices related to erosion and sediment controls must be implemented. The control measures may include, but not be limited to procedures for perimeter site controls, stabilized construction pads at each construction entrance, equipment decontamination, and dust suppression, as appropriate.
- (2) The Engineer will conduct routine inspections and any requested maintenance, repairs, or modifications will be made in a timely manner.

(C) ODOR AND VAPOR MITIGATION

- (1) As necessary, and as directed by the Engineer, the Contractor will implement odor and vapor mitigation measures to ensure odor and vapors are migrating outside the work zone.

**4.25.9 MATERIALS.**

- (A) The Contractor will supply all labor, materials, equipment, services, insurance, and incidentals necessary or required to perform the work in accordance with applicable governmental regulations and this section.

(B) EQUIPMENT

- (1) Equipment, drill rigs, storage containers, and water tanks brought on-site will be clean and decontaminated prior to entry to the Site.
- (2) Storage containers utilized for the storage and/or transport of contaminated materials will be structurally sound and tight to prevent leakage or spillage of materials. United States Department of Transportation (DOT)-approved containers and drums will be provided for storage, transportation, and disposal of solid and liquid wastes associated with the management of potentially contaminated materials prior to and following characterization of waste.
- (3) Drilling operations will be performed utilizing roto-sonic drill rigs.

(C) WATER

- (1) Water used for decontamination or other purposes may be obtained from any clean source. The Contractor will procure any permits required.
- (2) Water generated from equipment decontamination and well development must be containerized in 55-gallon drums for disposal off-site in accordance with all local, state, and federal regulations. Owner and other Contractors to coordinate disposal.

(D) WELL MATERIALS

- (1) All materials and equipment to be furnished under this section will be new and of the latest standard products as advertised in printed catalogs by reputable manufacturers. All recovery wells will be constructed of a 6-inch diameter solid stainless-steel riser, 0.020-inch slotted stainless steel screen, and a 5-foot solid stainless-steel sump at the base. The pipe will be manufactured in strict compliance with ASTM A181/A181M. The recovery wells will be finished at the surface with labeled steel manhole covers and apron.

**4.25.10 METHODS.**

- (A) Verification of Conditions

- (B) Contractor and, if applicable, Contractor's subcontractor for waste disposal, will be held to have field-verified the types and quantity of wastes to be removed and will have become familiar with all variable field conditions existing at the site before the submission of bid(s) for the Contract work.

- (C) Contractor will notify the Engineer 30 days in advance of work associated with this section.

(D) PROTECTION OF EXISTING FACILITIES AND STRUCTURE

- (1) The Contractor will notify the Underground Utilities Call Center a minimum of three (3) days before any intrusive activities.
- (2) Limited access is available to all drilling locations. Contractor is responsible for reviewing work areas and providing equipment to accomplish the work.
- (3) In the event that subsurface work at any given drilling location must be resumed during a subsequent work shift, the Contractor will temporarily cover the subsurface penetration in a manner that eliminates tripping hazards and also cordon off the area to eliminate all other safety hazards.
- (4) Contractor will maintain the Site in a manner that eliminates tracking of soil off-site or to portions of the Site that are outside of the designated work areas.
- (5) The Contractor will take precautions to ensure that project operations do not cause interference with nearby vehicular and pedestrian traffic and are protective of the on-site workers and visitors, occupants/users of the area, and the general public. Traffic barriers, signs, or similar warnings may be required to control traffic flow in the work area. If Contractor's operations cause damage, harm, upset, or similar impact to roads or private/public property, the Contractor will remedy such impact to the satisfaction of the Engineer and at no additional cost to The City.

(E) PERMITS

- (1) The Contractor will acquire all permits and approvals necessary to perform the work, including, but not limited to, NYC Department of Buildings (DOB), NYC Department of Parks and Recreation, and NYC DOT. The Contractor will acquire all permits to complete the work, including any other permits not specified herein that may be required by federal, state, or local agencies.

(F) The Contractor will perform odor, dust, and vapor mitigation measures at the direction of the Engineer. The Engineer will conduct air monitoring in accordance with the RAP (which includes a CHASP) and MGP WMP in work zones and surrounding areas.

(G) All drilling work will be performed using two rotosonic drill rigs and crews working concurrently unless otherwise approved by the Engineer.

(H) SOIL BORING ADVANCEMENT

- (1) Prior to installation of each recovery well, a soil boring will be advanced in each location 10 feet deeper than the deepest known depth of NAPL as directed by the Engineer, typically to an elevation of -46 (North American Vertical Datum of 1988), which is no more than 70 feet below final design grade. Based on the observations from the Engineer of the subsurface NAPL contamination, the Engineer will prescribe the recovery well construction depth and the screen interval.
  - a. Soil borings will be advanced using a rotosonic drill rig to obtain high-quality core samples.
  - b. At each proposed recovery well location, continuous soil cores will be collected in 5-foot long, 4-inch diameter dedicated plastic bags/sleeves.

- c. Soil cores will be inspected by the Engineer for evidence of contamination. The Engineer will also prepare a log of the subsurface geology observed in the soil cores.

(I) RECOVERY WELL INSTALLATION

- (1) Recovery wells will be installed using a rotosonic drill rig and constructed as shown on the **Drawing RW0001-00 titled "Recovery Well Details and Notes"**.
- (2) All recovery wells will be constructed of a 6-inch diameter solid stainless-steel riser, up to 20 feet 0.020-inch slotted stainless steel screen sections, and a 5-foot solid stainless-steel sump at the base within a 10-inch diameter borehole. The riser/screen pipe will be manufactured in strict compliance with ASTM A181/A181M.
- (3) The annular space of the recovery wells will include:
  - a. 4-foot thick interval of bentonite grout at the base,
  - b. Followed by a filter pack constructed of No. 2 silica sand, which will be constructed to 1-foot above the top of the screen [the screen interval will be determined by the Engineer based on the soil boring observations referenced in **Subsection 4.25.10(H)**]; Followed by a 2-foot thick layer of bentonite seal;
  - c. Followed by a layer of bentonite grout installed to 2 feet below the ground surface;
  - d. The remaining 2-foot space will be filled with a layer of concrete to the ground surface for construction of the concrete apron referenced in **Subsection 4.25.10(I)(5)**.
- (4) Each recovery well will be finished with a minimum 10-inch diameter flush-mount steel well box.
- (5) Each flush-mount steel well box surrounded by a 3-foot square by 6-inch thick reinforced concrete apron.
- (6) Each recovery well will be physically labeled with fixed identification tags in the field to facilitate future identification and monitoring of individual wells.
- (7) Recovery wells located in grass lawns will have the concrete apron be painted green or dyed with green pigment in an effort to minimize disturbing the appearance of the grass lawn.
- (8) Each recovery well flush-mount steel well box will be labeled with a black triangle with a white base and clearly labeling stating "Monitoring Well – Do Not Fill".

(J) WELL DEVELOPMENT

- (1) Immediately following installation, each recovery well will be developed via pumping and surging to remove any accumulated fines and establish a hydraulic connection with the surrounding aquifer.
- (2) Well development will be conducted by the Contractor using a submersible pump.

- (3) The pump will be used to surge the well during development. If necessary, clean water can be introduced to the well at the screened interval for the first 10 minutes of development. Following completion of development, purged water will be containerized in 55-gallon drums for off-site disposal.
  - (4) The Engineer will observe development efforts and will field screen purged water every 5 minutes using a photoionization detector and turbidity meter. Well development will be terminated after turbidity readings remain below 50 nephthelometric units (NTU) for three consecutive readings. In the event that turbidity readings do not decrease below 50 NTU, well development will be terminated after 45 minutes of surging and development. In the event that limited water column recharge is noted, the well will be allowed to recharge and will be pumped dry three times prior to termination of the well development efforts.
  - (5) If NAPL is observed from the purge water, turbidity readings would be terminated, and the recovery well will be pumped till NAPL is no longer recoverable, as determined by the Engineer.
- (J) SURVEYING OF RECOVERY WELLS
- (1) Within 30 days after installation, the Contractor will have each recovery well surveyed for the horizontal and vertical locations. The vertical locations will include elevations for top of riser casing, ground surface, and manhole to an accuracy of 0.01 feet.
- (K) DISPOSAL OF INVESTIGATION DERIVED WASTE
- (1) The management drill cuttings and fluids will be performed in accordance with **Section 8.01**.
  - (2) The wastes generated by drilling activities will be containerized in DOT-approved, 55-gallon drums with all appropriate labels and maintained in a designated drum staging area determined by the Engineer, segregated as groundwater and soil, where MGP contaminated soil and groundwater are further segregated (as determined by the Engineer) to the extent feasible. DOT-approved 55-gallon drums will be contained within a locking spill containment pallet or secured in another manner approved by the Engineer.
  - (3) Disposable sampling equipment, including, spoons, gloves, bags, paper towels, etc., that have come in contact with contaminated environmental media will be double-bagged and disposed as municipal trash in a facility trash dumpster as non-hazardous trash.
  - (4) Decontamination fluids will be containerized in properly labeled DOT-approved 55-gallon drums for future off-site disposal at a permitted facility. Fluids that contain sheens and NAPL will be containerized separately, as determined by the Engineer.
  - (5) The Contractor will perform any required waste classification sampling and analysis of the removed materials.
  - (6) Other debris (i.e. concrete, asphalt) will be stockpiled as directed by the Engineer.
- (L) SITE RESTORATION

- (1) The Contractor will provide all labor, material, and equipment to perform all drilling operations, backfilling boreholes and surface restoration.
- (2) The Contractor will be responsible for maintaining any utilities encountered during drilling operations. Damages to any utilities caused by the work performed under this section will be repaired by the Contractor at no expense to The City.
- (3) All work will be completed at-grade with concrete patching and permanent structures (e.g., wells with protective manholes) sealed in place with concrete.
- (4) In the event that subsurface work at any given drilling location must be resumed during a subsequent work shift, the Contractor will temporarily cover the subsurface penetration in a manner that eliminates tripping hazards and also cordon off the area to eliminate all other safety hazards.

(M) WARRANTY OF RECOVERY WELLS

- (1) The Contractor is responsible to perform any necessary repairs as determined by the Engineer to the recovery wells for a period of 2 years following the installation of the recovery well. The repairs may consist of, but not limited to, re-patching the recovery well, decommissioning failed/collapsed recovery wells and installing a replacement recovery well, and redevelopment of poorly performing wells.

(N) METHOD OF MEASUREMENT

- (1) Quantities of recovery wells will be measured as fully completed recovery wells in accordance with this section.
- (2) Quantities of investigation derived waste, as per Subsection 4.25.10 L, will be measure in 55-gallon drums and determined by finalized disposal manifests from the receiving facility.

(O) PRICE TO COVER

- (1) The unit bid price bid per quantity for Item ESCR-4.25 RW60 will include the cost of furnishing all labor, materials, equipment, plan, insurance, fees, permits, any other incidentals necessary to complete all the work as specified herein for the installation of recovery wells to a depth of 60 feet below grade.
- (2) The unit bid price per foot for Item ESCR-4.25 PFT60 will include the incremental cost of furnishing all labor, materials, equipment, plan, insurance, fees, permits, any other incidentals by foot for recovery well installation beyond the depth of 60 feet below grade until the terminal construction depth of the recovery well.
- (3) The unit bid price per 55-gallon drum for Item ESCR-4.25 IDW will include the costs for handling, transportation, disposal, documentation, fees, permits, loading, hauling, and any other incidentals necessary to complete all the work as specified herein for handling, transporting, and disposal of investigation derived wastes.
- (4) The unit bid price per 55-gallon drum for Item ESCR-4.25 MGP will include the costs for handling, transportation, disposal, documentation, fees, permits, loading, hauling, and any other incidentals necessary to complete all the work as specified herein for handling, transporting, and disposal of MGP-contaminated investigation derived wastes.

- (5) The unit bid price per 55-gallon drum for Item ESCR- 4.25 HAZ will include the costs for handling, transportation, disposal, documentation, fees, permits, loading, hauling, and any other incidentals necessary to complete all the work as specified herein for handling, transporting, and disposal of hazardous investigation derived wastes.

*Payment will be made under:*

Item No.	Item	Pay Unit
ESCR-4.25 RW60	RECOVERY WELL INSTALLED TO 60 FEET BELOW GRADE	EACH
ESCR-4.25 PFT60	ADD/DEDUCT PRICE FOR ADDITIONAL/REDUCED RECOVERY WELL FOOT (BEYOND/LESS THAN THE BASE RECOVERY WELL UNDER ESCR 4.25 RW60)	FOOT
ESCR-4.25 IDW	INVESTIGATION DERIVED WASTE (NON-HAZARDOUS)	DRUMS
ESCR-4.25 MGP	MGP-CONTAMINATED INVESTIGATION DERIVED WASTE (NON-HAZARDOUS)	DRUMS
SCR-4.25 HAZ	HAZARDOUS INVESTIGATION DERIVED WASTE	DRUMS

**SECTION ESCR 8.01 HANDLING, TRANSPORTING, AND DISPOSAL OF POTENTIAL AND IDENTIFIED CONTAMINATED AND HAZARDOUS MATERIALS**

**8.01.1. DESCRIPTION.** This Section provides common references and requirements for Sections 8.01 C1, 8.01 C2, 8.01H, 8.01S, 8.01W1, and 8.01 W2.

**8.01.2. MATERIALS.** None.

**8.01.3. METHODS.**

(A) Current New York City Department of Environmental Protection (NYCDEP) Limitations for Discharge to Sewer provided below. The Contractor is responsible to adhere to any updates to the NYCDEP Limitations for Discharge to Sewer.

NYCDEP Bureau of Wastewater Treatment – Limitations for Effluent to Sanitary or Combined Sewers

<b>Parameter<sup>1</sup></b>	<b>Daily Limit</b>	<b>Units</b>	<b>Sample Type</b>	<b>Monthly Limit</b>
Non-polar material <sup>2</sup>	50	mg/l	Instantaneous	---
pH	5-11	SU's	Instantaneous	---
Temperature	< 150	Degree F	Instantaneous	---
Flash Point	> 140	Degree F	Instantaneous	---
Cadmium	2 0.69	mg/l mg/l	Instantaneous Composite	---
Chromium (VI)	5	mg/l	Instantaneous	---
Copper	5	mg/l	Instantaneous	---
Lead	2	mg/l	Instantaneous	---
Mercury	0.05	mg/l	Instantaneous	---
Nickel	3	mg/l	Instantaneous	---
Zinc	5	mg/l	Instantaneous	---
Benzene	134	ppb	Instantaneous	57
Carbontetrachloride	---	---	Composite	---
Chloroform	---	---	Composite	---
1,4 Dichlorobenzene	---	---	Composite	---
Ethylbenzene	380	ppb	Instantaneous	142
MTBE (Methyl-Tert-Butyl-Ether)	50	ppb	Instantaneous	---
Naphthalene	47	ppb	Composite	19
Phenol	---	---	Composite	---
Tetrachloroethylene (Perc)	20	ppb	Instantaneous	---
Toluene	74	ppb	Instantaneous	28
1,2,4 Trichlorobenzene	---	---	Composite	---
1,1,1 Trichloroethane	---	---	Composite	---
Xylenes (Total)	74	ppb	Instantaneous	28
PCB's (Total) <sup>3</sup>	1	ppb	Composite	---
Total Suspended Solids (TSS)	350 <sup>4</sup>	mg/l	Instantaneous	---
CBOD <sup>5</sup>	---	---	Composite	---
Chloride <sup>5</sup>	---	---	Instantaneous	---
Total Nitrogen <sup>5</sup>	---	---	Composite	---
Total Solids <sup>5</sup>	---	---	Instantaneous	---

Notes for table above:

- 1 All handling and preservation of collected samples and laboratory analyses of samples must be performed in accordance with 40 C.F.R. pt. 136. If 40 C.F.R. pt. 136 does not cover the pollutant in question, the handling, preservation, and analysis must be performed in accordance with the latest edition of "Standard Methods for the Examination of Water and Wastewater." All analyses must be performed using a detection level less than the lowest applicable regulatory discharge limit. If a parameter does not have a limit, then the detection level is defined as the least of the Practical Quantitation Limits identified in NYSDEC's Analytical Detectability and Quantitation Guidelines for Selected Environmental Parameters, December 1988
- 2 Analysis for **non-polar materials** must be done by USEPA method 1664 Rev. A. Non-Polar Material will mean that portion of the oil and grease that is not eliminated from a solution containing N-Hexane, or any other extraction solvent the USEPA will prescribe, by silica gel absorption.
- 3 Analysis for PCBs is required if **both** conditions listed below are met:
  - 1) if proposed discharge  $\geq$  10,000 gpd;
  - 2) if duration of a discharge > 10 days.
 Analysis for PCBs must be done by USEPA method 608 with MDL= $\leq$ 65 ppt. PCB's (total) is the sum of PCB-1242 (Arochlor 1242), PCB-1254 (Arochlor 1254), PCB-1221 (Arochlor 1221), PCB-1232 (Arochlor 1232), PCB-1248 (Arochlor 1248), PCB-1260 (Arochlor 1260) and PCB-1016 (Arochlor 1016).
- 4 For discharge  $\geq$  10,000 gpd, the TSS limit is 350 mg/l. For discharge < 10,000 gpd, the limit is determined on a case by case basis.
- 5 Analysis for Carbonaceous Biochemical Oxygen Demand (CBOD), Chloride, Total Solids and Total Nitrogen are required if proposed discharge  $\geq$  10,000 gpd.

(B) Applicable Regulations

Applicable regulations include, but are not limited to:

1. 49 CFR 100 to 179 - DOT Hazardous Materials Transport and Manifest System Requirements
2. 6 NYCRR 375-6 - NYSDEC Remedial Program Soil Cleanup Objectives
3. 6 NYCRR 360-1 NYSDEC Solid Waste Management Facilities
4. 6 NYCRR 364- Waste Transporter permits
5. Local restrictions on transportation of waste/debris
6. 40 CFR 260 to 272 - Hazardous Waste Management (RCRA)
7. 6 NYCRR 371 - Identification and Listing of Hazardous Wastes
8. 6 NYCRR 372 - Hazardous Waste Manifest System and Related Standards for Generators, Transporters and Facilities
9. 6 NYCRR 373-1 - Hazardous Waste Treatment, Storage and Disposal Facility Permitting Requirements
10. 6 NYCRR 376 - Land Disposal Restrictions
11. Posted weight limitations on roads or bridges
12. Transportation Skills Programs, Inc. 1985 - Hazardous Materials and Waste Shipping Papers and Manifests
13. Other local restrictions on transportation of waste/debris

32. Environmental Protection Agency 40 CFR 262 and 761
33. Resource Conservation and Recovery Act (RCRA)
34. Any transporter of hazardous or non-hazardous materials must be licensed in the State of New York and all other states traversed in accordance with all applicable regulations.

(C) Definitions

Contaminated Groundwater and Decontamination Fluids: Groundwater within the excavation trench or decontamination water that contains regulated compounds above the NYCDEP Discharge to Sewer Effluent limits.

Disposal or Treatment Facility: A facility licensed to accept either non-hazardous regulated waste or hazardous waste for either treatment or disposal.

Exclusion Zone: Work area that will be limited to access by Contractor personnel specifically trained to enter the work area only. The exclusion zone will be set up to secure the area from the public and untrained personnel. The project health and safety program will apply to all construction personnel including persons entering the work area.

Hazard Assessment: An assessment of any physical hazards that may be encountered on a work site.

Hazardous Soils: Soils that exhibit any of the characteristics of a hazardous waste, namely ignitability, corrosivity, reactivity, and toxicity, as defined in 6 NYCRR Part 371, Section 371.3 and 40 CFR Section 261.

Hazardous Substance Evaluation: An evaluation of the possible or known presence of any hazardous substances that may be encountered on a job site. This evaluation is included in the Health and Safety Plan and will include the identification and description of any hazardous substances expected to be encountered. Material Safety Data Sheets (MSDS) will be included for each substance.

Health and Safety Plan: A plan employed at a work site that describes all the measures that will be taken to assure that all work is conducted in a safe manner, and that the health of the workers and the public will be insured.

Material Handling Plan: A plan outlining the methods that will be employed to handle, transport and dispose of contaminated materials.

Manufactured Gas Plant Contaminated Soils: Soils producing higher than background responses on a photoionization detector, creosote-like odor, visual impacts (e.g., staining or discoloration), proximity to known releases from historic Manufactured Gas Plant facilities, and exceed the soil cleanup levels for naphthalene and other volatile organic compounds (VOCs) and semivolatile organic compounds (SVOCs) exceeding 6 NYCRR Part 375 NYSDEC SCOs.

MGP Mitigation Work Plan: A plan approved by NYSDEC, which includes a system of recovery wells and procedures to minimize the migration of Manufactured Gas Plant-related wastes during and after construction.

Non-Hazardous Contaminated Soils: Soils which exhibit a distinct chemical or petroleum odor, or exhibit elevated photoionization detector readings but are not classified as hazardous waste under 6 NYCRR Part 371, Section 371.3 and 40 CFR Section 261.

New York State Health Department's Environmental Laboratory Approval Program: A program by which the state of New York approves and accredits environmental testing laboratories.

PCBs: Polychlorinated biphenyls are a group of toxic compounds commonly used as a coolant in transformers and other electrical components.

Photoionization Detector: A hand held instrument used to measure volatile organic compounds in air. The instrument ionizes the organic molecules through the use of an ultraviolet lamp.

RCRA Hazardous Waste Characteristics: Characteristics of a material which may indicate the material is hazardous. These include: ignitability corrosivity, reactivity, and toxicity.

Remedial Action Plan: A plan approved by NYCDEP outlining procedures for managing soil and groundwater during subsurface disturbance and includes guidelines for the import and export of soil/fill materials.

Total Petroleum Hydrocarbons: An analytical procedure used to determine the total amount of petroleum compounds in a material.

Waste Management Plan for MGP-Related Contamination: A plan approved by NYSDEC specifically addressing the management and handling of soil and groundwater impacted by Manufactured Gas Plant-related wastes.

(D) Phase I and Phase II Investigation Reports

1. East Side Coastal Resiliency Project Area One: Subsurface Exploration Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF-JV, October 2015, 8,555 Pages.
2. East Side Coastal Resiliency Project Area Two: Subsurface Exploration Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF-JV, October 2015, 3,145 Pages.
3. East Side Coastal Resiliency: Supplemental Subsurface Investigation Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF-JV, November 2016, 12,342 Pages.

4. East Side Coastal Resiliency, Parallel Conveyance & Isolation Gates: Environmental Subsurface Investigation Report - Borough of Manhattan, New York, prepared by AKRF under the AKRF-KSE JV, January 2019, 2,221 Pages.

5. East Side Coastal Resiliency: Supplemental Subsurface Investigation Report - Borough of Manhattan, New York, prepared by AKRF under the Hazen and Sawyer / AKRF-JV, August 2019, 2,161 pages.

**8.01.4. MEASUREMENT AND PAYMENT.** No separate payment will be made for complying with the requirements of this Section.

## SECTION ESCR 8.01 C1 – HANDLING, TRANSPORTATION, AND DISPOSAL OF NON-HAZARDOUS CONTAMINATED SOIL

### 8.01 C1.1. WORK TO INCLUDE

#### (A) General

This work will consist of the handling, transportation, and disposal of contaminated soils. The materials covered by this specification are soils that are contaminated with petroleum, manufactured gas plant (MGP) wastes, or chemical products but cannot be classified as hazardous waste. For the purpose of this specification, soil will be defined as any material excavated below the pavement (concrete and/or asphalt) and pavement base (concrete and/or asphalt).

Soil to be excavated can be classified as non-contaminated, contaminated, or hazardous soil. Non-contaminated soils are defined as soils not exhibiting any of the following characteristics.

- Exceedances of New York State Department of Environmental Conservation (NYSDEC) Part 375-6 Restricted Commercial Soil Cleanup Objectives (SCOs) for street work, Restricted Residential SCOs for work areas in parkland, or Residential SCOs for housing projects.
- Elevated Photo-Ionization Detector (PID) readings, subsequently confirmed by laboratory analysis and showed exceedances of applicable SCOs.
- Visual evidence of contamination, such as the presence of staining, discoloration.
- Petroleum, MGP waste, and/or chemical odors, subsequently confirmed by laboratory analysis and showed exceedances of applicable SCOs.
- Physical evidence of coal ash, municipal solid waste, construction and demolition debris, or dredged spoils.

Contaminated soils are defined as soils exhibiting one or more of the above characteristics. Contaminated soils must be handled, transported, and disposed of in accordance with the specifications for **Section 8.01**.

Hazardous soils are defined as soils showing exceedances of Toxicity Characteristic Leaching Procedure (TCLP) or ignitability, corrosivity, or reactivity Regulatory Levels for Hazardous Waste published in Resource Conservation and Recovery Act (RCRA), 6 New York Codes, Rules, and Regulations (NYCRR) Part 371, or 40 Code of Federal Regulations (CFR) Section 261. Hazardous soils must be handled, transported, and disposed of in accordance with the specifications of this section.

This entire specification 8.01 covers the handling, transportation, and disposal of contaminated soils and hazardous soils only. Non-contaminated soil can be reused at the project site with prior approval by the Engineer, provided it meets other contract requirements. Soil reused on-site must be (1) below a structure; (2) beneath a roadbed or other paved area; or (3) in any unpaved areas, either beneath the soil cap. Soil reused for the soil cap must meet the criteria for fill and backfill as required in ESCR 4.11 - Excavation and Filling and the RAP. Excess non-contaminated soil becomes the property of the Contractor.

The Contractor must ensure that all operations associated with the handling, sampling, loading, transportation, and disposal of contaminated soils are in compliance with all applicable Federal, State, and City statutes and regulations.

The Contractor must supply all equipment, material and labor required to conduct the specified work of this Section. The Contractor must document the excavation, handling, transportation and disposal of contaminated soils.

## (B) Request for Approval of Subcontractors

A subcontractor/subconsultant, such as the independent Environmental Consultant and the waste hauler, is not permitted to start work until approved by the Engineer. If the Contractor performs work using a subcontractor/subconsultant prior to approval, the Contractor will not be paid for the work performed by that subcontractor/subconsultant and the Contractor may be subject to sanctions including, but not limited to, initiation of default proceedings.

The Contractor must submit a completed original Request for Approval of Subcontractors (RFAS) form and all required documents, such as legal identity, project reference list, Corporate Health and Safety Plan (HASP), waste transporter permits, Occupational Safety and Health Administration (OSHA) 10 certification, Hazardous Waste and Emergency Response (HAZWOPER) certification, etc., to the Engineer at least 30 days prior to the scheduled subcontract work start date. The Engineer must then submit the original RFAS to DDC Safety and Site Support, Office of Environmental and Geotechnical Services (OEGS) for review and approval. If the RFAS is denied by OEGS, OEGS will issue the final denial and return the original RFAS to the Engineer. If the RFAS is approved by OEGS, OEGS will forward the original RFAS package and an approval memo to the DDC ACCO for further review and approval. The ACCO's Vendor Integrity Unit and Office of Contract Opportunity (OCO) will review the subcontractor/subconsultant's overall business integrity and compliance with Vendor Exchange System (VENDEX), Executive Order 50, Local Law 1, and Minority- and Women-Owned Business Enterprise/ Disadvantaged Business Enterprise (MWBE/DBE) participation as per the contract. ACCO will issue the final Approval or Denial. The original RFAS will be returned to the Engineer, who will subsequently notify and return the original RFAS to the Contractor.

## (C) Independent Environmental Consultant

The Contractor must retain an independent Environmental Consultant to obtain all permits, prepare the plans required in the specification 8.01, and perform, sampling, and other health and safety services. The independent Environmental Consultant must be approved under the RFAS process and must demonstrate the minimum requirements as set forth below:

1. The independent Environmental Consultant project supervisor on site and other designated key personnel must have a minimum of three (3) years of experience in the environmental field dealing with issues associated with contaminated soils, specifically volatile organic compounds and MGP-related contamination.
2. The independent Environmental Consultant must be experienced in work of similar nature, size, and complexity and must have previous experience in working with DDC.
3. The independent Environmental Consultant must furnish a project listing identifying the location, nature of services provided, owner, owner's contact, contact's working telephone number, project duration and value for at least five (5) projects within the last 3 years.

## (D) Sampling and Analysis

Prior to the performance of soil sampling, the Contractor will submit a Field Sampling Plan (FSP). Soil sampling must not be conducted until OEGS has approved the FSP. The Contractor must conduct sampling and analysis of the impacted soils as specified under **Section 8.01 C2**. The laboratory results must be forwarded to OEGS for review to determine if the soils would be handled and disposed of as contaminated soils or hazardous soils.

## (E) Material Handling Plan

At least 45 days prior to the commencement of work, the Contractor must submit to the OEGS for review a Material Handling Plan (MHP). The MHP must be approved by the OEGS prior to the Contractor beginning any soil excavation work. The MHP must, at a minimum, consist of:

1. The Contractor's procedures for safely handling contaminated soils. The procedures must include personnel safety and health as well as environmental protection considerations.
2. For the proposed laboratory for analysis of representative soil samples, provide the following: (a) name, (b) address, (c) telephone number, and (d) New York State Department of Health's (NYSDOH) Environmental Laboratories Accreditation Program (ELAP) status.
3. Identification of the Contractor's proposed waste transporter(s) (hauler). This information must include:
  1. Name and Waste Transporter Permit Number
  2. Address
  3. Name of responsible contact for the waste transporter
  4. Telephone number for the contact
  5. All necessary permit authorizations for each type of waste transported
  6. Previous experience in performing the type of work specified herein
4. The name and location of the facility where an off-site scale is located. The Contractor must outline the procedures on controlling trucks leaving the work site and en-route to the off-site scale.
5. All staging/stockpiling areas (if stockpiling areas are intended and available), or alternate procedures that will be used. Alternate procedures may include, but are not limited to, agreements from the intended disposal facilities to accept boring data and/or analytical data previously obtained during the site characterization so that materials may be directly loaded into vehicles for shipment to the disposal facility.
6. A backup facility must be provided, should the staging/stockpile areas become unavailable, insufficient in area or presented by some other unforeseen difficulty.
7. Identification of the Contractor's two proposed Treatment Storage or Disposal (TSD) facilities for contaminated soils (primary and back-up) for final disposal of the soils. Both primary and backup TSD facilities must be currently state-licensed disposal facilities approved to receive contaminated soil. The information required for each facility must include:
  - a. General Information
    1. Facility name and the State identification number
    2. Facility location
    3. Name of responsible contact for the facility
    4. Telephone number for contact
    5. Signed letter of agreement to accept waste as specified in this contract. The letter must indicate agreement to handle and accept the specified estimated quantities and types of material during the time period specified in the project schedule and any time extension as deemed necessary.
    6. Unit of measure utilized at disposal facility for costing purposes
  - b. A listing of all permits, licenses, letters of approval, and other authorizations to operate, which are currently held and valid for the proposed facility.
  - c. A listing of all permits, licenses, letters of approval, and other authorizations to operate which have been applied for by the proposed facility but not yet granted or issued.
  - d. The Contractor must specify and describe the disposal/containment unit(s) that the proposed facility will use to manage the waste. The Contractor must identify the capacity available in the units and the capacity reserved for the subject waste.

- e. The Contractor must provide the date of the proposed facility's last compliance inspection.
  - f. A list of all active (unresolved) compliance orders (or agreements), enforcement notices, or notices of violations issued to the proposed facility must be provided. The source and nature of the cause of violation must be stated, if known.
8. Description of all sampling and field/laboratory analyses that will be needed to obtain disposal facility approval.

#### **8.01 C1.2. MATERIALS**

(A) The Contractor must provide containers as specified in the United States Department of Transportation (USDOT) regulations.

(B) The Contractor must provide polyethylene sheeting, which is to be placed under (20 mil. thickness minimum) and over (10 mil. thickness minimum) soil piles.

(C) The Contractor must provide Portland cement as a soil amendment to stabilize wet soil that is determined by the Engineer to be impacted by MGP wastes prior to shipping for off-site disposal.

(D) The Contractor must assure that the waste transporter's appropriate choice of vehicles and operating practices are fitted to prevent spillage or leakage of contaminated material during transportation.

(E) The Contractor must provide, install, and maintain any temporary stockpiling or loading facilities on site as required until completion of material handling activities. The location and design of any such facilities must be included in the MHP.

#### **8.01 C1.3. CONSTRUCTION DETAILS**

(A) Material Handling

1. Immediately after excavation of non-hazardous contaminated soil the Contractor must:
  - a. Stabilize wet soil determined by the Engineer to be impacted with MGP wastes with Portland cement as a soil amendment prior to soil waste disposal. The Contractor is responsible for determining the appropriate percent of Portland cement required to stabilize the soil. It is anticipated that stabilization will require a minimum of 5% Portland cement. Dosage of Portland cement shall be no greater than 25% by wet weight;
  - b. Load material directly onto trucks/tankers/roll offs for disposal off site; or
  - c. If interim stockpiling is required, place contaminated soil on a minimum of 20 mil. polyethylene sheeting and cover it securely by minimum of 10 mil. polyethylene sheeting to protect against cross contamination, airborne dust, leaching or runoff of contaminants into the subsurface, groundwater, or stormwater. Weight or secure the sheeting by appropriate means and seal seams as approved by the DDC to prevent tearing or removal by wind or weather. Grade surrounding surface to provide for positive drainage away from pile. Each stockpile must not exceed 500 cubic yards unless otherwise approved by the Engineer. Contaminated soils must be stockpiled separately from uncontaminated and hazardous soil at an off-site location approved by DDC or secured on-site by the Contractor, meeting all required Federal, State and Local stipulations. Stockpiles must be at least 800 feet away from any sensitive receptors, such as schools, daycare center, hospitals, nursing homes, etc., and at least 100 feet away from any water body, unless otherwise coordinated with the Engineer.

2. Institute appropriate procedures and security measures to ensure the protection of site personnel and the public from contaminated materials as described in the approved MHP, Site HASP, and **Section 8.01 S - Health and Safety**.
3. Petroleum contaminated, MGP contaminated, and non-hazardous soils must be segregated separately when stockpiling.
4. Any soil encountered that appears to contain unknown contaminants (based on visual, odor, or other observation), or that vary substantially from the material originally identified must be segregated in stockpiles and the Contractor's independent Environmental Consultant promptly notified to collect soil samples for analysis. Construct stockpiles to the same requirements as stated in subsection (A).(1).(b) above.
5. Provide any dewatering that is necessary to complete the work. Contaminated water must be disposed of in accordance with **Section 8.01 W1**.

(B) Off-Site Transportation to Disposal Facility

1. General

- a. The Contractor must furnish all labor, equipment, supplies and incidental costs required to transport contaminated material from the work area to the off-site disposal facility, and any other items and services required for transporting contaminated material for disposal at an off-site facility.
- b. The Contractor will be responsible for tracking all materials and vehicles from the site to the off-site scale.
- c. The Contractor must submit to the Engineer the certified tare and gross weight slips for each load received at the accepted facility which must be attached to each returned manifest. These documents must be maintained and kept with project field records.
- d. Contaminated soils must be delivered to the disposal or treatment facility within 30 calendar days after excavation.
- e. The Contractor must coordinate the schedule for truck arrival and material deliveries at the job site to meet the approved project schedule.
- f. The Contractor must inspect all vehicles leaving the project site to ensure that contaminated soils adhering to the wheels or undercarriage are removed prior to the vehicle leaving the site.
- g. The Contractor must obtain letters of commitment from the waste haulers and the TSD facility to haul and accept shipments.
- h. The Contractor must provide waste profile forms to OECS for review and approval before transporting contaminated soil to the approved TSD facility.

2. Hauling

- a. The Contractor must coordinate manifesting, placarding of shipments, and vehicle decontamination. All quantities must be measured and recorded upon arrival at the disposal facility. If any deviation between the two (2) records occurs, the matter is to be reported immediately to the Engineer and to be resolved by the Contractor to the satisfaction of the Engineer.
- b. The Contractor will be held responsible, at its own cost for any and all actions necessary to remedy situations involving material spilled in transit or mud and dust tracked off-site.

- c. The Contractor must ensure that trucks are protected against contamination by properly covering and lining them with polyethylene sheeting or by decontaminating them prior to and between acceptances of loads. Trucks with loaded contaminated soil must be covered securely with tarps before leaving the project site to prevent generation of airborne dust during hauling. When loading soil determined by the Engineer to be impacted by MGP wastes, the Contractor must use impermeable, tight fitting truck covers. The Contractor must install and maintain a truck tracking pad to limit the amount of sediment that is transported from the site by vehicles. The truck tracking pad should be at least 24 feet wide and 50 feet long, and constructed of 3-6 inch washed stone with a depth of at least 12 inches. When working in areas determined to be impacted by MGP wastes by the Engineer, the truck tracking pad must additionally include liner(s) and a sump for decontaminating all vehicles leaving the site, and all decontamination fluids will be containerized for disposal.
  - d. The Contractor will be responsible for inspecting the access routes for road conditions, overhead clearance, and weight restrictions.
  - e. The Contractor must only use the transporter(s) identified in the approved MHP for the performance of work. A revised MHP or an addendum to the original approved MHP must be submitted to OEGS for review and approval at no additional cost to the City for any use of substitute or additional transporters.
  - f. The Contractor must develop, document, and implement a policy for accident prevention.
  - g. The Contractor must not combine contaminated materials from other projects with material from this project.
  - h. No material will be transported until approval by the Engineer is obtained.
3. Off-Site Disposal
- a. The Contractor must use only the disposal facility(ies) identified in the approved MHP for the performance of the work. A revised MHP or an addendum to the original approved MHP must be submitted to OEGS for review and approval at no additional cost to the City for any use of substitutions or additions of disposal facility.
  - b. The Contractor must be responsible for acceptance of the materials at an approved facility, for ensuring that the facility is properly permitted to accept the stated materials, and for ensuring that the facility provides the stated treatment and/or disposal services.
  - c. The City reserves the right to contact and visit the TSD facility and regulatory agencies to verify the agreement to accept the stated materials and to verify any other information provided.
  - d. In the event that the identified and approved facility ceases to accept the stated materials or the facility ceases operations, it is the Contractor's responsibility to locate an alternate approved and permitted facility(ies) for accepting materials. The alternate facility(ies) must be approved in writing by the Engineer in the same manner and with the same requirements as for the original facility(ies). This must be done at no extra cost or delay to the City.
  - e. The Contractor must obtain manifest forms and complete the shipment manifest records required by the appropriate regulatory agencies for verifying the material and quantity of each load in unit of volume and weight. Copies of each manifest must be submitted to the Engineer within four (4) business days following shipment, and within three (3) business days after notification of receipt of the facility. The signed manifests

must be maintained and kept with the project field records. Any manifest discrepancies must be reported immediately to the Engineer and be resolved by the Contractor to the satisfaction of the Engineer.

4. Equipment and Vehicle Decontamination

- a. The Contractor must design and construct a portable decontamination station to be used to decontaminate equipment and vehicles that have been used to handle contaminated soil. The cost for this work will be paid under Item ESCR-8.01 S.
- b. Water generated during the decontamination process must be disposed of in accordance with **Section 8.01 W1**.

**8.01 C1.4 METHOD OF MEASUREMENT**

Quantities for contaminated soils will be measured in tons. The tonnage will be determined by off-site truck scales, as per Subsection 8.01 C1.(3).(B).(1), that are capable of generating load tickets.

**8.01 C1.5 PRICE TO COVER**

(A) The unit bid price per ton for Item ESCR-8.01 C1 must include the cost of furnishing all labor, materials, equipment, plan, and insurance for excavation, handling, transportation, disposal, documentation, fees, permits, loading, stockpiling, hauling, and any other incidentals necessary to complete all the work as specified herein for handling, transporting, and disposal of non-hazardous contaminated soil.

(B) Final disposal of hazardous soil will be paid for under Item ESCR-8.01 H – Handling, Transporting and Disposal of Hazardous Soils. Disposal of decontamination water will be paid for under Item ESCR-8.01 W1 – Removal, Treatment and Discharge/Disposal of Contaminated Water.

(C) Backfill will be paid for under its respective item as specified in the contract document.

(D) The independent Environmental Consultant will be paid under Item ESCR-8.01 S – Health and Safety.

*Payment will be made under:*

Item No.	Description	Pay Unit
ESCR 8.01 C1	HANDLING, TRANSPORTING, AND DISPOSAL OF NON-HAZARDOUS CONTAMINATED SOIL	TONS
ESCR 8.01 C1MGP	HANDLING, TRANSPORTING, AND DISPOSAL OF NON-HAZARDOUS MGP CONTAMINATED SOIL	TONS

## SECTION ESCR 8.01 C2 – IN-SITU AND EX-SITU SOIL SAMPLING AND ANALYSIS FOR WASTE DISPOSAL PARAMETERS

### 8.01 C2.1 WORK TO INCLUDE

#### (A) Description

The work will consist of collecting and analyzing representative samples of soil to be excavated in-situ and/or ex-situ from stockpiles for parameters typically requested by the disposal facilities to determine if the soil to be excavated is suitable for reuse, or to be hauled off-site for disposal purposes as contaminated and/or hazardous soil.

#### (B) Sampling and Laboratory Analysis

1. At least forty-five (45) days prior to the commencement of work, the Contractor's independent Environmental Consultant must submit an FSP and an Investigation Health and Safety Plan (Investigation HASP) to OEGS for review and approval, prior to conducting the field sampling. The FSP must include, at a minimum, the following information:
  - a. Project information
  - b. Description of sample collection methodology for soil to be excavated and soil which appears to contain unknown contaminants based on field observation
  - c. Type of analyses
  - d. Sample preservation and handling
  - e. Training and experience of the personnel who will collect the samples
  - f. Equipment Decontamination
  - g. Analytical laboratory's name, address, New York State Department of Health's ELAP certification number, and telephone number
  - h. Map of the project area
  - i. Sample location plan
  - j. Chain of Custody

The Investigation HASP must identify actual and potential hazards associated with planned sampling field activities and stipulate appropriate health and safety procedures, so as to minimize field personnel exposures to physical, biological, and chemical hazards that may be present in the sampling media. The Investigation HASP must include, at a minimum, the following information:

- a. Project information
  - b. Description of work to be performed
  - c. Names of responsible health and safety personnel
  - d. Worker training
  - e. Job hazard analysis
  - f. Confined Space Entry Plan (if applicable)
  - g. Personal monitoring (if applicable)
  - i. Personnel Protection Equipment (PPE)
  - j. Decontamination
  - k. Safety rules
  - l. Spill prevention and control, dust control, vapor/odor suppression procedures
  - m. Identification of nearest hospital and route
  - n. Emergency Incident Reporting
2. The Contractor's Environmental Consultant must collect one (1) grab and one (1) composite sample per 500 cubic yards of soil to be excavated in-situ and/or ex-situ from

stockpiles. Sample locations must be placed throughout along the project area. For in-situ sampling, each grab soil sample must be collected from either the 6-inch interval above the water table (when encountered) or the 6-inch interval above the bottom of the proposed excavation depth (where recovery allowed), or from the 6-inch interval showing the highest potential for contamination based on field observation. For composite soil sampling, grid sampling must be performed for projects with excavation depth deeper than six (6) feet below grade. Each composite sample must consist of five (5) grab samples collected from various intervals along the depth of excavation at each sampling location. For stockpiled soils, each composite sample must consist of five (5) grab samples collected from various depths within each soil stockpile, at least two feet below the soil surface. For drummed soil, one (1) composite sample per 10 drums must be collected. Each composite soil sample must consist of one (1) grab sample from each of the 10 drums.

3. The quality of the data from the sampling program is the Contractor's responsibility. The Contractor must furnish all qualified personnel, materials, equipment and instruments necessary to carry out the sampling. Unless directed otherwise, all sampling procedures must follow the NYSDEC sampling guidelines and protocols. All sampling must be conducted by a qualified person trained in sampling protocols using standard accepted practices for obtaining representative samples.
4. Each grab and composite sample must be analyzed for all parameters required by disposal facilities accepting contaminated and hazardous soil.
5. All sample containers must be marked and identified with legible sample labels, which must indicate the project name, sample location and/or container, the sample number, the date and time of sampling, preservatives utilized and other information that may be useful in determining the character of the sample. Chain-of-custody must be tracked from laboratory issuance of sample containers through laboratory receipt of the samples.
6. The Contractor must maintain a bound sample logbook. The Contractor must provide the Engineer access to it at all times and must turn it over to the Engineer in good condition at the completion of the work. The following information, at a minimum, must be recorded to the log:
  - a. Sample identification number
  - b. Sample location
  - c. Field observation
  - d. Sample type
  - e. Analyses
  - f. Date/time of collection
  - g. Collector's name
  - h. Sample procedures and equipment utilized
  - i. Date sent to laboratory and name of laboratory
7. The City reserves the right to direct the Contractor to conduct alternative sampling in lieu of the parameters described in subsection 8.01 C2(1)(B)(4), if the situation warrants. The substitute sampling parameters will be of equal or lesser monetary value than those described in subsection 8.01 C2(1)(B)(4), as determined by industry laboratory pricing standards.
8. Only dedicated sampling equipment may be used to collect these samples. All equipment involved in field sampling must be decontaminated before being brought to the sampling location and must be properly disposed of after use.

9. The Contractor’s Environmental Consultant must prepare a Field Sampling Result Report (FSSR), tabulate the analytical results, and compare the data to the applicable NYSDEC Part 375.6 Soil Cleanup Objectives, and TCLP for Hazardous Waste published in RCRA and 6 NYCRR Part 371, or 40 CFR Section 261. If the soil is to be disposed of in a disposal facility outside of the State of New York, the soil sampling data must also be compared to the applicable regulatory criteria established by the state in which the disposal facility is located. The FSSR, with the tabulated tables and laboratory analytical data, must be submitted to OEGS for review and approval prior to any soil reuse or disposal activities.
10. Soils exceeding any of the hazardous characteristic criteria meet the legal definition of hazardous soils (rather than non-hazardous contaminated soils) and must be transported or disposed of under **Section 8.01 H**. All analyses must be done by a laboratory that has received approval from the ELAP for the methods to be used. The Contractor must specify the laboratory in the MHP.
11. The Contractor must contact the disposal facility where the waste will be sent for permanent disposal and arrange to collect any additional samples required by the facility. The cost associated with additional sampling and testing must be included in the bid price of this Item.

**8.01 C2.2 METHOD OF MEASUREMENT**

Quantities for samples must be measured as the number of sets of samples that are tested. A set will be defined as one (1) grab and one (1) composite samples per 500 cubic yards to be analyzed for the full range of parameters as specified in subsection 8.01 C2(1).(B).(4).

**8.01 C2.3 PRICE TO COVER**

The unit price bid per set for Item ESCR-8.01 C2 will include the cost of furnishing all labor, materials, equipment, plan, and insurance necessary for sampling, handling, transporting, testing, documentation, fees, permits, and any other incidentals necessary to complete the work as specified herein for in-situ and ex-situ soil sampling and analysis for waste disposal parameters.

*Payment will be made under:*

Item No.	Description	Pay Unit
ESCR 8.01 C2	SAMPLING AND TESTING OF CONTAMINATED/POTENTIALLY HAZARDOUS SOIL FOR DISPOSAL PURPOSES	SETS

## SECTION ESCR 8.01 H – HANDLING, TRANSPORTATION, AND DISPOSAL OF HAZARDOUS SOILS

### 8.01 H.1 WORK TO INCLUDE

#### (A) General

This work will consist of the handling, transportation, and disposal of hazardous soils, which are defined as soils showing exceedances of TCLP for Hazardous Waste published in RCRA, 6 NYCRR Part 371, or 40 CFR Section 261. Hazardous soil can also be contaminated soils, as defined in **Section 8.01 C1**, but must be handled, transported, and disposed of as hazardous soil under **Section 8.01 H**, in accordance with the specifications herein. For the purpose of this specification, soils will be defined as any materials excavated below the pavement and base for pavement.

The Contractor must ensure that all operations associated with the handling, sampling, loading, transportation, and disposal of hazardous materials are in compliance with the applicable Federal, State, and Local statutes and regulations. The Contractor must supply all equipment, material and labor required to conduct the specified work under this section.

The Contractor must document the excavation, handling, sampling, and testing, transportation, and disposal of hazardous soils. The City must be listed in the disposal documents as the waste generator.

The Contractor must decontaminate all equipment prior to its removal from the exclusion zone and/or following contact with hazardous materials, as detailed in **Section 8.01 S**. Water generated during the decontamination process must be disposed of as detailed in **Section 8.01 W1**.

The Contractor must retain an independent Environmental Consultant, meeting the requirements specified in Section 8.01 C1. The independent Environmental Consultant must conduct sampling for laboratory analysis of soil to be excavated to determine whether the soil is contaminated and/or hazardous.

All work under this section must be performed under the direct supervision of the Contractor's Environmental Consultant, as approved by the OEGS.

#### (B) Material Handling Plan

At least 45 days prior to the commencement of work, the Contractor must submit to the OEGS for review a MHP. The MHP must be approved by the OEGS prior to the Contractor beginning any soil excavation work. The MHP must, at a minimum, consist of:

1. The Contractor's procedures for identifying hazardous soils during excavation, including the specific model and manufacturer of intended organic vapor monitoring equipment and calibration procedures to be used. It should also include the training and experience of the personnel who will operate the equipment.
2. The Contractor's procedures for safely handling hazardous soils or soils which have not yet been tested but are believed to be potentially hazardous. The procedures must include personnel safety and health as well as environmental protection considerations.
3. Name, address, NYSDOH ELAP status and telephone number of the proposed laboratory for analysis of representative soil samples.
4. Identification of the Contractor's proposed waste transporter(s). This information must include:

- a. Name and Waste Transporter Permit Number
  - b. Address
  - c. Name of responsible contact for the waste transporter
  - d. Telephone number for the contact
  - e. All necessary permit authorizations for each type of waste transported
  - f. Previous experience in performing the type of work specified herein
5. The name and location of the facility where an off-site scale is located. The Contractor must outline the procedures on controlling trucks leaving the work site and en-route to the off-site scale.
  6. All staging/stockpiling areas (if stockpiling areas are intended and available), or alternate procedures that will be used. Alternate procedures may include, but are not limited to, agreements from the intended disposal facilities to accept boring data and/or analytical data previously obtained during the site characterization so that materials may be directly loaded into vehicles for shipment to the disposal facility.
  7. A backup facility must be provided, should the staging/stockpile areas become unavailable, insufficient in area or not be present by some other unforeseen difficulty.
  8. Identification of the Contractor's two proposed Treatment Storage or Disposal (TSD) facilities for hazardous soils (primary and back-up) for final disposal of the hazardous soils. Both primary and backup TSD facilities must be currently USEPA or State-approved RCRA TSD facilities for hazardous soils. The information required for each facility must include:
    - a. General Information
      1. Facility name and the USEPA identification number
      2. Facility location
      3. Name of responsible contact for the facility
      4. Telephone number for contact
      5. Signed letter of agreement to accept waste as specified in this contract. The letter must indicate agreement to handle and accept the specified estimated quantities and types of material during the time period specified in the project schedule and any time extension as deemed necessary.
      6. Unit of measure utilized at disposal facility for costing purposes
    - b. A listing of all permits, licenses, letters of approval, and other authorizations to operate, which are currently held and valid for the proposed facility.
    - c. A listing of all permits, licenses, letters of approval, and other authorizations to operate which have been applied for by the proposed facility but not yet granted or issued.
    - d. The Contractor must specify and describe the disposal/containment unit(s) that the proposed facility will use to manage the waste. The Contractor must identify the capacity available in the units and the capacity reserved for the subject waste.
    - e. The Contractor must provide the date of the proposed facility's last compliance inspection under RCRA.
    - f. A list of all active (unresolved) compliance orders (or agreements), enforcement notices, or notices of violations issued to the proposed facility must be provided. The source and nature of the cause of violation must be stated, if known.
  9. Description of all sampling and field/laboratory analyses that will be needed to obtain disposal facility approval.

## **8.01 H.2 MATERIALS**

- (A) The Contractor must provide containers as specified in the USDOT regulations.

(B) The Contractor must provide Portland cement as a soil amendment to stabilize wet soil that is determined by the Engineer to be impacted by MGP wastes prior to shipping the material for off-site disposal.

(C) The Contractor must provide polyethylene sheeting, which is to be placed under (20 mil. thickness minimum) and over (10 mil. thickness minimum) soil piles.

(D) The Contractor must assure that the waste transporter's appropriate choice of vehicles and operating practices are fitted to prevent spillage or leakage of contaminated material during transportation.

(E) The Contractor must provide, install, and maintain any temporary stockpiling or loading facilities on site as required until completion of material handling activities. The location and design of any such facilities must be included in the MHP.

### 8.01 H.3 CONSTRUCTION DETAILS

#### (A) Material Handling

1. Immediately after excavation of hazardous soil the Contractor must:
  - a. Stabilize wet soil determined by the Engineer to be impacted with MGP wastes with a soil amendment prior to off-site disposal. The Contractor is responsible for determining the appropriate percent of Portland cement required to stabilize the soil. It is anticipated that stabilization will require a minimum of 5% Portland cement. Dosage of Portland cement shall be no greater than 25% by wet weight;
  - b. Load material directly onto drums/trucks/tankers/roll offs for disposal off site. Containers must be labeled as hazardous soil while being held for disposal; or
  - c. If interim stockpiling is required, place hazardous soil on a minimum of 20 mil. polyethylene sheeting and cover it securely by minimum of 10 mil. polyethylene sheeting to protect against cross contamination, airborne dust, leaching or runoff of contaminants into the subsurface, groundwater, or stormwater. Weight or secure the sheeting by appropriate means and seal seams as approved by the Engineer to prevent tearing or removal by wind or weather. Grade surrounding surface to provide for positive drainage away from pile. Each stockpile must not exceed 500 cubic yards unless otherwise approved by the Engineer. Hazardous soils must be stockpiled separately from uncontaminated and contaminated soil at an off-site location approved by the Engineer or secured on-site by the Contractor, meeting all required Federal, State and Local stipulations. Stockpiles must be labelled as hazardous soil and situated at least 800 feet away from any sensitive receptors, such as schools, daycare center, hospitals, nursing homes, etc., and at least 100 feet away from any water body, unless otherwise coordinated with the Engineer.
2. Institute appropriate procedures and security measures to ensure the protection of site personnel and the protection of the public from hazardous soils as described in the approved MHP, Site HASP, and **Section 8.01 S**.
3. Any soil encountered that appears to contain unknown contaminants (based on visual, odor, or other observation), or that vary substantially from the material originally identified must be segregated in stockpiles and the independent Environmental Consultant promptly notified to collect soil samples for analysis. Construct stockpiles to the same requirements as stated in subsection (A)(1)(b) above.
4. Provide any dewatering that is necessary to complete the work. Contaminated water must be disposed of in accordance with **Section 8.01 W1**.

(B) Off-Site Transportation to Disposal Facility

1. General

- a. The Contractor must furnish all labor, equipment, supplies and incidental costs required to transport contaminated material from the work area to the off-site disposal facility, and any other items and services required for transporting hazardous material for disposal at an off-site facility.
- b. The Contractor is responsible for obtaining the USEPA hazardous waste generator identification number for the City. The application must be submitted to OEGS for review and approval prior to submission to USEPA. The Contractor must prepare the annual hazardous waste report for the project and submit to the NYSDEC and USEPA.
- c. The Contractor will be responsible for tracking all material/vehicles from the site to the off-site scale and to the approved disposal facility.
- d. The Contractor must provide to the Engineer certified tare and gross weight slips for each load received at the accepted facility which must be attached to each returned manifest. These documents must be maintained and kept with project field records.
- e. Hazardous soils must be delivered to the disposal or treatment facility within 30 calendar days after excavation.
- f. The Contractor must coordinate the schedule for truck arrival and material deliveries at the job site to meet the approved project schedule.
- g. The Contractor must inspect all vehicles leaving the project site to ensure that hazardous soils adhering to the wheels or undercarriage are removed prior to the vehicle leaving the site.
- h. The Contractor must obtain letters of commitment from the waste haulers and the TSD facility to haul and accept shipments.
- i. The Contractor must provide waste profile forms to OEGS for review and approval before transporting hazardous soil to the approved TSD facility.

2. Hauling

- a. The Contractor must coordinate manifesting, placarding of shipments, and vehicle decontamination. All quantities must be measured and recorded upon arrival at the disposal facility. If any deviation between the two records occurs, the matter is to be reported immediately to the Engineer and to be resolved by the Contractor to the satisfaction of the Engineer.
- b. The Contractor will be responsible, at its own cost for any and all actions necessary to remedy situations involving material spilled in transit or mud and dust tracked off-site.
- c. The Contractor must ensure that trucks are protected against contamination by properly covering and lining them with polyethylene sheeting or by decontaminating them prior to and between acceptances of loads. Trucks with loaded contaminated soil must be covered securely with tarp before leaving the project site to prevent generation of airborne dust during hauling. When loading soil determined by the Engineer to be impacted by MGP wastes, the Contractor must use impermeable, tight fitting truck covers. The Contractor must install and maintain a truck tracking pad to limit the amount of sediment that is transported from the site by vehicles. The truck tracking pad should be at least 24 feet wide and 50 feet long, and constructed of 3-6

inch washed stone with a depth of at least 12 inches. When working in areas determined to be impacted by MGP wastes by the Engineer, the truck tracking pad must additionally include liner(s) and a sump for decontaminating all vehicles leaving the site, and all decontamination fluids will be containerized for disposal.

- d. The Contractor will be responsible for inspecting the access routes for road conditions, overhead clearance, and weight restrictions.
  - e. The Contractor must only use the transporter(s) identified in the approved MHP for the performance of work. Only a transporter with a current Part 364 Waste Transporter Permit from NYSDEC may transport hazardous soil. A revised MHP or an addendum to the original approved MHP must be submitted to OEGS for review and approval at no additional cost to the City for any use of substitute or additional transporters.
  - f. The Contractor must develop, document, and implement a policy for accident prevention.
  - g. The Contractor must not combine hazardous materials from other projects with material from this project.
  - h. No material will be transported until approval by the Engineer is obtained.
3. Off-Site Disposal
- a. The Contractor must use only the disposal facility(ies) identified in the approved MPH for the performance of the work. A revised MHP or an addendum to the original approved MHP must be submitted to OEGS for review and approval at no additional cost to the City for any use of substitutions or additions of disposal facility.
  - b. The Contractor will be responsible for acceptance of the materials at an approved facility, for ensuring that the facility is properly permitted to accept the stated materials, and for ensuring that the facility provides the stated treatment and/or disposal services.
  - c. The City reserves the right to contact and visit the TSD facility and regulatory agencies to verify the agreement to accept the stated materials and to verify any other information provided.
  - d. In the event that the identified and approved facility ceases to accept the stated materials or the facility ceases operations, it is the Contractor's responsibility to locate an alternate approved and permitted facility(ies) for accepting materials. The alternate facility(ies) must be approved in writing by the Engineer in the same manner and with the same requirements as for the original facility(ies). This must be done at no extra cost or delay to the City.
  - e. The Contractor must obtain manifest forms and complete the shipment manifest records required by the appropriate regulatory agencies for verifying the material and quantity of each load in unit of volume and weight. Copies of each manifest must be submitted to the Engineer within four (4) business days following shipment, and within three (3) business days after notification of receipt of the facility. The signed manifests must be maintained and kept with the project field records. Any manifest discrepancies must be reported immediately to the Engineer and be resolved by the Contractor to the satisfaction of the Engineer.
  - f. The Contractor must submit all results and weights to the Engineer.
  - g. The Contractor is responsible to pay all fees associated with the generation and disposal of all excavated hazardous waste. These fees include, but are not limited to, the New York State Department of Finance and Taxation (DFT) quarterly fees for

hazardous waste and the NYSDEC annual hazardous waste regulatory fee program. The Contractor must submit a copy of proof of payment to the Engineer and OEGS.

4. Equipment and Vehicle Decontamination

- a. The Contractor must design and construct a portable decontamination station to be used to decontaminate equipment and vehicles that have been used to handle contaminated soil. The cost for this work will be paid under Item ESCR-8.01 S.
- b. Water generated during the decontamination process must be disposed of in accordance with **Section 8.01 W1**.

8.01 H.4 METHOD OF MEASUREMENT

Quantities for hazardous soils will be measured in tons. The tonnage will be determined by off-site truck scales, as per Subsection 8.01 H1.3.B, that are capable of generating load tickets.

8.01 H.5 PRICE TO COVER

- A. The unit bid price bid per ton for Item ESCR-8.01 H will include the cost of furnishing all labor, materials, equipment, plan, and insurance for excavation, handling, transportation, disposal, documentation, fees, permits, loading, stockpiling, hauling, and any other incidentals necessary to complete all the work as specified herein for handling, transporting, and disposal of hazardous soil.
- B. Final disposal of contaminated soil will be paid for under Item ESCR-8.01 C1 – Handling, Transporting and Disposal of Non-Hazardous Contaminated Soils. Disposal of decontamination water will be paid for under Item ESCR-8.01 W1 – Removal, Treatment and Discharge/Disposal of Contaminated Water.
- C. Backfill will be paid for under its respective item as specified in the contract document.
- D. The independent Environmental Consultant will be paid under Item ESCR-8.01 S – Health and Safety.

*Payment will be made under:*

Item No.	Description	Pay Unit
ESCR 8.01 H	HANDLING, TRANSPORTING, AND DISPOSAL OF HAZARDOUS SOIL	TONS

**SECTION ESCR 8.01 S – HEALTH AND SAFETY****8.01 S.1 WORK TO INCLUDE**

Health and Safety Requirements for work related to contaminated and / or hazardous soil:

(A) Scope of Work

It is the Contractor's responsibility to stage and conduct the Contractor's work in a safe manner. The Contractor must implement a Health and Safety Plan (HASP) for contaminated/hazardous soil intrusive activities as set forth in OSHA Standards 1910.120 and 1926.650-652. The Contractor must ensure that all workers have at a minimum hazard awareness training. The Contractor must segregate contaminated work area in secured exclusion zones. These zones must limit access to Contractor personnel specifically trained to enter the work area. The exclusion zone must be set up to secure the area from the public and untrained personnel. The project health and safety program will apply to all construction personnel including persons entering the work area. In addition, the Contractor must protect the public from on-site hazards, including subsurface contaminants associated with on-site activities. The HASP must be signed off by a Certified Industrial Hygienist and reviewed and approved by OEGS.

Soil and groundwater at the site may be contaminated with petroleum, solvents, manufactured gas plant (MGP) or other hazardous substances. Contractor must provide materials, equipment, and training to workers and authorized visitors to ensure their protection from these and any other hazards which may be identified during the course of this work. Workers in areas with evidence of contaminated material or known hazardous waste must have completed a 40-hour Hazardous Waste Operations and Emergency Response (HAZWOPER) training course that meets OSHA requirements of 29 CFR Part 1910, Occupational Safety and Health Standards. In addition, all personnel in contaminated work zones will have up-to-date 8-hour refresher training and medical monitoring.

The Engineer will conduct continuous air monitoring to ensure that concentrations of organic vapors and dust do not exceed safe action levels included in the RAP. If action levels specified by the Engineer are exceeded, the Engineer will direct the Contractor to implement dust suppression measures, abatement of organic vapors, mitigation of odors, and/or temporary work stoppage, as appropriate. The City or Engineer will not accept delay claims or change orders associated with conducting dust suppression, mitigation of odors, or abatement of organic vapors.

Work must include, but not be limited to:

1. Implementation of a baseline medical program.
2. Providing safety equipment and protective clothing for site personnel, including maintenance of equipment on a daily basis; replacement of disposable equipment as required; decontamination of clothing, equipment and personnel; and providing all other health and safety measures.
3. Providing, installing, operating and maintaining on-site emergency medical first aid equipment as specified in this section for which payment is not provided under other pay items in this Contract.
4. Providing, installing, operating, maintaining and decommissioning all equipment and personnel decontamination facilities specified within this section, including, but not limited to, the decontamination pad, decontamination water supply, decontamination water collection equipment and all other items and services required for the implementation of the health and safety requirements for which pay items are not provided elsewhere in this Contract.

5. Provide the minimum health and safety requirements for excavation activities within the limits of this Contract.
6. Implement and enforce a HASP: The HASP as presented in these specifications is dynamic with provisions for change to reflect new information, new practices or procedures, changing site environmental conditions or other situations which may affect site workers and the public. The HASP will also address measures for community protection, accident prevention, personnel protection, emergency response/contingency planning, air monitoring, odor control and hazardous chemicals expected on site. Providing a Confined Space Entry Program as defined in the Occupational Safety and Health Act, Confined Space Entry Standard, 29 CFR 1910.146.
7. Employ all necessary means to prevent on- and off-site odor nuisances. The procedures may include, but not limited to: (a) limiting the area of open excavations; (b) shrouding open excavations with tarps and other covers; (c) misting with odor masking agents; and/or (d) use of pre-approved foams to cover exposed odorous soils.
8. Ensure that the Engineer's air monitoring equipment is not damaged. The cost to repair any damage to equipment caused by the Contractor will be borne by the Contractor.
9. Responsible for any toxic effects to workers or authorized visitors from the air supplied to respirators or from toxic or damaging vapors or residues resulting from petroleum, solvents, or other hazardous substances in soil or groundwater.

(B) Environmental Consulting Services

The Contractor must retain an independent Environmental Consultant to obtain all permits and perform all soil and water sampling, and health and safety services.

1. If conditions within the exclusion zone are deemed hazardous, then the Contractor and its independent Environmental Consultant must ensure that all personnel working within identified exclusion zones and/or involved (direct contact) with the handling, storage or transport of hazardous and contaminated materials must have completed a minimum of forty (40) hours of Health and Safety Training on Hazardous Waste Sites in accordance with 29 CFR 1910.120(e). The training program must be conducted by a qualified safety instructor. If conditions in the exclusion zone are deemed to be non-hazardous, the independent Environmental Consultant must provide site specific training.
2. The Contractor must ensure that on-site management and supervisors directly responsible for or who supervise employees engaged in hazardous waste operations must receive the training specified in above and at least eight (8) additional hours of specialized training on managing such operations at the time of job assignment.

(C) Submittals

1. The Contractor must submit a written HASP, as specified herein, to OEGS for review and approval. The written HASP must be submitted, within thirty (30) calendar days after the availability of analytical results of the soil and groundwater testing, as required under Section 8.01 C2 and Section 8.01 W2. The Contractor must make all necessary revisions required by OEGS and resubmit the HASP to OEGS for acceptance. Start-up work for the project will not be permitted until written acceptance has been issued by OEGS.
2. Daily safety logs must be maintained by the Contractor and must be submitted to the Engineer either on request or on completion of the work. Training logs must be maintained by the Contractor and submitted to the Engineer either on request or on completion of the work. Daily logs on air monitoring during excavation activities must be prepared and

maintained by the Contractor and submitted to the Engineer either on request or upon completion of the work.

3. A closeout report must be submitted by the Contractor to the Engineer upon completion of the work within the defined exclusion zones. This report must summarize the daily safety and monitoring logs and provides an overview of the Contractor's performance regarding environmental and safety issues. The report must carefully document all areas where contamination has been found including pictures, addresses of locations, and potential sources.
4. Medical Surveillance Examinations: The Contractor must submit to the Engineer the name, office address and telephone number of the medical consultant utilized. Evidence of baseline medical examinations together with the evidence of the ability to wear National Institute for Occupational Safety and Health (NIOSH) approved respirators (as specified in American National Standards Institute (ANSI) Z88.6) must be provided to the Engineer for all construction personnel who are to enter the exclusion zones.
5. Accident Reports: All accidents, spills, or other health and safety incidents must be reported to the Engineer.

(D) Health and Safety Plan

The HASP must comply with OSHA regulations 29 CFR 1910.120/1926.65. This document must at a minimum contain the following:

1. Description of work to be performed
2. Site description
3. Key personnel
4. Worker training procedures
5. Work practices and segregation of work area
6. Hazardous substance evaluation
7. Hazard assessment
8. Personal and community air monitoring procedures and action levels
9. Personal protective equipment
10. Decontamination procedures
11. Safety rules
12. Emergency procedures
13. Spill prevention and control, as well as spill reporting procedures
14. Dust control, vapor/odor suppression procedures
15. Identification of the nearest hospital and route
16. Confined space procedures
17. Excavation safety procedures

## **8.01 S.2 MEASUREMENT**

### Health and Safety Requirements

- A. 25% of the lump sum price will be paid when the following items are implemented or mobilized:
  1. Medical surveillance program
  2. Health and safety training
  3. Health and safety plan
  4. Environmental and personnel monitoring
  5. Instrumentation
  6. Spill control

7. Dust control
8. Odor control
9. Personnel and equipment decontamination facilities
10. Personnel protective clothing
11. Communications
12. Mobilization

- B. 50% will be paid in proportional monthly amounts over the period of work.
- C. 25% will be paid when the operation is demobilized and removed from the project site.

### **8.01 S.3 PRICE TO COVER**

#### Health and Safety Requirements

The lump sum price bid for the health and safety requirements will include all labor, materials, equipment, and insurance necessary to complete the work in accordance with these specifications. The price bid will include, but not be limited to, the following:

- A. Providing training, safety personnel, air monitoring and medical examinations as specified.
- B. Providing safety equipment and protective clothing for site personnel, including maintenance of equipment on a daily basis; replacement of disposable equipment as required; decontamination of clothing, equipment and personnel; and all other health and safety activities or costs not paid for under other pay items in this Contract.
- C. Providing, installing, operating and maintaining on-site emergency medical and first aid equipment. This includes all furnishings, equipment, supplies and maintenance of all medical equipment, and all other health and safety items and services for which payment is not provided under other pay items in this Contract.
- D. Providing, installing, operating, maintaining, and decommissioning all personnel and equipment decontamination facilities, including decontamination pad, decontamination water supply, and all other items and services required for the implementation of the health and safety requirements for which pay items are not provided elsewhere in this Contract. Vehicle decontamination pads will be included in the price of this item. Disposal of decontamination fluid will be paid for under Item ESCR-8.01 W1.
- E. Spill Control
  1. Payment will account for furnishing, installing, and maintaining all spill control equipment and facilities. Payment will include equipment and personnel to perform emergency measures required to contain any spillage and to remove spilled materials and soils or liquids that become contaminated due to spillage during work within the exclusion zones and handling of excavated soils and liquids from these areas. This collected spill material will be properly disposed of.
  2. Payment under this item will not include testing, handling, transportation or disposal of petroleum-contaminated/potentially hazardous soils excavated during construction. The price for this work will be paid for under Items ESCR-8.01 C1, ESCR-8.01 C2, or ESCR-8.01 H, as appropriate.

#### F. Dust Control

Payment will account for furnishing, installing, and maintaining dust control equipment and facilities to be used whenever applicable dust levels are exceeded as required in the Remedial Action Plan and MGP Mitigation Work Plan and associated Construction HASPs. Payment will include all necessary labor, equipment, clean water, foam, and all

other materials required by the Dust Control Plan. The NYSDOH Community Air Monitoring Plan (CAMP) may be used as guidance.

G. Vapor/Odor Suppression

Payment will account for furnishing, installing and maintaining vapor/odor control equipment and facilities to be used whenever organic vapor monitoring or the presence of odors indicates that vapor suppression is required to protect workers or the public as required in the Remedial Action Plan, MGP Mitigation Work Plan, and associated Construction HASPs. Payment will include all necessary labor, equipment, clean water, foam and all other materials required by the Vapor/Odor Suppression Plan.

H. Mobilization/Demobilization

1. Mobilization

Payment will include the following, but not be limited to:

- a. All work required to furnish, install and maintain all signs, fencing, support zone facilities, parking areas and all temporary utilities;
- b. All work required to furnish, install, and maintain an office space with phone and utilities for health and safety personnel;
- c. All work required for complete preparation of lay down area for roll-off containers, including sampling, and any required fencing;
- d. All direct invoiced cost from bonding companies and government agencies for permits and costs of insurance; and
- e. All other items and services required for mobilization and site preparation.

2. Demobilization

Payment will include but not be limited to: All work required to sample the area; remove from the site all equipment, temporary utilities and supporting facilities; performance of necessary decontamination and repairs; disposal of disposable equipment and protective gear and other items and services required for complete demobilization.

*Payment will be made under:*

Item No.	Description	Pay Unit
ESCR 8.01 S	HEALTH AND SAFETY	L.S.

## SECTION ESCR 8.01 W1 – REMOVAL, TREATMENT, AND DISPOSAL / DISCHARGE OF CONTAMINATED WATER

### 8.01 W1.1 WORK TO INCLUDE

General: This work must consist of the proper removal and disposal of all contaminated groundwater and decontamination water generated during construction operations. The Contractor must be solely responsible for the proper disposal or discharge of all contaminated water generated at the job site. The Contractor will have the option of treating water on-site for discharge to the sewer system or removing contaminated water for off-site disposal. The Contractor must be responsible to choose a method compatible to the construction work and will be compensated on a per day basis regardless of method employed. The Contractor will be compensated for only those days where the system is in full operation.

The Contractor must retain a dewatering/water treatment Specialist (hereinafter the “Specialist”) and laboratory as specified under **Section 8.01 W2**, to conduct any testing that may be required for disposal of impacted water.

The dewatering/water treatment Specialist is responsible to obtain all permits; perform all water sampling, testing; and provide ancillary services related to dewatering and water treatment. The Specialist must at a minimum provide documentation to OEGS demonstrating the minimum requirements as set forth below:

1. The Specialist must demonstrate that it has, at a minimum, three (3) years’ experience in the design of dewatering plans. The Specialist should demonstrate expertise dealing with issues associated with contaminated water. During that three (3) year period, the Specialist must demonstrate that it provided dewatering and water treatment systems as a routine part of its daily operations.
2. The Specialist must be experienced in work of this nature, size, and complexity and must have previous experience in working with the NYSDEC.
3. The Specialist must furnish a project listing identifying the location, nature of services provided, owner, owner’s contact, contact’s telephone number, project duration and value for at least five (5) projects within the last three (3) years of a similar nature, size, and complexity to this one.
4. If conditions within the exclusion zone are deemed hazardous, then the Contractor and its independent Environmental Consultant must ensure that all personnel working within identified exclusion zones and/or involved (direct contact) with the handling, storage or transport of hazardous and contaminated material must have completed a minimum of forty (40) hours of Health and Safety Training on Hazardous Waste Sites in accordance with 29 CFR 1910.120(e). The training program must be conducted by a qualified safety instructor. If conditions in the exclusion zone are deemed to be non-hazardous, the Specialist will be responsible to provide site-specific training to its employees and other affected personnel.
5. The Contractor must ensure that on-site management and supervisors directly responsible for or who supervise employees engaged in hazardous waste operations must receive the training specified in above and at least eight (8) additional hours of specialized training on managing such operations at the time of job assignment.

The Contractor must document all operations associated with the handling, sampling and disposal of contaminated water, and ensure that they are in compliance with applicable Federal, State and Local statutes and regulations.

The Contractor must supply all labor, equipment, transport, plant, material, treatment, and other incidentals required to conduct the specified work of this section.

If water will be disposed of into the sewer system, the Contractor must ensure the Specialist treats the water to comply with the New York City Department of Environmental Protection (NYCDEP) Sewer Effluent Limit concentrations prior to discharge. The Contractor is responsible for providing settling or filtering tanks and any other apparatus required by NYCDEP. Alternatively, the Contractor can provide a plan for transport and disposal at an off-site waste disposal facility.

Within forty-five (45) calendar days after award of Contract, the Contractor must submit to OECS for review and approval, a Water Handling Plan (WHP). The WHP must be approved by OECS prior to the Contractor's commencement of work. The minimum requirements for the WHP are specified in **Section 8.01W 1.2**, for each type of disposal (disposal into the sewer or off-site disposal). The Contractor must maintain a complete, up to date copy of the WHP on the job site at all times.

### **8.01 W1.2 CONSTRUCTION DETAILS**

For each disposal method the Contractor proposes to utilize (disposal to sewer or off-site disposal), the WHP must include the information required in paragraphs A and B below, as appropriate.

- A. On-site treatment and discharge into New York City sewers.
  1. Regulations: The Contractor must comply with all applicable regulations. This includes but may not be limited to:
    - Title 15-New NYCDEP Sewer Use Regulations.
  2. Permits: The Contractor is solely responsible to obtain all necessary and appropriate Federal, State and Local permits and approvals. The Contractor will be responsible for performing all and any system pilot tests required for permit approval. This includes but may not be limited to:
    - a. Industrial waste approval for the New York City sewer system.
    - b. Groundwater discharge permit for the New York City sewer system (NYCDEP Division of Sewer Regulation and Control), if discharge to sewer exceeds 10,000 gallons per day.
    - c. The Contractor must comply with NYSDEC State Pollutant Discharge Elimination System (SPDES) Permit Number GP-0-10-001, General Permit for Stormwater Discharges.
    - d. An NYSDEC water withdrawal permit is required if discharge exceeds 100,000 gallons per day.
    - e. Wastewater quality control application, NYCDEP.
  3. The WHP for this portion of the work must include the following at a minimum:
    - a. Identification and design of Contractor's proposed treatment to assure that the water meets the NYCDEP sewer use guidelines and/or NYSDEC discharge permit requirements prior to discharge to the sewer, including identification of all materials, procedures, settling or filtering tanks, filters and other appurtenances proposed for treatment and disposal of contaminated water.

- b. The name, address and telephone number of the contact for the Contractor's proposed chemical laboratory, as well as the laboratory's certifications under Federal, State or non-governmental bodies.
- c. The name, address and telephone number of the contact for the Contractor's proposed independent Environmental Consultant.
- d. Copies of all submitted permit applications and approved permits the Contractor have received.
- e. Periodic inspection, monitoring, and reporting in accordance with discharge permit requirements.

#### 4. Materials

The Contractor must supply all settling or filtering tanks, pumps, filters, treatment devices and other appurtenances for treatment, temporary storage and disposal of contaminated water. All equipment must be suitable for the work described herein.

#### 5. Execution

- a. The Contractor is solely responsible for disposal of all water, in accordance with all Federal, State and Local regulations.
- b. The Contractor is solely responsible for any treatment required to assure that water discharged into the sewer is in compliance with all permits and Federal, State and Local statutes and regulations.
- c. The Contractor is solely responsible for the quality of the water disposed of into the sewers.
- d. The Contractor is responsible for sampling and testing of water for the NYCDEP/NYSDEC discharge concentrations. The quality of the data is the Contractor's responsibility. Any sampling and testing must be conducted and paid in accordance with **Section 8.01 W2**.
- e. The Contractor will be responsible to maintain the discharge rate to the sewer such that all permit requirements are met, the capacity of the sewer is not exceeded and no surcharging occurs downstream due to the Contractor's actions.
- f. An NYSDEC water withdrawal permit is required if discharge exceeds 100,000 gallons per day.
- g. Disposal of Treatment Media
  - (1) The Contractor will be responsible for disposal or recycling of treatment media in accordance with all Federal, State and Local regulations.
  - (2) The Contractor must provide the Engineer with all relevant documentation concerning the disposal of treatment media, including manifests, bills of lading, certificates of recycling or destruction and other applicable documentation.
  - (3) Disposal of treatment media will not be considered as a separate pay item; instead it will be considered as incidental work thereto and included in the unit price bid.

## B. Off-Site Disposal

1. Regulations: The Contractor must conform to all applicable Federal, State and Local regulations pertaining to the transportation, storage and disposal of any hazardous and/or non-hazardous materials as listed in Attachment 2.
2. The following must be submitted to the Engineer prior to initiating any off-site disposal:
  - a.
    - (1) Name and waste transporter permit number
    - (2) Address
    - (3) Name of responsible contact for the waste transporter
    - (4) Any and all necessary permit authorizations for each type of waste transported
    - (5) Previous experience in performing the type of work specified herein
  - b. General information for each proposed treatment/disposal facility and at least one backup treatment/disposal facility
    - (1) Facility name and USEPA identification number
    - (2) Facility location
    - (3) Name of responsible contact for the facility
    - (4) Telephone number for contact
    - (5) Unit of measure utilized at facility for costing purposes
  - c. A listing of all permits, licenses, letters of approval and other authorizations to operate, which are currently held and valid for the proposed facility as they pertain to receipt and management of the wastes derived from this Contract.
  - d. A listing of all permits, licenses, letters of approval and other authorizations to operate which have been applied for by the proposed facility but not yet granted or issued. Provide dates of application(s) submitted. Planned submittals must also be noted.
  - e. The Contractor must specify and describe the disposal/containment unit(s) that the proposed facility will use to manage the waste and provide dates of construction and beginning of use, if applicable. Drawings may be provided. The Contractor must identify the capacity available in the units and the capacity reserved for the subject waste.
  - f. The Contractor must provide the date of the proposed facility's last compliance inspection.
  - g. A list of all active (unresolved) compliance orders, agreements, enforcement notices or notices of violations issued to the proposed facility must be submitted. The source and nature of the cause of violation must be stated, if known. If groundwater contamination is noted, details of the facility's groundwater monitoring program must be provided.
  - h. Description of all sampling and field/laboratory analyses that will be needed to obtain disposal facility approval.

### 3. Materials

All vessels for temporary storage and transport to an off-site disposal facility must be as required in DOT regulations.

#### 4. Execution

##### a. General

- (1) The Contractor must organize and maintain the material shipment records/manifests required by Federal, State and Local laws. The Contractor must include all bills of lading, certificates of destruction, recycling or treatment and other applicable documents.
- (2) The Contractor must coordinate the schedule for truck arrival and material deliveries at the job site to meet the approved project schedule. The schedule must be compatible with the availability of equipment and personnel for material handling at the job site.
- (3) The Contractor must inspect all vehicles leaving the project site to ensure that contaminated liquids are not spilling and are contained for transport.
- (4) The Contractor must obtain letters of commitment from the waste haulers and the treatment, disposal or recovery facility to haul and accept shipment. The letter must indicate agreement to handle and accept the specified estimated quantities and types of material during the time period specified in the project schedule and any time extension as deemed as necessary.
- (5) The Contractor must verify the volume of each shipment of water from the site.
- (6) The Contractor is responsible for sampling and testing of water for off-site disposal. The quality of the data is the Contractor's responsibility. Any sampling and testing must be conducted and paid in accordance with **Section 8.01 W2**.
- (7) The Contractor is responsible for any additional analyses required by the TSD facility, and for the acceptance of the water at an approved TSD facility.

##### b. Hauling

- (1) The Contractor must not deliver waste to any facility other than the TSD facility(ies) listed on the shipping manifest.
- (2) The Contractor must coordinate manifesting, placarding of shipments, and vehicle decontamination. All quantities must also be measured and recorded upon arrival at the TSD facility(ies). If any deviation between the two records occurs, the matter is to be reported immediately to the Engineer and must be resolved by the Contractor to the satisfaction of the Engineer.
- (3) The Contractor will be responsible for any and all actions necessary to remedy situations involving material spilled in transit or mud and dust tracked off-site. This cleanup must be accomplished at the Contractor's expense.
- (4) The Contractor will be responsible for inspecting the access routes for road conditions, overhead clearance and weight restrictions.
- (5) The Contractor must only use the transporter(s) identified in the WHP for the performance of work. Only a transporter with a current Part 364 Waste Transporter Permit from NYSDEC may transport this material. Any use of substitute or additional transporters must have previous written approval from the Engineer at no additional cost to the City.
- (6) The Contractor must develop, document, and implement a policy for accident prevention.

- (7) The Contractor must not combine waste materials from other projects with material from this project.
- (8) The Contractor must obtain for the City a hazardous waste generator identification number and will sign the manifest as the generator, if necessary.
- (9) No material must be transported until approved by the Engineer.

c. Disposal Facilities

- (1) The Contractor must use only the TSD facility(ies) identified in the WHP for the performance of the work. Substitutions or additions must not be permitted without prior written approval from OEGS, and, if approved, must be at no extra cost to the City.
- (2) The Contractor will be responsible for acceptance of the material at an approved TSD facility, for ensuring that the facility is properly permitted to accept the stated material, and that the facility provides the stated storage and/or disposal services.
- (3) The City reserves the right to contact and visit the disposal facility and regulatory agencies to verify the agreement to accept the stated material and to verify any other information provided. This does not in any way relieve the Contractor of the Contractor's responsibilities under this Contract.
- (4) In the event that the identified and approved facility ceases to accept the stated materials or the facility ceases operations, it is the Contractor's responsibility to locate an alternate approved and permitted facility(ies) for accepting materials. The Contractor is responsible for making the necessary arrangements to utilize the facility(ies), and the alternate facility(ies) must be approved in writing by the Engineer in the same manner and with the same requirements as for the original facility(ies). This must be done with no extra cost or delay to the City.

d. Equipment and Vehicle Decontamination

- (1) The Contractor must design and construct a portable decontamination station to be used to decontaminate equipment and vehicles exiting the exclusion zone. The cost for this work will be paid under Item ESCR-8.01 S.

8.01 W1.3 METHOD OF MEASUREMENT

The quantity for on-site treatment and discharge or off-site disposal will be on a per day basis.

8.01 W1.4 PRICE TO COVER

(A) The per day price bid for Item ESCR-8.01 W1 will include the cost of furnishing all labor, materials, equipment, plan, and insurance for handling, transportation, disposal, documentation, permits, hauling, mobilization and demobilization, and any other incidentals thereto to complete the work.

(B) The Contractor will not be paid for water that is within the NYCDEP Sewer Discharge Limits and/or NYSDEC permit discharge limits.

*Payment will be made under:*

Item No.	Description	Pay Unit
ESCR 8.01 W1	REMOVAL, TREATMENT, AND DISCHARGE/DISPOSAL OF CONTAMINATED WATER	DAY

**SECTION ESCR 8.01 W2 –SAMPLING AND TESTING OF CONTAMINATED WATER****8.01 W2.1 WORK TO INCLUDE****(A) Description**

The work will consist of sampling and testing of potentially contaminated groundwater, surface runoff within the excavated area and all contaminated water generated during the decontamination process.

**(B) Sampling and Testing**

1. The Contractor is responsible, at a minimum, for sampling and testing of contaminated water for the NYCDEP Sewer Effluent Limit concentrations as listed in Section 8.01 and/or NYSDEC SPDES Permit Number GP-0-10-001, General Permit for Stormwater Discharges and/or any other NYSDEC discharge permitting requirements, and in accordance with the Engineer-approved SSP/FSP and the Investigation HASP, as specified in Section 8.01 C2. The quality of the data is the Contractor's responsibility. Any additional testing required by the Federal, State and/or disposal facilities must be included in the bid price of this Item.
2. All sampling and testing must be conducted by a person trained in sampling protocols using accepted standard practices and/or the NYSDEC sampling guidelines and protocols.
3. All sample containers must be marked with legible sample labels which must indicate the project name, sample location and/or container, the sample number, the date and time of sampling, preservatives utilized, how the sample was chilled to 4 degrees Celsius, and other information that may be useful in determining the character of the sample.
4. Chain-of-custody must be tracked from laboratory issuance of sample containers through receipt of the samples.
5. The Contractor must maintain a bound sample log book. The Contractor must provide the Engineer access to it at all times and must turn it over to the Engineer in good condition at the completion of the work. The following information, as a minimum, must be recorded to the log:
  - a. Sample identification number
  - b. Sample location
  - c. Field observation
  - d. Sample type
  - e. Analyses
  - f. Date/time of collection
  - g. Collector's name
  - h. Sample procedures and equipment used
  - i. Date sent to laboratory/name of laboratory
6. Only dedicated sampling equipment may be used to collect these samples. All equipment involved in field sampling must be decontaminated before being brought to the site, and must be properly disposed of after use.
7. Samples must be submitted to the Contractor's laboratory within the holding times for the parameters analyzed.
8. All analyses must be done by a laboratory that has received approval from the NYSDOH's ELAP for the methods to be done. The Contractor must specify the laboratory in the WHP.

9. Analytical results for water discharged to the sewer and for off-site disposal must be submitted to the Engineer no later than five (5) days after sample collection.
10. The City reserves the right to direct the Contractor to conduct alternative sampling in lieu of the parameters described above, if the situation warrants. The substitute sampling parameters will be of equal or lesser monetary value than those described above, as determined by industry laboratory pricing standards.

**8.01 W2.2 METHOD OF MEASUREMENT**

Quantities for samples will be measured as the number of sets of samples that are tested for the NYCDEP Sewer Effluent Limit concentrations and/or NYSDEC discharge permitting requirements. A set will be defined as one (1) representative sample analyzed for the full range of NYCDEP parameters as specified in Section 8.01.

**8.01 W2.3 PRICE TO COVER**

The unit price bid per set for Item ESCR-8.01 W2-1 will include the cost of furnishing all labor, materials, equipment, plan, and insurance for handling, transport, sampling, testing, documentation, permits, other incidentals necessary to complete the work of sampling and testing of contaminated water. Any additional costs incurred by the Contractor for sampling and testing of contaminated water will be included in the bid price of this Item.

*Payment will be made under:*

ESCR 8.01 W2-1	NYCDEP-SAMPLING AND TESTING OF CONTAMINATED WATER	SETS

## **SECTION ESCR 900-SSVS – SUB-SLAB VENTING SYSTEM**

### **ESCR 900-SSVS.1. DESCRIPTION.**

Under this item, the Contractor is required to perform unforeseen installation of sub-slab venting systems (SSVS) as part of the construction of the buildings within the project limits, as shown on the contract documents and specifications, or as directed by the Engineer. The sub-slab venting systems installation work may consist of:

- Four (4)-inch diameter, 0.02-inch slotted, and solid, polyvinyl chloride piping installed beneath the building's concrete foundation slab and waterproofing within 16-inch wide by 16-inch deep trenches;
- For the East 10<sup>th</sup> Comfort Station, Maintenance and Operations Area 2 Building (M&O 2), Maintenance and Operations Area 3 Building (M&O 3), and the Tennis House Building, two lengths of pipe would be installed beneath each building. The pipes would travel the length of the building parallel to each other, dividing the building into thirds. These sub-grade piping sections would be connected with an additional section of pipe (perpendicular) forming a "U" or an "H" shape to allow for one vent to the roof;
- For the Track and Field Building, three lengths of pipe would be installed beneath the building slab. The pipes would travel the length of the building parallel to each other, dividing the building into quarters. These sub-grade piping sections would be connected with an additional section of pipe (perpendicular) forming a "U" or an "H" shape to allow for one vent to the roof;
- The base of the trenches to be compacted and covered with non-woven geotextile;
- Trenches to be backfilled with ASTM #5 aggregate;
- Minimum 6-inch thick layer of gas permeable aggregate under the building slab outside of piping trench areas;
- One (1) interior riser pipe constructed of 4-inch diameter galvanized steel extending from each building slab to building roof with a turbine; and
- All other unforeseen sub-slab venting system related work.

### **ESCR 900-SSVS.2. QUALITY ASSURANCE.**

The Contractor or subcontractor that will install the sub-slab venting systems shall have not less than seven (7) years' continuous experience in the installation operations required to install sub-slab venting systems or other related work that may be required to complete the work.

### **ESCR 900-SSVS.3. MATERIALS.**

The Contractor must provide shop drawings signed by a Professional Engineer licensed in the State of New York, catalog cuts and/or other manufacturer documentation in order to verify new materials to be installed or constructed as directed and approved by the Engineer.

### **ESCR 900-SSVS.4. CONSTRUCTION DETAILS.**

The Contractor must take photos prior to, during and after construction of items being constructed under this section. The Contractor must organize photos with a key map / sketch for each property to the satisfaction of the Engineer.

If during the course of the work there is an unforeseen changed condition than was not documented in the scope of "sub-slab venting system", the Contractor must stop work and notify the Engineer.

The Contractor is responsible to complete the sub-slab venting system work to the satisfaction of the Engineer.

**ESCR 900-SSVS.5. MEASUREMENT.**

The quantity of SSVS WORK to be measured for payment will be the number of SSVS systems actually installed by the Contractor to the satisfaction of the Engineer.

**ESCR 900-SSVS.6. BASIS OF PAYMENT.**

The unit price bid for each SSVS WORK item must cover the cost of all labor, materials, plant, equipment, insurance, and necessary incidentals required to furnish, install, and test the new SSVS; all in accordance with the the contract drawings, the specifications and the directions of the Engineer.

Payment will be made under:

Item No.	Item	Pay Unit

**V - PRELIMINARY GAS WORK TO BE PERFORMED BY FACILITY OPERATOR**

**VI - LISTING OF APPROXIMATE LOCATIONS OF EP-7 BID ITEMS QUANTITIES**

## I - NOTICE TO ALL BIDDERS; GAS COST SHARING WORK

All prospective bidders are hereby advised that, pursuant to the "Gas Facility Cost Allocation Act", ("the Act"), the City of New York has entered into an agreement ("the Agreement") with the gas companies (Con Edison or National Grid (formerly KeySpan Energy Delivery)) operating in their respective areas of the City to "share" the cost of facility relocation and/or support and protection of facilities disturbed by proposed water and/or sewer and related City work specified in this contract. Therefore, bid items, specifications and estimated quantities for the incremental costs of support and protection of certain gas facilities have been included in this contract. The low bid for this contract shall be determined by examining each bid for all work to be performed under this contract including any work of support and protection of gas facilities to be performed. The Contractor shall not seek additional compensation from gas companies except as specifically set forth in its contract.

## II - GENERAL PROVISIONS; GAS COST SHARING WORK

### 1. General:

The Contractor shall perform City work with interferences from existing live and abandoned gas facilities. This shall be defined as utility work. Therefore, this contract includes bid items, specifications and estimated quantities designed to fully compensate him/her for the incremental costs of supporting, protecting, providing accommodations and, avoiding disturbing gas facilities located in the streets shown on the contract drawings. In the event that any other provisions of this contract related to gas facilities (or private utilities) conflict with these provisions, these provisions shall supersede and govern all work related to gas facilities owned by the companies operating in the project area. All utility work, as defined in these specifications, including changes and additions thereto shall be paid solely by the City except when specified otherwise in this contract. Contractor hereby agrees that the facility operator shall not be liable to pay him/her for any work performed including extra utility work. Contractor agrees that its bid prices include all compensation for loss of productivity and efficiency, idle time, delays (including any delays occasioned by negotiation of a contract change), change in operations, mobilization, demobilization, remobilization, added cost or expense, lost of profit, other damages or impact costs that may be suffered by or because of utility work, or the presence of gas facilities in the proximity of City work and that it will not seek additional compensation for these items. All disputes shall be resolved as specified in the contract.

Pursuant to the Act, Agreement, and the New York City Administrative Code, the gas company(ies) has been directed by the Commissioner and is required to perform all maintenance, repairs, replacement, shifting, alteration, relocation, and/or removal work that are not part of this contract. By having bid on this contract, the Contractor understands and agrees that the Commissioner has preasserted any right the City has to require, including the issuance of any directives or so called "order outs" under the New York City Administrative Code, any or all gas companies to maintain, repair, replace, protect, support, shift, alter, relocate, and/or remove all gas facilities that are about to be disturbed by the City contract work. The issuance of additional such directives during the performance of the contract work, where necessary in the sole judgment of the Commissioner, shall be initiated by such Commissioner as set forth in the relevant sections of the Act and Agreement. Contractor further agrees to insert such requirements as set forth herein above into any contracts with its approved subcontractors so that its subcontractors also understand and agree to such contract requirements.

### 2. Gas Interferences And Accommodations:

During the performance of sewer and water main work funded by the New York City Department of Environmental Protection (NYCDEP), as instructed by the Engineer, the use of any applicable contract bid item is allowed in order to resolve and accommodate all gas facilities interferences with such City work, including the removal of contaminated soil in associated trench excavation. This is in addition to the specified EP-7 bid items in the contract. Payment for such accommodation shall be funded by EP-7 bid item "UTL-GCS-2WS - GAS INTERFERENCES AND ACCOMMODATIONS" (F.S. Fixed Sum). The value of such accommodation shall be computed by multiplying the appropriate unit prices bid to the quantity of work performed, as determined by the Engineer, and applying the total amount thus to be paid

to EP-7 bid item “UTL-GCS-2WS - GAS INTERFERENCES AND ACCOMMODATIONS”. When EP-7 bid item “UTL-GCS-2WS - GAS INTERFERENCES AND ACCOMMODATIONS” does not exist, such additional accommodation work shall be at no cost to the City but shall be a matter of adjustment between gas facility operator and Contractor. Private facilities, other than gas, that become in interference due to gas interferences accommodations shall also be accommodated, if so directed by the Resident Engineer, at no additional cost to the City and, provided that its owner agrees to be responsible for all additional costs to Contractor, otherwise, such facility shall be ordered by the City to be maintained, shifted, relocated or replaced by its owner at his/her expenses.

## **2a. Water Main Accommodations:**

When water main construction is to be performed in this contract, Contractor shall be required, if warranted by field conditions, and at locations designated by the Resident or Borough Engineer, to change the vertical or horizontal alignment of water mains including but not limited to all additional labor, material, work method accommodations, furnishing, delivering and laying offset fittings and pipes, etc., necessary in order to complete water main installation and, avoid gas interferences in the project area, including street intersections. Typical work method accommodations shall include, but not be limited to, pier and plate, installation of filter fabric and select fill, etc. Such work shall be performed as directed by the Engineer and in accordance with contract specifications and latest edition of water mains standards and specifications.

## **2b. Sewer Accommodations:**

When sewer construction is to be performed in this contract, Contractor shall be required, if warranted by field conditions, and at locations designated by the Resident or Borough Engineer, to change the horizontal alignment of sewer facilities (if possible) including but not limited to all additional labor, material, work method accommodations, furnishing, delivering and construction of additional manholes or modification of manholes/catch basins, extending chute connections, house connections, using alternate materials and methods, poured-in-place structures, etc., necessary in order to complete sewer installation and, avoid gas interferences in the project area, including street intersections. The term sewer facility shall include, but not be limited to, all sewer pipe and appurtenances, manholes, catch basins, catch basin chutes, etc. Such work shall be performed as directed by the Engineer and in accordance with contract specifications and latest edition of sewer standards and specifications.

## **3. Quantity Overruns, EP-7 Funded Bid Items:**

No quantity overrun, in excess of one hundred twenty five (125) percent, shall be permitted for EP-7 funded bid items (gas) included in this contract, except when Resident Engineer determines that such overruns are caused by field modifications to planned City work, or approved construction methods, or contract scope changes. Overruns not paid by City shall be negotiated and paid to Contractor by gas facility operator who then shall be entitled to reimbursement by NYCDEP under established cost sharing procedures.

## **4. Changes And Extra Work:**

This section is not applicable to work defined under “Emergency Reconstruction Contracts” or so-called “Where and When Contracts” since these projects, by definition, inherently encounter unanticipated gas facilities and cannot be pre-engineered. In all other cases, any contract changes proposed for City work shall also cover and include all associated changes to support and protection of gas facilities affected by such changes to City work. In all other cases where the Contractor finds that City work cannot be performed as planned and specified and/or, as approved because of a need to support, protect and/or alleviate interferences from gas facilities that were not listed and/or shown, or incorrectly shown in contract plans and specifications, he shall immediately notify the Resident Engineer and the facility operators’ representative of his findings. Resident Engineer shall promptly examine such claims and determine whether or not such work is covered by contract bid items and /or specifications (contract bid items and specifications shall include city contract items as well as EP-7 items). The Resident Engineer shall also

examine the claim to determine if the application of EP-7 bid item "UTL-GCS-2WS - GAS INTERFERENCES AND ACCOMMODATIONS" is appropriate to resolve the claim. If upon examination, the Engineer determines that such field conditions were unanticipated (not shown and/or listed, or incorrectly shown in contract documents) and are not covered by bid items and contract specifications, he shall then direct the Contractor and the affected facility operator to negotiate the cost of supporting and protecting, and/or alleviating the impact on City work caused by such unanticipated gas facilities with each other with the understanding that the performance of City work shall continue during negotiations. If a cost agreement is reached, the Contractor and facility operator shall adjust such costs between themselves at no additional costs to the City contract. If the Contractor and affected facility operator do not reach an agreement concerning the price to be paid for the extra work within five (5) business days of the Engineer's directive to engage into such negotiations and, after considering: public safety and inconvenience, requirements of laws and regulations applicable to private utilities, integrity of all utility systems, including but not limited to sewer and water, gas, electric, telephone and, cable TV facilities, sound engineering practices, cost (long and short term) to all affected parties, and potential City work delays, then the Resident Engineer, depending on nature and severity of interferences with City work, shall either, direct the facility operator to relocate or replace its facilities at its own discretion and cost, reimbursable by NYCDEP under established gas cost sharing procedures or, direct the Contractor to perform the utility work on actual time, material and equipment costs basis pursuant to relevant contract requirements and amendments. Contract bid prices for any applicable items of work involved shall be applied, or converted to an allowance for time and material charges. Changes shall be for affected portions of utility work and, shall be processed with EP-7 funds.

#### **5. Excavation:**

All excavators shall notify the NYC/LI One Call Center at 1-800-272-4480 at least two (2) working days, not including the day of the call, but not more than ten (10) working days in advance of the start of any excavation work. The gas company(ies) will mark out its facilities within the project limits and provide Construction Inspector(s) during all excavation work in close proximity (within twelve (12) inches) to gas facilities. The Contractor shall exercise extreme caution when excavating in the vicinity of any gas facilities. Hand excavation shall be performed within twelve (12) inches of gas facilities. The Contractor prior to excavating underneath these facilities shall adequately support all gas facilities. Standard support details for gas facilities have been included in the specifications. Any damage to gas facilities shall be reported immediately to the gas company(ies). The Contractor shall be responsible for all cost associated with repairs made necessary by damages caused by his operations.

#### **6. Backfilling And Street Restoration:**

Backfilling operations and street restorations shall be in accordance with contract requirements.

#### **7. Non-Responsive Bids:**

Every gas (EP-7) bid item has a suggested "Not less than" value per unit indicated on contract bid sheet. Bids resulting in cost of less than suggested for EP-7 items are hereby prohibited and if submitted shall be considered NON-RESPONSIVE.

#### **8. Minimum Clearances:**

Clearance requirements for City work shall govern and supersede any clearance requirement of gas facility operator. Therefore, a minimum of twelve (12) inches clearance between private utilities and City water mains, sewers or related structures to be installed in this contract shall be maintained. When this clearance is not attainable, the Resident Engineer may allow a minimum of four (4) inches clearance. With less than twelve (12) inches clearance a neoprene/polyethylene shield (to be provided by facility operator) shall be installed as part of all work item specifications. However, if Resident Engineer determines that City work cannot be performed within allowable clearance and no reasonable City accommodation (no-cost change to City work) is possible, the City shall direct the facility operator to remove, relocate, shift, or alter their facility(ies) pursuant to the New York City Administrative Code.

## **9. Work By Facility Operator:**

The facility operator may find it necessary to perform the following types of work during performance of City work: accommodating a contractor's request for gas facilities modifications (in order to facilitate City contractor's proposed construction method) or, remedial and emergency work on gas facilities proper with their own resources and materials if an approved method of construction for City work causes unanticipated disturbances to gas facilities or, replacing defective gas facilities when they are exposed by the Contractor and their actual conditions are observable by the facility operator. Also included in the above category of defective gas facilities are: the presence of environmental contaminants attributable to the gas facility in or around gas facilities. If such work is deemed required by the facility operator or if facility operator is directed by the City to address such deficiencies at any time during the course of construction, the Contractor shall modify the construction schedule at no cost to the City and allow the facility operator five (5) business days to perform such work without interferences. Additional costs to the facility operator (in cases of accommodations) or, Contractor (in cases of defective gas facilities) due to such gas work, if any, shall be the responsibility of the parties involved and not of the City. Such costs shall be a matter of adjustment between the Contractor and the facility operator.

## **10. Materials Furnished By Facility Operator:**

It shall be the Contractor's responsibility to inspect material to be installed by him immediately upon delivery and advise the facility operator through its authorized representative, of all damaged materials. The Contractor at no additional costs to the City or the facility operator shall replace any material that is damaged or lost after the Contractor's inspection.

## **11. Liability And Insurance:**

Notwithstanding the provisions of this contract, the existing division of liabilities to third parties shall remain the same as between the City and the company. Therefore, it is specifically agreed by the City, company and Contractor (by bidding on this contract) that for the purpose of any liabilities to third parties, that the City contractor performing work directly and physically relating to gas company facilities in this project, shall be deemed an agent of the company and not an agent of the City, the New York City Municipal Water Finance Authority, or the New York City Water Board. Contractor shall include the company as an additional insured on all insurance policies maintained to comply with the City's insurance requirements.

## **12. Width And Depth Of Excavation:**

Contractor shall not be authorized to deliberately change trench or excavation widths and/or depth specified without Engineer's approval. Enlargement of any side of excavation up to eighteen (18) inches beyond pay limits (or inside face of sheeting) requested by the Contractor for the installation of certain types of sheeting may be granted. However, such enlargements or those greater than allowable shall not be approved when, in the sole judgment of the City, field conditions allow the water mains and sewer work to be performed within the limits specified and, the sole purpose of such enlargement request is to impact adjacent utilities (public or private) whose support and protection are part of this contract. Any approval shall be given at no additional cost to the City contract, including EP-7 funding, and all costs associated with unauthorized enlargements shall be the sole responsibility of the Contractor.

## **13. Depth And Crossing Angles Of Gas Facilities:**

Where gas facilities are shown (or specified as) crossing proposed alignment of sewers, water mains, catch basins and chute connections or any other proposed excavations at specific angles (as measured off plans or sketches or specified in contract), it shall be understood that actual field measurements may deviate (plus or minus) forty-five (45) degrees from those shown or specified. The cover, or depth from street surface to top of facilities, shall be as shown or specified in contract documents, no deviation is to be assumed. Where gas facilities are not shown on contract documents, but their support and protection are otherwise included in this contract then, all references to facilities crossing at "various angles and depth" in the gas sections shall mean that such facilities are crossing sewer, water, catch basin and, catch basin chute, and other excavations at a ninety (90) degree angle to the proposed sheeting line or side of

excavation (for unsheeted trenches) with an allowable deviation of forty-five (45) degrees in any direction, except for catch basin chute excavation where the allowable deviation shall be sixty (60) degrees. Where the cover is not noted or specified, the bottom face of such facilities shall be assumed to be crossing catch basin chutes at a depth of three (3) foot eight (8) inches or less from the street surface. Paragraph No. 2 above shall apply in cases of distribution water main construction. Appropriate bid items and specifications are provided for cases where angle and depth are greater than stated above. This section also applies to work defined in "Emergency Reconstruction Contracts" or so-called "Where and When Contracts". These contracts are not pre-engineered and consequently have no drawings, sketches or determined locations and so, gas facilities encountered will be crossing existing and proposed sewer, water, catch basin/catch basin chutes and all appurtenances at various angles and depths.

#### **14. Maintenance Of Traffic For Gas Work:**

All work pertaining to gas bid items and specifications shall be performed within the contract maintenance of traffic plan as specified in the contract document. The bid price for the Maintenance and Protection of Traffic shall cover all work pertaining to gas items. The City shall make compensation for additional maintenance and protection of traffic items in connection with gas item of work only when such additional work is deemed reasonable and necessary by the Resident Engineer and is approved by him prior to its performance.

#### **15. Relocated Gas And Temporary Systems Installation:**

In cases where the Contractor is allowed to select the location for temporary construction such as, installation of dewatering headers, wells, well points, etc., he shall not disturb any gas facilities shown on sketches provided in this section. The only exception shall be, if the affected gas company agrees to such relocation and provided that the cost of such relocation is a matter of adjustment between the company and Contractor, and at no cost to the City.

#### **16. Role Of Company Inspector:**

In any case in which the City elects to perform some or all support and protection work with its own employees, personnel or contractors, the facility operator shall provide onsite inspectors to approve and certify such support and protection work (exclusive of City accommodations) performed by the City's own employees, personnel, and contractors. Facility operator's inspectors are not authorized to direct City contractor during the performance of contract work. They shall act through the City Resident Engineer and provide him/her required approvals and certifications, prior to preparing partial payments of EP-7 items, in a format and frequency to be prescribed by the appropriate City Head of Construction.

#### **17. Coordination With Gas Company:**

The Contractor shall be required to notify the gas company(ies), in writing, at least two (2) weeks prior to the start of final paving in order to allow companies to complete any unfinished gas work located within the area to be paved. Every effort shall be made to maintain gas service with minimum inconvenience to the public.

### **III - TECHNICAL SECTION**

#### **SECTION 6.01 - Trench Crossings; Support And Protection Of Gas Facilities And Services.**

##### **1. Description:**

Under this section, the Contractor shall provide all labor, materials, equipment, and incidentals required to

support and/or protect the integrity of gas mains, services and appurtenances of any sizes, configurations, and operating pressures crossing trench excavations above subgrade for planned construction of sewers and water mains facilities. A gas service shall be defined as a gas pipe of three (3) inches in diameter or less branching from the main to a customer pick up point or property valve box. A gas main may be any size pipe that is part of a distribution or transmission network other than services described above. Crossings shall be defined as gas facilities spanning the width of excavation (one side to the other side). These crossings may be at various angles and depth as shown on "Gas Cost Sharing Work Standard Sketches Nos. 1 and 1A", and as specified in "General Provisions; Gas Cost Sharing Work Paragraph No. 13" and, at the locations shown or listed in contract documents. The gas company operating in the area, (facility operator), owns these facilities. The work shall be performed in accordance with contract specifications, plans, and at the directions of the Resident Engineer in consultation with the authorized representatives of the facility operator.

## 2. Method Of Construction:

- A. Protection: In general, the gas facilities shall be protected as required by New York State Industrial Code 753. In particular, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the gas facilities (marked out by facility operators) and to ascertain the clearances and cover of the facilities with respect to the proposed excavation. Upon exposing the affected facilities sufficiently, at the discretion of the Resident Engineer, to ascertain the foregoing, Contractor shall be permitted to proceed with a combination of hand and machine excavation, as appropriate, outside a zone of protection whose limit shall be defined as a perimeter located twelve (12) inches from the outside face of each gas facility crossings (See "Gas Cost Sharing Work Standard Sketch No. 2"). If the facilities are in direct interference with City work, meaning that "Minimum Clearances" described in "General Provisions; Gas Cost Sharing Work Paragraph No. 8" cannot be maintained, and excavation has to be temporarily or permanently abandoned then this particular location shall become a test pit and dealt with as specified in Section 6.07, and "General Provisions; Gas Cost Sharing Work Paragraphs Nos. 2 and 8".
- B. Support: Gas mains or services crossing excavations equal or less than four (4) feet wide are generally self supporting, unless field conditions as determined by the Resident Engineer require otherwise. The support requirements for gas mains and services crossing excavations greater than four (4) feet wide shall be as shown on the attached "Gas Cost Sharing Work Standard Sketch No. 1" and Contractor shall use sheeting methods that permit the maintenance of gas facilities in their existing locations and configurations. Alternate methods equivalent to those shown on the sketch or accommodations by the facility operator proposed by the Contractor in order to facilitate the execution of the specified work shall be allowable, provided that prior approval is obtained by the Contractor from the Engineer and the facility operator. The support and protection of gas facilities crossings shown on plans, drawings, listings or otherwise identified in this contract shall not be circumvented with the issuance of so called "order outs".

## 3. Method Of Measurement:

The Contractor shall be paid for supporting and/or protecting gas facilities crossing trench excavations under the appropriate bid items covered by this section. The Contractor shall be directly responsible to the facility operator for the total cost of using any alternate method requiring the use of resources owned by the facility operator. Regardless of the method used, the City shall pay the bid price for the appropriate support and/or protect item of work. The average rate charged by the facility operator for alternate support and protection work such as, disconnecting and reconnecting gas services is listed in attached "Schedule GCS-A".

## 4. Payment Restrictions:

These items shall not be paid for: gas services crossing unsheeted water main trench excavation; abandoned gas main/services identified by facility operator; gas mains/services crossing trench excavations for fire hydrant branch connections pipes, catch basins and/or chutes (sewer drain pipe), house sewer and/or water services; gas facilities encroaching any face of excavation for sewer and/or

water construction, all of which are covered under other contract sections. Also this item shall not be paid for new gas mains and services crossing water trenches when trenching for such new facilities has been performed by the Contractor in common with trench excavation for City work (overlapping trench limits). The cost of supporting and protecting such gas facilities crossings shall be deemed included in the cost of trench excavation for the new gas facilities. This payment restriction shall apply even if such common trench gas excavation is not part of the contract. The prices bid for items covered by this section represent full compensation to Contractor to completely perform the work described. No other bid items shall be combined with these items in order to pay for gas main and/or services crossing excavations specified herein.

5. Method Of Payment:

Each (Ea.) gas facility crossing trench excavation as described in these specifications shall be counted for payment.

6. Price To Cover:

The cost of timber/steel supports installed for gas facilities shall be included in the bid price. The bid price for each crossing shall also cover all additional supervision, labor, material (except those provided by the facility operator), equipment and insurance necessary to completely maintain the gas facilities without disruption of service to the customers and in accordance with contract plans, specifications and facility operator standards. The price shall also include: changes of method of operations; sheeting modifications where necessary to accommodate the gas facilities crossings; installation and removal of water pipe under gas facilities (so called "snaking"); extra care during excavation (including hand excavation under existing single and multiple gas facilities); extra backfilling and compaction around, over and under gas facilities; installation and removal of sheeting around gas facilities; associated maintenance and protection of traffic; barricades; and traffic plates that may be required to temporarily close and/or complete the work.

## **SECTION 6.02 - Extra Excavation For The Installation Of Catch Basin Sewer Drain Pipes With Gas Interferences.**

1. Description:

Under this item, the Contractor shall provide all labor, materials, equipment, insurance, and incidentals for the extra excavation associated with the installation of catch basin sewer drain pipes (chute) under gas facilities of various sizes crossing the trench excavation at various angles and depth at the locations shown in the contract documents and also, for the support and protection of these facilities during associated excavation and backfill operations. The gas company operating in the area, (facility operator), owns these facilities.

2. Method Of Measurement:

The bid price shall be per location (Each) where extra excavation is required when catch basin sewer drain pipes are installed at an upstream invert depth lower than four (4) feet (up to a maximum of six (6) feet) from the proposed pavement grade because the bottom faces of interfering gas mains and appurtenances are located at a depth greater than three (3) foot eight (8) inches from proposed pavement surface (See "Gas Cost Sharing Work Standard Sketch No. 4").

3. Method Of Construction:

Incremental cost responsibility for chute excavation is determined by the first private facility encountered starting from catch basin structure proper and that prevents the installation of the chute connection at an upstream cover less than or equal to three (3) feet or any other minimum cover required to avoid City facilities (e.g. water, sewer, etc.) as directed by the Resident Engineer.

#### 4. Payment Restrictions:

This item shall not apply and related bid item shall not be paid in cases where:

- A. Upstream invert chute is more than six (6) feet deep because of gas facilities.
- B. Chute cannot be installed above existing gas facilities because of interferences with other private facilities that are not otherwise covered under this contract, regardless of upstream invert depth.

The above cases shall be at no cost to the City, but shall be a matter of adjustment between the Contractor and the facility operator(s).

#### 5. Price To Cover:

The bid price shall cover the additional cost of all additional supervision, labor, materials, equipment and insurance, to complete the installation of catch basins and associated sewer connections in accordance with the contract plans and specifications. The price shall include: excavation by hand around and under single and multiple gas facilities; locating, supporting and protecting gas facilities; backfilling and all other items necessary to perform all work incidental thereto including: installation and removal of drain pipe under gas facilities ("snaking"); widening of trenches to facilitate the above work; subsequent additional backfill and pavement restoration; modifying precast catch basin window to accommodate connection; changing sheeting method and configuration to accommodate gas facility crossings; maintenance and protection of traffic; barricades; and installation of traffic plates that may be required to temporarily close and/or complete the work. The price shall not include removal of ledge rock and/or excavation of boulders in open cut.

### **SECTION 6.02.1 - Extra Excavation For The Installation Of Catch Basin Sewer Drain Pipes With Upstream Inverts Greater Than Six (6) Feet.**

#### 1. Description:

Under this item, the Contractor shall provide all labor, materials, equipment, insurance and incidentals for the extra excavation of catch basin chutes where the upstream invert is greater than six (6) feet under gas facilities of various sizes crossing the trench excavation at various angles and depth at the locations shown in the contract documents or as determined by field conditions and also, for the support and protection of these facilities during the associated excavation, sheeting and backfilling operations.

#### 2. Method Of Measurement:

The bid price shall be per location (Each) where extra excavation and sheeting is required when the catch basin chute installed at an upstream invert depth lower than six (6) feet from the proposed pavement grade because the bottom faces of the interfering gas mains and appurtenances are located at a greater depth than three foot eight inches from the proposed pavement surface only.

#### 3. Method Of Construction:

Incremental cost responsibility for chute excavation is determined by the first private facility encountered during such excavation when initiated from catch basin structure and that prevents the installation of the chute at an upstream cover less than or equal to three (3) feet or any other cover required to avoid City facilities as directed by the Resident Engineer.

#### 4. Payment Restriction:

This item shall not apply and related bid item shall not be paid in cases where:

Upstream invert chute is less than or equal to six (6) feet deep because of gas facilities. Section 6.02 shall be paid.

## 5. Price To Cover:

The bid price shall cover the additional cost of all supervision, labor, materials, equipment and insurance to complete the installation of catch basin and associated sewer connections in accordance with the contract plans and specifications. The price shall include: excavation by hand around and under single and multiple gas facilities; locating, supporting and protecting gas facilities incidental thereto; widening of trenches to facilitate the above work; subsequent additional backfilling and pavement restoration; modifying pre-cast basin window to accommodate connection; the installation of catch basin with deeper sumps as specified; additional sheeting and changes in sheeting method and configuration to accommodate gas facility crossings; maintenance and protection of traffic; barricades; and installation of traffic plates that may be required to temporarily close and/or complete the work.

## **SECTION 6.03 - Removal Of Abandoned Gas Facilities. All Sizes.**

### 1. Description:

Under this section the Contractor shall provide all labor, materials, equipment, insurance and, incidentals required for the removal of abandoned gas mains, services, or appurtenances thereof, located within the street shown on the contract plans, owned by gas company operating in the project area (facility operator), used or to be used for or in connection with or to facilitate the conveying, transportation, distribution or furnishing of gas (natural or manufactured or mixture of both) for light, heat, or power, but does not include property used solely for or in connection with business of selling, distributing or furnishing of gas in enclosed containers. Such removal shall include only abandoned gas facilities that interfere with (i.e. cause additional work) City work.

### 2. Determination Of Operating Status Of Gas Facilities:

The Contractor shall notify facility operator, as required by New York State Industrial Code 753. Gas facilities shall not be removed without the approval of the facility operator whose authorized representative shall certify in writing (specific facility or area wide facilities certification) and in a timely manner acceptable to the Resident Engineer that abandoned facilities are free of combustible gas and any other environmental contaminants prior to removal. The Resident Engineer shall rely on facility operator's certification. The facility operator may request the excavation of test pits (See Section 6.07) for this determination ahead of City work and, Contractor shall provide safe access, facilitate and permit facility operator to enter test pit excavations for the purpose of testing gas facilities to be removed by the Contractor. However, facility operator may prefer to make this test during performance of City work, in order to issue the above certification. This shall be permitted provided that it is agreed that additional costs, if any resulting from this choice shall be a matter of adjustment between the Contractor and facility operator only, and at no cost to the City.

### 3. Restrictions:

The facility operator shall be solely responsible for its contaminated gas facilities, surrounding contaminated soil and their disposal and abatement procedures, unless contract bid items are applicable and provided for such work. In such cases, the quantity removed shall be charged to EP-7 bid item "UTL- GCS-2WS - GAS INTERFERENCES AND ACCOMMODATIONS" at the City bid prices.

### 4. Method Of Measurement:

Abandoned gas pipeline removal shall be measured for payment per linear foot of pipe and appurtenances removed.

## 5. Price To Cover:

The price shall cover all additional cost of supervision, labor, materials, equipment, and insurance necessary to complete this work in accordance with the contract plans and specifications, including excavation by hand around and under other City and facility operator owned properties and, where necessary, support and protection of such properties. The price shall also cover breaking, cutting, and/or burning of abandoned gas pipes and their disposal from the site; sealing open ends remaining in the excavation with concrete or caps (caps to be provided by the facility operator) and backfilling of the area where the pipeline has been removed with clean backfill. The price shall also include any required dump charges. This item does not include any type of extra excavation, backfilling, compaction, pavement removal and restoration associated with abandoned gas facilities removal, all of which are covered under Section 6.06.

### **SECTION 6.03.1 - Removal Of Abandoned Gas Facilities With Possible Coal Tar Wrap. All Sizes. (For National Grid Work Only)**

#### 1. Description:

Under this section the Contractor shall provide all labor, materials, equipment, insurance and, incidentals required for the removal of abandoned gas mains, services or appurtenances thereof, located within the street shown on the contract plans, owned by the gas company operating in the project area (facility operator), used or to be used for or in connection with or to facilitate the conveying, transportation, distribution or furnishing of gas (natural or manufactured or mixture of both) for light, heat, or power, but does not include property used solely for or in connection with business of selling, distributing or furnishing of gas in enclosed containers. Such removal shall include only abandoned gas facilities that interfere with (i.e. cause additional work) City work. These gas facilities may be coated with Coal Tar Wrap and so, may require special handling and disposal methods as specified in National Grid Standard Operating Procedure 12-2, Coal Tar Wrap Handling and 12NYCRR56.

#### 2. Determination Of Operating Status Of Gas Facilities:

The Contractor shall notify facility operator, as required by New York State Industrial Code 753. Gas facilities shall not be removed without the approval of the facility operator whose authorized representative shall certify in writing (specific facility or area wide facilities certification) and in a timely manner acceptable to the Resident Engineer that abandoned facilities are free of combustible gas and any other environmental contaminants prior to removal. The Resident Engineer shall rely on the facility operator's certification. The facility operator may request the excavation of test pits (See Section 6.07) for this determination ahead of City work and, the Contractor shall provide safe access, facilitate and permit facility operator to enter test pit excavations for the purpose of testing gas facilities to be removed by the Contractor. However, the facility operator may prefer to make this test during performance of City work, in order to issue the above certification. This shall be permitted provided that it is agreed that additional costs, if any, resulting from this choice shall be a matter of adjustment between the Contractor and the facility operator only, and at no cost to the City contract. Should such investigation result in the determination that the abandoned gas facilities do not contain Coal Tar Wrap then the removal of said facilities shall be covered under separate item (See Section 6.03).

#### 3. Requirements:

The City Contractor shall excavate abandoned gas facility sufficiently, either in its entirety, or at locations determined by Contractor to allow the removal of Coal Tar Wrap (if present on the abandoned gas facility) and to facilitate the safe extraction of manageable lengths of abandoned pipe without damage to adjacent facilities, utilities or City structures either parallel to or crossing above or below abandoned gas facility. The Contractor is to allow access to the designated cutting points within the Contractor's trench by authorized National Grid personnel who will remove the Coal Tar Wrap as per National Grid procedures. This work by National Grid personnel shall be performed in a timely fashion and shall not unduly impede

the Contractor's progress and/or productivity. Upon completion of the coating removal, the Contractor shall be allowed to cut, burn or grind the gas facility and remove the section of abandoned pipe. The Contractor at a site designated by the Contractor shall stockpile the removed pipe. The facility operator will be responsible to provide trucking and disposal services with its own personnel and shall remove the stockpiled pipes during off hours or during such time as agreed to by the Contractor. Since the pipe removed will remain the property of the facility operator and is to be disposed of by the facility operator, the facility operator shall be responsible for any required notifications, filings, dump charges and incidentals associated with the disposal of abandoned gas facilities found to contain Coal Tar Wrap.

#### 4. Method Of Measurement:

Abandoned gas pipeline removal shall be measured for payment per linear foot of pipe and appurtenances removed.

#### 5. Price To Cover:

The price shall cover all additional cost of supervision, labor, materials, equipment and insurance necessary to complete this work in accordance with the contract plans and specifications, including excavation by hand around and under other City and facility operator owned properties and, where necessary, the support and protection of such properties. The cost shall also include hand excavation in the area(s) of proposed abandoned pipe cut(s), cutting and/or burning of abandoned gas pipes and stockpile of removed sections of abandoned pipe and associated maintenance and protection of traffic, blocking and temporary fencing if required. The unit price shall also cover sealing open ends remaining in the excavation with concrete or end caps (end caps to be provided by the facility operator) and backfilling of the area where the abandoned pipeline has been removed with clean backfill material. This item does not include any type of extra excavation, backfilling, compaction, pavement removal and/or restoration (temporary and permanent) associated with abandoned pipe removal ("lost trench"), all of which are covered under separate Section 6.06. The price shall also include allowance for any loss of productivity by the Contractor due to required facility operator work to remove pipe coating and prepare pipe for cutting as well as any change in Contractor's excavation method, additional trucking and/or stockpiling costs.

### **SECTION 6.03.1a - Removal Of Abandoned Gas Facilities With Possible Coal Tar Wrap. All Sizes. (For Con Edison Work Only)**

#### 1. Description:

Under this section the Contractor shall provide all labor, material, equipment, insurance and, incidentals required to prepare abandoned gas mains, services and appurtenances thereof located within the street shown on contract plans, owned by the gas company operating in the project area (facility operator), for removal due to interference with proposed City work. These abandoned gas facilities were, at one time, used for or in connection with or to facilitate the conveying, transportation, distribution or furnishing of gas (natural, manufactured or a combination of both) for light, heat, or power, but does not include property used solely for or in connection with business of selling, distribution or furnishing of gas in enclosed containers. Such preparation for removal shall include only abandoned gas facilities that interfere with (i.e. cause additional work) City work. These gas facilities may be coated with Coal Tar Wrap which may contain asbestos or PCB's and so, may require special handling and disposal methods as specified in Con Edison - ASBESTOS MANAGEMENT MANUAL, CHAPTER 6 - ASBESTOS WORK PROCEDURES, SECTION 06.04 - COAL TAR WRAP REMOVAL. For under 25' (feet) in length and an approved NYC-DEP variance for over 25' (feet).

#### 2. Determination Of Operating Status Of Gas Facilities:

The Contractor shall notify facility operator, as required by New York State Industrial Code 753. Gas Facilities shall not be removed without the approval of the facility operator whose authorized representative shall certify in writing (specific facility or area wide facilities certification) and in a timely

manner acceptable to the Resident Engineer that abandoned facilities are free of combustible gas and any other environmental contaminants prior to removal. The Resident Engineer shall rely on the facility operator's certification. The facility operator may request the excavation of test pits (See Section 6.07) for this determination ahead of City work and Contractor shall provide safe access, facilitate and permit facility operator to enter test pit excavations for the purpose of testing gas facilities. However, the facility operator may prefer to make this test during performance of City work in order to issue the above certification. This shall be permitted provided that it is agreed that additional costs, if any, resulting from this choice shall be a matter of adjustment between the Contractor and the facility operator only, and at no cost the City contract. Should such investigation result in the determination that the abandoned gas facilities do not contain Coal Tar Wrap then the removal of said facilities shall be covered under separate item (See Section 6.03).

### 3. Requirements:

The Contractor shall excavate abandoned gas facility sufficiently, either in its entirety, or at locations determined by Contractor to allow the removal of Coal Tar Wrap (if present on the abandoned gas facility) and to facilitate the safe extraction of manageable lengths of abandoned pipe without damage to adjacent facilities, utilities or city structures either parallel to or crossing above or below abandoned gas facility. The Contractor is to allow access to the designated cutting points within the Contractor's trench by authorized Con Edison personnel who will remove the Coal Tar Wrap as per Con Edison and/or NYC-DEP approved procedures. This access shall conform to all applicable codes, rules & regulations. This work by Con Edison personnel shall be performed in a timely fashion and shall not unduly impede the Contractor's progress and/or productivity. Upon completion of the coating removal, the Contractor shall be allowed to cut, burn or grind the gas facility and remove the section of abandoned pipe. Contractor shall designate a specific site to stockpile those removed pipes. The facility operator will be responsible to provide trucking and disposal services with its own personnel and shall remove the stockpiled pipes during off hours or during such time as agreed to by the Contractor. Since the pipe removed will remain the property of the facility operator and is to be disposed of by the facility operator, the facility operator shall be responsible for any required notifications, filings, dump charges and incidentals associated with the disposal of abandoned gas facilities found to contain Coal Tar Wrap.

### 4. Method Of Measurement:

Abandoned gas facility removal shall be measured for payment per linear foot of pipe and appurtenances removed.

### 5. Price To Cover:

The price shall cover all additional cost of supervision, labor, materials, equipment and insurance necessary to complete this work in accordance with the plans and specifications, including, but not limited to, excavation by hand around and under other City and facility operator owned properties and, where necessary, the support and protection of such properties. The cost shall also include hand excavation in the area(s) of proposed abandoned pipe cut(s), cutting and/or burning of abandoned gas pipes and stockpile of removed sections of abandoned pipe and associated maintenance of traffic, blocking and temporary fencing if required. The unit price shall also cover sealing open ends remaining in the excavation with concrete or end caps (end caps to be supplied by facility operator) and backfilling of the area where the abandoned pipeline has been removed with clean backfill material. This item does not include any type of extra excavation, backfilling, compaction, pavement removal and/or restoration (temporary and permanent) associated with abandoned pipe removal ("lost trench"), all of which are covered under separate Section 6.06. The price shall also include allowance for any loss of productivity by the Contractor due to required facility operator work to remove pipe coating and prepare pipe for cutting as well as any change in Contractor excavation method, additional trucking and/or stockpiling costs.

## **SECTION 6.04 - Adjust Hardware To Grade Using Spacer Rings/Adaptors. (Street Repaving.)**

### 1. Description:

Under this section, the Contractor shall provide all labor, supervision, materials, equipment, insurance and incidentals required to adjust to final grade gas street surface hardware located within the contract area boundaries shown on the plans. The gas company operating in the area, (facility operator), owns these facilities. The work shall be performed in accordance with the contract plans, specifications and at the directions of the Resident Engineer in concurrence with authorized representative of the facility operator.

### 2. Materials:

The facility operator shall furnish and deliver all prefabricated hardware parts required. These include adaptors for the grade adjustment proper and new street hardware if existing ones are found to be defective, all in accordance with the facility operator standards and City rules and regulations. The Contractor shall notify the facility operator of the installation schedule at least three (3) business days before materials are required on the site. Should the facility operator fail to deliver the necessary material according to any schedule mutually agreed upon by the Contractor and facility operator, the City shall not be responsible for any delays attributable thereto, nor for the failure of delivery of such materials. On project where material storage is not permitted on site, the facility operator shall deliver the required material to the Contractor's yard and it shall be the Contractor's responsibility to transport the material to the work site when needed for installation. It shall also be the Contractor's responsibility to inspect the materials to be installed by him immediately upon delivery and advise the facility operator through its authorized representative, of all damaged materials. The Contractor at no additional expense to the City or the facility operator shall replace any material that is damaged or lost after the Contractor's inspection.

### 3. Method Of Measurement:

The Contractor shall be paid for each six (6) inch round box and/or nine (9) inch square box adjusted to grade regardless of adjustment height requirements.

### 4. Price To Cover:

The unit price bid for this item shall include all additional labor, supervision, insurance, equipment and material (except those to be provided by the facility operator), required to adjust each box to grade as required in the contract plans and specifications. The bid price shall also include the removal of existing frames and covers from existing facilities to be salvaged and returned to the facility operator and, all material transportation from the Contractor's material storage yard to the work site. In addition the bid price shall include "chipping" around existing box using appropriate means and methods where grinding is required.

## **SECTION 6.05 - Adjust Hardware To Grade By Resetting. (Road Reconstruction.)**

### 1. Description:

Under this item, the Contractor shall provide all labor, supervision, materials, equipment, insurance and incidentals required to adjust to the proposed grade gas street surface hardware located within the contract area boundaries shown on the plans. The gas company operating in the area, (facility operator), owns these facilities. The work shall consist of either building up or lowering or resetting the casting by removing the existing frame and cover building up or decreasing the existing installation, replacing the frame and/or cover if damaged or worn out, as determined by the Resident Engineer, with a new frame and/or cover furnished by the owner, and setting the frame and cover to new elevation. The work shall be performed in

accordance with the contract plans, specifications and at the directions of the Resident Engineer.

## 2. Materials:

The facility operator shall furnish and deliver all new hardware parts required. The Contractor shall furnish materials such as mortar, bricks and concrete in compliance with contract requirements. At locations where high-early strength concrete is required under this contract to be placed adjacent to gas facilities, then the requirement for concrete shall be high-early strength complying with the current New York State Department of Transportation, Standard Specifications for Class F concrete. Existing castings may be replaced as required and deemed necessary by the Engineer and by City rules and regulations. The Contractor shall install the new castings of various sizes furnished by the facility operator. The Contractor shall notify the facility operator of the installation schedule at least three (3) business days before materials are required on the site and, shall provide off-loading services to the facility operator. Should the facility operator fail to deliver the necessary material according to any schedule mutually agreed upon by the Contractor and facility operator, the City shall not be responsible for any delays attributable thereto, nor for the failure of delivery of such materials. Such delays shall be a matter of adjustment between the Contractor and the facility operator. On project where material storage is not permitted on site, the facility operator shall deliver the required material to the Contractor's yard and it shall be the Contractor's responsibility to transport the material to the work site when needed for installation. It shall also be the Contractor's responsibility to inspect the materials to be installed by him, immediately upon delivery and advise the facility operator through its authorized representative, of all damaged materials. The Contractor at no additional expense to the City or the facility operator shall replace any material that is damaged or lost after the Contractor's inspection.

## 3. Methods Of Construction:

The Contractor shall remove and reinstall existing castings or install new castings to the proposed grade. Setting and resetting the castings shall be done with mortar and brick according to the standards of the facility operator. Work shall be performed in a workmanlike manner. Castings that are deemed unacceptable for resetting shall remain the property of the facility operator and he shall be responsible for their removal and proper disposal from site. No traffic shall be allowed on adjusted street hardware until permitted by the Engineer.

## 4. Method Of Measurement:

The Contractor shall be paid for each gas hardware adjusted to grade regardless of size or adjustment height requirements (up or down).

## 5. Price To Cover:

The unit price bid for this item shall include all additional labor, supervision, insurance, equipment and, material (except those to be provided by the facility operator), required to adjust each gas hardware to grade as required in the contract plans and specifications. The bid price shall also include the removal of existing frames and covers from existing facilities; building up the existing installations with bricks and mortar, or lowering the existing installation by removing bricks and mortar; replacing damaged frames and/or covers with new frames and/or covers furnished by the facility operator; setting the frames and covers to the new elevations; protect existing installations; repair minor structural damages to existing installations prior to resetting frames; unloading of furnished castings at the Contractor's yard and transporting castings from the Contractor's yard to the job site as required; completing the work in accordance with the contract plans, specifications and, at the directions of the Engineer. In addition the bid price shall include "chipping" around existing gas facilities using appropriate means and methods where grinding is required.

## **SECTION 6.06 - Special Care Excavation And Backfilling.**

### 1. Description:

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to support and protect the integrity of live gas facilities including mains, services, related structures and appurtenances during excavations. The gas company operating in the area, (facility operator), owns these facilities. The work shall be performed in accordance with the contract plans, specifications and at the directions of the Resident Engineer in consultation with authorized representatives of the facility operator.

### 2. Applicability Of Section:

This section shall apply to live gas facilities of various sizes located within two (2) feet of any face of unsheeted excavation, (unsheeted excavation refers to any excavation performed for city work and includes excavations performed that are to be subsequently sheeted using approved methods) and paralleling or, encroaching any face of excavation. Also, for crossings greater than forty-five (45) degrees and/or located at a cover depth greater than five (5) feet from existing street surface. Parallel facilities are not exposed at any time during excavation (See "Gas Cost Sharing Work Standard Sketch No. 5"). Encroaching facilities are partially exposed inside the limit of excavation (See "Gas Cost Sharing Work Standard Sketch No. 5"). This section shall also apply to gas facilities crossing catch basins excavation, and catch basins sewer connections (chutes) trench excavation only when extra depth (covered in other section), is not required for chutes installations because of such utilities interferences (See "Gas Cost Sharing Work Standard Sketch No. 3"). This section shall also apply to gas services (if shown or otherwise listed in contract documents) crossing unsheeted excavations for water mains, gas facilities crossing fire hydrant branch connections, house sewer and/or water service connections excavations. This section shall also apply for so called "loss trench", as described further, and for additional excavation (pavement and/or soil), backfilling, compaction, roadway base and pavement restoration due to abandoned gas facilities, only if removed by Contractor. If operating status of gas facilities cannot be determined prior to excavation then such facilities shall be considered live and this section shall fully apply. The excavation around fully exposed live gas facilities along and within limits of excavation (not crossings) shall be covered by this section also (not shown on "Gas Cost Sharing Work Standard Sketch No. 5"), however the support requirement, if any is required, of such facilities is beyond the scope of these specifications and therefore shall be the responsibility of facility operator to determine and prescribe, at no cost to the City contract, but shall be a matter of adjustment between the Contractor and facility operator.

### 3. Payment Restriction:

No special care excavation shall be paid for abandoned gas facilities paralleling and/or encroaching excavation and therefore are not in direct interference with City work. Except as allowed in this section, the bid item specified under this section shall not be used in combination with items covered under other sections for work done due to a particular gas facility. This item shall not be paid for new gas facilities when trenching for such new facilities has been performed by the Contractor of record in common with trench excavation for City Work (overlapping trench limits). The cost of excavating with care as defined in this section shall be deemed included in the cost of trench excavation for the new gas facilities. This restriction shall apply even if such gas common trench excavation is not part of the contract. If facilities are in direct interference with City work, meaning that "Minimum Clearances" described in "General Provisions; Gas Cost Sharing Work Paragraph No. 8" cannot be maintained and excavation has to be temporarily or permanently abandoned then this particular location shall become a test pit and dealt with as specified in Section 6.07 and "General Provisions; Gas Cost Sharing Work Paragraphs Nos. 2 and 8".

### 4. Method Of Construction:

All excavation in the vicinity of gas facilities shall be as required by NYS Industrial Code 753. Where these facilities are paralleling and located two (2) feet or less from the limits of the proposed excavation, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) to ascertain the clearances of these facilities with respect to the proposed excavation. Once the location of these

facilities with respect to the proposed excavation is verified to the satisfaction of the Resident Engineer, the Contractor shall then proceed with a combination of hand and machine excavation as required preserving the integrity of the facilities. The installation of timber supports or underpinning, when soil foundation cannot fully support partially exposed pipes, may be required to prevent pipe movement as directed by the Resident Engineer.

5. Method Of Payment:

The unit price for this work item shall be based on cubic yard (CY) of average excavation with care and, is to be considered as an incremental cost for performing City work with gas facilities interferences.

6. Method Of Measurement:

- A. For Paralleling Facilities: Volume calculated as: Depth as measured from existing street surface to the bottom of unsheeted trench excavation allowable by OSHA regulations, multiplied by, the width measured as one (1) foot from the face of excavation toward the center of excavation, multiplied by the length of parallel facility, divided by twenty-seven (27) cubic feet per cubic yard (See "Gas Cost Sharing Work Standard Sketch No. 5"). The gas facility is no longer considered to be in interference once sheeting has been installed, therefore no further compensation for paralleling facilities as described above will be made.
- B. For Encroaching Facilities: Volume calculated as: Depth of trench as allowable by OSHA, maximum up to five (5) feet multiplied by, the width of partially exposed pipe plus one (1) foot, multiplied by the length of facility encroachment, divided by twenty-seven (27) cubic feet per cubic yard (See "Gas Cost Sharing Work Standard Sketch No. 5").
- C. Fully Exposed Gas Facilities: (Not shown on "Gas Cost Sharing Work Standard Sketch No. 5") along and inside trench and/or crossing trench at an angle greater than forty-five (45) degrees and/or a cover depth greater than five (5) feet from the existing street surface. The volume shall be measured as the depth of trench excavation multiplied by the distance measured along the sheeting line between two (2) points of intersections of the gas facilities and the sides of trench excavation, multiplied by the width of trench excavation.
- D. For Additional Excavation And Restoration Due To So Called "Loss Trench", When The Integrity Of Pavement And Soil Above And Around Existing Live Gas Facilities Cannot Be Maintained Due To Its Lack Of Cohesiveness: Volume shall be calculated as: Depth of unsheeted trench excavation multiplied by width measured as distance of facility from closest edge of unsheeted excavation plus, width of facility proper plus, one (1) foot or a maximum width of three (3) feet multiplied by length of facility fully exposed divided by, twenty-seven (27) cubic feet per cubic yard (not shown on "Gas Cost Sharing Work Standard Sketch No. 5").
- E. For Facilities Crossing Excavation For Catch Basins, Or Chutes Installations (When NYCDEP Funded) Or Fire Hydrant Branch Connections, Or Unsheeted Water Main Trench, Or House Sewer And/Or Water Services: Volume calculated as: Depth as measured from existing street surface to the bottom of the trench excavation multiplied by, the width taken as the outside diameter of pipe or the width of structure plus one (1) foot on either side (two (2) feet), multiplied by, the length of exposed facility crossing the trench, divided by twenty-seven (27) cubic feet per cubic yard (not shown on "Gas Cost Sharing Work Standard Sketch No. 5").

Overlapping volume dimensions measured as described above may occur when multiple facilities are paralleling excavations, encroaching excavations or crossing catch basins and catch basin chute installations. In such cases, all such facilities shall be counted as one limited by the extreme pipes, faces (See "Gas Cost Sharing Work Standard Sketch No. 2"). The volume shall then be calculated as described above.

## 7. Price To Cover:

The bid price shall also cover all additional supervision, labor, material, equipment and insurance necessary to excavate while protecting and maintaining (excluding supports for fully exposed live gas) gas facilities without disruption of service to the public and in accordance with contract specifications. The price shall also include, changes of sheeting method and excavation width configuration where necessary to accommodate gas facilities in their existing locations; difficulties during the installation of catch basins, chute connections, hydrant branch, and house sewer and water connections under or over gas facilities; loss of productivity due to slower rate of excavation (special care) during excavation, including the use of such methods as: hand excavation around existing single and multiple facilities, extra excavation and backfilling due to lost trench because of existing and adjacent gas facilities, compaction, removal of sheeting from the facilities, extra roadway base restoration and temporary pavement, associated maintenance and protection of traffic, barricades, and traffic plates that may be required to temporarily close and/or complete the work.

## SECTION 6.07 - Test Pits For Gas Facilities.

### 1. Description:

Under this section, the Contractor shall furnish all labor, materials, insurance, equipment and appliances necessary to excavate, sheet and, maintain test pits at locations approved by the Resident Engineer in consultation with the facility operator. Test pits shall be dug in order to ascertain exact locations, cover and invert elevations, clearances, alignment and operating status (live or dead) of existing gas facilities. The Contractor shall inspect jointly with the Resident Engineer and facility operator, gas facilities and other structures uncovered, take all relevant measurements and elevations as directed by the Resident Engineer. Tests to determine operating status of gas facilities shall be performed by facility operator. The pits shall be covered with steel plates during daytime nonworking hours, and uncovered, as required, until the inspection work is completed. Testing of gas facilities may require a maximum of four (4) hours. Then, the pits shall be backfilled with clean fill, and resurfaced with temporary pavement. All traffic shall be maintained and all safety measures as stipulated shall be complied with.

### 2. Methods Of Construction:

A. Excavation: Existing pavement to be removed shall be neatly cut along lines of removal with a saw or other approved equipment which leaves a neat straight joint line along the juncture with subsequently replaced pavement. Excavation in the vicinity of utilities and other structures shall be performed using hand tools. Use of hand operated pneumatic and electric jackhammers will be permitted only for breaking pavement and removal of masonry, concrete and boulders, or as otherwise directed by the Resident Engineer. The Contractor shall properly dispose of all materials excavated from test pits away from site. Test pits shall be excavated at locations shown on the contract drawings or as directed by the Resident Engineer. Additional test pits may be required and shall be excavated where required, as ordered by the Resident Engineer. All test pits shall be excavated to a depth and size necessary to locate the existing facilities. Sheeting shall be used when depth of excavation exceeds five (5) feet. The sheeting required shall be furnished and installed in full compliance with the State of New York and Federal Safety Codes requirements and as specified in contract, whichever is more stringent. Care shall be taken that no existing gas facilities or other structures are broken or damaged. All broken or damaged facilities shall be reported immediately to facility operator who shall decide whether such facilities shall be repaired or replaced by company forces or by City contractor and in conformance with "General Provisions; Gas Cost Sharing Work Paragraph No. 9". Contractor shall excavate all material encountered, including large masses of concrete, cemented masonry and boulders, as directed by the Resident Engineer. Any type of excavation protection used, shall satisfy the following:

- (a) Industrial Code Rule 753.
- (b) Prevent injury to workers and the public, and avoid damage to existing water, sewer, and gas pipes or other structures, and to pavements and their foundations, through caving or sliding of the

banks of the excavation.

Should it become necessary, as determined by the Resident Engineer, to enlarge any test pit in any dimension after sheeting has been placed, the Contractor shall remove portions of the sheeting, as necessary, enlarge the test pits as directed, and replace the sheeting without additional compensation for this work other than for the additional volume of material excavated.

- B. Maintenance Of Test Pits: Excavated test pits shall be maintained free of debris and kept dry by the Contractor in order to permit the inspection and measurements and to determine the locations of facilities. In order to accomplish this, Contractor shall, upon completion of excavation and placement of sheeting (if depth greater than five (5) feet), furnish and install adequate steel plates and posting over the excavated pits and shall temporarily remove all equipment debris and workers, and relocate barricades in order to open the full width of street to traffic during nonworking hours. The Contractor shall then, at no additional cost, relocate such barricades, barrels, cones and other warning devices and remove steel plates, as and when directed by the Resident Engineer to facilitate the inspection of exposed facilities. When work is being performed and the pits are not covered with steel plates, the Contractor shall provide complete and safe access to the test pits as may be required, and he shall provide construction barricades and maintain traffic at all times as shown or as directed by the Resident Engineer. Upon completion of test pit inspection by the Resident Engineer, the pit shall be backfilled by the Contractor as specified in contract, except that backfill material shall conform to contract specifications for such purpose.
- C. Pavement And Sidewalk Restoration: After backfilling is completed, the Contractor shall construct a temporary pavement consisting of a minimum of four (4) inches thick asphaltic concrete mixture in roadway areas or a two (2) inches thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent pavement and sidewalk replacement is constructed as specified in contract.

### 3. Measurements:

The quantity to be measured for payment shall be the number of cubic yards of material removed from within the limits of the pit dimensions as directed by the Resident Engineer. The volume occupied by existing pipes or other structures remaining within the maximum payment lines will not be deducted from the total volume measured except, where the cross sectional area of these facilities exceeds four (4) square feet. As determined by the Resident Engineer, the quantity measured for payment may be proportionate to a fair and reasonable estimate of gas responsibility in the total volume excavated.

### 4. Price To Cover:

The contract price bid per cubic yard for test pits shall cover all additional costs of labor, material, insurance, equipment, appliances and incidentals required to excavate test pits, including removal and disposal of excavated materials, sheeting, steel plating, backfill, compaction and temporary pavement and sidewalk restoration all in accordance with the specifications and as directed by the Resident Engineer. The price shall also include the cost of providing safe access to the excavation by facility operator for the performance of certain test to determine operating status of gas facilities prior to City work. The price shall also include support and protection of all gas facilities crossing excavation, paralleling and/or encroaching any face of excavation.

## **SECTION 6.08a – Pier And / Or Plate Method of Protection for Ductile Iron Water Main with Less Than 24" cover.**

A. Description:

Under this item, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to protect ductile iron water mains that are installed with a cover of 24 inches or less crossing over gas facilities of various sizes. The work shall be performed in accordance with the contract plans, specifications and at the direction of the facility operator(s), upon approval from the Resident Engineer.

B. Materials:

The Contractor shall supply all materials (concrete, beams, plates, etc.) necessary to provide the pier and plate method of protection as shown on BWS Standard Drawing No. 46464-Z.

C. Method of Construction:

The Contractor shall provide pier and plate protection in accordance with BWS Standard Drawing No. 46464-Z. The Contractor shall support, maintain and accommodate the water main and all other utility facilities during the installation of the pier and plate components. The Contractor shall be solely and totally responsible for the disturbances and/or any damages to such facilities.

D. Method of Measurement:

The quantity to be measured for payment shall be each (EA.) location wherein an additional area of square foot (S.F.) of steel plate is required to be installed to protect ductile iron water mains with a cover of 24 inches or less crossing over gas facilities of various sizes, as directed by the Facility Operator(s) upon approval from the Resident Engineer. The additional area of square foot (S.F.) of steel plate shall be in accordance with BWS Standard Drawing No. 46464-Z.

E. Price to Cover:

The price shall cover the cost of all supervision, labor, material, equipment, and incidentals necessary to construct the specified method of protection. The work shall also cover the cost to cut, break, and remove additional pavement, additional excavation, sheeting, maintenance of traffic, traffic plates, and to furnish and install additional backfill and pavement restoration. This item does not cover the costs for special care excavation around gas facilities that are covered under separate items.

F. References:

1. BWS Standard Drawing No. 46464-Z.

## **SECTION 6.09 - Trench Excavation and Backfill for New Gas Mains and Services**

### **(For National Grid Work Only)**

#### 1. Description:

Under this section, the contractor shall furnish all labor, materials, equipment, insurance, permits and incidentals required to break/remove roadway and sidewalk pavement, excavate, backfill and restore gas trenches. The trench to be excavated shall be determined by the size of the gas facility to be installed. The work shall be performed in accordance with applicable specifications, and/or at the direction of the Resident Engineer in consultation with the facility operator.

#### 2. Materials:

All materials used to excavate and prepare trenches shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer.

#### 3. Method of Construction:

Excavation – The Contractor shall saw cut and/or break and remove existing roadway which may include but is not limited to, asphalt, concrete and cobblestone, utilizing approved equipment that leaves a neat straight joint line along the juncture with subsequently replaced pavement. Prior to starting the trenching operation, the contractor shall excavate the appropriate gas main tie-in pits at the extremities of the gas main sections to be replaced. Test pits shall be excavated to determine exact location of all tie-in pits and at appropriate intervals along proposed trench excavation to verify lane and clearances as shown on the contract plans. The tie-in pits shall be adequately protected by the contractor using wood fencing or steel traffic plates until such time when the facility operator has completed the tie-in work. The Contractor shall be permitted to excavate utilizing a combination of machine and hand excavation, as field conditions warrant, and as directed by the facility operator. The trench shall be adjusted so as to provide for a nominal cover on the new gas facilities or as required based on field conditions, applicable specifications, or as directed by the facility operator in consultation with the Resident Engineer. The width of the trench shall be as directed by the facility operator in consultation of the Resident Engineer. The bottom of the trench shall be graded smooth with a minimum cushion of 3 inches of clean sand and in conformance with applicable specification and be compacted, to minimize initial settlement and to avoid "point" support of new gas facilities. All stones projecting into the trench bottom shall be removed, and the voids backfilled before the new gas facilities are installed. Where streets are not to final grade, the cover shall be measured from the final grade, or the existing grade, whichever provides the deeper trench. Excavation in the vicinity of utilities and other structures shall be performed using hand tools. The contractor shall properly dispose of all materials excavated away from site. Size and location of excavation shall be as directed by the facility operator in consultation with the Resident Engineer. Trenches shall be excavated to a depth and size necessary to facilitate the installation of the new gas facility and in conformance with the applicable specification. All existing facilities that are encountered during trench excavating shall be protected in a manner suitable to the facility operator in consultation with the Resident Engineer. Tight sheeting shall be used, as required, based on field conditions and/or when the depth of excavation is equal to or greater than five feet. Skeleton type sheeting will not be permitted. The sheeting required shall be furnished and installed in full compliance with the State of New York and Federal Safety Code requirements and in compliance with applicable specifications and/or as directed by the facility operator in consultation with the Resident Engineer. Care shall be taken that no existing gas facilities or other structures are broken or damaged. Contractor shall excavate all material encountered necessary to facilitate the installation of the new gas facilities, and as directed by the facility operator. Care should be taken to avoid damage to existing utility facilities and structures, and to pavements and their foundations, and to avoid caving or sliding banks within the excavation.

Maintenance of Trench Excavation - Excavated trenches shall be maintained free of debris and kept dry by the contractor. In order to accomplish this, contractor shall, upon completion of excavation and placement of sheeting (as required and/or if depth is equal to or greater than five feet), furnish and install adequate steel plates, as directed by the facility operator in consultation with the Resident Engineer, and posting over

the excavated trenches and shall temporarily remove all equipment debris and workers, and relocate barricades in order to open the full width of street to traffic during non-working hours, as required based on DOT requirements. National Grid forces will perform all live gas main connections, dead gas main cut-outs, and/or service work associated with disconnecting and reconnecting from old to new gas main. The Contractor shall then, at no additional cost, relocate such barricades barrels, cones and other warning devices and remove steel plates, as and when directed by the facility operator in consultation with the Resident Engineer to facilitate the installation of the new gas facilities. When work is being performed and the excavations are not covered with steel plates, the Contractor shall provide complete and safe access to the trench as may be required, and shall provide construction barricades and maintain traffic at all times as shown or as directed by the facility operator in consultation with the Resident Engineer. The contractor has the responsibility to maintain and set to grade all National Grid hardware during backfill and pavement restoration. Upon completion of installation of the new gas facility, the trench excavation shall be backfilled by the contractor in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose.

**Pavement and Sidewalk Restoration** - After backfilling is completed, the contractor shall install temporary pavement consisting of six inches (6") thick asphaltic concrete mixture in roadway areas or a two inches (2") thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent replacement as specified in contract. Permanent pavement restoration shall be as required by the appropriate contract specifications and as directed by the Resident Engineer.

#### 4. Method of Measurement:

The quantity to be measured for payment shall be the number of cubic yards (C.Y.) of trench actually excavated, including roadway pavement, base and/or sidewalk concrete removed within the limits of the trench as directed by the Resident Engineer in consultation with the facility operator. The volume occupied by existing pipes or other structures will be deducted from the total volume measured as shown on contract drawing(s) Title: EP-7 SECT. 6.09 GAS SPECIALTY CONTRACTOR WORK, or as encountered based on existing field conditions.

#### 5. Price to Cover:

The unit price bid per cubic yard for excavation shall include the cost of all supervision, labor, material, equipment, insurance and incidentals necessary to complete excavation trenches, including backfill, compaction testing and restoration of trenches and tie-ins pits as specified or shown on the contract, plans. The bid price shall also include the cost of coordinating the sewer and water main work to be performed by the contractor with the gas installation work to be performed by others. The price shall also include, associated maintenance of traffic, and traffic plates and openings and closings of plates as may be required in order to provide access to the facility operator during the new gas facility installation, and installing, removing and maintaining tight sheeting that may be required, cut, break and remove various thickness of surface and base pavement, excavate by hand, furnish, place and compact, in compliance with DOT requirements, clean sand backfill following installation of the gas facility. Any required removing, trucking, storing, and disposing of material shall be deemed included in the unit price. The price shall also include the cost of providing temporary pavement restoration. Permanent pavement restoration shall be deemed included in this item, as required and as directed by the Resident Engineer.

### **SECTION 6.09a Trench Excavation and Backfill for New Gas Mains and Services (For Con Edison Work Only)**

#### 1. Description:

Under this section, the contractor shall furnish all labor, materials, equipment, insurance, permits and incidentals required to break/remove roadway and sidewalk pavement, excavate, backfill and restore gas trenches. The trench to be excavated shall be determined by the size of the gas facility to be installed. The work shall be performed in accordance with applicable specifications, and/or at the direction of the Resident Engineer in consultation with the facility operator.

## 2. Materials:

All materials used to excavate and prepare trenches shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer. Clean sand backfill material shall be used and shall conform to Con Edison specification EO-1181-rev.6, General Specification for Backfilling of Trench and Small Openings.

## 3. Method of Construction:

Excavation – The Contractor shall saw cut and/or break and remove existing roadway which may include but is not limited to, asphalt, concrete and cobblestone, utilizing approved equipment that leaves a neat straight joint line along the juncture with subsequently replaced pavement. Prior to starting the trenching operation, the contractor shall excavate the appropriate gas main tie-in pits at the extremities of the gas main sections to be replaced. Test pits shall be excavated to determine exact location of all tie-in pits and at appropriate intervals along proposed trench excavation to verify lane and clearances as shown on the contract plans. The tie-in pits shall be adequately protected by the contractor using wood fencing or steel traffic plates until such time when the facility operator has completed the tie-in work. The Contractor shall be permitted to excavate utilizing a combination of machine and hand excavation, as field conditions warrant, and as directed by the facility operator. The trench shall be adjusted so as to provide for a nominal cover on the new gas facilities or as required based on field conditions, applicable specifications, or as directed by the facility operator in consultation with the Resident Engineer. The width of the trench shall be as directed by the facility operator in consultation of the Resident Engineer. The width and depth of the trench shall conform to Con Edison Gas Operations drawing 309495 rev. 4, Trench Excavation for Gas Mains Up to 350 PSIG, or as directed by the facility operator in consultation of the Resident Engineer. The bottom of the trench shall be graded smooth with a minimum cushion of 3 inches of clean sand and in conformance with applicable specification and be compacted, to minimize initial settlement and to avoid "point" support of new gas facilities. All stones projecting into the trench bottom shall be removed, and the voids backfilled before the new gas facilities are installed. Where streets are not to final grade, the cover shall be measured from the final grade, or the existing grade, whichever provides the deeper trench. Excavation in the vicinity of utilities and other structures shall be performed using hand tools. The contractor shall properly dispose of all materials excavated away from site. Size and location of excavation shall be as directed by the facility operator in consultation with the Resident Engineer. Trenches shall be excavated to a depth and size necessary to facilitate the installation of the new gas facility and in conformance with the applicable specification. All existing facilities that are encountered during trench excavating shall be protected in a manner suitable to the facility operator in consultation with the Resident Engineer. Tight sheeting shall be used, as required, based on field conditions and/or when the depth of excavation is equal to or greater than five feet. Skeleton type sheeting will not be permitted. The sheeting required shall be furnished and installed in full compliance with the State of New York and Federal Safety Code requirements and in compliance with applicable specifications and/or as directed by the facility operator in consultation with the Resident Engineer. Care shall be taken that no existing gas facilities or other structures are broken or damaged. Contractor shall excavate all material encountered necessary to facilitate the installation of the new gas facilities, and as directed by the facility operator. Care should be taken to avoid damage to existing utility facilities and structures, and to pavements and their foundations, and to avoid caving or sliding banks within the excavation.

Maintenance of Trench Excavation - Excavated trenches shall be maintained free of debris and kept dry by the contractor. In order to accomplish this, contractor shall, upon completion of excavation and placement of sheeting (as required and/or if depth is equal to or greater than five feet), furnish and install adequate steel plates, as directed by the facility operator in consultation with the Resident Engineer, and posting over the excavated trenches and shall temporarily remove all equipment debris and workers, and relocate barricades in order to open the full width of street to traffic during non-working hours, as required based on DOT requirements. Con Edison forces will perform all live gas main connections, dead gas main cut-outs, and/or service work associated with disconnecting and reconnecting from old to new gas main. The Contractor shall then, at no additional cost, relocate such barricades barrels, cones and other warning devices and remove steel plates, as and when directed by the facility operator in consultation with the Resident Engineer to facilitate the installation of the new gas facilities. When work is being performed and

the excavations are not covered with steel plates, the Contractor shall provide complete and safe access to the trench as may be required, and shall provide construction barricades and maintain traffic at all times as shown or as directed by the facility operator in consultation with the Resident Engineer. The contractor has the responsibility to maintain and set to grade all Con Edison hardware during backfill and pavement restoration. Upon completion of installation of the new gas facility, the trench excavation shall be backfilled by the contractor in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose.

Pavement and Sidewalk Restoration - After backfilling is completed, the contractor shall install temporary pavement consisting of six inches (6") thick asphaltic concrete mixture in roadway areas or a two inches (2") thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent replacement as specified in contract. Permanent pavement restoration shall be as required by the appropriate contract specifications and as directed by the Resident Engineer.

#### 4. Method of Measurement:

The quantity to be measured for payment shall be the number of cubic yards (C.Y.) of trench actually excavated, including roadway pavement, base and/or sidewalk concrete removed within the limits of the trench as directed by the Resident Engineer in consultation with the facility operator. The volume occupied by existing pipes or other structures will be deducted from the total volume measured as shown on contract drawing(s) Title: EP-7 SECT. 6.09 GAS SPECIALTY CONTRACTOR WORK, or as encountered based on existing field conditions.

#### 5. Price to Cover:

The unit price bid per cubic yard for excavation shall include the cost of all supervision, labor, material, equipment, insurance and incidentals necessary to complete excavation trenches, including backfill, compaction testing and restoration of trenches and tie-ins pits as specified or shown on the contract, plans. The bid price shall also include the cost of coordinating the sewer and water main work to be performed by the contractor with the gas installation work to be performed by others. The price shall also include, associated maintenance of traffic, and traffic plates and openings and closings of plates as may be required in order to provide access to the facility operator during the new gas facility installation, and installing, removing and maintaining tight sheeting that may be required, cut, break and remove various thickness of surface and base pavement, excavate by hand, furnish, place and compact, in compliance with DOT requirements, clean sand backfill following installation of the gas facility. Any required removing, trucking, storing, and disposing of material shall be deemed included in the unit price. The price shall also include the cost of providing temporary pavement restoration. Permanent pavement restoration shall be deemed included in this item, as required and as directed by the Resident Engineer.

**GAS COST SHARING STANDARD SPECIFICATIONS**  
**SCHEDULE GCS-A**

**Average rate charged by utility companies to Disconnect and Reconnect Gas Services:**

1. National Grid - \$586.90 per Service/and Visit
2. Con Edison - \$524.00 per Service/and Visit

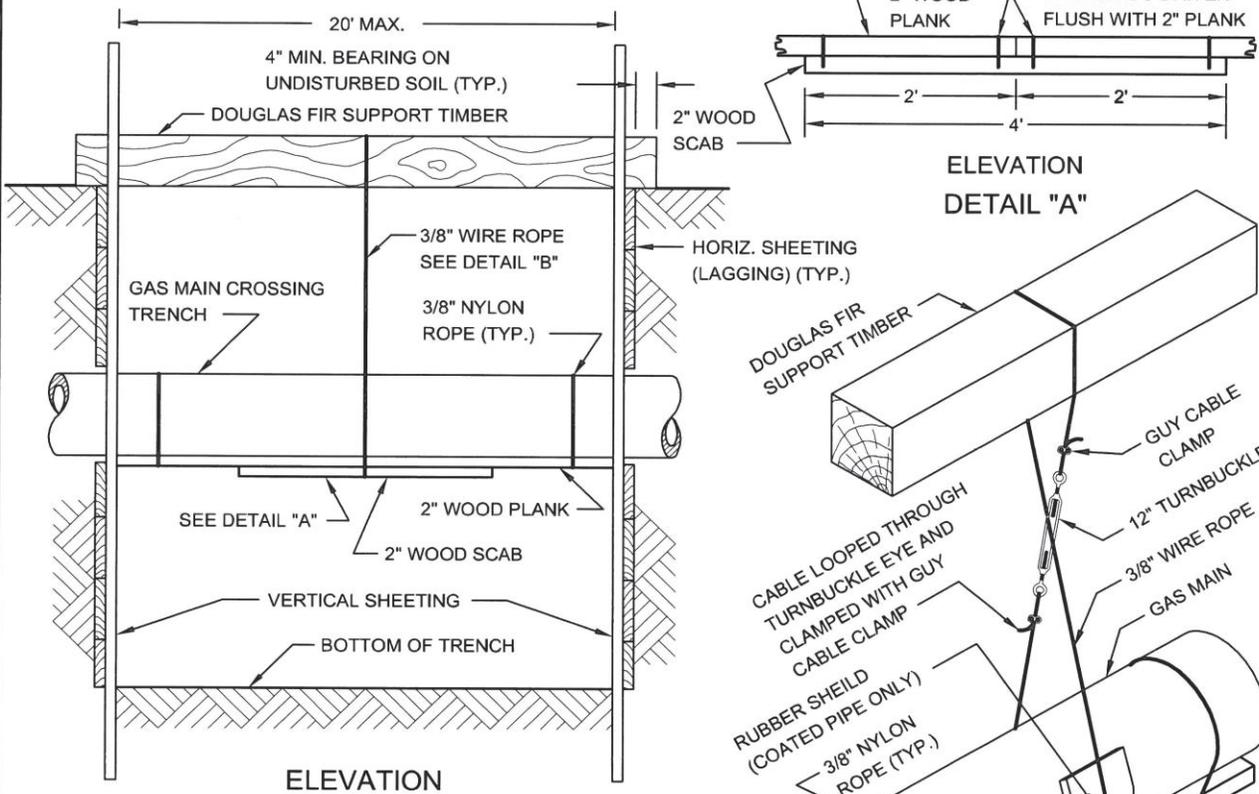

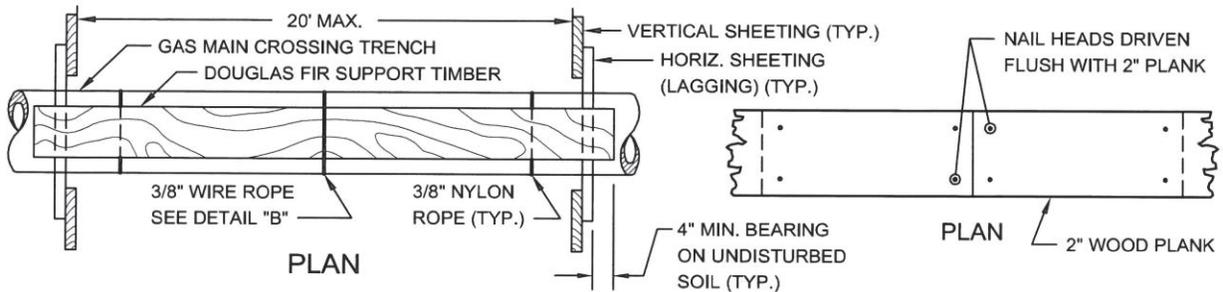

#### **IV - STANDARD SKETCHES; GAS COST SHARING WORK**

Hereinafter attached are the following Standard Sketches for Gas Cost Sharing Work:

- Sketch No. 1 - Support Requirements For Gas Mains And Services Crossing Excavation Greater Than 4' - 0" Wide At Any Angle
- Sketch No. 1A - Support Requirements For Gas Mains Over 16" Diameter Up To And Including 48" Diameter Crossing Excavation At Any Angle
- Sketch No. 2 - Typical Methods Of Measurement For Gas Crossings
- Sketch No. 3 - Utility Crossings During Catch Basin Chute Connection Pipe Installation
- Sketch No. 4 - Utility Crossings During Catch Basin Chute Connection Pipe Installation (Extra Depth)
- Sketch No. 5 - Gas Main Encroachment On And/Or Parallel To Excavation Of Unsheeted Trench

# GAS COST SHARING WORK (SKETCH NO. 1)

## SUPPORT REQUIREMENTS FOR GAS MAINS AND SERVICES CROSSING EXCAVATION GREATER THAN 4'-0" WIDE AT ANY ANGLE

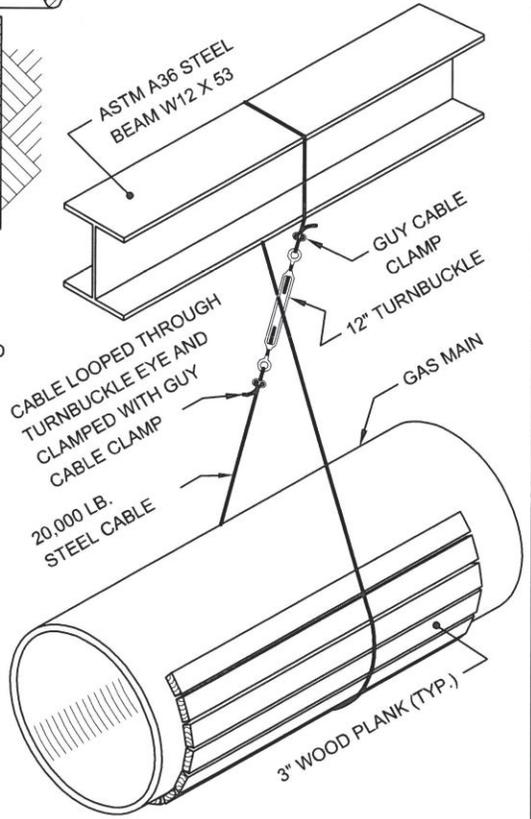

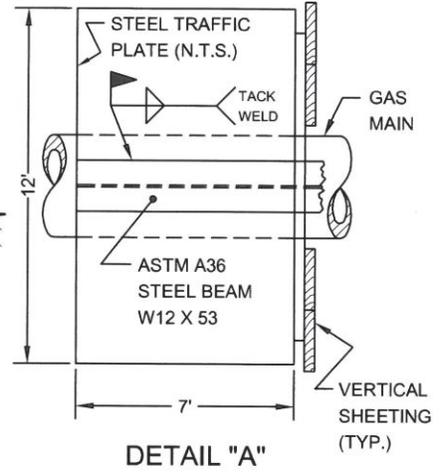

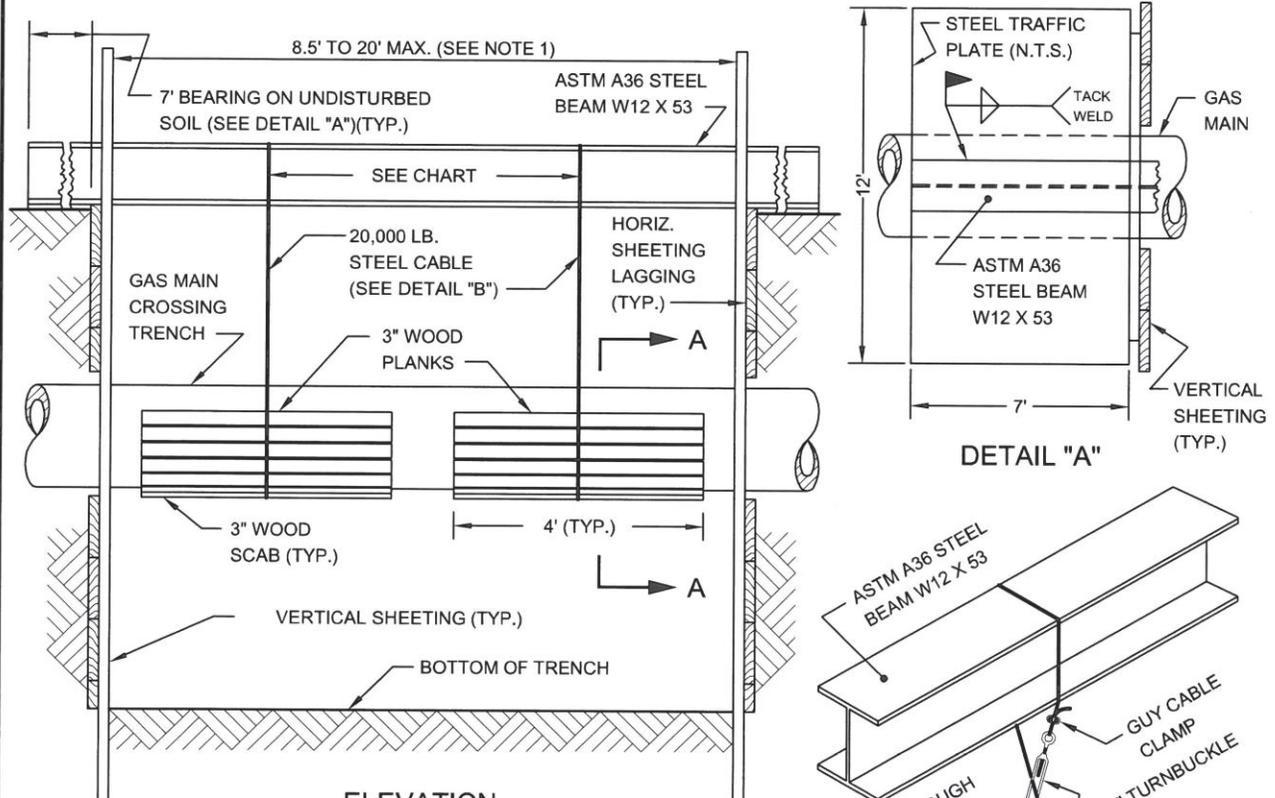

CABLE SUPPORT		TIMBER SUPPORT	
MAIN TYPE	SPACING	MAIN SIZE	TIMBER SIZE
CAST IRON	4' O.C. MAX.	UP TO 6"	6" X 6"
STEEL	10' O.C. MAX.	8" TO 10"	8" X 8"
PLASTIC	10' O.C. MAX.	12" TO 16"	10" X 10"

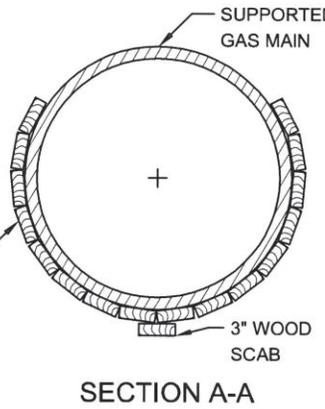

REVISED OCT. 2004 - L. ADRIEN  
REVISED JUNE 1998 - J. WONG/T.W. PATALANOP/IMOY

# GAS COST SHARING WORK (SKETCH NO. 1A)

SUPPORT REQUIREMENTS FOR GAS MAINS OVER 16" DIAMETER UP TO AND INCLUDING 48" DIAMETER CROSSING EXCAVATION AT ANY ANGLE

CABLE SUPPORT	
MAIN TYPE	SPACING
CAST IRON	4' O.C. MAX.
STEEL	10' O.C. MAX.

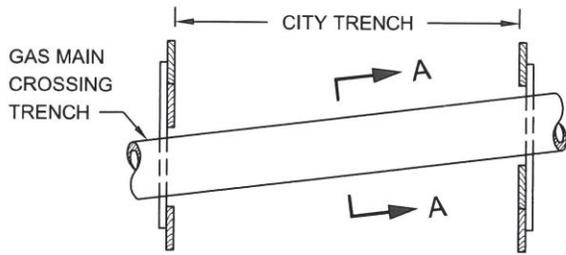

- NOTES:**
- (1) NO SUPPORT IS REQUIRED FOR GAS MAINS OVER 16" DIA. UP TO AND INCLUDING 48" DIA. CROSSING TRENCHES LESS THAN 8.5' WIDE.
  - (2) UNDERMINE A MAXIMUM OF 8.5 L.F. OF CAST IRON GAS MAIN AT A TIME.
  - (3) SET STEEL CABLE OVER 3" WOOD PROTECTIVE PLANKS AND PLACE AN ADDITIONAL 3" SCAB ON THE BOTTOM OF THE GAS MAIN.
  - (4) ADJUST STEEL CABLE UNTIL DEAD WEIGHT OF THE UNDERMINED GAS MAIN HAS BEEN TAKEN UP BY THE OVERHEAD STEEL BEAM SUPPORT.
  - (5) ALL SUPPORTS AND STEEL CABLES CAN BE REMOVED ONLY AFTER THE REQUIRED BACKFILL (AROUND AND BELOW GAS MAIN) HAS BEEN COMPACTED IN ACCORDANCE WITH NEW YORK CITY STANDARDS AND AT THE DIRECTIONS OF THE ENGINEER.

**TO EXCAVATION OF UNSHEETED TRENCH**

**NOTES:**

- (1) GAS MAIN LOCATED AS SHOWN MAY HAVE TO BE REMOVED BY THE FACILITY OPERATOR PRIOR TO THE START OF CITY EXCAVATION, OTHERWISE, THE CONTRACTOR WILL BE PAID UNDER SECTION 6.06 FOR THE SAID WORK. IF GAS MAIN IS ABANDONED THEN SECTION 6.03 SHALL APPLY.
- (2) EIGHTEEN (18) INCHES FROM STANDARD NEAT LINE IS THE MAXIMUM ALLOWABLE WIDTH OF AREA THAT MAY BE DISTURBED OR EXCAVATED DURING INSTALLATION OF CERTAIN TYPES OF SHEETING SYSTEMS THAT MEET THE REQUIREMENTS OF THE STANDARD SPECIFICATIONS OF THE DEPARTMENT OF DESIGN AND CONSTRUCTION OF THE CITY OF NEW YORK.

## V - PRELIMINARY GAS WORK TO BE PERFORMED BY FACILITY OPERATOR

### APPLICABLE TO ALL GAS DRAWINGS:

- ALL RELOCATION WORK SHOWN IN THIS SECTION IS TO BE PERFORMED BY FACILITY OPERATOR.
- ALL SUPPORT AND PROTECTION WORK IS TO BE PERFORMED BY CITY CONTRACTOR.
- IF ADDITIONAL INFORMATION IS NEEDED REGARDING THE FACILITY OPERATOR RELOCATION WORK, THE CONTRACTOR IS ADVISED TO CONTACT THE GAS COMPANY REPRESENTATIVE:

**Appendix “C”**  
**Resolution of Certain Disputes**  
**Arising Between the Contractor and**  
**the Utilities**

C.1.0 Applicability. In recognition of the usefulness of a process of alternative dispute resolution for its efficiency, speed and cost-effectiveness in managing conflict and settling disputes that may arise under, or by virtue of, these special provisions of Joint Bidding, the City and Utilities have agreed to the procedures set forth in this **Appendix “C.”** Accordingly, this **Appendix “C”** shall apply to disputes between the Contractor and the Utilities that arise under, or by virtue of, the provisions of this contract, which are set forth in pertinent part, below:

C.1.1 The Utilities’ Responsibilities. If the Utility identifies an issue in the payment requisition for the Utility Work only, the Utility will immediately notify the City and the Contractor by a written notice. After sending such written notice, the Utility agrees to meet with the Contractor to resolve the issue. If the issue cannot be resolved, then the Utility or the Contractor shall seek to resolve the issue through the arbitration process as set forth herein.

C.1.2 If The Utility Determines That There Is No Extra Or Disputed Work. If the Utility determines that the alleged extra Utility Work or the disputed Utility Work is part of the City’s contract documents and denies the Contractor’s claim or request for a change order, then after receiving the Utility’s written response, the Contractor shall either accept the Utility’s determination or immediately seek to have the issue resolved through the arbitration process as set forth herein.

C.1.3 If The Utility Determines That There Is Extra Work. If the Utility determines that there is extra Utility Work, the extra Utility Work will be paid for based on the Unit Price Book and the Contractor’s Multiplier. If all or a portion of the agreed upon extra Utility Work items are not in the Unit Price Book, then the Utility and the Contractor shall negotiate the cost of supporting and protecting and/or alleviating the impact on the Public Work caused by the extra or disputed Utility Work with each other with the understanding that the performance of Public Work shall continue during all negotiations and discussions. If the parties reach an agreement on cost for the extra or disputed Utility Work, then the Contractor and the Utility shall submit to the City’s RE a copy of the agreed upon prices together with supporting documentation. If the parties do not reach an agreement on cost for the extra or disputed Utility Work, then the parties will immediately arbitrate the issue as set forth herein.

C.2.0 Joint Bid Projects. Disputes that arise under this Appendix, as described above in paragraph A.1.0, shall be resolved in accordance with the provisions of this **Appendix “C”**. **Appendix “C”** shall NOT apply to any disputes between the City and the Contractor, or any disputes between the City and the Utilities. Since the arbitration of Utility interference disputes, as described in Article A.1.0 above, is a matter solely between the Utilities and the Contractor, and since the parties agree to reduce or eliminate any costs to the City relating to any arbitration pursuant to this **Appendix “C”**, the parties hereby agree that:

C.2.1 The City shall not be a party in the arbitration process;

□

C.2.2 Neither the Contractor nor the Utilities shall call as a witness in the arbitration process any City employee, agent or consultant, including the City's RE, his staff or City inspection personnel;

C.2.3 The City shall not be responsible for any costs, fees or monetary awards or price adjustments associated in any way with the arbitration process described in this **Appendix "C"**; and

C.2.4 Notwithstanding Articles A.2.1 and A.2.2, the City's obligation to furnish information to the parties shall be limited to those requests as set forth under the New York State Freedom of Information Law, as amended.

### C.3.0 Pre-Arbitration Procedures.

C.3.1 Should a dispute arise between any Utility and the Contractor pursuant to Article A.1.0 of this Appendix, the disputing party shall notify the City and the other party in writing within two (2) Business Days of the dispute that a dispute exists, and briefly describe; (i) the nature of the dispute; and (ii) the proposed resolution and rationale supporting its proposal.

C.3.2 After notifying the City of the dispute, the disputing parties shall have fifteen (15) Business Days to meet, discuss the issues, exchange documents and/or exchange offers with due diligence and in good faith in order to reach an agreement and resolve the dispute.

C.3.3. If the disputing parties reach an agreement, they shall immediately notify the City in writing that the dispute has been resolved and describe the terms of the resolution.

C.3.4 If the disputing parties have not reached an agreement within fifteen (15) Business Days of the date the City was first notified of the dispute, the Contractor shall, within five (5) Business Days thereafter, submit to the Utility a written Final Offer, which shall consist of: (i) a description (e.g., units and quantities) of all reasonable and necessary disputed work or extra work which the Contractor contends are not covered by application of the Unit Price Book and the Multiplier; and (ii) a detailed breakdown of the Contractor's proposed prices (e.g., unit prices and quantities) for such work.

C.3.5 Upon receipt of the Contractor's Final Offer, the Utility shall, within five (5) Business Days, either accept the Contractor's Final Offer or submit to the Contractor a written Final Offer which shall consist of: (i) a description (e.g., units and quantities) of all reasonable and necessary disputed work or extra work, if any; and (ii) a detailed breakdown of the Utility's proposed prices (e.g., unit prices and quantities) for such work, if applicable.

C.3.6 Once Final Offers have been exchanged by the parties, they may not be modified or withdrawn by either party except by mutual agreement or final settlement of the dispute.

□

- C.3.7 Upon exchange of Final Offers, the Contractor shall have three (3) Business Days, to either accept the Utility's Final Offer or submit the dispute to the American Arbitration Association ("AAA") to be resolved in accordance with the Construction Industry Arbitration Rules ("Rules") in effect on the date the arbitration is initiated, except as such Rules are modified herein.
- C.3.8 Each of the steps described above shall be a condition precedent to the obligations of the parties in succeeding steps. Since **Time is of the Essence**, should either party fail to comply with any of the pre-arbitration procedures described above, that party shall be deemed to be in default. If, upon receipt of written notice of default by the other party, the defaulting party has not cured the default within three (3) Business Days, the other party may proceed to arbitration solely on the issue of whether the defaulting party was in default of these pre-arbitration procedures. If, after hearing evidence, the arbitrator(s) determine that the defaulting party was in default of these pre-arbitration procedures, then the arbitrator(s) shall enter a final decision in favor of the other party in accordance with the Final Offer submitted by the other party or, if no Final Offer has been submitted prior to the default, according to the last written proposal submitted by the other party.

#### C.4.0 General Provisions.

- C.4.1 The Utility agrees to pay for any disputed or extra Utility Work while the arbitration proceeding is pending based on the Utility's Final Offer.
- C.4.2 All determinations by the parties required by this **Appendix "C"** shall be clearly stated, with a reasoned explanation for the determination based on the information and evidence presented to the party making the determination.
- C.4.3 The Utility agrees to copy the City on all communications involving the arbitration process and to notify the City of the final determination.
- C.4.4 The Utility agrees to pay the Contractor directly for any final settlement for extra Utility Work that may be agreed to by the Utilities and the Contractor or any final award for extra Utility Work issued by the arbitrator(s), less credits for any payments previously made by the Utility to the Contractor.
- C.4.5 All of the contract defined terms shall apply here, as if they were re-stated herein.
- C.4.6 Since **Time Is Of The Essence** on all Joint Bid Projects, whenever there is a dispute pursuant to this **Appendix "C"**, the terms of the City's Construction Contract shall remain in full force and effect, and the Contractor shall continue performing all of the City Work and the Utility Work as directed by the City.
- C.4.7 The timeframes set forth herein have been established to ensure that the Joint Bid Project does not stop for any disputes between the Contractor and the Utility.
- C.4.8 All of the timeframes are measured in Business Days, which include Monday, Tuesday, Wednesday, Thursday and Friday, but exclude holidays.

□

C.4.9 For all disputes that arise under **Appendix “C”**, the City’s role shall be limited to receiving copies of all written communications.

C.4.10 The Contractor and all subcontractors hired by it agree to waive any rights they may have, if any, under law, equity, contract or otherwise to compel the City to assert any right the City may have, including the issuance of any directives or so-called “order outs” under the New York City Administrative Code, to require any or all of the Utilities to maintain, repair, replace, protect, support, shift, alter, relocate, and/or remove Utility facilities in connection with work to be performed under this contract. However, nothing in this Agreement shall preclude the City from exercising its rights under the law, including the right to issue such a directive to a Utility.

C.4.11 Each Utility shall be named as an additional insured on all insurance policies required to be maintained by the Contractor in connection with the Joint Bid Project. The actual incremental cost, if any, to the Contractor of providing such insurance coverage shall be borne by the Contractor. The Contractor shall provide a written statement from its insurance provider documenting the this added coverage to the Utility. Under no circumstances shall the cost of insurance coverage on behalf of the Utility be borne by the City. Nothing in this paragraph shall be interpreted to imply the City’s acceptance of any additional responsibility or liability for any matter related to the performance of Utility Work. In particular, with regard to any Utility Work performed in accordance with or through this **Appendix “c”**, the Utility and the Contractor bear joint and full responsibility to ensure that any Utility Work performed by the Contractor is in compliance with all applicable government and Utility regulations.

C.5.0 The Arbitration Procedures.

C.5.1 Once the AAA has appointed an arbitrator(s), the arbitration shall be scheduled as promptly as possible given the arbitrator(s) and the parties’ schedules.

C.5.2 No later than fourteen (14) calendar days prior to the first day of arbitration, the Utility and Contractor shall submit to the arbitrator(s), and to each other, a summary of each party’s respective position, all documentary, photographic or physical evidence on which the party intends to rely, and such other information as is deemed appropriate, along with a copy of each party’s “Final Offer” as described above.

C.5.3 The arbitration shall be conducted and concluded in two (2) days.

C.5.4 On the morning of the first (1<sup>st</sup>) day of the arbitration, Contractor and/or representatives shall have 3½ hours to make a presentation of its claim to the arbitrator(s). During its presentation, Contractor shall not be permitted to produce any evidence that has not already been provided to the Utility and the arbitrator(s) pursuant to Paragraph A.5.2, above. Contractor shall be permitted to produce any analysis or description of its claim that has been prepared for the purpose of its presentation.

□

- C.5.5 After the Contractor's presentation, Utility and/or its representatives shall have 2 hours to ask the Contractor questions about its claim and its presentation. Thereafter, the arbitrator(s) shall have 2 hours to ask the Contractor questions about its claim and its presentation.
- C.5.6 On the morning of the second (2<sup>nd</sup>) day of the arbitration, Utility and/or its representatives shall have 3½ hours to make a presentation of its claim to the arbitrator(s). During its presentation, the Utilities shall not be permitted to produce any evidence that has not already been provided to the Contractor and the arbitrator(s) pursuant to Paragraph A.5.2, above. The Utility shall be permitted to produce any analysis or description of its claim that has been prepared for the purpose of its presentation.
- C.5.7 After the Utility's presentation, the Contractor and/or its representatives shall have 2 hours to ask the Utility questions about its claim and its presentation. Thereafter, the arbitrator(s) shall have 2 hours to ask the Utility questions about its claim and its presentation.
- C.5.8 Subject to the above maximum time limitations set forth above, the arbitrator(s) may conduct the arbitration in such manner as the arbitrator(s) deems reasonable.
- C.5.9 The arbitrator(s) shall then have one (1) week to select in writing, as the arbitrators' award, that party's Final Offer that appears to be more reasonable, based on the presentations at the arbitration hearings.
- C.5.10 The arbitrator(s) shall have no discretion to grant an award other than one of the two (2) Final Offers submitted by the parties.
- C.5.11 The arbitration award shall be final and binding upon the parties to the arbitration and judgment upon the award may be entered in a court having jurisdiction. A.5.12 Any award for work that has already been performed shall be paid on the 7<sup>th</sup> day after receipt of the arbitrator's decision, or on the 30<sup>th</sup> day after completion of the work, whichever is later. Payment for work not yet completed at the time of the arbitrator's decision shall be paid within thirty (30) calendar days of completion of work. Interest shall accrue from the date payment is due at the rate of nine (9%) percent per annum. Either party may cause judgment to be entered in accordance with the decision of the arbitrator(s) in a court in the State of New York, County of New York.
- C.5.13 The Utility and the Contractor initially shall share the arbitrator's(s') fees and any other costs of the arbitration equally. The non-prevailing party shall then pay all arbitrator's(s') fees and costs of the arbitration and shall reimburse the prevailing party for its share of such fees and costs theretofore paid.

□

C.5.14 The parties may, at any time, settle any matter submitted to arbitration.

C.5.15 Since **Time is of the Essence**, should any party, at any time after the dispute has been submitted for arbitration, materially fail to comply with: (i) the Rules, (ii) any of these arbitration procedures, or (iii) any procedural decisions by the arbitrator(s), then the arbitrator(s) shall enter an order directing the party to cure its non-compliance within five (5) Business Days. If the party shall fail to comply with the order of the arbitrator(s) order within the five (5) Business Days, upon receipt of evidence that the non-complying party has failed to comply with the arbitrator's(s') order, the arbitrator(s) shall enter a final decision in favor of the other party in accordance with the other party's Final Offer.

Guideline Document for Public Improvement

CONST- 029 Revision Number 4

Purpose: To update the Public Improvement Contractor Guideline document for safe entry into Sub-Surface Structures and moving energized underground cables.

Revision Date: 7-30-2020 Next Revision Due Date: 7-30-2022

Supersedes Date: 6-30-2018 Revision Cycle Period: Once every 2 years

Table with 3 columns: TYPE, NAME, DATE. Rows include EH&S (Glenn D. Newell), Technical (Joseph Bedell, Joseph Bedell Jr., John Stefandl & Marlon Kalloo), and Legal (Inna Rozenberg), all dated 7/30/2020.

- Summary of Changes: 1. Updated Reference Section to Include OSHA 1926 Subpart V; 2. Removed Section on Moving Energized U.G. Cables Located Inside Sub-Surface Structures; 3. Updated/Revised Sections 1.4, 2.1, 2.2.2, 3.4, 3.6, 3.8, 3.9, 4.5.5, 4.7 & 4.7.1; 4. Added New Section 4.5.4 – HDPE Conduit; 5. Added New Chapter 5.0 – Breaking Out a Point of Entry (POE)

Training Requirements - N/A

DOJT/Course #, etc. Associated with this Operating Document:

None

Subject Matter Expert: Marlon Kalloo Approved Date: 7/30/2020 [Signature]

- 5.1 – Activities Prior to creating POE’s
- 5.2 – Creation of POE Operations

□

**1.0 Definitions**

- 1.1 Competent Person-** As a general rule, a Competent Person is an individual who, by way of training and/or experience, is knowledgeable of OSHA and other applicable standards, is capable of identifying workplace hazards relating to the specific operation, and is designated by the employer with the authority to take all appropriate actions necessary to comply with all applicable standards and properly address hazards. Some OSHA standards add additional specific requirements that must be met by the Competent Person.
- 1.2 Attendant -** An authorized individual who is stationed outside a sub-surface structure or an Electrical Enclosed Space to monitor the authorized entrants and to perform duties assigned including providing assistance to individual inside the sub-surface structure or Electrical Enclosed Space.
- 1.3 Electrical Enclosed Space –** OSHA defines an Electrical Enclosed Space as a working space, such as a manhole, vault, tunnel, service box, or shaft, used for the operation and maintenance of electric power generation, transmission, and distribution lines and equipment. An Electrical Enclosed Space has a limited means of egress or entry, and is designed for periodic entry under normal operating conditions. Under normal conditions, an Electrical Enclosed Space does not contain a hazardous atmosphere, but may contain a hazardous atmosphere under abnormal conditions.
- 1.4 CET Specification –** CET Specification defining private utility work within Municipal Construction Contracts.
- 1.5 JB Specification –** Joint Bid specification defining private utility work within a NYC DDC Capital contract.
- 1.6 Public Improvement Representative -** Con Edison employee, (Inspector, Construction Representative, Chief Construction Inspector, Project Specialist, or Manager) assigned to the Public Improvement section.
- 1.7 Municipal Contractor –** Construction municipal contractor performing work for Municipal, State or other Public Agencies or Authorities.
- 1.8 Electrically Competent Qualified Municipal Contractor -** is a Municipal Contractor employee designated and documented by the Municipal Contractor employer, in writing, as the electrically competent and qualified person who, by way of training and/or experience has the skills and techniques necessary to distinguish exposed live parts from other parts of electrical equipment, can identify non-insulated conductors from insulated conductors and/or cables and has the knowledge of the precautionary techniques, personal protective equipment, insulating and shielding materials, and insulated tools that are required for working on or near exposed energized electrical equipment. The Electrically Competent Qualified Municipal Contractor employee is capable of identifying varying workplace electrical hazards relating to the specific operation and has the authority to take appropriate actions, as required. In order to meet the task specific qualifications of this guideline, the Electrically Competent Qualified Municipal Contractor employee must be familiar with this document and be able to demonstrate adherence.

□

## 2.0 References

### 2.1 **OSHA Section 1910.269 – Electric Power Generation, Transmission & Distribution & 1926 Subpart V –Electric Power Transmission and Distribution**

### 2.2 **Training-** The OSHA Office of Training and Education (OTE) develops, directs, oversees, manages and ensures implementation of OSHA's national training and education policies and programs in support of OSHA's strategic goals with the objective of reducing occupational hazards through direct intervention, promoting a safety and health culture through compliance assistance, cooperative programs and strong leadership and maximizing OSHA effectiveness and efficiency by strengthening capabilities and infrastructure.

All Municipal Contractor employees shall be trained in and familiar with the safety-related work practices, safety procedures, and other safety requirements in section 1910.269(a)(2) and 1926 Subpart V that pertains to the Municipal Contractor employees' respective job assignments. Municipal Contractor employees' shall also be trained in and familiar with any other safety practices, including emergency procedures, such as manhole rescue, that are not specifically addressed by this referenced section but that is related to their work and is necessary for their safety.

Con Edison manhole inspection and underground awareness training can be scheduled through the Con Edison TLC upon request of the municipal contractor. OSHA 10 certification cards and CPR / First Aid training are prerequisites.

#### 2.2.1 Electrically Competent Qualified municipal contractors shall also be trained and competent in:

- a- The skills and techniques necessary to distinguish exposed live parts from other parts of electrical equipment
- b- The skills and techniques necessary to determine exposed live parts from other parts, (determination of non-insulated conductors from insulated conductors / cables).
- c- The knowledge of the precautionary techniques, personal protective equipment, insulating and shielding materials, and insulated tools that are required for working on or near exposed energized parts of electrical equipment. Generally, the Municipal Contractor will not be required to work on or near exposed/non-insulated energized parts of electrical equipment or cables. In the event special conditions exist requiring working near exposed/non insulated energized parts of electrical equipment or cables, the Municipal Contractor shall cease working and immediately contact the authorized Con Edison Inspector so that a further assessment of the condition can be evaluated, and appropriate guidance provided.
- d- The Electrically Competent Qualified Municipal Contractor employee shall determine, through regular supervision and through inspections conducted on at least an annual basis that each Municipal Contractor employee is complying with the safety-related work practices outlined in this guidance document.

□

□

**2.2.2** A Municipal Contractor employee shall receive additional training (or retraining) by the Electrically Competent Municipal Contractor under any of the following conditions:

- a- If the Electrically Competent Qualified Municipal Contractor employee indicates that the Municipal Contractor employee is not complying with safety-related work practices
- b- If new technology, new types of equipment, or changes in procedures necessitate the use of safety-related work practices that are different from those which the Municipal Contractor employee would normally use
- c- If the Municipal Contractor employee must employ other safety-related work practices that are not normally used or that require modification from those stated in this guidance document

Note: OSHA requires retraining before commencing with a task that has not been performed within one year.

The required training shall be of the classroom and/or on-the-job type. The training shall establish Municipal Contractor proficiency in the work practices required and shall introduce the procedures necessary for compliance. The Electrically Competent Qualified Municipal Contractor shall certify that each Municipal Contractor employee has received the training required and retains records of this training to be supplied upon request by Con Edison.

### **3.0 Safe Entry into Sub-Surface Structures, (Electrical Enclosed Space)**

**3.1 Purpose:** To establish a guideline that shall be employed for safe entry into Con Edison sub-surface structures by Municipal Contractors.

**3.2 Application:** Municipal Contractor personnel

**3.3 Guideline:** This guideline provides the requirements for practices that shall be employed for safe entry into Con Edison sub-surface structures. Municipal Contractor personnel requiring entry into Con Edison sub-surface structures shall adhere to this guideline.

### **3.4 Inspection/Testing**

Prior to entry into a Con Edison sub-surface structure, properly trained and qualified Con Edison electrical personnel must conduct an inspection. The assessment will determine if the condition of the electrical facilities contained therein is sufficient to allow need based unrestricted access. Con Edison electrical personnel shall validate that the Con Edison sub-surface structure inspected is approved for need based unrestricted access. The Con Edison Inspector shall communicate and document to an Electrically Competent Municipal Contractor personnel any safety precautions to be taken and that the subsurface structure is safe for entry. Any condition deemed to be un-safe through this formal inspection process would preclude granting access.

□

□

An inspection must take place daily prior to Municipal Contractor entry. Once the cover is placed on the electric subsurface structure another inspection must occur prior to Municipal Contractor entry. Inspections include but are not limited to:

- 1) Testing for stray voltage by a qualified Con Edison employee or qualified Municipal Contractor employee.
- 2) Completion of atmospheric testing.
- 3) Determination that it is safe to enter the space.
- 4) A visual inspection for any abnormalities previously defined.
- 5) Communication of inspection results and hazards to the Con Edison inspectors and the municipal contractor supervisor.

### 3.5 Job Briefing

The Electrically Competent Qualified Municipal Contractor in charge shall conduct a job briefing with the municipal contractor's employees involved before they start the job. The briefing shall cover: the hazards associated with the job; work procedures involved; special precautions; and personal protective equipment requirements. The Electrically Competent Qualified Municipal Contractor shall instruct that all cables are to be treated as energized. Additional briefings shall be held if significant changes, which might affect the safety of the municipal contractor's employees, occur during the course of the work. The Electrically Competent Qualified Municipal Contractor shall document completion of the job briefing. A copy of the documented job briefing should be available upon request by Con Edison.

### 3.6 Attendants

While work is performed in a Con Edison sub-surface structure, a Municipal Contractor Attendant shall be available in the immediate vicinity to render emergency assistance. Sub-surface structure Attendants shall comply with applicable OSHA requirements.

### 3.7 Hazardous Atmosphere

Municipal Contractor personnel shall perform a hazardous atmosphere test before entry into any Con Edison sub-surface structure and perform continuous air monitoring in compliance with applicable OSHA requirements. Any atmospheric reading deemed to be un-safe would prohibit access to the structure. The Municipal Contractor shall immediately notify the authorized Con Edison Inspector.

### 3.8 Personal Protective Equipment

Municipal Contractor personnel requiring entry into Con Edison sub-surface structures shall refer to and comply with applicable OSHA requirements regarding the use of Personal Protective Equipment when performing this work. In addition, Con Edison is requiring that Municipal Contractor personnel assigned to work inside Con Edison sub-surface structures shall at all times wear Flame Resistant (FR) Clothing with a rating of 8 cal/cm<sup>2</sup> or HR2, a retrieval harness and that a retrieval device be on location. In addition, an atmospheric tester

□

must be in use continuously anytime a structure is occupied. See section 3.9 for Matrix on Con Edison's Personal Protective Equipment Guideline.

**3.9 Con Edison Personal Protective Equipment Guideline**

	Task	Class 0 Gloves	FR Clothing	FR Hood	Blast Goggles	Face Shield	Safety Glasses
1	Pavement breaking	N	N				Y
2	Breaking out concrete encased duct	Y	Y				Y
3	Moving energized primary cables that are located outside a structure while in proximity to joints	Y	Y	Y	Y		
4	Moving primary cables outside a structure (no joints involved)	Y	Y				Y

24	Removing underground silo	Y	Y				Y
25	Regrade	Y	N				Y
26	Build/remove shunt box w/ energized cable inside	Y	Y				Y

**3.10 Access**

Municipal Contractor personnel shall not climb into or out of Con Edison subsurface structures by stepping on cables or hangers.

□

**4.0 Removal of Conduit from Cables and Moving Energized Underground Cables Located Outside of Subsurface Structures**

**4.1 Purpose:** Establish a guideline that shall be employed by Electrically Competent Qualified Municipal Contractor personnel, meeting OSHA training requirements, when removing conduit from cables and moving Con Edison energized underground cables located outside structures.

**4.2 Application:** Municipal Contractor personnel

**4.3 Guideline:** This guideline details the requirements for practices that shall be employed when moving Con Edison energized underground cables located outside of Con Edison structures. Movement of energized cables on the Con Edison system shall be performed in accordance with the following directions. Only Electrically Competent Qualified Municipal Contractor personnel who been trained and meet necessary OSHA requirements for moving energized underground cables and in accordance with the following directions shall perform movement of energized cables on the Con Edison system.

**4.4 Job Briefing**

The Electrically Competent Qualified Municipal Contractor in charge shall conduct a job briefing with the Municipal Contractor’s employees involved before they start the job. The briefing shall cover: the hazards associated with the job; work procedures involved; special precautions; and personal protective equipment requirements. The Electrically Competent Qualified Municipal Contractor shall instruct that all cables are to be treated as energized. Additional briefings shall be held if significant changes, which might affect the safety of the Municipal Contractor’s employees, occur during the course of the work. The Electrically Competent Qualified Municipal Contractor shall document completion of the job briefing.

**4.5 Removal of Conduit from Cables**

All subsurface electric cable systems and related components shall be considered energized. Caution shall always be employed whenever conduits are opened to expose the interior cable.

**4.5.1- Pre-cast Concrete Conduit**

- a- The conduit shall be fractured by striking the top end corner of the conduit with a 3 lb. hammer equipped with a non-conductive handle. When fracturing the conduit, all impact/chipping action shall be performed in such a manner so as to be directed across the top of the conduit away from any cable that may be inside of the conduit.
- b- A small piece of the concrete conduit shall be chipped away so that a visual examination of the interior of the conduit can be made to verify the presence of cable. All impact/chipping actions shall be performed in such a manner so as to be directed across the top of the duct, away from the cable.

□

□

- c- If cable is present, concrete-chipping operations shall continue until enough material has been removed to permit insertion of a non-conductive protective shield barrier between the conduit and cable or as directed by the authorized Con Edison Inspector based on existing field conditions. Material such as exterior grade plywood or lumber (min. thickness 3/4") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g. Norplex Micarta RT504 NEMA Grade G-3) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operations. The remainder of the conduit shall be fractured using the 3 lb. hammer equipped with a non-conductive handle. Care shall be taken so as to avoid any impact upon the cable, either by direct or indirect hammer blows.
- d- During and after conduit removal operations, cable/conduit shall be properly supported as indicated in Section 5.7, below.

#### 4.5.2 - Concrete Encased Conduit

- a- The concrete encased conduit (including but not limited to pre-cast, fiber, tile, clay), shall be fractured by striking the top end corner of the conduit with a 3 lb. hammer equipped with a non-conductive handle. When fracturing the conduit, all impact/chipping action shall be performed in such a manner so as to be directed across the top of the conduit away from any cable that may be inside of the conduit.
- b- For concrete encased conduit, it may be necessary to employ a handheld cold chisel (in conjunction with the 3 lb. hammer) to remove concrete encasement. If a chisel is utilized, all impact/chipping actions shall be performed in such a manner so as to be directed across the top of the duct, away from the cable.
- c- If the concrete encasement is so dense as to render the use of a hammer and handheld chisel non-effective, an 8-pound sledgehammer may be employed. If neither of these devices proves effective, the use of a pneumatic chipping hammer will be permitted. The weight/size of the pneumatic chipping hammer shall not exceed 20 lbs. When utilizing a pneumatic chipping hammer, the device shall be securely positioned and be under close operator control at all times. The tool bit used for these operations shall be chisel shaped with a minimum width of two (2") inches. All impact/chipping actions shall be performed in such a manner so as to be directed across the top of the duct, away from the cable.
- d- A small piece of the concrete conduit shall be chipped away so as to permit verification of the presence of cable inside the conduit.
- e- If cable is present, concrete-chipping operations shall continue until enough material has been removed to permit insertion of a non-conductive protective shield barrier between the conduit and cable or as directed by the authorized Con Edison Inspector

□

□

based on existing field conditions. Material such as exterior grade plywood or lumber (min. thickness ¾") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g. Norplex Micarta RT504 NEMA Grade G-3) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operation.

- f- After installation of the shield material has been completed, continue removal of remaining conduit and encasement, using handheld and power tools.
- g- During and after conduit removal operations, cable/conduit shall be properly supported as indicated in Section 5.7, below.

#### 4.5.3 – Wood Conduit

- a- Wooden conduit shall be split using a handheld cold chisel and a 3 lb. hammer equipped with a non-conductive handle. All impact/chipping action shall be performed in such a manner so as to be directed across the top of the conduit away from the cable.
- b- The chisel shall use to create a small window in the conduit that will permit a visual inspection of the conduit interior for the presence of cable.
- c- If cable is present, wood conduit material shall continue to be removed until enough material has been removed to permit insertion of a non-conductive protective shield barrier between the conduit and cable or as directed by the authorized Con Edison Inspector based on existing field conditions. Material such as exterior grade plywood or lumber (min. thickness ¾") or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g. Norplex Micarta RT504 NEMA Grade G-3) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operation.
- d- After installation of the shield material has been completed, continue removal of remaining conduit
- e- During and after conduit removal operations, cable/conduit shall be properly supported as indicated in Section 5.7, below.

#### 4.5.4 – HDPE Conduit

- a- HDPE conduit shall be split using hand tools or a handheld pneumatic rotary cutting tool. All splitting/cutting actions shall be performed in such a manner so as to be directed across the top of the duct, away from the cable.
- b- Pneumatic Rotary Cutting Tool – A pneumatic rotary cutting tool shall be used to score an access area in the surface of the conduit., Prior to application of the cutting tool to the surface of the

□

□

conduit, the depth collar on the pneumatic rotary cutting tool shall be set so that the cutting bit will penetrate approximately  $\frac{3}{4}$  of the wall thickness of the conduit. After the conduit has been cut to the maximum depth allowable (such that the bit does not fully penetrate the thickness of the conduit), a 3 lb hammer shall be used to knock out the access area (window) outlined by the cutting tool. This will permit visual inspection of the conduit interior for the presence of cable.

- c- If inspection of the interior of the conduit reveals that cable is present, a non-conductive protective shield barrier shall be inserted into the conduit between the conduit and cable. This shield material shall provide protection for the cable during the remaining conduit removal operations. Material such as exterior grade plywood or lumber (min. thickness  $\frac{3}{4}$ " ) or suitably reinforced plastic sheet material (min. thickness 0.060" – e.g. Norplex Micarta RT504 NEMA Grade G-3) shall be used for this purpose. This shield material shall provide protection for the cable during the remaining conduit removal operations.
- d- If inspection of the conduit interior does not reveal the presence of cable, the remaining conduit may be removed using the tool choices mentioned in 4.5.4.a.

#### 4.5.5 - Metal Conduit

- a. When removing metal conduit, the Municipal Contractor should first excavate and expose a collar connecting two sections of conduit. Once the collar is accessible, split and/or cut the collar off to inspect the conduit interior for the presence of cable. If a metal conduit collar is NOT easily accessible, or found within 20 to 40 feet of open excavation, proceed to section 4.5.5.b. Note: If the work to be performed is in response to a suspected natural gas leak or in the presence of natural gas, only the use of non-powered hand tools is allowed. Further guidance will be provided by Gas Engineering.
- b. If a collar connecting two sections of conduit cannot be found, metal conduit will be split using hand tools and/or a handheld rotary cutting tool. All splitting actions will be directed across the top of the conduit, away from the cable. Note: If the work to be performed is in response to a suspected natural gas leak or in the presence of natural gas, only the use of non-powered hand tools is allowed. Further guidance will be provided by Gas Engineering.
- c. Score the outline of an access area onto the surface of the conduit. Do not fully penetrate the conduit with the tool while making this outline.
- d. Use this outline as a guide for further splitting and cutting operations that will eventually create a viewing window into the conduit.

□

- e. If inspection of the conduit interior reveals the presence of cable, insert a non-conductive protective barrier between the cable and conduit wall. The barrier will provide physical protection for the cable during remaining conduit removal operations. Materials including, but not limited to, exterior grade plywood, lumber, and Norplex Micarta are acceptable. After the installation of the non-conductive protective barrier, the removal of the remaining conduit may proceed using the tool choices mentioned in section 5.5.4b.
- f. If inspection of the conduit interior does not reveal the presence of cable, the remaining conduit may be removed using the tool choices mentioned in section 4.5.5b.

#### 4.6 Visual Inspection

- a- A visual inspection of cables located outside Con Edison structures that will be moved, shall be performed by Electrically Competent Qualified Municipal Contractor personnel or the authorized Con Edison Inspector.
- b- After the conduits have been broken out (removed from the cables), the exposed cable(s) shall be inspected by the Electrically Competent Qualified Municipal Contractor personnel.
- c- The cables shall be visually inspected by the Electrically Competent Qualified Municipal Contractor personnel, and determined to be free from any of the defects that would prevent relocation. Cable(s) shall be free of cracks, tears, and evidence of oil stains, swelling, or melting of the insulation. Cables shall not have any exposed conductor.

#### 4.7 Cable Moving Operations – Outside Structures

- a- Prior to moving any cables outside of a subsurface structure, the cables located within the associated connecting subsurface structures shall be inspected in accordance with the guideline requirements for moving cables within Con Edison sub-structures.
- b- Municipal Contractor personnel experienced in moving Con Edison cables only shall move cables.
- c- Cables shall not be moved until plastic “fair-leaders” are positioned at the duct edges to prevent chaffing damage.
- d- Synthetic web slings having a minimum width of two (2) inches shall support cables that have been removed from conduit. Slings shall be used in a basket hitch configuration.
- e- Conduits housing cables shall be supported using slings, cable, or rope. Conduits shall be supported in such manner as to maintain alignment with one another.
- f- Maximum distance between support points shall be four (4) feet.

□

- g- To prevent inadvertent over bending of the cables, the maximum vertical or horizontal offset between supports shall be one foot (1') for cable that is supported outside of conduit. For cable that is being moved while still installed in conduit, the conduit shall not be offset more than one foot per four-foot section of conduit.
- h- Each set of cables (cables from one duct/conduit) shall be moved individually. Cables from multiple ducts/conduits shall not be moved as a bundle.
- i- Relocation of cables shall be performed in a careful manner with the movement of cable under complete control at all times. There shall be no sudden movements of the cable or the conduit that contains cable.
- j- An observer shall be positioned so as to determine proper slack in structures and to ensure that joints remain properly supported on rack arms and specified offsets are maintained. This observation shall be performed from outside of the structure while the cable is being moved.
- k- Allowable horizontal and vertical offsets shall be determined based on applicable CET or JB item sketches and/or as directed by the authorized Con Edison Inspector.
- l- Cables shall not be permitted to fall freely from temporary supports.
- m- All cables supported by slings shall be visually inspected at the beginning and end of each work shift to ensure that no cracks, leaks, or other defects have developed.
- n- Cables shall be repositioned with care when being moved into their final position for the installation of split conduit.

#### 4.7.1 Personal Protective Equipment

Municipal Contractor personnel moving Con Edison energized cables shall refer to and comply with applicable OSHA requirements regarding the use of Personal Protective Equipment when performing this work. See Section 3.9 for Matrix on Con Edison's Personal Protective Equipment Guideline.

### 5.0 Breaking Out a Point of Entry (POE's) in an Electrical Enclosed Space

#### 5.1 Activities Prior to creating POE's

- 5.1.1 Prior to creating POE's, the location of all conduit and cable passing through the section of the wall shall be visually identified and protected inside structure.
- 5.1.2 If any cables are required to be moved prior to creation of a POE, they shall be moved by properly trained and qualified Con Edison electrical personnel.

□

□

**5.2 Creation of POE Operations**

**5.2.1** Using caution, expose the exterior section of the wall that you intend to create the POE (typically done in 2' – deep vertical sections) by carefully excavating on the outside of the structure.

**5.2.2** When there is a potential for contact between the existing cables that have been visually identified and the tool being used to break out the POE, protect the cables using fire rated wood, phenolic board, cable shields or other acceptable non-conductive materials. Along with protecting the cable from coming in contact with the implement being used for breaking, cables on the walls in the POE area shall also be protected from falling debris using FR wood even if there is no potential for contact with said cables.

**5.2.3** Once the following conditions have been satisfied:

**5.2.3.1** Location of cables inside the structure and the associated conduit outside have been verified.

**5.2.3.2** Protection of cable on both the inside and the outside of the structure walls

**5.2.3.3** Structural integrity of the proposed POE area has been confirmed using hand tools

Then use the appropriate tool (up to and including a 90 lb. jackhammer) to create the POE on the section of structure wall that was previously prepared.

**5.2.4** If a jackhammer is being used for the POE breakout operation, where feasible, support the tool from underneath to prevent slippage.

**5.2.5** Where possible, the use of a 90 lb. jackhammer shall be avoided within 8" of a live conduit. If the competent person determines that the breakout can only be made using a jackhammer within 8" of live conduit, a physical barrier must be placed between the jackhammer and all facilities that could possibly come in contact with the jackhammer. The Municipal Contractor may then begin utilizing the 90 lb. jackhammer using a 3" bit or wider.

**ENGINEERING INSTRUCTION**

CE-SI-1080, Rev. 01

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018****SECTION I – GENERAL REQUIREMENTS****1.0 SCOPE**

The scope of this document is a general guideline for the prevention of damage to high pressure pipes and coating for underground 69, 138 and 345 kV cable systems (electric facilities), caused by construction on ("*outside plant*") properties not owned by CECONY. The guideline provides information such as:

- a) general instructions *and notification requirements* prior to any construction activities;
- b) clearance requirements;
- c) precautions/protections to be made; and
- d) special notes during construction activities

*The guideline is not applicable for solid dielectric or self-contained oil-filled cables. Specific work plans for these type of Transmission Feeders shall be reviewed with Con Edison for approval.*

**1.1 APPLICATION**

This instruction applies to all Consolidated Edison Company of New York, Inc. (CECONY) organizations and contractors, and outside "third party" organization with oversight responsibility for municipal public improvement contractors and non-municipal contractors, commencing or engaging in underground construction activities associated with excavations, foundations, and demolitions within the vicinity of CECONY's existing underground transmission system.

**2.0 DEFINITIONS**

- 2.1 CECONY refers to Consolidated Edison Company of New York, Inc.
- 2.2 Contractor is the construction firm hired by the Property Owner or Project Manager to perform the construction services.
- 2.3 Designated Contact is the contact person identified within the Project Manager Company and the Property Owner who has the responsibility to communicate on all of the planned construction works to be carried out safely.
- 2.4 Encroachment Area is the area where the ground disturbance occurs within 25 feet on land of the centerline of the *Assumed* Location of the existing electric facilities.
- 2.5 *Assumed* Location is the location of underground facilities determined from the subsurface investigations, *such as record drawings or utility mark outs on streets.*
- 2.6 *Known Location is the Assumed Location that is visually confirmed from hand dug test holes. Both horizontal and vertical locations of underground facilities shall be field verified at, (a) every proposed crossings, (b) every turn in direction, and (c) a minimum of two locations along a straight run of the existing Transmission Electric Facilities. A use of vacuum excavations is an acceptable means of*

## ENGINEERING INSTRUCTION

CE-SI-1080, Rev. 01

Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018

*exposing underground facilities.*

- 2.7 Professional Engineer is the engineer, currently licensed in New York State, hired by the Property Owner or Contractor to perform the engineering/design services.
- 2.8 Property Owner is the entity that has legal jurisdiction or ownership of the work area or new facility being installed.
- 2.9 Tolerance Zone is the area in which soil must be removed by non-mechanical means, such as hand excavations methods, to expose subsurface utilities *in absence of test pits. It is 2-ft clear distance on both sides of the Assumed Locations and the width of the existing Transmission Electric Facilities.*
- 2.10 Trained Personnel refer to someone who is capable of identifying existing and predictable hazards in the surroundings or working conditions, has authorization to take prompt corrective measures to eliminate the hazards, and is trained and experienced in utility installation and inspection.
- 2.11 Transmission Electric Facilities refer to underground transmission feeders *69kV and higher* and associated circulation piping.
- 2.12 Wingback is the required longitudinal distance of a pipe to be exposed by excavation in order to achieve the desired relocated position.

## 3.0 INSTRUCTIONS

## 3.1 GENERAL INSTRUCTIONS

- 3.1.1 Follow the requirements outlined in the State of New York Department of Public Service NYCRR 16 Part 753, "Protection of Underground Facilities".
- 3.1.2 *Perform subsurface investigations and mark-outs prior to planning and performing any work in the Encroachment Area of the underground Transmission Electric Facilities.*
- 3.1.3 Mark-outs of the *Assumed* Locations of the underground facilities must be refreshed periodically, by the Contractor, to ensure underground facilities locations are always clearly identified over the entire project duration. If at any time the underground facilities marks become illegible, work must be stopped until the locations can be re-identified.
- 3.1.4 Contractor shall provide proper support of all *exposed* Transmission Electric Facilities during excavation activities.
  - 3.1.4.1 A work plan, including pipe support design and calculations, shall be submitted to CECONY Engineering for approval, at least two weeks prior to performing any work in the Encroachment Area of the electric facilities. Refer to section 3.4 for pipe support design criteria.
  - 3.1.4.2 *For management of excavated soils, refer to section 3.5, "Backfill".*

□

**ENGINEERING INSTRUCTION**

CE-SI-1080, Rev. 01

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018**

- 3.1.4.3 CECONY Transmission Operation shall review the work plan on an as-needed basis and shall inspect the work area for pipe support, moving process and coating conditions prior to backfill.
- 3.1.4.4 The approved work plan shall be obtained by the Contractor prior to commencement of any work.
- 3.1.5 *In absence of test pits, excavation within the Tolerance Zone shall be performed by hand only. Saw-cutting pavements within the Tolerance Zone is allowed with blade depths less than the confirmed asphalt pavement thickness.*
- 3.1.6 *For Known Locations, a zone of protection shall be established by shielding the exposed facilities from damage that could result from falling debris, i.e. rocks, concrete, compacted soil, etc. Machine excavation or additional saw-cutting of pavements may then be allowed as directed by CECONY Engineering or CECONY Field Representative.*
- 3.1.7 Maintain clearances and separation distances to the existing Transmission Electric Facilities to the maximum extent possible at all times. Refer to section 3.2 for clearance and separation distance requirements.
- 3.1.8 Only Trained Personnel should work in the vicinity of exposed underground Transmission Electric Facilities.

**3.2 CLEARANCES AND SEPARATION DISTANCE**

- 3.2.1 Existing Transmission Electric Facilities within the Tolerance Zone must be protected in place. In general, a minimum of 3 feet of cover over the electric facilities shall be maintained. When less than 2 feet of cover is authorized because of special conditions, suitable guards shall be placed over pipes as described in CE-TS-3352. Clear distance between the guard and the pipe shall be a minimum of 6 inches. Contractor may be allowed to move the existing Transmission Electric Facilities by following the requirements described in section 3.2.2 and **3.4.4**, or the new facilities must be relocated.
- 3.2.2 Maintain **both** the following minimum required **vertical** clearances and **horizontal** separation distances between **existing** Transmission Electric Facilities and **the new subsurface** facilities:

□

**ENGINEERING INSTRUCTION**

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities****SEPTEMBER, 2018**

---

**3.3 Vibration Monitoring Program**

3.3.1 Construction activities that involve blasting and non-blasting activities, including but not limited to pile driving, hydraulic breakers (hoe ram), drilling or boring activities, in the Encroachment Area of the underground facilities having the potential to produce vibration levels that may be susceptible to damaging existing Transmission Electric Facilities shall be monitored.

3.3.2 All blasting and non-blasting activities described in section 3.3.1 must be approved by CECONY Engineering prior to commencing the work and may require a vibration monitoring *plan* subject to CECONY review and approval. *Allow minimum two weeks for CECONY Engineering's review and approval of a vibration monitoring plan.*

3.3.3 The Contractor is required to engage professional engineering services to conduct an existing conditions survey of the Transmission Electric Facilities, and an experienced vibration monitoring Consultant, *with minimum 5 years of related experience in New York State*, is required to measure peak particle velocities prior to and during construction activities.

3.3.4 The measured vibration level experienced on the Transmission Electrical Facilities shall not exceed 0.5 in/sec. If maximum values are approached, construction activities shall be halted; construction means and methods shall be reevaluated, or an approved alternative construction methodology may be adopted *to mitigate excessive vibration.*

3.3.5 The vibration monitoring plan shall include, but not be limited to, the following items:

3.3.5.1 Description of the Transmission Electric Facilities to be surveyed;

3.3.5.2 Monitoring equipment;

3.3.5.3 Monitoring device locations;

3.3.5.4 Monitoring frequency;

3.3.5.5 *List of personnel to be notified (supplied by CECONY) in the event that vibration approaches the threshold limits.*

3.3.6 The Contractor shall maintain a continuous log at the construction site and shall furnish a copy to the CECONY *Field Representative* upon request. The log shall also include receipts and notices of complaints. CECONY reserves the right to concurrently monitor any construction vibration levels. A preconstruction survey documenting the existing condition of the Transmission Electric Facilities to be monitored shall be conducted by the Contractor.

**3.4 Transmission Electric Facility Support Design Criteria**

3.4.1 Any and all materials/means used to hang, support, and/or protect the Transmission Electric Facility pipes must maintain the integrity of the pipe

□

from Nearby Construction Activities**

**SEPTEMBER, 2018**

---

coating. Any and all damage to the coating must be reported to the CECONY representative on site; and no backfilling of the pipe can be performed until pipe coating is restored and inspected.

3.4.2 Prior to any Transmission Electric Facility pipe support work *that deviates from the CET manual*, the Contractor shall submit to CECONY Engineering the following for review and approval:

3.4.2.1 Drawings drawn to scale showing plans, sections and details of pipe support design stamped by a Professional Engineer.

3.4.2.2 Supporting calculations stamped by the Professional Engineer.

3.4.2.3 The design span for Transmission Electric Facility supports shall satisfy the allowable stress and deflection limits in accordance with ASME B31.1 considering both static loads and internal operating pressure. Additional loads due to jacking to move the Transmission Electric Facility pipes shall be accounted for in the support design.

3.4.2.4 Typical Transmission Electric Facility pipe parameters are listed in Exhibit A for calculating design loads for pipe supports.

3.4.2.5 The maximum spacing between supports shall not exceed 10 feet.

3.4.3 Pending a condition assessment of the pipe by CECONY, the Contractor may be allowed to adjust the location and/or elevation of existing Transmission Electric Facility pipes by transitioning the pipes with the minimum required Wingback distances for the required offsets as outline below. *Wingback distances were computed for high pressure fluid filled (pipe-type) Transmission Electric Facilities only. Refer to drawing 516411 for schematic guideline on relocation of Transmission Electric Facilities.*

Nominal Pipe Size [in]	Minimum Required Wingback [ft]		
	6" Offset	9" Offset	12" Offset
5	88	108	125
6	98	120	138
7 (TUBE)	97	119	137
8	111	136	157
10	129	158	183
12	147	180	208

3.4.4 A work plan detailing the steps and means of moving the pipe shall be submitted to CECONY Engineering for approval. The plan shall identify the incremental sequence and distances to move the pipe in achieving the final offset, a

□

□

**ENGINEERING INSTRUCTION****CE-SI-1080, Rev. 01****Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018**

description of jacks (or other equipment) to move the pipe, their locations and load capacity, and the protective measures that will be employed to not damage the pipe coating.

**3.5 Backfill**

- 3.5.1. Prior to backfilling the exposed electric Transmission Electric Facility, CECONY Transmission Operations/Corrosion Control shall be notified to inspect the condition of pipe and repair any areas of corrosion or damaged coating.
- 3.5.2. Approved material is to be used for backfilling under, adjacent and over the *Transmission Electric Facilities* pipe as described in specifications EO-8085 (for general backfill) and CE-TS-4074 (for thermal sand) and as depicted on EO-12640-B. *345kV transmission feeders must be backfilled with thermal sand and 69 KV and 138kV transmission feeders must be backfilled with clean sand as described by specifications. Contractor must submit a copy of the gradation analysis and test report to CECONY Engineering for approval.*
- 3.5.3. Reuse of excavated soil may be permitted as approved backfill materials if it conform to the requirements outlined in the Specification, CE-TS-3352, latest revision. Contractor must submit a copy of the gradation analysis and the material must be approved by CECONY prior to its application.
- 3.5.3.1. *For CECONY Contractors*, excavated soil must be managed in accordance with the requirements of CECONY GEHSI E05.11 "Management of Excavated Soils on Property Not Owned by the Company", latest revision. Excavated soil cannot be reused as backfill if it does not meet the requirements of the governing GEHSI.
- 3.5.4. Approved backfill shall be compacted in maximum 12" lifts in accordance with Specification EO-1181, latest revision, unless otherwise approved by CECONY.
- 3.5.5. *The CECONY Field Representative may require in-place density tests to ensure proper compaction.*

**3.6. SPECIAL NOTES FOR CONSTRUCTION ACTIVITIES**

- 3.6.1. Each party shall use its best efforts to avoid or minimize, to the maximum extent practicable, any adverse environmental effects associated with the construction activities around subsurface Transmission Electric Facilities.
- 3.6.2. Perform daily job briefings with all employees before each shift, highlighting the hazards associated with working around Transmission Electric Facility and in excavations, i.e. high voltage electrical hazards, high pressure dielectric fluid or nitrogen gas pressure, coal tar pipe coatings, asbestos coating on pipe, work area protections, traffic, cave-ins, etc.
- 3.6.2.1. In the event that the Transmission Electric Facility pipe displays disturbed or disbonded asbestos coating, stop the work immediately and contact the CECONY Designated Contact for further directions.

□

□

---

**ENGINEERING INSTRUCTION**

**CE-SI-1080, Rev. 01**

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018**

---

- 3.6.3. Long duration projects must be managed with vigilance to ensure that all employees maintain proper focus regarding the hazards associated with working around the Transmission Electric Facilities.
- 3.6.4. CECONY shall inspect the exposed Transmission Electric Facility to verify its condition prior to any work being performed. It is Contractor's responsibility to contact CECONY to schedule this inspection.
- 3.6.5. Any undermined Transmission Electric Facility ten feet or great in span must be supported with sand bags, nylon slings or other approved methods, taking special care to not damage the pipe coating.

**3.7. EMERGENCY ACTION PLAN**

- 3.7.1. In the event of emergency, such as pipe cracks, leaks, or breakage, Contractor must notify the CECONY's Designated Contact immediately. All work must stop and cannot proceed until the CECONY field representative has inspected the damage and further direction is provided.

Paper copies of the Engineering Operations Manual are uncontrolled and therefore may be outdated. Please verify that you have the current version prior to use by viewing the Central Engineering website (<http://ceng/>).

## **JB 100 - 116 - TRENCH CROSSINGS SUPPORT AND PROTECTION OF UTILITY FACILITIES**

### **A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to support and maintain and protect and accommodate the integrity of utility facilities, including but not limited to:

1. Conduits;
2. Conductors;
3. Concrete Encased Conduit Banks;
4. Steel Pipes; Steam Facilities;
5. Oil-o-Static Facilities; and
6. Non-Cost Sharing Gas;

Of various sizes and configurations, crossing at various angles as shown on the Contract Documents above the sewer, catch basin chute connection pipes, water main trench excavation at the locations shown in the contract documents or as encountered during construction and as directed by the facility operator in consultation with the Resident Engineer. The support, maintenance, protection, and accommodation of utility facilities encountered during performance of test pits as ordered by the City are also covered under this item.

The above reference to facilities crossing at "various angles" shall mean that such facilities are crossing sewer, water and catch basin chute excavations at a 90 degree angle to the proposed sheeting line or side of excavation (for unsheeted trenches) with an allowable deviation of 60 degrees in any direction. The only exceptions to this definition shall be where greater angles are shown on the contract documents.

### **B. Materials**

All materials used to support and protect shall be as indicated on the attached standard Sketches JB 100 A, A-1, B, C, C-1 and D shall be supplied by the Contractor and approved by the facility operator in consultation with the Resident Engineer.

### **C. Methods of Construction**

The Contractor shall support and protect all utility facilities crossing excavations as shown on the Standard sketches. Sketches JB 100A and CET 100A-1 are to be used as a guide. Alternate methods and/or one or a combination of methods shown on the JB sketches shall be permitted if proposed by the Contractor and approved by the facility operator in consultation with the Resident Engineer. It is the intent of this item to support and maintain and protect and accommodate the integrity of utility facilities and all combinations and configurations of utility facilities encountered in the course of the work. Support Requirements for utility facilities crossing Items (Sketch JB 100A) are intended to support the actual square foot cross section area of the utility facilities. Where multiple facilities are measure for

□

□

payment purposes as one facility, conditions may require that each facility be supported separately. Sketch JB 100A can be used as a guide to determine support requirements.

The facility operator shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the facilities and to ascertain the numerical relationships and/or dimensions of these utilities with respect to the proposed excavation and/or sheeting operations. Upon exposing the affected utilities sufficiently at the sole discretion of the facility operator in consultation with the Resident Engineer, to determine relationships and/or dimensions, the contractor shall be permitted to proceed with a combination of hand and machine excavation, as appropriate, with a zone of protection whose limit shall be defined as a perimeter located 12 inches from the outside face of each utility crossing or interference.

Combination of hand and hand and machine excavation may be required within the limits of the city trench under and between zones of protection and/or between utility facilities and other existing structures.

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty Contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

**D. Method of Measurement**

The quantity to be measured for payment shall be each (EA) type of utility facility crossing any new sewer, catch basin chute connection pipe or water pipe trench excavation. The various types of facility crossings (described below) shall be defined as "ranges" of their cross sectional areas, measured in square feet (SF) along a plane cutting through the trench parallel to the water/sewer and catch basin chute connection pipe trench. The area shall be a rectangle or square vertical plane enclosing and touching the outside limits of the utility. The sides of

□

the rectangle or square shall be approximately level and plumb as shown on attached Sketch JB 100 E. When utility facilities are located and overlap at any point along the utility spans crossing the trench excavation and are over, or under and within one foot of each other, both horizontally and vertically, (except oil-o-static lines which shall be within two feet of each other), the utility facilities involved shall be considered, for the purposes of this section, as one utility crossing limited by the outside faces of the extreme pipes, conduits, ducts, and/or duct banks. The cross sectional area to be measured shall be selected at the point of the greatest area along the utility spanning the trench excavation, as previously described, and as shown on the attached Sketch JB 100 E. Each type of utility crossing shall be paid for separately. The types of utility crossings are defined as follows:

- Type .1 = Cross sectional area of utility up to and including 0.75 SF
- Type .2 = Cross sectional area of utility over 0.75 SF, up to and including 2.0 SF
- Type .3 = Cross sectional area of utility over 2.0 SF, up to and including 6.0 SF
- Type .4 = Cross sectional area of utility over 6.0 SF, up to and including 10.0 SF
- Type .5 = Cross sectional area of utility over 10.0 SF, up to and including 15.0 SF
- Type .6 = Cross sectional area of utility over 15.0 SF, up and including 20.0 SF
- Type .7 = Cross sectional area of utility over 20.0 SF

#### **E. Price to Cover**

The unit price bid for each of the various items shall cover the cost of all labor, material, equipment, insurance, and incidentals necessary to completely support and maintain and protect and accommodate the integrity of the utilities without disruption of service to the customers and in accordance with contract documents. The unit price shall also include the cost of: supports, slings and beams installed for utility support; additional supports necessary for multiple facilities that for payment purposes are measured as one facility; changes of sheeting method and configuration where necessary to accommodate the utility; installation of new sewer, water, and catch basin chute connection pipes under the utilities; (including the removal of any abandoned existing facilities to be removed under the City Contract as shown on the Contract Drawings) a combination of hand and hand and machine excavation within the zone of protection, backfilling and compacting around, over, under and between the zones of protection of the utilities; and removal of sheeting around the utilities, and the cost of any impact with maintenance and protection of traffic. The unit price shall also cover any additional excavations, including hand and hand and machine excavations under and in between zones of protection for single and multiple utilities; tunneling; additional pipe cutting and joining; removal of existing city facilities; snaking and/or in between utility facilities and other existing structures.

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field

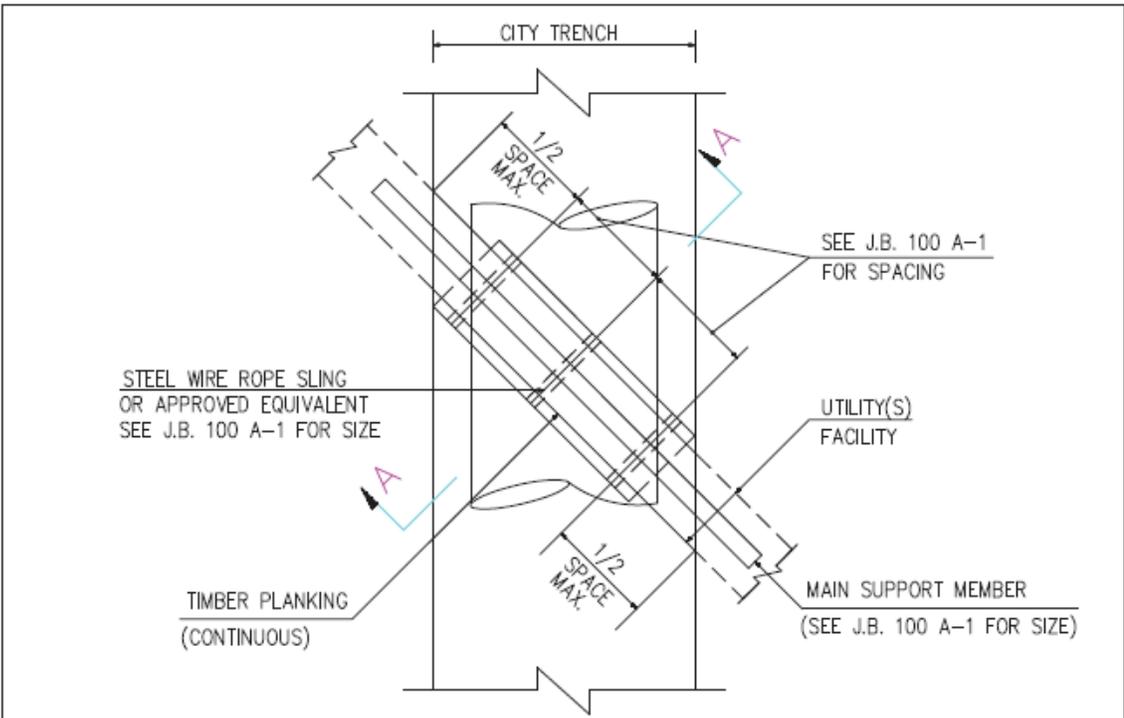

□

coating of oil-o-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

Edison, and approved by the facility operator in consultation with the Resident Engineer. All conduit(s) shall be supplied to the Contractor's requested location by the facility operator for work under this item. The Contractor shall be required to inform Con Edison in advance of the need for link seal. The Contractor shall notify the facility operator(s) of the installation schedule at least 10 days before such materials are required on the site. The Contractor shall be responsible to unload, handle, store, deliver and/or distribute the material supplied by the facility operator(s) to the required job location(s) for the duration of the contract. It shall also be the Contractor's responsibility to inspect and verify upon delivery that the correct quantity of material has been delivered and to advise the facility operator(s), through its authorized representative, of all damaged material. The Contractor at no additional expense to the facility operator(s) shall replace any material that is damaged or lost after the Contractor's inspection and acceptance.

### **C. Methods of Construction**

All work shall comply with the specifications, plans and standard of the facility operator. The Contractor shall refer to Utility Crossings dated February 21, 2020 for the flood wall, flood gate and retaining wall design under Project ID: SANDRESM1. Alternate sheeting means and methods and/or a combination of methods shall be covered by this section if proposed by the Contractor and approved by the facility operator in consultation with the Resident Engineer. It is the intent of this item to provide link seal around Con Edison's facilities on the flood side of the structure, install a sleeve running the entire length of the crossing, and in the remaining voids provide sand between the sleeve and utility as shown on Con Edison Dwg. EO-9230-C. Methods to perform this work in flowable fill material shall be permitted if proposed by the Contractor and approved by the facility operator in consultation with the Resident Engineer.

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a Specialty Contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

### **D. Method of Measurement**

The quantity to be measured for payment shall be each (EA) type of utility facility located underneath the proposed flood wall/flood gate/retaining wall crossing through flowable fill material between the auger piles where the sleeve and modified wall/gate section is installed, as encountered during construction and as directed by the facility operator in consultation with

the Resident Engineer. The types of piles included under this specification include all various types of piles referenced in the Contract Drawings dated February 21, 2020 as defined below:

- JB 117B = Utilities crossing sheet piles for flood wall/gate
- JB 117C = Utilities crossing various types of individual piles for flood wall/gate

The various types of facility crossings (described below) shall be defined as "ranges" of their cross sectional areas, measured in square feet (SF) along a plane cutting through the trench parallel to the flood wall/flood gate/retaining wall. The area shall be a rectangle or square vertical plane enclosing and touching the outside limits of the utility. The sides of the rectangle or square shall be approximately level and plumb. When utility facilities are located and overlap at any point along the utility spans crossing the trench excavation and are over, or under and within one foot of each other, both horizontally and vertically, (except oil-o-static lines which shall be within two feet of each other), the utility facilities involved shall be considered, for the purposes of this section, as one utility crossing limited by the outside faces of the extreme pipes, conduits, ducts and/or duct banks. The cross sectional area to be measured shall be selected at the point of the greatest area along the utility spanning the trench excavation, as previously described. Each type of utility crossing shall be paid for separately. The types of utility crossings are defined as follows:

- Type .1 = Cross sectional area of utility up to and including 0.75 SF
- Type .2 = Cross sectional area of utility over 0.75 SF, up to and including 2.0 SF
- Type .3 = Cross sectional area of utility over 2.0 SF, up to and including 6.0 SF
- Type .4 = Cross sectional area of utility over 6.0 SF, up to and including 10.0 SF
- Type .5 = Cross sectional area of utility over 10.0 SF, up to and including 20.0 SF

**E. Price to Cover**

The unit price bid for each of the various items shall cover the cost of all labor, materials, equipment, insurance and incidentals necessary to sleeve and seal the utilities without disruption of service to the customers and in accordance with contract documents. Vibration monitoring shall be deemed included in the cost of all joint bid items (see general notes). Contractor to refer to the latest version of Con Edison Dwg. EO-9230-C for sleeve diameter and link seal details. Utility facilities through flowable fill material, excavatable fill, or approved equal are permitted in accordance with the facility operator and in consultation with the Resident Engineer. Under no circumstance shall utility facilities cross through jet grout material.

The unit price shall also include the cost of changes of sheeting means and methods and configuration where necessary to accommodate the utility, hand excavation within the zone of protection, removal of sheeting around the utilities, and the cost of any impact with maintenance and protection of traffic. The zone of protection varies for each type of utility facility and shall be determined by the facility operator and in consultation with the Resident Engineer. Where the typical utility crossing details provided in the contract drawings dated February 21, 2020 for the flood wall, flood gate and retaining wall, Project ID: SANDRESM1 require modification, the unit price shall also include the cost of additional concrete, additional steel reinforcement, pile cap and auger pile design as directed by the facility operator in consultation with the Resident Engineer.

□

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field coating of oil-o-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

**F. References**

1. Item JB 302
2. Con Edison Gas Operations Standard G-8209 – Field Coating of Steel Pipe and Fittings Installed Underground and in Subsurface Structures
3. EO-9230-C

Details will be provided during construction when the extent of work included under this item is identified by the facility operator in consultation with the Resident Engineer.

**JB 118 – UTILITIES CROSSING THROUGH FLOOD WALL OR FLOOD GATE, REINFORCED CONCRETE FOUNDATION, OR PILE CAP**

**A. Description**

Under this section, the Contractor shall provide all incremental labor, materials, equipment, insurance and incidentals required to sleeve and seal utility facilities, included but not limited to:

- 1. Conduits;
- 2. Conductors;
- 3. Concrete encased conduit banks;
- 4. Steel pipes;
- 5. Plastic conduit banks;
- 6. Steam mains;
- 7. Fiber optic lines;
- 8. Oil-o-Static facilities;
- 9. Fuel lines;
- 10. Freeze lines; and
- 11. All gas mains (low pressure, high pressure, transmission mains) of any type of material (steel, P.E., C.I., W.I., etc.);

Of various sizes and configurations as encountered during construction, crossing through the proposed flood wall, flood gate or retaining wall reinforced concrete, foundation, or pile cap. Auger piles or a Con Edison approved equivalent method will be used under this specification to limit vibration around the utility facilities. The support, maintenance, protection, and accommodation of utility facilities encountered, including minor adjustments to these facilities, as encountered during performance of this item and any test pits ordered by the City or Facility Operator in reference to this item shall be paid under other appropriate JB items.

Utilities crossing the flood wall, flood gate and retaining wall shall be at a 90 degree angle to the proposed sheeting line or side of excavation (for unsheeted trenches) with an allowable deviation of 60 degrees in any direction.

This item includes the additional material and effort(s), above and beyond the contract drawings dated February 21, 2020 for the flood wall, flood gate and retaining wall design under Project ID: SANDRESM1. In this instance, the Contractor shall submit a redesign of the wall/gate to accommodate Con Edison utilities for review and approval by the City and Con Edison.

In consultation with the Resident Engineer, the facility operator through its authorized representatives shall be solely responsible for approval of methods used by the contractor to perform work under this item. All work shall be performed without risking the integrity of the utility facility and be done consistent with all applicable safety standards as directed by the facility operator in consultation with the Resident Engineer.

**B. Materials**

All materials used to sleeve and seal utility facilities including but not limited to additional steel reinforcement, additional concrete, additional auger piles, lean concrete, extrudable hydrophilic waterstops, ribbed centerbulb waterstops, flowable fill, jet grout, sand, sleeves, link seal, and altering of any kind to sheeting and shoring systems, and any incidental hardware shall be

supplied by the Contractor, at no cost to Con Edison, and approved by the facility operator in consultation with the Resident Engineer. All conduit(s) shall be supplied to the Contractor's requested location by the facility operator for work under this item. The Contractor shall be required to inform Con Edison in advance of the need for link seal. The Contractor shall notify the facility operator(s) of the installation schedule at least 10 days before such materials are required on the site. The Contractor shall be responsible to unload, handle, store, deliver and/or distribute the material supplied by the facility operator(s) to the required job location(s) for the duration of the contract. It shall also be the Contractor's responsibility to inspect and verify upon delivery that the correct quantity of material has been delivered and to advise the facility operator(s), through its authorized representative, of all damaged material. The Contractor at no additional expense to the facility operator(s) shall replace any material that is damaged or lost after the Contractor's inspection and acceptance.

**C. Methods of Construction**

Upon the City and Con Edison's approval of the wall/gate redesign, all work shall comply with the specifications, plans and standards of the facility operator. Alternate sheeting means and methods and/or a combination of methods shall be covered by this section if proposed by the Contractor and approved by the facility operator in consultation with the Resident Engineer. It is the intent of this item to provide link seal around Con Edison's facilities on the flood side of the structure, install a sleeve running the entire length of the crossing, and in the remaining voids provide sand between the sleeve and utility as shown on Con Edison Dwg. EO-9230-C. Methods to perform this work shall be permitted if proposed by the Contractor and approved by the facility operator in consultation with the Resident Engineer.

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty Contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

**D. Method of Measurement**

The quantity to be measured for payment shall be each (EA) type of utility facility crossing the wall/gate through the wall itself, the foundation of the wall or the pile cap where the sleeve is installed, as encountered during construction and as directed by the facility operator in consultation with the Resident Engineer. The types of piles included under this specification include all various types of piles referenced in the Contract Drawings dated February 21, 2020 as defined below:

- JB 118B = Utilities crossing through flood wall/gates on sheet piles
- JB 118C = Utilities crossing through flood wall/gates on various types of individual piles

The various types of facility crossings (described below) shall be defined as "ranges" of their cross sectional areas, measured in square feet (SF) along a plane cutting through the trench parallel to the flood wall/flood gate. The area shall be a rectangle or square vertical plane enclosing and touching the outside limits of the utility. The sides of the rectangle or square shall be approximately level and plumb. When utility facilities are located and overlap at any point along the utility spans crossing the trench excavation and are over, or under and within one foot of each other, both horizontally and vertically, (except oil-o-static lines which shall be within two feet of each other), the utility facilities involved shall be considered, for the purposes of this section, as one utility crossing limited by the outside faces of the extreme pipes, conduits, ducts and/or duct banks. The cross sectional area to be measured shall be selected at the point of the greatest area along the utility spanning the trench excavation, as previously described. Each type of utility crossing shall be paid for separately. The types of utility crossings are defined as follows:

- Type .1 = Cross sectional area of utility up to and including 0.75 SF
- Type .2 = Cross sectional area of utility over 0.75 SF, up to and including 2.0 SF
- Type .3 = Cross sectional area of utility over 2.0 SF, up to and including 6.0 SF
- Type .4 = Cross sectional area of utility over 6.0 SF, up to and including 10.0 SF
- Type .5 = Cross sectional area of utility over 10.0 SF, up to and including 20.0 SF

**E. Price to Cover**

The unit price bid for each of the various items shall cover the cost of the Contractor's wall/gate redesign, all labor, materials, equipment, insurance and incidentals necessary to sleeve and seal the utilities without disruption of service to the customers and in accordance with contract documents. Vibration monitoring shall be deemed included in the cost of all joint bid items (see general notes). Contractor to refer to the latest version of Con Edison Dwg. EO-9230-C for sleeve diameter and link seal details.

The unit price shall also include the cost of changes of sheeting means and methods and configuration where necessary to accommodate the utility, hand excavation within the zone of protection, removal of sheeting around the utilities, and the cost of any impact with maintenance and protection of traffic. The zone of protection varies for each type of utility facility and shall be determined by the facility operator and in consultation with the Resident Engineer. The unit price shall also include the cost of additional concrete, additional steel reinforcement, pile cap and pile design as directed by the facility operator in consultation with the Resident Engineer.

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field coating of oil-o-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

□

**F. References**

- 1. Item JB 302
- 2. Con Edison Gas Operations Standard G-8209 – Field Coating of Steel Pipe and Fittings Installed Underground and in Subsurface Structures
- 3. EO-9230-C

Details will be provided during construction when the extent of work included under this item is identified by the facility operator in consultation with the Resident Engineer.

□

**JB 122 – INCREMENTAL COST FOR MGP CONTAMINANT EXCAVATION, TRANSPORTATION, HANDLING & DISPOSAL**

**A. Description**

Under this section, the Contractor shall provide all incremental labor, materials, equipment, insurance and incidentals required to excavate, temporary sheeting/shoring, transport, handle and dispose of MGP (manufactured gas plant) contaminants, included but not limited to:

1. Soil
2. Dirt
3. Debris
4. Sediment
5. Groundwater

Historic MGP operations were conducted adjacent to the Project area from approximately 1848 to the mid-1940's, and consisted of two main manufacturing facilities: East 11<sup>th</sup> Street Works and East 21<sup>st</sup> Street Works, where MGP-related contamination from these historic MGP operations has migrated into the area of the Project. These facilities were operated by Con Edison predecessor companies.

These MGP facilities existed before the construction of natural gas pipelines. The plants converted coal, or a combination of coke or coal, oil and water in the form of steam into a gas that could be distributed and used as a fuel for heating, cooking, and lighting. Byproducts of the gas production conducted at the former MGP facilities, such as coal tar, impacted the soil and groundwater in the vicinity of plant operations. MGP-related contamination associated with the East 11<sup>th</sup> Street Works and East 21<sup>st</sup> Street Works has affected portions of the Project Area. A third facility, the East 14<sup>th</sup> Street Works, also operated near the Project Area, but MGP-related contamination from this facility reportedly remains on-site and is not anticipated to intersect the area of the flood protection structure construction.

In consultation with the NYS Department of Environmental Conservation (DEC) and Con Edison, the City has prepared a Mitigation Work Plan (the "Mitigation Plan") that has been approved by DEC to address potential environmental and health impacts associated with MGP-impacted materials during the construction of the project site in the area impacted by the MGPs (the "MGP Mitigation Area"). The Mitigation Plan is attached hereto as Exhibit A. The MGP Mitigation Area is shown in the map attached hereto as Exhibit B. [This Exhibit will be generated based on City's work plan for excavation for the wells and the overall project as well as the DEC-approved site investigations already conducted by Con Edison that delineate the areas within which MGP Waste may be encountered.]

This item includes the additional material and effort(s), above and beyond the contract drawings. In consultation with the Resident Engineer, all work shall be performed with all applicable safety standards as directed by the Resident Engineer.

**B. Materials**

□

All materials used to excavate, transport, handle and dispose of MGP Waste shall be supplied by the Contractor and approved by Con Edison in consultation with the Resident Engineer. The Contractor shall be responsible to excavate, transport, unload, handle, store, and/or deliver MGP Waste to the required disposal facilities for the duration of the contract. It shall also be the Contractor's responsibility to inspect and verify upon delivery that the correct quantity of MGP Waste has been delivered.

### C. Methods of Construction

The Contractor shall provide Con Edison with at least thirty (30) business days' advance written notification specifying the dates of the commencement of excavation in the MGP Mitigation Area, including a projected schedule. The Contractor shall provide Con Edison a schedule every week for all work within the MGP Mitigation Area that is planned to be carried out in the upcoming two-week period involving the excavation, temporary sheeting and shoring, handling, loading, treatment and disposal of MGP Waste at and from the MGP Mitigation Area. The Contractor or Resident Engineer shall provide Con Edison with a copy of such test results indicating the presence or absence of MGP Waste within ten (10) business days after the Contractor receive such test results. The Contractor shall afford Con Edison the opportunity to collect split samples during the testing of any suspected MGP Waste.

The Contractor shall identify any suspected MGP Waste encountered in connection with construction within the MGP Mitigation Area by visual and olfactory inspection, and shall promptly notify Con Edison and the Resident Engineer of the initial identification of such suspected MGP Waste. The Contractor shall provide Con Edison and the Resident Engineer a reasonable opportunity to perform confirmatory visual and olfactory inspection of such material identified by the Contractor within twenty-four (24) hours of the Contractor's notice.

In the event of a dispute between Con Edison and the Resident Engineer, as to whether the identified material is in fact MGP Waste, their respective field representatives shall confer in good faith to attempt to resolve the dispute. If Con Edison and the Resident Engineer fail to so resolve the dispute within three (3) business days, then upon written notice of either party, the Contractor shall as promptly as possible collect samples of the disputed materials for submission to META Environmental, Inc., 2200 West 25th Street, Lawrence, Kansas 66047 or such other environmental testing laboratory that is reasonably acceptable to both Con Edison and the Resident Engineer.

The environmental testing laboratory shall perform testing of samples by forensic fingerprint analysis of polycyclic aromatic hydrocarbons ("PAHs") and alkylated PAHs (petrogenic and pyrogenic discrimination) and PAH source allocation to determine whether the disputed material contains residual materials likely to have been generated by the MGPs. The laboratory's determination shall be dispositive of whether the disputed materials are MGP Waste.

The Contractor shall comply with the following requirements with respect to the management and disposal of MGP Waste in the MGP Mitigation Area:

- Dispose of any MGP Waste at an appropriate Con Edison-approved waste disposal or treatment facility (i.e. Con Edison's Approved TSDF List (attached)).
- Use appropriately licensed and Con Edison-approved haulers for the transportation of MGP Waste.

- Comply fully with the Mitigation Plan, DEC requirements and directives, and all Environmental Laws, including implementation of any required Community Air Monitoring Program (“CAMP”);
- Maintain within the vicinity of the MGP Mitigation Area a complete and accurate tracking log of all MGP Waste leaving the MGP Mitigation Area and provide a copy of such log to Con Edison upon completion of excavation for the ESCR Project;
- Sign all required manifests and shipping papers for the transportation, treatment and disposal of MGP Waste as the “generator” of such waste;
- Prohibit re-use of MGP Waste as backfill, landfill cover or for any other purpose;
- Provide Con Edison with final approved copies of the following documents within ten (10) business days after receipt of same from the Contractors: (1) maps or figures showing the locations where samples of soil, groundwater or other environmental media were collected from the MGP Mitigation Area; (2) chain of custody forms for all media and waste samples; (3) laboratory reports of the results of such media and waste samples; (4) any data summaries and data validation reports prepared for such samples; (5) weight tickets (sometimes referred to as bills of lading) indicating the volume of MGP Waste received by the disposal facility and (6) copies of completed waste manifests for all loads of MGP Waste; and
- Comply with legal requirements, rules, regulations, directives or orders issued by any governmental authority with respect to soil excavation for the project generally.

#### **D. Method of Measurement**

The quantity to be measured for payment shall be in volume (cubic yards). Disposal tickets and other documentation from the approved disposal facility must be submitted to Con Edison as proof.

#### **E. Price to Cover**

The price bid shall cover the incremental cost of all labor, materials, equipment, insurance and incidentals necessary to properly handle and dispose of MGP Waste without disruption of service and in accordance with contract documents. The price shall also include the cost of additional sample testing to properly identify and verify questionable MGP Waste.

As applicable, unit costs (e.g., price per ton, price per day, etc.) and estimated quantities (e.g., number of tons, number of days, etc.) shall be included in the bid for each of the following categories:

1. **Excavation, Transportation, Handling and Disposal of MGP Waste:**
  - Incremental costs of excavating, temporary sheeting and shoring, transporting, handling, disposal and managing MGP Waste from the MGP Mitigation Area due to the excavation activities required for construction of the project, including any waste characterization testing required due to the presence or reasonably suspected presence of MGP Waste; and
  - Incremental costs of manifesting, off-site transportation and off-site disposal of MGP Waste from the MGP Mitigation Area at appropriate Con Edison-

approved waste disposal or treatment facilities and by Con Edison-approved licensed haulers for transportation of such waste;

2. **Community Air Monitoring Plan for MGP Waste**

- Incremental costs of implementation of the Community Air Monitoring Plan for MGP Waste in accordance with the Mitigation Plan.

3. **Odor Control for MGP Waste**

- Incremental costs of implementation of controls necessary to manage, mitigate or control odors or vapors during excavation due to presence of MGP Waste in the MGP Mitigation Area in accordance with the Mitigation Plan;
- Incremental costs of air monitoring necessary to assess worker exposure as a result of the presence of MGP Waste in the MGP Mitigation Area; and
- Incremental costs of occupational health and safety precautions (e.g., odor control) taken as a result of the presence or potential presence of MGP Waste in the MGP Mitigation Area.

4. **DEC Waste Generation Fees**

- DEC waste generation fees as a result of the presence of MGP Waste in the MGP Mitigation Area.

**F. References**

Currently, references are not available because NYSDEC has not provided a ruling/decision to the East Side Coastal Resiliency project. When a ruling/decision is made, it will be a reference to this item specification. Note that this item specification may be revised based on the provided ruling/decision in the future.

□

**JB 123 – INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM  
ENCAPSULATION OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN  
LINES**

**A. Description**

**A.1 SCOPE**

A.1.1 The Refurbishment of the Transmission Feeder Pipes is a proactive program to reduce dielectric fluid leaks and increase the availability and reliability of transmission facilities. This program focuses on addressing areas of corrosion on the high pressure fluid filled (HPFF) pipe-type transmission feeder system, and involved the installation of composite carbon fiber system.

A.1.2 This specification provides the requirements for the installation of a high strength composite carbon fiber pipeline reinforcement system to serve as a secondary pressure boundary for approximately 2,000 trench feet (TF) of HPFF feeder pipes 10" nominal pipe size and smaller (excluding any repairs/barrels). The final composite will provide a structurally independent composite pipe capable of withstanding 100% of the internal pressure of the feeder pipes. The composite system will also serve to enclose the existing asbestos containing material (ACM) coal tar coating or green tape primer-less butyl rubber tape coating that is currently on the feeder pipes.

**A.1.3 DEFINITIONS**

Consolidated Edison of New York shall herein be referred to as "Con Edison."

The person or persons performing the work detailed in this specification shall herein be referred to as the "Contractor."

The term "Engineer" shall be understood to refer to the Con Edison Central Engineering Department Lead Engineer.

The term "Con Edison Field Representative" shall be understood to refer to the Con Edison Employee(s) designated as the contact for the Contractor.

A.1.4 Work shall be performed by a certified carbon fiber application Contractor. Con Edison will provide a list of approved carbon fiber application vendors.

A.1.5 No Text.

A.1.6 The Contractor shall be prequalified in accordance with Appendix I.

A.1.7 Safety Data Sheets (SDS) and Technical Data Sheets (TDS) shall be supplied for all materials installed or used during the project. SDS sheets must be approved by the Company for use prior to the start of the project per CEHSP S09.02.

□

□

- A.1.8 All work performed by the Contractor in subject to the approval and acceptance of the Company. Any work not meeting approval shall be corrected by the Contractor at their expense, until such work is approved and accepted by the Company Representative.
- A.1.9 Any failure of the Contractor to acquaint themselves with all available information shall not relieve from their responsibility to perform the work and to properly estimate the difficulty and cost.
- A.1.10 Contractor shall record/GPS survey the adhesion zones of the carbon fiber application.

NOTE: Contained throughout this specification are material references and data requirements from Advanced Fiber Reinforced Polymers (FRP) Systems Inc. Any substitutions shall be considered only after a submittal is presented to Con Edison identifying all technical comparisons for review and approval. If an alternative material is accepted the Contractor must comply with the requirements of this Specification, and any modifications to incorporate the proposed material.

A.2 PROJECT DESCRIPTION

- A.2.1 The project scope includes carbon fiber pipe enhancement and encapsulation along the East Side of Manhattan on eight (8) pipes including four (4) feeder pipes and (4) cooling return pipes.
- A.2.2 Transmission feeder pipes are 5", 8" and 10" nominal pipe size (varying) and cooling return pipes are 5", 7" and 8" nominal pipe size (varying) with repair barrels of varying diameters, lengths and locations.
- A.2.3 The Contractor's Con Edison approved asbestos abatement contractor shall abate the existing ACM coal tar or primer-less butyl rubber tape coating from the adhesion zones. (This assumes Con Edison is filing for ACM abatement and for DOL Variance for Removal of Coal Tar Wrap on Feeder Pipes pending assistance and information from Contractor, carbon fiber vendor and/or Con Edison approved asbestos abatement contractor.)
- A.2.4 The Contractor's Con Edison approved asbestos abatement contractor shall install a composite carbon fiber system coated with a holiday free, non-conductive, impact and abrasion resistant protective epoxy. However, the epoxy layer considered to be the first ACM encapsulation must be performed by the Con Edison approved asbestos abatement contractor/vendor.
- A.2.5 The Contractor shall be responsible for implementing all quality control and quality assurance (QA/QC) requirements and following the Inspection Test Plan (ITP). Installation requirements will include: plasticizing trench, pipe surface abatement and preparation, carbon fiber application, managing

□

□

environmental conditions (as required) throughout the installation process, and all nondestructive and destructive testing requirements.

- A.2.6 The Contractor will be responsible for sufficient surface preparation, maintaining environmental conditions, a clean debris free work area, and detailed record of daily job activities and progress.
- A.2.7 The Contractor shall be responsible for installing a low-profile mechanical clamp at any active leak locations on the pipe.
- A.2.8 Con Edison shall install a barrel repair over any active leak mitigated with low profile clamp.
- A.2.9 The Contractor shall use Dynamic Response Spectroscopy (DRS), ASTM D4541 Adhesion Test and ASTM D3039 Tensile Test to evaluate the quality of carbon fiber application within the adhesion zones. A flaw in the Carbon Fiber application can be identified by a loss of DRS response signal to the steel (See Appendix II), failure of the adhesion test plate or failure of the tensile test samples. A failure will require installation of a new Adhesion Zone.
- A.2.10 The Contractor shall be responsible to repair any work that does not meet the visual and non-destructive test criteria.

A.3 PROTECTION OF THE COMPANY

- A.3.1 Any damage caused by the Contractor to Con Edison property during the performance of their work shall be repaired/replaced in-kind in a timely manner to the satisfaction of the Con Edison Field Representative, and at no additional cost to Con Edison.

**B. Materials**

B.1 VENDOR QUALIFICATION PROCESS

- B.1.1 All Contractors shall successfully complete the Vendor Qualification process (See Appendix I)
- B.1.2 Listed below are the approved materials for the carbon fiber application process. Any substitution requires Con Edison approval and must have properties equivalent or superior to than those listed below.

B.1.2.1 **Thick Film, ACM protection system – FRP Tack Coat 110 HT (Minimum Requirements)**

- a. Strongly adheres to steel and composites
- b. Assists in application of reinforcing composites, adheres pre-cured sheets to steel, and maintains its structural properties up to 250°F.

□

□

c. Performance Data Table:

Property	Test Method	Results
Adhesion to Steel	ASTM D4541	>3,000 psi
Heat Distortion Temp.	ASTM D648	306°F
Tensile Strength	ASTM D638	11,900 psi
Tensile Modulus	ASTM D638	634 ksi
Flexural Strength	ASTM D790	19,900 psi
Flexural Modulus	ASTM D790	677 ksi
Compressive Strength	ASTM D695	14,100 psi

d. Cure Schedule:

	50°F	75°F	100°F
Dry to Touch	10 hours	6 hours	3 hours
Dry Hard	48 hours	24 hours	12 hours
Overcoat Window	10-128 hours	6-96 hours	3-48 hours
Return to Service	N/A	24 hours	12 hours
Full-Mechanical Strength	N/A	120 hours	72 hours

The FRP Tack Coat 110 material shall be applied via brush or roller and hang at a minimum of 40 mils per coat.

B.1.2.2

**High Strength Epoxy Adhesive #1 – FRP 120 HT (Minimum Requirements)**

a. Strongly adheres to blasted steel and composites

b. Performance Data Table:

Property	Test Method	Results
Adhesion to Steel	ASTM D4541	>4,000 psi
Heat Distortion Temp.	ASTM D648	297°F
Tensile Strength	ASTM D638	13,100 psi
Tensile Modulus	ASTM D638	479 ksi
Flexural Strength	ASTM D790	12,800 psi
Flexural Modulus	ASTM D790	398 ksi
Compressive Strength	ASTM D695	9.4%

c. Assists in application of reinforcing composites used in high pressure applications and provides 4,000 psi adhesion strength to properly blasted steel.

d. Cure Schedule:

	50°F	75°F	100°F
Dry to Touch	10 hours	6 hours	3 hours
Dry Hard	48 hours	24 hours	12 hours

□

Overcoat Window	10-128 hours	0-96 hours	0-48 hours
Return to Service	N/A	24 hours	12 hours
Full-Mechanical Strength	N/A	120 hours	72 hours

e. The epoxy material shall be applied via brush or roller and hang at a minimum of 10 mils per coat

**B.1.2.3 Heavy Weight Bi-Directional Glass Fabric – FRP GF 300-BD (Minimum Requirements)**

a. High strength composite used as a galvanic barrier between carbon fiber and steel surface.

b. Performance Data Table:

Property	Test Method	Results
Coefficient of Linear Thermal Exp.	ASTM E831	5.71 x 10 <sup>^-6</sup> in/in °F
Thermal Conductivity		1.2 W/m K
Tensile Strength	ASTM D3039	70,000 psi
Young's Modulus	ASTM D3039	1,260 ksi
Effective Fabric Thickness		0.031 psi
Lap Shear	ASTM D3165	3,210 psi
Flexural Strength	ASTM D790	72,000 psi
Flexural Modulus	ASTM D790	398 ksi
Elongation at Break	ASTM D638	5.7%

c. Material must be at least 30 mils in thickness and shall have a low electrical conductivity.

**B.1.2.4 High Temperature Composite Saturating Resin – FRP 210 HT (Minimum Requirement)**

a. Strongly adheres to blasted steel and composites.

b. Low in viscosity to ensure complete saturation of Carbon and Glass fiber during the installation.

c. Performance Data Table: (Unreinforced Resin)

Property	Test Method	Results
Flexural Strength	ASTM D790	19,100 psi
Flexural Modulus	ASTM D790	551 ksi
Tensile Strength	ASTM D638	15,600 psi
Tensile Modulus	ASTM D638	496 ksi
Compressive Strength	ASTM D695	11,900 psi
Adhesion to Concrete	ASTM D4541	>750 psi
Adhesion to Steel	ASTM D4541	3,000 psi

Heat Distortion Temperature	ASTM D648	>400°F
Maximum Operating Temp	N/A	395°F

d. Cure Schedule:

	50°F	75°F	100°F
Dry to Touch	9 hours	6 hours	3 hours
Dry Hard	24 hours	12 hours	6 hours
Overcoat Window	0-168 hours	0-96 hours	0-72 hours
Cure for Service	24 hours	12 hours	6 hours
Return to Service	N/A	48 hours	24 hours
Full-Mechanical Strength	N/A	96 hours	72 hours

**B.1.2.5 Carbon Fiber – FRP CF 500-BD (Minimum Requirement)**

a. Carbon fiber shall be a minimum of 12K, 2 x 2 twill weave, aerospace quality, high strength, bi-directional woven fabric. A minimum weight of 19.5 oz/yd<sup>3</sup>.

b. Performance Data Table:

Property	Test Method	Results
Coefficient of Linear Thermal Exp.	ASTM E831	3.78 x 10 <sup>-6</sup> in/in °F
Tensile Strength	ASTM D3039	Actual Value: 102,000 psi Design Value: 77,000 psi
Young's Modulus	ASTM S3039	Actual Value: 5,667 ksi Design Value: 4.038 ksi
Poisson's Ratio	ASTM S3039	0.091
Lap Shear	ASTM D3165	3,450 psi
Sheer Modulus	ASTM D5379	362,650 psi
Flexural Strength	ASTM D790	Actual Value: 100,200 psi Design Value: 75,150 psi
Compressive Strength	ASTM D695	Actual Value: 111,750 psi Design Value: 88,125 psi
Elongation at Break	ASTM D3039	1.5%
Effective-Fabric Thickness	N/A	0.0375 in

**B.1.2.6 High Performance Epoxy Top Coating System – FRP HP-300 Epoxy (Minimum Requirement)**

a. Strongly adheres to blasted steel and composites

b. Performance Data Table: (Unreinforced Resin)

Property	Test Method	Results
Abrasion Resistance	ASTM D4060; CS17 wheel, 1Kg	56.2 mg-loss/1000 cycles

□

Adhesion to Steel	ASTM D4541	>2000 psi
Head Distortion Temp.	ASTM D648	141°F
Direct Impact Resistance	ASTM D2794	116 in lbs.
Immersion Resistance	Fresh and Salt water; 1 year	No Rust, no blistering, no loss of adhesion
Humidity Resistance	ASTM D4585; 10,000 hours	No rust, no cracking, no loss of adhesion
Dry Heat Resistance	ASTM D2485	250°F (121°C)

c. Cure Schedule:

	50°F	75°F	100°F
Dry to Touch	24 hours	12 hours	8 hours
Dry to Handle	72 hours	36 hours	24 hours
Overcoat Window	24-168 hours	12-120 hours	8-96 hours
Cure for Service	36 hours	24 hours	12 hours
Return to Service	48 hours	36 hours	24 hours
Full-Mechanical Strength	168 hours	120 hours	72 hours

The material shall be applied via brush or roller and should hang at a minimum of 30 mils per coat.

**B.1.2.7 High Build Epoxy Repair Putty – FRP Repair Putty**

- a. Strongly adheres to concrete, steel, masonry, wood and composites
- b. The High build epoxy putty shall hang at a minimum of ½ inch per layer at 70°F.
- c. The High Build Putty shall be designed to repair and rebuild damaged or corroded areas and can be used on weld seems, filling pits, holes, physical damage and for resurfacing areas.

d. Performance Data Table: (Unreinforced Resin)

Property	Test Method	Results
Density		1.11 g/mL
% Solid		100%
Heat Distortion Temp	ASTM D648	155°F
Compressive Strength	ASTM D695	15,400 psi
Tensile Strength	ASTM D638	7,600 psi
Tensile Modulus	ASTM D638	398 ksi
Flexural Strength	ASTM D790	13,800 psi
Flexural Modulus	ASTM D790	502 ksi

□

Adhesion to Steel		>3,000 psi
-------------------	--	------------

e. Cure Schedule:

	55°F	70°F	85°F
Overcoat Window	14-168 hours	8-120 hours	4-72 hours
Dry to Touch	14 hours	8 hours	4 hours
Functional Cure	36 hours	24 hours	12 hours
Full Mechanical Strength	168 hours	120 hours	72 hours

The material shall create a smooth surface free of gaps, sharp edges, and voids for full composite reinforcement effectiveness.

B.2 WORK TO BE PERFORMED BY CONTRACTOR

B.2.1 GENERAL REQUIREMENTS

- B.2.1.1 The scope of work includes, but is not necessarily limited to, furnishing of all installation, demolition, supervision, labor, services, material, temporary lighting, tools, precision instruments, supplies, expendables, and equipment necessary to: purchase and/or receive, unload, haul, store (if necessary), remove from storage, truck, demolish/remove or relocate, assemble, install, set in place, and all other work as required for project completion. This encompasses all related activities such as purchasing, receipt, inspections, testing and other associated operations for all materials, structures, equipment and accessories as described herein.
- B.2.1.2 The Contractor shall provide all labor, materials, tools, equipment, and supervision required to perform all work that is detailed in this specification and shown on the contract drawings, unless otherwise noted.
- B.2.1.3 The Contractor shall procure a qualified Application Expert from the respective OEM to oversee the application of the composite system.
- B.2.1.4 The Contractor shall follow OSHA requirements and all other applicable existing Federal, State and Local Regulations.
- B.2.1.5 Contractor shall provide environmentally controlled areas for chemical storage, mixing of the polymers and saturation of the carbon fiber.
- B.2.1.6 Compressors, blasting equipment and spray equipment shall have all appropriate moisture and oil traps, regulators and gauges, and shall be in good working order.
- B.2.1.7 Contractor shall provide all required environmental enclosures with any required environmental control equipment, such as heaters and

□

dehumidifiers, to ensure that the environmental conditions comply with the OEM product recommendations.

- B.2.1.8 The Contractor shall maintain a clean environment within the trench at all times. The flame retardant plasticizing used in the trench must be maintained to ensure debris does not contaminate the ongoing carbon fiber work.
- B.2.1.9 Prior to abrasive blasting, the Contractor shall take ultrasonic testing (UT) readings at three equally spacing distances at the 3, 6, 9, and 12 o'clock position in the adhesion zone. All UT readings must be above minimum wall thickness of 0.161" in order to proceed with grit blasting. The readings shall be equally spaced every 6 inches along the 3-foot section and reviewed and approved by the Con Edison Engineering Representative.
- B.2.1.10 Prior to abrasive blasting, all existing primer-less butyl rubber tape coating and any ACM coal tar shall be removed in the adhesion zone according to local, state and federal regulations.
- B.2.11 If any oil residue is present on the adhesion zone prior to grit-blasting the Contractor shall clean the adhesion zone with an approved industrial degreaser to remove any residual oil contamination from the substrate. *Oil removal must be done prior to grit blasting.*
- B.2.12 The Contractor shall assure Con Edison the remainder of the pipe (the non-adhesion zone) is free of dirt and loose debris. Any existing coatings that are raised from the substrate by more than 1/2 inch much be removed prior to composite wrapping. Any exposed steel surface shall be coated with an approved galvanic barrier including the FRP Repair Putty or GF-300 BD/210 Saturant.

B.2.2 TRAFFIC CONTROL MEASURES

- B.2.2.1 The Contractor shall abide by all traffic control requirements in accordance with the Manual on Uniform Traffic Control Devices (MUTCD) documents provided by Con Edison and/or New York City Department of Transportation regulations.

B.2.3 PROTECTION OF PEDESTRIANS

- B.2.3.1 The Contractor shall abide by all requirements for Pedestrian Protection as specified in the MUTCD NYC BC Chapter 3307 and OSHA and DOT regulations.

B.2.4 ACM CONTAINING COAL TAR REMOVAL

□

□

- B.2.4.1 Since the identified work area for this project has been previously refurbished using a combination of primer-less butyl tape coating and/or ACM-containing coal tar coating should be encountered. Any ACM-containing coal tar coating discovered in the course of the work, removal and disposal of Coal Tar shall be performed in accordance with asbestos-related notifications and variances and other permits submitted/obtained by Con Edison per Section E.3.12.
- B.2.4.2 Unless documentation is available to the contrary, all Coat Tar shall be considered to be contaminated with ACM.
- B.2.4.3 All workers that may be exposed above the Action Levels shall have biological monitoring provided for them in the form of blood sampling and analysis.
- B.2.4.4 No welding or burning of Coal Tar surfaces shall be allowed. The contaminated surfaces in the adhesion zones shall be abated using a Con Edison approved method.
- B.2.4.5 Only properly trained and approved Asbestos Handlers shall be involved in the abatement process. All surfaces shall be abated following regulatory guidelines for ACM abatement.
- B.2.4.6 Asbestos awareness training shall be provided to all personnel working on a contaminated site, even if their jobs do not involve direct handling of contaminated materials.
- B.2.4.7 The Contractor shall not use any electric or pneumatic rotating or other power tools to abate or come in to contact with existing coal tar coatings.
- B.2.4.8 For any activity identified as potentially causing airborne discharge of ACM, an initial exposure assessment shall be performed by an Asbestos Handler to determine the exposure of personnel to ACM.
- B.2.4.9 Appropriate personal protective equipment (PPE) shall be worn to prevent exposure of personnel and contamination of garments and other items.
- B.2.4.10 A controlled area shall be established around the worksite that is demarcated by barricades or barrier tape and restricts access to authorized individuals.
- B.2.4.11 ACM warning signs shall be posted at boundary of work area.
- B.2.4.12 For the duration of the project, all surfaces in the work area, including floors, walls, and steps shall be maintained as free of accumulation of ACM containing materials including paint chips, dust, and corrosion to the extent practical.

□

□

- B.2.4.13 When vacuuming is necessary, only High-Efficiency Particulate Air (HEPA) equipped vacuums shall be used.
- B.2.4.14 Contaminated waste, such as paint chips, coal tar, and used blast media shall be stored in sealed 55 gallon drums. Waste shall be disposed of at a Con Edison approved waste site.
- B.2.4.15 For all areas outside of adhesion zones, upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines exposed under JB 405A, the Con Edison representative must visually inspect all oil-o-static and return lines. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the repair and remediation will be performed by the Contractor's Con Edison approved asbestos abatement contractor in accordance with JB 302 and the latest version of G-8209. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to performance of the application of composite reinforcement system.
- B.2.4.16 Prior to any transmission facility pipe movement, the Contractor shall request for permission to move any Con Edison electric transmission facility from the Con Edison on-site construction representative. The Con Edison on-site construction representative will request permission from the Con Edison Energy Control Center. Prior to the Contractor moving pipes in any direction, approval through the Con Edison on-site construction representative is required.
- B.2.4.17 To perform electric transmission facility pipe adjustments that may be required for repair, remediation, abatement activities and/or carbon fiber application process, repair activities; the Contractor shall have and use acceptable equipment to lift/move pipes as necessary. Acceptable equipment for lifting feeder/oil return pipes include: air bag systems with appropriate regulators/controllers or come-alongs/chain hoists with nylon slings around pipes only. Excavation equipment (such as a backhoe) or other hydraulic hoists or jacks are not to be used.
- B.2.4.18 Construction activities will be halted if, due to vibrations, electric transmission facilities coating is damaged and needs to be repaired. Any and all delays incurred shall be at the expense of the Contractor.

**B.2.5 APPLICATION OF COMPOSITE REINFORCEMENT SYSTEM**

- B.2.5.1 The Contractor shall ensure that the environmental conditions including air, surface temperature, relative humidity, and dew point are within the specified range according to the most current Manufacturer's product data sheets for its application.

□

□

- B.2.5.2 The Contractor shall provide environmental protection as required.
- B.2.5.3 Prior to application, all epoxy materials shall be thoroughly mixed according to the Manufacturer's product data sheet.
- B.2.5.4 The Contractor shall verify that no active leaks are present before the application of the carbon fiber system. Any active dielectric fluid leaks shall be repaired with a mechanical clamp installed by contractor followed by a welded barrel repair by Con Edison.
- B.2.5.5 All transmission pipes subject to composite reinforcement work shall be temporarily supported after excavation with nylon straps or slings and sand bags every 20 feet, throughout the length of the excavation.
- B.2.5.6 The Contractor shall remove any existing, loose coating/tape along the length of the pipe that will interfere with composite system application.
- B.2.5.7 If the piping systems are found to have ACM containing coatings, the Contractor shall enclose the existing coating with the FRP Tack Coat 110 HT with a dry film thickness of 40 to 60 mils.
- HOLD POINT: Visual inspection to ensure no ACM material is exposed
- B.2.5.8 All weld seams, bolt heads, support clamps, composite claps, and areas with removed coating/green tape shall be covered with FRP Repair Putty to create a smooth transition zone between surfaces, prior to the application of the carbon fiber composite system.
- B.2.5.9 All weld caps and barrel terminations shall have the FRP Repair Putty applied to create a smooth transition for subsequent composite wrapping. Alternatively, prefabricated pieces may be adhered to the pipe to provide a smooth transition. To use prefabricated pieces, Contractor must submit designs for each piece for Con Edison approval.
- HOLD POINT: Visual inspection shall be performed prior to application of FRP 120 HT adhesive to ensure the pipe is smooth and properly prepared for composite installation and sufficiently cured.
- B.2.5.10 FRP 120 HT Adhesive shall be applied via brush/roller at 10 – 15 mils WFT. Adhesive should be applied to the entire pipe section being wrapped that day.
- B.2.5.11 The carbon fiber composite shall be installed in circumferential bands that wrap twice around the circumference of the pipe plus an extra six (6) inches for overall. Two (2) feet clearance around each individual pipe for installation of the carbon fiber composite is preferred with one (1) foot minimum clearance required. Refer to JB 402B for criteria to adjust oil-o-

□

□

static pipes and return lines horizontally and/or vertically as required to install carbon fiber composite.

In low clearance areas single layers plus six (6) inches for overlap can be used.

- B.2.5.12 The carbon fiber shall be saturated with FRP 210 HT – Saturating Resin according to the manufacturer’s specifications prior to installation on the pipe.
- B.2.5.13 The saturated carbon fiber should be rolled onto an application roll, then brought to the application area and wrapped in discrete hoops around the pipe.
- B.2.5.14 As the carbon fiber is wrapped around the pipe in discrete hoops, any air behind the composite shall be removed by hand during the wrapping process.
- B.2.5.15 Air pockets shall be removed by massaging the carbon fiber in the direction of the wrap so the wrap tightens onto the pipe as the air is removed.
- B.2.5.16 Subsequent bands of carbon fiber applied to the pipe must have a six (6) inch overlap over the previously installed band. Longer overlaps are acceptable when required to end at a specific point.
- B.2.5.17 The first double layer of carbon fiber shall stop 3 – 5 inches away from any pipe support edges.
- B.2.5.18 The second double layer of carbon fiber wrap shall start with a 12 inch wide band in order to stagger the seams between layers. All remaining carbon fiber layers after the 12 inches wide band can be 25 inches in width unless a barrel or other special condition is present.
- B.2.5.19 The second layer shall be wrapped in the same direction as the first layer to ensure the layers are all tighten on the pipe as they are applied.
- B.2.5.20 The second double layer of Carbon fiber shall continue down the pipe with a 4 – 6 inch overlap between circumferential bands.
- B.2.5.21 The second double layer of carbon fiber shall stop 6 – 10 inches away from the pipe support edge.
- B.2.5.22 The third double layer of carbon fiber wrap shall start with a 25 inch wide band in order to stagger the seams between layers. All remaining carbon fiber layers can be 25 inches in width unless a barrel or other special condition is present.

□

□

- B.2.5.23 The third double layer of Carbon fiber shall continue down the pipe with a 4 – 6 inch overlap between circumferential bands.
- B.2.5.24 The third double layer of wrapping shall stop 9 – 15 inches away from the pipe support edge.
- B.2.5.25 A minimum of six layers of composite carbon fiber shall be installed over the entire pipe section. All six single layers or three double layers shall be applied in each area before the end of each shift.
- B.2.5.26 Contractor shall at a minimum comply with the listed recommended remediation process if water intrusion into the trench occur:
- a. Water intrusion into the trench at any time during the carbon fiber application process – The trench shall be drained and plasticizing shall be replaced as required, to ensure a clean work environment
  - b. Water intrusion prior to wrapping or applying polymer – The pipe surface and trench area is dry prior to applying carbon fiber system. If the adhesion zones area flood and flash rusting occur, reblast any rust contamination in the adhesion zone.
  - c. Water intrusion after the adhesive application, prior to wrapping with carbon fiber – Stop coating or wrapping carbon fiber. When the trench is drained, ensure the pipe surface is dry and free of dirt and debris. Sand the pipe surface then remove dust by wiping surface with an approved solvent and apply FRP 120 HT adhesive then continue the wrapping process.
  - d. Water intrusion in the middle of the wrap process – Stop the wrapping application. When the trench is drained ensure the pipe surface is clean, dry, and free of all debris. Sand the surface of the carbon fiber to ensure good adhesion for the next layer. Remove all dust, clean with an approved solvent, and apply FRP 120 HT and continue wrapping until the specified 6 or 8 layers.
  - e. Water intrusion after all 6 or 8 layers of carbon fiber are applied – When the trench is drained, verify the pipe is dry. Sand the surface of the carbon fiber to ensure good adhesion for the next coating. Remove all dust, clean the surface by wiping with an approved solvent, and apply the HP-300 Epoxy Topcoat.
  - f. Water intrusion after the application of HP-300 topcoat, and prior to full cure of the HP-300 – When the trench is drained, visually inspect the top coat for defects due to abrasion from the sand or soil. If defects are present, remove all debris and dust, sand the surface of the pipe, clean with a solvent and reapply an additional layer of HP-300 topcoat.

□

□

g. Water intrusion after HP-300 topcoat has reached a functional cure requires no remediation.

B.2.5.27 HOLD POINT: Visual inspection and tap testing shall be performed once the composite has cured for a minimum of 48 hours

B.2.5.28 The final epoxy coating of HP-300 Epoxy shall be mixed and applied to the outside of the pipe with a brush or roller at a total DFT of 15 – 20 mils DFT per coat. The pipes shall have a minimum of three (3) coats to ensure no holidays are present.

B.2.5.29 The HP-300 Epoxy will be applied in a grey first then a second coat in red and the final coat shall be in grey as the final product with an exception to the adhesion zones, which will be red then grey then red on top.

B.2.6 CARBON FIBER ADHESION ZONES

B.2.6.1 Adhesion zones shall have a minimum length of three (3) feet. The green tape or existing ACM coating shall be completely abated for four (4) feet of pipe to provide a buffer zone for grit blasting on either side of the adhesion zone.

B.2.6.2 An adhesion zone shall be installed at least every 100 ft on a straight length of pipe without a barrel, weld cap or other interruption present.

B.2.6.3 Prior to abrasive blasting, the Contractor shall take ultrasonic testing (UT) readings at three equally spacing distances at the 3, 6, 9, and 12 o'clock position in the adhesion zone. Visual inspection for pitting shall also be performed. The test data shall be documented and submitted to the Con Edison Engineering Representative for review and approval. All UT reading must be above minimum wall thickness of 0.161" and any pitting shall have the pit depth analyzed prior to proceeding with grit blasting.

B.2.6.4 The Con Edison Engineering Representative shall provide documented approval prior to grit blasting the adhesion zone.

B.2.6.5 The Contractor shall contain any dust created by grit blasting to ensure it is not released in to the environment and does not contaminate the remainder of the work space.

B.2.6.6 Prepare the adhesion zone by abrasive blasting with 16 or 20 mesh aluminum oxide, in accordance with surface preparation standard NACE 2/SSPC-SP-10 "Near White Metal Blast Finish" with a 3 mil minimum angular profile.

B.2.6.7 HOLD POINT: Third-Party Inspector to verify blast cleanliness and profile via Testex replica tape

□

□

- B.2.6.8 The adhesion zone shall be vacuumed by the Contractor to eliminate any residual dust on the surface.
- B.2.6.9 After the adhesion zones are cleaned the Contractor shall apply 10 – 15 mils of FRP 120 HT via brush/roller.
- B.2.6.10 Contractor shall cut out a section of GF-300 BC is a bi-directional glass fiber which serves as a galvanic barrier.
- B.2.6.11 Contractor shall saturate GF 300-BD Glass Fabric with FRP 210 HT Saturating resin and wrap the glass fiber around the entirety of the adhesion zone and any bare metal adjacent to the adhesion zone.
- B.2.6.12 GF-300 BD must be wrapped around the entire adhesion zone extending at least two (2) inches past the end of the exposed steel on both sides of the adhesion zone.
- B.2.6.13 HOLD POINT: Visual inspection of the adhesion zone or bulk of pipe must be performed prior to wrapping to ensure there is no bare steel that hasn't been covered.
- B.2.6.14 All six (6) layers of CF-500 BD shall be wrapped around the adhesion zone as specified in Section B.2.5.
- B.2.6.15 Prior to application of HP-300 Epoxy topcoat, an additional two (2) layers of CF-500 BD shall be wrapped around the adhesion zone, extending at least six (6) inches past the end of the adhesion zone.
- B.2.6.16 The adhesion zones will have a third layer of HP-300 Epoxy installed. The final color will be red to clearly define the adhesion zones upon future excavation.

**B.2.7 CURING OF THE COMPOSITE SYSTEM**

- B.2.7.1 Surface and environmental conditions must be maintained within the specified range by the OEM for the entirety of the curing process. See the technical data sheets for each product for the temperature dependent curing times.

**B.2.8 QUALITY CONTROL REQUIREMENTS**

- B.2.8.1 Third-Party NACE Level III Inspector's shall have a minimum of a NACE Level III certification, and minimum of five (5) years of experience.
- B.2.8.2 The Third-Party NACE Level III Inspector shall be responsible for monitoring environmental conditions in the trench/enclosure, the mixing area, and the material storage area.

□

□

- B.2.8.3 The Third-Party NACE Level III Inspector shall be responsible for documenting the job progress by taking photos, and or videos of work performed.
- B.2.8.4 The Contractor's QA/QC Manager, in conjunction with the Third-Party NACE Level III Inspector shall be responsible for keeping a tally of the batch numbers for all polymers and composite fabrics and recording the batch numbers used on each pipe.
- B.2.8.5 The Third-Party NACE Level III Inspector shall perform visual inspection, including tap testing to find any air bubbles and delamination in the composite. QA/QC manager in conjunction with the Third-Party NACE Level III Inspector shall document all defects, application issues, improper environmental condition, water intrusion issues, or other Non-conformances with the specification and submit the appropriate QC reports.
- B.2.8.6 The Third-Party NACE Level III Inspector shall verify the adhesive zone grit blasted to NACE 2/SSPC-SP-10 "Near White Metal Blast Finish" with a 3 mil minimum angular profile as verified by a minimum of three (3) pieces of Testex replica tape per adhesion zone per pipe.
- B.2.8.7 Each day that composite wrapping is taking place, the Contractor shall furnish a two layer, 12" x 12" sample of CF-500 BD saturated with FRP 210 HT. The Third-Party NACE Level III Inspector shall be present to witness the panel preparation. These samples shall be reserved for destructive testing by a Con Edison approved Third-Party Test Lab, to verify the tensile strength of the composite.
  - a. The Third-Party NACE Level III Inspector in conjunction with the Contractor's QA/QC manager shall fill out to appropriate QC form for each 12" x 12" sample and document the batch numbers, date applied, and location where was taken from/applied on the sample once it has cured.
  - b. The coupon shall be tested in accordance with ASTM D3039 Tensile Strength for individual tensile strength values.
  - c. Minimum tensile acceptable strength is 85,600 psi, or 80% of the maximum tensile strength of the CF-500 BD saturated with FRP 210 HT Saturating resin,
  - d. If the sample failed between 53,500 and 85,600 psi tensile strength three (3) additional layers of CF shall be applied to the location where the sample was taken.

□

□

- e. If the sample fails at less than 53,500 psi tensile strength, six (6) additional layers of CF shall be applied to the location where the sample was taken.
- f. If an individual tensile strength value falls below the threshold, two additional tensile strength values shall be measured, and the results submitted to Con Ed Engineering for review and approval.
- g. A photograph should be taken of each panel prior to submitting them to the lab for analysis to assist in any analysis for a failed sample.
- h. In the event of a failed tensile test sample, the Contractor shall prepare a root cause analysis report for each panel/coupon failure and submit to Con Ed Engineering for review and comment.

B.2.8.8 The Contractor shall be required to prepare one (1) 12" x 12" grit blasted ¼" plate to NACE 2/SSPC-SP-10 "Near Whit Metal Blast Finish" with a 3 mil minimum angular profile every shift they are grit blasting an adhesion zone. The plate shall be primed with 10 – 15 mils of FRP 120 HT then one (1) saturated layer of 12" x 12" GF -300 BD shall be applied followed by one (1) saturated layer of 12" x 12" CF-500 BD then one (1) saturated layer of 6" x 12" CF-500 BD. A minimum of four (4) adhesion test dollies shall be placed on both the single, and double layer sides of the carbon fiber sample plate for a total of eight (8) dollies. The plate samples shall be allowed to cure for a minimum of 96 hours at 75°F. The sample shall be reserved for destructive testing done by the Contractor in accordance with ASTM D4541, witnessed by the Third-Party NACE Level III Inspector, a Con Edison Representative and the composite OEM Application Expert. Refer to Appendix VI.

B.2.8.9 The Contractor's QA/QC manager in conjunction with the Third-Party NACE Level III Inspector shall be required to collect the following data for each Tensile Test sample and Adhesion Test plate prepared:

- a. Batch numbers of all products used to create the sample
- b. Ambient temperature and humidity of application area
- c. Date of the application
- d. Location and pipe identity that were wrapped that day or Location of corresponding adhesion zone.
- e. List of application team members associated with the creation of the carbon fiber samples.

## B.2.9 APPLICATION INSPECTION AND REPAIRS

□

□

- B.2.9.1 A thorough visual inspection and tap test shall be performed by the Third-Party NACE Level III Inspector at least 2 days after the CF-500 BD has cured. Any air bubbles, wrinkles, delamination, lifted edges or other defects will be clearly marked to identify the area of the defect. The QA/QC manager in conjunction with the Third-Party NACE Level III Inspector will fill out the appropriate NCR form to document the defect.
- B.2.9.2 Approved air bubble repair techniques are shown in Appendix IV Section 3.0.
- B.2.9.3 After application of the HP-300 Epoxy topcoat, the Third-Party NACE Level III Inspector shall perform a thorough visual inspection of the pipe to ensure there are no holidays present in the coating system.
- B.2.9.4 Dynamic Response Spectroscopy (DRS) shall be used, in conjunction with Tensile Testing and Adhesion testing, to ensure the quality of the adhesion zones. The Adhesion zone must pass Sonomatic's adhesion zone QC criteria.
  - a. If an adhesion zone fails the DRS scan, tensile testing or adhesion testing then a second adjacent adhesion zone shall be installed at the Contractor's expense.
- B.2.9.5 Final inspection and approval by Con Edison's Field Representative and Con Ed Engineering Representative shall be performed prior to backfilling the feeder lines.

**B.2.10 PERSONNEL**

- B.2.10.1 All Contractor personnel shall have safety training in accordance with carbon fiber/epoxy OEM training manual and eHASP. The Contractor's Supervisors shall be directly responsible for ensuring that the project is carried out efficiently and in a highest quality manner and shall interface directly with the Con Edison Project Manager and Con Edison Field Representative as appropriate.
- B.2.10.2 All Contractor personnel shall complete the mandatory epoxy/carbon fiber OEM training and certification prior to the commencement of any work related to the application of the carbon fiber system.

**B.2.11 ADDITIONAL REQUIREMENTS**

- B.2.11.1 The Contractor shall maintain the work area in a neat and orderly condition at all times. Site cleanup shall be performed on a daily basis and as directed by the Con Edison Field Representative. Proper housekeeping is critical to the successful installation of the composite carbon fiber system. All hazardous materials and debris generated during construction shall

□

□

become the property of the Contractor, and legally disposed offsite at an approved Con Edison waste facility on a daily basis.

- B.2.11.2 The Contractor shall provide temporary lighting and temporary electrical power, as follows:
- a. Prior to the start of construction, the Contractor shall notify Con Edison's Field Representative of the temporary electric service required for the construction phase of the project, if available; else Contractor shall provide their own temporary electrical power.
  - b. The Contractor shall install temporary lighting as required to perform the work as specified in this contract. The light shall remain on for safety and security at all times if deemed necessary by the Con Edison Field Representative.
  - c. Cable, conduit and equipment for temporary light and power are the Contractor's responsibility. It is not included in any schedules, tables or materials lists.
  - d. When the work is completed, the Contractor shall remove all temporary light and power equipment and cable installed by him unless directed otherwise by the Con Edison Field Representative. The Contractor shall also remove all material, hardware, devices, etc. to the satisfaction of Con Edison.
  - e. Receptacles shall not be on the same circuit as lighting facilities. The Contractor shall use separate circuits, of the proper ratings required by the construction tool load.
  - f. All 120/208 VAC, 10, 15 and 20 ampere receptacle outlets and devices (which are used for construction purposes), shall be equipped with ground fault circuit interrupters (GFCI) for personnel protection. The GFCI shall be "Class A" rated to trip when the line current reaches 5 milliamps. The GFCI shall be Underwriter's Laboratory listed and approved.
  - g. All cable runs for the temporary light and power shall be provided with pigtail adaptors for small hand tools.
  - h. All temporary grounding of construction equipment in accordance with CE-ES-1027-05, "Temporary Grounding of Electrical Equipment" for the duration of this contract.
- B.2.11.3 Contractor may if approved by Con Edison establish their field office and other necessary installations, such as storeroom, tool room, etc. on the job site only at locations designated by the Company Field Representative.

□

□

- B.2.11.4 The General Contractor shall hire the Third-Party NACE Level III Inspector directly, not through any subcontractor associated with carbon fiber installation. The Third-Party NACE Level III Inspector shall report directly to Con Edison. The carbon fiber Contractor shall provide all data as required in this specification to the Third-Party NACE Level III Inspector.
- B.2.11.5 The General Contractor shall provide all required civil work to excavate, sheet & shore and backfill the transmission piping trench.
- B.2.11.6 The General Contractor shall provide all civil support during the installation of the composite system, which include dewatering, temporary pipe support relocation, street plating, traffic control and trench shoring modifications.
- B.2.11.7 The General Contractor shall backfill the trench if the following requirements are completed:
  - a. DRS results, tensile results and adhesion pull off results are completed, and no repairs are required.
  - b. All visual inspections are completed and all defects repaired. Including composite application and top coat application.
  - c. Adhesion zones are painted red and locations are surveyed/GPS.
  - d. Coated area of the pipe has ACM labelling for coal tar (if applicable)
  - e. Survey areas in order to identify completed carbon fiber application.

**B.2.12 MATERIALS ORDERS/DELIVERY**

- B.2.12.1 The Contractor shall notify Con Edison Field Representative within 2 weeks from the date of award of contract if there are problems on the availability of materials noted in this specification or indicated on any drawings.
- B.2.12.2 The Contractor shall coordinate all equipment and material suppliers, by them and all subcontractors, to ensure they meet the requirements of this specification. The Contractor shall notify the specific subcontractors or suppliers of any approved changes to the structures, materials or equipment which could affect the installation or performance of the other subcontractor's structures, materials or equipment.

**B.2.13 EXISTING CONDITIONS**

- B.2.13.1 The Contractor shall examine the work site thoroughly. If any conditions exist which are detrimental to the proper installation of the work, the

□

Contractor shall notify the Con Edison Field Representative, in writing, of the presence of said conditions. Starting of work will be regarded as acceptance of existing surfaces, pipe clearances, and trench conditions and any claims thereafter will be disregarded.

#### B.2.14 SAFETY

- B.2.14.1 All work performed by the Contractor shall be in accordance with submitted and accepted site specific Environmental Health and Safety Plan (eHASP).
- B.2.14.2 All persons working within Con Edison facility shall follow all appropriate safety rules.
- B.2.14.3 In the performance of their work covered under this specification, the Contractor shall observe all applicable Federal, State and Local regulations pertaining to safety in the workplace.
- B.2.14.4 Any and all precautions found in the current Manufacturer's Product Data Sheets and the Safety Data Sheets shall be strictly observed.
- B.2.14.5 Procedures and recommendations as found in SSPC PA Guide 3 shall be strictly followed.

#### B.3 WORK TO BE PERFORMED BY OTHERS

- B.3.1 Con Edison shall review and approve all testing and test results. A final inspection shall be performed by Con Edison's Field Representative and Engineering.
- B.3.2 Con Edison shall provide, if approved by the proper agency, a laydown area for work related materials to be stored adjacent to the work site.  
  
The Civil Contractor shall provide all required civil work to excavate, sheet & shore and backfill the transmission piping trench.
- B.3.3 Visual inspection/testing, repairs and remediation to existing pipe coating between adhesion zones, as required, shall be performed by the Contractor's Con Edison approved asbestos abatement contractor. The Contractor's Con Edison approved asbestos abatement contractor shall abate the existing ACM coal tar or primer-less butyl rubber tape coating from the adhesion zones.

#### B.4 DELIVERY STORAGE AND HANDLING

- B.4.1 The Contractor shall be responsible for ensuring delivery of all composite materials on site prior to start of the job.

□

- B.4.2 Containers and packages of all material shall bear the manufacturer's printed label.
- B.4.3 Composite reinforcement materials shall be delivered to the job site in the manufacturer's unopened, original containers bearing a legible product designation, batch number, and date of manufacture. Damaged containers shall be rejected and the material contained therein shall not be used.
- B.4.4 All composite reinforcement materials shall be received and stored in a covered area at storage temperatures specified on the current Manufacturer's Product Data Sheet. Materials shall be protected from physical damage, moisture and extreme temperatures.
- B.4.5 All composite reinforcement materials shall be stored and labeled using appropriate hazardous material classification system, as required by 29 CFR Part 1926.59.
- B.4.6 Material found contaminated, expired, or otherwise nonconforming shall be disposed in accordance with Con Edison Field Representative concurrence.
- B.4.7 If any flammable, solvent based material is to be stored, the storage area/cabinet shall be suitable for storage of flammable materials and comply with all applicable codes and regulations.
- B.4.8 Materials to be used shall be within the stated shelf life throughout the duration of the job.
- B.4.9 Storage of abrasives shall be adequate to protect the abrasive from moisture and other contaminants.

B.5 MATERIAL REQUIREMENTS

B.5.1 Unless otherwise approved by the Con Edison Engineer, use of materials other than materials listed below shall not be permitted.

B.5.1.1 Epoxy / Carbon Fiber Materials

- FRP 120 HT (High Strength Epoxy Adhesive)
- FRP Repair Putty (High Build Epoxy Repair Putty)
- FRP 110 HT (High Strength Epoxy Adhesive)
- FRP GF 300=BD (Glass Fabric (Bi-Directional))
- FRP 210 HT (High Temperature Composite Saturating Resin)

□

□

FRP CF 500-BD (Carbon Fiber (Bi-Directional))

FRP HP 300 Epoxy (High Performance Epoxy Coating System)

- B.5.2 Carbon fiber threads shall have a documented minimum tensile strength of 77 ksi and be manufactured in compliance with ISO 9001-2015 QA/QC Program.
- B.5.3 Carbon fiber threads shall be woven into a bi-directional fabric with a 12K tow and 2 x 2 twill weave orientation. The overall weight of the fabric shall be at least 19.5 oz. per square yard.
- B.5.4 The final composite system shall meet or exceed all the test parameters shown in Table 1 below. Testing shall be performed by an accredited, Third-Party laboratory. No internal testing manufacturers or applicators will be accepted. Curing of composite samples shall be done at 75°F maximum.

**Table 1. Required Properties for Final, Cured Composite**

Property	ASTM Test #	Minimum Value
Flexural Strength	D790-15	55,000 psi
Flexural Modulus	D790-15	4,300 ksi
Tensile Strength	D3039M-14	105,000 psi
Modulus	D3039M-14	6,250 ksi
Poisson's Ratio	D3039M-14	0.070
Lap Shear Strength	D3165-07	3,200 psi
Coefficient of Linear Thermal Expansion	E831-14	3.8 – 4.3 x 10 <sup>(-6)</sup> in/in °F
Barcol Hardness	D2583-13a	41
Heat Deflection Temperature	D648-16	425°F (264 psi stress)

- B.5.5 All products applied underneath the composite wrap including polymeric repair putties and tack coats shall demonstrate >2,500 psi adhesion to blasted steel panels according to ASTM D4541.

**B.6 MATERIAL LIST**

**B.6.1 Epoxy / Carbon Fiber Materials**

- B.6.1.1 Encapsulation Materials for ACM containing Coal Tar
  - a. Advanced FRP Systems Tack Coat 110 HT
- B.6.1.2 Scratch Coat/Filler – High Build Epoxy Repair Putty
  - a. Advanced FRP Systems – FRP Repair Putty
- B.6.1.3 High Strength Epoxy Adhesive
  - a. Advanced FRP System – FRP 120 HT
- B.6.1.4 Glass Fabric

□

□

- a. Advanced FRP System – FRP GF-300BD

B.6.1.5 High Temperature Composite Saturating Resin

- a. Advanced FRP System – FRP Saturant 210 HT

B.6.1.6 Carbon Fiber (Bi-Directional)

- a. Advanced FRP System – FRP CF-500 BD

B.6.1.7 High Performance Epoxy Coating System

- a. Advanced FRP Systems – FRP HP 300 Epoxy

**B.7 INSTALLATION IMPROVEMENT OPTIONS**

**B.7.1 Wet Lay-up Reduction in Layers**

B.7.1.1 The current wet lay-up design includes eight (8) layers in the adhesion zone, and six (6) layers in the coated area. Con Edison Engineering is currently in the process of reducing the number of layers to improve the design and reduce the installation cost. The improvements will also reduce the overlaps required in order to reduce material costs. The QA/QC requirements will remain the same for the project. All testing will be performed in accordance with ASME-PPC-2, an addendum will be submitted with the design changes.

**B.7.2 Encapsulation Sleeve Design**

B.7.2.1 The new encapsulation design will be installed on straight lengths of pipe, barrels, and branch connections. The new design shall be installed over live feeder pipes with an exterior anticorrosion primer-less butyl rubber tape coating or green tape, exposed steel pipe surface, or coal tar coating. The encapsulation design shall create a secondary pressure boundary around the existing pipe to contain any leaks. The design shall include transition joints, termination ends, allowance for temporary pipe supports, and a repair process for any field defects. A quality control and quality assurance (QA/QC) process shall be developed to monitor product installation, with minimal material sampling, and adhesion testing as required. The encapsulation design shall provide a structurally independent pipe capable of withstanding 100% of the internal pressure, thermal growth, and of the transmission feeder system pressure. Since this area has been previously refurbished, the encapsulation system shall also serve to encapsulate the existing primer-less butyl rubber tape coating or green tape that is currently on the feeder pipes, and mitigate any corrosion issues.

**C. Methods of Construction**

**C.1 TRAINING AND DEMONSTRATION**

□

□

- C.1.1 All personnel directly involved in the installation of composite materials shall be required to have an active certification as a certified applicator, issued by Con Edison or approved OEM/Vendor. Certification shall be based upon completion of a comprehensive training course, including both classroom and in the field training (See Appendix III).
- C.1.2 All personnel involved with the work process shall be trained on the proper installation methods (in accordance with all Con Edison specifications) for coating, and all Environmental, Health and Safety requirements. Contractor personnel shall be knowledgeable in the installation of pipe clamps should a dielectric fluid leak occur during the Pipe Enhancement work activities. Only low profile clamps are permitted.
- C.1.3 Any deviation from this Specification which results in a change to the designed operation of affected equipment shall be clearly defined and submitted in writing to the Con Edison Field Representative for Con Edison review and approval.

## C.2 SEQUENCE AND SCHEDULING

- C.2.1 The Contractor shall provide a detailed CPM Level III or Primavera P6 resource loaded schedule for the complete installation, including allotments for permitting, pipe enhancement work, including abatement, cleaning the pipe, coating and NDE inspection, and all the other pertinent milestones.

At a minimum, the schedule should include the following items:

- a. Mobilization
  - b. Excavation
  - c. Abatement of primer-less butyl rubber tape, ACM Coal Tar/Coating Enclosing (as required)
  - d. Adhesion Zone Surface Preparation
  - e. Carbon Fiber Application
  - f. Inspection Intervals and Hold Points
  - g. Curing Period
  - h. NDE Assessment
  - i. Adhesion Zone DRS Testing
  - j. Delivery of Documentation and Reports
  - k. Backfilling
  - l. Final Site Restoration
  - m. Demobilization
- C.2.2 The Contractor shall complete all pipe enhancement/refurbishment work in a timely fashion.

□

□

- C.2.3 The Contractor shall be responsible to coordinate the actions/activities of their subcontractors' and suppliers with Con Edison Field Representative who will be designated by Con Edison.
- C.2.4 The Contractor shall be responsible to coordinate any approved changes to the structures, materials, equipment and other items supplied by him and to him by Con Edison, which could affect the work or performance of the other subcontractors' structures, materials or equipment.
- C.2.5 The work described in this construction specification shall be coordinate with the work to be performed by others. The Contractor shall schedule and accomplish its work such that it will cause no delay to proper installation and completion of work to be performed by others.
- C.2.6 All communications of coordinating shall be routed through the Contractor's site Representative to the Con Edison Field Representative.
- C.2.7 All requirements relating to the sequencing and scheduling of the work to be performed shall be in accordance with Con Edison's Construction Job Management Procedures, Standard Terms and Conditions for Construction Contracts, and the Special Site Conditions.

C.3 CONSTRUCTION

- C.3.1 The Contractor shall notify Con Edison in writing within two (2) weeks of being awarded the contract if they will take exception to any aspect of this specification. Any deviation from the specification shall be approved by Con Edison Engineering prior to acceptance.
- C.3.2 The Contractor shall notify Con Edison if any deviations from the work schedule come up prior to or during application.

**D. Method of Measurement**

The quantity to be measured for payment shall be the linear trench feet (T.F.) of composite carbon fiber system encapsulation of underground transmission feeders and return lines as shown in the contract drawings dated February 21, 2020 under Project ID: SANDRESM1 as directed by Con Edison in consultation with the Resident Engineer. Eight pipes within one linear trench foot)

**E. Price to Cover**

E.1 SUBMITTALS

- E.1.1 The Contractor shall submit the following in the required quantity and format to Con Edison:

□

□

- E.1.1.1 As part of the bid submittals, submit company overview and minimum five years of related project experience similar in scope and magnitude to the project covered by this specification.
- E.1.1.2 Resumes of the key personnel, supervisors, and the superintendent who shall manage the field operations are to be submitted with the bid and shall have at least three (3) years of experience with carbon fiber or composite application work.
- E.1.1.3 All required licenses are to be obtained by the Contractor listed in the bid package.
- E.1.1.4 Contractor shall submit their training manual reflective of the carbon fiber application process and Appendix III for Con Edison review and approval.
- E.1.1.5 A site-specific Environmental, Health and Safety Plan (eHASP) shall be submitted by the low bidder at the pre-award meeting. The eHASP shall address, at minimum, CEHSP A12.03 EH&S Qualifications for Supplier Procurement and Oversight, Con Edison EH&S-related requirements set forth in Section F, asbestos-related notifications and variances governing the work, Con Edison-approved disposal scenarios for all waste streams generated by Contractor activities, and the contents of this section. The eHASP shall be reviewed and accepted by Con Edison prior to the commencement of the work.
- a. Spill Prevention and Response Plan (SPRP) (including provisions for response to any dielectric fluid leaks that occur during the Pipe Encapsulation work tasks) is to be included in the eHASP, in accordance with CEHSP E10.01 and GEHSI E02.01.
  - b. A Noise Mitigation Plan in accordance with DEP requirements
  - c. A Dewatering Plan
  - d. Working in confined spaces in accordance with CEHSP S16.00
  - e. Hazardous waste plan; grit blasting contaminants; dust collection
- E.1.1.6 The Contractor shall comply with Con Edison QA/QC Manual and Inspection Test Plan (ITP), see Attached QA/QC Manual and ITP.
- E.1.1.7 The Contractor shall submit a report listing each composite material used, its technical data sheet, wrapping application, carbon fiber specification, photos, ITP test results, QA/QC forms, and NDE analysis of the adhesion zone. SDS sheets are to be supplied for all materials installed or used during the project and remain on file throughout the project. SDS sheets must be approved for use prior to the start of the project per CEHSP S09.02.

□

□

- E.1.1.8 Contractor shall submit a Third-Party lab report within seven (7) business days for all tensile testing performed in accordance with ASTM D-3039 for all daily composite tensile test panels. All results shall be submitted to Con Edison for review and approval prior to Contractor demobilization.
- E.1.1.9 Contractor shall submit a QA/QC report and test results for all adhesion testing performed in accordance with ASTM D4541 Adhesion Strength (See Appendix V) for Con Edison review and approval prior to Contractor demobilization.
- E.1.1.10 Where items/equipment are specified by exact make and model and the Contractor certifies in writing that these specific items shall be provided, samples and/or catalog cuts shall be required for submission. No variation or substitutions from the specified products shall be permitted unless approved by Con Edison Engineering.
- E.1.1.11 The Contractor shall submit his dust collection plan to contain any dust and debris during surface preparation or Con Edison approval.
- E.1.2 The Contractor shall submit all drawings, reports and information in accordance with Project Description in digital and hard copy formats. All As-Built drawings shall be made in AutoCAD 2013 or newer. All drawings shall include, but not be limited to, the following:
  - E.1.2.1 As-Built drawings (at least in AutoCAD 2013), showing an accurate location (in plan and profile) with reference to adjacent curb lines and cross streets, direction of the pipe, bends, any new welded repair barrels and patches, location of all adhesion zone areas, the exact location and depth of the existing manholes, and end-wall repair. Typical cross sections are to be indicated where the cross section changes along the run.
  - E.1.2.2 Contractor shall, on a daily basis, document job progress, personnel roles and responsibilities, carbon fiber saturation process, carbon fiber coating application, carbon fiber inspection, and required NDE testing for the project on all associated QA/QC Forms.
  - E.1.2.3 The final As-Built drawings must reflect all adhesion zone coated red, barrels, patch welds, high hats, design changes, facilities and services located near the feeder pipes in the trench in accordance with Engineering Operations Manual CE-0301.
  - E.1.2.4 Contractor shall submit a comprehensive project report and receive Con Edison approval prior to demobilizing any resources from the project site. The report shall include the following:
    - Executive Summary (brief description about the project process, key attributes, and what was completed)

□

□

- Project Schedule (plan vs. actual), including any schedule impacts and their cause
- As-built drawings, showing adhesion zone locations or custom wraps
- QA/QC Reports
- Inspection reports with associated photos
- NACE Inspectors reports
- Third-Party Labs results, adhesion testing results, and Somatic DRS results
- RFIs and non-conformances reports
- Conclusion (Detail summary of the project, issues and root causes, productivity, and challenges)

### E.1.3 Review and Approval of Submittals

- E.1.3.1 All documents and materials required for the full completion of this project shall be submitted to, and subject to the approval of, Con Edison Representatives and Engineers.
- E.1.3.2 Documents or materials that do not satisfy Con Edison standards and requirements of applicable codes and standards shall be replaced, rectified or corrected by the Contractor based on Con Edison comments without and additional compensation from Con Edison.
- E.1.3.3 Approval of Contractor's submittals shall not relieve the Contractor of any responsibility arising from any future claims due to unforeseen non-compliance to Con Edison standards and requirements of applicable codes and standards.

## E.2 SITE REPRESENTATIVE

- E.2.1 Upon execution of the Contract, Con Edison shall identify in writing to the Contractor, a Con Edison Field Representative for the Project. The Con Edison Field Representative shall have full authority to act, or to cause others to act, on behalf of Con Edison, to assure that the work is carried out in full compliance with the requirements of the Contract, and to otherwise generally protect the interests of Con Edison. Con Edison may change the Representative at any time by notifying the Contractor, in writing, of the name of the new Con Edison Field Representative and the effective date of the change.
- E.2.2 Prior to the start of construction, the Contractor shall submit the names and responsibilities of the Contractor's and any subcontractors' personnel, including the primary contact and key people that will directly interface with the Con Edison Representative and Engineers.

□

□

- E.2.3 The Contractor may only proceed with the required work under the direction of the Con Edison Representative on a daily basis. The Contractor must be in close coordination with the Con Edison Representative to ensure that if System conditions change and permission to work is denied and/or modified that this information can be quickly communicated to the Contractor field supervision and crews.
- E.2.4 All Contractor employees for the project must be trained and certified by the approved composite supplier (OEM) to install all composite material. For this project the approved composite supplier is Advanced FRP Systems, Inc.
- E.2.5 A certified representative from the OEM, Advanced FRP Systems, Inc., shall be present onsite during the entirety of the project to verify the installation of the composite reinforcement system and ensure that the material is applied in accordance to the composite supplier's recommendations and the entirety of this specification.
- E.2.6 No work may proceed without the presence of a Third-Party NACE Level III Inspector, Contractor QA/QC Manager, a Certified OEM Representative, and a Company Representative.

E.3 QUALITY ASSURANCE

- E.3.1 The Contractor shall use trained and qualified/certified personnel to install the carbon fiber system, in accordance with Appendix III requirements and this Specification.
- E.3.2 The Contractor shall provide daily supervision, QA/QC personnel, and proper equipment to complete the scope of work listed in this Specification.
- E.3.3 The Contractor shall provide documentation of all personnel that may be required or requested by Con Edison for the full completion of the project. The Contractor(s) performing work on the pipe-type transmission system facilities must be qualified by the composite OEM supplier and approved by Con Edison. Documentation of Contractor qualifications must be submitted for approval prior to start of work.
- E.3.4 A Third-Party Quality Control (QC) Inspector shall be present for the duration of the project. The Third-Party NACE Level III Inspector shall be fully trained by the OEM on Carbon Fiber application and shall review the QA/QC manual, QA/QC forms, and ITP before the commencement of work. The NACE Level III Inspector shall have a National Association of Corrosion Engineers (NACE) CIP Level III (3) certification, with a minimum of five (5) years field experience. The NACE Inspector in conjunction with the Contractor's QA/QC Manger shall complete and submit a weekly QC report, which include total LF installed, RFI's and non-conformance reports, inspections performed, and NDE results to date to Con Edison throughout the project.

□

□

The Third-Party QC Requirements and responsibilities are laid out in detail in Section B.2.8 of this Specification.

- E.3.5 During each shift that includes the direct installation of carbon fiber, one (1) 12" x 12" two (2) layer sample of carbon fiber will be produced by the Contractor for tensile testing according to ASTM D3039. The Third-Party NACE Level III Inspector shall witness daily sample preparation and sign off on appropriate QA/QC forms for tensile test.
- E.3.6 During each shift that includes grit blasting for the adhesion zone one adhesion test panel will be produced. The panel will have the following layout, 12" x 12" grit blasted ¼" steel plate with NACE 2/SSPC-SP-10 "Near White Metal Blast Finish" with a 3 mil minimum angular profile coated with 10-15 mils of Epoxy adhesive, one (1) 12" x 12" single layer of saturated e-glass. Additionally, one (1) 12" x 12" single layer of saturated carbon fiber shall be placed over the e-glass, and one (1) 6" x 12" single layer of saturated carbon fiber shall be placed on half of the plate for adhesion testing. A minimum of eight (8) adhesion test dollies shall be adhered to the plate immediately following sample preparation. OEM training shall include details of Adhesion test plate preparation.
- E.3.7 The Third-Party NACE Level III Inspector, in conjunction with the QA/QC manager shall be required to collect the following data for each Tensile Strength and Adhesion test sample:
- E.3.7.1 Batch number of the Saturant, Adhesive, Fiberglass and Carbon Fiber
- E.3.7.2 Temperature, humidity, dew point, spread, in the associated work areas
- E.3.7.3 Date of the application
- E.3.7.4 Locations on the feeders and return lines installed the day of sample preparation
- E.3.7.5 List of application team members involved in the preparation of the test sample
- E.3.8 The Contractor shall comply with Con Edison's QA/QC Manual and quality control Inspection Test Protocol (ITP) and shall impose the same requirements on all Sub-Contractors and Suppliers. The plan shall be implemented and monitored by the Contractor's QA/QC Manager. The Company will review the Contractor's quality control activity. See QA/QC Forms and ITP.
- E.3.9 The Contractor shall afford the Third-Party NACE Level III Inspector and OEM oversight representative full cooperation and access to the installation, inspections and QA/QC testing being performed. They shall be able to make material examinations, check for specification compliance, and review history of all materials during construction, and witness performance of any testing.

□

□

- E.3.10 Test equipment used shall be calibrated to a known standard traceable to the National Institute of Standards and Technology (NIST) or as required for compliance with ISO 17025.
- E.3.11 The Contractor's Non Destructive Examination (NDE) program shall be approved by Con Edison's Engineer. NDE technician used shall be certified in accordance with ASNT-CP-189 and ASNT-SNT-TC-1A requirements.
- E.3.12 Regulatory and Permit Requirements
  - E.3.12.1 Con Edison will submit/obtain all required asbestos-related notifications and variances and other permits (as required by New York City/State Regulations and its Agencies) and share them with Contractor.
  - E.3.12.2 The Contractor shall comply with all applicable Federal, State, City and OSHA rules and regulations. All violations arising from noncompliance are the responsibility of the Contractor and shall be promptly rectified by them at their expense.
- E.3.13 Guarantees
  - E.3.13.1 Contractor shall guarantee the epoxy and carbon fiber material installation and workmanship is in compliance with ASME PCC-2, and Table 1 Repair System Required Material and Performance Properties, resulting in a secondary pressure boundary, which provides an environmentally safe and dependable system.
  - E.3.13.2 The Contractor shall replace, free of charge, any part of the system, which proves defective or in any way fails to meet the specified requirements, because of poor workmanship, failed Dynamic Response Scan, tensile or adhesion testing failure, or defective materials.
- E.3.14 Quality of Work
  - E.3.14.1 Any work performed by Contractor found to be nonconforming to the requirements of this specification or defective shall be redone at no additional cost to Con Edison.
  - E.3.14.2 Preparation of all test samples must be completed with the same procedures and care utilized for application of the composite material on the actual feeder pipes and oil return lines to ensure the samples are fully representative of the quality of work being performed.
  - E.3.14.3 Any workmanship deemed by Con Edison as being inferior, unsuitable, or not conforming to requirements of this specification shall be redone with no additional costs to Con Edison.

□

□

E.3.15 Carbon Fiber

E.3.15.1 Manufacturers of carbon fiber to be used by the Contractor shall be subject to the requirements of CE-PS-4302, Quality Assurance Requirements for Level C Vendors and have a quality system that meets the requirements of ISO 9001 (2015).

E.3.16 Non Destructive Examination

E.3.16.1 All NDE inspectors performing visual inspection, UT thickness testing, or other NDE shall be at a minimum certified to ASNT Level II.

E.4 PROPOSAL

E.4.1 The Contractor’s proposal shall include all items and information requested in the Purchasing Department’s Invitation to Bid Documents and as stipulated in Con Edison Standard Terms and Conditions for Construction Contracts.

E.4.2 Any statement in the Contractor’s proposal that differs from the requirements of this specification shall be referred to in a section entitled “Statement of Exceptions.” The Contractor shall state the section and paragraph of the specification he is taking exception to. If the proposal contains exceptions that are not included in the “Statement of Exceptions” the conditions of this specification shall prevail.

E.4.3 Any request for substitutions or modifications from the product requirements listed herein shall be submitted to and approved by Con Edison. For any product change, data/information must be provided demonstrating that the proposed alternate system can meet all product requirements herein.

Requests for alternative systems must be submitted with the proposal to provide sufficient time for review.

E.4.4 The Contractor shall present its proposed technical approach to install carbon fiber systems, including lists of expected skills, expected number of personnel required, expected equipment required, and foreseen changes required to complete the project successfully, as proposed.

E.5 OWNER ACCEPTANCE

E.5.1 Final acceptance of the Contractor’s work shall be contingent upon an inspection performed by the Third-Party NACE Level III Inspector and a member of Con Edison’s Engineering support team, in conjunction with any other requirements of the contract.

□

□

- E.5.2 Acceptance of Con Edison's purchase order or the making of a contract shall be construed as evidence that an examination of the project was made and later claims for labor, equipment or materials required shall not be allowed.
- E.5.3. The analysis and results of all required destructive and non-destructive testing including the Dynamic Response Spectroscopy (DRS) inspection of the Adhesion Zones, Tensile test results, adhesion test results, hardness test results and visual inspection shall be used to assess the carbon fiber work performed by the Contractor. Acceptance criteria shall be based on the adhesion bond between the carbon fiber and steel. (See Appendix II).
- E.5.4 Written acceptance of the work after final inspection does not release the Contractor from workmanship liabilities as referenced in the Quality Assurance section.

E.6 REQUIRED SUBMITTALS

- E.6.1 The Contractor shall obtain the required Notice to Proceed from the Con Edison Construction Manager.
- E.6.2 Contractor shall submit to Con Edison all applicable QA/QC Forms by next business day.
- E.6.3 Contractor shall submit to Con Edison all material test results within seven (7) business days, and prior to demobilization from the site.
- E.6.4 Prior to the start of work, the Contractor shall submit a detailed work plan and schedule to the Con Edison Field Representative for review and approval. The schedule shall identify each specific task requiring down time of any existing system, along with the start and end times of each task. The Notice to Proceed shall be contingent upon approval of Contractor's work plan and schedule by the Con Edison Field Representative. Con Edison reserves the right to change the schedule.
- E.6.5 Where the material is specified by manufacturer, the Contractor shall certify in writing that these specific items shall be provided. No variation or substitutions from the specified products will be permitted.
- E.6.6 When field changes are required, the Contractor shall keep a complete record of all such changes being made by his/her field forces on the Contractor's copy of the affected subsurface drawings. At the completion of the work, the Contractor shall prepare and submit the As-Built drawings in AutoCAD 13 format to the Con Edison Representative, who will forward them to the Con Edison Engineer in order that the original tracing be revised.

□

□

E.7 ADJUSTMENT OF PIPES TO PERFORM INSTALLATION

E.7.1 The price shall cover the cost to adjust transmission utilities, inclusive of oil-o-static pipes, return lines, freeze lines and communication lines in order to install the carbon fiber composite.

E.7.2 Refer to JB 402B for price to cover final position of oil-o-static pipes, freeze lines and return lines.

The price shall cover any costs incurred if the integrity of the field coating is compromised on the oil-o-static and/or return lines' due to adjustment/movement and/or support of transmission lines to final position, per Con Edison guidelines, payment for additional inspection/testing, excavation, repair, remediation and field coating shall be covered and paid for under this item.

E.7.3 Refer to JB 402 for price to cover final position of communication lines.

E.8 FIELD COATING OF OIL-O-STATIC FEEDER PIPES AS REQUIRED

E.8.1 The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces and the Contractor's Con Edison approved asbestos abatement contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity and to repair and remediate the coating between adhesion zones, as required; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity.

E.8.2 The price shall cover any costs incurred if the integrity of the field coating is compromised on the oil-o-static and/or return lines' due to adjustment/movement and/or support of transmission lines per Con Edison guidelines, all costs associated with additional inspection/testing and excavation performed to repair and remediate the coating between adhesion zones and any and all delays shall be covered and paid for under this item; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity.

E.8.3 The price shall cover any costs incurred if any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with additional inspection/testing and excavation performed to repair and remediate the coating between adhesion zones and any and all delays incurred (inclusive of modification and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity) shall be at the Contractor's expense.

E.9 ABATEMENT OF EXSTING ACM COAL TAR COATING FROM ADHESION ZONES

□

E.9.1 The Contractor's Con Edison approved asbestos abatement contractor shall abate the existing ACM coal tar or primer-less butyl rubber tape coating from the adhesion zones.

**F. References**

**F.1 APPLICABLE STANDARDS AND REFERENCES**

F.1.1 All work, materials and equipment under this specification shall conform to the requirements of the latest applicable portions of the following codes and standards. #### APPENDICES

1. Appendix I – Vendor Qualification
2. Appendix II – Carbon Fiber NDE Assessment (Sonomatic)
3. Appendix III – Personnel Training & Qualification
4. Appendix IV – Repairs
5. Appendix V – NCR Repairs
6. Appendix VI – Adhesion Pull Off Testing Procedure

□

**CONSTRUCTION SPECIFICATION**  
**SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION**  
**OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

**NOVEMBER 2019**

**APPENDIX I - VENDOR QUALIFICATION**

**1.0 PROJECT DESCRIPTION**

- 1.1 The current repair work scope includes trenching (predominantly in a street environment), soil stabilization, manual soil excavation to expose the pipe, removal of original coal tar coating, and pipe surface preparation for nondestructive (NDE) inspection. Often times the NDE inspection results in extreme pipe wall thickness loss, which requires the installation of larger diameter pipes or barrels to be welded over sections of heavily corroded pipe. The new barrel and any exposed pipe are wrapped with new protective anti-corrosion tape coating (Fig 1).

*Figure 1. Excavated Transmission Feeder Pipe.*

**2.0 PROJECT DESCRIPTION**

- 2.1 In the repair phase, rather than remove all the existing tape coating, the concept allows for its encapsulation, while repairing/preventing leaks and re-establishing the original design basis of the corroded or defective area of steel pipe. This can be achieved with the installation of an epoxy coating applied over the tape coat, then carbon fiber circumferential wrap impregnated with epoxy resins over the epoxy coating.

**3.0 CERTIFICATION PROCESS**

- 3.1 Listed below are the instructions to prepare the simulated pipe samples for carbon fiber wrapping and hydrostatic testing. The carbon fiber application process has to be witnessed by Company or an approved OEM for vendor certification. The proposed instructions can be modified and submitted for Company review and approval. Video recording, photos, and NDE results are incorporated into a technical report prepared by an approved Third-Party certified testing lab or equal, which is required for verification of the application

---

**OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

---

**NOVEMBER 2019**

---

process. All certification steps are at the expense of the Contractor, except the sample test pipes.

**3.2 Preparation of Test Pipe**

- 3.2.1 Company shall provide two 10" diameter pipe samples for testing, one with bitumastic coal tar, and the other with green tape coating, both pipes are to be wrapped with composite system.
- 3.2.2 Qualified NACE Level III Inspector, composite OEM representative and, Company representative must be present during installation to ensure the quality of the carbon fiber application.
- 3.2.3 Prepare the three feet adhesive zone surface by abrasive blasting in accordance with surface preparation standard NACE 2/SSPC-SP-10, "Near White Metal Blast Cleaning, with a minimum 3 mil angular profile. All grit blast areas shall be protected from corrosion (See Fig 2).
- 3.2.4 If the pipe is coated with Coal Tar, apply a 30 - 40 mils layer of FRP 110 HT epoxy coating over the coal tar mastic coating, extending approximately ½ inch onto the metal surface on each end. Allow FRP 110 HT to dry to the touch prior to next step
- 3.2.5 Apply the FRP 120 HT – high strength adhesive to the entire pipe at 5 – 10 mils DFT via brush/roller.
- 3.2.6 Apply one circumferential band of GF 300-BD glass fabric saturated with the FRP 210 HT saturating resin extending 2 inches beyond both ends of the adhesion zone with a six inch circumferential overlap.
- 3.2.7 Saturate CF-500 BD, a bi-directional carbon fiber, with the FRP 210 HT Saturating resin.
- 3.2.8 Apply 6 layers of CF-500 BD as shown by OEM in the mandatory training session. Carbon fiber will be applied in 3 double layers, exactly the same as described in this specification.
- 3.2.9 Apply carbon fiber in a circumferential technique, with a minimum overlap of 6" inches on all joints.
- 3.2.10 Seams between layers should be offset by starting the second double layer with a 12" wide band of CF-500 BD.
- 3.2.11 Apply an additional two layers of carbon fiber covering a length of 40 inches, which includes the 3-ft adhesion zone and 4 inches onto the bulk of pipe.
- 3.2.12 Apply at least one (1) layer of topcoat of epoxy at 15 to 20 mils thick to the exterior surface of the 6 and 8 layers of carbon fiber.
- 3.2.13 Remove all sharp edges and rough surfaces from the final surface finish.
- 3.2.14 Pressure test pipe in accordance with Appendix I, Section 4.0

**CONSTRUCTION SPECIFICATION**

**SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

**NOVEMBER 2019**

3.2.15 The adhesion zone of the pipe shall be scanned by Sonomatic to assess for any subsurface deficiencies or disbonding after pressure testing.

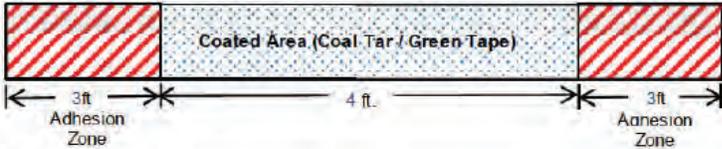

Figure 2. Pipe layout.

**4.0 TESTING PROCESS**

- 4.1 Fill Pipe #1 with city water, vent all air.
- 4.2 Hydrostatically test pipe in increments of 50 psi to 250 psig, hold for 60 minutes, then increase to 500 psi, hold for 10 minutes, and then 1000 psig for 3 minutes. No leaks must be visible.
- 4.3 Pipe #2 shall be shipped to Sonomatic for pre and post hydrostatic DRS scanning.
- 4.4 Hydrostatically test Pipe #2 in increments of 50 psi to 250 psig, hold for 60 minutes, then increase to 500 psi, hold for 10 minutes, and then 1000 psig for 3 minutes. No leaks must be visible.
- 4.5 Sonomatic/NDE Vendor to scan Pipe #2 adhesion zone section for defect/s.
- 4.6 NDE vendor to visually inspect Pipe #1 & #2 carbon fiber wrap for any application or material defect.

**5.0 PIPE SAMPLES**

- 5.1 One sample 10-ft in length, 10" diameter, a 4-ft band of bitumastic coal tar coating center of the pipe, with 3-ft adhesion zones on either side of the 4ft band.
- 5.2 One sample 10-ft in length, 10" diameter, a 4-ft band of green tape center of the pipe, with 3-ft adhesion zones on either side of the 4ft band.
- 5.3 The two pipe samples, one with bitumastic coal tar coating, and one with green tape coating will be shipped to the Vendor's address (See below, Visual References).

**APPENDIX II – Carbon Fiber NDE Assessment (Sonomatic®)**

**1.0 BACKGROUND**

Dynamic Response Spectroscopy (DRS) was developed by Sonomatic® to address the issue of ultrasonic attenuation in coatings. It utilizes low frequency ultrasound to penetrate coatings and induce the steel to vibrate at its natural frequencies. Advanced signal processing algorithms are used to extract these frequencies and convert them into wall thickness (WT) measurements. DRS can also be used to identify areas of coating disbondment through loss of signal from the steel, see Figure 1.

Excite steel with a broad range of low ultrasonic frequencies

Steel responds at natural frequencies related to its wall thickness profile

**Figure 1. Steel response relies upon transmission of ultrasound through the composite and bond line. DRS Technique Overview (Sonomatic®)**

**2.0 TEST RESULTS**

DRS maps are used to evaluate the adhesion quality of the carbon fiber reinforcement. Where it is well bonded, DRS signals are transmitted into the steel. Flaws in the composite, such as

---

**CONSTRUCTION SPECIFICATION**

**SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION  
OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

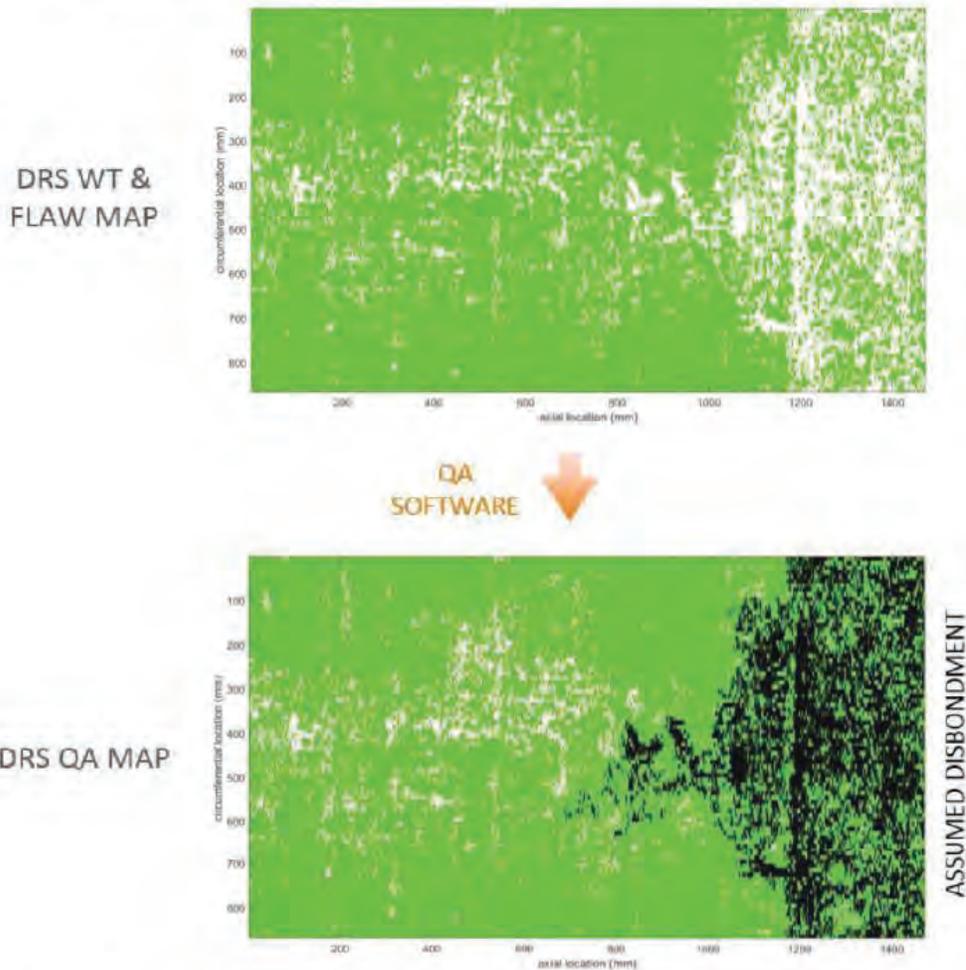

---

**NOVEMBER 2019**

---

disbondment at the steel interface, delamination between the layers and contamination, result in poor signal transmission.

The map in Figure 2 shows the result of a typical DRS QA check. It displays in green where the carbon fiber is well adhered to the steel. White pixels show where the DRS signals were not transmitted through the reinforcement, indicating flaws. Black shows flaw pixels for which there may be interaction with the disbondment assumed to exist at the right-hand edge of the map.

*Figure 2. QA Test: Pass (Sonomatic®)*

**3.0 FAILURE IDENTIFICATION**

CONSTRUCTION SPECIFICATION

SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES

NOVEMBER 2019

Sonomatic® tested various samples. Test results determined that DRS is capable of detecting defects in the carbon fiber wrap. However, it is limited to scanning areas that do not have a layer of coal tar. Based on testing performed using the DRS different samples had different results. Overall, DRS was capable of detecting flaws within the carbon fiber reinforcement, see Figure 3.

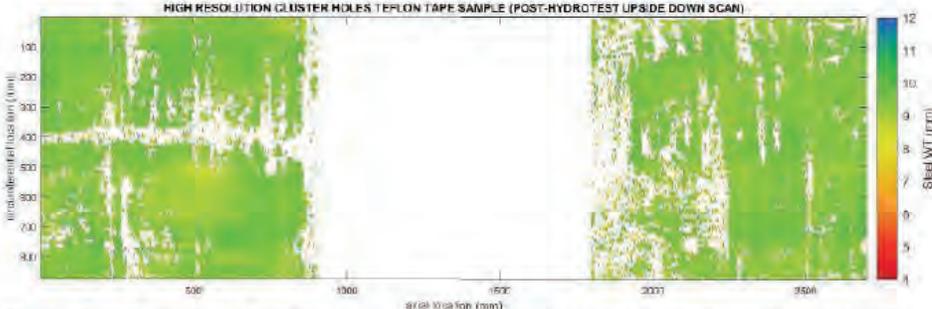

Figure 3. Failure path shown at six o'clock position on the left side of the pipe. (Sonomatic®)

4.0 ACCEPTANCE CRITERIA

DRS identifies flaws in the composite reinforcement but cannot distinguish interlaminar flaws from those at the steel interface. Therefore, a conservative approach is taken which assumes all flaws found in the adhesion zone are of the type most detrimental to the integrity of the reinforcement, i.e. steel disbondment. In order for a flaw to influence the load carrying capacity it must interact with the disbonded zone and/or other flaws that interact with the disbonded zone. Finite element modelling was used to establish the distance over which interaction occurs, this being approximately 25 mm. The QA software considers the location of flaws to identify those which 'interact' with the disbonded zone. All flaws within 25 mm of the 'interacting flaws' are then also designated as interacting. If a path of interacting flaws extends across the entire length of the adhesion zone, the QA test is failed. Otherwise, the adhesion zone passes the QA test.

**APPENDIX III – PERSONNEL TRAINING & QUALIFICATION**

**1.0 REQUIREMENTS**

Every person on the jobsite that is taking part in carbon fiber encapsulation is expected to participate in the OEM Training session described below.

**1.1 Classroom/Presentation Training**

- Tutorial Presentation on the carbon fiber process
- Safety (including appropriate PPE)
- Introduction to carbon fiber wrap technology
- Information about working at/for Company
- Project overview
- Introduction to the epoxy/carbon fiber materials
- Application of carbon fiber
- Course review

**1.2 Hands-On Training/Qualification Testing**

- Review of the application process
- Review of coating specification procedures
- Hands-on experience saturating the carbon fiber
- Hands-on experience wrapping a 5-inch and 10-inch sample pipe with low clearance between 3 – 6 inches
- Hands-on experience wrapping at a temporary pipe support repair location.

**1.3 Repair Training Process**

- Temporary pipe support repair
- Air bubble repair
- Welded barrel repair

**1.4 Written Test**

- Project Safety Requirements
- Tests their understanding of the materials
- Tests their understanding of the application process
- Tests their understanding of Transmission Feeder Pipes

**1.5 Qualification Testing**

- Company to provide 6" diameter x 3ft long test pipes in accordance Section II, subsection 2.5 and Figure 1.
- Wrap 1 ft center section of pipe with 4" wide TR Green tape
- Candidate to wrap 6" diameter test pipe provided by Company, see Figure 1.
- Each test pipe shall be labeled with company info, individual data, date of wrap, and test location.
- Each test pipe shall cure for a minimum of 48 hours, prior to testing.
- Each test pipe shall be pressure tested to 250 psig for no less than 60 minutes.

CONSTRUCTION SPECIFICATION

SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES

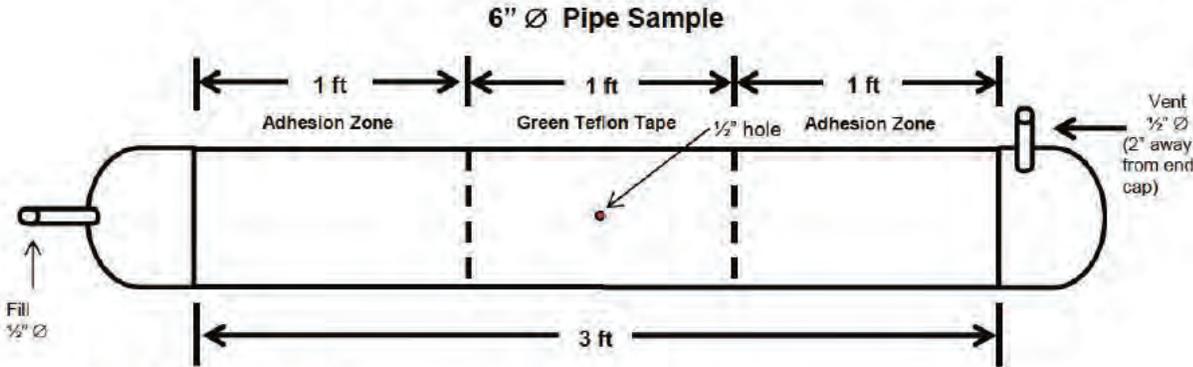

NOVEMBER 2019

- After successful completion of the 250 psig test, the pressure shall be increased by 50 psig increments to 500 psig, held for 15 minutes, to certify the carbon fiber application process.
- Pressure test failure of the 6-in diameter test pipe restricts the group from applying the carbon fiber. The individuals can only mix, saturate, and transport the carbon fiber materials

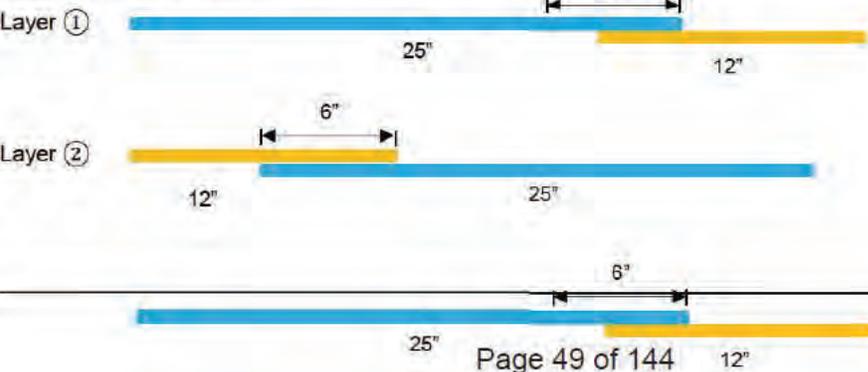

1.6 Certification

- 1.6.1 The training and testing organization shall issue a certificate to individuals who have successfully completed the training and examination that includes the following information:
- Name of organization
  - Description of the certification process.
  - Name of individual successfully completing the training and examination
  - Date of certification issuance
  - Date of certification expiration

1.6.2 The training and testing organization shall maintain a record of personnel certificates.

Carbon Fiber Application:

**OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

**NOVEMBER 2019**

Layer ③

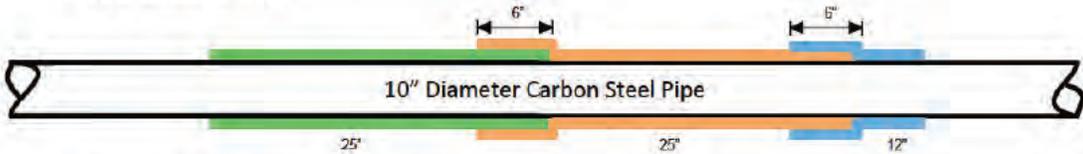

**Figure 1 - Sample test pipe for candidate certification.**  
**APPENDIX IV – REPAIRS**

**1.0 SECTIONAL REPAIR**

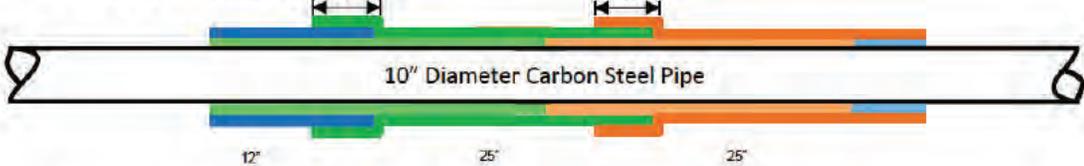

1. After the removal of existing carbon fiber material to expose pipe surface, grit blast exposed pipe surface and 1ft on either of expose pipe to Section II, subsection 2.5.
2. Use High Build Epoxy Repair Putty to create a transition zone between the carbon fiber wall and the pipe surface. Verify repair putty is cured, prior to the application of carbon fiber.
3. Apply a coating of High Strength Epoxy Adhesive # 2 at 5-10 mils with a roller.
4. Apply 3 double layers of carbon fiber, starting with Double Layer 1, and see below.

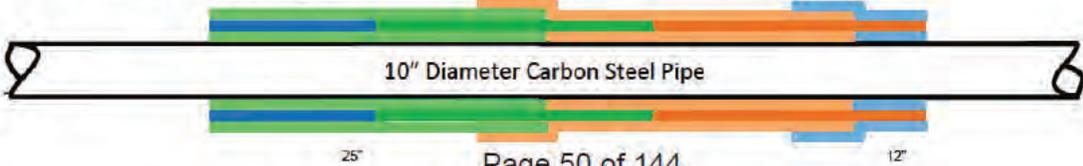

First Double Layer ①

Second Double Layer ②

Third Double Layer ③

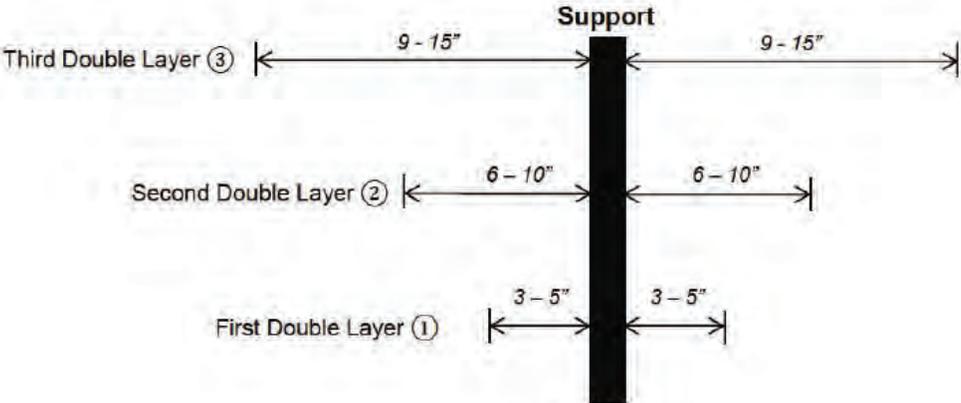

**CONSTRUCTION SPECIFICATION**  
**SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION**  
**OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

**NOVEMBER 2019**

**2.0 PIPE SUPPORT TIE IN**

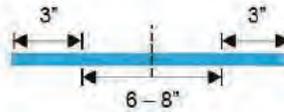

1. Stop first double layer of carbon fiber 3" to 5" away from the edge of the temporary support (See Fig. 2 Layer 1).
2. Stop second double layer of carbon fiber 6" to 10" away from the edge of the temporary support (See Fig. 2 Layer 2).
3. Stop third double layer of carbon fiber 9" to 15" away from the edge of the temporary support (See Fig. 2 Layer 3).
4. Relocate temporary pipe support approximately two (2) feet onto cured carbon fiber surface.
5. Sand all carbon fiber surfaces with 80 – 120 grit sandpaper within the repair area to remove 100% of glossy areas, extending one (1) foot beyond the exterior carbon fiber surface coating.
6. Apply High Strength Epoxy Adhesive # 2 at 5 -10 mills with a roller onto repair area.
7. Apply first double layer of carbon fiber to gap. The first layer should start and stop at a minimum of 3" onto the tie in area on both sides (See Fig. 3 Layer 1).
8. Apply second double layer of carbon fiber to the gap. The second layer should start and stop at least 3 inches onto the second step down on either side. (See Fig. 3 - Layer 2)
9. Apply third double layer of carbon fiber to the gap. The third layer should start and stop at least 3 inches onto the third step down on either side. (See Fig. 3 - Layer 3)
10. Allow layers to cure for 24 hours, prior to applying final epoxy coating.
11. Apply final epoxy coat following the standard specification.

NOVEMBER 2019

**3.0 AIR BUBBLE REPAIRS****REPAIR #1 – REPAIRS OF LIFTED EDGES**

When to use this method: Repair #1 will be used when a minor lifted edge or other superficial defect is present in the composite wrap.

1. Visually identify the defect
2. Remove the defect by sanding or lightly grinding the lifted edge until it is flush with the composite wrap
3. Remove dust/debris in the repair area by vacuum or solvent wipe
4. Fill any holidays or voids with FRP Repair Putty
5. Top coat with HP-300 Epoxy at 15 – 20 mils DFT via brush or roller
6. Allow a minimum of 24 hours to cure before backfilling

**REPAIR #2 – REPAIRS OF AIR BUBBLES IN THE OUTERMOST TWO LAYERS OF THE COMPOSITE SYSTEM**

Use this method when the defect must be analyzed to determine the depth within the composite wrap. A depth of less than 0.080 inches shows that the defect was in the two outermost layers of composite. This repair procedure should only be used for defects that are identified to be in the outermost two layers.

1. Visually identify the defect
2. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
  - a. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect
3. Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.
4. Sand or lightly grind the entire circumference of the repair area to ensure adequate adhesion of the repair.
5. Remove dust/debris in the repair area by vacuum or solvent wipe
6. Fill any holidays or voids with FRP Repair Putty
7. Prime the entire repair area with 5 – 15 mils of FRP 120 HT – Adhesive applied via brush or roller
8. Apply a 12" wide band of CF-500 BD saturated with FRP 210 HT that is two times the pipe circumference plus six inches.
9. Apply a second 12" wide band of CF-500 BD saturated with FRP 210 HT with a 6 inch overlap. The overlap should be centered on the defect.
10. Top coat the repair area according to the above specification with 2 to 3 coats at 15 – 20 mils of HP-300 Epoxy via brush or roller.
11. Allow a minimum of 24 hours to cure before backfilling.

**REPAIR #3 – REPAIRS OF AIR BUBBLES/WRINKLES IN LAYERS 3 AND 4**

□

□

**CONSTRUCTION SPECIFICATION****SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES****NOVEMBER 2019**

Use this method when the defect must be analyzed to determine the depth within the composite wrap. A depth of between 0.080 and 0.160 inches shows that the defect is in the 3<sup>rd</sup> or 4<sup>th</sup> layers of composite. This repair procedure should only be used for defects that are identified to be in the 3<sup>rd</sup> or 4<sup>th</sup> layer of the composite wrap.

1. Visually identify the defect
2. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
  - a. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect
3. Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.
4. Sand or lightly grind the entire circumference of the repair area to ensure adequate adhesion of the repair.
5. Remove dust/debris in the repair area by vacuum or solvent wipe
6. Fill any holidays or voids with FRP Repair Putty
7. Prime the entire repair area with 5 – 15 mils of FRP 120 HT – Adhesive applied via brush or roller
8. Apply a 12" wide band of CF-500 BD saturated with FRP 210 HT that is two times the pipe circumference plus six inches.
9. Apply a second 12" wide band of CF-500 BD saturated with FRP 210 HT with a 6 inch overlap. The overlap should be centered on the defect.
10. Apply a 25" wide band of CF-500 BD saturated with FRP 210 HT centered over the defect area.
11. Top coat the repair area with 15 – 20 mils of HP-300 Epoxy via brush or roller.
12. Allow a minimum of 24 hours to cure before backfilling.

**REPAIR #4 – REPAIRS OF AIR BUBBLES/WRINKLES UNDER THE 4<sup>TH</sup> LAYER OF THE COMPOSITE SYSTEM**

Use this method when the defect must be analyzed to determine the depth within the composite wrap. A depth greater than 0.160 inches shows that the defect is below the 4<sup>th</sup> layers of composite. This repair procedure should only be used for defects that are identified to be below the 4<sup>th</sup> layer of the composite wrap.

7. Visually identify the defect
8. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
9. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect
10. Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.

□

**CONSTRUCTION SPECIFICATION****SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION  
OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES****NOVEMBER 2019****4.0 INSTALLATION OF HDPE WELD CAP COVERS AND TRANSITION WEDGES**

The High Density Polyethylene (HDPE) transitional wedge was designed and machined by Construction Services see attached drawings and safety data sheet (SDS) of the three sleeve designs. The transitional wedge is used to reduce the amount of repair putty needed. They will also eliminate the putty curing time required prior to apply carbon fiber composite. They will be used to smooth the transition from the welded barrels and caps of the High Pressure Fluid Filled Feeder (HPFF) and oil return lines to the original pipe diameter. The installation process of the transitional wedges is applied as follows:

**4.1 WELD CAP COVERS**

1. Clean the soil and debris, and remove any delaminated green tape from the pipe. All exposed metal surfaces shall be covered with an approved galvanic barrier. (HOLD)
2. Visually inspect the HDPE weld cap cover prior to installation. Ensure no hard edges or corners will be present once the piece is installed.
3. Place the weld cap cover directly over the weld cap.
4. Use ratchet straps to ensure full contact to pipe coated with green tape.
5. Check for proper fit-up of the weld cap to the pipe coated with green tape.
6. Wrap bi-directional fiberglass tape around wedge cover.
7. Remove the strap that was applied in Step 4.
8. Verify wedge and tape does not expand creating an air gap between the pipe and the wedge cover. (HOLD)
9. Mix FRP Repair Putty in accordance with the manufacturer's product data sheet.
10. Apply FRP Repair Putty to the weld cap, longitudinal seams and the circumferential seams of the wedge and on top of the fiberglass tape. Apply FRP Repair Putty to any raised edges. Verify all grooves and edges are 100% filled and tapered, and no voids are present. (HOLD)
11. Multiple layers of FRP Repair Putty may be required to smooth all edges and fill all voids on the weld cap cover. Allow the FRP Repair Putty a minimum of 12 hours to cure prior to applying another layers
12. Visually inspect the final transition to ensure that the grooves and wedges are completely filled. Ensure the Fiberglass tape is completely covered with FRP Repair Putty. (HOLD)
13. Allow a minimum of 12 hours of cure time after the last addition of FRP Repair Putty. Weld cap and transition are now ready to be wrapped with Carbon Fiber Composite.

**4.2 HDPE TRANSITION WEDGES**

1. Clean the soil and debris, and remove any delaminated green tape from the pipe. All exposed metal surfaces shall be covered with an approved galvanic barrier. (HOLD)
2. Place the transitional wedge halves placed on the pipe (either 10" or 5") with the longitudinal seams at the 3 o'clock and 9 o'clock positions whenever possible.
3. Use ratchet straps to pull together the two half sections of the wedges, and to allow transition wedges to have full contact to pipe coated with green tape.
4. Verify there is a gap on the longitudinal seams, and the wedges are in full

□

**CONSTRUCTION SPECIFICATION****SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES****NOVEMBER 2019**

- contact with the pipe circumference. (HOLD)
5. Check for proper fit-up of the wedge to the barrel and wedge to host pipe.
  6. Wrap bi-directional fiberglass tape around wedge in the machined grooves provided.
  7. Remove the strap that was applied in Step 3. Verify wedge and tape does not expand creating an air gap between the pipe and the wedge. (HOLD)
  8. Mix FRP Repair Putty in accordance with the manufacturer's product data sheet.
9. Apply FRP Repair Putty to the weld cap, longitudinal seams and the circumferential seams of the wedge and on top of the fiberglass tape. Apply FRP Repair Putty to any raised edges. Verify all grooves and edges are 100% filled and tapered, and no voids are present. (HOLD)
  10. Multiple layers of FRP Repair Putty may be required to smooth all edges and fill all voids on the weld cap cover. Allow the FRP Repair Putty a minimum of 12 hours to cure prior to applying another layers.
  11. Visually inspect the final transition to ensure that the grooves and wedges are completely filled. Ensure the Fiberglass tape is completely covered with FRP Repair Putty. (HOLD)
  12. Allow a minimum of 12 hours of cure time after the last addition of FRP Repair Putty. Barrel and transition are now ready to be wrapped with Carbon Fiber Composite.

**Notes:**

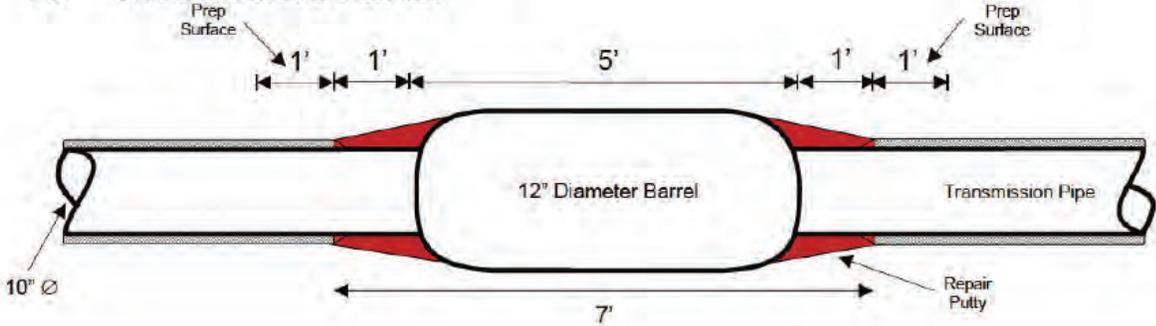

1. No grinding or modification shall be performed in the field.
2. Carbon Fiber cannot be wrapped immediately over the transitional wedge, only after 12 hours minimum cure.
3. All personnel shall be trained to install the wedges
4. To ensure QA/QC process during fabrication wedges will be weight in shop after manufacturing to establish a baseline.

□

**CONSTRUCTION SPECIFICATION**  
**SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION**  
**OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

**NOVEMBER 2019**

**5.0 STANDARD BARREL REPAIR**

1. Clean the surface of the pipe prior to applying FRP Repair Putty or prefabricated barrel wedges.
2. Use FRP Repair Putty or prefabricated HDPE wedges to create a smooth transition between the barrel and the pipe to facilitate Carbon Fiber installation. Allow putty to cure prior to wrapping.
3. The transition from the end of a barrel should be approximately 12 inches long for every 1 inch of drop. Transition wedges can be used
4. Apply FRP 120 HT – High Strength adhesive at 5 – 10 mils DFT.
5. Apply a total of 6 layers of CF-500 BD over barrel and pipe. On pipe ends and weld caps, six single layers may be used to ensure air bubbles are not present on uneven pipe circumferences.

**6.0 20" BARREL REPAIR**

During a carbon fiber composite wrap project, it is possible to encounter 20" barrels. Therefore, creating a transition from the 10" diameter pipe to a 20" diameter barrel with Repair Putty becomes very difficult and time consuming. In order to reduce the amount of Repair Putty and time spent transitioning the barrel, a carbon steel transition cone can be welded in place by following the procedure listed below:

- 6.1 Remove any Green TR Tapecoat on the pipe a minimum of 18" from the weld area.
- 6.2 UT test the weld area to verify the existing wall thickness is greater than 50% in accordance with CE-TI-3356.
- 6.3 Stich weld the transition barrel in position circumferentially and longitudinally in accordance with CE-TI-3356.
- 6.4 Seal weld the longitudinal seam after the transition cone is positioned correctly in accordance with CE-TI-3356.
- 6.5 Grind all the welds flush to the surface and remove any attachment weld used to position the cone.
- 6.6 Apply 4" Green TR Tapecoat over the entire length of the cone plus 2" on each end.
- 6.7 Apply additional Repair Putty to create a smooth transition at the 10" diameter pipe to the 20" diameter barrel and any other areas that require a smooth transition.
- 6.8 Ensure any and all bare steel is covered with Green TR Tapecoat, Repair Putty, or Fiberglass.

□

**CONSTRUCTION SPECIFICATION****SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION  
OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES****NOVEMBER 2019****7.0 HIGH HAT REPAIRS**

During a carbon fiber composite wrap project, it is possible to encounter high hats on pipes. High hats require a specialized wrapping procedure to ensure full repair strength. The high hats also require training and a mock up for the individuals performing the repair.

**SURFACE PREPARATION**

7.1 The area surrounding the High hat and a minimum of 18 inches of pipe in both directions shall be prepared via grit blasting to a minimum SSPC SP-6 Near White Metal finish with a minimum 3 mil angular profile. Course Aluminum Oxide should be used to blast just like an adhesion zone.

7.1.1 Surface shall be vacuumed free of all dust and debris prior to application of the composite reinforcement system.

**APPLICATION**

7.2 The FRP 120 HT – high strength adhesive will be applied to the entire pipe section via roller at 5 – 10 mils DFT.

7.2.1 Allow the FRP 120 HT a minimum of 8 hours to cure.

7.3 FRP Repair Putty will be applied to the bottom joint where the high hat meets the feeder pipe. The putty is used to create a cove that softens the 90° transition. Approximately a 1 inch cove is recommended.

7.4 GF-300 BD shall be saturated with FRP 210 HT and applied to the pipe to cover 100% of the exposed metal.

7.4.1 Relief cuts will be required to avoid air bubbles around the high hat

7.4.2 We recommend using standard, steel scissors for the relief cuts since they will be done on wet fabric.

7.5 HOLD POINT: NACE Level III Inspector to verify that no bare metal is exposed and that the bottom of the high hat has putty applied correctly.

7.6 The wrap sequence will require 7 pieces of carbon fiber per layer. CF-500 BD must be fully saturated with FRP 210 HT saturating resin prior to installation.

7.7 1<sup>st</sup> piece will be a 6" wide band of CF-500 BD that starts on the South side of the High Hat. The piece will be laid along the weld seam at the base of the high hat, continue around the feeder and terminate at the weld seam on the other side of the high hat.

7.8 2<sup>nd</sup> piece will be a 6" wide band of CF-500 BD that overlaps the previous piece by 50%. This strip shall continue up the front and back face of the high hat and wrap around the feeder.

7.9 3<sup>rd</sup> piece will be a 6" wide band of CF-500 BD that overlaps the previous piece by 50%. This strip shall continue up the front and back face of the high hat and wrap around the feeder.

7.10 4<sup>th</sup> piece will be a 6" wide band of CF-500 BD that overlaps the previous piece by 50%. The strip will start on the North side of the High Hat. The piece will be laid along the weld seam at the base of the high hat, continue around the feeder and terminate at the weld seam on the other side of the high hat.

7.11 5<sup>th</sup> piece will be a cap that extends over the entire high hat, with relief cuts at the top of the high hat and at the base of the high hat so it sits smoothly onto the pipe body.

7.11.1 Approximately 12" x 30" rectangle of CF should be adequate to completely cover high hat.

□

---

**CONSTRUCTION SPECIFICATION**  
**SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION**  
**OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES**

---

**NOVEMBER 2019**

---

- 7.12 6<sup>th</sup> piece will be a circumferential band that is applied around the high hat itself. No relief cuts should be required.
  - 7.12.1 CF should be cut so that it covers the entire height of the high hat and wraps around the high hat itself with a 6" overlap.
- 7.13 7<sup>th</sup> piece will be a 25" wide band of CF-500 BD which extends around the feeder pipe only with a + shaped hole cut out to fit around the high hat.
  - 7.13.1 25" wide CF cut to the Circumference of the barrel plus 6 inches for overlap.
- 7.14 Repeat steps 8 – 14 five additional times to provide a full 6 layer reinforcement.
- 7.15 Ensure that the relief cuts for Step 12 are rotated around the pipe and are not in the same location for each layer that is applied. Step 12 and 15 are the only steps that require relief cuts in the CF-500 BD for proper installation.
- 7.16 This repair detail for a high hat can be terminated with a hard end and a sectional repair detail can be used to tie into the existing Carbon Fiber on the remainder of the feeder.
- 7.17 Due to the complexity of the above procedure, this application should only be done with the presence of the OEM representative onsite.

□

**CONSTRUCTION SPECIFICATION****SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION  
OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES****NOVEMBER 2019****8.0 MANHOLE OR POINT OF ENTRY (POE) TERMINATION REPAIRS**

Carbon fiber composite wrap projects may start and/or end at a manhole (MH). When this occurs, a custom repair shall be created. If the pipes running through the MH have identical or similar properties, the following procedure may be used with approval from the OEM Representative and the Company Engineering Representative.

**8.1 TERMINATION DETAIL #1 – TERMINATION OF M52 FEEDER WITH HIGH HAT TWO INCHES INSIDE MANHOLE**

The following procedure is specific for M52 Feeder pipe as it enters manhole MH61741. The M52 Feeder has a large interruption, referred to as a high hat, approximately 2 - 3 inches past the inside wall of the manhole.

1. Remove any exposed wax tape and green tape starting at the center point of the High hat inside the manhole and finishing at the beginning of the barrel transition.
  - a. Including six (6) inches up the south facing side of the High Hat (half the circumference of the High Hat).
2. Remove any adhesive, dirt and other debris on the surface of the pipes
3. Grit blast a circumferential band starting at the center point of the High hat inside the manhole and continuing 12" onto the existing adhesion zone #1 excluding puttied area. Grit blast to an SSPC SP-10 Near White Metal blast with a minimum profile of 3 mils.
  - a. Front face of the High Hat should also be blasted at least 5 inches up.
  - b. HOLD POINT: NACE inspector to verify cleanliness and profile readings
4. Remove dust from the surface of the pipe then apply the FRP 120 HT – High strength adhesive at 5 – 10 mils DFT via paint roller. Apply adhesive over any exposed metal.
5. Saturate with 210 HT and apply GF-300 BD with a 6 inch circumferential overlap, to cover any exposed metal and provide a galvanic barrier prior to application of the Carbon Fiber composite. Ensure that the fiberglass extends at least 3 inches up the high hat covering just the south facing half of the surface and onto the existing adhesion zone. See Figure 1 for more details.
  - a. HOLD POINT: Visual inspection that no bare metal is exposed prior to wrapping with CF
6. Saturate CF-500 BD with 210 HT and apply eight layers of composite around the pipe, using standard procedures for offsetting seams and barrel transitions. See Figure 1 for specifics on North side stopping point.
  - a. We recommend starting on the North side of the feeder and working South
  - b. All 8 layers should end at the same point on the North side of the Feeder, and terminate at least 12" onto the adhesion zone #1 on the South side.
  - c. 2 inches of fiberglass shall be visible past the end of the Carbon Fiber at the high hat area/north side to ensure an adequate galvanic barrier was installed.
7. Apply HP-300 Epoxy to the Feeder in 3 coats (Red/Grey/Red) at 15 – 20 mils per coat via roller. HP-300 Epoxy should extend past the end of the fiberglass by at least 1 inch to the blasted pipe surface.
8. Allow the HP-300 Epoxy to cure and apply a band of 4" wide Green tape around the circumference of the feeder that extends 2 inches past the end of the Carbon Fiber reinforcement and 2 inches onto the Carbon Fiber reinforcement.

**CONSTRUCTION SPECIFICATION****SPECIFICATION FOR INSTALLATION OF A COMPOSITE CARBON FIBER SYSTEM ENCAPSULATION  
OF UNDERGROUND TRANSMISSION FEEDERS AND RETURN LINES****NOVEMBER 2019****8.2 TERMINATION DETAIL #2 – TERMINATION OF M51 FEEDER**

The following procedure is specific for M51 Feeder pipe as it enters manhole MH61741. The M51 Feeder has a small weld cap approximately 9 - 10 inches past the inside wall of the manhole.

1. Remove any exposed wax tape and green tape starting 8 inches inside the manhole and finishing at the beginning of the barrel transition
2. Remove any adhesive, dirt and other debris on the surface of the pipes
3. Grit blast a circumferential band starting 8 inches inside of the manhole and continuing 12" onto the existing adhesion zone #1 excluding puttied area. Grit blast to an SSPC SP-10 Near White Metal blast with a minimum profile of 3 mils.
  - a. HOLD POINT: NACE inspector to verify cleanliness and profile readings
4. Remove dust from the surface of the pipe then apply the FRP 120 HT – High strength adhesive at 5 – 10 mils DFT via paint roller. Apply adhesive over all exposed Metal
5. Saturate with 210 HT and apply GF-300 BD with a 6 inch circumferential overlap, to cover any exposed metal and provide a galvanic barrier prior to application of the Carbon Fiber composite.
  - a. HOLD POINT: Visual inspection that no bare metal is exposed prior to wrapping with CF
6. Saturate CF-500 BD with 210 HT and apply eight layers of composite around the pipe, using standard procedures for offsetting seams and barrel transitions.
  - a. We recommend starting on the North side of the feeder and working South
  - b. All 8 layers should end at the same point, 6 inches inside the manhole on the North side and terminate at least 12" onto the adhesion zone #1 on the South side.
  - c. 2 inches of fiberglass shall be visible past the end of the Carbon Fiber to ensure an adequate galvanic barrier was installed.
7. Apply HP-300 Epoxy to the Feeder in 3 coats (Red/Grey/Red) at 15 – 20 mils per coat via roller. HP-300 Epoxy should extend past the end of the fiberglass by at least 1 inch.
8. Allow the HP-300 Epoxy to cure and apply a band of 4" Green tape around the circumference of the feeder that extends 2 inches past the end of the Carbon Fiber reinforcement and 2 inches onto the Carbon Fiber reinforcement.

**8.3 TERMINATION DETAIL #3 – TERMINATION OF M51 AND M52 RETURN LINES  
OUTSIDE OF MANHOLE**

The following procedure is specific for M51 and M52 Return lines that route outside of the Manhole MH61741.

1. Terminate the M51 and M52 return lines within 5 ft of the manhole location. The Carbon fiber shall be terminated in a pipe support style step down.
2. Apply the HP-300 Epoxy topcoat, extending at least 1 inch past the end of the step down and cover 100% of the exposed steel. Apply 3 coats at 15 – 20 mils per coat via paint roller.
3. Allow the HP-300 Epoxy to cure and apply a band of Green tape around the circumference of the feeder that extends 2 inches past the end of the Carbon Fiber reinforcement and 2 inches onto the Carbon Fiber reinforcement.

□

### Custom NCR Repairs - Air Bubble Repairs on Pipe support Details

#### Repair #1 – Repairs of lifted edges

When to use this method: CA #1 will be used when a minor lifted edge or other superficial defect is present in the composite wrap.

1. Visually identify the defect
2. Remove the defect by sanding or lightly grinding the lifted edge until it is flush with the composite wrap
3. Remove dust/debris in the repair area by vacuum or solvent wipe
4. Fill any holidays or voids with FRP Repair Putty
5. Top coat with HP-300 Epoxy at 15 – 20 mils DFT via brush or roller
6. Allow a minimum of 24 hours to cure before backfilling

#### Repair #2 – Repairs of Air Bubbles/Wrinkles in the outermost two layers of the composite system

When to use this method: The defect must be analyzed to determine the depth within the composite wrap. A depth of less than 0.080 inches shows that the defect was in the two outermost layers of composite. This repair procedure should only be used for defects that are identified to be in the outermost two layers.

1. Visually identify the defect
2. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
  - a. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect
3. Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.
4. Sand or lightly grind the entire circumference of the repair area to ensure adequate adhesion of the repair.
5. Remove dust/debris in the repair area by vacuum or solvent wipe
6. Fill any holidays or voids with FRP Repair Putty
7. Prime the entire repair area with 5 – 15 mils of FRP 120 HT – Adhesive applied via brush or roller
8. Apply a 12" wide band of CF-500 BD saturated with FRP 210 HT that is two times the pipe circumference plus six inches.
9. Apply a second 12" wide band of CF-500 BD saturated with FRP 210 HT with a 6 inch overlap. The overlap should be centered on the defect.
10. Top coat the repair area with 15 – 20 mils of HP-300 Epoxy via brush or roller.
11. Allow a minimum of 24 hours to cure before backfilling

● Air Bubble

□

□

**Repair #3 – Repairs of Air Bubbles/Wrinkles in layers 3-4 of the composite system**

When to use this method: The defect must be analyzed to determine the depth within the composite wrap. A depth of between 0.080 and 0.160 inches shows that the defect is in the 3<sup>rd</sup> or 4<sup>th</sup> layers of composite. This repair procedure should only be used for defects that are identified to be in the 3<sup>rd</sup> or 4<sup>th</sup> layer of the composite wrap.

1. Visually identify the defect
2. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
  - a. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect
3. Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.
4. Sand or lightly grind the entire circumference of the repair area to ensure adequate adhesion of the repair.
5. Remove dust/debris in the repair area by vacuum or solvent wipe
6. Fill any holidays or voids with FRP Repair Putty
7. Prime the entire repair area with 5 – 15 mils of FRP 120 HT – Adhesive applied via brush or roller
8. Apply a 12" wide band of CF-500 BD saturated with FRP 210 HT that is two times the pipe circumference plus six inches.
9. Apply a second 12" wide band of CF-500 BD saturated with FRP 210 HT with a 6 inch overlap. The overlap should be centered on the defect.
10. Apply a 25" wide band of CF-500 BD saturated with FRP 210 HT centered over the defect area.
11. Top coat the repair area with 15 – 20 mils of HP-300 Epoxy via brush or roller.
12. Allow a minimum of 24 hours to cure before backfilling

□

□

**Repair #4 – Repairs of Air Bubbles/Wrinkles below the 4<sup>th</sup> layer of the composite system**

When to use this method: The defect must be analyzed to determine the depth within the composite wrap. A depth greater than 0.160 inches shows that the defect is below the 4<sup>th</sup> layers of composite. This repair procedure should only be used for defects that are identified to be below the 4<sup>th</sup> layer of the composite wrap.

1. Visually identify the defect
2. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
  - a. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect

Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.

Repair via the procedure on page 68 of this specification.

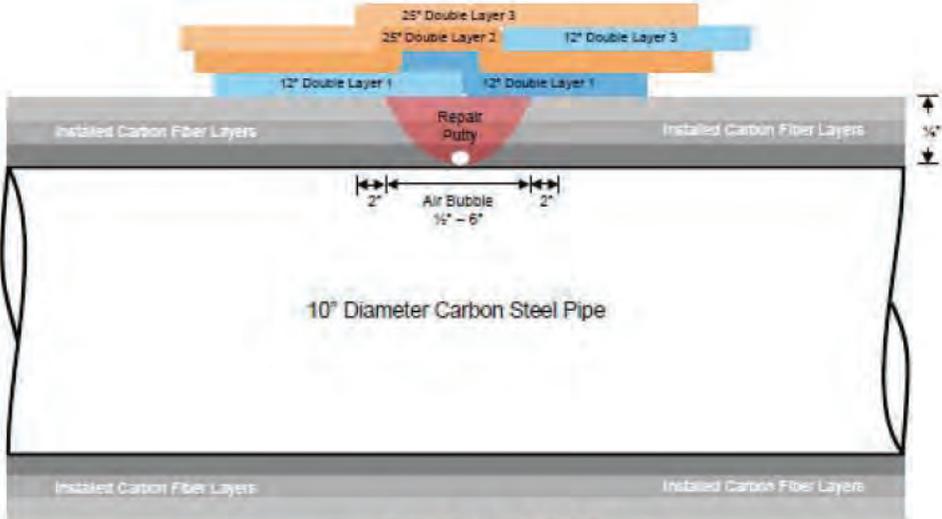

Figure 5 – Air Bubble Repair

**Corrective Action #4** – Repairs of Air Bubbles/Wrinkles below the 4<sup>th</sup> layer of the composite system

When to use this method: The defect must be analyzed to determine the depth within the composite wrap. A depth greater than 0.160 inches shows that the defect is below the 4<sup>th</sup> layers of composite. This repair procedure should only be used for defects that are identified to be below the 4<sup>th</sup> layer of the composite wrap.

□

□

1. Visually identify the defect
2. Remove carbon fiber above the bubble or wrinkle until the lifted area of carbon fiber is completely removed.
  - a. Carbon fiber can be removed via cutting with a knife or by grinding away the edges of the defect
3. Analyze the removed carbon fiber to verify the thickness of composite removed and ensure that the correct repair procedure is being followed.
4. Sand or lightly grind the entire circumference of the repair area to ensure adequate adhesion of the repair.
5. Remove dust/debris in the repair area by vacuum or solvent wipe
6. Fill any holidays or voids with FRP Repair Putty
7. Prime the entire repair area with 5 – 15 mils of FRP 120 HT – Adhesive applied via brush or roller
8. Apply a 12” wide band of CF-500 BD saturated with FRP 210 HT that is two times the pipe circumference plus six inches.
9. Apply a second 12” wide band of CF-500 BD saturated with FRP 210 HT with a 6 inch overlap. The overlap should be centered on the defect.
10. Apply a 25” wide band of CF-500 BD saturated with FRP 210 HT centered over the defect area.
11. Apply double layer three as per the figure below
12. Top coat the repair area with 15 – 20 mils of HP-300 Epoxy via brush or roller.
13. Allow a minimum of 24 hours to cure before backfilling

□

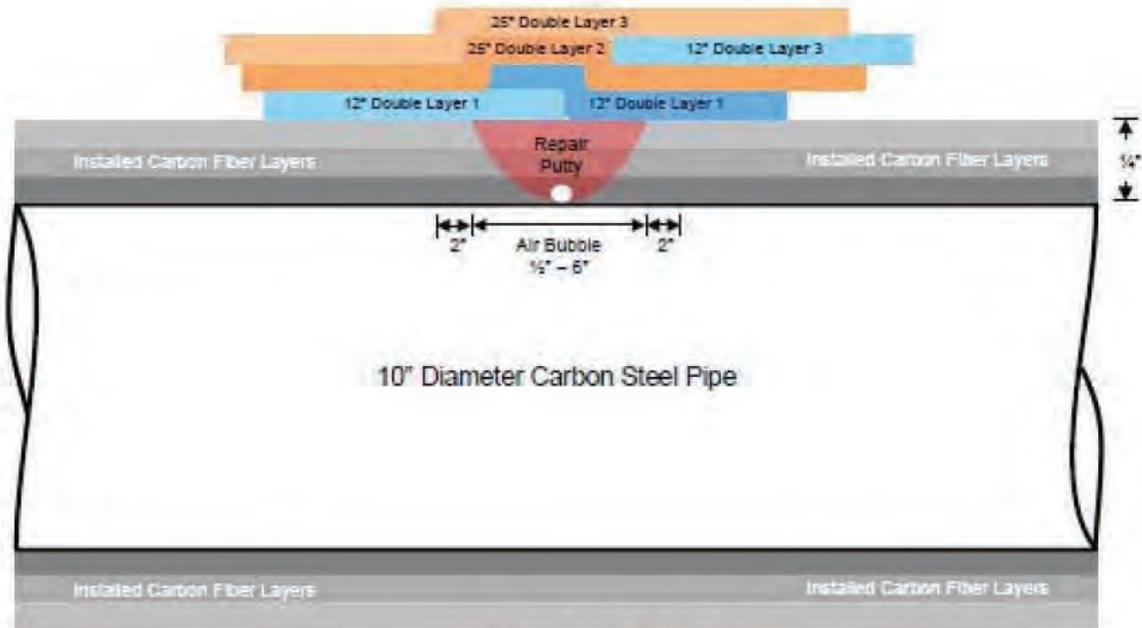

Figure 5 – Air Bubble Repair

Custom NCR Repairs - Air Bubble Repairs on Pipe Support Details

Repair #5 – Air Bubble Is Found On the Bottom Double Layer at the End of a Pipe Support Detail

Corrective Action:

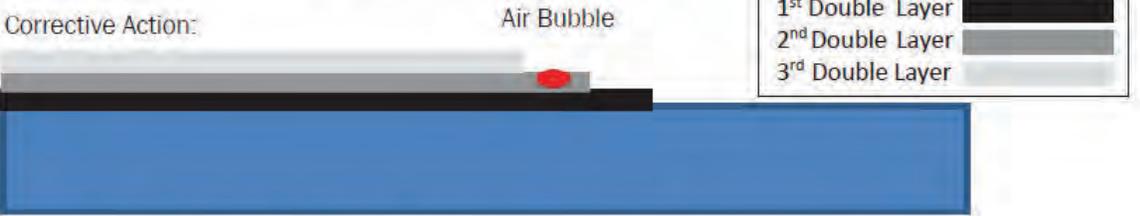

- 1. Remove Air bubble by cutting it out or grinding it off
- 2. Sand around the air bubble to remove any roughness or voids. Sand the entire circumference of the repair/tie in area.
- 3. Ensure no bare steel is present.
- 4. Clean the surface then apply FRP Repair Putty to fill in the air bubble void.
- 5. Proceed with the pipe support tie in procedures as usual.

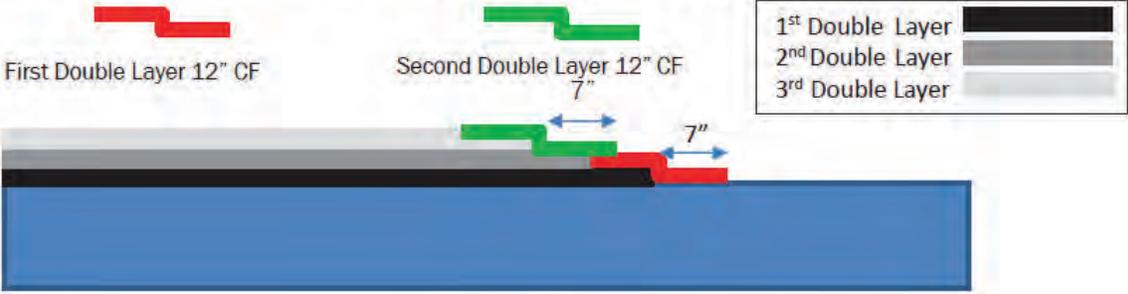

\*Note: Grinding on the bottom layer of Carbon fiber is only allowed for Green Tape coated feeder lines. Coal tar may contain asbestos and grinding is not permitted.

Repair #6 – Air Bubble Is Found In the Middle Double Layer in the Center Section of the Pipe Support

Corrective Action:

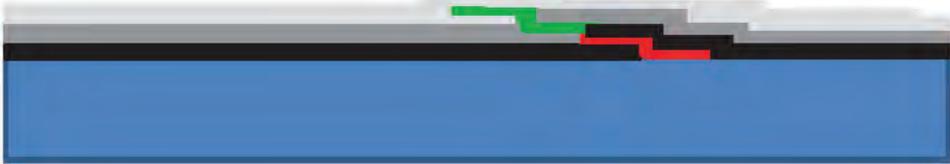

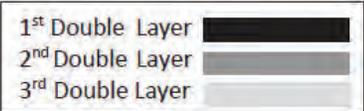

- 1. Remove Air bubble by cutting it out or grinding it off
- 2. Sand around the air bubble to remove any roughness or voids. Sand the entire circumference of the repair/tie in area.
- 3. Ensure no bare steel is present.
- 4. Clean the surface then apply FRP Repair Putty to fill in the air bubble void.
- 5. Apply FRP 120 HT Adhesive at 5 – 10 mills via roller
- 6. Saturate a 12” Double band of CF-500 BD. Wrap as shown in red on the illustration below
- 7. Saturate a 12” Double band of CF-500 BD. Wrap as shown in green on the illustration below
- 8. A new step down should be present as shown in the illustration below.

□

**Steps to Complete Step-Up and Step-Down Support Repairs**

1. If the Repair has been allowed to cure, lightly sand the circumference, clean the surface and apply FRP 120 HT – Adhesive.
2. Fill in the first double layer of CF-500 BD, stopping 10 - 12 inches over the tie in area (shown in Black Below)
3. Fill in the second double layer of CF-500 BD, stopping an additional 5 – 7 inches over the tie in area. (Shown in Dark Grey)
4. Fill in the third double layer of CF-500 BD, stopping an additional 5 – 7 inches over the tie in area. (Shown in Light Grey)

*\*Note: Air bubble thickness must be measured. Repair #6 is designed for an air bubble in the outermost layers, in this case, the exposed 3<sup>rd</sup> and 4<sup>th</sup> layer on the pipe support. A depth of 0.080 inches or less shows that the air bubble is in the outer two layers.*

□

### Adhesion Zone – ASTM D4541-17 Adhesion Testing Protocol

The Contractor shall be required to prepare one (1) 12" x 12", grit blasted, ¼" steel plate to NACE 2/SSPC-SP-10 "Near White Metal Blast Finish" with a 3 mil minimum angular profile every shift they are grit blasting the adhesion zone(s). The plate shall be prepared in parallel to the adhesion zone(s) it represents and will be used in a destructive test to verify the adhesion of the composite to the bare steel for each set of adhesion zones.

#### **Preparation of the Adhesion Test Plate**

1. Grit blast 12" x 12" panel at the same time the corresponding adhesion zones are blasted.
2. Apply a single layer of FRP 120 HT at 5 – 10 mils via brush/roller to prevent the metal surface from oxidizing.
  - a. The sample plate shall have each layer of adhesive and composite materials applied at the same time as the corresponding adhesion zone(s).
3. When the FRP 120 HT is allowed to cure on the sample plate before application of the composite system, follow **Steps 4 and 5**. If GF-300 BD is applied directly to the sample plate while the initial coat of FRP 120 HT is still wet, skip **Steps 4 and 5**.
4. Sand the surface of the plate with 80 – 120 grit sand paper until the gloss has been removed, then wipe down with a volatile solvent like MEK or Denatured Alcohol.
5. Allow the surface to dry for at least 20 minutes and apply another layer of FRP 120 HT at 5 – 10 mils via brush/roller.
6. Cut a 12" x 12" piece of GF-300 BD and saturate with FRP 210 HT. Ensure the fabric is fully saturated and apply to the steel panel, using your fingers to remove any air bubbles.
7. Cut a 12" x 12" piece of CF-500 BD and saturate with FRP 210 HT. Ensure the fabric is fully saturated and apply to the steel panel, using your fingers to remove any air bubbles.
8. Cut out a 6" x 12" piece of CF-500 BD and saturate with FRP 210 HT. Ensure the fabric is fully saturated and apply to one half of the steel panel, using your fingers to remove any air bubbles.
9. Visually inspect the adhesion dollies to ensure they are fully blasted and have a consistent, rough profile.
  - a. See Blasting of Adhesion Dolly procedures in **Appendix I**.
10. Apply a small quantity of FRP 210 Saturant to the bottom of the adhesion dolly by dabbing with a gloved finger, then gently place the dolly on the surface of the sample panel. Tap the dolly in place to ensure it does not slide.
  - a. Apply four (4) dollies on each side of the adhesion test panel, for a total of eight (8) dollies. Space the dollies evenly on each side as shown in **Picture 1**.

□

11. Allow the sample to cure for a minimum of 48 hours at ambient temperature (70°F) prior to handling, shipping or post-curing.
12. Fill out all appropriate QC documentation, which includes information such as the person making the sample panel, the name and location of the adhesion zones, and the batch numbers of all the products being used on the sample, see **Picture 2**.

**Picture 1. Adhesion Test Plate**

□

**Appendix I – Blasting of Adhesion Dollies**

1. Remove the dollies from the packaging and discard the cardboard inserts.
2. Wipe down the dollies with a solvent like MEK, Acetone or Denatured Alcohol to remove any dust or oils on the surface.
  - a. Handle the dollies with clean gloves from this point on.
3. Put the dollies into a blast jig that holds the dollies firmly in place and raised slightly above the jig surface to allow the entire adhesion surface to be exposed for proper blasting.
4. Blast the adhesion dollies with coarse aluminum oxide media (16 or 20 grit) until the entire surface is fully blasted and no shiny spots are present.
5. Blow off or vacuum the dollies.
6. Visually inspect the dollies to ensure they are 100% blasted and no voids are present in the blast profile.
7. Put the dollies into a sealed container or sealed bag until they are ready for use during the adhesion sample panel fabrication.

□

□

**Appendix II - Curing of the Adhesion Test Plate**

The FRP 210 HT/CF-500 BD carbon fiber composite system must be fully cured in order to achieve the desired pull off adhesion test values. There are two possible cure methods that can achieve this objective: Standard Ambient Temperature Cure and Elevated Temperature Post-Cure. Prior to performing the ASTM D4541-17 Adhesion Test Protocol the sample plates must be fully cured by either an approved ambient temperature cure or an elevated temperature post cure. Adhesion test panels shall be prepared exactly as described in the specification and the cure conditions shall be noted on the appropriate QC form.

Elevated Temperature Post-Cure

**Post-Cure condition** – The sample shall be allowed to cure a minimum of 48 hours at ambient temperature (60°F to 85°F) and should be tack free and hard to the touch. The sample panel shall be placed in an oven at 180°F for a 12 hour period. The sample panel shall be allowed to cool to ambient temperature (60°F to 85°F). If the sample panel displays a maximum Barcol hardness of above 48\* then the sample panel can be pulled for adhesion testing.

Please note that for all curing conditions listed above, if the sample panel does NOT reach the required maximum Barcol hardness value of 48\* or above then consult with the Advanced FRP Systems before running the adhesion test.

□

□

**Appendix III - Testing of Adhesion Values: (Based on ASTM D4541-17)**

A wide range of adhesion testers are commercially available. We have found the PosiTester AT-A and AT-M are the best adhesion testers for this adhesion test procedure. 20 mm adhesion test dollies shall be used. Any proposed alternative adhesion testers must be verified by Consolidated Edison Engineering and Advanced FRP Systems prior to use.

1. Verify that the sample panel is fully cured and hardness tested according to the procedures detailed above.
2. Ensure the panel is between 50°F – 85°F and securely held in place prior to scoring around the dollies.
3. Pre-score around the circumference of each of the test dollies by using a 25 mm (1 inch) hand held hole saw bit. Turn the bit 4 – 5 times by hand to create a score mark on the surface of the sample.
4. Using an electric drill, score around each dolly using water to keep the cut area cool.
  - a. The preferred hole saw drill bit is diamond coated or has smaller teeth that will not cause excessive damage to the composite system on the sample panel. Consult with Advanced FRP Systems for recommendations on hole saw models if guidance is required.
  - b. Once the hole saw becomes dull, bend or damaged in any way it should be discarded. If excess force is required to remove the composite, the hole saw shall be replaced with a new one.
  - c. A small pool of water is sufficient to cool the area, constant addition of water is not necessary.
5. For the automatic adhesion tester, turn on the adhesion tester and set it for 20 mm dollies with a 180 psi/sec pull rate.
6. Run the adhesion test and record the values and the failure mode for each dolly.

A minimum adhesion value of 2,000 psi is required to pass the adhesion test quality control test protocol. If a value of less than 2,000 psi is measured, then an analysis of the adhesion test plate must be conducted following the guidance of the ASTM D4541 specification. All test shall have the mode of failure noted in the documentation for any subsequent analysis.

□

# FRP 120 HT

## High Strength Epoxy Adhesive

### Description

Advanced FRP Systems' **FRP 120 HT** – High strength adhesive was engineered to provide exceptional adhesion values to blasted steel. It is designed specifically as a high strength structural adhesive and tack coat for high temperature and high pressure composite applications. The enhanced adhesion strength is recommended for composite applications with isolated adhesion zones, substrates with cathodic protection, as well as any composite reinforcement operating above 250 psi design pressure.

### Product Advantages

- Zero VOC Epoxy
- Outstanding adhesion to concrete, steel, masonry, wood and composites
- Highly blush resistant formulation
- Excellent initial green strength
- Easy to apply with roller
- Moisture Tolerant epoxy
- Low Coefficient of Linear Thermal Expansion
- Good Elongation

### Suggested Application

**FRP 120 HT** is used to assist in application of carbon and glass fiber reinforcement used in high pressure applications or anywhere that additional adhesion is required. It provides over 4,000 psi adhesion to blasted steel and is compatible with a variety of composite reinforcement and coating options.

### Performance Data

	Test Method	Results
Adhesion to Concrete	ASTM D4541	>750 psi
Adhesion to Steel	ASTM D4541	>4,000 psi
Heat Distortion Temperature	ASTM D648	297 °F
Tensile Strength	ASTM D638	13,100 psi
Tensile Modulus	ASTM D638	479 ksi
Flexural Strength	ASTM D790	12,800 psi
Flexural Modulus	ASTM D790	398 ksi
Elongation at Break	ASTM D638	9.4%

### Product Characteristics

Finish: High Gloss	Color: Clear (milky)	Volume solids: 100%
Mix Ratio (by wt.): 2.5:1	Mix Ratio (by Vol.): 2.3:1	Density: 1.09 g/mL
Approximate Coverage: 160 sqft/gallon at 10 mils	Maximum Film Build: 10 mils per coat	Application Temperatures: 50 - 105 °F
Working time: 60 minutes at 75 °F		

**FRP 120 HT** is sold in ½ 1, 2, and 4 gallon units.

All products are sold FOB Weymouth, MA

□

**Cure Schedule**

	50 °F (10 °C)	75 °F (24 °C)	100 °F (38 °C)
<b>Tacky Window</b>	1 – 8 hours	30 min. – 4 hours	15 min – 2 hours
<b>Dry to Touch</b>	10 hours	6 hours	3 hours
<b>Dry Hard</b>	48 hours	24 hours	12 hours
<b>Overcoat Window</b>	0 – 128 h	0 – 96 h	0 – 48 h
<b>Cures for Service</b>			
<b>Return to Service</b>	N/A	24 hours	12 hours
<b>Full Mechanical Strength</b>	N/A	120 hours	72 hours

If FRP 120 HT is no longer tacky enough to support reinforcing fabric, simply reapply another layer of FRP 120 HT. No additional surface prep is required if within the overcoat window.

**Application Information**

*Consult Advanced FRP Application Guidelines Prior to use. This datasheet provides general guidelines for application Advanced FRP Composite Systems.*

**Contact Advanced FRP Systems for information on detailed coating specifications specific to your project.**

Ensure air and substrate temperatures are between 50 - 105 °F and relative humidity is below 95%. Follow surface preparation guidelines prior to coating.

Heavily pitted areas must be filled with **FRP Repair putty** or other Advanced FRP resurfacing material prior to applying composite reinforcements.

Pour all of Part A – Hardener into Part B – Base and mix with low speed power agitator for 2-3 minutes. Using a paint stick or spatula, thoroughly scrape sides and bottom of unit. Mix with power agitator for an additional 2 minutes. Do not dilute any Advanced FRP products.

**FRP 120 HT** can be applied via brush, roller, or airless spray equipment. Consult Advanced FRP Application Guidelines for information on spraying FRP 120 HT.

**FRP 120 HT** should be applied at 5 - 10 mils in a single coat or according to the specification for your project. A second coat can be applied if the material loses its tackiness prior to applying reinforcing fabric.

While **FRP 120 HT** is required for vertical and overhead applications to hold the reinforcement in place, it will also increase the overall adhesion value of the composite reinforcement in all areas. We strongly recommend applying **FRP 120 HT**, prior to applying reinforcement, over the entire substrate for optimal results.

□

□

**Surface Preparation**

Composite reinforcement requires a smooth surface without gaps and voids for full effectiveness. Use FRP Repair Putty or Ceramic Repair Putty to fill any holes, voids, and smooth weld seams.

High Pressure Applications on Steel (Wet Layup): Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe. Grit blast the surface to an SSPC-SP 10 Near White Metal finish with a minimum angular surface profile of 3.0 mils. Remove dust and debris prior to applying.

Low Pressure Applications on Steel (Wet Layup): Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe. Minimum surface preparation of SSPC-SP2 Hand Tool Cleaning must be performed. For enhanced performance, an SSPC-SP6 Commercial Blast Cleaning with an angular surface profile of 1.5+ mils should be used.

Concrete (Wet Layup): Refer to SSPC-SP13 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Surface should be thoroughly cleaned and dry. Concrete and mortar must be cured at least 28 days @ 75 °F. Surface must be free of laitance, concrete dust, dirt, form release, curing aids and other foreign material. Sealer 200, penetrating concrete primer, is recommended to increase adhesion and strengthen concrete prior to installing reinforcement.

**Storage and Shelf Life**

**FRP 120 HT** must be stored between 45 – 110 °F, out of direct sunlight. If stored in these conditions the product will have a 12 month shelf life.

**Safety Precautions**

Please consult up to date SDS's prior to use. An SDS should be available onsite whenever Advanced FRP Products are being used.

**Warranty Information**

Advanced FRP Systems Inc. warrants that our products are free of manufacturing defects in accordance with applicable Advanced FRP quality control parameters. Liability for products proven defective, if any, is limited to replacement of defective product or refund of purchase price as determined by Advanced FRP Systems. Additional warranties and protection are available. Contact Advanced FRP for more information.

**Disclaimer**

The information and recommendations set forth upon this data sheet are based on years of laboratory and field analysis. This information provides no performance guarantee and is intended to be used as guidance only as many factor effect the performance of polymeric systems. Actual exposure conditions are the best test of suitability and Advanced FRP Systems will generally provide complementary samples for field testing.

Revision Date: 3/1/2018

□

# CF 500-BD

## Heavy Duty, Bi-directional Carbon Fiber

### Description

Advanced FRP Systems' **CF 500-BD** is a 12K, 2 x 2 Twill weave, 19.5 oz/yd<sup>2</sup>, bi-directional carbon fiber woven fabric. **CF-500 BD** is made in the USA and meets the most stringent quality requirements for aerospace applications. This material is engineered to provide extremely strong, durable and lightweight composites for long term structural reinforcement. **CF 500-BD** is easy to apply, corrosion resistant and can be applied at any thickness required to provide adequate structural reinforcement.

### Product Advantages

- Bi-Directional weave provides outstanding strength in all directions
- ASME PCC-2 Compliant reinforcement
- Lightweight, pliable fabric easily conforms to any shape
- Stable twill weave orientation
- 37.5 mils (0.0375 inch) per layer
- Single or multi-layer systems available
- Coefficient of Thermal Expansion close to carbon steel

### Suggested Application

CF-500 BD is part of an ASME PCC-2 compliant pipe, tank and vessel repair system in conjunction with the appropriate saturating resin, adhesive and filler. It is commonly used for the reinforcement of steel pipes, concrete pipes, steel and fiberglass tanks as well as heat exchangers and pressure vessels.

### Performance Data: (Cured with FRP Saturant 210 HT)

	Test Method	Results
<b>Coefficient of Linear Thermal Exp.</b>	ASTM E831	4.1 x 10 <sup>-6</sup> in/in °F
<b>Tensile Strength</b>	ASTM D3039	107,000 psi
<b>Young's Modulus</b>	ASTM D3039	6,290 ksi
<b>Poisson's Ratio</b>	ASTM D3039	0.0702
<b>Lap Shear</b>	ASTM D3165	3,290 psi
<b>Elongation</b>	ASTM D3039	2.5%

<b>Flexural Strength</b>	ASTM D790	55,200 psi
<b>Flexural Modulus</b>	ASTM D790	4,370 ksi
<b>Maximum Exposure Temperature</b>		195 °C Continuous Exposure 220 °C Max Upset Exposure
<b>Minimum Exposure Temperature</b>		-52 °C Continuous Exposure

**Cure Schedule**

	50 °F (10 °C)	75 °F (24 °C)	100 °F (38 °C)
<b>Dry to Touch</b>	14 hours	8 hours	4 hours
<b>Dry to Handle</b>	36 hours	24 hours	12 hours
<b>Overcoat Window</b>	14 – 168 h	8 – 120 h	4 – 72 h
<b>Cures for Service</b>			
<b>Atmospheric</b>	36 hours	24 hours	12 hours
<b>Water Immersion</b>	48 hours	36 hours	24 hours
<b>Full Chemical Resistance</b>	168 hours	120 hours	72 hours

Contact Advanced FRP Systems for Elevated temperature post-cure information. Elevated temperature cures will increase chemical resistance and reduce return to service time.

**Application Information**

*Consult Advanced FRP Application Guidelines Prior to use. This datasheet provides general guidelines for application of HP-300 Epoxy.*

**Contact Advanced FRP Systems for information on detailed coating specifications specific to your project.**

Ensure air and substrate temperatures are between 45-105 °F and relative humidity is below 95%. Follow surface preparation guidelines on pg. 3 prior to applying any coatings.

Pour all of Part A – Hardener into Part B – Base and mix with low speed power agitator for 2-3 minutes. Using a paint stick or spatula, thoroughly scrape sides and bottom of unit. Mix with power mixer for an additional 2 minutes. Do not dilute Advanced FRP products.

**HP-300 Epoxy** can be applied via brush, roller, conventional airless spray equipment or plural component, airless spray equipment. Consult Advanced FRP Application Guidelines for information on spraying **HP-300 Epoxy**.

Stripe coating of all crevices, weld seams, corners and sharp angles is an essential part of good coating practices and should be done for all immersion services. Heavily pitted areas should be filled with **FRP Repair putty** or other Advanced FRP resurfacing material prior to coating.

**HP-300 Epoxy** should be applied at 10 – 30 mils per coat in 1 – 3 coats according to the specification for your project. General water immersion requires a minimum of 2 coats at 40 mils DFT. Atmospheric corrosion requires 1 coat at 10-15 mils DFT.

After the coating system has cured, the dry film thickness should be measured by non-destructive dry film thickness gauges to verify minimum application thickness. The coating system should be free of all pinholes and holidays which can be tested through high voltage spark testing. The cured film should be essentially free of runs, sags, inclusions, and other defects. All coating deficiencies should be repaired and allowed to cure prior to return to service.

□

**Surface Preparation**

Steel (Immersion Service): Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe prior to blasting. Check for chlorides on the surface and remove if present with suitable wash. Abrasive Blast to an SSPC SP-10 Near white metal blast with a sharp angular profile of 2 – 3 mils (50 – 75 microns).

Steel (Atmospheric Corrosion): Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe. Minimum surface preparation of SSPC-SP2 Hand Tool Cleaning must be performed. For enhanced performance, an SSPC-SP6 Commercial Blast Cleaning with an angular surface profile of 1.5+ mils should be used.

Concrete (Immersion/Secondary Containment): Refer to SSPC-SP13/ NACE 6, Section 4.3.1 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Surface should be thoroughly cleaned and dry. Concrete and mortar must be cured at least 28 days @ 75 °F. Surface must be free of laitance, concrete dust, dirt, form release, curing aids and other foreign material. Advanced FRP’s Sealer 200 should be applied prior to coating at 3-5 mils to increase adhesion and reduce outgassing.

Concrete (Atmospheric Corrosion): Refer to SSPC-SP13/ NACE 6, Section 4.3.1 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Advanced FRP Sealer 200 is not required bur recommended for improved adhesion and aesthetics.

Previously Coated Surfaces: Consult with Advanced FRP to ensure previous coating is compatible. If compatible and previous coating is in good condition, remove all loose coating and foreign materials. Brush blast or grind all glossy areas to a uniform dull finish. Remove dust, oil and debris with SSPC SP 1 Solvent Wipe prior to coating.

**Storage and Shelf Life**

**HP-300 Epoxy** must be stored between 45 – 110 °F, out of direct sunlight. If stored in these conditions the product will have a 24 month shelf life.

**Safety Precautions**

Please consult up to date SDS’s prior to use. An SDS should be available onsite whenever Advanced FRP Products are being used.

**Warranty Information**

**Application Information**

*Consult Advanced FRP Application Guidelines Prior to use. This technical data sheet provides general guidelines for application of FRP Repair Putty.*

**Contact Advanced FRP Systems for information on detailed coating specifications specific to your project.**

Ensure air and substrate temperatures are between 45-105 °F and relative humidity is below 95%. Follow surface preparation guidelines below prior to coating.

Pour all of Part A – Hardener into Part B – Base and mix with low speed power agitator for 2-3 minutes. Using a paint stick or spatula, thoroughly scrape sides and bottom of unit. Mix with power agitator for an additional 2 minutes. Do not dilute Advanced FRP products.

**FRP Repair Putty** has the consistency of a thick putty or spackling compound. It should be applied with a trowel, notched trowel, or a plastic applicator.

Stripe coating of all crevices, weld seems, corners and sharp angles is an essential part of good coating practices and should be done for all immersion services. Heavily pitted areas should be filled with **FRP Repair putty** or other Advanced FRP resurfacing material prior to coating.

**FRP Repair Putty** is designed to be applied up to 500 mils in a single coat. It can be worked into deep pits and gouges, can be used to bury weld seems, and resurface worn or corroded concrete.

After the coating system has cured, the dry film thickness should be measured by non-destructive dry film thickness gauges to verify minimum application thickness. The coating system should be free of all pinholes and holidays which can be tested through high voltage spark testing. The cured film should be essentially free of runs, sags, inclusions, and other defects. All coating deficiencies should be repaired and allowed to cure prior to return to service.

□

**Surface Preparation**

**Steel (Immersion Service):** Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe prior to blasting. Abrasive Blast to an SSPC SP-10 Near white metal blast with a sharp angular profile of 2 – 3 mils (50 – 75 microns).

**Steel (Atmospheric Corrosion):** Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe. Minimum surface preparation of SSPC-SP2 Hand Tool Cleaning must be performed. For enhanced performance, an SSPC-SP6 Commercial Blast Cleaning with an angular surface profile of 1.5+ mils should be used.

**Concrete (Immersion/Secondary Containment):** Refer to SSPC-SP13/ NACE 6, Section 4.3.1 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Surface should be thoroughly cleaned and dry. Concrete and mortar must be cured at least 28 days @ 75 °F. Surface must be free of laitance, concrete dust, dirt, form release, curing aids and other foreign material. Advanced FRP's Sealer 200 should be applied prior to coating at 3-5 mils to increase adhesion and reduce outgassing.

**Concrete (Atmospheric Corrosion):** Refer to SSPC-SP13/ NACE 6, Section 4.3.1 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Advanced FRP Sealer 200 is not required but recommended for improved adhesion and aesthetics.

**Previously Coated Surfaces:** Consult with Advanced FRP to ensure previous coating is compatible. If compatible and previous coating is in good condition, remove all loose coating and foreign materials. Brush blast or grind all glossy areas to a uniform dull finish. Remove dust, oil and debris with SSPC SP 1 Solvent Wipe prior to coating.

**Storage and Shelf Life**

**FRP Repair Putty** must be stored between 45 – 110 °F, out of direct sunlight. If stored in these conditions the product will have a 24 month shelf life.

**Safety Precautions**

Please consult up to date SDS's prior to use. An SDS should be available onsite whenever Advanced FRP Products are being used.

**Warranty Information**

Advanced FRP Systems Inc. warrants that our products are free of manufacturing defects in accordance with applicable Advanced FRP quality control parameters. Liability for products proven defective, if any, is limited to replacement of defective product or refund of purchase price as determined by Advanced FRP Systems. Additional warranties and protection are available. Contact Advanced FRP for more information.

**Disclaimer**

The information and recommendations set forth upon this data sheet are based on years of laboratory and field analysis. This information provides no performance guarantee and is intended to be used as guidance only as many factor effect the performance of polymeric systems. Actual exposure conditions are the best test of suitability and Advanced FRP Systems will generally provide complementary samples for field testing.

Revision Date: 3/2018

**Cure Schedule**

	50 °F (10 °C)	75 °F (24 °C)	100 °F (38 °C)
<b>Dry to Touch</b>	9 hours	6 hours	3 hours
<b>Dry Hard</b>	24 hours	12 hours	6 hours
<b>Overcoat Window</b>	0 – 168 h	0 – 96 h	0 – 72 h
<b>Cures for Service</b>			
<b>Handling</b>	24 hours	12 hours	6 hours
<b>Return to Service</b>	N/A	48 hours	24 hours
<b>Full Mechanical Strength</b>	N/A	96 hours	72 hours

Contact Advanced FRP Systems for Elevated temperature post-cure information. Elevated temperature cures will increase chemical resistance, raise heat distortion temperature and reduce return to service time.

**Application Information**

*All Advanced FRP Systems composite repairs must be installed by a certified applicator or with direct oversight by Advanced FRP Systems Inc.*

**Contact Advanced FRP Systems for information on detailed coating specifications specific to your project.**

Ensure air and substrate temperatures are between 50 - 195 °F and relative humidity is below 85%. Application above 105 °F requires high temperature procedures. Follow surface preparation guidelines below prior to coating.

Prior to applying composite reinforcement, the surface to be reinforced must be smooth and free of pits, voids, or other imperfections. Repair and rebuild damaged substrates with Advanced FRP Repair Putty or FRP Tack Coat 110 HT.

Pour all of Part A – Hardener into Part B – Base and mix with low speed power agitator for 2-3 minutes. Using a paint stick or spatula, thoroughly scrape sides and bottom of unit. Mix with power mixer for an additional 2 minutes. Do not dilute Advanced FRP products.

Ensure surface is properly prepared and vertical and overhead areas have Tack Coat 110 HT applied as directed.

**Hand Saturation:** Pre-saturate the reinforcing fabric by rolling it out onto a saturation table, then pouring the mixed 210 HT directly onto the fabric. The liquid should be moved around the fabric until the entire surface is visibly saturated. Repeat a second time to ensure 100% saturation of the fabric prior to installation.

**Saturation Machine:** Saturation machine shall not be used by a contractor that has not been trained in its proper use by Advanced FRP Systems. The saturation machine can only be used for fabrics up to 25 inches in width. Larger width fabrics must be hand saturated. Contact Advanced FRP Systems for information on technical oversight and use of saturation machine.

**Surface Preparation**

Steel (Immersion Service): Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe prior to blasting. Abrasive Blast to an SSPC SP-10 Near white metal blast with a sharp angular profile of 2 – 3 mils (50 – 75 microns).

Steel (Atmospheric Corrosion): Remove all oil and grease from surface with an SSPC SP-1 Solvent Wipe. Minimum surface preparation of SSPC-SP2 Hand Tool Cleaning must be performed. For enhanced performance, an SSPC-SP6 Commercial Blast Cleaning with an angular surface profile of 1.5+ mils should be used.

Concrete (Immersion/Secondary Containment): Refer to SSPC-SP13/ NACE 6, Section 4.3.1 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Surface should be thoroughly cleaned and dry. Concrete and mortar must be cured at least 28 days @ 75 °F. Surface must be free of laitance, concrete dust, dirt, form release, curing aids and other foreign material. Advanced FRP’s Sealer 200 should be applied prior to coating at 3-5 mils to increase adhesion and reduce outgassing.

Concrete (Atmospheric Corrosion): Refer to SSPC-SP13/ NACE 6, Section 4.3.1 or ICRI No. 310.2, CSP 1-3 for concrete preparation guidelines. Advanced FRP Sealer 200 is not required but recommended for improved adhesion and aesthetics.

Previously Coated Surfaces: Consult with Advanced FRP to ensure previous coating is compatible. If compatible and previous coating is in good condition, remove all loose coating and foreign materials. Brush blast or grind all glossy areas to a uniform dull finish. Remove dust, oil and debris with SSPC SP 1 Solvent Wipe prior to coating.

**Storage and Shelf Life**

FRP Saturant 210 HT must be stored between 40 – 125 °F, out of direct sunlight. If stored in these conditions the product will have a 24 month shelf life.

**Safety Precautions**

Please consult up to date SDS’s prior to use. An SDS should be available onsite whenever Advanced FRP Products are being used.

Revision Date: 12/2018

**SAFETY DATA SHEET**

**SECTION 1. IDENTIFICATION OF THE SUBSTANCE AND COMPANY**

**Product Name:** CF-500 BD

**Product Classification:** Composite Reinforcing Fabric

**Manufactured By:** Adavnced FRP Systems Inc.  
 106 Finnell Dr.  
 Units 13/14  
 Weymouth, MA 02188  
 (508) 927-6915

**In case of emergency contact:** Chem-Tel 800-255-3924

**Prepared by:** Russell Giudici

**Revision Date:** 06/2018

**SECTION 2. IDENTIFICATION OF HAZARDS**

**GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)**

None

**GHS Label Elements, Including precautionary statements**

Pictogram: None

Signal Word: None

**Hazard determining component(s):**  
 None

Hazard Statements  
 None

Precautionary Statements  
 None

**Hazards not otherwise classified (HNOC) or not covered by GHS:**

**Adverse Human Health Effects**

Acute Toxic Substance: No case of disease, which is caused by Carbon Fiber, has been reported. Short fiber, for Example, particles or fly, can cause transient skin irritation.

**Environmental Effects**

Carbon Fiber is electrically conductive, and it can cause the short-circuiting of electrical equipment. Airborne Carbon Fiber can also disturb electrical equipment.

**SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
Carbon Fiber	7440-44-0	None	95 – 100%

**SECTION 4. FIRST AID MEASURES**

Inhalation: Remove person to fresh air. If signs or symptoms continue seek medical attention.

# SAFETY DATA SHEET

**Skin Contact:** Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and was with soap and water.

**Eye Contact:** Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.

**Ingestion:** Do not induce vomiting. Consult a physician if necessary.

## SECTION 5. FIRE-FIGHTING MEASURES

**Extinguishing media:** Use dry chemicals, CO2, water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.

**Special Hazards:** Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.

**Additional Measures:** Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

## SECTION 6. ACCIDENTAL RELEASE MEASURES

ELIMINATE ALL IGNITION SOURCES (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers. LARGE SPILLS: Dike far ahead of liquid spill to contain released material and runoff from fire control.

**Environmental precautions**  
Do not allow spills to enter drains or watercourses.

**Methods and material for containment and cleaning up**  
Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

## SECTION 7. HANDLING AND STORAGE

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

## SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION

### Control Parameters

Component	CAS Number	Value	Control Parameter	Basis
Carbon Fiber	7440-44-0	TWA	2.00 mg/m <sup>3</sup>	USA. Workplace Environmental Exposure Levels (WEEL)

### Exposure Control

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses,

**SAFETY DATA SHEET**

chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

**Other Work Practices**

NCA019\_A1

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc. Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

**SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES**

Appearance	Black solid Fabric
Flammability of Explosive Limit	
Upper	Not applicable
Lower	Not applicable
Odor	no odor
Vapor Pressure	0 mmHg at 70 °F
Odor Threshold	No data available
Vapor Density	No data available
pH	Unknown
Relative Density	1.75 g/mL
Melting Point/Freezing Point	< 0 °F
Solubility in water	Not soluble
Initial Boiling Point	>1,000 °F
Boiling Range	No data available
Flash Point	No data available
Evaporation Rate	Not applicable
Flammability	Not flammable
Partition Coefficient: n-octanol/water	Not soluble
Auto Ignition Temperature	Not applicable
Decomposition Temperature	>500 °F
Viscosity	Not Applicable
% Volatile Content by Weight:	0%
VOC Content	0 g/L

**SECTION 10. STABILITY AND REACTIVITY**

**Reactivity:** None

**Chemical stability:** This product is stable and hazardous polymerization will not occur. Not sensitive to mechanical impact.

**Possibility of hazardous reactions:** None

**Incompatible materials:** None

**Hazardous decomposition products:** None

**SAFETY DATA SHEET**

**SECTION 11. TOXICOLOGICAL INFORMATION**

Ingredient	Oral LD50, mg/kg	Skin LD50, mg/kg	Inhalation (vapor) LD50, mg/L/4h	Inhalation (dust/mist) LD50, mg/L/4h
No data available				

**Specific Target Organ Toxicity – Single exposure (STOT-se):** Product not classified based on available data  
**Specific Target Organ Toxicity – repeated exposure (STOT-re):** Product not classified based on available data

**Chronic Health Effects:** None

**SECTION 12. ECOLOGICAL INFORMATION**

**Toxicity:** No additional information is available on this product. See Section 3 for chemical specific breakdown of toxicity.

**Aquatic Ecotoxicity**

Ingredient	96h LC50 fish, mg/L	48h EC50 crustacea, mg/L	ErC50 algae, mg/L
No data available			

- General effect:** None
- Persistence and degradability:** Not readily biodegradable
- Bioaccumulation potential:** Not measured
- Mobility in Soil:** No data available
- Results of PBT and vPvB Assessment:** This product contains no PBT/vPvB chemicals.
- Other Adverse Effects:** None

**SECTION 13. DISPOSAL CONSIDERATIONS**

**Waste Treatment Method:** Dispose of in accordance with local, state and federal regulations.

**SECTION 14. TRANSPORT INFORMATION**

# SAFETY DATA SHEET

## SECTION 1. IDENTIFICATION OF THE SUBSTANCE AND COMPANY

**Product Name:** FRP 120 HT – High Strength Adhesive - Base

**Product Classification:** Paint/Coating

**Manufactured By:** Adavnced FRP Systems Inc.  
106 Finnell Dr. Units 13/14  
Weymouth, MA 02188  
(508) 927-6915

**In case of emergency contact:** Chem-Tel 800-255-3924

**Prepared by:** Russell Giudici

**Revision Date:** 5/2018

## SECTION 2. IDENTIFICATION OF HAZARDS

### GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)

- Acute Toxicity, Oral (Category 4), H302
- Acute Toxicity, Dermal (Category 4), H312
- Skin Irritant (category 2), H315
- Skin Sensitizer (Category 1), H317
- Eye Irritant (Category 2A), H319
- Acute Toxicity, Inhalation (Category 4), H332
- Reproductive Toxicity (Category 1B), H360
- Acute Aquatic Toxicity (Category 3), H402
- Chronic Aquatic Toxicity (Category 3), H412

### GHS Label Elements, Including precautionary statements

Pictogram

Signal Word: **WARNING**

#### Hazard determining component(s):

- Bisphenol A epoxy resin
- Butanedioldiglycidyl ether
- 1-Methoxy-2-propanol acetate

#### Hazard Statements

- H302+H312+H332 Harmful if swallowed, in contact with skin or if inhaled
- H315 Causes skin irritation
- H317 May cause allergic skin reaction
- H319 Causes serious eye irritation
- H360 May damage fertility of the unborn child
- H 412 Harmful to aquatic life with long lasting effects

**SAFETY DATA SHEET****Precautionary Statements**

P261	Avoid breathing dust/fume/gas/mist/vapors/spray.
P264	Wash skin thoroughly after using this product.
P270	Do not eat, drink, or smoke when using this product
P271	Use only outdoors or in well ventilated areas
P272	Contaminated work clothes should not be allowed out of the workplace
P273	Avoid release into the environment
P280	Wear protective gloves/protective clothing/eye protection/face protection
P301+P312	IF SWALLOWED: Call a POISON CENTER or doctor/physician if feeling unwell.
P303+P361+P353	IF ON SKIN: Remove/take off immediately all contaminated clothing. Rinse skin with water/shower.
P304+P340+P312	IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and continue rinsing.
P333+P313	If skin irritation or rash occurs, Get medical advice/attention.
P362	Take off contaminated clothes and wash before reuse.
P370+P378	In case of fire use dry sand, dry chemicals or alcohol resistant foam for extinguishing.
P501	Dispose of contents/containers in accordance with local/regional/national/international regulations.

**Hazards not otherwise classified (HNOC) or not covered by GHS**

None

**SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
Bisphenol A Epoxy Resin	25068-38-6	Skin Irrit. 2; Skin Sens. 1; Eye Irrit. 2; H315, H317, H319	60 - 90%
Butanedioldiglycidyl ether	2425-79-8	Acute Tox. 4; Skin Irrit. 2; Eye Irrit. 2A Skin Sens. 1; Aquatic Acute 3; Aquatic Chronic 3; H302, H312, H315, H317 H319, H412	10 - 40%
1-methoxy-2-propanol acetate	108-65-6	Flam Liq. 3; Rep. Tox. 1B; H226; H360	<0.6%

**SECTION 4. FIRST AID MEASURES**

Inhalation:	Remove person to fresh air. If signs or symptoms continue seek medical attention.
Skin Contact:	Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and was with soap and water.
Eye Contact:	Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.
Ingestion:	Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

Extinguishing media:	Use dry chemicals, CO <sub>2</sub> , water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.
----------------------	--

***SAFETY DATA SHEET***

**Special Hazards:** Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.

**Additional Measures:** Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

**SECTION 6. ACCIDENTAL RELEASE MEASURES**

**ELIMINATE ALL IGNITION SOURCES** (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers. **LARGE SPILLS:** Dike far ahead of liquid spill to contain released material and runoff from fire control.

**Environmental precautions**  
Do not allow spills to enter drains or watercourses.

**Methods and material for containment and cleaning up**  
Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

**SECTION 7. HANDLING AND STORAGE**

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

**SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION**

**Control Parameters**

Component	CAS Number	Value	Control Parameter	Basis
1-methoxy-2-proanol acetate	108-65-6	TWA	50 ppm	US WEEL

**Exposure Control**

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses, chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

# SAFETY DATA SHEET

**Other Work Practices**

NCA019\_A1

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc. Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

**SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES**

Appearance	Amber liquid
Flammability of Explosive Limit	
Upper	No data available
Lower	No data available
Odor	faint chemical odor
Vapor Pressure	10 mmHg at 70 °F
Odor Threshold	No data available
Vapor Density	No data available
pH	Unknown
Relative Density	1.16 g/mL
Melting Point/Freezing Point	< 0 °F
Solubility in water	Negligible
Initial Boiling Point	284 °F
Boiling Range	284 °F – 511 °F
Flash Point	284 °F
Evaporation Rate	No data available
Flammability	No data available
Partition Coefficient: n-octanol/water	No data available
Auto Ignition Temperature	No applicable
Decomposition Temperature	>500 °F
Viscosity	900 cps
% Volatile Content by Weight:	<0.2%
VOC Content	0 g/L

**SECTION 10. STABILITY AND REACTIVITY**

**Reactivity:** Avoid contact with strong mineral or Lewis acids as rapid polymerization can result. Also avoid strong oxidizing agents.

**Chemical stability:** This product is stable and hazardous polymerization will not occur. Not sensitive to mechanical impact. Excessive heat and fumes generation can occur if improperly handled.

**Possibility of hazardous reactions:** Avoid incompatible materials listed below.

**Incompatible materials:** Strong oxidizing agents. Strong mineral or Lewis acids.

**Hazardous decomposition products:** Heat is generated when the Base and Activator are mixed. Uncontrolled curing of large masses may cause the material to char or catch fire. Material may burn but does not ignite readily. Fire may produce irritating, corrosive and/or toxic gases. Sealed containers may explode when heated.

**SECTION 11. TOXICOLOGICAL INFORMATION**

Ingredient	Oral LD50, mg/kg	Skin LD50, mg/kg	Inhalation (vapor) LD50, mg/L/4h	Inhalation (dust/mist) LD50, mg/L/4h

**SAFETY DATA SHEET**

Bisphenol A Epoxy Resin	>5,000	>6,000	>3,466	No Data
Butanedioldiglycidyl ether	1,118	>1,250	No Data	No Data

**Specific Target Organ Toxicity – Single exposure (STOT-se):** Product not classified based on available data

**Specific Target Organ Toxicity – repeated exposure (STOT-re):** Product not classified based on available data

**Chronic Health Effects:** Skin sensitizer; once sensitized, a severe allergic reaction may occur when subsequently exposed.

**Carcinogen Categories:**

National Toxicology Program (NTP): No ingredients are listed

International Agency for Research on Cancer (IARC): No ingredients are listed

Occupational Safety and Health Administration (OHSA): No ingredients are listed

**SECTION 12. ECOLOGICAL INFORMATION**

**Toxicity:** No additional information is available on this product. See Section 3 for chemical specific breakdown of toxicity.

**Aquatic Ecotoxicity**

Ingredient	96h LC50 fish, mg/L	48h EC50 crustacea, mg/L	ErC50 algae, mg/L
Bisphenol A Epoxy Resin	1.5 (Rainbow Trout)	3.6 (Daphnia)	No data
Butanedioldiglycidyl ether	24 (Zebra Fish)	75 (Daphnia)	72 (algae)

**Persistence and degradability:** ~13% based on modified Stern Method, not readily biodegradable

**Bioaccumulation potential:** Not measured

**Mobility in Soil:** No data available

**Results of PBT and vPvB Assessment:** This product contains no PBT/vPvB chemicals.

**Other Adverse Effects:** Harmful to aquatic life with long lasting effects.

**SECTION 13. DISPOSAL CONSIDERATIONS**

**Waste Treatment Method:** Do not allow spills to enter into drains or waterways. Dispose of in accordance with local, state and federal regulations. Part A and B can be mixed together and allowed to cure to form an inert solid to facilitate easy disposal.

**SECTION 14. TRANSPORT INFORMATION**

**DOT (Domestic Surface Transportation)**

1-Methoxy-2-propanol acetate	108-65-6	

**California Prop. 65 Components**

This product does not contain any chemicals known to the State of California to cause cancer, birth defects or any other reproductive harm.

**Canadian Regulations:** WHMIS Hazard Class: D2B - Toxic material causing other toxic effects.  
 All components of this product are on the Canadian Domestic Substances List.

**SECTION 16. OTHER INFORMATION**

**HMIS RATINGS**

HEALTH: 3  
 FLAMMABILITY: 1  
 REACTIVITY: 0  
 PERSONAL PROTECTION: B

The information and recommendations contained herein are based upon data believed to be correct. However, no guarantee or warranty of any kind, expressed or implied, is made with respect to the information contained within this SDS. We accept no responsibility and disclaim all liability for any harmful effects which may be caused by exposure to our products. Customer/users of this product must comply with all applicable health and safety laws, regulations and orders.

**SAFETY DATA SHEET****SECTION 1. IDENTIFICATION OF THE SUBSTANCE AND COMPANY****Product Name:** FRP 120 HT – High Strength Tack Coat - Hardener**Product Classification:** Paint/Coating

**Manufactured By:** Adavnced FRP Systems Inc.  
 106 Finnell Dr. Units 13/14  
 Weymouth, MA 02188  
 (508) 927-6915

**In case of emergency contact:** Chem-Tel 800-255-3924**Prepared by:** Russell Giudici**Revision Date:** 5/2018**SECTION 2. IDENTIFICATION OF HAZARDS****GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)**

Combustible Liquid (Category 3), H227  
 Skin Corrosive (category 1A), H314  
 Skin Sensitizer (Category 1), H317

**GHS Label Elements, Including precautionary statements**  
Pictogram

Signal Word: DANGER

**Hazard determining component(s):**

1,3-Cyclohexanedimethanamine  
 3-aminopropyldimethylamine

**Hazard Statements**

H227 Combustible Liquid  
 H314 Causes severe skin burns and eye damage  
 H317 May cause allergic skin reaction

**Precautionary Statements**

P101 If medical advice is needed, have product container or label on hand  
 P102 Keep out of reach of children  
 P103 Read label before use  
 P210 Keep away from heat/sparks/open flames/hot surfaces. –No smoking.  
 P260 Do not breathe dust/fume/gas/mist/vapors/spray.  
 P303+P361+P353 IF ON SKIN: Remove/take off immediately all contaminated clothing. Rinse skin with water/shower.  
 P305+P351+P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and continue rinsing.  
 P405 Store locked up.

**SAFETY DATA SHEET**

P501 Dispose of contents/containers in accordance with local/regional/national/international regulations.

**Hazards not otherwise classified (HNOC) or not covered by GHS**

None

**SECTION 3. COMPOSITION/INFORMATION ON HAZARDOUS INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
1,3-cyclohexane-dimethanamine	2579-20-6	Acute Tox. 4; Skin Corr. 1A; Acute Tox. 4; H302, H312, H314	5.0 – 9.0%
3-aminopropylidimethylamine	109-55-7	Flam. Liq 3; Acute Tox. 4; Skin Cor. 1B, Skin Sens. 1; H226, H302, H314, H317	3.0 – 8.0%
Salicylic Acid	69-72-7	Acute tox. 4; Skin Irrit. 3; Eye Dam. 1; H302, H316, H318	1.0 – 3.0%

**SECTION 4. FIRST AID MEASURES**

**Inhalation:** Remove person to fresh air. If signs or symptoms continue seek medical attention.

**Skin Contact:** Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and wash with soap and water.

**Eye Contact:** Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.

**Ingestion:** Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

**Extinguishing media:** Use dry chemicals, CO<sub>2</sub>, water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.

**Special Hazards:** Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.

**Additional Measures:** Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

**SECTION 6. ACCIDENTAL RELEASE MEASURES**

**ELIMINATE ALL IGNITION SOURCES** (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers. **LARGE SPILLS:** Dike far ahead of liquid spill to contain released material and runoff from fire control.

**Environmental precautions**

Do not allow spills to enter drains or watercourses.

**Methods and material for containment and cleaning up**

Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

**SAFETY DATA SHEET**

**SECTION 7. HANDLING AND STORAGE**

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

**SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION**

**Control Parameters**

Component	CAS Number	Value	Control Parameter	Basis

**Exposure Control**

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses, chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

**Other Work Practices**

NCA019\_A1

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc. Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

**SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES**

Appearance	Yellow liquid
Flammability of Explosive Limit	
Upper	No data available
Lower	No data available
Odor	Ammonia odor
Vapor Pressure	No data available
Odor Threshold	No data available
Vapor Density	No data available
pH	Unknown
Relative Density	0.953 g/mL
Melting Point/Freezing Point	< 0 °F
Solubility in water	Not soluble
Initial Boiling Point	>230 °F
Boiling Range	No data available
Flash Point	>230 °F
Evaporation Rate	<1 (Butyl acetate = 1)

**SAFETY DATA SHEET**

Flammability	No data available
Partition Coefficient: n-octanol/water	No data available
Auto Ignition Temperature	Product does not self-ignite
Decomposition Temperature	>450 °F
Viscosity	70 cps
% Volatile Content by Weight:	<0.2%
VOC Content	0 g/L

**SECTION 10. STABILITY AND REACTIVITY**

**Reactivity:** Avoid contact with strong mineral or Lewis acids as rapid polymerization can result. Also avoid strong oxidizing agents.

**Chemical stability:** This product is stable and hazardous polymerization will not occur. Not sensitive to mechanical impact. Excessive heat and fumes generation can occur if improperly handled.

**Possibility of hazardous reactions:** Avoid incompatible materials listed below.

**Incompatible materials:** Strong oxidizing agents. Strong mineral or Lewis acids.

**Hazardous decomposition products:** Heat is generated when the Base and Activator are mixed. Uncontrolled curing of large masses may cause the material to char or catch fire. Material may burn but does not ignite readily. Fire may produce irritating, corrosive and/or toxic gases. Sealed containers may explode when heated.

**SECTION 11. TOXICOLOGICAL INFORMATION**

Ingredient	Oral LD50, mg/kg	Skin LD50, mg/kg	Inhalation (vapor) LD50, mg/L/4h	Inhalation (dust/mist) LD50, mg/L/4h
Product	1870 (rat)	490 (rabbit)	2.4 (rat)	No data

**Specific Target Organ Toxicity – Single exposure (STOT-se):** Product not classified based on available data

**Specific Target Organ Toxicity – repeated exposure (STOT-re):** Product not classified based on available data

**Chronic Health Effects:** Skin sensitizer; once sensitized, a severe allergic reaction may occur when subsequently exposed. After repeated high-dose oral exposure the substance causes adverse effects to the liver and kidneys.

**Carcinogen Categories:**

National Toxicology Program (NTP): No ingredients are listed

International Agency for Research on Cancer (IARC): No ingredients are listed

Occupational Safety and Health Administration (OHSA): No ingredients are listed

**SECTION 12. ECOLOGICAL INFORMATION**

**Toxicity:** No additional information is available on this product. See Section 3 for chemical specific breakdown of toxicity.

**Aquatic Ecotoxicity**

Ingredient	96h LC50 fish, mg/L	48h EC50 crustacea, mg/L	ErC50 algae, mg/L

**SAFETY DATA SHEET**

**General effect:** Water hazard Class 2: hazardous for water. Do not allow product to reach ground water, water course or sewage system.

**Persistence and degradability:** Not readily biodegradable

**Bioaccumulation potential:** Not measured

**Mobility in Soil:** No data available

**Results of PBT and vPvB Assessment:** This product contains no PBT/vPvB chemicals.

**Other Adverse Effects:** No further relevant information

**SECTION 13. DISPOSAL CONSIDERATIONS**

**Waste Treatment Method:** Do not allow spills to enter into drains or waterways. Do not dispose of with household trash. Dispose of in accordance with local, state and federal regulations. Part A and B can be mixed together and allowed to cure to form an inert solid to facilitate easy disposal.

**SECTION 14. TRANSPORT INFORMATION**

**Prepared by:** Russell Giudici

**Revision Date:** 06/2018

## SECTION 2. IDENTIFICATION OF HAZARDS

**GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)**

Skin Irritant (category 2), H315  
Skin Sensitizer (Category 1), H317  
Eye Irritant (Category 2A), H319

**GHS Label Elements, Including precautionary statements**

Pictogram

**Signal Word:** WARNING

**Hazard determining component(s):**  
Bisphenol A epoxy resin

**Hazard Statements**

H315 Causes skin irritation  
H317 May cause allergic skin reaction  
H319 Causes serious eye irritation

**Precautionary Statements**

P261 Avoid breathing dust/fume/gas/mist/vapors/spray.  
P264 Wash skin thoroughly after using this product.  
P270 Do not eat, drink, or smoke when using this product  
P272 Contaminated work clothes should not be allowed out of the workplace  
P273 Avoid release into the environment  
P280 Wear protective gloves/protective clothing/eye protection/face protection  
P301+P312 IF SWALLOWED: Call a POISON CENTER or doctor/physician if feeling unwell.  
P303+P361+P353 IF ON SKIN: Remove/take off immediately all contaminated clothing. Rinse skin with water/shower.  
P304+P340+P312 IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.

**SAFETY DATA SHEET**

P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and continue rinsing.
P333+P313	If skin irritation or rash occurs, Get medical advice/attention.
P362	Take off contaminated clothes and wash before reuse.
P370+P378	In case of fire use dry sand, dry chemicals or alcohol resistant foam for extinguishing.
P501	Dispose of contents/containers in accordance with local/regional/national/international regulations.

**Hazards not otherwise classified (HNOC) or not covered by GHS**

Hazardous to the aquatic environment – Chronic Category 2, Toxic to aquatic life with long lasting effects.

**SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
Bisphenol A Epoxy Resin	25068-38-6	Skin Irrit. 2; Skin Sens. 1; Eye Irrit. 2; H315, H317, H319	50 – 70%
Polypropylene glycol diglycidyl Ether	9072-62-2	None	5 – 15%
Nepheline Syenite	37244-96-5	None	12 – 33%
CI Pigment Red 101	1309-37-1	None	1 – 5%
Alkyl quarternary ammonium clay	71011-24-0	None	2 – 9%
Hydrophobic Fumed Silica	67762-90-7	None	1 – 5%

**SECTION 4. FIRST AID MEASURES**

Inhalation:	Remove person to fresh air. If signs or symptoms continue seek medical attention.
Skin Contact:	Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and wash with soap and water.
Eye Contact:	Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.
Ingestion:	Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

Extinguishing media:	Use dry chemicals, CO <sub>2</sub> , water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.
Special Hazards:	Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.
Additional Measures:	Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

**SECTION 6. ACCIDENTAL RELEASE MEASURES**

ELIMINATE ALL IGNITION SOURCES (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers. LARGE SPILLS: Dike far ahead of liquid spill to contain released material and runoff from fire control.

**Environmental precautions**

# SAFETY DATA SHEET

Do not allow spills to enter drains or watercourses.

**Methods and material for containment and cleaning up**

Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

**SECTION 7. HANDLING AND STORAGE**

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

**SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION**

**Control Parameters**

Component	CAS Number	Value	Control Parameter	Basis
Nuisance Dust	N/A	TWA	5 mg/m <sup>3</sup> (respirable fraction) 15 mg/m <sup>3</sup> (total dust)	OSHA limits for Air Contamination 29 CFR 1910.1000

**Exposure Control**

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses, chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

**Other Work Practices**

NCA019\_A1

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc. Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

**SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES**

Appearance and Odor	Red Paste, faint epoxy odor
Flammability of Explosive Limit	
Upper	No data available
Lower	No data available
Odor	faint chemical odor
Vapor Pressure	< 1.0 mmHg at 70 °F
Odor Threshold	No data available
Vapor Density	No data available
pH	Unknown

# SAFETY DATA SHEET

Relative Density	1.19 g/mL
Melting Point/Freezing Point	< 0 °F
Solubility in water	Negligible
Initial Boiling Point	284 °F
Boiling Range	284 °F – 511 °F
Flash Point	284 °F
Evaporation Rate	No data available
Flammability	No data available
Partition Coefficient: n-octanol/water	No data available
Auto Ignition Temperature	No applicable
Decomposition Temperature	>500 °F
Viscosity	100,00 cps
% Volatile Content by Weight:	<0.2%
VOC Content	0 g/L

## SECTION 10. STABILITY AND REACTIVITY

**Reactivity:** Avoid contact with strong mineral or Lewis acids as rapid polymerization can result. Also avoid strong oxidizing agents.

**Chemical stability:** This product is stable and hazardous polymerization will not occur. Not sensitive to mechanical impact. Excessive heat and fumes generation can occur if improperly handled.

**Possibility of hazardous reactions:** Avoid incompatible materials listed below.

**Incompatible materials:** Strong oxidizing agents. Strong mineral or Lewis acids.

**Hazardous decomposition products:** Heat is generated when the Base and Activator are mixed. Uncontrolled curing of large masses may cause the material to char or catch fire. Material may burn but does not ignite readily. Fire may produce irritating, corrosive and/or toxic gases. Sealed containers may explode when heated.

Titanium Dioxide	13462-67-7	None	0 - 5%

**SECTION 4. FIRST AID MEASURES**

Inhalation:	Remove person to fresh air. If signs or symptoms continue seek medical attention.
Skin Contact:	Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and wash with soap and water.
Eye Contact:	Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.
Ingestion:	Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

Extinguishing media: Use dry chemicals, CO<sub>2</sub>, water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.

**SAFETY DATA SHEET**

**Special Hazards:** Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.

**Additional Measures:** Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

**SECTION 6. ACCIDENTAL RELEASE MEASURES**

**ELIMINATE ALL IGNITION SOURCES** (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers. **LARGE SPILLS:** Dike far ahead of liquid spill to contain released material and runoff from fire control.

**Environmental precautions**

Do not allow spills to enter drains or watercourses.

**Methods and material for containment and cleaning up**

Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

**SECTION 7. HANDLING AND STORAGE**

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

**SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION****Control Parameters**

Component	CAS Number	Value	Control Parameter	Basis
Benzyl Alcohol	100-51-6	TWA	10.00 mg/m <sup>3</sup>	USA. Workplace Environmental Exposure Levels (WEEL)
Titanium Dioxide	13463-67-7	TWA	10.00 mg/m <sup>3</sup>	USA. ACGIH Threshold Limit Values (TLV)

**Exposure Control**

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses, chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

**Other Work Practices**

NCA019\_A1

**SAFETY DATA SHEET**

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc. Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

**SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES**

Appearance and Odor	White Paste, Mild amine odor
Flammability of Explosive Limit	
Upper	No data available
Lower	No data available
Odor	faint chemical odor
Vapor Pressure	0.094 mmHg at 72 °F
Odor Threshold	No data available
Vapor Density	No data available
pH	Unknown
Relative Density	1.70 g/mL
Melting Point/Freezing Point	< 0 °F
Solubility in water	Negligible
Initial Boiling Point	>400 °F
Boiling Range	400 °F – 511 °F
Flash Point	>215 °F
Evaporation Rate	No data available
Flammability	No data available
Partition Coefficient: n-octanol/water	No data available
Auto Ignition Temperature	No applicable
Decomposition Temperature	>500 °F
Viscosity	40,000 cps
% Volatile Content by Weight:	<0.2%
VOC Content	0 g/L

**SECTION 10. STABILITY AND REACTIVITY**

**Reactivity:** Avoid contact with strong mineral or Lewis acids as rapid polymerization can result. Also avoid strong oxidizing agents.

**Chemical stability:** This product is stable and hazardous polymerization will not occur. Not sensitive to mechanical impact. Excessive heat and fumes generation can occur if improperly handled.

**Possibility of hazardous reactions:** Avoid incompatible materials listed below.

**Incompatible materials:** Strong oxidizing agents. Strong mineral or Lewis acids.

**Hazardous decomposition products:** Heat is generated when the Base and Activator are mixed. Uncontrolled curing of large masses may cause the material to char or catch fire. Material may burn but does not ignite readily. Fire may produce irritating, corrosive and/or toxic gases. Sealed containers may explode when heated.

**SECTION 11. TOXICOLOGICAL INFORMATION**

Ingredient	Oral LD50, mg/kg	Skin LD50, mg/kg	Inhalation (vapor) LD50, mg/L/4h	Inhalation (dust/mist) LD50, mg/L/4h
Product	690 (rat)	2188 (rabbit)	>900 (rabbit)	No data
Titanium Dioxide	10,000	10,000	No Data	6.82

# SAFETY DATA SHEET

**Specific Target Organ Toxicity – Single exposure (STOT-se):** Product not classified based on available data  
**Specific Target Organ Toxicity – repeated exposure (STOT-re):** May cause damage to the liver and skeletal muscles through prolonged or repeated exposure

**Chronic Health Effects:** Skin sensitizer; once sensitized, a severe allergic reaction may occur when subsequently exposed. After repeated high-dose oral exposure the substance causes adverse effects to the liver and kidneys.

## SECTION 12. ECOLOGICAL INFORMATION

**Toxicity:** No additional information is available on this product. See Section 3 for chemical specific breakdown of toxicity.

### Aquatic Ecotoxicity

Ingredient	96h LC50 fish, mg/L	48h EC50 crustacea, mg/L	ErC50 algae, mg/L
Product	10 (freshwater fish)	10 (daphnia)	16 (algae)
Titanium Dioxide	1,000 (Fundulus heteroclitus)	5.50 (Daphna)	5.83 (78h) (Pseudokirchneriella subcapitata)

- General effect:** Harmful to aquatic life with long lasting effects
- Persistence and degradability:** Not readily biodegradable
- Bioaccumulation potential:** Not measured
- Mobility in Soil:** No data available
- Results of PBT and vPvB Assessment:** This product contains no PBT/vPvB chemicals.
- Other Adverse Effects:** Neutralization may be required prior to waste water treatment

## SECTION 13. DISPOSAL CONSIDERATIONS

**Waste Treatment Method:** Do not allow spills to enter into drains or waterways. Dispose of in accordance with local, state and federal regulations. Part A and B can be mixed together and allowed to cure to form an inert solid to facilitate easy disposal.

REACTIVITY:	0
PERSONAL PROTECTION:	B

The information and recommendations contained herein are based upon data believed to be correct. However, no guarantee or warranty of any kind, expressed or implied, is made with respect to the information contained within this SDS. We accept no responsibility and disclaim all liability for any harmful effects which may be caused by exposure to our products. Customer/users of this product must comply with all applicable health and safety laws, regulations and orders.

**SAFETY DATA SHEET****SECTION 1. IDENTIFICATION OF THE SUBSTANCE AND COMPANY****Product Name:** FRP Saturant 210 Base**Product Classification:** Paint/Coating

**Manufactured By:** Advanced FRP Systems Inc.  
 106 Finnell Dr. Units 13/14  
 Weymouth, MA 02188  
 (508) 927-6915

**In case of emergency contact:** Chem-Tel 800-255-3924**Prepared by:** Russell Giudici**Revision Date:** 6/2018**SECTION 2. IDENTIFICATION OF HAZARDS****GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)**

Skin Irritant (category 2), H315  
 Skin Sensitizer (Category 1), H317  
 Eye Irritant (Category 2A), H319

**GHS Label Elements, Including precautionary statements**  
 Pictogram

**Signal Word:** WARNING

**Hazard determining component(s):**  
 Bisphenol A epoxy resin  
 Butanedioldiglycidyl ether

**Hazard Statements**

H315 Causes skin irritation  
 H317 May cause allergic skin reaction  
 H319 Causes serious eye irritation

**Precautionary Statements**

P261 Avoid breathing dust/fume/gas/mist/vapors/spray.  
 P264 Wash skin thoroughly after using this product.  
 P270 Do not eat, drink, or smoke when using this product  
 P271 Use only outdoors or in well ventilated areas  
 P272 Contaminated work clothes should not be allowed out of the workplace  
 P273 Avoid release into the environment  
 P280 Wear protective gloves/protective clothing/eye protection/face protection  
 P301+P312 IF SWALLOWED: Call a POISON CENTER or doctor/physician if feeling unwell.  
 P303+P361+P353 IF ON SKIN: Remove/take off immediately all contaminated clothing. Rinse skin with water/shower.

**SAFETY DATA SHEET**

P304+P340+P312	IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and continue rinsing.
P333+P313	If skin irritation or rash occurs, Get medical advice/attention.
P362	Take off contaminated clothes and wash before reuse.
P370+P378	In case of fire use dry sand, dry chemicals or alcohol resistant foam for extinguishing.
P501	Dispose of contents/containers in accordance with local/regional/national/international regulations.

**Hazards not otherwise classified (HNOC) or not covered by GHS**

None

**SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
Bisphenol A Epoxy Resin	25068-38-6	Skin Irrit. 2; Skin Sens. 1; Eye Irrit. 2; H315, H317, H319	50 - 70%
Butanedioldiglycidyl ether	16096-31-4	Skin Irrit. 2; Skin Sens. 1; Eye Irrit. 2; H315, H317, H319	10 - 40%
1,2-ethanediamine polymer with aziridine	398475-96-2	Eye Irrit. 2A; H 319	0 - 2%
Epoxy phenol novolac resin	28064-14-4	Skin Irrit. 2; Skin Sens. 1; H315, H317	5 - 10%

**SECTION 4. FIRST AID MEASURES**

Inhalation:	Remove person to fresh air. If signs or symptoms continue seek medical attention.
Skin Contact:	Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and was with soap and water.
Eye Contact:	Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.
Ingestion:	Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

Extinguishing media:	Use dry chemicals, CO <sub>2</sub> , water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.
Special Hazards:	Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.
Additional Measures:	Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

**SECTION 6. ACCIDENTAL RELEASE MEASURES**

ELIMINATE ALL IGNITION SOURCES (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements

**SAFETY DATA SHEET**

Lower	No data available
Odor	faint epoxy odor
Vapor Pressure	10 mmHg at 70 °F

The information and recommendations contained herein are based upon data believed to be correct. However, no guarantee or warranty of any kind, expressed or implied, is made with respect to the information contained within this SDS. We accept no responsibility and disclaim all liability for any harmful effects which may be caused by exposure to our products. Customer/users of this product must comply with all applicable health and safety laws, regulations and orders.

# SAFETY DATA SHEET

## SECTION 1. IDENTIFICATION OF THE SUBSTANCE AND COMPANY

**Product Name:** HP 300 Epoxy Base

**Product Classification:** Paint/Coating

**Manufactured By:** Advanced FRP Systems Inc.  
106 Finnell Dr.  
Units 13/14  
Weymouth, MA 02188  
(508) 927-6915

**In case of emergency contact:** Chem-Tel 800-255-3924

**Prepared by:** Russell Giudici

**Revision Date:** 06/08/2018

## SECTION 2. IDENTIFICATION OF HAZARDS

**GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)**

- Skin Irritant (category 2), H315
- Skin Sensitizer (Category 1), H317
- Eye Irritant (Category 2A), H319
- Aquatic Chronic (Category 4), H413

**GHS Label Elements, Including precautionary statements**

Pictogram

Signal Word: **WARNING**

Hazard determining component(s):

- Bisphenol A epoxy resin
- Cahew nutshell liquid, oligomeric reaction product with epichlorohydrin

Hazard Statements

- H315 Causes skin irritation
- H317 May cause allergic skin reaction
- H319 Causes serious eye irritation
- H 413 May cause long lasting harmful effects to aquatic life.

Precautionary Statements

- P261 Avoid breathing dust/fume/gas/mist/vapors/spray.
- P264 Wash skin thoroughly after using this product.
- P270 Do not eat, drink, or smoke when using this product
- P273 Avoid release into the environment
- P280 Wear protective gloves/protective clothing/eye protection/face protection
- P301+P312 **IF SWALLOWED:** Call a POISON CENTER or doctor/physician if feeling unwell.
- P303+P361+P353 **IF ON SKIN:** Remove/take off immediately all contaminated clothing. Rinse skin with water/shower.

**SAFETY DATA SHEET**

P304+P340+P312 IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.

P305+P351+P338 IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and continue rinsing.

P333+P313 If skin irritation or rash occurs, Get medical advice/attention.

P363 Wash contaminated clothes before reuse.

P370+P378 In case of fire use dry sand, dry chemicals or alcohol resistant foam for extinguishing.

P501 Dispose of contents/containers in accordance with local/regional/national/international regulations.

**Hazards not otherwise classified (HNOC) or not covered by GHS**  
None

**SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
Bisphenol A Epoxy Resin	25068-38-6	Skin Irrit. 2; Skin Sens. 1; Eye Irrit. 2; H315, H317, H319	30 - 60%
Cashew nutshell liquid, oligomeric reaction product with epichlorohydrin	68413-24-1	Skin Sens. 1; Eye Irrit. 2; Aquatic Chronic 4; H317, H319, H413	6 - 12%
Nepheline Syenite	37244-96-5	None	24 - 45%
CI Pigment Red 101	1309-37-1	None	0 - 5%
Titanium Dioxide	13462-67-7	None	0 - 5%
Hydrophobic Fumed Silica	67762-90-7	None	1 - 5%

**SECTION 4. FIRST AID MEASURES**

Inhalation: Remove person to fresh air. If signs or symptoms continue seek medical attention.

Skin Contact: Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and wash with soap and water.

Eye Contact: Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.

Ingestion: Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

Extinguishing media: Use dry chemicals, CO2, water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.

Special Hazards: Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.

Additional Measures: Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

**SECTION 6. ACCIDENTAL RELEASE MEASURES**

ELIMINATE ALL IGNITION SOURCES (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements

# SAFETY DATA SHEET

or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers.  
**LARGE SPILLS:** Dike far ahead of liquid spill to contain released material and runoff from fire control.

**Environmental precautions**  
 Do not allow spills to enter drains or watercourses.

**Methods and material for containment and cleaning up**  
 Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

## SECTION 7. HANDLING AND STORAGE

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

## SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION

### Control Parameters

Component	CAS Number	Value	Control Parameter	Basis
Titanium Dioxide	13463-67-7	TWA	10.00 mg/m <sup>3</sup>	USA. ACGIH Threshold Limit Values (TLV)

### Exposure Control

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses, chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

### Other Work Practices

NCA019\_A1  
 Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc. Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

## SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance	Red or Grey viscous liquid
Flammability of Explosive Limit	
Upper	No data available

# SAFETY DATA SHEET

Lower	No data available
Odor	faint epoxy odor
Vapor Pressure	10 mmHg at 70 °F
Odor Threshold	No data available
Vapor Density	No data available
pH	Unknown
Relative Density	1.36 g/mL
Melting Point/Freezing Point	< 0 °F
Solubility in water	Negligible
Initial Boiling Point	>400 °F
Boiling Range	>400 °F
Flash Point	>400 °F
Evaporation Rate	No data available
Flammability	No data available
Partition Coefficient: n-octanol/water	No data available
Auto Ignition Temperature	Not applicable
Decomposition Temperature	>500 °F
Viscosity	20,000 cps
% Volatile Content by Weight:	<0.2%
VOC Content	0 g/L

## SECTION 10. STABILITY AND REACTIVITY

**Reactivity:** Avoid contact with strong mineral or Lewis acids as rapid polymerization can result. Also avoid strong oxidizing agents.

**Chemical stability:** This product is stable and hazardous polymerization will not occur. Not sensitive to mechanical impact. Excessive heat and fumes generation can occur if improperly handled.

**Possibility of hazardous reactions:** Avoid incompatible materials listed below.

**Incompatible materials:** Strong oxidizing agents. Strong mineral or Lewis acids.

**Hazardous decomposition products:** Heat is generated when the Base and Activator are mixed. Uncontrolled curing of large masses may cause the material to char or catch fire. Material may burn but does not ignite readily. Fire may produce irritating, corrosive and/or toxic gases. Sealed containers may explode when heated.

## SECTION 11. TOXICOLOGICAL INFORMATION

Ingredient	Oral LD50, mg/kg	Skin LD50, mg/kg	Inhalation (vapor) LD50, mg/L/4h	Inhalation (dust/mist) LD50, mg/L/4h
Bisphenol A Epoxy Resin	>5,000	>6,000	>3,466	No data
Titanium Dioxide	10,000	10,000	No Data	6.82

## SECTION 12. ECOLOGICAL INFORMATION

**Toxicity:** No additional information is available on this product. See Section 3 for chemical specific breakdown of toxicity.

### Aquatic Ecotoxicity

Ingredient	96h LC50 fish, mg/L	48h EC50 crustacea, mg/L	ErC50 algae, mg/L
Bisphenol A Epoxy Resin	1.5 (Rainbow Trout)	3.6 (Daphnia)	No data

**SAFETY DATA SHEET**

Titanium Dioxide	1,000 (Fundulus heteroclitus)	5.50 (Daphna)	5.83 (78h) (Pseudokirchneriella subcapitata)

- Persistence and degradability:** ~13% based on modified Stern Method
- Bioaccumulation potential:** Not measured
- Mobility in Soil:** No data available
- Results of PBT and vPvB Assessment:** This product contains no PBT/vPvB chemicals.
- Other Adverse Effects:** None known

**SECTION 13. DISPOSAL CONSIDERATIONS**

**Waste Treatment Method:** Do not allow spills to enter into drains or waterways. Dispose of in accordance with local, state and federal regulations. Part A and B can be mixed together and allowed to cure to form an inert solid to facilitate easy disposal.

**SECTION 14. TRANSPORT INFORMATION**

**DOT (Domestic Surface Transportation)**

- DOT Proper Shipping Name: Not Regulated
- DOT Hazard Class: Not Regulated
- UN/NA Number: Not Regulated
- DOT Packaging Group: Not Regulated
- CERCLA/DOT RQ: Not Applicable

**IMO/IMDG (Ocean Transport)**

- IMDG Proper Shipping Name: Not Regulated
- IMDG Hazard Class: Not Regulated
- Sub Class: Not Applicable
- IMDG Packaging Group: Not Regulated
- System Reference Code: 9

**ICAO/IATA (Air Transport):** Hazard Class 9  
Packaging Group: III

**Environmental Hazards**

Marine Pollutant (Bisphenol A Epoxy Resin)

**SECTION 15. REGULATORY INFORMATION**

**SARA 302 Components**

No chemicals in this material are subject to the reporting requirements of SARA Title III, Sec. 302.

**SARA 313 Components**

This material does not contain any chemical components with known CAS numbers that exceed the threshold (De Minimis) reporting levels established by SARA Title III, Sec. 313.

**SARA 311/312 Hazards**

Chronic Health Hazard

**Massachusetts Right to Know Components**

**Prepared by:** Russell Giudici

**Revision Date:** 06/2018

## SECTION 2. IDENTIFICATION OF HAZARDS

### GHS Classification in accordance with 29 CFR 1910.1200 (OSHA HCS)

- Acute Oral Toxicity (Category 4), H302
- Skin Irritant (category 2), H315
- Skin Sensitizer (Category 1), H317
- Eye Damage (Category 1), H318
- Acute Toxicity/Inhalation (Category 4), H332
- Single Target Organ Toxicity, Respiratory (Category 2), H373
- Aquatic Toxicity, Chronic (Category 3), H412

### GHS Label Elements, Including precautionary statements

Pictogram

Signal Word: DANGER

### Hazard determining component(s):

- 4,4'-Methylenebis(cyclohexamine)
- Benzyl Alcohol
- Epoxy Polyamine adduct
- Salicylic acid

### Hazard Statements

- |          |   |
|----------|---|
| H302+332 | Harmful if swallowed or inhaled                                   |
| H315     | Causes skin irritation  |
| H317     | May cause allergic skin reaction                                  |
| H318     | Causes serious eye damage   |
| H373     | May cause damage to organs through prolonged or repeated exposure |
| H 412    | Harmful to aquatic life with long lasting effects                 |

### Precautionary Statements

- P261 Avoid breathing dust/fume/gas/mist/vapors/spray.

**SAFETY DATA SHEET**

P264	Wash skin thoroughly after using this product.
P270	Do not eat, drink, or smoke when using this product
P271	Use outdoors or in well ventilated areas
P272	Contaminated work clothes should not be allowed out of the workplace
P273	Avoid release into the environment
P280	Wear protective gloves/protective clothing/eye protection/face protection
P301+P312	IF SWALLOWED: Call a POISON CENTER or doctor/physician if feeling unwell.
P303+P361+P353	IF ON SKIN: Remove/take off immediately all contaminated clothing. Rinse skin with water/shower.
P304+P340+P312	IF INHALED: Remove person to fresh air and keep comfortable for breathing. Call a POISON CENTER or doctor/physician if you feel unwell.
P305+P351+P338	IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and continue rinsing.
P333+P313	If skin irritation or rash occurs, Get medical advice/attention.
P362	Take off contaminated clothes and wash before reuse.
P501	Dispose of contents/containers in accordance with local/regional/national/international regulations.

**Hazards not otherwise classified (HNOC) or not covered by GHS**

None

**SECTION 3. COMPOSITION/INFORMATION ON INGREDIENTS**

Chemical Name	CAS #	Classification	Concentration
4,4'-Methylenebis(cyclohexamine)	1761-71-3	Acute Tox. 4; Skin Corr. 1A; Skin Sens. 1; STOT-re 2; Aquatic Chronic 2; H302, H314, H317, H373, H411	35 - 50%
Benzyl Alcohol	100-51-6	Acute Tox. 4; Eye Irrit. 2A; Aquatic Acute 2; H302+332, H319, H401	35 - 45%
Epoxy Polyamine adduct	N/A	Acute Tox. 4; Skin Irrit. 2; Skin Sens. 1; Eye Irrit. 2; H302, H315, H317, H319	15 - 30%
Salicylic Acid	69-72-7	Acute tox. 4; Skin Irrit. 3; Eye Dam. 1; H302, H316, H318	3 - 7%

**SECTION 4. FIRST AID MEASURES**

Inhalation:	Remove person to fresh air. If signs or symptoms continue seek medical attention.
Skin Contact:	Wash off with soap and water. If the chemical has penetrated clothing, remove clothing and was with soap and water.
Eye Contact:	Immediately wash the eyes with plenty of water. If irritation persists, seek medical attention.
Ingestion:	Do not induce vomiting. Consult a physician if necessary.

**SECTION 5. FIRE-FIGHTING MEASURES**

Extinguishing media:	Use dry chemicals, CO <sub>2</sub> , water spray or foam. Move containers from fire area if you can without risk. Runoff from fire control may cause pollution. Dike water for later disposal.
----------------------	--

# SAFETY DATA SHEET

**Special Hazards:** Material may burn but does not ignite readily. Fire may produce irritating, corrosive, and/or toxic gases.

**Additional Measures:** Cool closed containers by spraying with water. Do not allow water run off to enter drains or waterways.

## SECTION 6. ACCIDENTAL RELEASE MEASURES

ELIMINATE ALL IGNITION SOURCES (no smoking, flares, sparks or flames in immediate area). Do not touch or walk through spilled material. Stop leak if you can do so without risk. Prevent entry into waterways, sewers, basements or confined areas. Absorb or cover with dry earth, sand, or other non-combustible material and transfer to containers. **LARGE SPILLS:** Dike far ahead of liquid spill to contain released material and runoff from fire control.

### Environmental precautions

Do not allow spills to enter drains or watercourses.

### Methods and material for containment and cleaning up

Isolate spill or leak area immediately for at least 25 to 50 meters (80 to 160 feet) in all directions. Keep unauthorized personnel away. Stay upwind. Keep out of low areas. Ventilate closed spaces before entering.

## SECTION 7. HANDLING AND STORAGE

Store all materials between 40 – 100 °F. Ensure storage area is well ventilated and free from all sources of ignition. Wash hands thoroughly after use. Immediately clean up any spills and keep containers tightly closed when not in use.

## SECTION 8. EXPOSURE CONTROL AND PERSONAL PROTECTION

### Control Parameters

Component	CAS Number	Value	Control Parameter	Basis
Benzyl Alcohol	100-51-6	TWA	10.00 mg/m <sup>3</sup>	USA. Workplace Environmental Exposure Levels (WEEL)

### Exposure Control

**Respiratory:** Select equipment to provide protection from the ingredients listed in Section 3 of this document. Ensure fresh air entry during application and drying. If you experience eye watering, headache or dizziness or if air monitoring demonstrates dust, vapor, or mist levels are above applicable limits, wear an appropriate, properly fitted respirator (NIOSH approved) during and after application. Follow respirator manufacturer's directions for respirator use.

**Eyes:** Avoid contact with eyes. Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, safety glasses, chemical goggles, and/or head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Skin:** Protective equipment should be selected to provide protection from exposure to the chemicals listed in Section 3 of this document. Depending on the site-specific conditions of use, protective gloves, apron, boots, head and face protection may be required to prevent contact. The equipment must be thoroughly cleaned, or discarded after each use.

**Engineering Controls:** Depending on the site-specific conditions of use, provide adequate ventilation.

### Other Work Practices

NCA019\_A1

Emergency eye wash fountains and safety showers should be available in the immediate vicinity of any potential exposure. Use good personal hygiene practices. Wash hands before eating, drinking, using toilet facilities, etc.

# SAFETY DATA SHEET

Promptly remove soiled clothing and wash clothing thoroughly before reuse. Shower after work using plenty of soap and water.

## SECTION 9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance	Amber liquid
Flammability of Explosive Limit	
Upper	13%
Lower	0.6%

ENGINEERING INSTRUCTION

CE-SI-1080, Rev. 01

Guidelines for Protecting Underground Transmission Electric Facilities from Nearby Construction Activities  
SEPTEMBER, 2018

SECTION I – GENERAL REQUIREMENTS

1.0 SCOPE

The scope of this document is a general guideline for the prevention of damage to high pressure pipes and coating for underground 69, 138 and 345 kV cable systems (electric facilities), caused by construction on (“*outside plant*”) properties not owned by CECONY. The guideline provides information such as:

- a) general instructions *and notification requirements* prior to any construction activities;
- b) clearance requirements;
- c) precautions/protections to be made; and
- d) special notes during construction activities

*The guideline is not applicable for solid dielectric or self-contained oil-filled cables. Specific work plans for these type of Transmission Feeders shall be reviewed with Con Edison for approval.*

1.1 APPLICATION

This instruction applies to all Consolidated Edison Company of New York, Inc. (CECONY) organizations and contractors, and outside “third party” organization with oversight responsibility for municipal public improvement contractors and non-municipal contractors, commencing or engaging in underground construction activities associated with excavations, foundations, and demolitions within the vicinity of CECONY’s existing underground transmission system.

2.0 DEFINITIONS

- 2.1 **CECONY** refers to Consolidated Edison Company of New York, Inc.
- 2.2 **Contractor** is the construction firm hired by the Property Owner or Project Manager to perform the construction services.
- 2.3 **Designated Contact** is the contact person identified within the Project Manager Company and the Property Owner who has the responsibility to communicate on all of the planned construction works to be carried out safely.
- 2.4 **Encroachment Area** is the area where the ground disturbance occurs within 25 feet on land of the centerline of the *Assumed* Location of the existing electric facilities.
- 2.5 **Assumed Location** is the location of underground facilities determined from the subsurface investigations, *such as record drawings or utility mark outs on streets.*
- 2.6 **Known Location** is the *Assumed Location that is visually confirmed from hand dug test holes. Both horizontal and vertical locations of underground facilities shall be field verified at, (a) every proposed crossings, (b) every turn in direction, and (c) a minimum of two locations along a straight run of the existing Transmission Electric Facilities. A use of vacuum excavations is an acceptable means of*

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities**

**SEPTEMBER, 2018**

---

*exposing underground facilities.*

- 2.7 **Professional Engineer** is the engineer, currently licensed in New York State, hired by the Property Owner or Contractor to perform the engineering/design services.
- 2.8 **Property Owner** is the entity that has legal jurisdiction or ownership of the work area or new facility being installed.
- 2.9 **Tolerance Zone** is the area in which soil must be removed by non-mechanical means, such as hand excavations methods, to expose subsurface utilities *in absence of test pits*. It is *2-ft clear distance on both sides of the Assumed Locations and the width of the existing Transmission Electric Facilities*.
- 2.10 **Trained Personnel** refer to someone who is capable of identifying existing and predictable hazards in the surroundings or working conditions, has authorization to take prompt corrective measures to eliminate the hazards, and is trained and experienced in utility installation and inspection.
- 2.11 **Transmission Electric Facilities** refer to underground transmission feeders *69kV and higher* and associated circulation piping.
- 2.12 **Wingback** is the required longitudinal distance of a pipe to be exposed by excavation in order to achieve the desired relocated position.

### 3.0 INSTRUCTIONS

#### 3.1 GENERAL INSTRUCTIONS

- 3.1.1 Follow the requirements outlined in the State of New York Department of Public Service NYCRR 16 Part 753, "Protection of Underground Facilities".
- 3.1.2 *Perform subsurface investigations and mark-outs prior to planning and performing any work in the Encroachment Area of the underground Transmission Electric Facilities.*
- 3.1.3 Mark-outs of the **Assumed** Locations of the underground facilities must be refreshed periodically, by the Contractor, to ensure underground facilities locations are always clearly identified over the entire project duration. If at any time the underground facilities marks become illegible, work must be stopped until the locations can be re-identified.
- 3.1.4 Contractor shall provide proper support of all **exposed** Transmission Electric Facilities during excavation activities.
  - 3.1.4.1 A work plan, including pipe support design and calculations, shall be submitted to CECONY Engineering for approval, at least two weeks prior to performing any work in the Encroachment Area of the electric facilities. Refer to section 3.4 for pipe support design criteria.
  - 3.1.4.2 *For management of excavated soils, refer to section 3.5, "Backfill".*

□

---

**ENGINEERING INSTRUCTION**

CE-SI-1080, Rev. 01

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018**

---

3.1.4.3 CECONY Transmission Operation shall review the work plan on an as-needed basis and shall inspect the work area for pipe support, moving process and coating conditions prior to backfill.

3.1.4.4 The approved work plan shall be obtained by the Contractor prior to commencement of any work.

3.1.5 *In absence of test pits, excavation within the Tolerance Zone shall be performed by hand only. Saw-cutting pavements within the Tolerance Zone is allowed with blade depths less than the confirmed asphalt pavement thickness.*

3.1.6 *For Known Locations, a zone of protection shall be established by shielding the exposed facilities from damage that could result from falling debris, i.e. rocks, concrete, compacted soil, etc. Machine excavation or additional saw-cutting of pavements may then be allowed as directed by CECONY Engineering or CECONY Field Representative.*

3.1.7 Maintain clearances and separation distances to the existing Transmission Electric Facilities to the maximum extent possible at all times. Refer to section 3.2 for clearance and separation distance requirements.

3.1.8 Only Trained Personnel should work in the vicinity of exposed underground Transmission Electric Facilities.

**3.2 CLEARANCES AND SEPARATION DISTANCE**

3.2.1 Existing Transmission Electric Facilities within the Tolerance Zone must be protected in place. In general, a minimum of 3 feet of cover over the electric facilities shall be maintained. When less than 2 feet of cover is authorized because of special conditions, suitable guards shall be placed over pipes as described in CE-TS-3352. Clear distance between the guard and the pipe shall be a minimum of 6 inches. Contractor may be allowed to move the existing Transmission Electric Facilities by following the requirements described in section 3.2.2 and 3.4.4, or the new facilities must be relocated.

3.2.2 Maintain **both** the following minimum required **vertical** clearances and **horizontal** separation distances between **existing** Transmission Electric Facilities and **the new subsurface** facilities:

**ENGINEERING INSTRUCTION**  
CE-SI-1080, Rev. 01

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities**  
SEPTEMBER, 2018

Subsurface Facility	Minimum Required Vertical Clearance* to Electric Facilities [ft]		Minimum Required Horizontal Separation Distance* to Electric Facilities [ft]

**ENGINEERING INSTRUCTION**

CE-SI-1080, Rev. 01

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities  
SEPTEMBER, 2018****3.3** Vibration Monitoring Program

- 3.3.1 Construction activities that involve blasting and non-blasting activities, including but not limited to pile driving, hydraulic breakers (hoe ram), drilling or boring activities, in the Encroachment Area of the underground facilities having the potential to produce vibration levels that may be susceptible to damaging existing Transmission Electric Facilities shall be monitored.
- 3.3.2 All blasting and non-blasting activities described in section 3.3.1 must be approved by CECONY Engineering prior to commencing the work and may require a vibration monitoring *plan* subject to CECONY review and approval. ***Allow minimum two weeks for CECONY Engineering's review and approval of a vibration monitoring plan.***
- 3.3.3 The Contractor is required to engage professional engineering services to conduct an existing conditions survey of the Transmission Electric Facilities, and an experienced vibration monitoring Consultant, ***with minimum 5 years of related experience in New York State***, is required to measure peak particle velocities prior to and during construction activities.
- 3.3.4 The measured vibration level experienced on the Transmission Electrical Facilities shall not exceed 0.5 in/sec. If maximum values are approached, construction activities shall be halted; construction means and methods shall be reevaluated, or an approved alternative construction methodology may be adopted ***to mitigate excessive vibration.***
- 3.3.5 The vibration monitoring plan shall include, but not be limited to, the following items:
- 3.3.5.1 Description of the Transmission Electric Facilities to be surveyed;
- 3.3.5.2 Monitoring equipment;
- 3.3.5.3 Monitoring device locations;
- 3.3.5.4 Monitoring frequency;
- 3.3.5.5 List of personnel to be notified (supplied by CECONY) in the event that vibration approaches the threshold limits.***
- 3.3.6 The Contractor shall maintain a continuous log at the construction site and shall furnish a copy to the CECONY ***Field Representative*** upon request. The log shall also include receipts and notices of complaints. CECONY reserves the right to concurrently monitor any construction vibration levels. A preconstruction survey documenting the existing condition of the Transmission Electric Facilities to be monitored shall be conducted by the Contractor.

**3.4** ***Transmission Electric Facility*** Support Design Criteria

- 3.4.1 Any and all materials/means used to hang, support, and/or protect the Transmission Electric Facility pipes must maintain the integrity of the pipe

**Guidelines for Protecting Underground Transmission Electric Facilities  
 from Nearby Construction Activities**

**SEPTEMBER, 2018**

---

coating. Any and all damage to the coating must be reported to the CECONY representative on site; and no backfilling of the pipe can be performed until pipe coating is restored and inspected.

- 3.4.2 Prior to any Transmission Electric Facility pipe support work *that deviates from the CET manual*, the Contractor shall submit to CECONY Engineering the following for review and approval:
  - 3.4.2.1 Drawings drawn to scale showing plans, sections and details of pipe support design stamped by a Professional Engineer.
  - 3.4.2.2 Supporting calculations stamped by the Professional Engineer.
  - 3.4.2.3 The design span for Transmission Electric Facility supports shall satisfy the allowable stress and deflection limits in accordance with ASME B31.1 considering both static loads and internal operating pressure. Additional loads due to jacking to move the Transmission Electric Facility pipes shall be accounted for in the support design.
  - 3.4.2.4 Typical Transmission Electric Facility pipe parameters are listed in Exhibit A for calculating design loads for pipe supports.
  - 3.4.2.5 The maximum spacing between supports shall not exceed 10 feet.
- 3.4.3 Pending a condition assessment of the pipe by CECONY, the Contractor may be allowed to adjust the location and/or elevation of existing Transmission Electric Facility pipes by transitioning the pipes with the minimum required Wingback distances for the required offsets as outline below. *Wingback distances were computed for high pressure fluid filled (pipe-type) Transmission Electric Facilities only. Refer to drawing 516411 for schematic guideline on relocation of Transmission Electric Facilities.*

Nominal Pipe Size [in]	Minimum Required Wingback [ft]		
	6" Offset	9" Offset	12" Offset
5	88	108	125
6	98	120	138
7 (TUBE)	97	119	137
8	111	136	157
10	129	158	183
12	147	180	208

- 3.4.4 A work plan detailing the steps and means of moving the pipe shall be submitted to CECONY Engineering for approval. The plan shall identify the incremental sequence and distances to move the pipe in achieving the final offset, a

□

**ENGINEERING INSTRUCTION**

from Nearby Construction Activities  
SEPTEMBER, 2018**

description of jacks (or other equipment) to move the pipe, their locations and load capacity, and the protective measures that will be employed to not damage the pipe coating.

**3.5 Backfill**

- 3.5.1. Prior to backfilling the exposed electric Transmission Electric Facility, CECONY Transmission Operations/Corrosion Control shall be notified to inspect the condition of pipe and repair any areas of corrosion or damaged coating.
- 3.5.2. Approved material is to be used for backfilling under, adjacent and over the *Transmission Electric Facilities* pipe as described in specifications EO-8085 (for general backfill) and CE-TS-4074 (for thermal sand) and as depicted on EO-12640-B. ***345kV transmission feeders must be backfilled with thermal sand and 69 KV and 138kV transmission feeders must be backfilled with clean sand as described by specifications. Contractor must submit a copy of the gradation analysis and test report to CECONY Engineering for approval.***
- 3.5.3. Reuse of excavated soil may be permitted as approved backfill materials if it conform to the requirements outlined in the Specification, CE-TS-3352, latest revision. Contractor must submit a copy of the gradation analysis and the material must be approved by CECONY prior to its application.
- 3.5.3.1. ***For CECONY Contractors***, excavated soil must be managed in accordance with the requirements of CECONY GEHSI E05.11 "Management of Excavated Soils on Property Not Owned by the Company", latest revision. Excavated soil cannot be reused as backfill if it does not meet the requirements of the governing GEHSI.
- 3.5.4. Approved backfill shall be compacted in maximum 12" lifts in accordance with Specification EO-1181, latest revision, unless otherwise approved by CECONY.
- 3.5.5. ***The CECONY Field Representative may require in-place density tests to ensure proper compaction.***

**3.6. SPECIAL NOTES FOR CONSTRUCTION ACTIVITIES**

- 3.6.1. Each party shall use its best efforts to avoid or minimize, to the maximum extent practicable, any adverse environmental effects associated with the construction activities around subsurface Transmission Electric Facilities.
- 3.6.2. Perform daily job briefings with all employees before each shift, highlighting the hazards associated with working around Transmission Electric Facility and in excavations, i.e. high voltage electrical hazards, high pressure dielectric fluid or nitrogen gas pressure, coal tar pipe coatings, asbestos coating on pipe, work area protections, traffic, cave-ins, etc.
- 3.6.2.1. In the event that the Transmission Electric Facility pipe displays disturbed or disbonded asbestos coating, stop the work immediately and contact the CECONY Designated Contact for further directions.

□

---

**ENGINEERING INSTRUCTION**

**CE-SI-1080, Rev. 01**

**Guidelines for Protecting Underground Transmission Electric Facilities  
from Nearby Construction Activities**

**SEPTEMBER, 2018**

---

- 3.6.3. Long duration projects must be managed with vigilance to ensure that all employees maintain proper focus regarding the hazards associated with working around the Transmission Electric Facilities.
- 3.6.4. CECONY shall inspect the exposed Transmission Electric Facility to verify its condition prior to any work being performed. It is Contractor's responsibility to contact CECONY to schedule this inspection.
- 3.6.5. Any undermined Transmission Electric Facility ten feet or great in span must be supported with sand bags, nylon slings or other approved methods, taking special care to not damage the pipe coating.

**3.7. EMERGENCY ACTION PLAN**

- 3.7.1. In the event of emergency, such as pipe cracks, leaks, or breakage, Contractor must notify the CECONY's Designated Contact immediately. All work must stop and cannot proceed until the CECONY field representative has inspected the damage and further direction is provided.

**JB 301 - SPECIAL CARE EXCAVATION AND BACKFILLING FOR OIL-O-STATIC PIPES**

**A. Description**

Under this section, the Contractor shall provide all incremental labor, materials, equipment, insurance and incidentals required for trench excavation when maintaining, protecting, and accommodating the integrity of the facility operator's oil-o-static facilities. This system consists of steel pipes containing the high tension cables and cooling oil (oil-o-static pipes) encroaching (partially exposed) or paralleling (not exposed) within 12 inches of the face of the approved city excavations for all phases of contract excavation as encountered during construction, except excavations to the ultimate depth for curbs, sidewalks and roadway/base/subbase which are covered under specific contract items. The work shall be performed in accordance with the contract plans, specifications, attached Sketch JB 301 A and at the directions of the facility operator in consultation with the Resident Engineer.

**B. Materials**

Backfill material to be used around oil-o-static pipes will be paid for under Item JB-303.

**C. Method of Construction**

The Contractor shall maintain, protect and accommodate the integrity of oil-o-static pipes encroaching/paralleling excavations as schematically shown on attached Sketch JB 301 A. The facility operator shall identify the locations of oil-o-static pipe(s) within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the oil-o-static pipe(s) and ascertain the numerical relationships and/or dimensions of these utilities with respect to the proposed excavation. Upon exposing the affected oil-o-static pipe(s) sufficiently at the sole discretion of the facility operator in consultation with the Resident Engineer to determine relationships and/or dimensions, the Contractor shall be permitted to proceed with hand excavation only, within a zone of protection whose limit shall be defined as a perimeter located 12 inches from the outside face of each oil-o-static encroaching/paralleling.

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to

allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

**D. Method of Measurement**

The unit price for this work shall be based on the volume of cubic yard (C.Y.) of special care excavation calculated as follows:

- For paralleling (not exposed) oil-o-static pipe(s) within 12 inches of the outside edge of the approved City trench line, the volume included for payment shall be calculated as the depth from below the existing pavement base to the bottom of the unsheeted trench excavation or to the bottom of the oil-o-static pipe whichever is greater, multiplied by the width, measured as one foot from the face of the excavation toward the center of excavation, multiplied by the length of the parallel oil-o-static line. See Sketch JB 301 A.
- For encroaching (exposed) oil-o-static pipe(s) the volume shall be calculated as the width of the encroachment (facility partially or fully exposed in the trench) plus one foot, multiplied by length of the encroachment, multiplied by the depth as defined above. (See Sketch JB 301 A).

The volume calculation shall in all cases include, the volume occupied by the utility proper within the payment area described above. Overlapping volume dimensions measured as described above may occur when multiple utilities are encroaching trench excavations. In such cases, all such utilities shall be counted as one utility limited by the maximum encroachment of pipes, conduit(s), and conduit banks faces. The volume shall then be calculated as described above and shown on attached Sketch # JB 300 A. Utilities identified as abandoned by the facility operator prior to be beginning of excavation, are not included for payment under this item.

**E. Price to Cover**

The unit price bid per cubic yard of special care excavation and backfill of oil-o-static pipes shall cover the incremental cost of all incremental labor, material, equipment, insurance and incidentals necessary to completely protect, and maintain, and accommodate the integrity of oil-o-static pipe(s) without disruption of service to the customers and in accordance with contract documents. The unit price shall also include the cost of: difficulties encountered during the performance of contract work items under, over and around the oil-o-statics; installation and removal of sheeting; loss of productivity due to slower rate of excavation (special care) during excavation, including the use of such methods as hand excavation around existing oil-o-static pipe(s); trucking and disposing of unsuitable fill; backfilling and compaction, in compliance with DOT requirements, around, over and under the facilities including the use of special methods; and traffic plates that may be required to temporarily close and/or complete the work.

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the

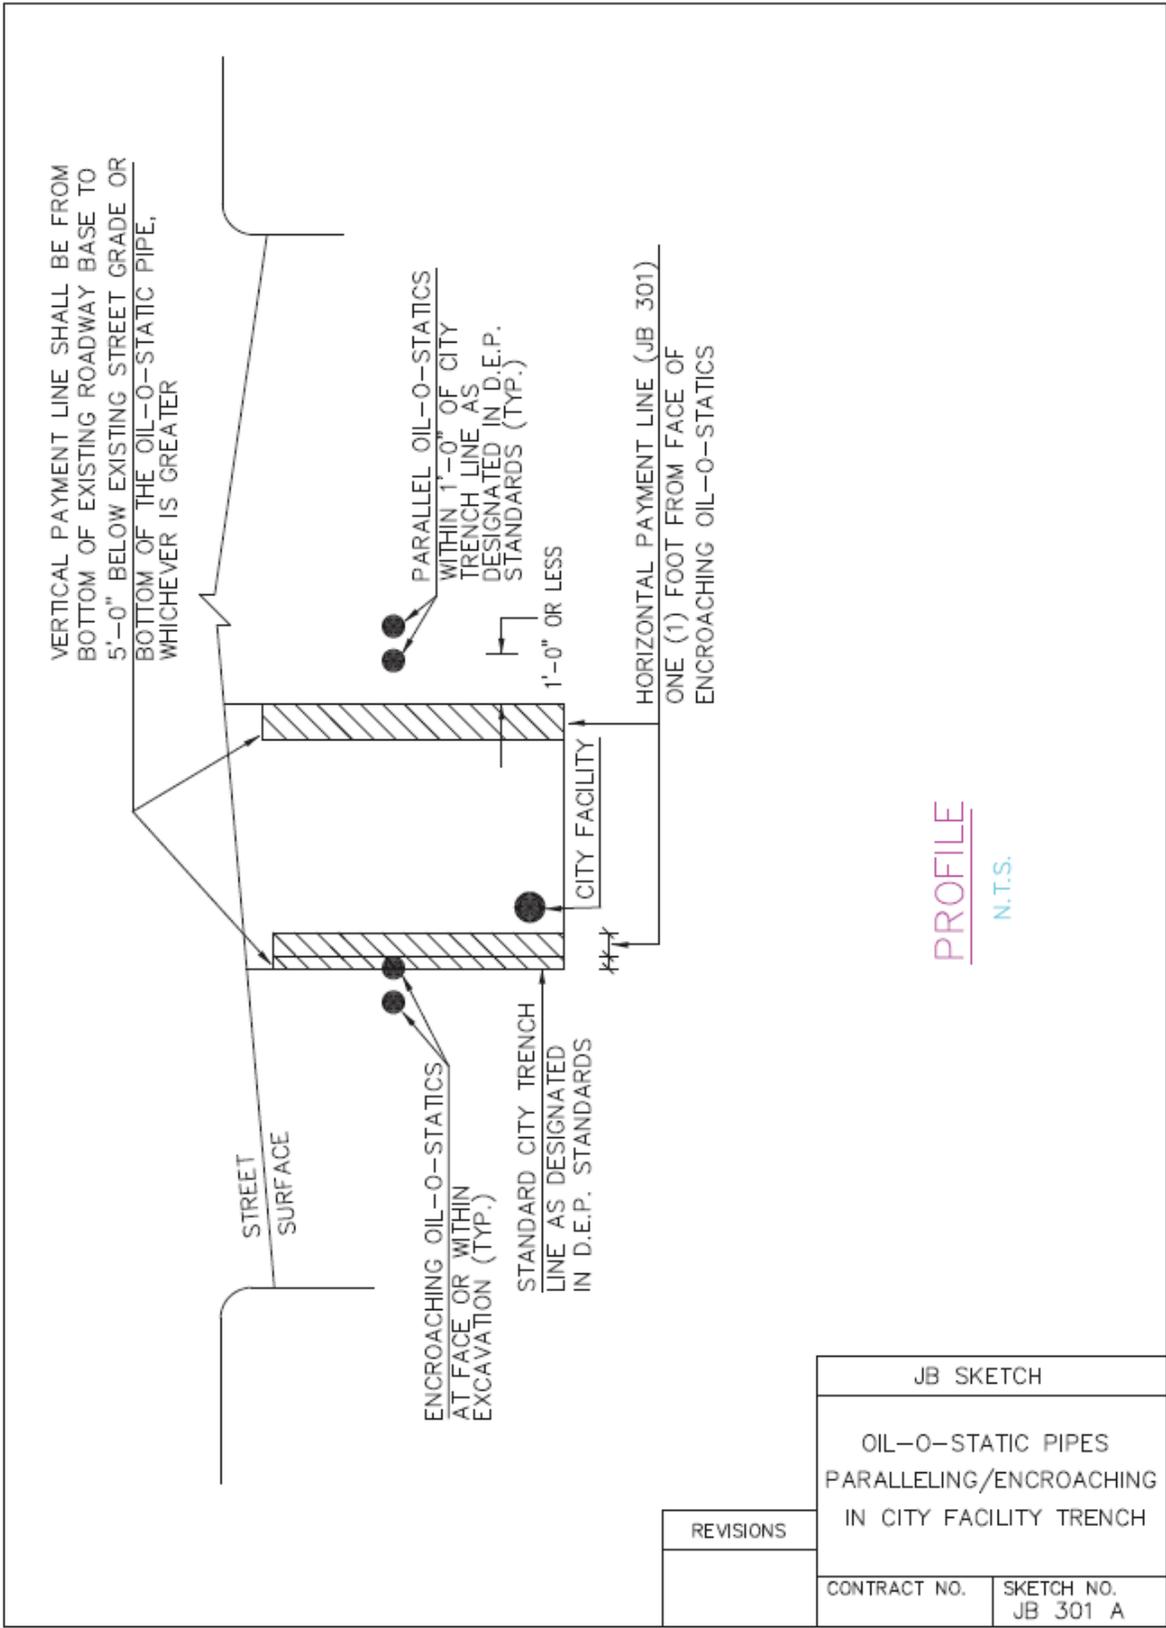

□

existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field coating of oil-o-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

JB SKETCH	
OIL-O-STATIC PIPES PARALLELING/ENCROACHING IN CITY FACILITY TRENCH	
CONTRACT NO.	SKETCH NO. JB 301 A

REVISIONS

**JB 302 – FIELD COATING OF OIL-O-STATIC FEEDER PIPES**

**A. Description**

Under this section, the Contractor shall provide all labor, tools, equipment, insurance and incidentals required to apply field coating and wrapping on Oil-O-Static feeder pipes at various locations within the contract limits in accordance with the specifications and as directed by the facility operator. The Oil-O-Static system consists of steel pipes containing high voltage cables and cooling oil. All work shall be in accordance with the Con Edison requirement G-8209, System B.

**B. Materials**

All materials required to apply coatings and wrappings as referenced in G-8209 shall be supplied by Con Edison.

**C. Method of Construction**

Some of the existing coatings on Oil-O-Static pipes may consist of coal tar wrap and may contain asbestos and/or PCB's. The Con Edison representative prior to backfilling must visually inspect all Oil-O-Static lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection. Con Edison shall be allowed to perform an electrical spark test (jeeping) inspection of these pipes and obtain a sample of the coating for testing. The electrical spark test will indicate the amount of coating required to be applied and the sample test will determine the coating materials. If the tests are negative, the Con Edison representative will direct the Contractor to perform the required amount of coating prior to the pipes being backfilled. If the tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty Contractor hired by Con Edison. The Contractor will coordinate his operations to allow this work to be performed. The work shall be performed in accordance with Con Edison specification G-8209, which is included within this section. System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

**D. Method of Measurement**

The quantity to be measured for payment shall be the actual number of linear feet (L.F.) of each Oil-O-Static pipe for which coating is applied by the Contractor as prescribed.

**E. Price to Cover**

The price shall cover the cost of all labor, tools, equipment, insurance and incidentals necessary to unload, store and handle the necessary material and to perform all associated work to coat and wrap the Oil-O-Static lines as outlined in Con Edison specification G-8209, System B. The price shall also include the cost of all difficulties encountered to apply the coating in the area of other underground facilities and the additional excavation that may be required to obtain the necessary clearances to apply the coating; coordination with Con Edison forces or their Specialty Contractor; modifications to work methods or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for all work herein specified shall be made on a one-time basis only; no payment for work herein specified shall be made for the same area more than one time. If the Contractor subsequently damages any

□

coatings paid for under this contract, the pipe shall be recoated in accordance with this item at the Contractor's expense.

**F. References**

- 1. Con Edison Gas Operations Standard G-8209 – Field Coating of Steel Pipe and Fittings Installed Underground and in Subsurface Structures

□

□

**JB 400 - TEST PITS FOR UTILITY FACILITIES**

**A. Description**

Under this section, the Contractor shall furnish all labor, materials, equipment, insurance and incidentals necessary to excavate, sheet and maintain test pits at locations approved by the facility operator in consultation with the Resident Engineer. Test pits shall be dug in order to ascertain exact locations, cover, and invert elevations, configurations, clearances, alignment and operating status of existing utility facilities. The contractor shall inspect jointly with the facility operator and Resident Engineer, utility facilities and other structures uncovered, take all relevant measurements and elevations as directed by the facility operator(s) in consultation with the Resident Engineer. Tests to determine operating status of utility facilities shall be performed by facility operator. The pits shall be covered with steel plates during non-working hours, and uncovered, as required, until the inspection work is completed. Testing of utility facilities may require a maximum of 4 hours. Then, the pits shall be backfilled with clean fill, and resurfaced with temporary pavement. All traffic shall be maintained and all safety measures as stipulated shall be complied with.

**B. Materials** – N/A

**C. Methods of Construction**

1. Excavation – Existing pavement to be removed shall be neatly cut along lines of removal with a saw or other approved equipment which leaves a neat straight joint line along the juncture with subsequently replaced pavement. Excavation in the vicinity of utilities and other structures shall be performed using hand tools. Use of hand operated pneumatic and electric jackhammers will be permitted only for breaking pavement and removal of masonry, concrete and boulders, or as otherwise directed by the facility operator in consultation with the Resident Engineer. All materials excavated from test pits shall be properly disposed of away from site by the contractor. Test pits shall be excavated at locations as directed by the facility operator in consultation with the Resident Engineer. All test pits shall be excavated to a depth and size necessary to locate the existing facilities. All facilities that are encountered during the excavation of the test pit shall be supported and protected in a manner suitable to the facility operator. Sheeting shall be used when depth of excavation exceeds five feet. The sheeting required should be furnished and installed in full compliance with the State of New York and Federal Safety Codes requirements and as specified in contract, whichever is more stringent.

Care shall be taken that no existing utility facilities or other structures are broken or damaged. All broken or damaged facilities shall be reported immediately to facility operator who shall decide whether such facilities shall be repaired or replaced by company forces or by City contractor. Contractor shall excavate all material encountered, including large masses of concrete, cemented masonry and boulders, as directed by the facility operator. Any type of excavation protection used shall satisfy the following:

- Industrial Code Rule 753.
- Prevent injury to workers and the public, and avoid damage to existing utility facilities and structures, and to pavements and their foundations, from caving or sliding banks within the excavation.

□

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty Contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

2. Maintenance of Test Pits - Excavated test pits shall be maintained free of debris and kept dry by the contractor in order to permit the inspection and measurements and to determine the locations of facilities. In order to accomplish this, contractor shall, upon completion of excavation and placement of sheeting (if depth greater than five feet), furnish and install adequate steel plates and posting over the excavated pits and shall temporarily remove all equipment debris and workers, and relocate barricades in order to open the full width of street to traffic during non-working hours. The contractor shall then, at no additional cost, relocate such barricades barrels, cones and other warning devices and remove steel plates, as and when directed by the facility operator in consultation with the Resident Engineer to facilitate the inspection of exposed facilities. When work is being performed and the pits are not covered with steel plates, the contractor shall provide complete and safe access to the test pits as may be required, and he shall provide construction barricades and maintain traffic at all times as shown or as directed by the facility operator in consultation with the Resident Engineer. Upon completion of test pit inspection by the facility operator, the pit shall be backfilled by the contractor in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose.

3. Pavement and Sidewalk Restoration - After backfilling is completed, the contractor shall construct a temporary pavement consisting of six inches (6") thick asphaltic concrete mixture in roadway areas or a two inches (2") thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent replacement as specified in contract.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards of material removed from within the limits of the pit dimensions as directed by the facility operator in consultation with the Resident Engineer. The volume occupied by existing pipes or other structures remaining within the maximum payment lines will not be deducted from the total volume measured except, where the cross sectional area of these facilities exceeds

□

four (4) square feet. As determined by the facility operator(s) in consultation with the Resident Engineer, the quantity measured for payment may be proportionated among the facility operator(s) involved in total volume excavated.

**E. Price to Cover**

The unit price bid per cubic yards for test pits shall cover all costs of labor, material, equipment, insurance and incidentals required to excavate test pits, including removal and disposal of excavated materials, sheeting, steel plating, all associated maintenance of traffic, backfill and compaction, in compliance with DOT requirements, all in accordance with the specifications and at the direction of the facility operator in consultation with the Resident Engineer. The price shall also cover the cost of providing temporary pavements and sidewalks. The price shall also include the cost of providing safe access to the excavation by facility operator for the performance of certain test to determine operating status of utility facilities prior to City work. The price shall also include the necessary support and protection of all utility facilities crossing, paralleling and /or encroaching the test pit excavation.

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field coating of oil-o-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

**JB 400A – SURVEYED AND DRAFTED TEST PITS FOR UTILITY FACILITIES**

**A. Description**

Under this section, the Contractor shall furnish all labor, materials, equipment, insurance and incidentals necessary to hand excavate utilizing pneumatic tools, sheet and maintain test pits at locations approved by the facility operator in consultation with the Resident Engineer. Test pits shall be dug in order to ascertain exact locations, cover, and invert elevations, configurations, clearances, alignment and operating status of existing utility facilities. A privately licensed NYS Land Surveyor, contracted by the Contractor, shall survey the test pit using surveying equipment, take all relevant measurements and elevations as directed by the facility operator(s) in consultation with the Resident Engineer, and draft findings using AutoCAD. The contractor shall inspect jointly with the facility operator and Resident Engineer, utility facilities and other structures uncovered. Tests to determine operating status of utility facilities shall be performed by facility operator. The pits shall be covered with steel plates during non-working hours, and uncovered, as required, until the inspection work is completed. Then, the pits shall be backfilled with clean fill, and resurfaced with temporary pavement. All traffic shall be maintained and all safety measures as stipulated shall be complied with.

**B. Materials**

A licensed NYS surveyor will provide signed and sealed test pit results using surveying equipment and reference the Borough of Manhattan, Downtown horizontal datum and NAVD88 vertical datum to correspond directly with design drawings. Surveyed test pits shall be delivered in PDF and AutoCAD formats.

**C. Methods of Construction**

1. Excavation – Existing pavement to be removed shall be neatly cut along lines of removal with a saw or other approved equipment which leaves a neat straight joint line along the juncture with subsequently replaced pavement. Excavation in the vicinity of utilities and other structures shall be performed using hand tools. Use of hand operated pneumatic and electric jackhammers will be permitted only for breaking pavement and removal of masonry, concrete and boulders, or as otherwise directed by the facility operator in consultation with the Resident Engineer. All materials hand excavated from test pits shall be properly disposed of away from site by the contractor. Test pits shall be hand excavated at locations as directed by the facility operator in consultation with the Resident Engineer. All test pits shall be hand excavated to a depth and size necessary to locate the existing facilities. All facilities that are encountered during the excavation of the test pit shall be supported and protected in a manner suitable to the facility operator. Sheeting shall be used when depth of excavation exceeds five feet. The sheeting required should be furnished and installed in full compliance with the State of New York and Federal Safety Codes requirements and as specified in contract, whichever is more stringent.

Care shall be taken that no existing utility facilities or other structures are broken or damaged. All broken or damaged facilities shall be reported immediately to facility operator who shall decide whether such facilities shall be repaired or replaced by company forces or by City contractor. Contractor shall hand excavate all material encountered, including large masses of concrete, cemented masonry and boulders, as directed by the facility operator. Any type of excavation protection used shall satisfy the following:

□

- Industrial Code Rule 753.
- Prevent injury to workers and the public, and avoid damage to existing utility facilities and structures, and to pavements and their foundations, from caving or sliding banks within the excavation.

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty Contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

2. Maintenance of Test Pits – Hand excavated test pits shall be maintained free of debris and kept dry by the contractor in order to permit the inspection and measurements and to determine the locations of facilities. In order to accomplish this, contractor shall, upon completion of excavation and placement of sheeting (if depth greater than five feet), furnish and install adequate steel plates and posting over the hand excavated pits and shall temporarily remove all equipment debris and workers, and relocate barricades in order to open the full width of street to traffic during non-working hours. The contractor shall then, at no additional cost, relocate such barricades barrels, cones and other warning devices and remove steel plates, as and when directed by the facility operator in consultation with the Resident Engineer to facilitate the inspection of exposed facilities. When work is being performed and the pits are not covered with steel plates, the contractor shall provide complete and safe access to the test pits as may be required, and he shall provide construction barricades and maintain traffic at all times as shown or as directed by the facility operator in consultation with the Resident Engineer. Upon completion of test pit inspection by the facility operator, the pit shall be backfilled by the contractor in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose.

3. Pavement and Sidewalk Restoration - After backfilling is completed, the contractor shall construct a temporary pavement consisting of six inches (6") thick asphaltic concrete mixture in roadway areas or a two inches (2") thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent replacement as specified in contract.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards of material removed from within the limits of the pit dimensions as directed by the facility operator in consultation with the Resident Engineer. The volume occupied by existing pipes or other

□

□

structures remaining within the maximum payment lines will not be deducted from the total volume measured except, where the cross sectional area of these facilities exceeds four (4) square feet. As determined by the facility operator(s) in consultation with the Resident Engineer, the quantity measured for payment may be proportionated among the facility operator(s) involved in total volume hand excavated.

**E. Price to Cover**

The unit price bid per cubic yards for test pits shall cover all costs of labor, material, equipment, insurance and incidentals required to hand excavate test pits, including removal and disposal of hand excavated materials, sheeting, steel plating, all associated maintenance of traffic, backfill (paid under the appropriate City items) and compaction, in compliance with DOT requirements, all in accordance with the specifications and at the direction of the facility operator in consultation with the Resident Engineer. The price shall also cover the cost of providing temporary pavements and sidewalks. The price shall also include the cost of providing safe access to the excavation by facility operator for the performance of certain test to determine operating status of utility facilities prior to City work. The price shall also include the necessary support and protection of all utility facilities crossing, paralleling and /or encroaching the test pit excavation.

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field coating of oil-o-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

**JB 401 - TRENCH EXCAVATION FOR ADJUSTMENT OF UTILITY FACILITIES****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to excavate by hand to locate and expose subsurface utilities encountered during construction in preparation for horizontal and vertical movement (covered by other Sections), and to support and maintain and protect the integrity of utility facilities including but not limited to:

1. Conduits;
2. Conductor(s) and/or cable(s);
3. Concrete Encased Conduit Bank(s);
4. Steel Pipe(s);
5. Electric transmission facilities.

The trench to be excavated shall be determined by the size of the utility and the extent of adjustment required to avoid interferences as detailed on Sketch JB 402 A during all phases of contract work. The work shall be performed in accordance with the specifications, and at the directions of the facility operator in consultation with the Resident Engineer.

**B. Materials**

All materials used to support and maintain and protect shall be similar to those indicated on Sketches JB 100 A and 100 A-1 and shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer.

**C. Methods of Construction**

The Contractor shall cut, break and remove various thickness of surface and base pavement, excavate by hand to expose, support and protect all utility facilities within the trench and then furnish and tamp backfill after work has been completed by the parties indicated under other Sections. The facility operator(s) shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the utility. Upon exposing the affected utilities sufficiently to determine relationships and/or clearances at the sole discretion of the facility operator in consultation with the Resident Engineer, the Contractor shall be permitted to proceed with a combination of hand and machine excavation sufficiently to wingback all interferences of cable and conduit. The trench shall be adjusted so as to provide a nominal cover of 24" over the highest conduit. The width of the trench shall be as directed by the facility operator in consultation with the Resident Engineer. The bottom of the trench shall be graded smooth and tamped to minimize initial settlement and to avoid "point" support of conduits. All stones projecting into the trench bottom shall be removed, and the voids backfilled before conduits are placed. Where streets are not to final grade, the cover shall be measured from the final grade, or the existing grade, whichever provides the deeper trench.

□

□

Some of the existing coatings on oil-o-static pipes and/or return lines may consist of coal tar wrap and may contain asbestos and/or PCB's. Upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines encroaching/exposed, the Con Edison representative must visually inspect all oil-o-static and return lines that are exposed during the performance of this contract. The Contractor shall notify the Con Edison representative to perform this inspection and subsequent testing where the coating appears to lack integrity. If the visual inspection/tests reveal the presence of asbestos and/or PCB's, the work will be considered "specialty work" and be performed by Con Edison forces or by a specialty Contractor hired by Con Edison in accordance with JB 302 and the latest version of G-8209. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with testing, any additional excavation in order to perform "specialty work" and any and all delays incurred shall be at the Contractor's expense. The Contractor will coordinate their operations to allow this work to be performed. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

**D. Method of Measurement**

The Contractor shall be paid per cubic yard (C.Y.) of trench actually excavated to the limits directed as detailed in Sketch JB 402 A and to the satisfaction of the facility operator in consultation with the Resident Engineer. When two or more utility facilities requiring horizontal or vertical adjustment with different owners are in the same trench, the facility operators shall jointly determine the percentage of ownership of the trench.

**E. Price to Cover**

The unit price bid per cubic yard for excavation shall include the cost of all labor, materials, equipment, insurance, and incidentals necessary to completely expose, support and protect and maintain the integrity of the facilities without disruption of service to the customers and in accordance with the Contract Documents, associated maintenance of traffic, and traffic plates and sheeting that may be required, cut, break and remove various thickness of surface and base pavement, excavate by hand to expose existing structures, furnish, place and tamp backfill after required vertical and/or horizontal adjustments have been completed under other Sections. Any required removing, trucking, storing, and disposing of material shall be deemed included in the unit price. The unit price shall also include the cost of providing temporary pavement restoration. Permanent pavement restoration shall be paid under other items. The cost for supporting and protecting all other utilities encountered including the installation of slings and beams installed for utility support shall be paid under other applicable items, if required.

The price shall cover any costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform the visual inspection of exposed oil-o-static and return lines outside the carbon fiber wrap limits and additional excavation that may be required to perform testing if the existing field coating appears to lack integrity; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity. Payment for field coating

□

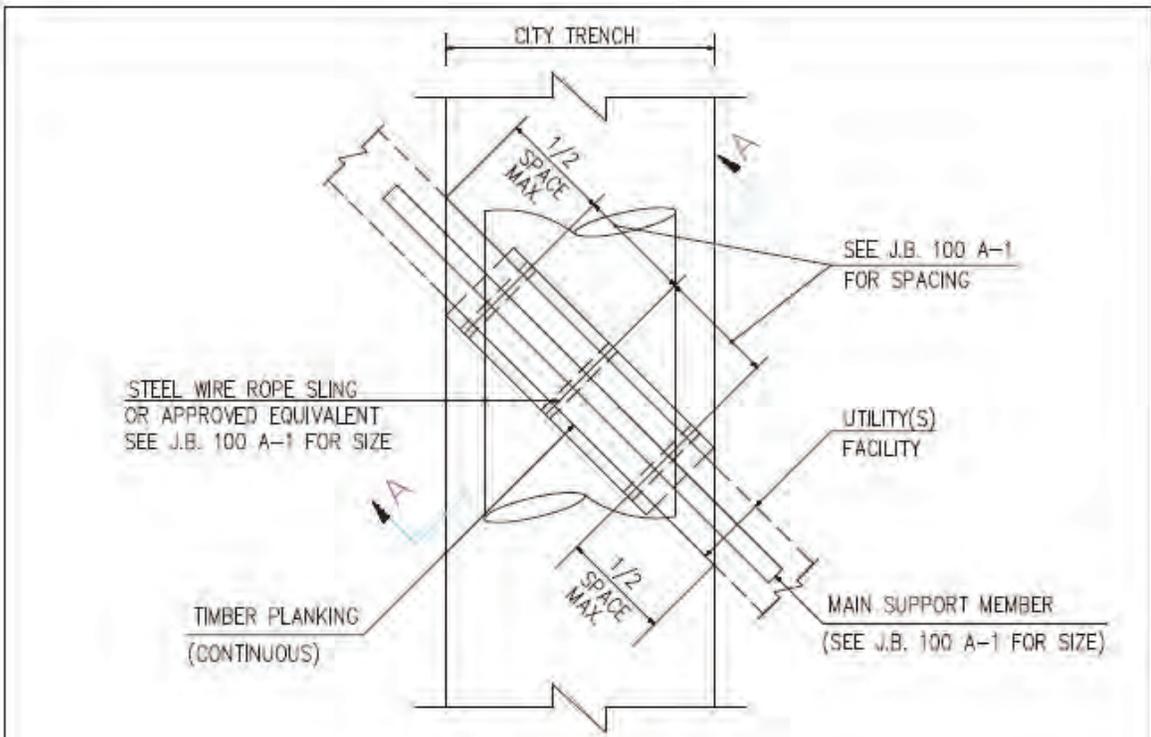

□

of oil-to-static feeder pipes, as required, shall be covered under JB 302 in accordance with the latest version of G-8209.

□

**JB 402B – HORIZONTAL AND VERTICAL ADJUSTMENT OF ELECTRIC TRANSMISSION FACILITIES TO FINAL POSITION**

**A. Description**

Under this section, Con Edison or an approved contractor approved by Con Edison shall provide all labor, materials, equipment, insurance and incidentals necessary and required to adjust, support, protect, maintain, and accommodate the integrity of transmission facilities, including but not limited to:

- 1. Oil-o-Static pipes;
- 2. Return lines;
- 3. Freeze lines;
- 4. Fuel lines.

The work shall be performed in accordance with the latest version of CE-SI-1080, Guidelines for Protecting Existing Underground Transmission Electric Facilities from Nearby Construction Activities and at the direction of the facility operator in consultation with the Resident Engineer.

Contractor to refer to section 3.6 of the latest version of CE-SI-1080 for special notes for construction activities.

Contractor to refer to section 3.7 of the latest version of CE-SI-1080 for emergency action plan.

**B. Materials**

Any and all materials/means used to hang, support and/or protect the transmission facilities must maintain the integrity of the pipe coating. Any and all damage to the coating must be reported to the Con Edison representative on site; and no backfilling of the pipe can be performed until pipe coating is restored and inspected.

All materials used to adjust, support, protect, maintain and accommodate the integrity of transmission facilities shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer.

**C. Methods of Construction**

Test pits shall be performed under specification JB 400A to identify exact locations of Con Edison transmission facilities prior to construction as directed by Con Edison in consultation with the Resident Engineer. The transmission facilities will be surveyed by the contractor in their existing position anywhere that they will require adjustment horizontally/vertically, as directed by Con Edison in consultation with the Resident Engineer, prior to movement into final position. These same transmission facilities will be surveyed by the contractor after they are adjusted to their final position.

The Contractor shall provide proper support of all transmission facilities during excavation activities and while the transmission facilities are exposed. Payment shall be covered under various appropriate joint bid items.

In non-carbon fiber wrap areas, under appropriate joint bid excavation specifications, Con Edison or a specialty Contractor hired by Con Edison will visually inspect, test and perform

□

□

necessary "specialty work" of any coating that appears to lack integrity on exposed oil-o-static and return lines in accordance with JB 302 and the latest version of G-8209 prior to adjustment/movement and/or support of transmission lines. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor, all costs associated with additional inspection, testing and "specialty work" performed to repair and remediate the coating and any and all delays incurred shall be at the Contractor's expense. If the integrity of the field coating is compromised on the oil-o-static and/or return lines' due to adjustment/movement and/or support of transmission lines per Con Edison guidelines, all costs associated with additional inspection, testing and "specialty work" performed to repair and remediate the coating and any and all delays shall be covered and paid for under JB 302. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

In carbon fiber wrap areas, Contractor to refer to JB 123 specification for details of visual inspection/testing and any repairs and remediation of damaged coating as required.

Methods of construction shall include but not be limited to the following:

1. Support

- a. Prior to any transmission facility pipe support work, the Contractor shall submit to Con Edison Engineering the following for review and approval:

Drawings drawn to scale showing plans, sections and details of temporary support design stamped by a NYS Professional Engineer.

Supporting calculations by the NYS Professional Engineer.

The design span for temporary transmission facility supports shall satisfy the allowable stress and deflection limits in accordance with ASME B31.1 considering both static loads and internal operating pressure. Additional loads due to jacking to move the transmission facilities shall be accounted for in the support design and in accordance with reference drawing 516411.

Typical transmission facility parameters are listed in Exhibit A of the latest version of CE-SI-1080 for calculating design loads for temporary pipe supports.

If the transmission facility being placed in final position has not been carbon fiber wrapped under this contract, the maximum spacing between supports shall not exceed 10 feet.

2. Vibration monitoring program

- a. Based on the Contractor's means and methods for support and protection of transmission facilities, refer to Section 3.3 in the latest version of CE-SI-1080 for details of the vibration monitoring program.

□

- b. Construction activities will be halted if, due to vibrations, electric transmission facilities coating is damaged and needs to be repaired. Any and all delays incurred shall be at the expense of the Contractor.

3. Adjust or move transmission facilities and/or support

- a. Prior to any transmission facility pipe adjustment work, the Contractor shall request for permission to move any Con Edison electric transmission facility from the Con Edison on-site construction representative. The Con Edison on-site construction representative will request permission from the Con Edison Energy Control Center. Prior to the Contractor moving pipes in any direction, approval through the Con Edison on-site construction representative is required.
- b. To perform electric transmission facility pipe adjustments that may be required for repair, remediation, abatement activities and/or moving into final position; the Contractor shall have and use acceptable equipment to lift/move pipes as necessary. Acceptable equipment for lifting feeder/oil return pipes include: air bag systems with appropriate regulators/controllers or come-alongs/chain hoists with nylon slings around pipes only. Excavation equipment (such as a backhoe) or other hydraulic hoists or jacks are not to be used.
- c. Transmission facilities shall be relocated horizontally and/or vertically as required to perform carbon fiber wrapping of pipes, as directed by the facility operator in consultation with the Resident Engineer, and the cost shall be covered under JB 123. Adjustment of transmission facilities to final position shall be covered under this item.
- d. Pending a condition assessment of the transmission facility by Con Edison, the contractor may be allowed to adjust the location and/or elevation of existing transmission facilities by transitioning the pipes with the minimum required wingback distances for the required offsets as outlined below. Nominal pipe size excludes repair barrels/clamps of varying diameters, lengths and locations:

Nominal Pipe Size [in]	Minimum Required Wingback [ft]		
	3" to 6" offset	6" to 9" offset	9" to 12" offset
6"	98	120	138
7"	97	119	137
8"	111	136	157
10"	129	158	183
12"	147	180	208

Contractor to refer to Section 4.0, Exhibit A, in the latest version of CE-SI-1080 for typical transmission steel pipe/conduit parameters and drawing 516411.

- e. A work plan detailing the steps and means of moving the pipe shall be submitted to Con Edison Engineering for approval. The plan shall identify the incremental sequence and distances to move the pipe in achieving the offset, a description of

□

jacks (or other equipment) to move the pipe, their locations and load capacity, and the protective measures that will be employed to not damage the pipe coating.

- f. If adjustment of transmission facilities greater than 12" is required, a work plan detailing the steps and means of moving the pipe incrementally shall be submitted to Con Edison Engineering for approval. As stated above, the plan shall identify the incremental sequence and distances to move the pipe in achieving the overall offset, a description of jacks (or other equipment) to move the pipe, their locations and load capacity, and the protective measures that will be employed to not damage the pipe coating.

**D. Method of Measurement**

The quantity to be measured for moving to final position, protecting and supporting transmission facilities shall be paid for by the linear foot (L.F.) of each line. A linear foot shall be defined as one (1) single pipe/line measured along its longitudinal axis that has been moved to its final position horizontally/vertically. Minimum required taper wingback lengths provided in the table above shall be paid for per longitudinal linear foot of pipe/line across varying appropriate pay items ranging from 0" up to and including 6", greater than 6" up to and including 9" and greater than 9" up to and including 12" adjustment in any direction.

Each type of utility adjustment shall be paid for separately; the types of utility adjustments are defined as follows:

- JB 402B.1A Existing transmission facility up to and including 6" nominal pipe size, adjusted 0" up to and including 6" in any direction, to final position
- JB 402B.1B Existing transmission facility greater than 6" nominal pipe size up to and including 12" nominal pipe size, adjusted 0" up to and including 6" in any direction, to final position
- JB 402B.2A Existing transmission facility up to and including 6" nominal pipe size, adjusted greater than 6" up to and including 9" in any direction, to final position
- JB 402B.2B Existing transmission facility greater than 6" nominal pipe size up to and including 12" nominal pipe size, adjusted greater than 6" up to and including 9" in any direction, to final position
- JB 402B.3A Existing transmission facility up to and including 6" nominal pipe size, adjusted greater than 9" up to and including 12" in any direction, to final position
- JB 402B.3B Existing transmission facility greater than 6" nominal pipe size up to and including 12" nominal pipe size, adjusted greater than 9" up to and including 12" in any direction, to final position

□

□

**E. Price to Cover**

The unit price bid per linear foot (L.F.) of transmission facility shall cover the cost of all labor, material, equipment, insurance, and incidentals necessary to shift, adjust, support, protect, maintain and accommodate the integrity of transmission facilities (measured by nominal pipe size, excluding repair barrels/clamps of varying diameters, lengths and locations) without damage to coating or disruption of service to the customers and in accordance with contract documents. The unit price bid shall also include the cost to: furnish and install supports, slings and beams for utility support; changes of sheeting method and/or configuration when required and where necessary to accommodate the utilities during all phases of contract work; any impact associated with maintenance and protection of traffic; and removal of sheeting around the utilities, and all else necessary and required to adjust the electric transmission facilities to final position.

The price to cover all survey work to determine the range of movement of transmission facilities to final position is covered in the cost of various bid items.

Thermal Sand/Sand backfill in accordance with the latest versions of EO-14620-13 and CE-SI-1080 shall be used around utility facilities and will be paid for under item JB 303 and the appropriate City items. Clean backfill shall be used if necessary starting approximately 15" above the top of the transmission facility and paid for under the appropriate City bid items.

In non-carbon fiber wrap areas, if the field coating is damaged by the Contractor a Con Edison approved specialty contractor will perform an additional visual inspection/testing of exposed oil-o-static and return lines and repair and remediate the coating as required. All costs to perform this work and any additional excavation that may be required, modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity shall be covered by the Contractor. If the integrity of the field coating is compromised, due to adjustment/movement and/or support of transmission facilities performed per Con Edison guidelines, payment for additional visual inspection/testing, repair and remediation and field coating shall be covered and paid for under JB 302 in accordance with the latest version of G-8209.

In carbon fiber wrap areas, Contractor to refer to JB 123 specification for price to cover inspection/testing and any repair and remediation of damaged coating as required to install the carbon fiber wrap. If the integrity of the field coating is compromised, due to adjustment/movement and/or support of transmission facilities to final position, performed per Con Edison guidelines, payment for additional inspection/testing, excavation, repair, remediation and field coating shall be covered and paid for under JB 123.

**JB 402T - HORIZONTAL AND VERTICAL ADJUSTMENT OF TELECOMMUNICATIONS FACILITIES****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to adjust and support and protect and maintain and accommodate the integrity of telecommunication facilities including but not limited to:

1. Conduit(s);
2. Cables and Air Pipe
3. Concrete Encased/Capped Conduit Banks

The work shall be performed in accordance with specifications and at the direction of the facility operator in consultation with the Resident Engineer.

**B. Materials**

All materials used to adjust and support and protect and maintain and accommodate the integrity of utility facilities shall be similar to those indicated on the standard Sketches JB 100 A & 100 A-1 and shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer.

Materials used for replacing conduit(s) removed under this item shall be supplied by and installed by the Contractor and shall include but not be limited to the following:

1. Bends
2. Split and Solid Conduit(s) PVC and Steel
3. Couplings and Adapters PVC, Tile and Steel
4. Straps or plastic ties

PVC conduit and fittings shall be as supplied by American Pipe and Plastics, Type "C" or approved equal.

Steel Pipe and fittings shall conform to ASTM A53 Schedule 40

Tile to PVC adaptors shall be as supplied American U-Tel or approved equal.

**C. Methods of Construction**

Lengths of "wing-back" shall be determined by the facility operator in consultation with the Resident Engineer. All work performed prior to that approval shall be at the contractors risk.

Methods of construction shall include but not be limited to the following:

**1 Removal and Support**

- a. Break with hand held power tools, remove and dispose of plain or reinforced concrete encasement.
- b. Break with hand held power tools, remove and dispose of conduit(s) enclosures and conduit that contain conductor(s) and/or cable(s) except steel/Iron conduits, inner ducts and 1 ¼" to 1 ½" PVC "quad ducts. Breaking – "ringing and ripping" - of steel/iron conduits belonging to ECS shall be performed by ECS forces only. Contractor shall make safe the work area to accommodate the ECS forces.
- c. Support and protect exposed conduits, cables, innerduct and airpipe as shown in Sketch JB 100A-1 and approved by the facility operator in consultation with the Resident Engineer.

□

- d. ECS tenants cables may require inspection, testing and encapsulation before they can be shifted. Contractor shall make safe the work area to accommodate these forces. Contractor shall be notified by the facility operator of the ECS tenant requirements before the conduits are broken-out.

2 Adjust or Move Conductor(s) and/or cable(s) and support

- a. Cable shall be relocated horizontally and/or vertically as directed by the facility operator in consultation with the Resident Engineer
- b. Support and protect conductors and/or cables as shown on Sketch # JB 100 A-1 and/or as directed by the facility operator.

3. Replacement, Encasement, Protection and Support

- a. Replace vacant and loaded conduit(s) with solid and/or split conduit(s) and adapters.
  - 1) Vacant Conduit - Repairs to conduits shall not be permitted. All damaged or impaired lengths of conduit(s) shall be removed and replaced with new conduit(s). The number of vacant conduits replaced shall be confirmed by the facility operator.
  - 2) Loaded Conduit - Replacement of conduits that are removed from around existing cable(s) or innerduct shall be accomplished with split plastic (PVC) or split steel conduits as directed by the facility operator. Where split and solid plastic or steel conduit is used, the conduit(s) shall be spaced 1½ inches from each other. All split PVC shall be secured with plastic straps spaced at a maximum distance of eighteen (18") inches. Plastic conduit shall be joined with plastic couplings.
  - 3) Adapting - Joining plastic conduit to existing conduits of other diameters or material shall be done using single or multiple adapters, (supplied by contractor).
    - b. If due to subsurface conditions, the cover is less than 20" from finished grade, the duct shall be protected with steel plates furnished by the contractor and measured for payment under Item JB 403T.
- c. Support and protect cable(s) and/or conductor(s) and conduit(s).
- d. Verify vacant conduits and provide pull ropes
- e. Encase all exposed conduit with concrete (f'c = 1200 to 1500 psi maximum) with slump commensurate to completely fill voids around conduits. Concrete encasement shall extend to two (2") inches beyond the limits of the duct bank vertically and horizontally.

**D. Method of Measurement**

The quantity to be measured for breaking out conduits, removing concrete, moving, protecting and supporting conductors and replacing conduits with split and solid conduit, shall be paid for by the linear foot (L.F.) of each conduit replaced. A linear foot of conduit shall be defined as one (1) single conduit measured along its longitudinal axis that has been broken out or moved from its original location either horizontally and/or vertically and measured in its final location. Quad PVC ducts produced as one unit shall be consider one duct for each quad unit. All conduits removed and not restored shall be covered for payment under the appropriate bid items for Removal of Abandoned Masonry for Utility Facilities and/or Removal of Abandoned Utility Conduits. Multiple tile duct bank with concrete protection cover is not considered concrete encasement.

Each type of utility adjustment shall be paid for separately, the types of utility adjustments are defined as follows:

□□□□□□□□0□□

JB-402T.J2 Existing Non-Concrete Encased Conduits Placed in Final Position without Concrete Encasement. (L.F.) in Which Only Conduit Joints are Broken Out and Conduits Remain Intact.

JB-402T.J2A Existing Non-Concrete Encased Conduits Placed in Final Position with Concrete Encasement. (L.F.) in Which Only Conduit Joints are Broken Out and Conduits Remain Intact.

**E. Price to Cover**

The unit price bid per linear foot (L.F.) of conduit shall cover the cost of all labor, material, equipment, insurance, and incidentals necessary to shift, adjust, support, protect, maintain and accommodate the integrity of utilities without disruption of service to the facility operator's customers and in accordance with contract documents. The price bid shall also include the cost of: breaking out, removal and disposal of plain or reinforced concrete encasements, conduits (except iron/steel), support of cables/conduits, replacement with field split, split and solid conduits, adapters, clamps, straps and couplings; verify vacant conduits and provide pull ropes; furnish and install concrete encasement, supports, slings and beams for utility support; changes of sheeting method and/or configuration when required and where necessary to accommodate the utilities during all phases of contract work; and removal of sheeting around the utilities, and all else necessary and required to complete the work.

□

The unit price shall include providing access to the facility operator pipe-ripping crews and tenants to verify and test cables before, during and after the pipe ripping operation completed by the facility operator or specialized contractor hired by the facility operator and after conduit removal by the Contractor. The unit price shall include, but not limited to, opening and closing of fences; removal and replacement of temporary timber curb and opening and closing of traffic plates. Access to adjacent manholes impacted by the run is included in this item. JB 450 shall not be used in conjunction with JB-402T as JB-402T covers access to the work site at all times for work required under this item.

**JB 403T – FURNISH AND INSTALL STEEL PROTECTION PLATES FOR TELECOMMUNICATIONS FACILITIES**

**A. Description**

Under this section, the Contractor shall furnish and install as required permanent steel protection plates over telecommunications facilities where directed by the facility operator(s).

**B. Materials**

Material shall be:  
1/4" thick ASTM A-36 plates. Maximum size 24" by 48".  
3/8" thick ASTM A-36 plates. Maximum size 12" by 18".  
Thickness to be determined by the facility operator(s)

**C. Method of Construction**

Steel protection plates shall be placed in accordance with the attached facility operator(s) standard sketch JB 403T. All protective plates shall overlap a minimum of 3".

**D. Method of Measurement**

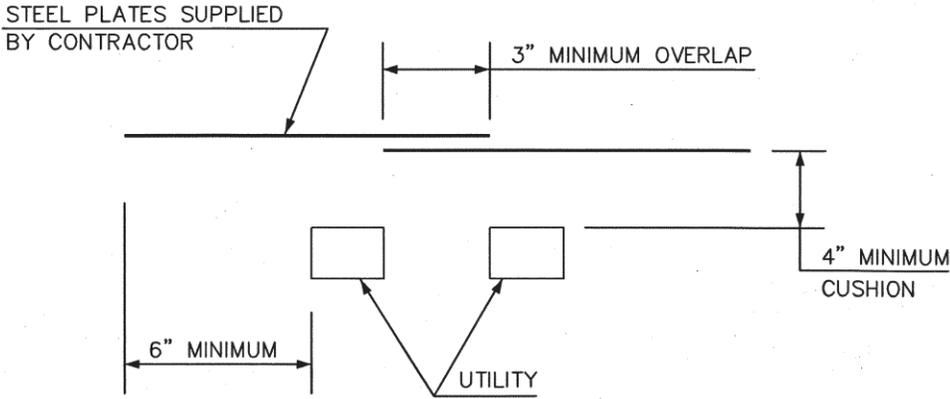

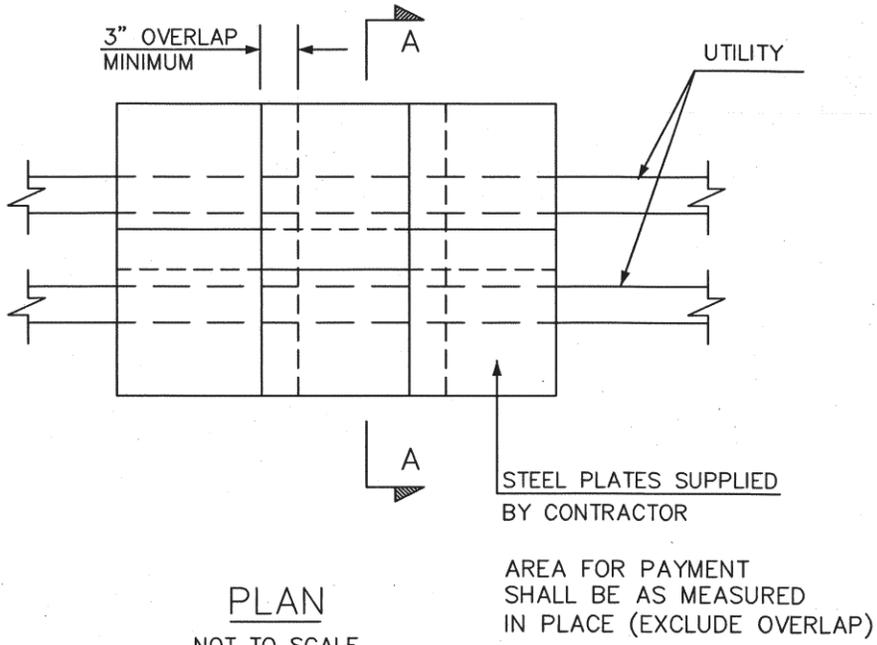

The quantity for payment shall be the area of permanent steel plating protection furnished and installed (excluding overlap) and measured in place in Square Feet (S.F.).  
JB 403T.1 – Furnish and Install 1/4" thick steel plate (S.F.)  
JB 403T.2 – Furnish and Install 3/8" thick steel plate (S.F.)

**E. Price to Cover**

The price shall cover the cost of all labor, material, equipment, insurance, and incidentals necessary to complete the work.

**F. References**

**JB 404 – Pier and/or Plate Method of Protection for Ductile Iron Water main with less than 24” Cover**

**A. Description:**

Under this item, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to protect ductile iron water mains that are installed with a cover of 24 inches or less crossing over various utility facilities. The work shall be performed in accordance with the contract plans, specifications and at the direction of the facility operator(s), upon approval from the Resident Engineer.

**B. Materials:**

The Contractor shall supply all materials (concrete, beams, plates, etc.) necessary to provide the pier and plate method of protection as shown on BWS Standard Drawing No. 46464-Z.

**C. Method of Construction:**

The Contractor shall provide pier and plate protection in accordance with BWS Standard Drawing No. 46464-Z. The Contractor shall support, maintain and accommodate the water main and all other utility facilities during the installation of the pier and plate components. The Contractor shall be solely and totally responsible for the disturbances and/or any damages to such facilities.

**D. Method of Measurement:**

The quantity to be measured for payment shall be the additional amount of square foot (S.F.) of steel plate required to protect ductile iron water mains crossing over utility facilities with a cover of 24 inches or less, or for other shallow facilities where the pier and plate method may be required, as directed by the Facility Operator upon approval from the Resident Engineer.

**E. Price to Cover:**

The price shall cover the cost of all supervision, labor, material, equipment, and incidentals necessary to construct the specified method of protection. The work shall also cover the cost to cut, break, and remove additional pavement, additional excavation, sheeting, maintenance of traffic, traffic plates, and to furnish and install additional backfill and pavement restoration. This item does not cover the costs for special care excavation around utilities that are covered under separate items.

**F. References:**

- 1. BWS Standard Drawing No. 46464-Z.

□

**JB 404A – ALLOWANCE FOR PERMANENT SUPPORT OF CRITICAL UTILITY FACILITIES IN AREAS OF SIGNIFICANT SETTLEMENT**

**A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals necessary and required to permanently support, maintain, protect and accommodate the integrity of utility facilities, including but not limited to:

- 1. Oil-o-Static facilities;
- 2. Return lines;
- 3. Communication lines;
- 4. Fuel oil lines;
- 5. Freeze lines;

of various sizes and configurations as shown on the contract documents and field verified by the Contractor at the start of construction. To fully understand the design implications of the potential interference and to proceed with the design work, the Contractor, after receiving the NOTICE TO PROCEED, shall excavate test pits identified by Con Edison and performed under specifications JB 400 and JB 400A to identify exact locations of Con Edison facilities within areas of anticipated significant settlement that require permanent support prior to construction. The Contractor will submit their findings to Con Edison and the Resident Engineer. Con Edison shall determine if and where the design of a permanent support system is required due to significant settlement under capital project SANDRESM1.

**B. Materials**

All materials used (concrete, steel reinforcement, beams, etc.) shall be determined by Con Edison's design and shall be supplied by the Contractor and approved by the facility operator. Contractor to refer to sketches JB 404A-A and JB 404A-B for conceptual design.

Type, size and spacing of piles and pile caps, and longitudinal and perpendicular grade beams shall be designed and provided by Con Edison to the Contractor.

Corrosion resistant protection shall be installed to protect the permanent support system for a life cycle analysis of 150 years.

**C. Methods of Construction**

The Contractor shall permanently support and protect all ten (10) pipes in the trench: five (5) electric transmission lines, three (3) return lines, and two (2) communication lines as shown on the Standard sketches. If any additional Con Edison facilities are unearthed during construction the Contractor shall notify Con Edison immediately to determine whether the facility is critical and how to proceed with permanent support and protection. Sketches JB 404A-A and JB 404A-B are to be used as a reference for the Contractor for scheduling purposes. Actual permanent support designs will be provided by Con Edison after test pit results are reviewed and analyzed by Con Edison. At which point alternate methods and/or one or a combination of methods shown on the JB sketches shall be permitted if proposed by the Contractor and approved by Con Edison. It is the intent of this item to build a permanent support, maintain, protect and accommodate the integrity of all utility facilities, and all combinations and configurations of utility facilities, encountered in the significant settlement areas.

The Contractor shall temporarily support, maintain and accommodate the utility facilities during the installation of the permanent support system components. The Contractor shall be required to perform all additional labor, provide all material, and accommodate all work methods in order to complete permanent support installation and avoid settlement of any kind on Con Edison facilities. Such work shall be performed as directed by the facility operator in consultation with the Resident Engineer and in accordance with contract specifications and the latest edition of CE-SI-1080, Guidelines for Protecting Existing Underground Transmission Electric Facilities from Nearby Construction Activities. The Contractor shall be solely and totally responsible for disturbances and/or any damages to such facilities.

The facility operator shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held tools; saw cutting is not permitted in any way) to remove the pavement section. Upon exposing the utility facilities sufficiently at the sole discretion of the facility operator in consultation with the Resident Engineer to determine relationships and/or dimensions, the contractor shall be permitted to proceed with hand excavation only, within a zone of protection whose limit shall be defined as a perimeter located 24-inches from the outside face of each utility facility. The contractor shall properly dispose of all material. Size and location of excavation shall be as directed by the facility operator in consultation with the Resident Engineer. Trenches shall be excavated to a depth and size necessary to facilitate the installation of the permanent support system and in conformance with the applicable specification. All existing utility facilities that are encountered during trench excavating shall be supported, protected, maintained, accommodated and adjusted as needed in a manner suitable to the facility operator in consultation with the Resident Engineer. The sheeting required shall be furnished and installed in full compliance with the State of New York and Federal Safety Code requirements and in compliance with applicable specifications and submitted, signed and sealed by a Professional Engineer licensed in the State of New York with supporting material, to Con Edison and the Department of Design and Construction (DDC) for review and approval.

Care shall be taken that no existing utility facilities or other structures are broken or damaged. Care shall be taken to avoid damage to existing utility facilities and structures, and to pavements and their foundations, and to avoid caving or sliding banks within the excavation. Any damage to existing utility facilities will be repaired by the Contractor, at the Contractor's expense, and to the satisfaction of the Owner of the facility.

Under other appropriate joint bid specifications, Con Edison or a specialty Contractor hired by Con Edison (or the Contractor's Con Edison approved Specialty Contractor in areas of carbon fiber wrap) will visually inspect, test and perform necessary "specialty work" or repairs and remediation of any coating that appears to lack integrity on exposed oil-o-static and return lines in accordance with JB 302 and the latest version of G-8209 prior to construction and installation of this permanent support system. If any damage to the oil-o-static and/or return lines' field coating is caused by the Contractor due to construction of this permanent support system, all costs associated with additional testing and work performed to repair and remediate the coating and any and all delays incurred shall be at the Contractor's expense. The latest version of Con Edison Gas Operations Standard G-8209, System B will be the only method that will be allowed. The coating shall be verified and accepted by the Con Edison representative prior to backfilling.

Based on the final permanent support system design, the facility operator in consultation with the Resident Engineer shall determine if vibration monitoring is required and how many monitoring locations are needed. Bracing of piles and means and methods for backfill to be approved by Con Edison in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose. In instances where the pile supports are in such close proximity to flood walls, retaining walls or other structural foundations to undermine their integrity, permanent supports may be integrated with SANDRESM1 foundation structures. Contractor to submit signed and sealed designs by a Professional Engineer licensed in the State of New York with supporting material, to Con Edison and DDC for review and approval.

**D. Method of Measurement**

The total estimated cost of this item is the "fixed sum" amount shown for this item in the Bid Schedule. No guarantee is given that the "fixed sum" amount shall be fully or partially used.

The "fixed sum" amount is included in the bid solely to ensure that sufficient monies will be available to pay the Contractor for the additional cost necessary to accommodate the possible need for a permanent support system to eliminate any settlement on Con Edison's facilities. Con Edison to determine if and where this permanent support system is required.

**E. Price to Cover**

The price shall cover the cost of all labor, material, equipment, insurance and incidentals necessary and required to construct a complete permanent support system and maintain, protect and accommodate the integrity of the utilities without disruption of service to the customers in accordance with contract documents, the specifications and as directed by the facility operator in consultation with the Resident Engineer. The price shall include the cost of: concrete and/or steel beams, epoxy coated steel reinforcement, corrosion resistant protection with a life cycle analysis of 150 years, perpendicular and longitudinal grade beam connections, beam connections to pile caps, supports, and slings; changes of any work methods including sheeting and configuration where necessary to accommodate the utility; installation of Maloney Model 60 Casing Insulators to each pipe (supplied by Con Edison); a combination of hand and hand and machine excavation within the zone of protections including widening the trench to accommodate the permanent support system as shown on JB Sketches JB 404A-A and JB 404A-B, temporary pavement as required, backfilling and compacting around, over, under and between the zones of protection of the utilities as required; and removal of sheeting around the utilities, and the cost of any impact with maintenance and protection of site and traffic.

Price to cover pile labor, material, equipment, insurance, furnishing, installing and incidentals necessary under item 70.13MN. Sand backfill shall be used around utility facilities and will be paid for under item JB 303.

Any and all excavation required to install the permanent support system, and work method accommodations or change in construction operations including, but not limited to, sheeting alterations shall be included in the cost of all joint bid items. Temporary support and protection of any and all Con Edison facilities encountered during installation of this permanent support system are included in all the joint bid items. Temporary support of this system itself during construction and prior to placement of backfill is included in all the joint bid items. All costs for vibration monitoring are included in all the joint bid items.

□

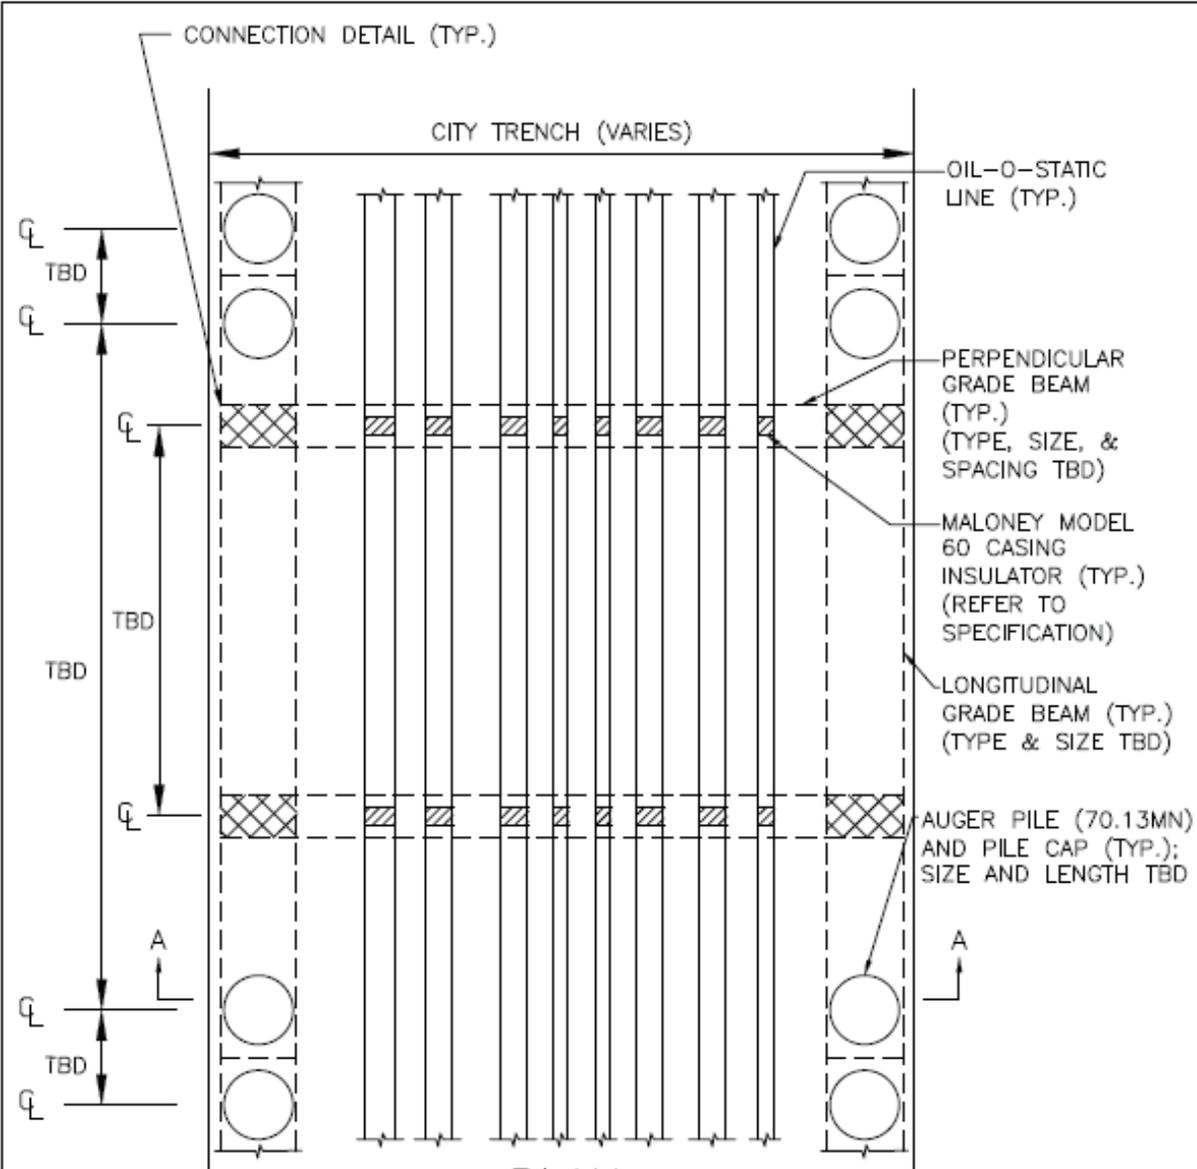

The costs incurred for the Contractor to coordinate with Con Edison forces or their Specialty Contractor to perform additional visual inspection of exposed oil-o-static and return lines and additional excavation that may be required if the field coating is damaged by the Contractor during construction of this permanent support system; repairs to field coating and remediation as required by the Specialty Contractor; modification of work methods and/or construction sequencing, any impact with maintenance and protection of traffic, and loss of productivity shall be covered at the Contractor's expense. The cost of any specialty work required due to coating that appears to lack integrity on exposed oil-o-static and return lines shall be covered under other appropriate joint bid items.

When Con Edison provides the design to the Contractor, pricing will be based on time and material or an agreed upon unit price by the Contractor, the Department of Design and Construction and Con Edison.

**JB 405 - EXCAVATION FOR INSTALLATION OF UTILITY FACILITIES**

**A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals necessary to excavate, maintain trenches and backfill for the installation of new utility facilities including but not limited to:

- 1. Conduits
- 2. Non-cost sharing gas facilities
- 3. Steam mains
- 4. Steel pipe(s)

The trench to be excavated shall be determined by the size of the utility facility to be installed. The work shall be performed in accordance with applicable specifications, at the direction of the facility operator.

**B. Materials**

All materials used to excavate and prepare trenches shall be supplied by the Contractor and be approved by the facility operator.

**C. Methods of Construction**

1. Excavation – The Contractor shall saw cut and/or break and remove existing roadway which may include but is not limited to, asphalt, concrete and cobblestone, utilizing approved equipment that leaves a neat straight joint line along the juncture with subsequently replaced pavement. The Contractor shall be permitted to excavate utilizing a combination of machine and hand excavation, as field conditions warrant and as directed by the facility operator. The trench shall be adjusted so as to provide a nominal cover as defined in the specifications for the facility being installed over the new utility facilities or as required based on field conditions, applicable specifications, or as directed by the facility operator. The width of the trench shall be as directed by the facility operator or as shown on Sketch JB 603T (ECS only). The bottom of the trench shall be graded smooth with a minimum cushion of 3 inches of backfill material or in conformance with applicable specification and be compacted, to minimize initial settlement and to avoid "point" support of new utility facilities. All stones projecting into the trench bottom shall be removed, and the voids backfilled before the new utility facilities are installed. Where streets are not to final grade, the cover shall be measured from the final grade, or the existing grade, whichever provides the deeper trench. Excavation in the vicinity of utilities and other structures shall be performed using hand tools. The contractor shall properly dispose of all materials excavated away from site. Size and location of excavation shall be as directed by the facility operator. Trenches shall be excavated to a depth and size necessary to facilitate the installation of the new utility facility and in conformance with the applicable specification. All existing facilities that are encountered during trench excavating shall be protected in a manner suitable to the facility operator. Tight sheeting shall be used, as required, based on field conditions and/or when the depth of excavation is equal to or greater than five feet. Skeleton type sheeting will not be permitted. The sheeting required shall be furnished and installed in full compliance with the State of New York and Federal Safety Code requirements and in compliance with applicable specifications and/or as directed by the facility operator. Care shall be taken that no existing utility facilities or other structures are broken or damaged. Contractor shall excavate all material encountered necessary to facilitate the installation of the new utility facilities, and as directed by the facility operator. Care should be taken to avoid damage to existing utility facilities and structures, and to pavements and their foundations, and to avoid caving or sliding banks within the excavation.

□

2. Maintenance of Trench Excavation - Excavated trenches shall be maintained free of debris and kept dry by the contractor. In order to accomplish this, contractor shall, upon completion of excavation and placement of sheeting (as required and/or if depth is equal to or greater than five feet), furnish and install adequate steel plates, as directed by the facility operator, and posting over the excavated trenches and shall temporarily remove all equipment debris and workers, and relocate barricades in order to open the full width of street to traffic during nonworking hours, as required based on DOT requirements. The Contractor shall then, at no additional cost, relocate such barricades barrels, cones and other warning devices and remove steel plates, as and when directed by the facility operator to facilitate the installation of the new utility facility. When work is being performed and the excavations are not covered with steel plates, the Contractor shall provide complete and safe access to the trench as may be required, and shall provide construction barricades and maintain traffic at all times as shown or as directed by the facility operator. Upon completion of installation of the new utility facility, the trench excavation shall be backfilled by the contractor in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose.

3. Pavement and Sidewalk Restoration - After backfilling is completed, the contractor shall install temporary pavement consisting of six inches (6") thick asphaltic concrete mixture in roadway areas or a two inches (2") thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent replacement as specified in contract.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards (C.Y.) of trench actually excavated and backfilled as directed by the facility operator or as shown on Sketch JB 603T for JB 603T Items. The volume occupied by existing pipes or other structures will not be deducted from the total volume measured.

JB 405.1 - Trench Excavations for installation of Utility Facilities with total depths less than five feet (C.Y.)

JB 405.2 - Trench Excavations for Utility Facilities with total depths equal to or greater than five feet (C.Y.)

**E. Price to Cover**

The unit price bid for the various trench excavation items shall include the cost of all labor, materials, equipment, insurance, and incidentals necessary to completely expose, protect and maintain the integrity of the facilities without disruption of service to the customers and in accordance with the contract documents. The price shall also include, installation of traffic plates as well as opening and closing of plates as may be required in order to provide access to trench; installation, removal and maintenance of tight sheeting as required; cutting, breaking and removing various thickness of surface and base pavement; excavation by hand to expose Page 3 of 3 10/05/2017 existing structures; furnishing, placing and compacting clean backfill following installation of utility facility in compliance with DOT requirements. Any required removing, trucking, storing, and disposing of material shall be deemed included in the unit price. The price shall also include the cost of providing temporary pavement restoration. Permanent pavement restoration shall be paid under city items. The price shall also include the cost of locating and protecting all utilities encountered as required.

Clean backfill material in accordance with specifications shall be used around gas facilities and critical facilities shall be paid for under item JB 303.

CEHSP S13.00 – Excavation and Trenching

□

**JB 405A – TRENCH EXCAVATION FOR CARBON FIBER WRAPPING EXISTING UTILITY FACILITIES**

**A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals necessary and required for trench excavation while maintaining, protecting and accommodating the integrity of the facility operator’s oil-o-static pipes, return lines, fuel lines, freeze lines, steam mains, gas transmission mains, high pressure gas mains and fiber optic lines (i.e., the utility facilities).

The trench to be excavated shall be determined by the space required to perform all carbon fiber wrap activities. The work shall be performed in accordance with contract plans, applicable specifications, and/or at the direction of the facility operator in consultation with the Resident Engineer. Contractor to refer to latest version of CE-SI-1080 for Guidelines for Protecting Existing Underground Transmission Electric Facilities from Nearby Construction Activities for additional information and requirements.

**B. Materials**

All materials used to excavate and prepare trenches, and provide support of utilities including any and all sheeting and shoring methods shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer. Backfill material to be used around the utility facilities will be paid for under Item JB 303 and appropriate City bid items.

**C. Methods of Construction**

1. Excavation – The contractor shall maintain, protect and accommodate the integrity of the utility facilities; including minor adjustments in any direction to these facilities. The facility operator shall identify the locations of the utility facilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the contractor shall use hand excavation methods (pick and shovel or hand held power tools; saw cutting is not permitted in any way) to remove the pavement section. Upon exposing the utility facilities sufficiently at the sole discretion of the facility operator in consultation with the Resident Engineer to determine relationships and/or dimensions, the contractor shall be permitted to proceed with hand excavation only, within a zone of protection whose limit shall be defined as a perimeter located 24-inches from the outside face of each utility facility. The bottom of the trench shall be a minimum of 18” below the facility, graded smooth with a minimum cushion of 6 inches of sand, backfilling in increments of 6” or in conformance with applicable specification, and be compacted to minimize initial settlement. All stones projecting into the trench bottom shall be removed, and the voids backfilled before the Contractor proceeds with the next phase of work. Where pavement is not to final grade, the cover shall be measured from the final grade, or the existing grade, whichever provides the deeper trench. The contractor shall properly dispose of all materials excavated away from site. Size and location of excavation shall be as directed by the facility operator in consultation with the Resident Engineer. Trenches shall be excavated to a depth and size necessary to facilitate the installation of carbon fiber wrapping and in conformance with the applicable specification. All existing facilities that are encountered during trench excavating shall be supported, protected and adjusted as needed in a manner suitable to the facility operator in consultation with the Resident Engineer. Tight sheeting shall be used, as required by the facility operator in consultation with the Resident Engineer, based on field conditions and/or when the depth of excavation is equal to or greater than five feet.

Skeleton type sheeting will not be permitted. The sheeting required shall be furnished and installed in full compliance with the State of New York and Federal Safety Code requirements and in compliance with applicable specifications and submitted, signed and sealed by a Professional Engineer licensed in the State of New York with supporting material, to Con Edison and the Department of Design and Construction (DDC) for review and approval.

Care shall be taken that no existing utility facilities or other structures are broken or damaged. Care should be taken to avoid damage to existing utility facilities and structures, and to pavements and their foundations, and to avoid caving or sliding banks within the excavation. Any damage to existing utility facilities will be repaired by the Contractor, at the Contractor's expense, and to the satisfaction of the Owner of the facility.

Refer to Section 3.4 in the latest version of CE-SI-1080 for transmission facility temporary support design criteria.

Some of the existing coatings on the utility facilities may consist of coal tar wrap and may contain asbestos and/or PCB's. Contractor to refer to JB 123 specification for details of visual inspection/testing and any repairs and remediation of coating required upon completion of hand excavation and unearthing (visual line of sight) of the utility facilities.

2. Maintenance of Trench Excavation - Based on the Contractor's method of sheeting and installation, the facility operator in consultation with the Resident Engineer shall determine if vibration monitoring is required and how many monitoring locations are needed. Refer to Section 3.3 in the latest version of CE-SI-1080 for details of the vibration monitoring program. All costs for vibration monitoring are included in all the joint bid items. Excavated trenches shall be maintained free of debris and kept dry by the contractor. In order to accomplish this, the contractor shall, upon completion of excavation and placement of sheeting (as required by the facility operator in consultation with the Resident Engineer, based on field conditions and/or if depth is equal to or greater than five feet), furnish and install plastic barrels and temporary chain link fence (refer to appropriate City bid items), as directed by the facility operator in consultation with the Resident Engineer, around the excavated trenches when they are not occupied by equipment and/or workers. The Contractor shall, at no additional cost, relocate such safety and warning devices, as and when directed by the facility operator in consultation with the Resident Engineer to facilitate the installation of the carbon fiber wrapping to the existing utility facility. When work is being performed and the excavations are open, the Contractor shall provide complete and safe access to the work area as may be required, and shall provide safety and warning devices and maintain pedestrian traffic at all times as directed by the facility operator in consultation with the Resident Engineer. Upon completion of installation of the carbon fiber wrapping to the existing utility facilities, the trench excavation shall be backfilled by the contractor in accordance with Contract requirements and all backfill material shall conform to contract specifications for such purpose. Refer to section 3.5 in the latest version of CE-SI-1080 for backfill of transmission facility requirements.

3. Pavement and Sidewalk Restoration - After backfilling is completed, the contractor shall install temporary pavement consisting of six inches (6") thick asphaltic concrete mixture in roadway areas or a two inches (2") thick asphaltic concrete mixture in sidewalk areas in order to maintain existing pedestrian and vehicular traffic. This temporary pavement shall be maintained until permanent replacement in completed.

The contractor shall maintain, protect, accommodate the integrity of and adjust as needed the utility facilities.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards (C.Y.) of trench actually excavated as directed by the facility operator in consultation with the Resident Engineer. The volume occupied by existing utility facilities will not be deducted from the total volume measured.

The volume included for payment shall be calculated as the depth from the surface to the bottom of the sheeted trench excavation as determined by the facility operator in consultation with the Resident Engineer, multiplied by the outer edge of the open excavation determined by the facility operator in consultation with the Resident Engineer, multiplied by the linear foot of trench as noted in the contract drawings.

**E. Price to Cover**

The unit price bid per cubic yard of trench excavation and backfill of utility facilities shall cover the cost of all labor, material, equipment, insurance and incidentals necessary to completely expose, support, protect, maintain and accommodate the integrity of the facilities, and make adjustments to the transmission utilities, inclusive of oil-o-static pipes, freeze lines, return lines and communication lines as determined by the Facility Operator in consultation with the Resident Engineer, in accordance with the Contract Documents and field-verified conditions. JB 402B shall cover the cost of adjustment of oil-o-static pipes, freeze lines and return lines to final position. JB 402 shall cover the cost of adjustment of communication lines to final position.

The unit price shall include the cost of: difficulties encountered during the performance of exposing oil-o-statics; installation and removal of sheeting; loss of productivity due to slower rate of excavation during excavation, including the use of such methods as hand excavation around existing oil-o-static pipe(s); trucking and disposing of unsuitable fill; backfilling and compaction, in compliance with DOT, DPR and Con Edison requirements, around, over and under the facilities including the use of special methods; and warning and safety measures that may be required to temporarily close and/or complete the work.

The price shall also include installing, removing and maintaining tight sheeting that may be required and vibration monitoring. The price shall also include associated maintenance of traffic, traffic plates, openings and closings of plates as may be required in order to provide access to trench when in roadway and DPR permits required to provide access to trench when in landscaping areas; cut, break and remove various thickness of surface and base pavement by hand-held pneumatic tools; excavate by hand to expose existing utility facilities including the 24" zone of protection; furnish, place and compact, in compliance with DOT, DPR and Con Edison requirements, clean backfill and sand following installation of carbon fiber wrapping. Any required removing, trucking, storing, and disposing of excavated material shall be deemed included in the unit price. The price shall also include the cost of providing temporary pavement restoration, inclusive of 4" Type 3 binder mixture on 6" shoulder stone. The temporary pavement will be maintained until restoration of the area is complete. If the Contractor's or subcontractor's equipment undermines the integrity of the temporary pavement, vehicular steel plates will be installed at no additional cost. The price shall also include the cost of locating and protecting all utilities encountered as required.

□

Sand backfill shall be used around existing oil-o-static pipes, steam mains, gas transmission mains, high pressure gas mains and fiber optic lines and will be paid for under item JB 303 and the appropriate City items. Clean backfill shall be used if necessary starting approximately 15" above the top of the utility facility and paid for under the appropriate City bid items.

Contractor to refer to JB 123 specification for price to cover visual inspection/testing and any repair and remediation of coating required upon completion of hand excavation and unearthing (visual line of sight) of oil-o-static and return lines.

**JB 450 – CONSTRUCTION FIELD SUPPORT****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals necessary to provide construction field support, while maintaining and protecting surface and subsurface facilities, at various locations approved solely by the facility operator. The Contractor shall encounter various surface and subsurface utility facilities while performing various construction field support operations, which may include but are not limited to working over, under, adjacent to, around, in between and in close proximity of:

1. Conduits
2. Conductors
3. Concrete encased conduit banks
4. Steel pipes
5. Gas mains
6. Steam mains
7. Oil-o-static facilities
8. Utility structures and covers

The actual construction field support operation to be performed by the Contractor shall be performed in accordance with the contract plans, specifications or as determined based on actual field conditions and at the sole discretion and direction of the facility operator. This item shall apply to various field support operation tasks for which there are no other applicable JB Items to cover the required work. This item will not apply and will not be paid when there are other applicable JB items available either partly or completely covering tasks described below as determined solely by the facility operator.

**B. Materials**

All materials used to provide construction field support shall be supplied by the Contractor and be approved by the facility operator in consultation with the Resident Engineer.

**C. Methods of Construction**

It is the intent of this item that the Contractor provides field support construction crews suffice to perform various item type tasks required as described. For the purpose of this item a crew consists of more than one non-management individual. The Contractor shall provide all labor and equipment necessary to perform the required task as described below under existing field conditions at various locations and at the sole discretion and direction of the facility operator in consultation with the Resident Engineer. The Contractor shall perform the necessary construction field support, while maintaining and protecting surface and subsurface facilities. The Contractor shall employ approved methods of operation, including the use of appropriate equipment and tools that will enable him to complete the field support operation work as described in the Item Type description below. Existing facilities that are encountered during the construction field support operation shall be supported and protected similar to those indicated on sketches JB 100A and 100B and in a manner suitable to the facility operator in consultation with the Resident Engineer and are deemed included in this item except as included under JB-402T. The Contractor shall properly dispose of all materials excavated away from site, which may require the use of hand held tools and equipment in order to ensure that the integrity of the underground utility facilities are not jeopardized. Care should be taken to avoid damage to existing utility facilities and structures, and to adjacent curbs, sidewalks, pavements and their foundations, and to avoid caving or sliding banks within excavations.

□

**D. Method of Measurement**

1 – Quantity - The quantity to be measured for payment shall be the number of actual crew hours (CRHRS.) provided by the Contractor for performing the various types of construction field support operation as directed by the facility operator in consultation with the Resident Engineer.

2 – Type – The unit type to be measured for payment shall be based on the actual task performed by the contractor and covered by the applicable Item Type. The tasks described within the Bid Item Type below are provided as a guide only as to the general nature of the various functions included, but these examples in no way limit the use of the item to these functions only. The contractor should use this information in order to approximate the various required crew sizes necessary to perform the work covered by this item in a productive, safe and efficient manner. The actual construction crew size required to perform the field support operation shall be determined solely by the contractor in order to perform the required construction field support operation. It is the responsibility of the contractor to provide appropriate field support crews capable of performing required tasks in a productive, safe and efficient manner. The actual crew performing the operation will not be considered, by the facility operator in consultation with the Resident Engineer, when determining the applicable item type, which shall be only as per the task performed.

Note: Only one measurement type will be used for each defined construction field support area.

Type .1 = Construction Field Support requiring an average size survey crew that will perform typical field survey functions and provide quality data analysis reports.

Type .2 = Construction Field Support requiring an average small size crew capable of performing various tasks not requiring the use of a machine or operator, which may include but are not limited to: opening/closing subsurface structure cover(s), setting/resetting MPT setup(s), assisting Utility Facility/Specialty crew(s) not included in JB 402T or JB 450.5, performing conduit occupancy identification, clean-up storage work-site area, etc.

Type .3 = Construction Field Support requiring an average medium size crew capable of performing various tasks which include the use of a machine and operator, which may include but are not limited to: excavations due to cable failures, including emergency type excavations, construct manhole enclosures, installing support system for utility facilities, dewatering utility structures and excavations, opening/closing traffic and/or pedestrian plates, etc not included in JB 402T or JB 450.5.

Type .4 = Construction Field Support requiring an average large size crew capable of performing various tasks that requires the use of multiple machine(s) and operator(s), which may include but are not limited to: assistance during heat contingency, welding, repositioning and placing large diameter pipe, etc.

Type .5 = Construction Field Support requiring an average small size crew when requested by the facility operator to assist the facility operator or speciality contractor hired by the facility operator in shifting and supporting the conduits during pipe-ripping operations and all else necessary as required to complete the work including but not limited to constructing temporary work platform and temporary weather protection.

□

**E. Price to Cover**

The unit price bid for the various construction field support items shall include the cost of all labor, materials, equipment, insurance, and incidentals necessary to provide construction field support, which may include but is not limited to working over, under, adjacent to, around, in between and in close proximity of surface and subsurface utility facilities and exposing, supporting, protecting and maintaining the integrity of the facilities without disruption of service to the general public, utility customers and in accordance with the Contract Documents at various locations approved by the Facility Operator in consultation with the Resident Engineer. The unit price shall also include openings and closings of plates, and cones, barrels, arrow-boards, etc. and installing, shifting, moving and relocating cones, barrels, arrow-boards, etc. as may be required in order to provide access to excavations and during specialty work being performed by others excluding work operations covered under JB402T. The unit price shall also include excavating by hand to expose existing structures. Any required removing, trucking, storing, and disposing of material shall be deemed included in the unit price bid. The unit price shall also include the cost of supporting and protecting all utilities encountered during the construction field support operation, as required except work operations covered under JB 402T. The unit price bid shall also include alternate methods for construction field support, which may include changes in equipment and special operations, and sequencing and the use of only all hand-held tools due to existing field conditions, including potential delays and extended performance. Any and all Contractor method changes and operation modifications employed for construction field support are deemed to be included in the price bid for this item. Work under this item may be paid in combination with other City, utility or facility accommodation Items bid under other contract items except where expressly excluded from that item.

**[NO FURTHER TEXT HERE.]**

□

**JB 603T - FURNISH AND INSTALL TELECOMMUNICATIONS CONDUITS**

**A. Description**

Under this Section, the Contractor shall provide all labor, materials, equipment, insurance, and incidentals required to procure and install conduit for the purpose of installing the facility operator's utilities. Conduit runs shall be as shown on the contract drawings or as specified by the facility operator in consultation with the Resident Engineer.

**B. Materials**

Conduit shall consist of:  
PVC – 2” and 4” diameter or 1 ¼” Quad, Type “C” as supplied by American Pipe and Plastics or approved equal  
Steel - 4” diameter, ASTM A53, Schedule 40 or approved equal  
All conduit including sleeves, couplings, bends, pulling lines, etc. shall be supplied by the Contractor and approved by the facility operator in consultation with the resident Engineer.  
The Contractor shall supply all material (Mortar, Brick, etc.) to make repairs to opening(s) as approved by the facility operator in consultation with the Resident Engineer.

**C. Method of Construction**

The Contractor shall install the specified conduit(s) then rod, mandrel and wire (install pulling line) the new conduits. When conduit pipes are to be connected to existing underground ducts, manholes, or boxes, the Contractor, using hand-held tools only, shall cut existing conduit, to pick-up existing underground conduits with new conduits, make openings into manholes or boxes, install/connect the conduit, and make repairs to seal the openings in the structure.

Steel pipe shall be used for shallow cover and crossing or paralleling steam mains as directed by the facility operator in consultation with the Resident Engineer.

When the facility operator required a combination of conduit types and materials the facility operator will define the configuration of the conduit system and the location of each type within the conduit bank. All conduit shall be spaced 1 ½” both vertically and horizontally from the adjacent conduit(s). All conduits shall be encased in lean concrete (f'c = 1200 to 1500 psi maximum) which shall extend 2” beyond each face of the conduit formation, above and each side of the conduit formation.

If due to subsurface conditions, the cover is less than 20" from finished grade, the duct shall be protected with steel plates furnished by the facility operator(s) and measured for payment under Item JB 403.

The work shall be performed in accordance with the contract plans, specifications, and at the directions of the facility operator in consultation with the Resident Engineer.

**D. Methods of Measurement**

The quantity to be measured for payment shall be the number of linear feet (LF) of conduit trench for which conduit was furnished and installed:

- 1. 603T.1 - Install 1 ea. 2", 4" or 1 ¼" Quad" Conduit (PVC or Steel) in any Combination

□

- 2. 603T.2 - Install 2 ea. 2", 4" or 1 1/4" Quad Conduits (PVC or Steel) in any Combination
- 3. 603T.3 - Install 4 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination
- 4. 603T.4 - Install 6 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination
- 5. 603T.5 - Install 8 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination
- 6. 603T.6 - Install 12 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination
- 7. 603T.7 - Install 15 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination
- 8. 603T.8 - Install 24 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination
- 9. 603T.9 - Install 30 ea. 4" or 1 1/4" Quad Conduits (PVC or Steel) in any combination

A Quad, consisting of four 1 1/4" conduits shall be supplied as one unit. For purposes of measurement and payment each quad unit of four 1 1/4" ducts shall be counted as one duct.

For any equivalent combination not fitting the above categories payment shall be based on the next higher category.

**E. Price to Cover**

The unit price per linear foot of Conduit trench shall cover the cost of all labor, materials, equipment, insurance and incidentals necessary to furnish, install, rod, rope, and perform any other associated work required to install the conduit completely in place. Where conduits are to be connected to ducts, manholes or boxes, the cost of cutting and/or breaking into the ducts, manholes or boxes, installing and sealing the conduit, including duct plugs; and making repairs to the openings in the structure shall be considered as included in the unit price bid for the installation of the conduit. All acceptance testing, including passing a mandrill with a diameter of 1/8" less than the inside diameter of the duct through the entire length of the duct, as required by the facility operator shall be considered as included in the unit price.

Payment for trench excavation shall be paid under Item JB 405.

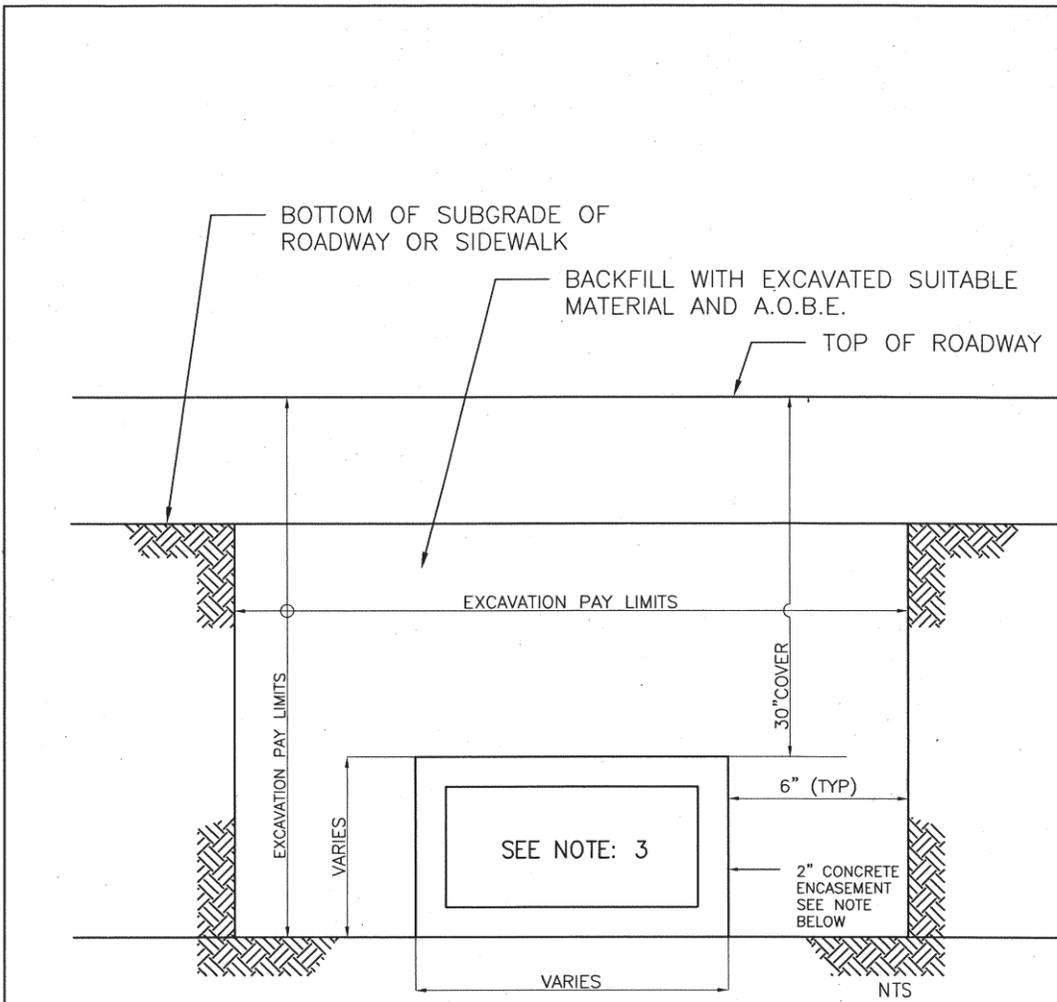

Steel protection plates shall be paid for under Item JB 403T

**TYPICAL CONDUIT EXCAVATION AND BACKFILL**

NOTES:

**QUEENS, BROOKLYN & STATEN ISLAND**

1- CONCRETE ENCASE REQUIRED IF TOP OF DUCTS IS 20" OR LESS FROM SURFACE AND ALL BENDS, SWEEPS AND CHANGE OF GRADE. FOR COVER LESS THAN 20", 3/8" STEEL (A36M) COVER PLATES IN ADDITION TO THE CONCRETE ENCASEMENT SHALL BE PROVIDED.

**MANHATTAN & BRONX,**

2- FOR COVER LESS THAN 20", 1/4" STEEL (A36M) COVER COVER PLATES IN ADDITION TO THE CONCRETE ENCASEMENT SHALL BE PROVIDED.

3- CONDUIT CONFIGURATION TO BE DETERMINED BY ECS/VERIZON REPRESENTATIVE.

J.B. SKETCH	
TRENCH EXCAVATION FOR CONDUIT	
09/13/2017	CONTRACT NO. SKETCH NO. JB 603T

**JB 610 - INSTALLATION OF STEEL GAS PIPE****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install gas pipe and service pipe connections within the Consolidated Edison service territory. The Contractor shall satisfactorily clean, test and install new gas pipes, tracer wire, tracer wire termination boxes and appurtenances, complete as specified herein and as indicated on the contract drawings / layouts in accordance with the specifications of Con Edison Gas Engineering and as directed by the authorized Con Edison field representative. All work shall be performed in accordance with Con Edison Requirements, standard drawings and specifications referenced herein.

The Contractor shall install new gas utility facilities and appurtenances including but not limited to:

1. Non gas cost sharing gas facilities
2. Steel gas pipes
3. Phenolic board
4. Foam board
5. Adjustable & non-adjustable steel valve box risers
6. Pipe coatings (refer to Con Edison Specification G-8209)
7. Fittings
8. Valves

The trench to be excavated shall be determined by the size of the gas facility to be installed, extended or modified. The work shall be performed in accordance with all applicable specifications, and / or at the direction of the facility operator in consultation with the Resident Engineer and paid under other applicable contract bid items

**B. Materials**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison shall be delivered to the Contractor at the construction site and unloaded by the Contractor.

**C. Methods of Construction**

The Contractor shall install the steel gas pipe(s), as shown on layouts and or drawings and sketches and as directed by the facility operator from designated facility operator service points and in accordance with the contract plans and Con Edison standard specifications. The method of construction shall include all labor, equipment and materials that are necessary to complete the installation of the steel gas pipe including cutting of the pipe, joining by welding, for each one (1) 40' random full length of pipe, complete with coating of pipe, installation of appurtenances and testing operations. The Contractor shall thoroughly clean each pipe length and fitting in order to remove all internal debris and foreign matter prior to the pipe being lowered into the trench. The installation of the new pipe must be performed by Operator Qualified mechanics. The Contractor must be approved by Con Edison.

A "WARNING BURIED GAS LINES BELOW" tape (class and stock number 024-6660) must be installed at a minimum of 12 inches above the top of the direct buried new replacement main.

**Cathodic Protection**

All buried or inserted steel pipe, fittings and appurtenances shall be coated and cathodically protected in accordance with the applicable Con Edison specifications

Protection plates shall be A36 steel 3/8" thick, provided by Con Edison.

**Pressure Testing And Inerting:**

The newly completed gas pipe shall be subjected to a combination strength-proof and leakage test by the Contractor in accordance with G-8204.

The Contractor shall install test connections as indicated on the drawings / layouts and EO-5261-C, "high Hats for Plugs and Nipples on 6 NPS – 30 NPS Steel Gas Mains 13.8 -2413.2 kPa".

All exposed coated steel gas mains where the coating is found damaged, shall be cleaned and the coating shall be replaced in kind in accordance with Con Edison specification G-8062.

Magnesium anodes and test stations shall be installed at the locations shown on the plans and layouts or as directed by the Engineer. Con Edison will supply thermit weld equipment. All test lead wires shall be tested by Con Edison's Corrosion Survey Section before backfilling.

**D. Method of Measurement**

The quantity to be paid for under this item shall be the actual number of linear feet (L.F.) of gas pipe installed for each pipe size, as measured along the center line of the pipe in its final position. The various types of pipe sizes are defined as follows:

- JB 610.1 - Installation of Steel Gas Pipe - 1" Diameter
- JB 610.1C - Installation of Steel Gas Pipe - 1-1/2" Diameter
- JB 610.2 - Installation of Steel Gas Pipe - 2" Diameter
- JB 610.3 - Installation of Steel Gas Pipe - 3" Diameter
- JB 610.4 - Installation of Steel Gas Pipe - 4" Diameter
- JB 610.6 - Installation of Steel Gas Pipe - 6" Diameter
- JB 610.8 - Installation of Steel Gas Pipe - 8" Diameter
- JB 610.12 - Installation of Steel Gas Pipe - 12" Diameter
- JB 610.16 - Installation of Steel Gas Pipe - 16" Diameter
- JB 610.20 - Installation of Steel Gas Pipe - 20" Diameter
- JB 610.24 - Installation of Steel Gas Pipe - 24" Diameter
- JB 610.30 - Installation of Steel Gas Pipe - 30" Diameter

□

**E. Price to Cover**

The unit price bid per linear feet (L.F.) shall include the cost of all labor, equipment and materials not provided by Con Edison as necessary to complete the work. The price per linear foot (L.F.) of steel gas pipe shall include pipe installation, cutting of pipe, joining by welding, installation of magnesium anodes, and installation of test stations, and repair of damaged pipe coatings and testing and inerting operations. Other work such as pavement saw-cutting, trench excavation, temporary timber sheeting, and backfilling with granular materials, compacting, valve installation, protection plates and pavement / curb restoration shall be paid for separately under other appropriate contract bid items.

**JB 611 - INSTALLATION OF STEEL GAS PIPE FITTINGS****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install gas pipe fittings and service pipe fittings within the Consolidated Edison service territory. The Contractor shall satisfactorily clean, test and install new gas pipe fittings, tracer wire, tracer wire termination boxes and appurtenances, complete as specified herein and as indicated on the contract drawings / layouts in accordance with the specifications of Con Edison Gas Engineering and as directed by the authorized Con Edison Field Representative. All work shall be performed in accordance with Con Edison requirements, standard drawings and specifications referenced herein.

The Contractor shall install new gas utility facility fittings and appurtenances including but not limited to:

1. Non cost sharing gas facilities
2. Steel gas pipes
3. Phenolic board
4. Foam board
5. Adjustable & non-adjustable steel valve box risers
6. Pipe coatings (refer to Con Edison Specification G-8209)
7. Fittings
8. Valves

The trench to be excavated shall be determined by the size of the gas facility fittings to be installed, extended or modified. The work shall be performed in accordance with all applicable specifications, and / or at the direction of the facility operator in consultation with the Resident Engineer and paid under other applicable contract bid items

**B. Materials**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison will be delivered to the Contractor at the construction site and unloaded by the Contractor.

**C. Methods of Construction**

The Contractor shall install the steel gas pipe fitting(s), (including but not limited to valves, elbows, weld end caps and tees), as shown on layouts and or drawings and sketches and as directed by the facility operator from designated facility operator service points and in accordance with the contract plans and Con Edison standard specifications. The method of construction shall include all labor, equipment and materials that are necessary to complete the installation of the gas steel pipe fittings including miter cut, joining by welding, coating of pipe fitting, and appurtenances complete, and testing operations. The Contractor shall thoroughly clean each pipe fitting in order to remove all internal dirt and foreign matter prior to the pipe being lowered into the trench. The installation of the

□

new pipe must be performed by Operator Qualified mechanics. The Contractor must be approved by Con Edison.

**Fittings:**

Fittings shall be defined as couplings, forged fittings, and valves, insulating joints, weld end cap and weldolets. All forged bends shall conform to Con Edison Specification G-100, 281, "Welded Forged Fittings for Gas Piping. Prior to installation, each insulating joint shall be checked with a continuity tester by Con Edison. The insulating joint shall not be installed until the Contractor has verified with the Con Edison Field Representative that a continuity test is acceptable. The cost for testing the insulation joint shall be included in the unit price for the appropriate size of the gas main.

A "WARNING BURIED GAS LINES BELOW" tape (class and stock number 024-6660) must be installed at a **minimum** of 12 inches above the top of the direct buried new / replacement main.

**Cathodic Protection**

All buried or inserted steel pipe fittings and appurtenances shall be coated and cathodically protected in accordance with the applicable Con Edison Specifications

Protection Plates shall be A36 steel 3/8" thick, provided by Con Edison.

**Pressure Testing And Inerting:**

The newly completed gas pipe fitting(s) shall be subjected to a combination strength-proof and leakage test by the Contractor in accordance with G-8204

The Contractor shall install test connections as indicated on the drawings / layouts and EO-5261-C, "high Hats for Plugs and Nipples on 6 NPS – 30 NPS Steel Gas Mains 13.8 -2413.2 kPa".

All exposed coated steel gas pipe fittings where the coating is found damaged shall be cleaned and the coating shall be replaced in kind in accordance with Con Edison Specification G-8062.

Magnesium anodes and test stations shall be installed at the locations shown on the plans and layouts or as directed by the Engineer. Con Edison will supply thermit weld equipment. All test lead wires shall be tested by Con Edison's Corrosion Survey Section before backfilling.

**D. Method of Measurement**

The quantity to be paid for under this item shall be the actual number of each (EA) steel gas pipe fitting installed for each pipe size. The various types of pipe sizes are defined as follows:

- JB 611.1 - Installation of Steel Gas Pipe Fitting - 1" Diameter
- JB 611.1C - Installation of Steel Gas Pipe Fitting - 1-1/2" Diameter
- JB 611.2 - Installation of Steel Gas Pipe Fitting - 2" Diameter
- JB 611.3 - Installation of Steel Gas Pipe Fitting - 3" Diameter
- JB 611.4 - Installation of Steel Gas Pipe Fitting - 4" Diameter
- JB 611.6 - Installation of Steel Gas Pipe Fitting - 6" Diameter
- JB 611.8 - Installation of Steel Gas Pipe Fitting - 8" Diameter

□

- JB 611.12 - Installation of Steel Gas Pipe Fitting - 12" Diameter
- JB 611.16 - Installation of Steel Gas Pipe Fitting - 16" Diameter
- JB 611.20 - Installation of Steel Gas Pipe Fitting - 20" Diameter
- JB 611.24 - Installation of Steel Gas Pipe Fitting - 24" Diameter
- JB 611.30 - Installation of Steel Gas Pipe Fitting - 30" Diameter

**E. Price to Cover**

The unit price bid per each (EA) shall include the cost of all labor, equipment and materials not provided by Con Edison as necessary to completely install the steel gas pipe fitting. The price per each (EA) fitting shall include pipe fitting installation, (including but not limited to valves, elbows, weld end caps and tees), miter cut, joining by welding, installation of magnesium anodes, and installation of test stations, and repair of damaged pipe coatings and testing and inerting operations. Other work such as pavement saw-cutting, trench excavation, temporary timber sheeting, and backfilling with granular materials, compacting, valve installation, protection plates and pavement / curb restoration shall be paid for separately under other appropriate contract bid items.

**JB 615 - INSTALLATION OF PLASTIC GAS PIPE****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install plastic gas pipes and service connections within the Consolidated Edison service territory. The Contractor shall satisfactorily clean, test and install new plastic gas pipes, tracer wire, tracer wire termination boxes and appurtenances, complete as specified herein and as indicated on the contract drawings / layouts in accordance with the specifications of Con Edison Gas Engineering and as directed by the authorized Con Edison representative. All work shall be performed in accordance with Con Edison Requirements, standard drawings and specifications referenced herein.

The Contractor shall install new Gas Utility Facilities and appurtenances including but not limited to:

1. Non cost sharing gas facilities
2. Plastic pipes
3. Phenolic board
4. Foam board
5. Adjustable & non-adjustable valve box risers
6. Pipe coatings (refer to Con Edison Specification G-8209)
7. Molded fittings
8. Plastic valves

The trench to be excavated shall be determined by the size of the Gas facility to be installed, extended or modified. The work shall be performed in accordance with all applicable specifications, and / or at the direction of the facility operator in consultation with the Resident Engineer.

**B. Materials**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison will be delivered to the Contractor at the construction site and unloaded by the Contractor.

**C. Methods of Construction**

The Contractor shall install the plastic gas pipe(s), as shown on layouts and or drawings and sketches and as directed by the facility operator from designated facility operator service points and in accordance with the contract plans and Con Edison Standard specifications. The method of construction shall include all labor, equipment and materials that are necessary to complete the installation of the plastic gas pipe including cutting of the pipe, joining by fusing, for each one (1) 40' random full length of pipe, and appurtenances complete, and testing operations. The Contractor shall thoroughly clean each pipe length and fitting in order to remove all internal debris and foreign matter prior to the pipe being lowered into the trench. The installation of the new pipe must be performed by Operator Qualified mechanics. The Contractor must be approved by Con Edison.

□

□

A **'WARNING BURIED GAS LINES BELOW'** tape (class and stock number 024-6660) must be installed at a **minimum** of 12 inches above the top of the direct buried new / replacement main. When new / replacement mains are inserted, the tape is to be installed above all exposed pipe in tie-in and service excavations.

Protection Plates shall be A36 steel 3/8" thick, provided by Con Edison.

**Pressure Testing Inerting:**

The newly completed gas pipe shall be subjected to a combination strength-proof and leakage test by the Contractor in accordance with G-8204

The Contractor shall furnish all material, transportation and equipment, including gas and air necessary to perform and complete the pressure testing and inerting operations, including the equipment used to record the test. Inerting shall be defined as the process of displacing air or natural gas in a facility with an inert gas.

**D. Method of Measurement**

The quantity to be paid for under this item shall be the actual number of linear feet (LF) of plastic gas pipe installed for each pipe size, as measured along the center line of the pipe in its final position.

- JB 615.1A - Installation of Plastic Gas Pipe – ½" Diameter
- JB 615.1 - Installation of Plastic Gas Pipe - 1" Diameter
- JB 615.1B - Installation of Plastic Gas Pipe - 1-1/4" Diameter
- JB 615.1C - Installation of Plastic Gas Pipe - 1-1/2" Diameter
- JB 615.2 - Installation of Plastic Gas Pipe - 2" Diameter
- JB 615.3 - Installation of Plastic Gas Pipe - 3" Diameter
- JB 615.4 - Installation of Plastic Gas Pipe - 4" Diameter
- JB 615.6 - Installation of Plastic Gas Pipe - 6" Diameter
- JB 615.8 - Installation of Plastic Gas Pipe - 8" Diameter
- JB 615.10 - Installation of Plastic Gas Pipe - 10" Diameter
- JB 615.12 - Installation of Plastic Gas Pipe - 12" Diameter
- JB 615.16 - Installation of Plastic Gas Pipe - 16" Diameter

**E. Price to Cover**

The unit price bid per linear feet (LF) shall include the cost of all labor, equipment and materials not provided by Con Edison as necessary to complete the work. The price per linear foot (LF) of plastic gas pipe shall include pipe installation, cutting of pipe, joining by fusing, and all other work necessary to completely install the plastic gas pipe, and testing and inerting operations. Other work such as pavement saw-cutting, trench excavation, temporary timber sheeting, and backfilling with granular materials, compacting, valve installation, protection plates and pavement / curb restoration shall be paid for separately under the appropriate contract bid items.

**JB 616 - INSTALLATION OF PLASTIC GAS PIPE FITTING****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install plastic gas pipe fittings and service pipe fitting connections within the Consolidated Edison service territory. The Contractor shall satisfactorily clean, test and install new plastic gas pipe fittings, tracer wire, tracer wire termination boxes and appurtenances, complete as specified herein and as indicated on the contract drawings / layouts in accordance with the specifications of Con Edison Gas Engineering and as directed by the authorized Con Edison representative. All work shall be performed in accordance with Con Edison Requirements, standard drawings and specifications referenced herein.

The Contractor shall install new Gas Utility Facility Fittings and appurtenances including but not limited to:

1. Non Cost Sharing Gas Facilities
2. Plastic Pipes
3. Phenolic Board
4. Foam Board
5. Adjustable & Non Adjustable Valve Box Risers
6. Pipe Coatings Refer to Con Edison Specification G-8209
7. Molded Fittings
8. Plastic Valves

The trench to be excavated shall be determined by the size of the Gas facility to be installed, extended or modified. The work shall be performed in accordance with all applicable specifications, and / or at the direction of the facility operator in consultation with the Resident Engineer and paid under other contract bid items.

**B. Materials**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison will be delivered to the Contractor at the construction site and unloaded by the Contractor.

**C. Methods of Construction**

The Contractor shall install the plastic gas pipe fitting(s), (including but not limited to valves, elbows, weld end caps and tees) as shown on layouts and or drawings and sketches and as directed by the facility operator from designated facility operator service points and in accordance with the contract plans and Con Edison Standard specifications. The method of construction shall include all labor, equipment and materials that are necessary to complete the installation of the plastic gas pipe fitting(s) including miter cut, joining the pipe by fusing, and appurtenances complete, and testing operations. The Contractor shall thoroughly clean each pipe length and fitting in order to remove all internal dirt and foreign matter prior to the pipe being lowered into the trench. The installation of the

new pipe must be performed by Operator Qualified mechanics. The Contractor must be approved by Con Edison.

**FITTINGS:**

**Plastic Valves**

Plastic valves are approved up to and including 16" diameter. Where the same diameter valve comes in reduced port and full port openings, a full port valve shall be used (unless otherwise noted on a layout or requested by Gas Distribution Engineering).

**Plastic Molded Fittings**

Plastic molded fittings (caps, elbows, reducers, tees and valves) can only be joined to plastic pipe or other molded fittings by butt fusion or electrofusion. Plastic molded fittings can never be joined to plastic pipe or other molded fittings by mechanical fittings. See Spec G-8005.

A 'WARNING BURIED GAS LINES BELOW' tape (class and stock number 024-6660) must be installed at a **minimum** of 12 inches above the top of the direct buried new / replacement main. When new / replacement mains are inserted, the tape is to be installed above all exposed pipe in tie-in and service excavations.

Protection Plates shall be A36 steel 3/8" thick, provided by Con Edison.

**Pressure Testing Inerting:**

The newly completed gas pipe shall be subjected to a combination strength-proof and leakage test by the Contractor in accordance with G-8204

The Contractor shall furnish all material, transportation and equipment, including gas and air necessary to perform and complete the pressure testing and inerting operations, including the equipment used to record the test. Inerting shall be defined as the process of displacing air or natural gas in a facility with an inert gas.

**D. Method of Measurement**

The quantity to be paid for under this item shall be the actual number of each (EA) plastic gas pipe fitting installed for each pipe size. The various types of pipe sizes are defined as follows:

- JB 616.1A - Installation of Plastic Gas Pipe Fitting - ½" Diameter
- JB 616.1 - Installation of Plastic Gas Pipe Fitting - 1" Diameter
- JB 616.1B - Installation of Plastic Gas Pipe Fitting - 1-1/4" Diameter
- JB 616.1C - Installation of Plastic Gas Pipe Fitting - 1-1/2" Diameter
- JB 616.2 - Installation of Plastic Gas Pipe Fitting - 2" Diameter
- JB 616.3 - Installation of Plastic Gas Pipe Fitting - 3" Diameter
- JB 616.4 - Installation of Plastic Gas Pipe Fitting - 4" Diameter
- JB 616.6 - Installation of Plastic Gas Pipe Fitting - 6" Diameter
- JB 616.8 - Installation of Plastic Gas Pipe Fitting - 8" Diameter
- JB 616.10 - Installation of Plastic Gas Pipe Fitting - 10" Diameter
- JB 616.12 - Installation of Plastic Gas Pipe Fitting - 12" Diameter
- JB 616.16 - Installation of Plastic Gas Pipe Fitting - 16" Diameter

**E. Price to Cover**

The unit price bid per each (EA) shall include the cost of all labor, equipment and materials not provided by Con Edison as necessary to completely install the plastic gas pipe fitting. The price per each (EA) plastic gas pipe fitting shall include pipe installation, (including but not limited to valves, elbows, weld end caps and tees), miter cut, joining by fusing, and all other work necessary to completely install the plastic gas pipe fitting, and testing and inerting operations. Other work such as pavement saw-cutting, trench excavation, temporary timber sheeting, and backfilling with granular materials, compacting, valve installation, protection plates and pavement / curb restoration shall be paid for separately under the appropriate contract bid items.

**F. References**

**JB 620 - INSTALLATION OF STEAM PIPE****A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install steam pipes and service connections. The Contractor shall satisfactorily clean and test install new steam pipes, and steam pipe insulation and steam housing and appurtenances, complete as specified herein and as indicated on the contract drawings / layouts and in accordance with the specifications and directions of the authorized Con Edison field representative in consultation with Con Edison Steam Engineering. All work shall be performed in accordance with Con Edison Requirements, standard drawings and specifications referenced herein.

**B. Materials**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison will be delivered to the Contractor at the construction site and unloaded by the Contractor.

**Pipe:**

All piping shall conform to Piping Design Criteria for The Steam Distribution System Volume 1 prepared by ABS Consulting Section 4.0 for the Consolidated Edison Company and Con Edison Specifications S-9035-9, S-9036-10 and S-9040-4.

**C. Methods of Construction:**

The Contractor shall install the steam pipe(s), as shown on layouts and or drawings and sketches and as directed by the facility operator from designated facility operator service points and in accordance with the contract plans and Con Edison Standard specifications. The method of construction shall include all labor, equipment and materials that are necessary to complete the installation of the steel steam pipe including cutting of the pipe, joining by welding, one (1) for each 40' random full length of pipe, coating of pipe, insulation installation, concrete housing installation and appurtenances complete, and testing operations.

**D. Method of Measurement:**

The quantity to be paid for under this item shall be the actual number of linear feet (LF) of pipe installed for each size, as measured along the center line of the pipe in its final position.

- JB 620.1 Installation of Steam Pipe - 2" Diameter
- JB 620.2 Installation of Steam Pipe - 3" Diameter
- JB 620.3 Installation of Steam Pipe - 4" Diameter

□

- JB 620.4 Installation of Steam Pipe - 6" Diameter
- JB 620.5 Installation of Steam Pipe - 8" Diameter
- JB 620.6 Installation of Steam Pipe - 10" Diameter
- JB 620.7 Installation of Steam Pipe - 12" Diameter
- JB 620.8 Installation of Steam Pipe - 14" Diameter
- JB 620.9 Installation of Steam Pipe - 16" Diameter
- JB 620.10 Installation of Steam Pipe - 18" Diameter
- JB 620.11 Installation of Steam Pipe - 20" Diameter
- JB 620.12 Installation of Steam Pipe - 24" Diameter
- JB 620.13 Installation of Steam Pipe - 30" Diameter
- JB 620.14 Installation of Steam Pipe - 36" Diameter

**E. Price To Cover:**

The unit price bid per linear feet (LF) of pipe shall include the cost of all labor, equipment and materials not provided by Con Edison as necessary to complete the work. The price per linear foot of steel steam pipe shall include pipe installation, cutting of pipe, joining by welding, one (1) for each 40' random full length of pipe, coating of pipe, insulation installation, concrete housing installation and appurtenances complete, and testing operations.

Other work such as pavement saw-cutting, trench excavation, temporary timber sheeting, and backfilling with granular materials, compacting, and pavement restoration shall be paid for separately under the appropriate contract item.

**F. References:**

**JB 621 - INSTALLATION OF STEAM PIPE FITTINGS**

**A. Description:**

Under this section, the City Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install steam pipe fittings and service connection fittings. The Contractor shall install new steam pipe fittings, insulation, encase steam pipe and fittings in concrete housing with waterproofing membrane and appurtenances, complete as specified herein and as indicated on the contract drawings/layouts and in accordance with the specifications and directions of the authorized Con Edison field representative in consultation with Con Edison Steam Engineering. All work shall be performed in accordance with Con Edison requirements, standard drawings and specifications referenced herein.

**B. Materials:**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison will be delivered to the Contractor at the construction site and unloaded by the Contractor.

**Pipe Fittings:**

All piping shall conform to Consolidated Edison Company Specification S-9035-11, ASTM A-53 (entitled "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless"), Grade B Type S (Seamless). Steam pipe fittings shall conform to the latest Con Edison Specification S-9040.

**C. Methods of Construction:**

The Contractor shall install the steam pipe fittings, including but not limited to valves, elbows, weld end caps and tees as shown on layouts and or drawings and sketches and as directed by the facility operator and in accordance with the contract plans and Con Edison Standard specifications and Engineering Orders (EO). The method of construction shall include all labor, equipment and materials that are necessary to complete the installation of the steam pipe fittings including miter cuts, weld(s), insulation, concrete housing with waterproofing membrane and appurtenances complete, and testing operations. All welds must be performed in accordance with Specification S-11944 and radiographically inspected as per specification G-1070. The elevation and line of the steam main may be changed to field conditions, and prior to any changes in the field must be reported to Steam Distribution Engineering for approval. In addition, the existing insulation may contain asbestos, and it should be handled and disposed in accordance with Con Edison's Corporate Asbestos Management Manual. An ACP-7 permit will need to be filed for any abatement work. All identified work shall be performed by a steam approved and qualified contractor.

□

□

**D. Method of Measurement:**

The quantity to be paid for under this item shall be the actual number of each (EA) pipe fitting installed for each size of pipe.

- JB 621.1 Installation of Steam Pipe Fitting - 2" Diameter
- JB 621.2 Installation of Steam Pipe Fitting - 3" Diameter
- JB 621.3 Installation of Steam Pipe Fitting - 4" Diameter
- JB 621.4 Installation of Steam Pipe Fitting - 6" Diameter
- JB 621.5 Installation of Steam Pipe Fitting - 8" Diameter
- JB 621.6 Installation of Steam Pipe Fitting - 10" Diameter
- JB 621.7 Installation of Steam Pipe Fitting - 12" Diameter
- JB 621.8 Installation of Steam Pipe Fitting - 14" Diameter
- JB 621.9 Installation of Steam Pipe Fitting - 16" Diameter
- JB 621.10 Installation of Steam Pipe Fitting - 18" Diameter
- JB 621.11 Installation of Steam Pipe Fitting - 20" Diameter
- JB 621.12 Installation of Steam Pipe Fitting - 24" Diameter
- JB 621.13 Installation of Steam Pipe Fitting - 30" Diameter
- JB 621.14 Installation of Steam Pipe Fitting - 36" Diameter

**E. Price To Cover:**

The unit price bid shall be the actual number of each (EA) pipe fitting installed for each size of pipe including the cost of all labor, equipment and materials (not provided by Con Edison) necessary to complete all associated installations identified in the project scoping document and as prescribed in the layout(s). The price per each steam fitting shall include the installation of the steam pipe fitting including miter cuts, weld(s), and pipe fittings, installing pipe insulation, encase all piping in concrete housing and appurtenances complete and testing operations.

Other work such as pavement saw-cutting, trench excavation, temporary timber sheeting, and backfilling with granular materials, compacting, and pavement restoration shall be paid for separately under the appropriate contract item.

**F. References:**

**JB 622 – FURNISH, DELIVERING AND INSTALLING STRAIGHT STEEL PIPE STEAM CASING**

**A. Description**

Furnishing, delivering and installing steel pipe for use as casing pipe for existing mains and services on the steam distribution system.

**B. Materials**

Pipe material shall conform to Con Edison Specification S-9037-7, Casing for pipe use on steam mains and service piping, and shall be made in the United States of America.

Pipe shall be spiral butt weld conduit conforming to ASTM A-139 entitled "Standard Specification for Electric-Fusion (Arc)-Welded Steel Pipe (NPS 4 and Over)."

For pipe sleeves attached to dresser couplings at building walls, use ASTM A-53 entitled "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless," conforming to Con Edison Specification S-9035-12 or S-9035-13.

Pipe conforming to ASTM A-252 entitled "Standard Specification for Welded and Seamless Steel Pipe Piles" is a suitable substitution.

Nominal pipe size, outside diameter, wall thickness and weight of steel pipe to be approved in writing by Con Edison Steam Group prior to manufacturing.

The interior of the pipe shall be smooth, free of scale, oil, grease and other projections.

The requirements for inspection and acceptance, as described in the detailed specification for material referenced above shall in all cases prevail. Con Edison may elect to arrange for inspection at the mill.

Additional proposed controlled low strength material (Item no. ESCR-7,18) shall be installed around the outermost new steam shells for the lengths of steel pipe indicated by Con Edison per the latest version of Contract Drawing F702, Utility Crossings Type C.

**C. Methods of Construction**

Steam casing pipe shall be furnished with square ends suitable for welding sleeves. The ends shall be prepared by grinding smooth the weld bead a total of 18" from the pipe ends.

All bidders shall fully comply with Con Edison Specification CE-PS-4303, "Quality Assurance Requirements for Level D Vendors."

Shipment of pipe by railroad transportation shall be in accordance with API specification RP 5L1 entitled "Recommended Practice for Railroad Transportation of Line Pipe." When transporting by truck or trailer, the pipe shall rest on pads and use adequate means to protect the pipe ends and maintain pipe roundness.

□

□

**D. Method of Measurement**

The quantities of straight steel pipes to be measured for payment shall be the number of linear feet of each size straight steel pipe actually furnished, delivered and laid, complete, as required by Con Edison and as measured along the center line axis of the pipe as installed.

The pipe shall be furnished in continuous lengths as ordered. Two or more shorter lengths of pipe joined together by welding or other means to meet length requirements are not acceptable.

**E. Price to Cover**

The contract price for furnishing, delivering and installing straight steel pipe steam casing around existing steam mains/services with outermost pipe encased in controlled low strength material shall be the unit price bid per linear foot for each size and shall cover the cost of all labor, materials (made in the United States of America, only), plant, equipment, samples, tests and insurance required and necessary to furnish, deliver and install straight steel steam casing pipe as specified; pumping; bridging; cleaning; welding; jointing; lining; coating; connections; backfilling; fabrication; inspection and testing; preparation, submittal and approval of all required shop drawings and designs; obtaining all necessary permits; furnish and install all other items necessary to complete this work; and do all other work necessary and incidental thereto in order to complete this work all in accordance with the plans and specifications and as directed by the Engineer.

Price to cover earth excavation outside the flood wall area shall be covered under JB 405.

Payment for furnishing, delivering and installing straight steel casing pipe will be measured in linear feet (L.F.):

- JB 622.36 FURNISHING, DELIVERING AND INSTALLING 36-INCH STRAIGHT STEEL STEAM CASING PIPE
- JB 622.48 FURNISHING, DELIVERING AND INSTALLING 48-INCH STRAIGHT STEEL STEAM CASING PIPE

STEEL PIPE FOR STEAM MAINS AND SERVICES  
FOR THE 200 PSIG DISTRIBUTION SYSTEM

Prepared by: P Sharma  
Pankaj Sharma  
Engineer

Date: 04/21/2016

Approved by: Dowlatram Somrah  
Dowlatram Somrah  
Section Manager

Date: 4-21-2016

□

□

**Specification S-9035- 12**

**1.0 SCOPE**

This specification applies to the purchase of steel pipe for use as 200 PSIG steam distribution mains and services.

**2.0 MATERIAL**

- 2.1 Pipe with nominal diameters from 1" to 24" inclusive shall conform to ASTM A-53 (entitled "Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless"), Grade B Type S (Seamless).
- 2.2 Pipe with nominal diameters from 30" and up shall conform to ASTM A-672 (entitled "Standard Specification for Electric-Fusion-Welded Steel Pipe for High-Pressure Service at Moderate Temperatures"), Grade B-65 Class 22 or Grade C-65 Class 22.

**3.0 SUITABLE SUBSTITUTION**

ASTM A-106 (entitled "Standard Specification for Seamless Carbon Steel Pipe for High-Temperature Service"), Grade B Seamless and API-5L (entitled "Specification for Line Pipe"), Grade B Seamless are suitable substitutes for pipe sizes 1" to 24" inclusive.

**4.0 LENGTH**

- 4.1 The pipe shall be furnished in one continuous length as specified on the order.
- 4.2 Two or more shorter lengths of pipe joined together by welding or other means to meet length requirements are not acceptable.

**5.0 PIPE ENDS**

The pipe shall be beveled for welding in accordance with requirements of API- 1104 entitled "Welding of Pipelines and Related Facilities".

**6.0 INTERIOR OF PIPE**

The interior of pipe shall be smooth, free of scale, oil, grease and other projections.

**7.0 COATING**

Pipe shall be supplied with the regular mill coating on the outside.

□

□

**Specification S-9035- 12**

**8.0 DESIGN LIMITATIONS**

The following sizes are approved for steam piping operating up to 200 PSIG and 650° F

Nominal Pipe Size (in.)	Outside Diameter (in.)	WT. Class/ Schedule	Wall Thickness (in.)	Weight (lbs/ft)
1	1.315	XS/80	0.179	2.17
2	2.375	XS/80	0.218	5.02
3	3.500	STD/40	0.216	7.58
4	4.500	STD/40	0.237	10.79
6	6.625	STD/40	0.280	18.97
8	8.626	STD/40	0.322	28.55
10	10.750	STD/40	0.365	40.48
12	12.750	STD	0.375	49.56
16	16.000	STD/30	0.375	62.58
20	20.000	STD/20	0.375	78.60
24	24.000	STD/20	0.375	94.60
30	30.000	STD	0.375	118.70
32	32.000	STD	0.375	126.66
34	34.000	STD	0.375	134.67
36	36.000	STD	0.375	142.68

**9.0 TRANSPORTATION OF PIPE**

- 9.1 Shipment of pipe by railroad transportation shall be in accordance with API Specification RP 5L1 entitled "Recommended Practice for Railroad Transportation of Line Pipe.
- 9.2 When transporting pipe by truck or trailer, the pipe supplier shall use adequate means to protect the pipe ends and maintain pipe roundness.

**10.0 QUALITY ASSURANCE**

All bidders shall fully comply with Consolidated Edison Specification CE-PS-4303, "Quality Assurance Requirements for Level D Vendors"

□

□

**Specification S-9035- 12**

**11.0 INSPECTION**

- 11.1 The requirements for inspection and acceptance, as described in the detailed specification for material referenced above, shall in all cases prevail. The Company may elect to arrange for inspection at the mill.
- 11.2 Seamed welds shall be 100% radiographically inspected per ASTM A 672.
- 11.3 Hydrostatic test shall conform in accordance with specifications for material referenced above.

REVISION 9  
Included 32", 34" and 36" nominal sizes and, Section 10.2

REVISION 10  
Reviewed and re-format.

REVISION 11  
Added Specification titles, added section 10 (QA).

**5.0 INTERIOR OF PIPE**

The interior of pipe shall be smooth, free of scale, oil, grease and other projections.

**6.0 PIPE ENDS**

Steam casing pipe shall be furnished with square ends suitable for welding sleeves. The ends shall be prepared by grinding smooth the weld bead a total of 18" from the pipe ends.

**7.0 LENGTH**

- 7.1 The pipe shall be furnished in continuous lengths as ordered.
- 7.2 Two or more shorter lengths of pipe joined together by welding or other means to meet length requirements are not acceptable.

□

□

**Specification S-9037-7**

**8.0 QUALITY ASSURANCE**

All bidders shall fully comply with Consolidated Edison Specification CE-PS-4303, "Quality Assurance Requirements for Level D Vendors"

**9.0 INSPECTION**

The requirements for inspection and acceptance, as described in the detailed specification for material referenced above shall in all cases prevail. The Company may elect to arrange for inspection at the mill.

**10.0 TRANSPORTATION OF PIPE**

- 10.1 Shipment of pipe by railroad transportation shall be in accordance with API Specification RP 5L1 entitled "Recommended Practice for Railroad Transportation of Line Pipe."
- 10.2 When transporting by truck or trailer, the pipe shall rest on pads and use adequate means to protect the pipe ends and maintain pipe roundness.

REVISION 4  
General review.

REVISION 5  
Added section 2.1, Reviewed and re-format.

REVISION 6  
Added specification titles, deleted ASTM A211 (no longer published), added section 8 (QA).

REVISION 7  
Added section 7.2, Reviewed and re-format.

Next Scheduled Review June, 2021

**ENGINEERING SPECIFICATION**

**CE-PS-4303, REV 02, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS**

**JUNE, 2016**

**SECTION I – GENERAL REQUIREMENTS**

**1.0 PURPOSE**

- 1.1 To set forth general requirements for vendors in establishing and maintaining the quality assurance effort required when the product or service being supplied is one of the vendor's standard products, but is simple enough in design that testing and/or inspection is adequate to ensure the required quality. (Level D Purchase).
- 1.2 This is not intended to specify those unique requirements associated to a particular type of equipment or service. Those requirements should be included in the detailed project or equipment specification.
- 1.3 This specification supersedes General Specification No. QA-7100D – QA Requirements for Sellers.

**2.0 PROJECT DESCRIPTION**

- 2.1 This specification is for projects that require Level D Quality Controls. This level of quality control is used when the product or service being supplied requires no significant design work and is similar to equipment previously supplied by the vendor. For Level D, only inspection and test controls are required.
- 2.2 This specification when referenced in an invitation, equipment specification, or contract shall apply to suppliers, equipment, sub-systems, systems and parts thereof as covered by those documents.
- 2.3 First Article is defined as the production unit or lot defined by Con Edison which is to be used to demonstrate the fulfillment of Con Edison's contract requirements with respect to fabrication and assembly techniques, inspection acceptance procedures and records, and specified configurations and functions.

**3.0 APPLICABLE STANDARDS AND REFERENCES**

- 3.1 Since this specification is generic in nature, a wide variety of codes and standards could apply to the product being provided. The Con Edison Responsible Person can specify these requirements as part of the detailed specifications or by providing an "X" in the applicability column in Part 0 of Section III of this document.
- 3.2 The National Electrical Safety Code (NESC) is applicable to all equipment/installations provided to Con Edison, and this line in Section III is always marked as applicable. The other codes and standards in Section III are meant to be a representative sample of potentially applicable codes, but the list is not meant to be all-inclusive. Other codes or standards may be added to Section III or provided as part of the project specific specification.
- 3.3 In addition to the above codes and standards, the Contractor/Seller shall comply with the Federal, State, and Local codes and regulations and all applicable specifications and standards including, but not limited to those specified in this document.

Paper copies of the Engineering Operations Manual are uncontrolled and therefore may be outdated. Please verify that you have the current version prior to use by viewing the Central Engineering website (<http://ceng/>)

**ENGINEERING SPECIFICATION****CE-PS-4303, REV 01, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS****MAY, 2016****4.0 QUANTITY AND RATING**

- 4.1 The quantity and rating of the equipment/service being purchased is provided by the specific project specifications.

**5.0 CONTRACT DRAWINGS, SUPPLEMENTAL SPECIFICATIONS, AND MATERIAL LISTS**

- 5.1 This specification is a supplement to other specific purchasing specifications. Contract drawings and material lists are defined in the specific project specifications.

**6.0 SUBMITTALS**

- 6.1 The vendor shall prepare and submit for approval a written proposal that demonstrates the vendor's capability of meeting all the requirements of this procedure.
- 6.2 The submittal of proprietary information is not required as part of the Quality Assurance System. However, such information shall be available for review by Con Edison representatives at the vendor's facility.
- 6.3 The vendor submittal shall include an outline of the inspection plan that will be used during the manufacture and acceptance of the purchased equipment or supplies. For inspection plan elements not in effect at the time of the submittal the vendor shall provide a schedule of implementation for such elements.
- 6.4 The Inspection Plan should include:
- 6.4.1 A listing of the products that will be inspected under the Inspection Plan.
- 6.4.2 A listing of critical characteristics for the product involved.
- 6.4.3 A listing of in-process and end product inspections that is to be performed to verify critical characteristics acceptance. This list should include inspection techniques and equipment to be used and acceptance criteria for each inspection and test.
- 6.4.4 Define those records of inspection and tests that will be retained together with the retention period for these records.
- 6.4.5 Define the control systems that will be used to control identification and inspection status throughout manufacturing and inspection operations.
- 6.4.6 Define the system to control and calibrate inspection, measuring and test equipment.
- 6.4.7 Include a statement defining the extent of sampling inspections to be used together with appropriate sampling plans.
- 6.4.8 The vendor shall define the extent of final product inspection and test.
- 6.5 Copies of procedures, plans, instructions and inspections necessary to assure conformance with contract requirements need not be submitted, but these documents shall be available for review by Con Edison representatives at the vendor's facility.

□

□

**ENGINEERING SPECIFICATION**

**CE-PS-4303, REV 01, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS**

**MAY, 2016**

- 6.6 The vendor shall submit an overview of the inspection organization including qualifications and experience of key personnel.
- 6.7 The vendor shall submit a listing of the inspection facilities and equipment available for use in meeting the quality requirements.
- 6.8 If an organization has been previously qualified under this specification or its predecessor the vendor does not need to resubmit all the information previously resubmitted, but must submit certification that the previously submitted information is still current. Any changes should be identified and fully explained.

**7.0 QUALITY ASSURANCE**

- 7.1 Con Edison may conduct audits or assessments to assure compliance with the contract requirements. The vendor shall cooperate with Con Edison and its authorized representatives in the conduct of these activities.
- 7.2 The vendor shall make available to the audit team at the vendor’s facility a copy of each specification, instruction, procedure, record, or special requirement deemed by the team to be necessary and pertinent to conduct such quality audits.
- 7.3 The vendor shall periodically verify the effectiveness and scope of their inspection plan.
- 7.4 When significant quality problems exist with a sub-tier supplier, the vendor at Con Edison’s request shall obtain permission for Con Edison or its authorized representative to inspect source supplies or services at the supplier’s facility. Such inspections shall not constitute acceptance nor shall it in any way replace the vendor’s responsibility to furnish an acceptable end product.
- 7.5 The vendor shall define those records of tests and inspections, which will be maintained as verifiable objective evidence of conformance to contract requirements.
- 7.6 The vendor shall specify the retention period for records and when requested shall make these records available to Con Edison during the defined retention period.
- 7.7 The vendor shall implement and maintain an Inspection and Test System, which will assure product conformance to contract quality requirements.
- 7.8 The system shall provide an organized approach to assure the adequacy and completeness of all documents product inspections and tests, material conformances, and quality.
- 7.9 The vendor shall obtain approval of Con Edison for all changes to quality assurance plans, System summaries, procedures and quality criteria previously approved by Con Edison.
- 7.10 Con Edison’s approval of vendor’s quality assurance plans, systems, procedures and related documents and audits of vendor’s compliance therewith shall not relieve the vendor of the responsibility for furnishing end products meeting all requirements of the contract.

Paper copies of the Engineering Operations Manual are uncontrolled and therefore may be outdated. Please verify that you have the current version prior to use by viewing the Central Engineering website (<http://ceng/>)

**ENGINEERING SPECIFICATION****CE-PS-4303, REV 01, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS****MAY, 2016****8.0 PROPOSALS**

- 8.1 Any nonconformance or deviation from this specification shall be identified by the vendor in writing and approved by Con Edison.

**9.0 SCHEDULE**

- 9.1 As defined in the equipment/service specific specification.

**10.0 GUARANTEES**

- 10.1 As defined in the equipment/service specific specification.

**11.0 TRAINING AND DEMONSTRATION**

- 11.1 As defined in the equipment/service specific specification.

**12.0 OWNER ACCEPTANCE**

- 12.1 Acceptability is defined in the equipment/service specific specification.
- 12.2 The vendor shall provide for the identification, segregation, and disposition of items that do not conform to either the vendor's or Con Edison's documented requirements.
- 12.3 The vendor shall document each instance of accepted nonconformance.
- 12.4 Acceptance of non-conforming items may be established as follows:
- 12.4.1 When an item does not conform to Con Edison requirements, the vendor may deliver the item, if Con Edison agrees in writing to accept the non-conforming item without repair, or authorizes repair that will make the non-conforming article acceptable to Con Edison.
- 12.4.2 When an item does not conform to vendor requirements, the vendor may establish acceptability of the item provided that such action does not affect the vendor's warranty obligations and that compliance with codes and requirements of regulatory bodies, having jurisdiction, is assured.
- 12.4.3 When an item does not conform to a drawing, specification, or procedure previously approved by Con Edison, the vendor's acceptance decision shall be submitted to Con Edison.
- 12.4.4 Any changes that affect contract price shall be administered in accordance with the change provisions of the contract terms and conditions.
- 12.5 When required by the purchase order, the vendor shall schedule a First Article Inspection for Con Edison at the vendor's facility upon completion of the "first article" as defined by Con Edison.
- 12.6 When required by the purchase order, the vendor shall schedule a comparable inspection at production points or for specified articles as agreed to by Con Edison and the vendor, following major retooling or design changes or subsequent to evident quality degradation.

□

□

---

**ENGINEERING SPECIFICATION**

**CE-PS-4303, REV 01, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS**

**MAY, 2016**

---

- 12.7** For a First Article Inspection, the vendor shall present the "first article" for Con Edison's examination, and present or demonstrate the following as a minimum.
  - 12.7.1 Drawings, specifications, and other documentation used in the manufacturing, inspecting and testing of the "first article."
  - 12.7.2 Objective evidence of inspection acceptance of tooling and test equipment used to produce the "first article."
  - 12.7.3 Objective evidence of the vendor's inspection and acceptance of the "first article."
  - 12.7.4 Other documentation, data, demonstrations or evidence of conformance of the "first article" to the requirements of the contract.

□

□

**ENGINEERING SPECIFICATION****CE-PS-4303, REV 01, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS****MAY, 2016****SECTION II – TECHNICAL REQUIREMENTS****1.0 TECHNICAL REQUIREMENTS**

- 1.1 To the extent possible, the vendor shall select parts, materials, and processes on the basis of proven experience or qualification for the intended use.
- 1.2 The elements of the process that require controls necessary should be specified in process control procedures or similar documents.

**2.0 PERFORMANCE REQUIREMENTS**

- 2.1 The vendor shall maintain an inspection system during manufacturing that will assure that contract requirements are met by adherence to this system and by end product inspection results.
- 2.2 The vendor shall maintain records of inspections and tests performed throughout the manufacturing cycle.

**3.0 SUPPORT SYSTEMS**

- 3.1 The vendor shall define those inspection operations that require special training and/or certification of personnel.
- 3.2 Prior to performing these operations the vendor shall train and/or certify as competent those personnel who will perform these functions during the operations.
- 3.3 Manufacturing tools, gauges, jigs, and fixtures used for the measurements of quality characteristics shall be checked for accuracy prior to initial use, and shall be re-examined at established intervals to the extent necessary to assure continued adequate accuracy. Accuracy may be established by inspection of articles produced.

**4.0 REQUIRED SUBMITTALS**

- 4.1 The vendor shall respond promptly to Con Edison's request for reports describing action taken to correct deficiencies found in items submitted to Con Edison and to preclude recurrence of these deficiencies in subsequent submittals.

**5.0 DELIVERY, STORAGE, AND HANDLING**

- 5.1 The vendor shall maintain a system to control packaging and shipping operations to assure the following:
  - 5.1.1 The articles are as contracted by Con Edison, are complete and properly identified.
  - 5.1.2 Packaging, preservation and markings are as required by the contract.
  - 5.1.3 An adequate pre-shipment inspection is conducted to assure that no damage occurs during shipping.

□

□

**ENGINEERING SPECIFICATION****CE-PS-4303, REV 01, QUALITY ASSURANCE REQUIREMENTS FOR LEVEL D VENDORS****MAY, 2016**

- 5.2** The vendor shall maintain facilities and procedures to the extent necessary to:
- 5.2.1 Control identification of articles or lots throughout all phases of manufacture and inspection.
  - 5.2.2 Ensure that housekeeping and handling practices prevent damage, loss substitution or quality degradation.
- 5.3** Equipment and manufacturing devices used for inspection purposes shall be stored in a manner, which will preclude damage and loss of accuracy.

**6.0 TESTS AND INSPECTIONS**

- 6.1** The vendor shall employ and maintain inspection, measuring and test equipment of suitable range, accuracy and type to assure conformance of equipment to contract requirements.
- 6.2** Un-calibrated and damaged measuring, inspection, and test equipment shall be controlled and identified to preclude use.
- 6.3** Each unit of inspection, measuring and test equipment shall be calibrated prior to initial use and at established intervals against adequate standards.
- 6.4** Calibration information shall be noted on the instrument or in correlated records.
- 6.5** Inspection, measuring and test equipment shall be modified as necessary to assure compatibility with engineering changes to equipment to be delivered under the contract.
- 6.6** Reference standards used for calibration of inspection, measuring and test equipment shall be periodically recalibrated to maintain traceability to international or national standards.
- 6.7** The vendor may use sampling inspection procedures when tests are destructive or when quality history, inherent characteristics or the non-critical application of the material justify less than 100% inspection. Such sampling plans shall be included as part of the vendor's Quality System.
- 6.8** The vendor shall maintain a system for identifying the inspection status of articles or lots during receipt inspection of supplies and materials and during manufacture, assembly and test of equipment.
- 6.9** The vendor shall maintain procedures for rework and re-inspection of items, which can be completed to drawing or specification requirements after an inspection rejection.
- 6.10** The vendor shall define the extent of standard final product inspection and test.
- 6.11** Prior to the submittal to Con Edison for acceptance, the vendor shall perform a final inspection in accordance with the requirements of the equipment or service specification, and the Inspection Plan.

□**JB 625 - INSTALLATION OF STEAM EQUIPMENT****A. Description:**

Under this section, the City Contractor shall provide all labor, materials, equipment, insurance and incidentals required to install steam equipment, concrete housing with waterproofing membrane and ancillary piping systems to existing or new Con Edison Company facilities. The Contractor shall satisfactorily install and hydrostatically test steam equipment as required in accordance with the specifications and directions of Con Edison Steam Engineering in consultation with the Con Edison field representative. All work shall be performed in accordance with Con Edison Requirements, standard drawings and specifications referenced herein. The steam equipment to be installed shall include but not be limited to:

1. Cooling Chamber Assembly
2. Trap Assembly
3. Drain Assembly
4. Valve Assembly
5. Anchor
6. Manhole
7. Service Valve box
8. Sewer connection

**B. Material:**

All materials will be provided by Con Edison unless specifically noted otherwise. All materials provided by Con Edison will be delivered to the Contractor at the construction site and unloaded by the Contractor. Materials supplied by the contractor and utilized in the construction of the steam cooling chamber shall be in accordance with Con Edison standard specifications and applicable Engineering Orders.

**C. Method of Construction:**

The Contractor shall install the steam assembly equipment and concrete housing, (including but not limited to bolts, water seals, tees, flanges, gaskets, trap valves, blow-off valves, sleeves, reducers, caps, and plates). All work shall comply with the specifications, plans, layouts, and standards of the facility operator. All work shall be performed in accordance with Con Edison standard specifications and applicable Engineering Orders. No traffic shall be allowed on modified structures until permitted by the facility operator. All welds must be performed in accordance with Specification S-11944 and radiographically inspected with Specification G-1070. The elevation and line of the steam main may be changed to field conditions, and prior to any changes in the field must be reported to Steam Distribution Engineering for approval. In addition, the existing insulation may contain asbestos, and it should be handled and disposed in accordance with Con Edison's Corporate Asbestos Management Manual. An ACP-7 permit will need to be filed for any abatement work. All identified work shall be performed by steam approved and qualified contractor.

□

□

**D. Method of Measurement:**

The quantity to be measured shall be for each (EA) steam assembly installed complete.

- JB 625A – Installation of Steam Cooling Chamber Assembly
- JB 625B – Installation of Steam Trap Assembly
- JB 625C – Installation of Steam Drain assembly
- JB 625D – Installation of Steam Valve Assembly
- JB 625E – Installation of Steam Anchor
- JB 625F – Installation of Steam Manhole
- JB 625G – Installation of Steam Service Valve Box
- JB 625H – Installation of Steam Sewer Connection

**E. Price To Cover:**

The unit price bid for each (EA) steam assembly item installed shall cover the cost of all labor, material, equipment, insurance, and incidentals necessary to completely install the steam assembly equipment and concrete housing with waterproofing membrane (including but not limited to bolts, water seals, tees, flanges, gaskets, trap valves, sleeves, blow-off valves, reducers, caps, and plates). The unit price shall cover the cost associated with the maintenance and protection of traffic and incidentals required to construct the steam assembly. All work shall comply with the plans, layouts, specifications, standards, and directions of the facility operator.

The installation of steam manholes and boxes shall be paid for separately under other appropriate contract bid item.

**JB 636E - ADJUSTMENT OF UTILITY HARDWARE**

Under this section the Contractor shall adjust existing utility street hardware including vault grates, valve boxes, etc., to the proposed grade by either building up or lowering the installation and resetting the castings, as and where directed by the facility operator.

**A. Description**

Building up or lowering the installation and resetting the castings shall consist of removing the existing frame and cover, building up or decreasing the existing installation, replacing the frame and/or cover if damaged, as determined by the facility operator, with a new frame and/or cover furnished by the facility operator, and setting the frame and cover to the new elevation.

**B. Materials**

Materials used shall comply with the Standards and specifications of the facility operator having jurisdiction over the installations. Where high-early strength concrete is required by the Resident Engineer to be placed adjacent to utility installations then the requirement for mortar shall be quick setting mortar capable of obtaining a minimum compressive strength of 1,500 psi in two (2) hours, and the requirement for concrete shall be high-early strength complying with current N.Y. State Department of Transportation, Standard Specifications for Class F concrete. When castings and/or covers are deemed inadequate at a location as determined by the facility operator, the facility operators shall furnish new castings and/or covers to the Contractor for installation. The Contractor is required to inform the utility operator in advance of the need for the castings. Materials supplied by the facility operator shall be delivered to the contractor’s designated storage area.

**C. Methods of Construction**

The Contractor shall breakout and dispose of sidewalk, curb, pavement and/or pavement base around existing casting, excavate as required to remove casting and install existing or replacement casting, remove casting, protect opening, reinstall existing casting or install new casting to the proposed grades, backfill, grade and compact fill around casting, install base concrete and or sidewalk pavement and curb, tack coat around frame, install and remove temporary pavement around casting where directed by the facility operator; and install and compact asphalt binder and wearing course or other permanent pavement around casting and perform all work in accordance with the contract plans and the specifications.

Setting or resetting the castings shall be done with bricks plus mortar and/or by raising or lowering adjustable castings according to the standards of the utility owner having jurisdiction over the installation. Work shall be done in a workmanlike manner. Any damage resulting from the Contractor’s operations to the existing installation which is to remain shall be satisfactorily corrected at the Contractor’s own expense, as directed by the facility operator. Castings, which are deemed unacceptable for resetting, shall become the property of the Contractor and shall be removed and disposed of by him away from the site.

No traffic shall be allowed on adjusted utility hardware until permitted by the facility operator.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of utility hardware units (EA) in each size group actually adjusted as specified under each item. The size of each utility hardware unit, measured in width, shall be defined as either, the diameter of the exposed edge of the casting, or the exposed edge of the longest side of rectangular frames as indicated in sketch JB 636.

For Castings in Roadway

**JB 636M – MODIFICATION OF WORK METHODS TO ACCOMMODATE UTILITY HARDWARE DURING PAVEMENT MILLING AND RESURFACING OPERATIONS**

**A. Description**

Under this section, the Contractor shall provide all labor, materials, equipment, insurance, and incidentals required to maintain, protect, and accommodate the integrity of utility hardware during pavement milling and resurfacing operations. Hardware includes castings, frames, and covers on utility structures, valve box cover castings, concrete collars around steam castings, and all other hardware protecting utility facilities.

**B. Materials – N/A**

**C. Method of Construction**

Removal of existing pavement around utility hardware shall be performed by the Contractor with extreme caution by utilizing appropriate methods of operation, by employing specialized construction equipment, and by special operations and sequencing.

The Contractor shall not mill existing pavement within 12" of the perimeter of utility hardware. Removal of pavement within 12" of the perimeter of utility hardware shall be by cutting with pavement breakers or other methods as proposed by the Contractor. All methods shall be presented to the facility operator by the Contractor prior to the start of construction and shall be approved by the facility operator.

During removal of existing pavement and for the duration of project, the Contractor shall protect utility hardware from damage by the Contractor's operations and traffic. Contractor shall also provide all necessary protection to pedestrians to prevent injury to pedestrians when crossing utility hardware during the project. Utility street hardware damaged by the Contractor or others during the project shall be replaced by the Contractor at Contractor's expense.

The Contractor shall not place any paving materials over utility hardware during the project and shall maintain free and unobstructed access to all structures at all times. The Contractor shall maintain all covers free of debris and protect the covers, if necessary, from residue that results from the paving operation.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of utility hardware units (EA.) in each size group actually adjusted as specified under each item. The size of each utility hardware unit, measured in width, shall be defined as either, the diameter of the exposed edge of the casting, the exposed edge of elliptical castings measured along the major axis or the exposed edge of the longest side of rectangular frames as indicated in sketch JB 636E.

JB 636 MA – Modification of Work Methods to Accommodate Utility Hardware (Under 7" Width)

- JB 636 SMB – Modification of Work Methods to Accommodate Utility Steam Hardware (Under and including 8" Width)
- JB 636 SMC – Modification of Work Methods to Accommodate Utility Steam Hardware (Above 8" to 34" Width)

**A. Price to Cover**

The price to modify work methods to accommodate Utility Hardware during pavement milling and resurfacing operations shall include the cost of all incremental labor, materials, time, equipment, insurance and incidentals required for removal and disposal of existing pavement, installation and compaction of base and wearing course materials, installation and compaction and removal of temporary asphalt concrete mixture, tack coating; in accordance with the plans, the specifications and the directions of the facility operator. The price to cover shall further include the cost of maintaining, protecting, and accommodating the integrity of utility street hardware during the project and during the performance of milling and resurfacing and the incremental additional work and effort made necessary to protect pedestrians from injury when crossing utility hardware during the project. The price to cover shall further include additional areas of modification of work methods beyond 12" of the perimeter of the utility street hardware due to the milling equipment and the location of other utility hardware, city street hardware, utility poles, street lights, traffic signals, curbs, sidewalks, medians, guide rails, pavement stops, cobblestones, and pavers. The price to cover for Items JB 636 SMB and JB 636 SMC shall also include modification of work methods due to existing concrete collars surrounding these castings.

Payment for all work herein specified shall be made on a one-time basis only; no payment for work herein specified shall be made for the same area more than one time. Adjustment to utility hardware shall be paid for under the appropriate JB 636E item.

□

**JB 636 RM - Rebuilding and Modifications to Utility Structures**

**A. Description**

This section describes the work of performing the rebuilding of utility structures by rebuilding the existing structures using methods approved by the facility operator. This section also describes the work of performing modifications to utility structures to accommodate changes in roadway or sidewalk grades that cannot be accomplished by adjustment of frames and covers, as described by Section 636 E, in the judgment of the facility operator. The existing structures shall be modified using methods approved by the facility operator in consultation with the Resident Engineer.

Rebuilding and or modifications of utility structures, which include boxes, manholes, vaults and valve boxes; shall be as directed by the facility operator and for structures with a monolithic roof shall include:

- Removing the existing frame and cover, followed by
- Demolition of all or a portion of the walls, floor, and monolithic roof, followed by
- Rebuilding of all or a portion of the floor, followed by
- Rebuilding:
  - A portion of the walls or
  - A portion of the walls plus a vertical extension or
  - All of the walls or
  - All of the walls plus a vertical extension, followed by
- Rebuilding all or a portion of the monolithic roof or replacement with a non-monolithic roof.

Rebuilding and or modifications of utility structures, which include boxes, manholes, vaults and valve boxes; shall be as directed by the facility operator and for structures with a non-monolithic roof shall include:

- Removing the existing frame, cover, and roof slab, followed by
- Demolition of all or a portion of the walls and floor, followed by
- Rebuilding:
  - A portion of the walls or
  - A portion of the walls plus a vertical extension or
  - All of the walls or
  - All of the walls plus a vertical extension, followed by
- Installation of the existing roof slab or a new non-monolithic roof slab.

**B. Materials**

All materials used shall comply with the standards of the facility operator. The Contractor shall obtain pre-cast roofs that are available from a facility operator’s vendor from that vendor.

**C. Method of Construction**

All work shall comply with the specifications, plans, and standards of the facility operator. The Contractor shall perform the necessary rebuilding of the floor, walls, and roof of the existing utility structure as directed by the facility operator. New roof slabs shall be monolithic or nonmonolithic as directed by the facility operator. New non-monolithic roofs shall be removable and cast on site or pre-cast as directed by the facility operator. No traffic shall be allowed on modified structures until permitted by the facility operator.

□

The Contractor shall perform the necessary modifications to the walls and roof of the existing utility structure to accommodate changes in roadway or sidewalk grades that cannot be accomplished by the adjustment of frames and covers as directed by the facility operator. New roof slabs shall monolithic or non-monolithic as directed by the facility operator. New non-monolithic roofs shall be removable and cast on site or pre- cast as directed by the facility operator. No traffic shall be allowed on modified structures until permitted by the facility operator.

Adjusting existing or new frames and covers shall be as described in JB 636E.

All work shall be done in a workmanlike manner and any damage resulting from the Contractor's operations shall be satisfactorily corrected as directed by the facility operator and at the Contractor's expense.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards (CY) of concrete, pre-cast concrete, brick, and mortar in place to the nearest hundredth of a cubic yard. No deductions will be made for the spaces occupied by steel reinforcement.

**E. Price to Cover**

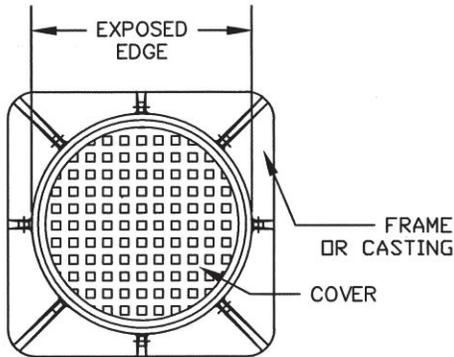

The contract price bid under this item shall be a unit price per cubic yard (CY) of concrete, precast concrete, brick, and mortar placed in the utility structure. The unit price shall cover the cost of all labor, materials, plant, equipment, insurance and incidentals required to rebuild or modify privately owned utility structures, including all pavement breaking, pavement removal and disposal, excavation, haul away, and disposal, furnish and install and compact backfill, sheeting and bracing, removing of frames and covers. The price shall also include demolition of the private utility structure, haul away and disposal of demolished materials, formwork, installation of concrete, bricks, mortar, steel reinforcement, structural steel beams, furnish and install pre-cast roofs, removal and installation of interior hardware, support and protection of all utility facilities within the excavation and structure, and the furnishing of samples, as required. All work shall comply with the plans, specifications, standards, and directions of the facility operator. Resetting of new or existing street hardware shall be paid under JB 636E.

**JB 638NT – FIELD CONSTRUCTED TELECOMMUNICATIONS MANHOLE STRUCTURES**

Under this item the Contractor shall perform the complete installation of field constructed utility structures approved by the facility operator in consultation with the Resident Engineer. The utility structure shall be field constructed and installed in compliance with standard utility specifications and/or methods approved by the facility operator in consultation with the Resident Engineer.

**A. Description**

Installation of field constructed utility structure shall comply with utility standard specifications and/or as directed by the facility operator in consultation with the Resident Engineer and shall include:

- Service Boxes (various sizes)
- Manholes (various sizes)

Where approved by the facility operator, telephone structures may as an alternate be constructed of precast reinforced concrete.

**B. Materials**

The facility operator will furnish cable racks, pulling-in irons, sump castings, hardware, manhole steps/ladder supports and cast iron frames and covers. All other materials required for a complete manhole installation including concrete, reinforcing steel and structural steel shall be supplied by the Contractor and shall comply with the standards of the facility operator.

The Contractor shall notify the facility operator a minimum of 30 days prior to manhole construction for scheduling materials to be furnished by the utility company. The Contractor shall pick up said materials at the facility operator's yard.

All concrete shall have a minimum compressive strength of 4,000 psi at 28 days.

Reinforcing steel shall be deformed bars conforming to ASTM, Grade 60.

Structural steel shall conform to the requirements of ASTM A-36. Bolts shall conform with the requirements of ASTM A-325.

The Contractor shall supply all necessary materials (mortar, concrete, brick, etc.) for sealing duct entrance windows in manholes and for constructing chimneys and bricking up castings to grade.

**C. Method of Construction**

All work shall comply with the utility specifications, plans, and standards of the facility operator.

Refer to specification JB 406 for excavation and sheeting requirements associated with telephone manhole construction. Where replacement manholes are indicated on the plans, the demolition and removal of the existing manhole structure and the protection of existing cables and splices will be paid separately under JB 638R.

The Contractor shall perform the necessary field construction of the floor, walls, and roof of the utility structure as shown on the Plans and as directed by the facility operator in consultation with the Resident Engineer. No traffic shall be allowed on the structure until permitted by the facility operator in consultation with the Resident Engineer.

□

Field conditions may require the contractor to modify the design of the manhole structure, as directed by the facility operator in consultation with the Resident Engineer.

Refer to specification JB 636E for guidelines relating to the installation of new frames and covers. All structural steel roof beams shall be ground free of burrs and painted with one shop coat and two field coats of finish paint. The Contractor shall make provisions for and incorporate into the manhole all required materials as shown on the Plans, standard utility details or as directed by the facility operator in consultation with the Resident Engineer.

The Contractor shall provide duct entry windows in the new manhole as shown on the Plans and as directed by the facility operator. All windows shall be properly sealed around new ducts per utility company requirements.

All cable racks and wall brackets shall be supported on walls with 1/2" dia. X 2-1/2" long galvanized steel machine bolts using 1/2" concrete inserts or expansion bolts. Vertical spacing of inserts shall not exceed 18" o.c. (typ).

The Contractor shall confirm placement of concrete inserts for cable rack supports, pulling-in irons, and other embedments shown on the Plans with the facility operator, in consultation with the Resident Engineer, prior to manhole construction.

All work shall be done in a workmanlike manner and any damage resulting from the Contractor's operations shall be satisfactorily corrected as directed by the facility operator in consultation with the Resident Engineer and at the Contractor's expense. The contractor shall perform the installation of the utility structure while maintaining, supporting, and protecting and accommodating the integrity of all utility facilities (without disruption of service) located within the areas of the excavation and the field constructed structure.

This item shall also apply when partially or totally rebuilding or modifying an existing utility structure.

The Contractor is advised that in lieu of poured-in-place structures the substitution of Precast Reinforced Concrete Structures that comply with Utility Specifications, will be permitted only when approved by the facility operator in consultation with the Resident Engineer, along with the following provisions:

1. Precast telephone manholes shall be constructed to the interior manhole dimensions and details shown on the Plans.
2. The Contractor shall submit shop drawings and design calculations for each precast manhole structure for review and approval by the facility operator and the Resident Engineer prior to fabrication. Shop drawings shall show the overall structure dimensions, roof openings, window sizes and locations, sump locations, reinforcing steel and details, construction joint types and locations including sealant material proposed. The inside face of all windows (4 sides) shall be beveled and provisions made for all inserts and hardware for a complete manhole installation, including cable pulling iron embedments and cable rack insert embedments in accordance with the standards and requirements of the facility operator.

□

- 3. Precast manhole design criteria shall be as follows:
  - Concrete Minimum Compressive Strength: 4,000 psi or greater at 28 days.
  - Steel Reinforcement: ASTM A-615, Grade 60.
  - Design Loading: AASHTO HS20-44
  - Shop drawings and calculations shall state design methodology used and all design assumptions including soil pressures and ground water levels used in the design.
- 4. A 9-inch thick compacted stone ballast leveling pad shall be provided as a foundation for all precast manholes

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards (CY) of concrete, cast on site or pre-cast, as specified, concrete, brick, and mortar in place to the nearest hundredth of a cubic yard. No deductions will be made for the spaces occupied by steel reinforcement.

**E. Price to Cover**

The unit price under this item shall be a unit price per cubic yard (CY) of concrete, cast on site or pre-cast, as specified, concrete, brick, and mortar placed in the field constructed utility structure. The unit price shall cover the cost of all labor, materials, plant, equipment, insurance and incidentals required to field construct partially or totally, rebuild or modify, a utility structure. The unit price shall also include all formwork installation and removal, installation of concrete, bricks, mortar, steel reinforcement, structural steel beams, furnish and install pre-cast concrete, chimney, and installation of interior and exterior hardware, including frames and covers. The Contractor shall also install pipes, conduits, sumps, drains, sleeves, related steel or cast iron materials or equipment through the structures as shown on the drawings. Upon removal of forms, the Contractor shall remove debris and face off the entire interior of the structure. The unit price includes necessary realignment of existing ducts into the new structure up to five feet from the outside face of the new structure; any additional duct realignment required shall be paid under a separate JB item. The unit price shall further include the cost of maintaining, supporting, protecting and accommodating the integrity of all utility facilities (without disruption of service) during the work within the areas of excavation and the field constructed structure, and the furnishing of samples, as required. All work shall comply with the plans, specifications, standards, and directions of the facility operator in consultation with the Resident Engineer.

All pavement breaking, pavement removal and disposal, excavation, haul away, and disposal, furnish and install backfill, temporary pavement, sheeting, bracing, and all necessary incidentals shall be paid under item JB 406, only if required. All required break out and disposal of all types of conduits/duct banks in new structure area, including maintenance and support of cable shall be included in JB 638R. Where precast reinforced concrete manholes are used in lieu of poured in place manholes, the cost for furnishing, delivery and installation of the precast reinforced structures, additional excavation associated with the widening and deepening of trench due to increased width of precast structures and due to the placement of a stone ballast leveling pad; stone ballast; connections; and all work incidental thereto all in accordance with the Plans, Specification and Standards, shall be deemed included under this item. No additional or separate payments will be made for any work associated with the installation of precast reinforced structures.

□  
The cost of providing an anti-freeze additive in concrete, when required, shall be paid for under Item 9.04 HW.

□

**JB 638R – BREAK OUT AND REMOVE UTILITY STRUCTURE CONTAINING ACTIVE FACILITIES**

**A. Description**

Under this section the Contractor shall provide all labor, materials, equipment, insurance and incidentals necessary to partially or totally break out and remove existing utility structures using methods approved by the facility operator. Breaking out and removing existing utility structures shall be performed while maintaining and protecting all subsurface facilities, at locations approved by the Facility Operator. The Contractor will encounter various underground facilities, located both inside and outside the utility structure, while partially or totally breaking out and removing existing utility structures and will be required to excavate and perform work over, under, adjacent to, around, in between and in close proximity of various congested configurations of multiple facilities, conduits, pipes and cables.

All work required to partially or totally break out and remove existing utility structures shall comply with standard utility specifications and/or as directed by the facility operator and shall include but not be limited to:

- Service Boxes (various sizes)
- Manholes (various sizes)
- Vaults (various sizes)
- Valve Boxes (various sizes)
- Concrete encased conduits containing cables

**B. Materials**

All materials used shall be supplied by the Contractor and comply with the standards of the facility operator.

**C. Method of Construction**

The Contractor shall perform the necessary breaking out and removal of the existing utility structure while maintaining and protecting all subsurface facilities. The Contractor will encounter various underground facilities located both inside and outside the utility structure, while partially or totally breaking out and removing existing utility structures and will be required to excavate and perform work over, under, adjacent to, around, in between and in close proximity of various congested configurations of multiple facilities, conduits, pipes and cables, as directed by the facility operator. All work shall be done in a workmanlike manner and any damage resulting from the Contractor's operations shall be satisfactorily corrected as directed by the facility operator and at the Contractor's expense.

This item shall also apply when partially or totally breaking out and removing an existing utility structure.

The rebuilding of the utility structure is covered under JB 638N AND 638NT.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of cubic yards (CY) of concrete, reinforced concrete, brick, and mortar of the existing utility structure broken out, removed and disposed to the nearest hundredth of a cubic yard. No deductions will be made for the spaces occupied by steel reinforcement.

□

**E. Price to Cover**

The unit price bid under this item shall be a unit price per cubic yard (CY) of concrete, reinforced concrete, brick, and mortar of the existing utility structure broken out, removed and disposed. The unit price shall also cover the cost of all labor, materials, plant, equipment, insurance, and incidentals required to partially or totally break out, remove and dispose of existing utility structure. The unit price shall also include demolition of the existing utility structure, haul away and disposal of demolished materials, formwork, concrete, bricks, mortar, steel reinforcement, structural steel beams, interior hardware, exterior hardware, including frames and covers. The unit price shall further include the cost of maintaining, supporting, protecting and accommodating the integrity of all utility facilities (without disruption of service) during the work within the areas of excavation and the existing structure. All work shall comply with the plans, specifications and standards, provided by and at the directions of the facility operator.

The unit price shall include providing access to the facility operator tenants to verify and test cables before, during and after breaking out and removal of the utility and after conduit removal by the Contractor. The unit price shall include, but not limited to, opening and closing of fences; removal and replacement of temporary timber curb and opening and closing of traffic plates. Access to adjacent manholes impacted by the run is included in this item. JB 450 shall not be used in conjunction with JB 638R as JB 638R covers access to the work site at all times.

All pavement breaking, pavement removal and disposal, excavation, haul away, and disposal, furnish and install backfill, temporary pavement, sheeting, bracing, and all necessary incidentals shall be paid under item JB 406, only if required.

□

**JB 798 - MODIFICATION OF NON-CONCRETE YOKE TROLLEY STRUCTURES  
REMOVAL WHEN CROSSING UTILITY FACILITES**

**A. Description**

This JB item shall only be applied to trolley structure systems that do not contain concrete yoke foundations. This JB item shall only be used for trolley systems that have rails and wood ties only.

Under this section, the Contractor shall provide all incremental labor, equipment, insurance and incidentals required to maintain and protect and accommodate the integrity of utility facilities that include but are not limited to:

- 1. Conduits;
- 2. Conductors;
- 3. Concrete encased Conduit banks;
- 4. Steel Pipes; Steam Facilities;
- 5. Oil-o-static Facilities;
- 6. Non-cost Sharing Gas Facilities;
- 7. Steam Facilities;

of various sizes and configurations crossing trolley structures at various angles located within a zone of protection, as indicated on Sketch JB 798, during the removal of trolley structures and subsequent backfilling operations. Utility facilities that run parallel to trolley structures are not included within this item and will be paid for under the appropriate JB item. The work shall be performed in accordance with the contract plans, the specifications, and as encountered during construction and directed by the facility operator.

**B. Materials – N/A**

**C. Method of Construction**

The Contractor shall maintain, protect, and accommodate the integrity of all utility facilities of various sizes and configurations crossing trolley structures within a zone of protection as indicated in Sketch JB 798, during removal of trolley structures and subsequent backfilling and compaction operations under other contract item(s). The facility operator shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the utility and ascertain the numerical relationships and/or dimensions of these utilities with respect to the proposed excavation. Contractor shall perform test pits at locations determined by the facility operator to expose utility as specified in JB 400. Upon exposing the affected utilities sufficiently, and at the sole discretion of the facility operator to determine relationships and/or dimensions, the Contractor shall be permitted to proceed with care to remove existing trolley structure within the zone of protection whose limit shall be defined as a distance of 24 inches from the outside face of each utility crossing.

□

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of linear feet of modified trolley structure removal within the zone of protection as indicated on JB Sketch 798, measured along the centerline of trench. The trench is defined as one track set containing two rails. The zone of protection shall be defined, for the purpose of this agreement, as the boundary/area designated on the plans or a boundary/area 24 inches to either side of each of the designated facilities, based upon available records and/or information obtained from prior or new test pits, or any combination thereof. Where overlapping of the zones occurs due to multiple facilities, the boundary/area shall be modified to one zone measured from the outside limits. The contract item specified under this section shall not be measured for payment in conjunction with other types of utility items. Modifications to work methods required in areas between zones of protection for multiple utilities or JB facilities shall not be measured for payment and are included in the price bid for this item.

**E. Price to Cover**

The unit price per linear foot shall include the incremental cost for all labor, equipment, insurance and incidentals required to maintain and protect and accommodate the integrity of utility facilities during the removal of trolley structures (including rails, timber ties, trolley conduits and main conduit), and backfilling and compacting within a zoned area designated for protection of utilities by the facility operator.

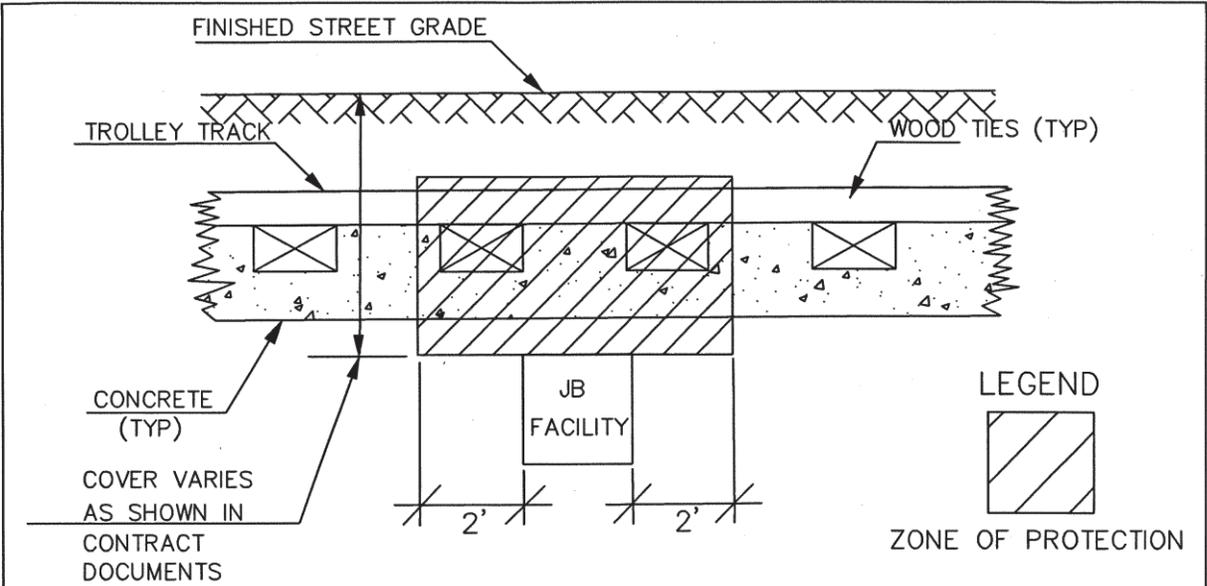

The price shall include any additional cutting, removing and disposing of roadway materials; hand or machine excavation; trucking and disposing of excavated materials, installation and removal of sheeting; and furnishing, installing and compacting backfill that may be required to support, protect, maintain and accommodate the integrity of utility facilities. The price shall also include means to ascertain the numerical relationship between utility and the trolley structure and the incremental cost for providing all vehicular and pedestrian traffic maintenance necessary to perform the work.

The Contractor shall be responsible for any and all damages resulting from and/or due to trolley demolition operations that are not performed in accordance with the specifications. When this work is performed within a mass excavation area, a credit will be taken for the removed trolley structure.

**JB 799 - MODIFICATION OF NON CONCRETE TROLLEY STRUCTURES  
REMOVAL PARALLEL TO UTILITY FACILITIES**

**A. Description**

This JB item shall only be applied to trolley structure systems that do not contain concrete yoke foundations. This JB item shall only be used for trolley systems that have rails and wood ties only.

Under this section, the Contractor shall provide all incremental labor, equipment, insurance and incidentals required to maintain, protect, support and accommodate the integrity of utility facilities that include but are not limited to:

- 1. Conduits;
- 2. Conductors;
- 3. Concrete encased Conduit banks;
- 4. Steel Pipes; Steam Facilities;
- 5. Oil-o-static Facilities; and
- 6. Non-cost Sharing Gas Facilities;
- 7. Steam Facilities.

of various sizes and configurations paralleling or encroaching trolley structures located within a zone of protection, as indicated on the Plans or as directed by the field representative, during all trolley structure removal operations and subsequent backfilling operations. Utility facilities which cross over, under and between the trolley structures are not included within this item and will be paid for under the appropriate JB item. The work shall be performed in accordance with the contract plans, the specifications, and as encountered during construction and directed by the facility operator(s).

**B. Materials – N/A**

**C. Method of Construction**

The Contractor shall maintain, protect, support and accommodate the integrity of all utility facilities of various sizes and configurations paralleling or encroaching trolley structures within a zone of protection as indicated on the Plans or as directed by the field representative, during removal of trolley structures and subsequent backfilling and compaction operations under other contract item(s). The facility operator(s) shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the utility and ascertain the numerical relationships and/or dimensions of these utilities with respect to the proposed excavation. Contractor shall perform test pits at locations determined by the facility operator to expose utility as specified in JB 400. Upon exposing the affected utilities sufficiently, and at the sole discretion of the facility operator(s) to determine relationships and/or dimensions, the Contractor shall be permitted to proceed with care to remove existing trolley structure within the zone of protection whose limit shall be defined as a distance of 24 inches from the outside face of each utility to the edge of the trolley structure.

□

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of linear feet of modified trolley structure removal within the zone of protection as indicated on the plans, measured along the centerline of trench. The trench is defined as one track set containing two rails. The contract item specified under this section shall not be measured for payment in conjunction with other types of utility items. Modifications to work methods required in areas between zones of protection for multiple utilities or JB facilities shall not be measured for payment and are included in the price bid for this item.

**E. Price to Cover**

The unit price per linear foot shall include the incremental cost for all labor, equipment, insurance and incidentals required to maintain, protect, support and accommodate the integrity of utility facilities paralleling or encroaching trolley structures during the removal of trolley structures (including rails, timber ties, trolley conduits, and main conduits), and backfilling and compacting within a zoned area designated for protection of utilities by the facility operator(s).

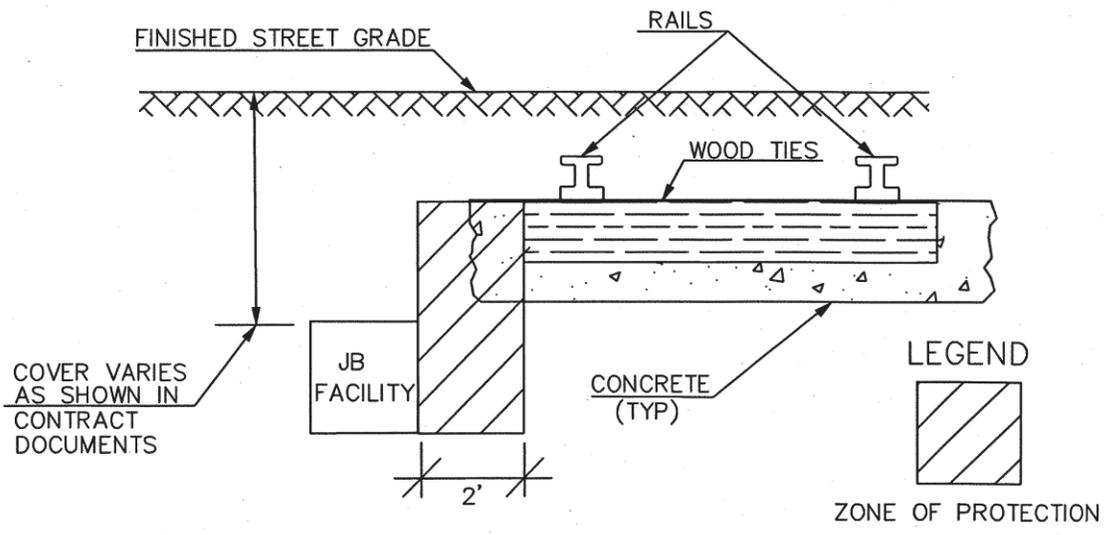

The unit price shall also include any additional cutting, removing and disposing of roadway materials; hand or machine excavation; trucking and disposing of excavated materials, installation and removal of sheeting; and furnishing, installing and compacting backfill that may be required to support, protect, maintain and accommodate the integrity of utility facilities. The price shall also include means to ascertain the numerical relationship between utility and the trolley structure, and the incremental cost for providing all vehicular and pedestrian traffic maintenance necessary to perform the work.

The Contractor shall be responsible for any and all damages resulting from and/or due to trolley demolition operations that are not performed in accordance with the specifications.

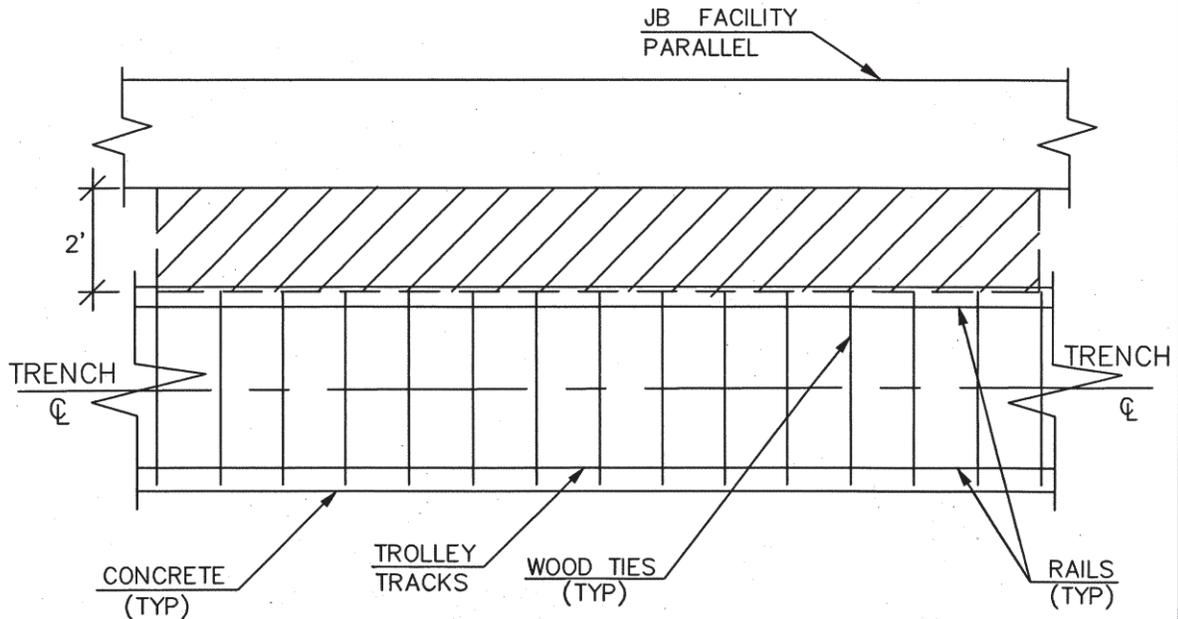

When this work is performed within a mass excavation area, a credit will be taken for the removed trolley structure.

**JB 800 - MODIFICATION OF CONCRETE YOKE TROLLEY STRUCTURES REMOVAL WHEN CROSSING UTILITY FACILITES**

**A. Description**

This JB item shall only be applied to trolley structure systems that contain concrete yoke foundations. This JB item shall not be used for trolley systems that have rails and wood ties only. Under this section, the Contractor shall provide all incremental labor, equipment, insurance and incidentals required to maintain and protect and accommodate the integrity of utility facilities that include but are not limited to:

- 1. Conduits
- 2. Conductors
- 3. Concrete encased conduit banks
- 4. Steel pipes
- 5. Oil-o-static facilities
- 6. Non-cost Sharing Gas Facilities and
- 7. Steam Facilities

of various sizes and configurations crossing trolley structures at various angles located within a zone of protection, as indicated on Sketch JB 800, during the removal of trolley structures and subsequent backfilling operations. Utility facilities that run parallel to trolley structures are not included within this item and will be paid for under the appropriate JB item. The work shall be performed in accordance with the contract plans, the specifications, and as encountered during construction and directed by the facility operator.

**B. Materials – N/A**

**C. Method of Construction**

The Contractor shall maintain, protect, and accommodate the integrity of all utility facilities of various sizes and configurations crossing trolley structures within a zone of protection as indicated in Sketch JB 800, during removal of trolley structures and subsequent backfilling and compaction operations under other contract item(s). The facility operator shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the utility and ascertain the numerical relationships and/or dimensions of these utilities with respect to the proposed excavation. Contractor shall perform test pits to expose the utilities as specified under JB 400. Upon exposing the affected utilities sufficiently, and at the sole discretion of the facility operator to determine relationships and/or dimensions, the Contractor shall be permitted to proceed with hand held power tools to remove existing trolley structure within the zone of protection whose limit shall be defined as a perimeter located 24 inches from the outside face of each utility crossing.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of linear feet of modified trolley structure removal within the zone of protection as indicated on JB Sketch 800, measured along the centerline of trench. The trench is defined as one track set containing two rails. The zone of protection shall be defined, for the purpose of this agreement, as the boundary/area designated on the plans or a boundary/area 3 feet to either side of each of the designated facilities, based upon available records and/or information obtained from prior or new test pits, or any combination thereof. Where overlapping of the zones occurs due to multiple facilities, the boundary/area shall be modified to one zone measured from the outside limits. The contract item specified under this section shall not be measured for payment in conjunction with other types of utility items. Modifications to work methods required in areas between zones of protection for multiple utilities or JB facilities shall not be measured for payment and are included in the price bid for this item.

**JB 801 - MODIFICATION OF CONCRETE YOKE TROLLEY STRUCTURES REMOVAL PARALLEL TO UTILITY FACILITIES**

**A. Description**

This JB item shall only be applied to trolley structure systems that contain concrete yoke foundations. This JB item shall not be used for trolley systems that have rails and wood ties only. Under this section, the Contractor shall provide all incremental labor, equipment, insurance and incidentals required to maintain, protect, support and accommodate the integrity of utility facilities that include but are not limited to:

- 1. Conduits
- 2. Conductors
- 3. Concrete encased conduit banks
- 4. Steel pipes
- 5. Oil-o-static facilities
- 6. Non-cost sharing gas facilities and
- 7. Steam facilities

of various sizes and configurations paralleling or encroaching trolley structures located within a zone of protection, as indicated in sketch JB 801 or as directed by the field representative, during all trolley structure removal operations and subsequent backfilling operations. Utility facilities which cross over, under and between the trolley structures are not included within this item and will be paid for under the appropriate JB item. The work shall be performed in accordance with the contract plans, the specifications, and as encountered during construction and directed by the facility operator(s).

**B. Materials – N/A**

**C. Method of Construction**

The Contractor shall maintain, protect, support and accommodate the integrity of all utility facilities of various sizes and configurations paralleling or encroaching trolley structures within a zone of protection as indicated in sketch 801 or as directed by the field representative, during removal of trolley structures and subsequent backfilling and compaction operations under other contract item(s). The facility operator(s) shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use hand excavation methods (pick and shovel or hand held power tools) directly below the pavement base to expose the utility and ascertain the numerical relationships and/or dimensions of these utilities with respect to the proposed excavation. Contractor shall perform test pits to expose the utilities as specified under JB 400. Upon exposing the affected utilities sufficiently, and at the sole discretion of the facility operator(s) to determine relationships and/or dimensions, the Contractor shall be permitted to proceed with hand held power tools to remove existing trolley structure within the zone of protection whose limit shall be defined as a perimeter located 24 inches from the outside face of each utility.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of linear feet of modified trolley structure removal within the zone of protection as indicated on the plans, measured along the centerline of trench. The trench is defined as one track set containing two rails. The contract item specified under this section shall not be measured for payment in conjunction with other types of utility items. Modifications to work methods required in areas between zones of protection for multiple utilities or JB facilities shall not be measured for payment and are included in the price bid for this item.

□

**E. Price to Cover**

The unit price per linear foot shall include the incremental cost for all labor, equipment, insurance and incidentals required to maintain, protect, support and accommodate the integrity of utility facilities paralleling or encroaching trolley structures during the removal of trolley structures (including rails, timber ties, yokes, trolley conduits, main conduit, rail and yoke foundations), and backfilling and compacting within a zoned area designated for protection of utilities by the facility operator(s).

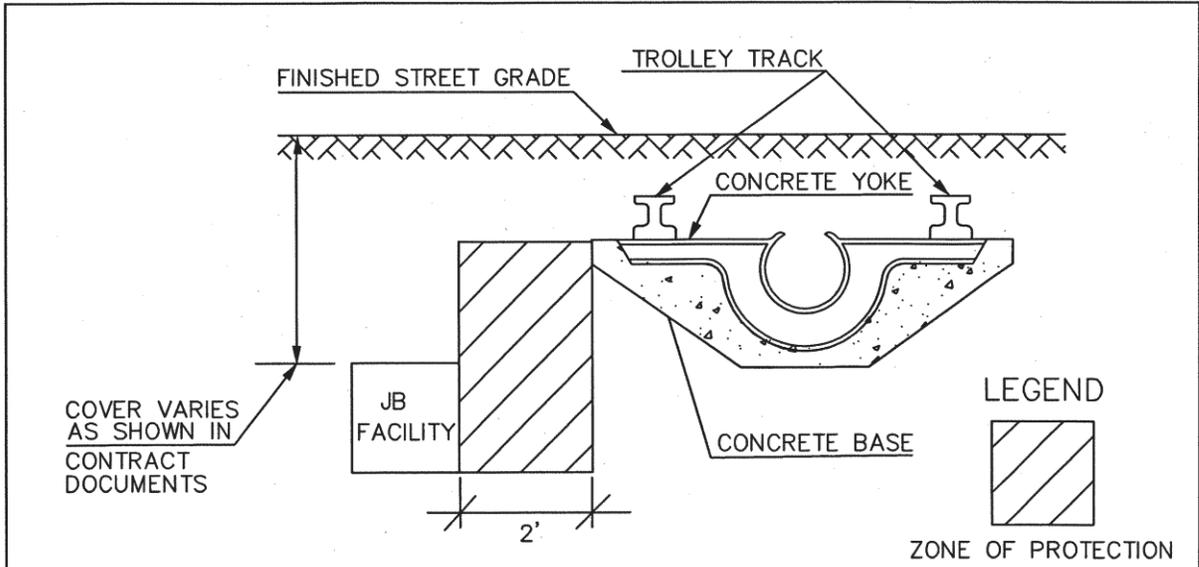

The unit price shall also include any additional cutting, removing and disposing of roadway materials; hand or machine excavation; trucking and disposing of excavated materials, installation and removal of sheeting; and furnishing, installing and compacting backfill that may be required to support, protect, maintain and accommodate the integrity of utility facilities. The unit price shall also include the incremental cost for providing all vehicular and pedestrian traffic maintenance necessary to perform the work.

The Contractor shall be responsible for any and all damages resulting from and/or due to trolley demolition operations that are not performed in accordance with the specifications. When this work is performed within a mass excavation area, a credit will be taken for the removed trolley structure.

**JB 803 - LINE CUT BY PNEUMATIC TOOLS IN LIEU OF SAW CUT ASSOCIATED WITH ROADWAY REMOVAL OPERATIONS**

**A. Description**

Under this section, the Contractor shall provide all incremental labor, equipment, insurance and incidentals required to maintain, protect, support and accommodate the integrity of utility facilities that include but are not limited to oil or static facilities, and any other facilities of various sizes and configurations paralleling or crossing proposed saw cut areas located within a zone of protection associated with roadway removal operations, as determined by the utility operator. Utility facilities which cross under and between the saw cut area are included within this item. The work shall be performed in accordance with the contract plans, the specifications, and as encountered during construction and determined by the facility operator(s).

**B. Materials – N/A**

**C. Method of Construction**

The Contractor shall maintain, protect, support and accommodate the integrity of all utility facilities of various sizes and configurations paralleling or crossing the saw cut area within a zone of protection as determined by the Facility Operator, during the roadway saw cut. The facility operator(s) shall identify the locations of all utilities within the contract area as required by New York State Industrial Code Rule 753. As provided by the Rule, the Contractor shall use pneumatic tools to line cut the pavement in lieu of saw cut by machine. It is the sole discretion of the facility operator(s) to determine relationships and/or dimensions, and advise the Contractor to proceed with pneumatic tools to line cut existing roadway structure.

**D. Method of Measurement**

The quantity to be measured for payment shall be the number of linear feet of line cut performed by pneumatic tools measured along the length of cut. The contract item specified under this section shall not be measured for payment in conjunction with other types of utility items. Modifications to work methods required in areas between zones of protection for multiple utilities or JB facilities shall not be measured for payment and are included in the price bid for this item.

JB 803.1 Line cut Asphalt Roadway (LF)

JB 803.2 Line cut any combination of Asphalt and Concrete Roadway (LF)

JB 803.3 Line cut any combination of Asphalt, Concrete, and Belgium Block (LF)

□

□

**E. Price to Cover**

The unit price per linear foot shall include the incremental cost for all labor, equipment, insurance and incidentals required to maintain, protect, support and accommodate the integrity of utility facilities paralleling or crossing the saw cut area associated with the removal of roadway designated for protection of utilities by the facility operator(s).

The unit price shall also include any additional cutting, removing and disposing of roadway materials; and any backfill that may be required to support, protect, maintain and accommodate the integrity of utility facilities. The price shall also include the incremental cost for providing all vehicular and pedestrian traffic maintenance necessary to perform the work.

The Contractor shall be responsible for any and all damages resulting from and/or due to saw cutting operations that are not performed in accordance with the specifications.

**JB 850 (CUSTOM – HMMWTCA7E) - Placing Rubber Sheets for Utility Facilities**

**A. Description**

Under this Section, the Contractor shall place permanent Rubber Sheets supplied by the facility operator(s) to protect utility facilities where directed by the facility operator(s) in consultation with the Resident Engineer.

**B. Materials**

Materials shall be supplied and delivered by the facility operator(s) at the job site or Construction Yard as directed by the Contractor.

**C. Method of Construction**

Rubber Sheets shall be placed in accordance with the attached facility operator(s) Specification for the Installation of High Pressure Pipe For 69, 138 and 345 kV Cable Systems, CE-TS-3352, under section 1.2.4.

**D. Method of Measurement**

The quantity for payment shall be the area of permanent rubber sheets installed and measured in Square Feet (S.F.). Each rubber sheet is typically 1/2" thick, 48" wide by 18' long.

**E. Price to Cover**

The unit price bid shall cover the cost of all labor, material, equipment, insurance, and incidentals necessary to complete the work.

**F. References**

1. Specification for the Installation of High Pressure Pipe For 69, 138 and 345 kV Cable Systems, CE-TS-3352.

□

**JB 900 - EXTRA UTILITY WORK COSTS ALLOWANCE**

**A. Description - Use of contract Item JB-900 "Extra Utility Work Costs Allowance" - Fixed Sum**

This item is applicable only for extra Utility Work. If the Utility determines that there is extra Utility Work for which there are no items in the Unit Price Book, then the Utility and City Contractor shall negotiate the cost of supporting and protecting and/or alleviating the impact on the Public Work caused by the extra Utility Work with each other with the understanding that the performance of Public Work shall continue during all negotiations and discussions.

(a) If the parties reach an agreement on cost for the extra Utility Work when there are no bid items available in the Unit Price Book, then the City Contractor and the Utility shall jointly submit to the City's Resident Engineer the agreed upon price along with all supporting documentation. The City Contractor shall be paid by requisitions submitted in accordance with the agreed upon price. All such extra utility work shall be totaled and the total shall be paid under Item JB 900.

(b) If the parties do not reach an agreement on the extra Utility Work within fifteen (15) Business Days from the start of negotiations, then the parties will resolve the dispute through the dispute resolution process, as set forth in Appendix "JB-A". During the arbitration process, the extra Utility Work will be performed and paid for based on the Utility's Final Offer, as set forth in Appendix JB-A.

(c) The total value of such method of payment shall be paid under Item JB 900.

**B. Materials**

All materials shall be supplied by the Contractor and approved by the facility operator in consultation with the Resident Engineer.

**C. Method of Construction**

As required.

**D. Method of Measurement**

No guarantee is given that this allowance item will in fact be required in this contract. The estimated "fixed sum" amount in the Bid Schedule is included in the total bid solely to ensure funding availability. The quantity to be measured for payment shall be each lump sum (LS) amount of the extra utility work. Payments for extra Utility Work shall be made under the JB-900 allowance item and shall be documented with a proper Change Order Request, provided that sufficient funding of JB-900 for each affected utility(ies) is available. Change Order Requests and Overrun Change Order Requests for Utility Work shall be submitted separately from Public Work Change Order Requests and Overrun Change Order Requests. The costs breakdown by items for each participating Utility shall be clearly tabulated and sub-totaled. Public Work costs shall not be

□

combined with Utility Work Costs on Change Order Requests of any type.

**E. Price to Cover**

Payment made under each lump sum (LS) amount, shall cover the cost of all labor, materials, equipment, supervision, insurance and incidentals necessary to complete the extra utility work. The price includes the modification of any methods of construction and operation and associated changes in sequencing of the City contract work as required, in order to perform the extra utility work and/or the City contract work. Each lump sum (LS) amount includes all special considerations due to all site conditions, loss of productivity and efficiency, idle time, demobilization and remobilization, site maintenance, maintenance of traffic and protection, extended performance, extended overhead costs, extended engineering and extended home office costs in connection with the extra utility work. In consideration of each lump sum (LS) amount, the contractor waives all claims for impacts arising from the extra utility work, which shall be deemed included in each lump sum amount paid. The total estimated cost of this item is the "fixed sum" amount shown for this item in the Bid Schedule. No guarantee is given that the actual lump sum cost for this item will in fact be the "fixed sum" amount. The "fixed sum" amount is included in the total bid solely to ensure that sufficient monies will be available to pay the Contractor under this item.

**E. References**

JB 1006V - 1020V VERTICAL OR ROLLED WATERMAIN OFFSET

A. Description

Under this section, the contractor shall provide all incremental labor, materials, equipment, insurance and incidentals required to offset water mains for vertical or rolled movement around exposed subsurface utilities encountered during construction. The work shall be performed in accordance with the contract plans, specifications and at the direction of the facility operator, upon written approval from the resident engineer. The trenches to be excavated shall be determined by the size of the water main and the extent of adjustment required to avoid utilities interferences during all phases of contract work. This work shall be performed in accordance with all the applicable City and utility specifications, and at the direction of the facility operator.

B. Materials

The contractor shall supply all materials necessary to offset the city water main(s) in accordance with the City standard water main specifications and approved by the facility operator.

C. Methods of Construction

The contractor shall cut, break and remove various thicknesses of surface and base pavement, excavate by hand to expose all utility facilities within the trench. Upon exposing the affected utility(s) determine clearances at the sole discretion of the facility operator. The contractor shall then be permitted to proceed with a combination of hand and machine excavation sufficient to accommodate the appropriate water main offset(s) under or above all utility facilities interfering with the installation of the water main as directed by the facility operator.

The contractor shall layout, measure, load and transport, unload, job store, as necessary, handle and lay fittings or portion of pipe, including labor, equipment and material for the complete installation of a water main offset including, but not limited to, fittings, all types of joints, retainer glands, rods and bands.

D. Method of Measurement

The quantity to be measured for vertical or rolled water main offset(s) shall be each (ea) water main offset which shall be defined as one (1) vertical or rolled water main offset in its final location with four (4) fittings and all appurtenances to avoid a single or multiple utility interference as directed by the facility operator. Each type of water main offset shall be paid for separately. The types of water main offsets are defined as follows:

1. JB 1006V – 6” Vertical or rolled water main offset
2. JB 1008V – 8” Vertical or rolled water main offset
3. JB 1012V – 12” Vertical or rolled water main offset
4. JB 1016V – 16” Vertical or rolled water main offset
5. JB 1020V – 20” Vertical or rolled water main offset

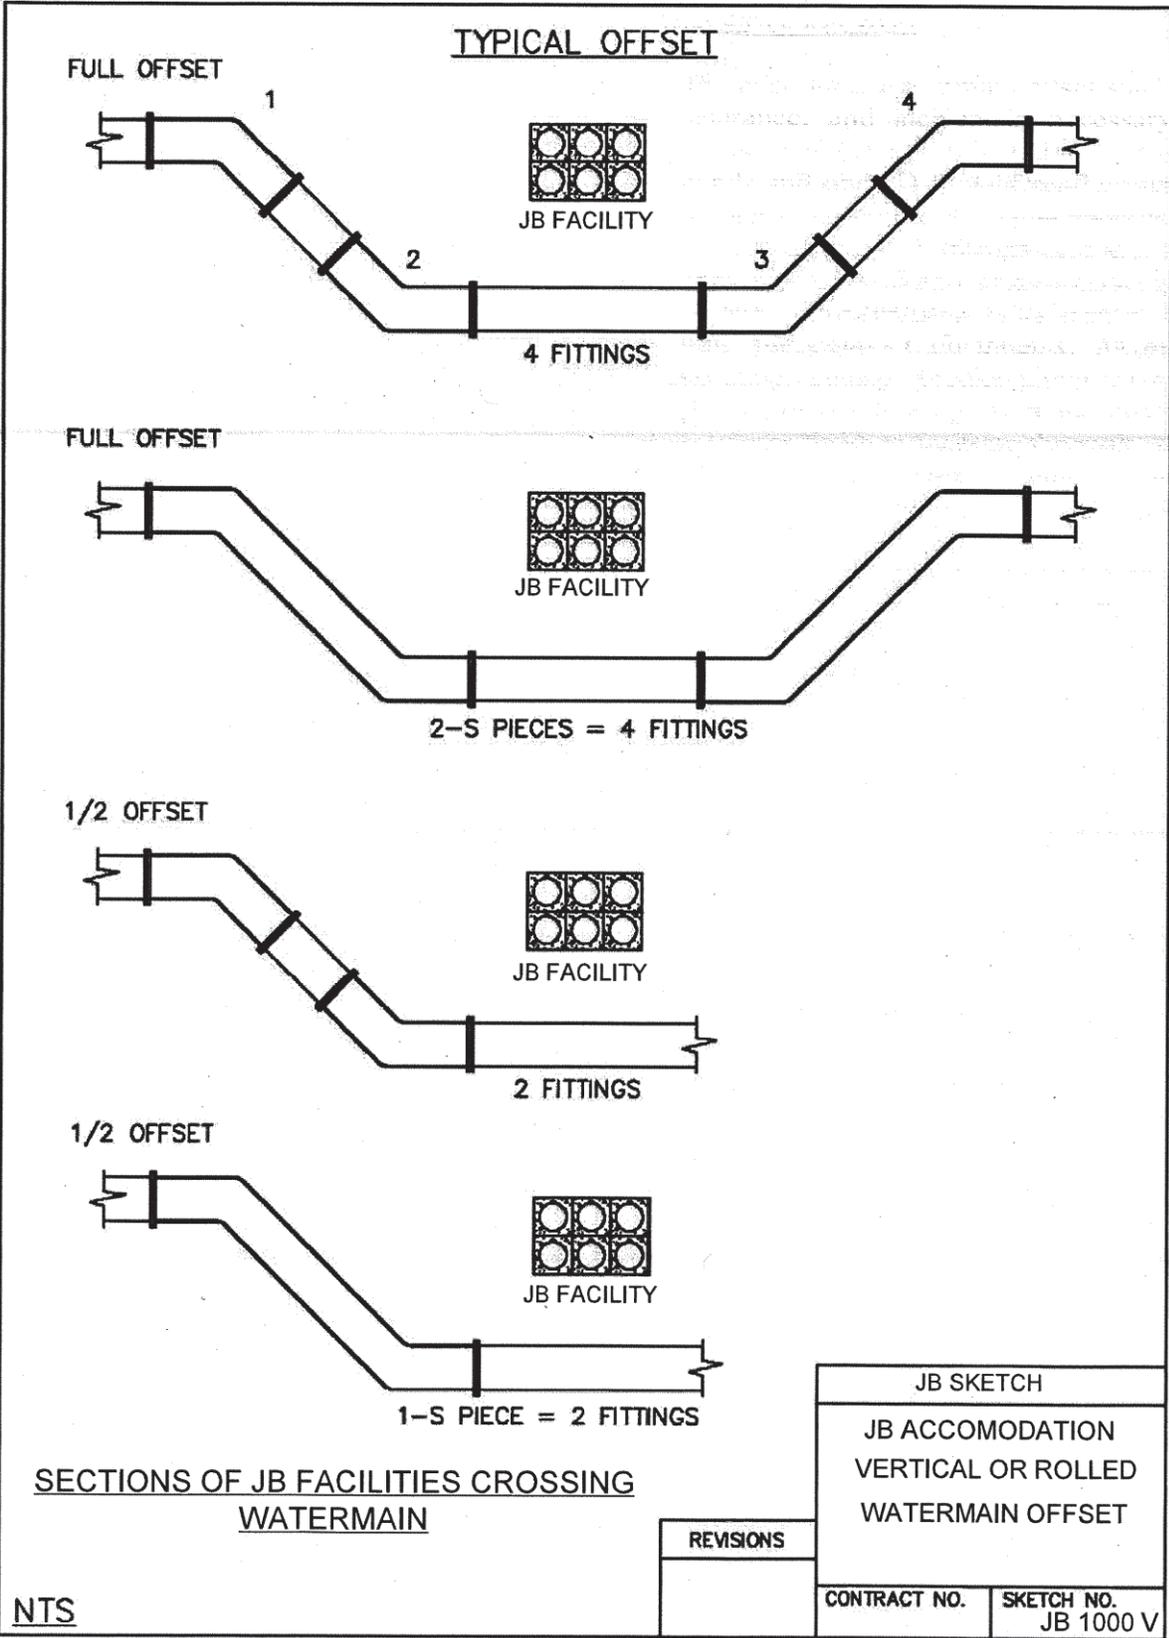

□

E. Price to Cover

The price for a water main offset shall include the cost of all labor, materials, equipment, insurance, and incidentals necessary to completely install a full water main offset inclusive of, but is not limited to, four (4) fittings, all types of joints, retainer glands, rods, bands and one (1) foot of sand around the pipe. If less than four (4) fittings are used, payment for this item shall be proportional to the number of fittings installed. For example, if 2 fittings are installed payment for this item shall be 50% of the applicable price. The contractor shall protect and maintain the integrity of the interfering facilities without disruption of service to the utility facility customers and in accordance with the contract documents. All associated maintenance of traffic, traffic plates, sheeting, cutting, breaking and removal of various thickness of surface and base pavement, excavating by hand to expose existing facilities, widening the trench, and any extra depth to facilitate the work, snaking, furnish, place and tamp backfill after water main installation, required removing, trucking, storing, and dispensing of material shall be deemed included in the unit price. The price shall also include the cost of providing temporary pavement restoration, as required. Permanent pavement restoration, if applicable, shall be paid under appropriate City items. The support and protection of utilities crossings encountered while performing this work shall be included in this JB item. No additional payment shall be made for utility crossings.

## **THIS ATTACHMENT IS HEREBY MADE A PART OF THE CONTRACT DOCUMENTS**

1. The riders and exhibits listed below, and included in this Attachment, are made a part of this contract documents, and the Contractor shall be responsible for compliance with all the provisions contained therein:
  - UNIFORM FEDERAL CONTRACT PROVISIONS RIDER FOR FEDERALLY FUNDED PROCUREMENT CONTRACTS (1/20/2021)
  - CDBG RIDER (1/20/2021)
  - HUD EXHIBIT 3 (11/18/2016)
  - FEDERAL LABOR STANDARDS PROVISIONS (Form HUD-4010) (6/2009)
  - DAVIS-BACON WAGE RATES

**(NO TEXT ON THIS PAGE)**

§ 102.116. (b) The notice shall include the following information:

- (1) The name of the recipient of the notice.
- (2) The name of the person or entity providing the notice.
- (3) The date of the notice.
- (4) The date of the recipient's last opportunity to be heard.
- (5) The date of the recipient's last opportunity to be heard.
- (6) The date of the recipient's last opportunity to be heard.
- (7) The date of the recipient's last opportunity to be heard.
- (8) The date of the recipient's last opportunity to be heard.
- (9) The date of the recipient's last opportunity to be heard.
- (10) The date of the recipient's last opportunity to be heard.

§ 102.117. **Termination.** (a) The recipient of the notice shall be terminated from the program if the recipient fails to comply with the notice.

§ 102.118. **Termination for Cause.** (a) The recipient of the notice shall be terminated from the program if the recipient is found to be in violation of the program's rules and regulations.

§ 102.119. **Notice to Cure.** (a) The recipient of the notice shall be given a notice to cure if the recipient is found to be in violation of the program's rules and regulations. The notice to cure shall include the following information:

- (1) The name of the recipient of the notice.
- (2) The name of the person or entity providing the notice.
- (3) The date of the notice.
- (4) The date of the recipient's last opportunity to be heard.
- (5) The date of the recipient's last opportunity to be heard.
- (6) The date of the recipient's last opportunity to be heard.
- (7) The date of the recipient's last opportunity to be heard.
- (8) The date of the recipient's last opportunity to be heard.
- (9) The date of the recipient's last opportunity to be heard.
- (10) The date of the recipient's last opportunity to be heard.

§ 102.120. **Opportunity to be Heard.** (a) The recipient of the notice shall be given an opportunity to be heard if the recipient is found to be in violation of the program's rules and regulations. The opportunity to be heard shall include the following information:

- (1) The name of the recipient of the notice.
- (2) The name of the person or entity providing the notice.
- (3) The date of the notice.
- (4) The date of the recipient's last opportunity to be heard.
- (5) The date of the recipient's last opportunity to be heard.
- (6) The date of the recipient's last opportunity to be heard.
- (7) The date of the recipient's last opportunity to be heard.
- (8) The date of the recipient's last opportunity to be heard.
- (9) The date of the recipient's last opportunity to be heard.
- (10) The date of the recipient's last opportunity to be heard.

§ 102.121. **Notice of Termination.** (a) The recipient of the notice shall be given a notice of termination if the recipient is found to be in violation of the program's rules and regulations. The notice of termination shall include the following information:

- (1) The name of the recipient of the notice.
- (2) The name of the person or entity providing the notice.
- (3) The date of the notice.
- (4) The date of the recipient's last opportunity to be heard.
- (5) The date of the recipient's last opportunity to be heard.
- (6) The date of the recipient's last opportunity to be heard.
- (7) The date of the recipient's last opportunity to be heard.
- (8) The date of the recipient's last opportunity to be heard.
- (9) The date of the recipient's last opportunity to be heard.
- (10) The date of the recipient's last opportunity to be heard.

§ 8-206. *Assignment of Contract.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-207. *March-in Rights.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract. If the contract is assigned to a party who is not a party to the contract, the assignee shall be bound by the terms of the contract as if it were the original party to the contract. If the contract is assigned to a party who is not a party to the contract, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-208. *Assignment of Contract.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-209. *Assignment of Contract.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-210. *Assignment of Contract.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-211. *Assignment of Contract.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-212. *Special Provisions for Contracts with Nonprofit Organizations.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

§ 8-213. *Assignment of Contract.* In any contract for the sale of real property, the parties may agree that the contract may be assigned to another party. If the contract is assigned, the assignee shall be bound by the terms of the contract as if it were the original party to the contract.

**FEDERAL EXHIBIT 2**

**[Insert Exhibit 2 for applicable federal grant program]**

**(NO TEXT ON THIS PAGE)**

## Applicability

The Project or Program to which the construction work covered by this contract pertains is being assisted by the United States of America and the following Federal Labor Standards Provisions are included in this Contract pursuant to the provisions applicable to such Federal assistance.

**A. 1. (i) Minimum Wages.** All laborers and mechanics employed or working upon the site of the work, will be paid unconditionally and not less often than once a week, and without subsequent deduction or rebate on any account (except such payroll deductions as are permitted by regulations issued by the Secretary of Labor under the Copeland Act (29 CFR Part 3), the full amount of wages and bona fide fringe benefits (or cash equivalents thereof) due at time of payment computed at rates not less than those contained in the wage determination of the Secretary of Labor which is attached hereto and made a part hereof, regardless of any contractual relationship which may be alleged to exist between the contractor and such laborers and mechanics. Contributions made or costs reasonably anticipated for bona fide fringe benefits under Section I(b)(2) of the Davis-Bacon Act on behalf of laborers or mechanics are considered wages paid to such laborers or mechanics, subject to the provisions of 29 CFR 5.5(a)(1)(iv); also, regular contributions made or costs incurred for more than a weekly period (but not less often than quarterly) under plans, funds, or programs, which cover the particular weekly period, are deemed to be constructively made or incurred during such weekly period.

Such laborers and mechanics shall be paid the appropriate wage rate and fringe benefits on the wage determination for the classification of work actually performed, without regard to skill, except as provided in 29 CFR 5.5(a)(4). Laborers or mechanics performing work in more than one classification may be compensated at the rate specified for each classification for the time actually worked therein: Provided, That the employer's payroll records accurately set forth the time spent in each classification in which work is performed. The wage determination (including any additional classification and wage rates conformed under 29 CFR 5.5(a)(1)(ii) and the Davis-Bacon poster (WH-1321) shall be posted at all times by the contractor and its subcontractors at the site of the work in a prominent and accessible, place where it can be easily seen by the workers.

**(ii) (a)** Any class of laborers or mechanics which is not listed in the wage determination and which is to be employed under the contract shall be classified in conformance with the wage determination. HUD shall approve an additional classification and wage rate and fringe benefits therefor only when the following criteria have been met:

**(1)** The work to be performed by the classification requested is not performed by a classification in the wage determination; and

**(2)** The classification is utilized in the area by the construction industry; and

**(3)** The proposed wage rate, including any bona fide fringe benefits, bears a reasonable relationship to the wage rates contained in the wage determination.

**(b)** If the contractor and the laborers and mechanics to be employed in the classification (if known), or their representatives, and HUD or its designee agree on the classification and wage rate (including the amount designated for fringe benefits where appropriate), a report of the action taken shall be sent by HUD or its designee to the Administrator of the Wage and Hour Division, Employment Standards Administration, U.S. Department of Labor, Washington, D.C. 20210. The Administrator, or an authorized representative, will approve, modify, or disapprove every additional classification action within 30 days of receipt and so advise HUD or its designee or will notify HUD or its designee within the 30-day period that additional time is necessary. (Approved by the Office of Management and Budget under OMB control number 1215-0140.)

**(c)** In the event the contractor, the laborers or mechanics to be employed in the classification or their representatives, and HUD or its designee do not agree on the proposed classification and wage rate (including the amount designated for fringe benefits, where appropriate), HUD or its designee shall refer the questions, including the views of all interested parties and the recommendation of HUD or its designee, to the Administrator for determination. The Administrator, or an authorized representative, will issue a determination within 30 days of receipt and so advise HUD or its designee or will notify HUD or its designee within the 30-day period that additional time is necessary. (Approved by the Office of Management and Budget under OMB Control Number 1215-0140.)

**(d)** The wage rate (including fringe benefits where appropriate) determined pursuant to subparagraphs (1)(ii)(b) or (c) of this paragraph, shall be paid to all workers performing work in the classification under this contract from the first day on which work is performed in the classification.

**(iii)** Whenever the minimum wage rate prescribed in the contract for a class of laborers or mechanics includes a fringe benefit which is not expressed as an hourly rate, the contractor shall either pay the benefit as stated in the wage determination or shall pay another bona fide fringe benefit or an hourly cash equivalent thereof.

**(iv)** If the contractor does not make payments to a trustee or other third person, the contractor may consider as part

of the wages of any laborer or mechanic the amount of any costs reasonably anticipated in providing bona fide fringe benefits under a plan or program, Provided, That the Secretary of Labor has found, upon the written request of the contractor, that the applicable standards of the Davis-Bacon Act have been met. The Secretary of Labor may require the contractor to set aside in a separate account assets for the meeting of obligations under the plan or program. (Approved by the Office of Management and Budget under OMB Control Number 1215-0140.)

**2. Withholding.** HUD or its designee shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld from the contractor under this contract or any other Federal contract with the same prime contractor, or any other Federally-assisted contract subject to Davis-Bacon prevailing wage requirements, which is held by the same prime contractor so much of the accrued payments or advances as may be considered necessary to pay laborers and mechanics, including apprentices, trainees and helpers, employed by the contractor or any subcontractor the full amount of wages required by the contract. In the event of failure to pay any laborer or mechanic, including any apprentice, trainee or helper, employed or working on the site of the work, all or part of the wages required by the contract, HUD or its designee may, after written notice to the contractor, sponsor, applicant, or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds until such violations have ceased. HUD or its designee may, after written notice to the contractor, disburse such amounts withheld for and on account of the contractor or subcontractor to the respective employees to whom they are due. The Comptroller General shall make such disbursements in the case of direct Davis-Bacon Act contracts.

**3. (i) Payrolls and basic records.** Payrolls and basic records relating thereto shall be maintained by the contractor during the course of the work preserved for a period of three years thereafter for all laborers and mechanics working at the site of the work. Such records shall contain the name, address, and social security number of each such worker, his or her correct classification, hourly rates of wages paid (including rates of contributions or costs anticipated for bona fide fringe benefits or cash equivalents thereof of the types described in Section 1(b)(2)(B) of the Davis-bacon Act), daily and weekly number of hours worked, deductions made and actual wages paid. Whenever the Secretary of Labor has found under 29 CFR 5.5 (a)(1)(iv) that the wages of any laborer or mechanic include the amount of any costs reasonably anticipated in providing benefits under a plan or program described in Section 1(b)(2)(B) of the Davis-Bacon Act, the contractor shall maintain records which show that the commitment to provide such benefits is enforceable, that the plan or program is financially responsible, and that the plan or program has been

communicated in writing to the laborers or mechanics affected, and records which show the costs anticipated or the actual cost incurred in providing such benefits. Contractors employing apprentices or trainees under approved programs shall maintain written evidence of the registration of apprenticeship programs and certification of trainee programs, the registration of the apprentices and trainees, and the ratios and wage rates prescribed in the applicable programs. (Approved by the Office of Management and Budget under OMB Control Numbers 1215-0140 and 1215-0017.)

**(ii) (a)** The contractor shall submit weekly for each week in which any contract work is performed a copy of all payrolls to HUD or its designee if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit the payrolls to the applicant sponsor, or owner, as the case may be, for transmission to HUD or its designee. The payrolls submitted shall set out accurately and completely all of the information required to be maintained under 29 CFR 5.5(a)(3)(i) except that full social security numbers and home addresses shall not be included on weekly transmittals. Instead the payrolls shall only need to include an individually identifying number for each employee (e.g., the last four digits of the employee's social security number). The required weekly payroll information may be submitted in any form desired. Optional Form WH-347 is available for this purpose from the Wage and Hour Division Web site at <http://www.dol.gov/esa/whd/forms/wh347instr.htm> or its successor site. The prime contractor is responsible for the submission of copies of payrolls by all subcontractors. Contractors and subcontractors shall maintain the full social security number and current address of each covered worker, and shall provide them upon request to HUD or its designee if the agency is a party to the contract, but if the agency is not such a party, the contractor will submit the payrolls to the applicant sponsor, or owner, as the case may be, for transmission to HUD or its designee, the contractor, or the Wage and Hour Division of the Department of Labor for purposes of an investigation or audit of compliance with prevailing wage requirements. It is not a violation of this subparagraph for a prime contractor to require a subcontractor to provide addresses and social security numbers to the prime contractor for its own records, without weekly submission to HUD or its designee. (Approved by the Office of Management and Budget under OMB Control Number 1215-0149.)

**(b)** Each payroll submitted shall be accompanied by a "Statement of Compliance," signed by the contractor or subcontractor or his or her agent who pays or supervises the payment of the persons employed under the contract and shall certify the following:

**(1)** That the payroll for the payroll period contains the information required to be provided under 29 CFR 5.5 (a)(3)(ii), the appropriate information is being maintained under 29 CFR 5.5(a)(3)(i), and that such information is correct and complete;

(2) That each laborer or mechanic (including each helper, apprentice, and trainee) employed on the contract during the payroll period has been paid the full weekly wages earned, without rebate, either directly or indirectly, and that no deductions have been made either directly or indirectly from the full wages earned, other than permissible deductions as set forth in 29 CFR Part 3;

(3) That each laborer or mechanic has been paid not less than the applicable wage rates and fringe benefits or cash equivalents for the classification of work performed, as specified in the applicable wage determination incorporated into the contract.

(c) The weekly submission of a properly executed certification set forth on the reverse side of Optional Form WH-347 shall satisfy the requirement for submission of the "Statement of Compliance" required by subparagraph A.3.(ii)(b).

(d) The falsification of any of the above certifications may subject the contractor or subcontractor to civil or criminal prosecution under Section 1001 of Title 18 and Section 231 of Title 31 of the United States Code.

(iii) The contractor or subcontractor shall make the records required under subparagraph A.3.(i) available for inspection, copying, or transcription by authorized representatives of HUD or its designee or the Department of Labor, and shall permit such representatives to interview employees during working hours on the job. If the contractor or subcontractor fails to submit the required records or to make them available, HUD or its designee may, after written notice to the contractor, sponsor, applicant or owner, take such action as may be necessary to cause the suspension of any further payment, advance, or guarantee of funds. Furthermore, failure to submit the required records upon request or to make such records available may be grounds for debarment action pursuant to 29 CFR 5.12.

#### 4. Apprentices and Trainees.

(i) **Apprentices.** Apprentices will be permitted to work at less than the predetermined rate for the work they performed when they are employed pursuant to and individually registered in a bona fide apprenticeship program registered with the U.S. Department of Labor, Employment and Training Administration, Office of Apprenticeship Training, Employer and Labor Services, or with a State Apprenticeship Agency recognized by the Office, or if a person is employed in his or her first 90 days of probationary employment as an apprentice in such an apprenticeship program, who is not individually registered in the program, but who has been certified by the Office of Apprenticeship Training, Employer and Labor Services or a State Apprenticeship Agency (where appropriate) to be eligible for probationary employment as an apprentice. The allowable ratio of apprentices to journeymen on the job site in any craft classification shall not be greater than the ratio permitted to the contractor as to the entire work force under the registered program. Any worker listed on a payroll at an apprentice wage rate, who

is not registered or otherwise employed as stated above, shall be paid not less than the applicable wage rate on the wage determination for the classification of work actually performed. In addition, any apprentice performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. Where a contractor is performing construction on a project in a locality other than that in which its program is registered, the ratios and wage rates (expressed in percentages of the journeyman's hourly rate) specified in the contractor's or subcontractor's registered program shall be observed. Every apprentice must be paid at not less than the rate specified in the registered program for the apprentice's level of progress, expressed as a percentage of the journeymen hourly rate specified in the applicable wage determination. Apprentices shall be paid fringe benefits in accordance with the provisions of the apprenticeship program. If the apprenticeship program does not specify fringe benefits, apprentices must be paid the full amount of fringe benefits listed on the wage determination for the applicable classification. If the Administrator determines that a different practice prevails for the applicable apprentice classification, fringes shall be paid in accordance with that determination. In the event the Office of Apprenticeship Training, Employer and Labor Services, or a State Apprenticeship Agency recognized by the Office, withdraws approval of an apprenticeship program, the contractor will no longer be permitted to utilize apprentices at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

(ii) **Trainees.** Except as provided in 29 CFR 5.16, trainees will not be permitted to work at less than the predetermined rate for the work performed unless they are employed pursuant to and individually registered in a program which has received prior approval, evidenced by formal certification by the U.S. Department of Labor, Employment and Training Administration. The ratio of trainees to journeymen on the job site shall not be greater than permitted under the plan approved by the Employment and Training Administration. Every trainee must be paid at not less than the rate specified in the approved program for the trainee's level of progress, expressed as a percentage of the journeyman hourly rate specified in the applicable wage determination. Trainees shall be paid fringe benefits in accordance with the provisions of the trainee program. If the trainee program does not mention fringe benefits, trainees shall be paid the full amount of fringe benefits listed on the wage determination unless the Administrator of the Wage and Hour Division determines that there is an apprenticeship program associated with the corresponding journeyman wage rate on the wage determination which provides for less than full fringe benefits for apprentices. Any employee listed on the payroll at a trainee rate who is not registered and participating in a training plan approved by

the Employment and Training Administration shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In addition, any trainee performing work on the job site in excess of the ratio permitted under the registered program shall be paid not less than the applicable wage rate on the wage determination for the work actually performed. In the event the Employment and Training Administration withdraws approval of a training program, the contractor will no longer be permitted to utilize trainees at less than the applicable predetermined rate for the work performed until an acceptable program is approved.

**(iii) Equal employment opportunity.** The utilization of apprentices, trainees and journeymen under 29 CFR Part 5 shall be in conformity with the equal employment opportunity requirements of Executive Order 11246, as amended, and 29 CFR Part 30.

**5. Compliance with Copeland Act requirements.** The contractor shall comply with the requirements of 29 CFR Part 3 which are incorporated by reference in this contract

**6. Subcontracts.** The contractor or subcontractor will insert in any subcontracts the clauses contained in subparagraphs 1 through 11 in this paragraph A and such other clauses as HUD or its designee may by appropriate instructions require, and a copy of the applicable prevailing wage decision, and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for the compliance by any subcontractor or lower tier subcontractor with all the contract clauses in this paragraph.

**7. Contract termination; debarment.** A breach of the contract clauses in 29 CFR 5.5 may be grounds for termination of the contract and for debarment as a contractor and a subcontractor as provided in 29 CFR 5.12.

**8. Compliance with Davis-Bacon and Related Act Requirements.** All rulings and interpretations of the Davis-Bacon and Related Acts contained in 29 CFR Parts 1, 3, and 5 are herein incorporated by reference in this contract

**9. Disputes concerning labor standards.** Disputes arising out of the labor standards provisions of this contract shall not be subject to the general disputes clause of this contract. Such disputes shall be resolved in accordance with the procedures of the Department of Labor set forth in 29 CFR Parts 5, 6, and 7. Disputes within the meaning of this clause include disputes between the contractor (or any of its subcontractors) and HUD or its designee, the U.S. Department of Labor, or the employees or their representatives.

**10. (i) Certification of Eligibility.** By entering into this contract the contractor certifies that neither it (nor he or she) nor any person or firm who has an interest in the contractor's firm is a person or firm ineligible to be awarded Government contracts by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1) or to be

awarded HUD contracts or participate in HUD programs pursuant to 24 CFR Part 24.

**(ii)** No part of this contract shall be subcontracted to any person or firm ineligible for award of a Government contract by virtue of Section 3(a) of the Davis-Bacon Act or 29 CFR 5.12(a)(1) or to be awarded HUD contracts or participate in HUD programs pursuant to 24 CFR Part 24.

**(iii)** The penalty for making false statements is prescribed in the U.S. Criminal Code, 18 U.S.C. 1001. Additionally, U.S. Criminal Code, Section 1 01 0, Title 18, U.S.C., "Federal Housing Administration transactions", provides in part: "Whoever, for the purpose of . . . influencing in any way the action of such Administration..... makes, utters or publishes any statement knowing the same to be false..... shall be fined not more than \$5,000 or imprisoned not more than two years, or both."

**11. Complaints, Proceedings, or Testimony by Employees.** No laborer or mechanic to whom the wage, salary, or other labor standards provisions of this Contract are applicable shall be discharged or in any other manner discriminated against by the Contractor or any subcontractor because such employee has filed any complaint or instituted or caused to be instituted any proceeding or has testified or is about to testify in any proceeding under or relating to the labor standards applicable under this Contract to his employer.

**B. Contract Work Hours and Safety Standards Act.** The provisions of this paragraph B are applicable where the amount of the prime contract exceeds \$100,000. As used in this paragraph, the terms "laborers" and "mechanics" include watchmen and guards.

**(1) Overtime requirements.** No contractor or subcontractor contracting for any part of the contract work which may require or involve the employment of laborers or mechanics shall require or permit any such laborer or mechanic in any workweek in which the individual is employed on such work to work in excess of 40 hours in such workweek unless such laborer or mechanic receives compensation at a rate not less than one and one-half times the basic rate of pay for all hours worked in excess of 40 hours in such workweek.

**(2) Violation; liability for unpaid wages; liquidated damages.** In the event of any violation of the clause set forth in subparagraph (1) of this paragraph, the contractor and any subcontractor responsible therefor shall be liable for the unpaid wages. In addition, such contractor and subcontractor shall be liable to the United States (in the case of work done under contract for the District of Columbia or a territory, to such District or to such territory), for liquidated damages. Such liquidated damages shall be computed with respect to each individual laborer or mechanic, including watchmen and guards, employed in violation of the clause set forth in subparagraph (1) of this paragraph, in the sum of \$10 for each calendar day on which such individual was required or permitted to work in excess of the standard workweek of 40 hours without payment of the overtime wages required by the clause set forth in subparagraph (1) of this paragraph.

---

**(3) Withholding for unpaid wages and liquidated damages.** HUD or its designee shall upon its own action or upon written request of an authorized representative of the Department of Labor withhold or cause to be withheld, from any moneys payable on account of work performed by the contractor or subcontractor under any such contract or any other Federal contract with the same prime contract, or any other Federally-assisted contract subject to the Contract Work Hours and Safety Standards Act which is held by the same prime contractor such sums as may be determined to be necessary to satisfy any liabilities of such contractor or subcontractor for unpaid wages and liquidated damages as provided in the clause set forth in subparagraph (2) of this paragraph.

**(4) Subcontracts.** The contractor or subcontractor shall insert in any subcontracts the clauses set forth in subparagraph (1) through (4) of this paragraph and also a clause requiring the subcontractors to include these clauses in any lower tier subcontracts. The prime contractor shall be responsible for compliance by any subcontractor or lower tier subcontractor with the clauses set forth in subparagraphs (1) through (4) of this paragraph.

**C. Health and Safety.** The provisions of this paragraph C are applicable where the amount of the prime contract exceeds \$100,000.

**(1)** No laborer or mechanic shall be required to work in surroundings or under working conditions which are unsanitary, hazardous, or dangerous to his health and safety as determined under construction safety and health standards promulgated by the Secretary of Labor by regulation.

**(2)** The Contractor shall comply with all regulations issued by the Secretary of Labor pursuant to Title 29 Part 1926 and failure to comply may result in imposition of sanctions pursuant to the Contract Work Hours and Safety Standards Act, (Public Law 91-54, 83 Stat 96). 40 USC 3701 et seq.

**(3)** The contractor shall include the provisions of this paragraph in every subcontract so that such provisions will be binding on each subcontractor. The contractor shall take such action with respect to any subcontractor as the Secretary of Housing and Urban Development or the Secretary of Labor shall direct as a means of enforcing such provisions.

# ARTICLE 1. DEFINITIONS

§ 1-1.01. Definitions.

(a) "Act" means Title 1 of the Housing and Community Development Act of 1974 (Public Law 93-58).

(b) "Agency" means the entity, or entities, executing this Agreement on behalf of the City of New York.

(c) "Agreement" means either the "contract" (as defined by 2 CFR § 200.200) between the City and "Subrecipient" as defined by 2 CFR § 200.200.

(d) "City" means the City of New York.

(e) "Construction" means the building, rehabilitation, alteration, conversion, extension, or improvement of any structure, or the installation of any equipment, or the acquisition of any land, or the acquisition of any interest in any land.

(f) "Contractor" and/or "Subrecipient" means the entity or entities executing this Agreement.

(g) "Equipment" means tangible personal property (including information technology equipment) having a useful life of more than one year and a unit cost of more than \$500.

(h) "Grant" means Community Development Block Grant Program funds provided to the City of New York by the United States Department of Housing and Urban Development.

(i) "Hometown Plan" means a plan developed by the City of New York in accordance with the provisions of the City of New York Charter, Chapter 46, of the City of New York Code of Rules and Regulations, and any amendments thereto.

(j) "HUD" means the Secretary of Housing and Urban Development or a person acting on behalf of the Secretary.

(k) "Program" means the New York City Community Development Block Grant Program.

(l) "Person" means any individual, partnership, firm, corporation, or other legal entity.

(m) "Subcontractor" means any person, firm or corporation, other than employees of the City of New York, who is engaged by the City of New York to perform any part of the work under this Agreement.

6. The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

The contractor shall ensure that all employees are treated with respect and dignity, and that no employee is subjected to harassment, discrimination, or coercion at all sites, and in all facilities at which the contractor's employees are employed.

Review, at least annually, the company's EEO policy and affirmative action

Disseminate the contractor's EEO policy externally by including it in any

and female recruitment and training organizations serving the contractor's recruitment

contractor's work force.

d

d

d

contractor's obligations under these specifications are being carried out.

d

d

Conduct a review, at least annually, of all supervisor's adherence to and performance under the Contractor's EEO policies and affirmative action obligations.

d

contractor's minority and female work force participation, makes a good faith effort to comply, however, is the contractor's and failure of such a group to comply with the obligation shall not be a defense for the contractor's noncompliance.

0. The contractor shall not be held liable for the failure of any subcontractor to comply with the requirements of this section. The contractor shall be held liable for the failure of any subcontractor to comply with the requirements of this section only if the contractor knew or should have known of the subcontractor's failure to comply with the requirements of this section.

0. The contractor shall not be held liable for the failure of any subcontractor to comply with the requirements of this section if the contractor can demonstrate that the subcontractor's failure to comply with the requirements of this section was due to the subcontractor's inability to obtain the necessary information from the contractor.

0. The contractor shall not be held liable for the failure of any subcontractor to comply with the requirements of this section if the contractor can demonstrate that the subcontractor's failure to comply with the requirements of this section was due to the subcontractor's failure to obtain the necessary information from the contractor.

0. The contractor shall not be held liable for the failure of any subcontractor to comply with the requirements of this section if the contractor can demonstrate that the subcontractor's failure to comply with the requirements of this section was due to the subcontractor's failure to obtain the necessary information from the contractor.

0. The contractor shall not be held liable for the failure of any subcontractor to comply with the requirements of this section if the contractor can demonstrate that the subcontractor's failure to comply with the requirements of this section was due to the subcontractor's failure to obtain the necessary information from the contractor.

4. The contractor shall not be held liable for the failure of any subcontractor to comply with the requirements of this section if the contractor can demonstrate that the subcontractor's failure to comply with the requirements of this section was due to the subcontractor's failure to obtain the necessary information from the contractor.

§ 46.60. The purpose of this section is to ensure that the State is able to provide the necessary support for the implementation of the program. The State shall ensure that the necessary support is provided in a timely manner and in accordance with the requirements of the program. The State shall also ensure that the necessary support is provided in a manner that is consistent with the principles of the program.

§ 46.60. The purpose of this section is to ensure that the State is able to provide the necessary support for the implementation of the program. The State shall ensure that the necessary support is provided in a timely manner and in accordance with the requirements of the program. The State shall also ensure that the necessary support is provided in a manner that is consistent with the principles of the program.

§ 46.60. The purpose of this section is to ensure that the State is able to provide the necessary support for the implementation of the program. The State shall ensure that the necessary support is provided in a timely manner and in accordance with the requirements of the program. The State shall also ensure that the necessary support is provided in a manner that is consistent with the principles of the program.

§ 46.60. The purpose of this section is to ensure that the State is able to provide the necessary support for the implementation of the program. The State shall ensure that the necessary support is provided in a timely manner and in accordance with the requirements of the program. The State shall also ensure that the necessary support is provided in a manner that is consistent with the principles of the program.

§ 46.60. The purpose of this section is to ensure that the State is able to provide the necessary support for the implementation of the program. The State shall ensure that the necessary support is provided in a timely manner and in accordance with the requirements of the program. The State shall also ensure that the necessary support is provided in a manner that is consistent with the principles of the program.

## ARTICLE 7. UNIFORM RELOCATION ASSISTANCE

*[Applicable to Contractors and Subrecipients]*

§ 46.60. The purpose of this section is to ensure that the State is able to provide the necessary support for the implementation of the program. The State shall ensure that the necessary support is provided in a timely manner and in accordance with the requirements of the program. The State shall also ensure that the necessary support is provided in a manner that is consistent with the principles of the program.

## ARTICLE 8. UNIFORM ADMINISTRATIVE REQUIREMENTS (INCLUDING PROCUREMENT STANDARDS), COST PRINCIPLES, AND AUDIT REQUIREMENTS FOR FEDERAL AWARDS

*[Subdivision (a) is applicable to Contractors and Subrecipients; subdivision (b) is applicable to Subrecipients only; subdivision (c) is applicable to Contractors only]*

§ 400(d)(4) shall be referred to as the “Super Circular”)

§ 400(d)(4) shall be referred to as the “Super Circular”)

§ 400(d)(4) shall be referred to as the “Super Circular”)

**ARTICLE 9. UNEARNED PAYMENTS; INCOME; DOCUMENTATION OF COSTS; ACCOUNTING SYSTEM; FIDELITY BONDS; DISBURSEMENT RESTRICTIONS**

*[Paragraphs (a), (b), (d), and (e) are applicable to Contractors and Subrecipients; paragraph (c) is applicable to Subrecipients only]*

§ 400(d)(4) shall be referred to as the “Super Circular”)

§ 400(d)(4) shall be referred to as the “Super Circular”)

§ 400(d)(4) shall be referred to as the “Super Circular”)

§ 400(d)(4) shall be referred to as the “Super Circular”)

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

## ARTICLE 14. SMALL FIRMS, M/WBE FIRMS, AND LABOR SURPLUS AREA FIRMS

*[Applicable to Subrecipients. Contractors must follow section C(11) of the Uniform Federal Contract Provisions Rider for Federally Funded Procurement Contracts.]*

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

## ARTICLE 15. INTANGIBLE PROPERTY

*[Applicable to Subrecipients. A similar provision for Contractors is included in the Uniform Federal Contract Provisions Rider for Federally Funded Procurement Contracts at section C(14).]*

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

Contractor shall ensure that all subcontractors are properly licensed and bonded in accordance with applicable laws and regulations. Contractor shall also ensure that all subcontractors are properly insured against all risks of the work.

contracts to contain “performance requirements and penalties.”

contracts to contain “performance requirements and penalties.”

contracts to contain “performance requirements and penalties.”

Contractor shall be responsible for obtaining all necessary permits and approvals for the work. Contractor shall be responsible for obtaining all necessary permits and approvals for the work.

The Contractor's compliance with the Executive Order and the regulations in 41 CFR Part 604 shall be a violation of the contract, the Contractor shall be responsible for obtaining all necessary permits and approvals for the work. Contractor shall be responsible for obtaining all necessary permits and approvals for the work.

Contractor shall be responsible for obtaining all necessary permits and approvals for the work. Contractor shall be responsible for obtaining all necessary permits and approvals for the work.

4. As used in this Agreement, the "covered area" is the City of New York.

WELDERS - Receive rate prescribed for craft performing operation to which welding is incidental.

=====

Note: Executive Order (EO) 13706, Establishing Paid Sick Leave for Federal Contractors applies to all contracts subject to the Davis-Bacon Act for which the contract is awarded (and any solicitation was issued) on or after January 1, 2017. If this contract is covered by the EO, the contractor must provide employees with 1 hour of paid sick leave for every 30 hours they work, up to 56 hours of paid sick leave each year. Employees must be permitted to use paid sick leave for their own illness, injury or other health-related needs, including preventive care; to assist a family member (or person who is like family to the employee) who is ill, injured, or has other health-related needs, including preventive care; or for reasons resulting from, or to assist a family member (or person who is like family to the employee) who is a victim of, domestic violence, sexual assault, or stalking. Additional information on contractor requirements and worker protections under the EO is available at [www.dol.gov/whd/govcontracts](http://www.dol.gov/whd/govcontracts).

Unlisted classifications needed for work not included within the scope of the classifications listed may be added after award only as provided in the labor standards contract clauses (29CFR 5.5 (a) (1) (ii)).

-----

The body of each wage determination lists the classification and wage rates that have been found to be prevailing for the cited type(s) of construction in the area covered by the wage determination. The classifications are listed in alphabetical order of ""identifiers"" that indicate whether the particular rate is a union rate (current union negotiated rate for local), a survey rate (weighted average rate) or a union average rate (weighted union average rate).

Union Rate Identifiers

A four letter classification abbreviation identifier enclosed in dotted lines beginning with characters other than ""SU"" or ""UAVG"" denotes that the union classification and rate were

prevailing for that classification in the survey. Example: PLUM0198-005 07/01/2014. PLUM is an abbreviation identifier of the union which prevailed in the survey for this classification, which in this example would be Plumbers. 0198 indicates the local union number or district council number where applicable, i.e., Plumbers Local 0198. The next number, 005 in the example, is an internal number used in processing the wage determination. 07/01/2014 is the effective date of the most current negotiated rate, which in this example is July 1, 2014.

Union prevailing wage rates are updated to reflect all rate changes in the collective bargaining agreement (CBA) governing this classification and rate.

#### Survey Rate Identifiers

Classifications listed under the "SU" identifier indicate that no one rate prevailed for this classification in the survey and the published rate is derived by computing a weighted average rate based on all the rates reported in the survey for that classification. As this weighted average rate includes all rates reported in the survey, it may include both union and non-union rates. Example: SULA2012-007 5/13/2014. SU indicates the rates are survey rates based on a weighted average calculation of rates and are not majority rates. LA indicates the State of Louisiana. 2012 is the year of survey on which these classifications and rates are based. The next number, 007 in the example, is an internal number used in producing the wage determination. 5/13/2014 indicates the survey completion date for the classifications and rates under that identifier.

Survey wage rates are not updated and remain in effect until a new survey is conducted.

#### Union Average Rate Identifiers

Classification(s) listed under the UAVG identifier indicate that no single majority rate prevailed for those classifications; however, 100% of the data reported for the classifications was union data. EXAMPLE: UAVG-OH-0010 08/29/2014. UAVG indicates that the rate is a weighted union average rate. OH indicates the state. The next number, 0010 in the example, is an internal number used in producing the wage determination. 08/29/2014 indicates the survey completion date for the classifications and rates under that identifier.

A UAVG rate will be updated once a year, usually in January of each year, to reflect a weighted average of the current negotiated/CBA rate of the union locals from which the rate is based.

---

#### WAGE DETERMINATION APPEALS PROCESS

1.) Has there been an initial decision in the matter? This can

be:

- \* an existing published wage determination
- \* a survey underlying a wage determination
- \* a Wage and Hour Division letter setting forth a position on a wage determination matter
- \* a conformance (additional classification and rate) ruling

On survey related matters, initial contact, including requests for summaries of surveys, should be with the Wage and Hour Regional Office for the area in which the survey was conducted because those Regional Offices have responsibility for the Davis-Bacon survey program. If the response from this initial contact is not satisfactory, then the process described in 2.) and 3.) should be followed.

With regard to any other matter not yet ripe for the formal process described here, initial contact should be with the Branch of Construction Wage Determinations. Write to:

Branch of Construction Wage Determinations  
Wage and Hour Division  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

2.) If the answer to the question in 1.) is yes, then an interested party (those affected by the action) can request review and reconsideration from the Wage and Hour Administrator (See 29 CFR Part 1.8 and 29 CFR Part 7). Write to:

Wage and Hour Administrator  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

The request should be accompanied by a full statement of the interested party's position and by any information (wage payment data, project description, area practice material, etc.) that the requestor considers relevant to the issue.

3.) If the decision of the Administrator is not favorable, an interested party may appeal directly to the Administrative Review Board (formerly the Wage Appeals Board). Write to:

Administrative Review Board  
U.S. Department of Labor  
200 Constitution Avenue, N.W.  
Washington, DC 20210

4.) All decisions by the Administrative Review Board are final.
